Harrisburg, PA 17120

**RE: Susan Kreider v. PECO Energy Company  
Docket No. C-2015-2469655**

Dear Ms. Chiavetta:

Enclosed for filing with the Commission is PECO Energy Company's Praecipe-Suggestion of Death with regard to the aforementioned matter.

Very truly yours,

A handwritten signature in cursive script, appearing to read "Ward L. Smith".

Ward L. Smith  
Counsel for PECO Energy Company

PENNSYLVANIA PUBLIC UTILITY COMMISSION**

<b>Susan Kreider</b>	:	
	:	
v.	:	<b>C-2015-2469655</b>
	:	
<b>PECO Energy Company</b>	:	

**Praecipe – Suggestion of Death**

Counsel has become aware of information from the sources listed below that Complainant Susan Kreider passed away on or about November 10, 2016.

1. The Main Brief of Catherine Frompovich in the matter of *Frompovich v. PECO*, C-2015-2474602, filed with the Commission on January 20, 2017 (¶47), refers to Ms. Kreider as “the last Susan Kreider, RN (deceased Nov. 10, 2016).” A copy of the relevant pages of the Brief is attached to this praecipe.

2. The online blog Vaccination Liberation has posted a memorial statement describing the circumstances of her death, which involved a fall and subsequent surgery. The blog can be found at [http://www.vaclib.org/news/Memorial-Susan Kreider.htm](http://www.vaclib.org/news/Memorial-Susan_Kreider.htm). A copy is also attached to this praecipe.

3. A November 23, 2016 online posting by Ms. Kreider’s employer, the Hospital of the University of Pennsylvania, announces that Ms. Kreider was awarded a Patient Advocate Award for 2016, and states in a footnote that: “It is with great sadness that we report that Susan

Kreider suddenly passed away after a brief hospitalization.” The HUP posting can be found at <https://www.pennmedicine.org/news/internal-newsletters/hupdate/2016/november/hup-celebrates-patient-advocate-award-winners>. A copy is also attached to this praecipe.

May God bless her.

Respectfully submitted,

---

exacerbated issues, which PECO's expert Dr. Israel identified as "IEI"—idiopathy environmental intolerance<sup>44</sup>.

44. However, PECO medical expert Dr. Israel contradicted himself when talking about IEI intolerances and EMF, which Frompovich points out as stated in the Transcript:

Page 278 (14-18)

PECO Attorney Watson Q. Let me ask you this. Is it generally accepted in the scientific or medical communities that idiopathic environmental intolerance to EMF and the variety of symptoms and conditions attributed to it are caused, contributed to or exacerbated by exposure to radiofrequency fields?

Page 278 (25) Dr. Israel A. It is not generally accepted.

Page 272 (14-16)

Dr. Israel A. We typically refer to them as IEI, idiopathy environmental intolerance, and followed by whatever that intolerance is, EMF, some chemical, whatever.

Page 274 (8-9)

PECO Attorney Watson Q. Do I understand that you're telling us that IEI is simply neutral, a neutral way to describe -

Page 274 (10-12)

Dr. Israel A. That's the way the World Health Organization proposed, and I think that's what's generally used amongst physicians today.

45. If EMF intolerance generally is not accepted, according to Dr. Israel *cf. Pg. 278 (25)*, then why does Dr. Israel make conflicting statements on Transcript pages 272 and 274, specifically stating *"that's what's generally used amongst physicians today."*

46. Dr. Israel's statement clearly supports, if not reinforces, Frompovich's claim that non-thermal radiation health effects from electric environments exist (*cf. IEI/EMF above*), and are identified specifically by the World Health Organization and physicians.

