**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $450+ million annual capex investment. $1.2B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** The majority of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth.

**M&A opportunities expand with focused growth strategy.** WTR completed 19 acquisitions in 2016, contributing to WTR's overall customer growth of 1.6%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions.

**Valuation.** Our $38 price target is ~24x our 2019 EPS estimate, below peers (~25x 2019E EPS), which we believe will expand as WTR executes on EPS growth.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

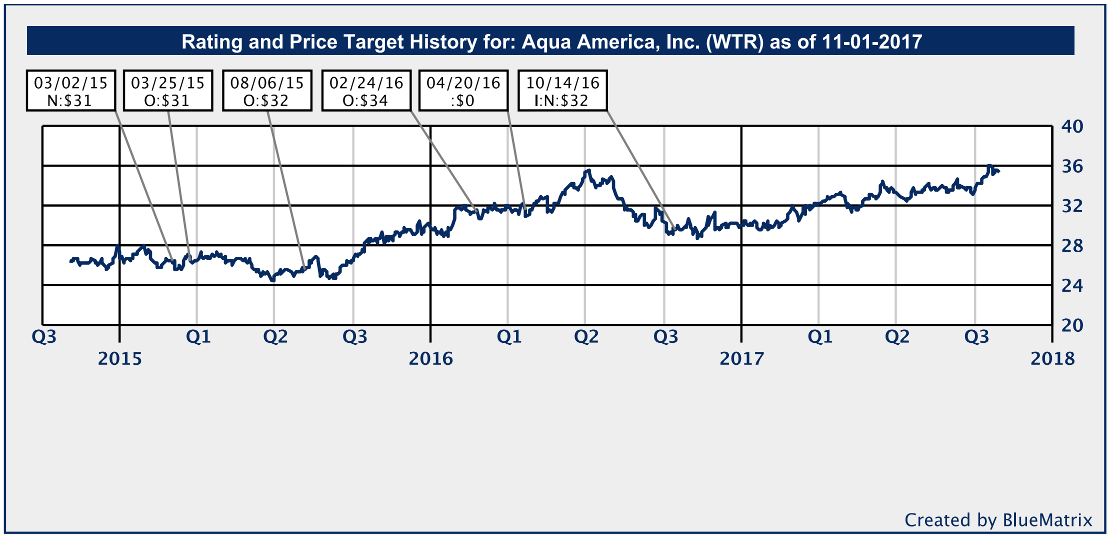
# Appendix - Important Disclosures and Analyst Certification

Approved on 1 November 2017 23:14EDT/ Published on 2 November 2017 01:00EDT.



1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

Robert W. Baird & Co. Incorporated and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months.

Robert W. Baird & Co. Incorporated may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

**Investment Ratings: Outperform (O)** - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. **Neutral (N)** - Expected to perform in line with the broader U.S. equity market over the next 12 months. **Underperform (U)** - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

**Risk Ratings: L - Lower Risk** - Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. **A - Average Risk** - Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. **H - Higher Risk** - Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. **S - Speculative Risk** - High-growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

**Valuation, Ratings and Risks.** The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

**Distribution of Investment Ratings.** As of October 31, 2017, Baird U.S. Equity Research covered 707 companies, with 53% rated Outperform/Buy, 45% rated Neutral/Hold and 2% rated Underperform/Sell. Within these rating categories, 12% of Outperform/Buy-rated and 6% of Neutral/Hold-rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

**Analyst Compensation.** Analyst compensation is based on: 1) the correlation between the analyst's recommendations and stock price performance; 2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; 3) the analyst's productivity, including the quality of the analyst's research and the analyst's contribution to the growth and development of our overall research effort and 4) compliance with all of Robert W. Baird’s internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee.

Analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not compensate research analysts based on specific investment banking transactions.

A complete listing of all companies covered by Baird U.S. Equity Research and applicable research disclosures can be accessed at http://www.rwbaird.com/research-insights/research/coverage/research-disclosure.aspx. # Aqua America, Inc. (WTR)

## Initiating at Neutral Given Near-Term Growth Uncertainty

**We are initiating with a Neutral rating and a $32 price target**. WTR is the second-largest IOU, with solid long-term prospects given its capital investment strategy and successful track record of growth through acquisitions. That said, WTR is currently overearning in several key states, making it more difficult for the company to increase revenue through capital investments. We believe this could make it difficult to outperform peers in the intermediate term, and are waiting for a clearer path to near-term revenue growth before becoming more constructive.

- **We are adding water utilities (WTR, AWK, CWT) to our coverage as water and water infrastructure continue to become a larger theme in resource management.** We believe water utilities will continue to attract new investor interest given their strong regulatory support, favorable backdrop for CAPEX and industry consolidation, and NIMBY headlines relating to water and utility projects. Additionally, water utilities have scarcity value and end market crossover with other companies in our coverage, including ITRI and CCC.
- **Aqua America is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA, and the company has completed over 75 acquisitions in the past five years to help drive growth.
- **WTR is currently overearning in several states, which may mute earnings growth from near-term capital investment.** As a result, WTR may have to rely more heavily on acquisitions to drive EPS. That said, the company has $1.1B in capital investment planned through 2018, and should have a new rate filing in PA become effective in 2019, positioning the company for revenue and earnings growth over the long term.
- **Constructive regulatory mechanisms could increase profitability in the long run**. The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which could lead to a premium peer valuation over time.
- **Focused acquisition growth strategy has increased M&A opportunities**. We expect M&A to remain at heightened levels reflecting recent positive legislative changes in key states.
- **$32 price target.** Our price target is based on a ~22x P/E multiple of our 2018 EPS estimate. This is in line with comps which are currently trading at a ~22x average multiple.

**Aqua America is a holding company for numerous regulated water/waste water utilities serving almost 3.0 million people in the eastern half of the U.S.**

# Details

## Investment Highlights

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion between 2013 and 2033. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $350-$360 million annual capex investment, (~2.6x depreciation). $1.1B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** Approximately 70% of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth.

**M&A opportunities expand with focused growth strategy.** WTR completed 16 acquisitions in 2015, providing 1.1% to WTR's overall customer growth of 1.9%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions

**Potential expansion into non-regulated water space could drive growth in the long run.** The company has recently divested from many of its market-based businesses that it considers too risky and hard to grow. WTR is actively evaluating other market-based activity, and believes that it will contribute to growth in the long run, but does not foresee non-regulated business becoming more than 15% to 20% of Aqua America. WTR has also indicated that it would consider moving into other regulated utility space, believing the core competencies of the regulated water utility market would be profitable in other utility spaces.

| Operating Revenue | $831.7 | $830.4 | $870.8 | $882.6 | $927.2 | $943.7 |
| Growth | | | 4.7% | 6.3% | 6.5% | 6.9% |
| Net Income | $234.7 | $236.0 | $243.5 | $248.4 | $262.6 | $266.5 |
| EPS | $1.32 | $1.33 | $1.37 | $1.40 | $1.47 | $1.50 |

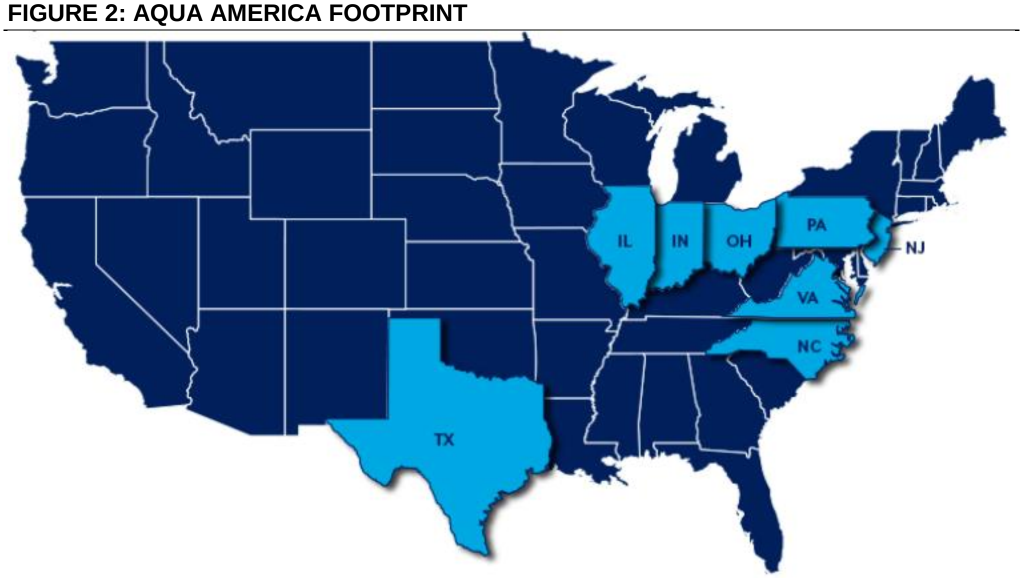
*Source: FactSet, Baird Estimates*

**We are initiating with a Neutral rating and a $32 price target.** Our price target is based on a ~22x P/E multiple of our 2018 EPS estimate. This is in line with comps which are currently trading at a ~22x average multiple.

