Re: Docket Number M-00051865, L-00050174 and L-00505175

We request that the interpretation of Act 35 of July 2007 that on-site generation is compensated "at the full retail value for all energy produced". The full retail value is the total cost per kwh, which includes all costs (generation, transmission, distribution and transition). The full retail rate was the intent of the Act to include generation, transmission, distribution and transitions.

The reality is that this is a savings for the utility as solar production is highest in peak demand times and the more solar, the less the utilities have to buy at the spot market prices. I believe that the price per kwh in PJM territory went to \$1.00 per kwh at some point last year.

Sincerely,

Charles Reichner