47. Furthermore, IEI or EHS complainants have filed formal complaints with the PA PUC and appeared before this Honorable Court. They include the late Susan Kreider, RN

---

<sup>44</sup> Transcript Pp. 272-73

(deceased Nov. 10, 2016) who suffered much physical and emotional distress as a result of PECO's AMI Smart Meter and the legal actions that ensued, Mary Paul, Maria Povacz, Laura Silberstein Murphy, Diane Van Schoyck and husband, who finally opted to get off the grid and install solar energy at a cost of \$120,000.00, which not every PECO customer or Pennsylvania utility customer can afford to do in order to obtain relief from EMFs/RFs, EHS or IEI, or possible cancer "triggers" and still have access to electric power—a necessity of life in modern times.

48. According to the system of laws in the United States, all 50 states exist to defend our fundamental and natural rights<sup>43</sup>, not create impossible situations or Catch-22s, specifically, health hazards for citizens who are individualistic in personality and body chemistry proclivities. An example of such proclivities is allergies, which can include gluten intolerance; peanut allergy; multiple chemical sensitivity (MCS) covered under the World Health Organization designation of IEI; and anaphylaxis, to mention a few. There are too many allergic responses to enumerate here with more being identified almost daily since man-made chemicals and new technologies present conditions humans have not evolved with over time and, therefore, can be reactive.

49. As a point of specific example, and germane to evaluate the case at hand, Frompovich introduces the U.S. Library of Medicine, which is lax in discussing allergies on its Internet website<sup>44</sup> since it does not include other "triggers", e.g., chemicals, pollution (electric or otherwise) plus heavy metal exposure under "Causes"—factors that precipitate reactive reflexes and/or conditions. Dr. Israel had difficulty with "triggers", i.e., *"I don't know what triggers*

**In Memory of Susan Kreider, RN, CPC, CNOP  
(May 23, 1957 - November 10, 2016)**

---

**Left to Right:**  
**Walene James, Susan Kreider, Don Harkins, Ingri Cassel, Lisa Mullenax**  
 Image source: [http://whale.to/vaccine/james\\_1.jpg](http://whale.to/vaccine/james_1.jpg)

It is with deep sadness and loss to our movement of a light bearer - Susan Kreider. She was a strong supporter of Vaccination Liberation and our message, being our Pennsylvania chapter leader along with Louise Francis. Susan suffered from an intense vaccine injury in October 1990 - 26 years ago. Her injury was from the mercury in the Hepatitis B vaccine series she was compelled to take

to complete her nursing degree and get a job. After consulting with Dr. Harold Buttram and becoming one of his patients, she discovered that the mercury amalgams in her mouth were a key factor in her severe injury. You can read her story here [\*A Nurse is Mercury Poisoned from Hepatitis B Vaccines\*](#)

Her website with a Glossary of Vaccines is here: <http://www.informedchoice.info/cocktail.html>  
Advocating informed choice in vaccine administration in a biologically-vulnerable global society.

In Fall 2002, I remember when we went across country to join others in a 50-state nationwide "We The People" protest regarding government accountability. I wanted to meet Susan for the first time and was quite disappointed it didn't happen then. We were both in Washington D.C. but she was at a Congressional hearing on mercury in dental amalgams and was part of a group from DAMS testifying. Fast forward to Summer 2004 - Alan Yurko, a man falsely-accused of SBS, was gathering activists from around the world to testify at his Evidentiary Hearing in August 2004. Many of us

wanted to go but the expense and distance to go to Florida was a deal breaker until Archie Kalokerinos from Australia was flying out to Florida for the Hearing at his own expense. Everyone reset their priorities at that point and Susan Kreider, Lisa Mullanex and Dr. Harold Buttram all came down from Pennsylvania for the Hearing. (Lisa's husband was in prison at the time for SBS and she was in the heat of publicizing her story of vaccine-induced SBS.) Susan found some time-share condos for us to stay in and we all had quite the meeting of minds -- quite a list of who is who in the movement showed up and it was an incredible blessing to be able to hug Susan for the first time!