## Company Overview

**Aqua America is the second-largest investor-owned water utility in the US.** WTR is a holding company for numerous regulated water and wastewater utilities operating in eight states largely in the eastern half of the U.S. that serve almost 3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**FIGURE 2: AQUA AMERICA FOOTPRINT**



*Source: Company Reports*

## Industry Overview

**The United States' public water system provides water to the vast majority of Americans.** US water utilities are broken down into municipal systems and investor-owned utilities. Municipal systems are owned and operated by local governments and account for ~84% of all community water systems, according to the EPA. The current water utility industry is highly fragmented, consisting of ~53k community water systems and ~16k community waste water facilities.

**Consolidation in the industry revolves around small and medium-sized systems.** According to the Environmental Protection Agency (EPA), 1.2% of community systems are "large" (defined as serving over 100,000 people), 16.0% are "medium" (serving 3,301 to 100,000 people) and 82.8% are "small" (serving less than 3,300 people). Large community water systems are believed to serve 46.3% of the population, however, while medium and small systems serve 45.6% and 8.1%, respectively. Smaller systems generally cannot take advantage of economies-of-scale like larger systems, which leads to higher costs per customer. This makes smaller systems attractive acquisition targets for larger investor-owned utilities.

**FIGURE 3: STATE COMMUNITY WATER SYSTEM 20-YEAR NEED BY SIZE AND POPULATION ($B)**

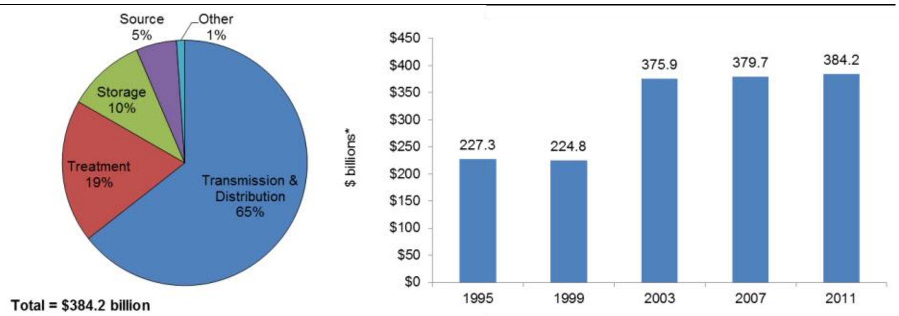
| System Size | Need | | Water Systems | | Population Served | |
|---|---|---|---|---|---|---|
| | $ Billions | % of Need | Number of Systems‡ | % of Water Systems‡ | Population (millions)§ | % of Population Served§ |
| Large Community Water Systems (serving over 100,000 persons)** | $145.1 | 39.1% | 611 | 1.2% | 137.4 | 46.3% |
| Medium Community Water Systems (serving 3,301 to 100,000 persons)** | $161.8 | 43.6% | 8,063 | 16.0% | 135.2 | 45.6% |
| Small Community Water Systems (serving 3,300 and fewer persons) | $64.5 | 17.4% | 41,801 | 82.8% | 24.0 | 8.1% |

Note: Numbers may not total due to rounding.
* This exhibit reports the need for community water systems in the states, Washington D.C., Puerto Rico, and the U.S. Territories. It does not discuss findings for not-for-profit noncommunity systems, needs associated with proposed or recently promulgated regulations, or needs for American Indian or Alaska Native Village water systems.
‡ Based on the DWINSA sample frame as discussed in Appendix A of this report.
§ Data on population served from EPA's *Annual Trends data, including summary inventory, violations and GPR*. June 2011 http://water.epa.gov/scitech/datait/databases/drink/sdwisfed/pivottables.cfm#summary. Does not include populations for systems defined as "Federal Systems" or "Native American," but does include populations served by Alaska Native Village Water Systems. Database distinguished system sizes for "very small," "small," "medium," "large," and "very large," allowing direct comparisons to system size in the Assessment.
** "Large" and "medium" community water systems are defined differently for this Assessment than in the 2003, 1999, and 1995 Assessments. See Appendix A for more information.

*Source: United States EPA, Drinking Water Infrastructure Needs Survey*

**Large US water infrastructure creates long-term earnings potential for regulated water utilities.** According to the EPA, the US public water system infrastructure has a 20-year capital improvement need of $384.2B. This encourages capital investment for water utilities, thereby increasing the rate base and, ultimately, earnings. Other assessment efforts have arrived at similar conclusions; the Congressional Budget Office (CBO) estimates annual water system needs of $16.6B to $28.6B (extrapolates to a 20-year need of $331.2-$571.7B), the EPA's "Clean Water and Drinking Water Infrastructure Gap Analysis" estimates $231-$670B, and the Water Infrastructure Network estimates $28.5B annually.

**FIGURE 4: US WATER INFRASTRUCTURE NEEDS PROJECTIONS**

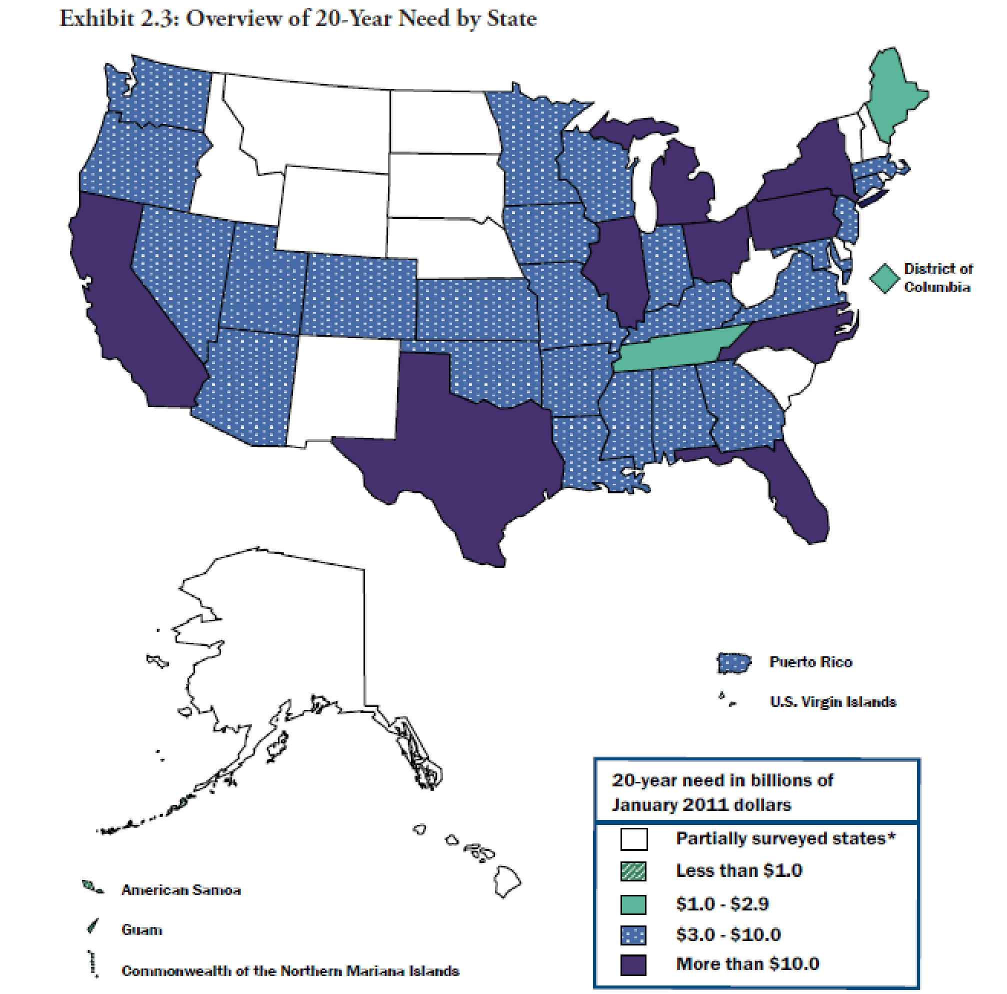


**EPA 2013-2033 Estimates** **DWINSA 20-Year National Needs**

*Source: United States EPA, Drinking Water Infrastructure Needs Survey*

**Major water utilities tend to concentrate in states with significant infrastructure needs.** AWK and WTR both have large presences in PA, a state with ~$14.2B of required infrastructure investment and a favorable regulatory outlook. Similarly, CWT and AWK have operations in CA, where an estimated $44.5B in investment is required over the next 20 years. Figure 4, from the EPA, below outlines projected infrastructure needs by state; in general states with more than $10.0B in 20-year need are better investment opportunities.

