Re: Aqua Pennsylvania, Inc. Original Cost Study – Bristol Township Water System

Dear Secretary Chiavatta:

Pursuant to Pa. Code 69.721(f), enclosed are two copies each of Aqua Pennsylvania's Original Cost Study valuation for the Bristol Township Water System.

If you have any questions regarding this filing, please contact me at (610) 645-4241.

Sincerely,

Meghan Kreszswick

Manager of Rates - PA & NJ

## SECTION 1

#### Acquisition of Bristol Township's Water System

#### **Executive Summary**

#### **BACKGROUND**

Bristol Township ("Township") provides water service to approximately 574 customers located in the area known as the Newportville-Ferguson & Keystone Park, situated in a portion of Bristol Township, Bucks County, Pennsylvania. The Township began providing water service in the early 1970's and has continued to grow and expand over the years.

On December 28, 2011, Aqua Pennsylvania, Inc. ("Aqua-Pa") and the Township filed an application requesting the Commission to approve the sale of the water system and grant Aqua-Pa the right to furnish service in Bristol Township and authorizing the Township to abandon service.

Aqua-Pa has retained AUS Consultants to prepare a study of the original cost of the fixed capital assets acquired and theoretical depreciation calculations as of July 31, 2013. The results of that study are set forth herein.

#### **OVERVIEW OF THE TOWNSHIP'S FACILITIES**

The Township's assets to be acquired consist of facilities for the distribution of water to its customers. The distribution system consists of approximately 68,000 linear feet of pipe, plus the associated valves, air release valves, hydrants, valve boxes, services and meters. All of the customers are metered and the water system also provides fire protection service.

#### **OVERVIEW OF THE STUDY TECHNIQUES**

The study of the original cost of the Bristol Township's assets was conducted in two (2) phases. First, a comprehensive utility plant inventory was conducted to ascertain and confirm the kind and quantity of property owned and operated by the Township.

Second, the original cost of the inventoried property was to be determined. Original Construction Cost was not able to be located or obtained from the Township. In addition, Aqua-Pa requested theoretical accrued depreciation calculations performed based upon the results of the original cost study to reflect the theoretical capital recovery of the plant in service at July 31, 2013.

A complete discussion of the methodologies employed in the original cost study is set forth in the following sections of this report.

#### **EXPLANATION OF THE STUDY**

#### Utility Plant Inventory

A comprehensive inventory of the Township's water system in service as of July 31, 2013 was performed. The main principal source of documents for the inventory was the "as built" map of the Township's water system, which was verified by a physical inspection. The map was particularly helpful in locating and documenting the sizes, types, and lengths of the pipelines and sizes, types, and locations of accessories, such as valves, and fire hydrants. Significantly components of the inventory are discussed below.

#### Mass Property

For purposes of this study, "mass" property consists of utility plant recorded in Account 331 (Mains and Accessories), Account 333 (Services), Account 334 (Meters)

and Account 335 (Hydrants).

For Account 331, footage of pipe, by size and type, were determined by reviewing the "as-built" map and were verified by a physical check of the distribution system in place. Due to the lack of information on the installation years of the plant, on each street during the physical inspection, the casting date on each fire hydrant was noted. This information was then utilized in determining the estimated installation date for the mains and accessories installed in that area. This same procedure was utilized for valves, valve boxes, and air release valves on a street by street basis.

For customer service lines (account 333) and meters (Account 334) a customer billing list was obtained from Aqua-Pa and the Township. The customer billing list was employed in determining the number and size of the services and meters. The installed years were again based upon the estimated installed date of the main, which was determined by utilizing the casting date on the fire hydrants as a guide for estimating the installed years. For Account 335, fire hydrant locations were determined by reviewing the "as-built" map and were verified by a physical check. The same method, as discussed above, was used in estimating the installed years.

The original cost of all inventoried property units is properly recorded in the following accounts:

Acct.

<u>No.</u>	Account Title
331	Mains and Accessories
333	Services
334	Meters
335	Hydrants

#### **ORIGINAL COST ANALYSIS**

The goal of the original cost analysis was to ascertain the value of the

Township's surviving water plant in service by fixed capital account and within each account, to determine the original costs by size and type (for mass property) and by vintage year. The original cost determinations for Account 331 (Mains and Accessories), Account 333 (Services), Account 334 (Meters) and Account 335 (Hydrants) are explained below.

#### Account 331, Account 333, Account 334 and Account 335

As previously explained, the information contained on the Township map was used to develop the footage of pipe, size of pipe, as well as the location and number of valves and hydrants. This was then verified by conducting a physical inventory of the system. During the physical inventory, the footage and accuracy of the map was verified, also the cast date and location of each fire hydrants was noted. It was the casting dates on the hydrant which was utilized in estimating the age assets.

Due to the absence of construction cost and other source documents, the original cost of mains and accessories were determinable from utilizing current unitized installed cost from Aqua-Pa of similar material. This information was used for the resultant unit price for the respective fixed capital asset.

The original cost values at July 31, 2013 for the Township's mains, customer services, meters, and fire hydrants was established by the original cost study total \$5,166,311; \$441,589; \$139,959 and \$127,167, respectively.

#### SUMMARY OF ORIGINAL COST

The results of the original cost study established that the original cost of the Township's utility plant in service is not less than \$5,875,026, as summarized by Plant Account in Section 2 (p. 2-1)

#### CONTRIBUTIONS IN AID OF CONSTRUCTION

AUS Consultants completed an extensive research of records to determine if any contributions in aid of construction (CIAC) existed. The record research included all Township documents that were available and discussed with Aqua-Pa personnel. Based on the available information, the water system received or collected CIAC. The calculated CIAC amounts to \$240,022. The results of those calculations and detailed supporting schedules are included in Section 3 of this report.

#### **CUSTOMER ADVANCES FOR CONSTRUCTION**

AUS Consultants completed an extensive research of records to determine if any customer advances for construction (CAC) existed. The record research included all documents that were available. Based on this record research, the water system was not funded by customer advances for construction.

#### **DEPRECIATION RESERVE**

ASU Consultants, as requested, prepared a theoretical calculated depreciation reserve of the utility plant in service at July 31, 2013. The calculated accrued depreciation reserve amounts to \$1,959,461 at July 31, 2013.

The calculations were based upon the Broad Group/Remaining Life Procedure and Technique utilizing appropriate service lives and mortality curves for the specific fixed capital assets by category and condition of the plant at the study date. The results of those calculations and detailed supporting documentation are included in Section 3 of this report.

#### After printing this label:

- 1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
- 2. Fold the printed page along the horizontal line.
- 3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com.FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim.Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jew elry, precious metals, negotiable instruments and other items listed in our ServiceGuide. Written claims must be filed within strict time limits, see current FedEx Service Guide.