Prior to our meeting, in November 2002, Susan had authored with Dr. Harold Buttram and Alan Yurko one of the very first exposes on vaccines causing genetic mutations. This one article made the rounds and was reprinted in newletters: "Vaccines and Genetic Mutations". Thanks to Lisa Jillani of PAVE in North Carolina for continuing to maintain Alan Yurko's website -- a virtual treasure trove of very important information. See [VACCINES AND GENETIC MUTATION](#) by Harold E. Buttram, MD; Susan Kreider, RN; Alan R. Yurko October 11, 2002.

Please note the addendum by Edda West of Vaccine Choice Canada -- breastfeeding is so very important!!!

Fast forward to Fall 2014. I am talking to Susan regularly since she wanted help with a letter she was composing to Lisa Blake, director of GBS/CIDP Foundation International regarding their upcoming symposium: 'Immunizations and Vaccinations, by Peter Donofrio and David Cornblath' were among the overviews of Symposium Topics. They were scheduled to devote a half-hour to "...discuss the lack of any significant evidence relating to flu vaccinations and Guillian-Barré Syndrome after 1977 and will emphasize the higher incidence of Guillian-Barré Syndrome after natural influenza illness..." Further, "They will review the flu vaccination

guidelines which have been proposed by the GBS|CIDP Foundation International, the Neuropathy Association, and the CDC, then will conclude the lecture by contrasting the morbidity and mortality of the natural influenza compared to complications of flu vaccination." A couple of you on this group offered to help and the final letter was sent to the director with copies to all the chapter leaders, who agreed with Susan but weren't willing to rock the boat! At the time, Susan related that she was ill for the last 15 months with headaches, heart palpitations, high blood pressure, insomnia and other symptoms that were identical to someone suffering from 'smart meter syndrome'. I asked her where her electric utility meter was and she drew a blank, never having a reason to check it. I asked her to look outside and locate it, letting me know if it had little clock dials on the face (an analog or 'turtle' meter) or if it had a digital read-out (a smart meter). When she called me back she confirmed that she had a smart meter and it was on the outside wall of her condo just outside her bedroom window – which confirmed for me that she was indeed suffering from 'smart meter syndrome'. I gave her some websites, especially <https://takebackyourpower.net/>.

or [Click here for TakeBackYourPower.net promo art graphic](#).  
Get connected in this overview guide, ask the right questions, and provide letter templates to prevent or remove a 'smart' meter from your home.

She proceeded from there, buying an analog meter online from Jerry Day and switching out the meter herself. What followed was an unbelievable battle with PECO, Pennsylvania Electric Company. In fact, I have an entire folder dedicated to the documents in her case before the Pennsylvania Utilities Commission. Where others had failed in obtaining accommodation for an analog meter, she was prevailing due to her use of the Americans with Disabilities Act. Susan was getting advice from Catherine Frompovich and others who were hot on this issue but she didn't hire an attorney and prepared all her paperwork herself for each hearing before the Commission. Susan was amazing strong and resilient but the pressure she was under was intense - a veritable David and Goliath kind of battle ensued.

So what happened?

Fast forward to October 2016 - Susan ... was considering unplugging and going solar. The estimate she received for doing this was \$60,000. Then she took a fall in her home - breaking or fracturing her leg (forget which). She ended up at the hospital where she was put under anesthesia for surgery. She had a stroke and was then put into ICU, She was weak and recovering but had lost some of her memory.

[For more about the appeal with the utility company, see Louise Francis comments below.]

The rest is too painful for me to recount. Louise Francis has been gracious enough to forward emails from a list that formed of Susan's friends who were taking turns visiting her in the hospital.

At one point she was taken from the hospital and put in a recovery facility but had a second stroke and ended up in ICU again where her brother had to make the decision, at some point, to unplug her. Many of us would like to see her medical records but this likely won't happen since her brother, Ben, is married to a woman who works for Big Pharma. They believe that Susan should have been on pharma blood pressure meds and, if she were, she would be alive today.