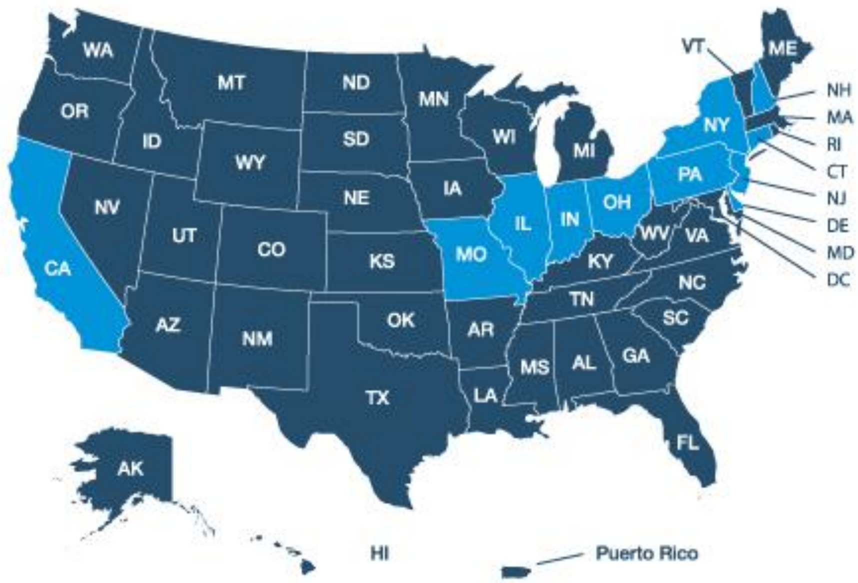
**FIGURE 5: OVERVIEW OF 20-YEAR NEED BY STATE**



*Source: United States EPA, Drinking Water Infrastructure Needs Survey*

**Constructive regulatory environments allow utilities to recoup infrastructure investments more quickly and efficiently, and therefore increase earnings.** The Distribution System Investment Charge (DSIC) is a mechanism designed to reduce regulatory lag (the time between capital investment and increased revenue) by allowing for rate increases outside of a general rate proceeding. The figure below, from the National Association of Water Companies (NAWC), shows states which have implemented DSIC policies, and therefore have more favorable regulatory environments. Generally, large water utilities prefer to invest in states that have both large infrastructure needs and constructive regulatory environments, like PA, CA, NY, and IL.

FIGURE 6: STATES WITH DISTRIBUTION SYSTEM INVESTMENT CHARGE



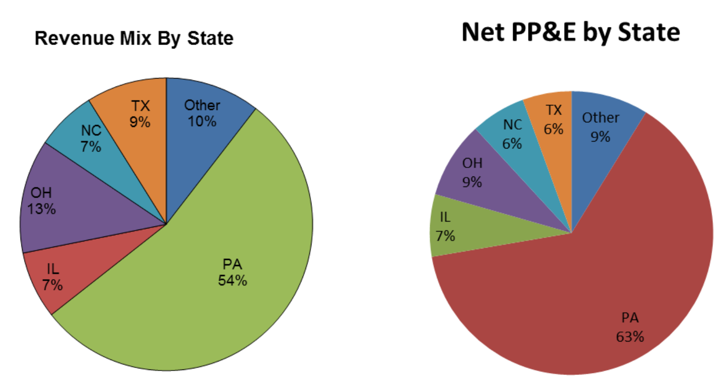
*Source: National Association of Water Companies (NAWC)*

## Business Segments

### Regulated Operations

**Aqua America is concentrated in Eastern states with a rich water supply and favorable regulatory environments.** Aqua generates the majority of its earnings in the state of Pennsylvania, with 63% of net PP&E and 54% of regulated revenue coming from the state (see Figure 5). North Carolina, Illinois, Ohio and Texas are the next largest states, each representing 5-10% of Aqua's earnings potential.

FIGURE 7: NET PP&E AND REGULATED REVENUE MIX BY STATE (2015)



*Source: Company Reports*

**Pennsylvania**

Aqua America's Pennsylvania subsidiary represents ~54% of Aqua America's regulated revenue and ~63% of its asset base. Aqua Pennsylvania serves roughly 420,000 connections representing approximately 1.4 million people in 30 counties. Water supply typically comes from surface water sources, such as streams, rivers and reservoirs, backed by 12 surface water treatment plants in the state. Additionally, WTR has ~5,600 miles of pipe and 200 wells in the state.

Aqua Pennsylvania has also provided wastewater services to various municipalities since 1996. It now provides wastewater services to approximately 14,500 customers throughout Pennsylvania.

**New Jersey**
Aqua New Jersey provides water and wastewater services to over 57,000 customers and 165,000 people in 27 municipalities. Aqua New Jersey became part of Aqua America in 1999 with the Consumers Water acquisition. It owns over 650 miles of pipe and 73 wells. Water supply principally comes from groundwater and wells.

**Ohio**
Aqua Ohio serves over 140,000 customers representing more than 500,000 people in 19 counties across Ohio. Aqua Ohio owns over 2,200 miles of pipe, 95 wells, and 33 water treatment facilities. Water supply generally comes from a combination of wells, Lake Erie, man-made lakes.

**Illinois**
Aqua Illinois serves over 70,000 water and wastewater customers representing approximately 225,000 people in 13 different counties throughout Illinois. Aqua Illinois owns ~928 miles of pipe, six water treatment facilities, nine wastewater treatment facilities, and 30 wells. Water supply comes from a combination of rivers, wells and lakes.

**Indiana**
Aqua Indiana serves around 24,500 customers representing more than 77,000 people in 11 counties throughout the state. The vast majority of connections in Indiana are wastewater customers. Aqua Indiana owns one water treatment facility and nine wastewater facilities.

**North Carolina**
Aqua North Carolina serves ~75,000 customers and 270,000 people in 52 counties. Water is supplied through a combination of wells and interconnections to adjacent water systems.

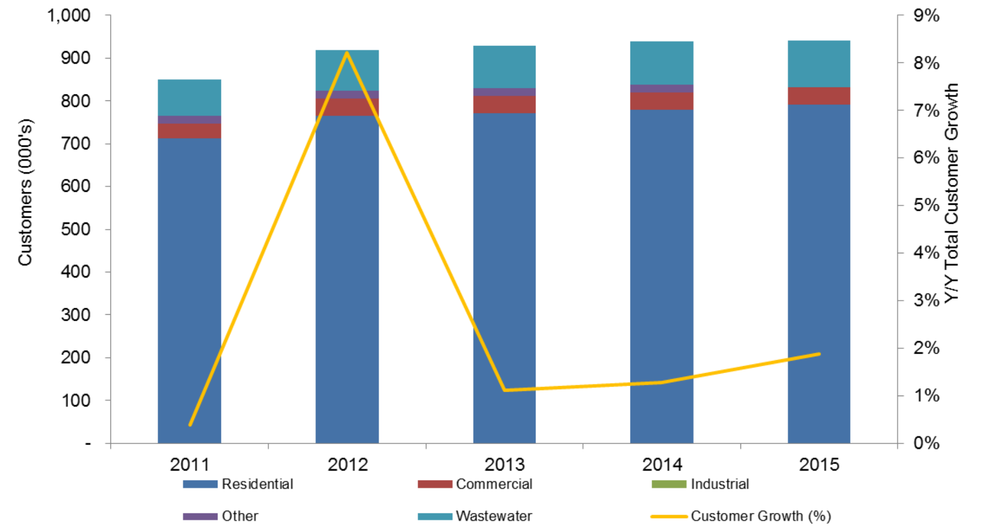
**Texas**
Aqua Texas serves over 60,000 customers and 170,000 people through ~400 water and wastewater facilities in 53 counties. Aqua Texas owns over 500 wells and 750 miles of pipe. Water supply principally comes from the 547 wells in the state.

**Virginia**
Aqua Virginia serves over 30,000 customers and 75,000 people. Water supply principally comes from the Middle Potomac Aquifer, using WTR's 343 wells in the state, and surface water from the Rivanna River.

## Customer Base

**WTR has reached its stated customer growth target of 1.5-2.0% in every year since 2011.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. The company currently serves over 950,000 customers and has maintained a growth rate of ~1.5% in recent years.

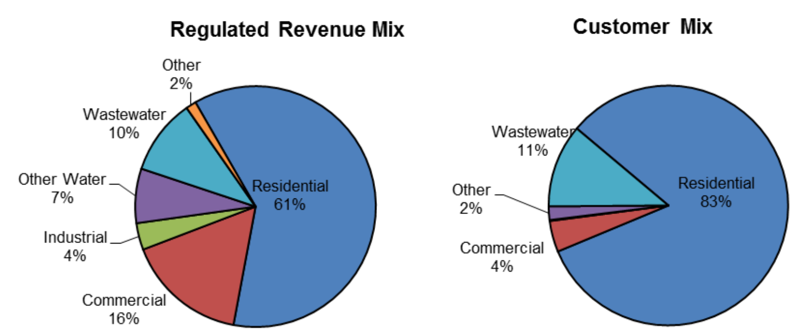
**FIGURE 8: UTILITY CUSTOMERS (000'S)**



*Source: Company Reports*

**Aqua America provides water and/or wastewater service to over 950,000 customers, the majority of which are residential water customers.** While 83% of the customer base is residential, only 61% of revenue comes from residential customers as average bill sizes are lower due to lower usage. Over the last five years, customers receiving wastewater services has maintained the highest growth rate among Aqua's customer classes as the company has sought to establish a presence in this market through acquisitions.

**FIGURE 9: UTILITY REVENUE AND CUSTOMER MIX (2015)**



*Source: Company Reports*

## Market-Based Operations

**WTR is in the process of reevaluating its Market-Based business segments as part of a larger effort to consolidate the business around more profitable segments.** The company has recently divested from many of its market-based businesses that it considers too risky and hard to grow. At the end of 2015, market-based business accounts for less than ~4% of WTR revenue.