In Memory of Susan Kreider, a beautiful and powerful activist

Susan was kind, gentle, generous, feminine, gracious, thoughtful, compassionate AND

passionate. I would always tell her how much I wished that she lived closer to me! She was a joy to work with on any project and had no ego trips to deal with. We all had the same goal in mind and would discuss how to go about the next step with ease and comradery. She used her own vaccine injury to warn others about the dangers of vaccines and would also share with them the dangers of mercury amalgams, and more recently 'smart meters.'

Susan will be sorely missed -- we need more courageous women in this battle against Goliath!

May she find peace on the other side and understand the impact her life has made on so, so many families.

And may Susan's gentle spirit continue to inspire all of us.

In the Spirit of Truth,

Ingri Cassel, director  
Vaccination Liberation

---

[Thank all of you who contributed photos and comments.]

#### Comments by Louise Francis, FCAS, MAAA

Susan devoted a lot of time in the last couple of years of her life to fighting the utility over their attempt to force a smart meter on her. I offer a few additions to the description of her case: At the end of September, Susan was notified that the Public Utility Commission decided against her in what they termed a "preliminary" decision. A brief story appeared in the local newspaper, the Philadelphia Inquirer. <http://www.philly.com/philly/business/energy/PUC-judges-say-smart-meters-are-not-unsafe.html>.

Smart meters are not unsafe, two PUC judges rule - philly.com

The installation of a smart meter on the house of a Philadelphia customer who complained the device made her sick did not constitute unreasonable or unsafe utility ...

Susan was not done with her case. She filed a kind of appeal (called an exception) in the week before her accident. Part of her filing addressed evidence of corruption she had that involved outside interference in her case by a Pa politician whose son works for the utility. She also contacted her state senator who was very supportive and might have been able to served as a last ditch defense against the utility.

There is a more complete write-up of Susan's case that was reviewed by Susan before posting. It is at the bottom of this page: *Smart Meters - The Health Harms, Other Harms, and Resources*. 10/25/2016: *Pennsylvania PUC Shows its Bias in Smart Meter Case* <http://www.healthalertphilly.org/SmartMeters.htm>

# HUP Celebrates Patient Advocate Award Winners!

November 23, 2016

**"Talented, innovative, bringing excellence to everything they do. Trusted, respected, valued. Welcoming and comforting"**

These were just some of the glowing adjectives Carolyn Jackson, COO, read in the narratives describing this year's winners of the HUP Patient Advocacy Recognition Awards. "And the word 'always,'" she added. "These are things they do every day. It is in the fabric of who they are."

This year's winners reflect HUP at its best. They consistently succeed at making the patient experience a great one. And it's making a difference. "With your help, patient satisfaction is at all-time record highs," said Garry Schellb, CEO of the hospital, at this year's Recognition Ceremony. "Our quality and patient outcomes are improving every year, thanks to team efforts led by our awardees."

"We should all strive to emulate their practices every day," said PJ Brennan, MD, chief medical officer and SVP for the Health System.

Congratulations to all of this year's winners! Read below to see how they are all making a difference in the lives of our patients and their families.

## **Sarah Allen, BSN, Emergency Services**

Sarah Allen consistently demonstrates excellence in emergency nursing. A frequent charge nurse and preceptor, Sarah's compassionate nature and team-work mentality is noticed by all disciplines. Her friendly smile and calm demeanor put both patients and families at ease. Sarah is the "go-to" person to assist in soothing an anxious patient and many staff have commented that they were grateful that Sarah was there to defuse a tense situation. The Emergency Department is lucky to have a nurse like Sarah.

## **Diane Cappalletti, BSN, Labor and Delivery**

**Diane is a talented nurse and a compassionate leader. Diane is a clinical expert with more than 16 years of experience supporting families through the process of giving birth. She is always patient centered and easily builds rapport with patient and families who are in her care. She is a true patient advocate!**

**Christine Colon, Radiation Oncology**

**Christine greets our patients when they walk off the elevator for their first treatment planning visit and then becomes the comfortable presence to welcome them for their daily treatments which can last for 2-9 weeks. Christine loves to come to work every day to see the patients' and families' determination and drive. The patients truly inspire her. It is not uncommon for Christine to go out of her way to assist patients with directions, escort, information and just plain caring.**

**Kenneth Flynn, EVS**

**Kenny consistently, without fail, shows compassion towards our patients and their families. He goes above and beyond to help families navigate the clinical areas and he possesses an infectious smile. All his coworkers look to him for guidance and they trust his direction. He always seems to find a way to get everything done.**

**Maurice Howerton, Transport**

**Maurice is a valued member of the transport team. Whether it's looking for chairs all day for the patients coming into the Ravdin lobby, or giving chairs to transporting patients as he comes across them throughout the hospital, or anything and everything that has to do with equipment, Maurice DOES IT WELL. When he's not here, that void is felt all over. So even though he might not fully understand the impact or downplays the importance of what he does, his work is truly valued.**

**Christopher Iyob, RMDS, of Radiology Ultrasound**

**Chris exemplifies being a patient-centered leader for Penn Medicine. Our patients' satisfaction is always his main concern. Working closely with his shared governance team, he engages his staff to work on things to improve our patients' experience. Thank you for going above and beyond for our patients and employees – you are a patient advocate and you make us proud!**

**Sharon Jordan, Emergency Services**

**Sharon is the epitome of professionalism. She understands the stressful environment in the Emergency Department and does everything in her power to ensure that all patients are treated with respect and dignity. You can always count on Sharon to greet all visitors and staff with a warm smile and hello. She goes out of her way to assist all those in need of help. No request is too big or small. It is our honor to have Sharon on our team and we thank her for her commitment to service excellence.**

**Susan Kreider, MSIT, RN, Quality Improvement**

Susan brings a unique perspective to her role as clinical nurse reviewer. Part of her role is to collect postoperative follow-up information from patients or their families at a time when they are least likely able or wanting to communicate. However, Susan has a knack for reinforcing the fact that she is an advocate for patients. Susan also makes sure that our care teams also get to hear the compliments and praise, which might not find its way to them otherwise.

**Joseph Moffa, MSN, PACU**

Joseph is committed to patient and family centered care. He initiated interdisciplinary rounds that include the patient and the family in the discussion. Joe is extremely responsive to patients' concerns and follows up with any patient whose expectations were not met. His team started sending "Thank you for allowing us to care for you" notes to his patients.

**Sindhu Srinivas, MD, Obstetrics & Gynecology**

Sindhu Srinivas has transformed the culture on Labor & Delivery with her inclusive and multi disciplinary approach to patient care and teamwork. She always puts the patient first and looks for innovative ways to engage patients in their care, from bedside rounding to using text messaging. Her kindness and calm demeanor are appreciated by the patients and staff.

**Julia Tchou, MD, PhD, Endocrine and Oncologic Surgery**

Julia Tchou is a dedicated clinician who does complex procedures with superb technical results. She also is a warm and caring physician who helps her patients understand the issues involved in selecting specific treatments. She is always willing to add on an extra patient in the office or see an extra consult in the hospital. In addition, she is dedicated to advancing the science of cancer immunology to bring new and innovative treatments to her patients. She is highly deserving of this important award.

**Sandra Williams of Food Services**

During her 19 years of service to the Food & Nutrition Department at HUP, Sandra has become known for her winning smile and for showing genuine care and concern for all the customers of Au Bon Pain. She listens attentively to their stories and has deep compassion for anyone who has had a difficult time or who has suffered. Her bubbly personality is energizing to all that meet or know her. Sandra is one in a million and we are blessed to have her as part of our team!

*\*It is with great sadness that we report that Susan Kreider suddenly passed away after a brief hospitalization.*