**The company plans to retain two segments, which it considers particularly low risk and low cost.** WTR will continue to operate Home Services, where it operates as the insurance product that protects service lines between water mains and customers' homes. In this business, WTR receives a royalty for work done by a company called HomeServe, so it is seen as low risk. WTR will also retain a limited number of O&M contracts that contribute to earnings.

**WTR is actively evaluating other market-based activity, and believes that it will contribute to growth in the long run.** Importantly, the company does not foresee non-regulated business becoming more than 15% to 20% of Aqua America.

## Major Acquisitions

**FIGURE 10: MAJOR ACQUISTIONS**

| WTR Major Acquisitions | | | | | |
|---|---|---|---|---|---|
| Date | Company | Acquired From | Customers Added | Cost | Locations |
| Mar-99 | Consumers Water Company | Merger | 700,000 | Merger | OH, IL, ME, NJ |
| Jul-03 | AquaSource, Inc. | DQE | 130,000 | $178.4M cash | 9 States |
| Jul-04 | Florida Water Services | ALLETE | 40,000 | $13.1M cash | Central FL |
| Jun-04 | Heater Utilities, Inc. | ALLETE | 50,000 | $75.7M cash/debt | NC |
| Jan-07 | New York Water Service Corp. | Utilities & Industries Corp. | 45,000 | $52.3M cash/debt | NY |
| May-12 | American Water's Ohio Operations | AWK | 57,000 | $112.0M cash/debt | OH |

*Source: Company Reports*

**American Water's Ohio Operations** (May 2012) - Aqua America acquired American Water's Ohio regulated operations for $101M in cash plus assumed debt of $11M. The transaction gave WTR eight additional water systems and one wastewater system, amounting to ~57,000 new connections. At the same time, WTR sold its seven New York water systems to AWK for $39M in cash and assumed debt of $23M. This reflected WTR's effort to consolidate its customer base in fewer states and improve its operational efficiency.

**New York Water Service Corporation** (January 2007) – Aqua America acquired New York Water on 1/1/2007 for $52.3 million in cash and debt, recording $10.8 million in goodwill. New York Water has nearly 45,000 customers on Long Island and generated revenue of $21.8 million in 2005.

**Heater Utilities, Inc.** (June 2004) – Aqua America acquired Heater Utilities on 6/1/2004 for $75.7 million in cash and debt, recording $18.8 million in goodwill. Heater provided water and wastewater service to over 50,000 customers in North Carolina (principally suburban Raleigh, Charlotte, Gastonia and Fayetteville). The NCUC approved a mechanism to recover up to two-thirds of the acquired goodwill assuming certain conditions, principally upgrading existing infrastructure.

**Florida Water Services Corporation** (June 2004) – Aqua America acquired Florida Water Services from ALLETE on 6/30/2004 for $13.1 million in cash. Aqua America did not record any goodwill in the transaction following a 12/2005 ruling by the FPSC regarding rate base that reduced the final purchase price. Florida Water provided water and wastewater services to approximately 40,000 residents in 63 systems in central Florida.

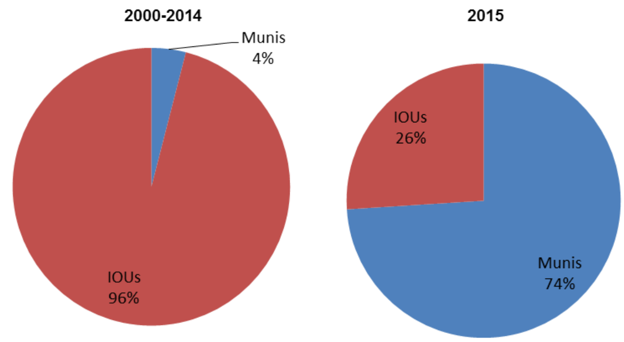
**AquaSource, Inc.** (July 2003) – Philadelphia Suburban acquired certain assets of AquaSource from DQE on 7/31/2003 for $190.7 million in cash, subsequently changing its corporate name to Aqua America on 1/16/2004 to reflect its growing national presence. The final purchase price was reduced to $178.4 million in August 2004 following working capital adjustments. The acquisition included four water and wastewater subsidiaries of AquaSource, including various integrated O&M contracts and related assets, serving over 130,000 customers in approximately 600 small systems within 11 states (nine states following disposal of several systems).

**Consumers Water Company** (March 1999) – Philadelphia Suburban merged with Consumers Water on 3/10/1999. Consumers Water provided water and wastewater services to approximately 700,000 customers in four states (Ohio, Illinois, Maine and New Jersey).

## Tuck-in Acquisition Strategy

**Aqua America has and will continue to rely on tuck-in acquisitions to increase its customer base.** Historically, WTR has acquired mostly Investor-Owned Utilities (IOUs). Between 2000 and 2014, WTR made 280 total acquisitions, amounting to 422,000 total connections. 96% of these connections were IOUs and 4% were wastewater connections. Going forward, WTR plans to focus on larger municipal deals and increasing its wastewater footprint. In 2015, WTR made 16 acquisitions, amounting to 10,621 connections; 74% of new connections were municipalities and 20% of connections were wastewater.

**FIGURE 11: NEW ACQUISITION STRATEGY**



*Source: Company Reports*

**WTR has historically done ~15 acquisitions a year, but currently the company targets growing the customer base ~1% through acquisitions**. In recent years, the company has consolidated its customer base in fewer states as part of an effort to improve operating efficiency. As a result, management has indicated that it will not move to a new state for less than ~25,000 customers, choosing instead to consolidate in states with favorable regulator environments. The ideal acquisition target for WTR would be sizeable (~2,500 customers or more), require significant capital upgrades, and would ideally be in a state in which it already does business.

### Non-Water Acquisitions

**WTR has indicated that it would consider moving into other regulated utility spaces**. The company indicated that the skill sets and core competencies of the regulated water utility market extend into other utility spaces. As a result, the company indicated that it would be willing to move into a new regulated market that would leverage its regulator relations and requires large capital investment.

## Regulatory Overview

**Regulated utilities generate income by filing rate cases with the state public utility commission (PUC).** During these proceedings, the PUC studies costs of construction, maintenance, operation, administration and financing. Based on these factors, the PUC sets the water rates, and in turn determines the utility's revenue. As a result, regulated utility growth relies on constant capital expenditures and constructive rate case results.

**Investor-owned utilities are subject to regulation at both the state and federal level**. State regulators are primarily responsible for economic regulation, reliability, and compliance with quality standards while federal regulation (e.g., Environmental Protection Agency (EPA)) sets national quality standards. The Safe Drinking Water Act, signed in 1974 and amended in 1986 and 1996, is designed to ensure the quality of the country's drinking water; the EPA enforces quality standards though a continuous and mandatory testing process. These tests are required periodically, usually daily, weekly, or monthly, depending on which compound is being tested. Municipality-owned utilities need to comply with EPA standards, but infrastructure investment decisions and subsequent rate increases are determined by the local politicians and the municipalities themselves. By contrast, the for-profit utilities have to comply with EPA standards but also need to seek regulatory approval from the state Public Service Commissions to earn on incremental investments and to receive rate increases.

**The state regulatory process varies by state and is an arduous and slow moving process (6-12 months typically, but some cases can take up to two years)**. When a previous case is set to expire, an investor-owned utility can file a new rate case with the state PUC. Rate cases are generally binding for multiple years; however, in a rising cost or accelerated infrastructure investment cycle (as seen between 2004 and 2009), rate cases are often filed more often (every few years). The parties involved in general rate cases include the company, the state PUC, including the PUC staff and an administrative law judge (ALJ), and the consumer advocate. Major consumers and politicians can also play an active role in rate cases.

**Simplistically, in the filing, the utility provides its rate base and the required revenue levels and rates necessary to recover investment and increased costs**. The utility provides its view on a reasonable required return and financing structure, anticipated costs to provide regulated services, proposed projects to maintain/enhance service, and requests revenue increases to offset investments. Other parties granted intervener status in the rate case then offer their opinion on some or all of the rate case details. The ALJ assigned to the case reviews all submitted evidence and renders a non-binding opinion. The ALJ's decision is then considered by the commissioners when providing a final decision. A rate case can be settled by all interested parties before a final commission order, or it can be appealed to the courts. Settlements are preferred, as they are less typically contentious, reduce regulatory/legal delays, and reduce costs.

## Regulatory Mechanisms

**A growing number of states have recognized the importance of consistent investment in system infrastructure and therefore have implemented regulatory policies to incent investor-owned utilities to invest in their infrastructure.** In particular, given the growing trend of water conservation and therefore lower water usage, it has become increasingly important to have regulatory mechanisms that allow the company to generate adequate returns on their invested capital regardless of usage. Below we list examples of important regulatory mechanisms that reduce regulatory lag:

- **DSIC (Distribution System Improvement Charge)** mechanisms allow regulated utilities to earn a return on certain infrastructure investments without having to file a full-blown rate case. In practice the amount recoverable is limited to a percentage of total revenue, and the investment is recovered through a surcharge on the customer's account that is typically adjusted on a quarterly basis. These infrastructure investments are ultimately rolled into the company's rate base during the next rate case proceeding. The percentage limit is then reset to zero upon completion of the next rate case. The DSIC is limited to investment in pipes and mains and cannot be used for growth projects. Therefore, companies can still experience regulatory lag on larger projects that require a rate case, but pipe/main replacement will start earning a return immediately with the DSIC. Pennsylvania was the first jurisdiction to adopt the DSIC mechanism in 1996, but other jurisdictions have followed like IL, IN, NJ and PA.
- **Infrastructure Rehabilitation Surcharges** allow WTR to add a surcharge to water or wastewater bills to offset depreciation and capital costs associated with capital expenditures related to upgrading water systems. This serves to limit the regulatory lag, which is the gap between the time that a capital project is completed and the recovery of its costs in rates. Currently six states allow for the use of surcharges, which provided revenues of $3.26M in 2015, $4.60M in 2014, and $3.21M in 2013. The states that allow surcharges, and their respective rates, are listed below.

**FIGURE 12: INFRASTRUCTURE RECOVERY SURCHARGES BY STATE**

| State | Allowed Surcharge |
|---|---|
| Ohio | 12.75% water<br>9% wastewater |
| Indiana | 10% |
| Pennsylvania | 7.5% water<br>5% wastewater |
| New Jersey | 5% |
| Illinois | 2.50% |
| North Carolina | 5% |

*Source: Company Reports*

### State Regulatory Commissions

**Pennsylvania (Pennsylvania Public Utilities Commission – PPUC)**
Pennsylvania is WTR's most favorable regulatory environment, as the commission has proactively adopted enhanced regulatory recovery mechanisms that encourage investment in the state's dated water distribution infrastructure. The most notable is the Distribution Systems Improvement Charge (DSIC) recovery mechanism, which was adopted in 1996. The DSIC mechanism allows companies to recover incremental pipe investment between rate cases proceedings, by allowing PAWC to quarterly adjust for and recover capital invested, without having to go through the formal rate case process. A surcharge of up to 7.5% of revenue can be recovered between rate cases. The DSIC mechanism has led to significantly higher infrastructure investment in PA's water system due to the minimal regulatory lag. WTR's PA rate base is estimated to be $2.41 billion.

**New Jersey (New Jersey Board of Public Utilities – NJBPU)**
New Jersey has a reasonably constructive regulatory environment, including DSIC, single tariff pricing, and expense mechanisms, but it lags behind Pennsylvania in terms of progressive reforms. New Jersey currently allows an infrastructure surcharge of 5%. WTR's NJ rate base is currently $134 million, and currently has a rate case pending with the NJPBU in which the company requests an annualized revenue increase of $2.5M.

**Illinois (Illinois Commerce Commission – ICC)**
WTR recently received an annualized revenue increase of $765,000 through a surcharge filing in Illinois, which allows a 2.5% surcharge recovery per year. As of December 31, 2015, WTR had a rate based of $213M in IL.

**Indiana (Indiana Utility Regulatory Commission – IURC)**
WTR has a rate base of $73M in Indiana, which allows a 10% infrastructure surcharge. WTR currently has a rate case pending with the IURC in which it requested an annualized revenue increase of $2.3M

**Ohio (Public Utilities Commission of Ohio- PUCO)**
WTR currently has a rate case pending with the PUCO in which is requests an additional $5.6M in annualized revenue, and has already been awarded $1.4M in revenue increases in 2016. Ohio allows high infrastructure surcharges of 12.75% for water and 9% for waste water. As of December 31, 2015, WTR had a rate base of $256M in Ohio

**Texas (Public Utility Commission of Texas- PUC)**
WTR had a rate base of $193M in Texas as of December 31, 2015. In 2016, WTR was awarded a revenue increase of $225,000 by the PUC.

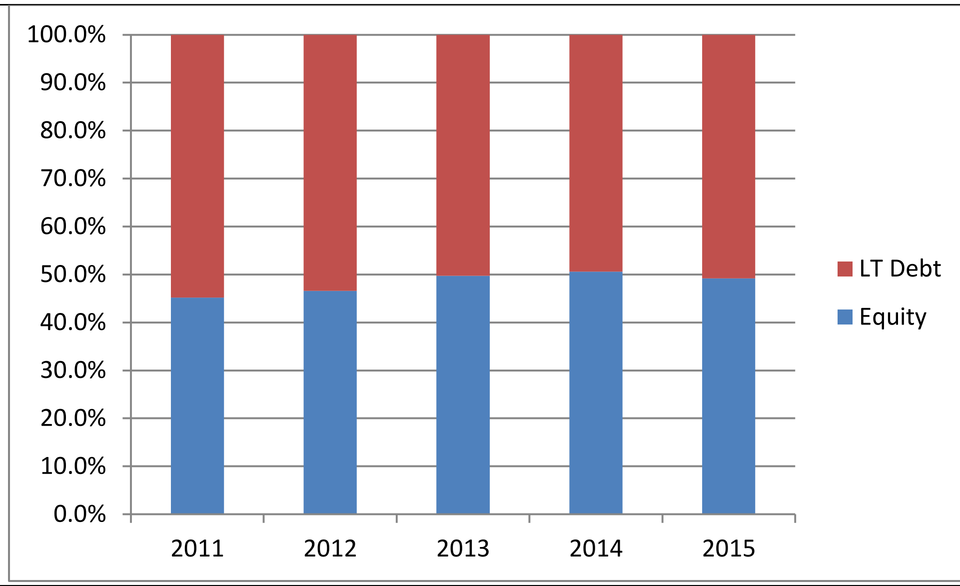
**North Carolina (North Carolina Utilities Commission- NCUC)**
As of December 31, 2015, WTR had a rate base of $124M in North Carolina, which allows an infrastructure surcharge of 5%. In 2016, WTR received a revenue increase of $1.0M from the NCUC.

**Virginia (State Corporation Commission- SCC)**
As of December 31, 2015, WTR had a rate base of $65M in Virginia. WTR was awarded a $1.6M revenue increase through rate case filings in 2016.

## Financials

**Aqua America maintains a fairly conservative balance sheet in line with its regulatory agreements**. As of December 31, 2015, equity represented 49% of total capitalization, in line with its average since 2011. The company issues equity, both through marketed secondary offerings and DRIP and direct stock purchases plans, in order to maintain an appropriate capitalization while funding numerous acquisition opportunities and significant capital expenditures.

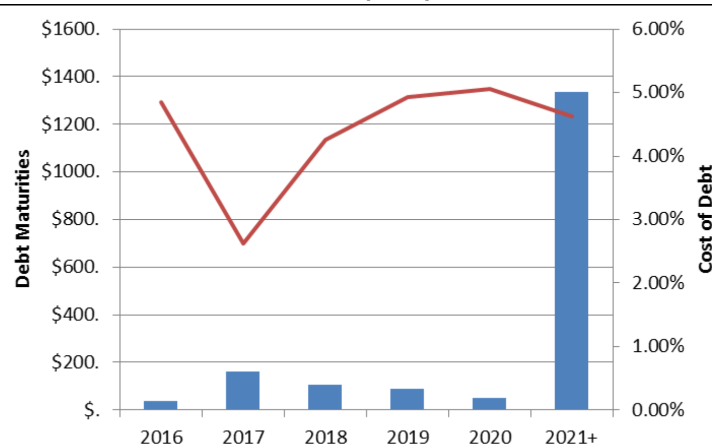
**FIGURE 13: FINANCIAL CAPITALIZATION**



*Source: Company Reports*

**Long-term debt issuance and refinancing is an ongoing necessity of Aqua's financial strategy to finance business expansion.** Aqua has limited debt maturities, totaling $441.5 million over the next five years. 9.2% of total long-term debt which matures in 2017.

**FIGURE 14: LONG-TERM DEBT MATURITIES ($MIL)**



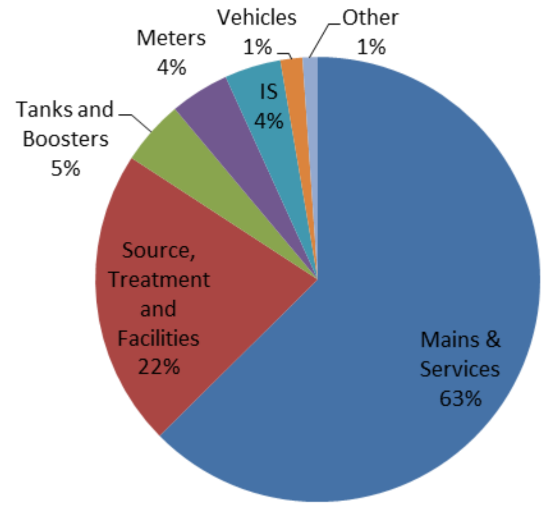
*Source: Company Reports*

**The current annualized dividend rate of Aqua America is $0.7652 and the expected payout ratio is 57.8%.** WTR has increased its dividend 26 times in the last 25 years. It targets a payout ratio of 60-70%, but has been slightly short of that; the dividend payout ratio since 2000 has been 55-60%. We expect Aqua will continue to provide steady dividend growth.

**We believe the long-term value in the stock comes from Aqua's capacity to fund capital infrastructure investments and complete acquisitions.** This leads to rate base growth and, in turn, earnings growth. The company has been able to grow rate base by 5.4% annually since 2000 through the combination of numerous acquisitions and significant capital investments. Since 2000, company-funded capital expenditures have been approximately 3x depreciation levels.

**Capital expenditure focus going forward has shifted towards maintaining and replacing existing water pipes.** Major capital projects in the past have included the addition of water treatment facilities to comply with EPA regulations and the rehabilitation of acquired water systems. The majority of the accelerated compliance related expenditures, however, have been made at this point. Management notes it plans to spend 62.6% of its capital budget on Mains and Services and 21.6% on Source, Treatment, and Facilities. All told, management plans to spend over $1.1B on capital investment over the next three years.

**FIGURE 15: 2016E TO 2018E CAPITAL INVESTMENT BREAKDOWN**



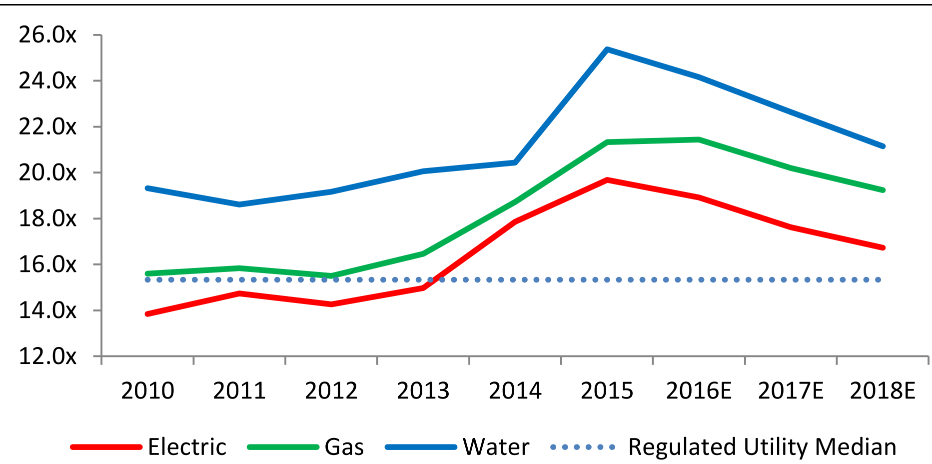
*Source: Company Reports*

## Financial Trends and Valuation

**We are initiating with a Neutral rating and a $32 price target.** Our price target is based on a ~22x P/E multiple of our 2018 EPS estimate. This is in line with comps which are currently trading at a ~22x average multiple.

**As detailed in Figure 16, regulated utility forward P/E multiples have risen steadily from their 10-year lows during 2008-2009.** This was driven by gradually improving economic and market conditions in addition to an acceleration of M&A, infrastructure investment and improved margins reflecting more widespread implementation of improved regulatory recovery mechanisms for capital investment. We expect water utilities to be fully valued at a P/E multiple on 2018 EPS of 20.0-22.0x in the long term, a premium to electric and natural gas utilities given transparency for above-average EPS growth primarily fueled by accelerated pipe replacement needs recovered via tracking mechanisms that are expected to keep earned ROEs close to authorized levels.

**FIGURE 16: FORWARD P/E TRENDS FOR ELECTRIC, GAS AND WATER UTILITIES**



*Source: FactSet*

## FIGURE 17: EPS GROWTH TRENDS

| | Y/Y EPS Change | | | | | | | | | | 3 YR |

*Source: FactSet, Baird estimates*

*Note: Median calculations are from 2010-2015.*

**WTR has a strong dividend record**. WTR had a median dividend growth rate of 7.7% from 2010-2015, which was much higher than the median water utility growth rate (~2.9%) and all utilities which averaged 3.4% growth over the same time frame. Aqua targets a payout ratio of 60-70%, and since it is currently in the mid-50s, we expect its dividend to grow over the next three years.

**FIGURE 24: BAIRD VERSUS CONSENSUS ESTIMATES (2016E-2018E)**

| | 2016E | | 2017E | | 2018E | |
|---|---|---|---|---|---|---|
| | Baird Estimates | Consensus Estimates | Baird Estimates | Consensus Estimates | Baird Estimates | Consensus Estimates |
| Operating Revenue | $831.7 | $830.4 | $870.8 | $882.6 | $927.2 | $943.7 |
| Growth | | | 4.7% | 6.3% | 6.5% | 6.9% |
| Net Income | $234.7 | $236.0 | $243.5 | $248.4 | $262.6 | $266.5 |
| EPS | $1.32 | $1.33 | $1.37 | $1.40 | $1.47 | $1.50 |

*Source: FactSet, Baird Estimates*

**Our initial estimates have WTR's revenue growing at a CAGR of 3.65% per annum from 2016 to 2018.** We believe it may be difficult for WTR to see significant EPS growth until the next rate case in Pennsylvania, which may not become effective until 2019. That said, increases in revenue and EPS could be driven through additional acquisitions, and/or capital investment in the intermediate term.

**We are initiating with a Neutral rating and a $32 price target.** Our price target is based on a ~22x P/E multiple of our 2018 EPS estimate. This is in line with comps which are currently trading at a ~22x average multiple.

## Competition

**American Water Works (AWK-$71.29-Outperform).** AWK is the largest investor-owned regulated water/wastewater utility in North America. Its regulated utility serves about 3.1 million water and 140,000 wastewater customers (over 14 million people combined) in 16 states. Additionally, AWK has a non-regulated segment (~14% of total revenue). Including its non-Regulated Businesses, AWK's presence spans 47 states and Ontario, from the East coast and Midwest region to the Southwest. Pennsylvania and New Jersey account for almost 50% of total water revenue. AWK was founded in 1886 and is headquartered in Voorhees, NJ.

**California Water Services (CWT-$32.38-Neutral).** CWT is the largest publicly traded water utility west of the Mississippi River and third-largest in the United States. CWT's regulated business consists of the production, purchase, distribution and sale of water for residential, commercial, industrial, and public use. The non-regulated operations, called Utility Services, leverage CWT's expertise in operating water systems and provide related water utility services, such as meter reading and water testing services for third-party systems. CWT serves approximately ~509,000 customer connections, generates more than $580 million in annual revenue and owns over $1.7 billion in net utility plant assets.

**American States Water (AWR-Not Covered).** AWR provides water service to approximately 261,000 customers located throughout 10 counties in Northern, Coastal and Southern California. The company also distributes electricity to approximately 24,000 electric customers in the city of Big Bear and surrounding areas in San Bernardino County, California. The company also provides operations, maintenance, and construction management for water and wastewater systems located on military bases across the country.

**SJW Corp. (SJW-Not Covered)**. SJW provides water service to more than one million people in San Jose, California and surrounding communities and in Canyon Lake, Texas and nearby communities. It is the parent company of San Jose Water Company, SJWTX, Inc., Texas Water Alliance Limited, SJW Land Company, and SJW Group, Inc.

**Middlesex Water (MSEX-Not Covered).** MSEX operates water and wastewater systems in New Jersey and Delaware. The company serves ~60,000 retail customers in New Jersey and was incorporated as a water utility company in 1897.

**York Water (YORW-Not Covered)**. YORW is the oldest investor-owned water utility in the United States, and impounds, purifies, and distributes water across its territory. The company serves 47 municipalities, largely located in south-central Pennsylvania. The company serves an estimated population of 180,000 through approximately 64,000 service connections.

**Connecticut Water Services (CTWS-Not Covered).** CWTS is the largest publicly traded water company based in New England, serving ~124,000 customers in 77 municipalities throughout Connecticut and Maine.

**Artesian Resources- A (ARTNA-Not Covered).** ARTNA offers water, wastewater and related services on the Delmarva Peninsula. Artesian supplies 7.6 million gallons of water per year through 1,218 miles of water main to about 301,000 people.

## Management

**Christopher Franklin - President and Chief Executive Officer**
Mr. Franklin has been president and CEO since 2015. Before that he served as COO (2012-2015) and regional president of Midwest and Southern Operations (2010-2012) for WTR. He has worked with WTR since January 1993.

**David Smeltzer - Chief Financial Officer**
Mr. Smeltzer has served as CFO of Aqua America since 1999. Before that he served as the VP of Rates and Regulatory Relations for the Philadelphia Suburban Water Company, which would later become Aqua America. He has worked for the company since 1986.

**Richard Fox - Chief Operating Officer**
Mr. Fox has served as COO of Aqua America since 2015. He has previously served with the company as regional president of Regulated Utilities (2012-2015), and president of Aqua utilities in Florida (2011-2012). He joined WTR in 2002.

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion between 2013 and 2033. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $350-$360 million annual capex investment, (~2.6x depreciation). $1.1B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** Approximately 70% of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth

**M&A opportunities expand with focused growth strategy.** WTR completed 16 acquisitions in 2015, providing 1.1% to WTR's overall customer growth of 1.9%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions

**Potential expansion into non-regulated water space could drive growth in the long run.** The company has recently divested from many of its market-based businesses that it considers too risky and hard to grow. WTR is actively evaluating other market-based activity, and believes that it will contribute to growth in the long run, but does not foresee non-regulated business becoming more than 15%-20% of Aqua America. WTR has also indicated that it would consider moving into other regulated utility space, believing the core competencies of the regulated water utility market would be profitable in other utility spaces.

**Valuation.** Our $32 price target is 22x our 2018 EPS estimate, in line with peers when fully valued (20x-22x 2018E EPS), reflecting average EPS growth opportunities and generally more constructive regulatory mechanisms.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

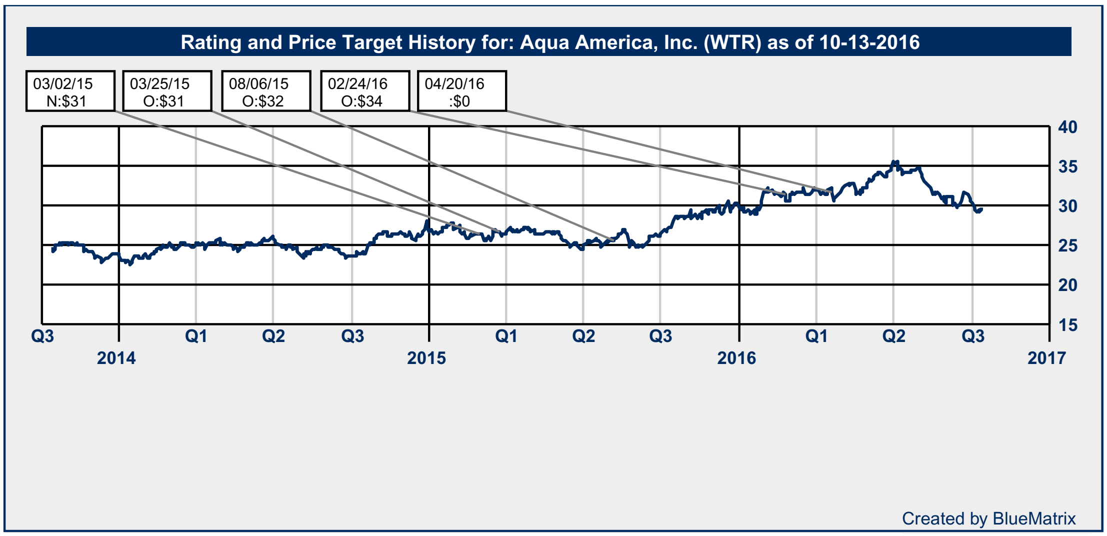
# Appendix - Important Disclosures and Analyst Certification

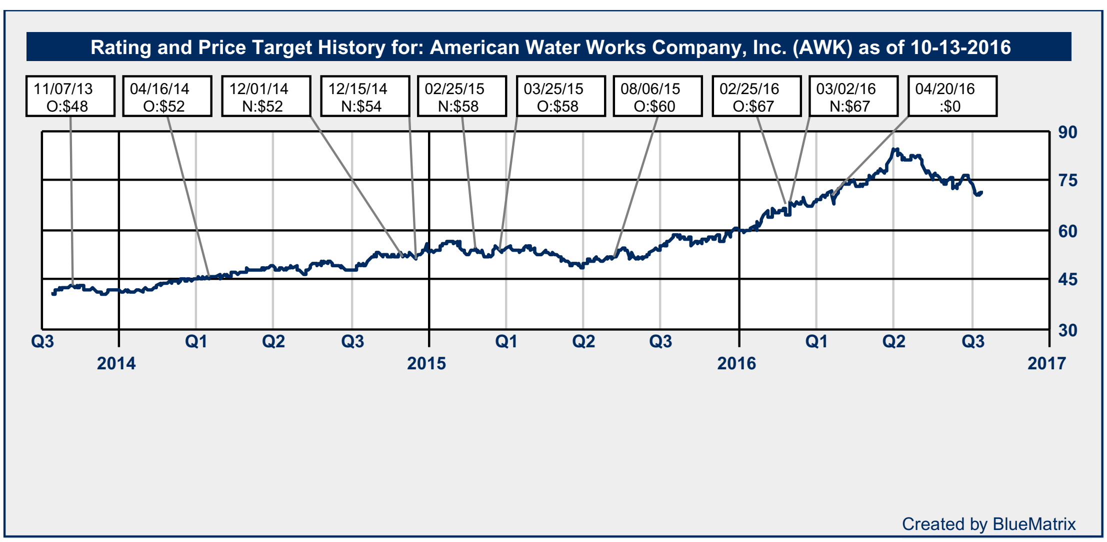
Approved on 13 October 2016 23:52EDT/ Published on 14 October 2016 01:00EDT.

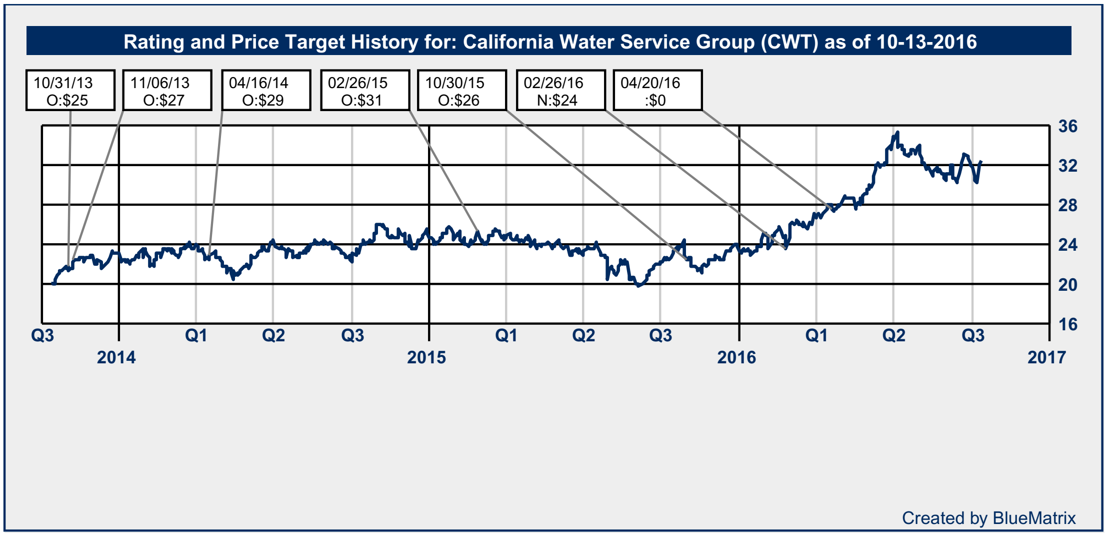
### Covered Companies Mentioned

All stock prices below are the 10/13/2016 closing price.

American Water Works Company, Inc. (AWK - $71.76 - Outperform)
Aqua America, Inc. (WTR - $29.77 - Neutral)
California Water Service Group (CWT - $32.53 - Neutral)
(See recent research reports for more information)







1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR, AWK and CWT.

3 Robert W. Baird & Co. Incorporated and/or its affiliates have received investment banking compensation from California Water Service Group in the past 12 months.

**Appendix – Important Disclosures and Analyst Certification**

Robert W. Baird & Co. Incorporated and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months.

Robert W. Baird & Co. Incorporated may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

**Investment Ratings: Outperform (O)** - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. **Neutral (N)** - Expected to perform in line with the broader U.S. equity market over the next 12 months. **Underperform (U)** - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

**Risk Ratings: L - Lower Risk** - Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. **A - Average Risk** - Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. **H - Higher Risk** - Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. **S - Speculative Risk** - High-growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

**Valuation, Ratings and Risks.** The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

**Distribution of Investment Ratings.** As of September 30, 2016, Baird U.S. Equity Research covered 719 companies, with 49% rated Outperform/Buy, 50% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 8% of Outperform/Buy-rated and 4% of Neutral/Hold-rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

**Analyst Compensation.** Analyst compensation is based on: 1) the correlation between the analyst's recommendations and stock price performance; 2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; 3) the analyst's productivity, including the quality of the analyst's research and the analyst's contribution to the growth and development of our overall research effort and 4) compliance with all of Robert W. Baird's internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee.

Analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not compensate research analysts based on specific investment banking transactions.

A complete listing of all companies covered by Baird U.S. Equity Research and applicable research disclosures can be accessed at http://www.rwbaird.com/research-insights/research/coverage/research-disclosure.aspx. You can also call 800-792-2473 or write: Robert W. Baird & Co., Equity Research, 777 E. Wisconsin Avenue, Milwaukee, WI 53202.

**Analyst Certification**
The senior research analyst(s) certifies that the views expressed in this research report and/or financial model accurately reflect such senior analyst's personal views about the subject securities or issuers and that no part of his or her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in the research report.

**Disclaimers**

**Baird prohibits analysts from owning stock in companies they cover.**

This is not a complete analysis of every material fact regarding any company, industry or security. The opinions expressed here reflect our judgment at this date and are subject to change. The information has been obtained from sources we consider to be reliable, but we cannot guarantee the accuracy.

**ADDITIONAL INFORMATION ON COMPANIES MENTIONED HEREIN IS AVAILABLE UPON REQUEST**

The Dow Jones Industrial Average, S&P 500, S&P 400 and Russell 2000 are unmanaged common stock indices used to measure and report performance of various sectors of the stock market; direct investment in indices is not available.

Baird is exempt from the requirement to hold an Australian financial services license. Baird is regulated by the United States Securities and Exchange Commission, FINRA, and various other self-regulatory organizations and those laws and regulations may differ from Australian laws. This report has been prepared in accordance with the laws and regulations governing United States broker-dealers and not Australian laws.

**Other Disclosures**

The information and rating included in this report represent the Analyst's long-term (12 month) view as described above. The research analyst(s) named in this report may, at times and at the request of clients or their Baird representatives, provide particular investment perspectives or trading strategies based primarily on the analyst's understanding of the individual client's objectives. These perspectives or trading strategies generally are responsive to client inquiries and based on criteria the analyst considers relevant to the client. As such, these perspectives and strategies may differ from the analyst's views contained in this report.

Robert W. Baird & Co. Incorporated and/or its affiliates (Baird) may provide to certain clients additional or research supplemental products or services, such as outlooks, commentaries and other detailed analyses, which focus on covered stocks, companies, industries or sectors. Not all clients who receive our standard company-specific research reports are eligible to receive these additional or supplemental products or services. Baird determines in its sole discretion the clients who will receive additional or supplemental products or services, in light of various factors including the size and scope of the client relationships. These additional or supplemental products or services may feature different analytical or research techniques and information than are contained in Baird's standard research reports. Any ratings and recommendations contained in such additional or research supplemental products are consistent with the Analyst's ratings and recommendations contained in more broadly disseminated standard research reports.

Baird Research Analysts may provide incremental data points or views regarding covered companies in the form of Research Posts and Flash Reports. All Posts and Flash Reports are available to clients via www.BairdOnline.com , but not all are sent directly to clients. Baird Associates may, at their discretion, choose whether to send these Posts and Flash Reports to Baird clients after they are posted online. Such decisions are based on, among other things, client interest, coverage, stock ownership and indicated email preferences. The incremental content and/or analysis contained in these pieces may be useful to investors as part of a broader investment thesis, but is not sufficient to warrant a change in the Research Analyst's published opinion, including rating, estimates and price targets. Access to www.BairdOnline.com is available to all Baird Clients. Contact your Baird representative if you would like access to www.BairdOnline.com .

**United Kingdom ("UK") disclosure requirements for the purpose of distributing this research into the UK and other countries for which Robert W. Baird Limited ("RWBL") holds a MiFID passport.**

The contents of this report may contain an "investment recommendation", as defined by the Market Abuse Regulation EU No 596/2014 ("MAR"). Please therefore be aware of the important disclosures outlined below. Unless otherwise stated, this report was completed and first disseminated at the date and time provided on the timestamp of the report. if you would like further information on dissemination times, please contact us. Please note, this report may provide views which differ from previous recommendations made by the same individual in respect of the same financial instrument or issuer in the last 12 months which is available at https://baird.bluematrix.com/sellside/MAR.action.

This material is distributed in the UK and the European Economic Area ("EEA") by RWBL, which has an office at Finsbury Circus House, 15 Finsbury Circus, London EC2M 7EB and is authorized and regulated by the Financial Conduct Authority ("FCA").

For the purposes of the FCA requirements, this investment research report is classified as investment research and is objective. The views contained in this report (i) do not necessarily correspond to, and may differ from, the views of Robert W. Baird Limited or any other entity within the Baird Group, in particular Robert W. Baird & Co. Incorporated, and (ii) may differ from the views of another individual of Robert W. Baird Limited.

All substantially material sources of the information contained in this report are disclosed. All sources of information in this report are reliable, but where there is any doubt as to reliability of a particular source, this is clearly indicated.

Robert W. Baird Group and or one of its affiliates may at any time have a long or short position in the company/companies mentioned in this report. Where the Group holds a long or short position exceeding 0.5% of the total issued share capital of the issuer, this will be disclosed separately by your RWBL representative upon request.

This material is only directed at and is only made available to persons in the EEA who would satisfy the criteria of being "Professional" investors under MiFID and to persons in the UK falling within articles 19, 38, 47, and 49 of the Financial Services and Markets Act of 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). Accordingly, this document is intended only for persons regarded as investment professionals (or equivalent) and is not to be distributed to or passed onto any other person (such as persons who would be classified as Retail clients under MiFID).

Robert W. Baird & Co. Incorporated and RWBL have in place organizational and administrative arrangements for the disclosure and avoidance of conflicts of interest with respect to research recommendations. Robert W. Baird Group and or one of its affiliates may be party to an agreement with the issuer that is the subject of this report relating to the provision of services of investment firms. An outline of the general approach taken by Robert W. Baird Limited in relation to conflicts of interest is available from your RWBL representative upon request. Baird's policies and procedures are designed to identify and effectively manage conflicts of interest related to the preparation and content of research reports and to promote objective and reliable research that reflects the truly held opinions of research analysts. Analysts certify on a quarterly basis that such research reports accurately reflect their personal views.
This material is not intended for persons in jurisdictions where the distribution or publication of this research report is not permitted under the applicable laws or regulations of such jurisdiction.
Investment involves risk. The price of securities may fluctuate and past performance is not indicative of future results. Any recommendation contained in the research report does not have regard to the specific investment objectives, financial situation and the particular needs of any individuals. You are advised to exercise caution in relation to the research report. If you are in any doubt about any of the contents of this document, you should obtain independent professional advice.
RWBL is exempt from the requirement to hold an Australian financial services license. RWBL is regulated by the FCA under UK laws, which may differ from Australian laws. As such, this document has not been prepared in accordance with Australian laws.
**Dividend Yield.** As used in this report, the term "dividend yield" refers, on a percentage basis, to the historical distributions made by the issuer relative to its current market price. Such distributions are not guaranteed, may be modified at the issuer's discretion, may exceed operating cash flow, subsidized by borrowed funds or include a return of investment principal.

# Aqua America, Inc. (WTR)

## Quick Thoughts Following Investor Day

**Reiterate Neutral rating.** While we remain constructive on the broader water utility space over the long term, given capital investments needs and potential for industry consolidation, we remain on the sidelines as we look for WTR to execute on earnings growth initiatives. Importantly, the company indicated it has a large pipeline of municipal acquisition opportunities (including six acquisitions totaling ~16.3k customers expected to close in 2018) and intends to file for a rate case in Pennsylvania in mid-2018, which could contribute to EPS growth over time.

- **WTR continues to work on driving growth through the acquisition of larger municipal utilities, but we will look for execution on the growth strategy to get more constructive.** Management indicated WTR's municipal acquisition initiative will be a core driver of growth moving forward and targets 2%-3% customer growth in 2018. The company has signed six municipal deals, totaling ~16.3k customers and $150M purchase price, which are expected to close in 2018, and highlighted 10 municipal acquisition opportunities in development, totaling ~289k customer connections. We will look for execution on the acquisition pipeline or other indications WTR's intended shift towards larger, municipal acquisitions is progressing as planned to get more constructive.
- **WTR tentatively plans to file for a rate case in Pennsylvania in mid-2018, which could contribute to EPS growth when effective in 2019.** WTR targets ~ $1.4B in infrastructure investment through 2020 which should contribute to ~7% rate base growth. While we view the investment targets favorably, the company is currently overearning in certain geographies, which could dampen EPS growth in the intermediate term. Importantly, the company expects to file a rate case in Pennsylvania in mid-2018 to recover ~$2B of prior capital investment, which could contribute to EPS growth when rates come in effect in 2019.
- **We remain constructive on the broader water utility industry over the long term given the infrastructure need and potential for consolidation.** The current water utility industry is highly fragmented, consisting of ~53k community water systems and ~16k community waste water facilities. Coupled with a significant need for infrastructure investment (the EPA projects a 20-year capital improvement need of $384B for U.S. public water infrastructure) and enhanced regulatory recovery mechanisms, we believe there is a favorable backdrop for growth for water utilities.
- **A favorable regulatory environment should continue to encourage consolidation and accelerated capital investment in the industry.** Favorable regulatory developments in recent years, including the adoption of DSIC mechanisms in several geographies, the implementation of forward test years, and fair market value legislation, should continue to contribute to a favorable acquisition environment and encourage capital investment for WTR.

# Details

**Lowering estimates to reflect 2018 guidance.** For 2018 we model revenue of $848M and EPS of $1.38 vs. consensus of $881M/$1.43. For 2019 we model revenue of $884M and EPS of $1.45 vs. consensus of $926M/$1.51.

**Lowering price target to $35.** Our price target is based on a ~24x P/E multiple of our 2019 EPS estimate, which is in line with comps which are currently trading at a ~22x-26x multiple. We believe this is justified as WTR works to execute on earnings growth.

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's ~$500 million annual capex investment. $1.4B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** The majority of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 2-3% customer growth in 2018 driven by acquisitions of municipal utilities. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth.

**$35 price target.** Our price target is based on a ~24x P/E multiple of our 2019 EPS estimate, which is in line with comps which are currently trading at a ~22x-26x multiple. We believe this is justified as WTR works to execute on earnings growth.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

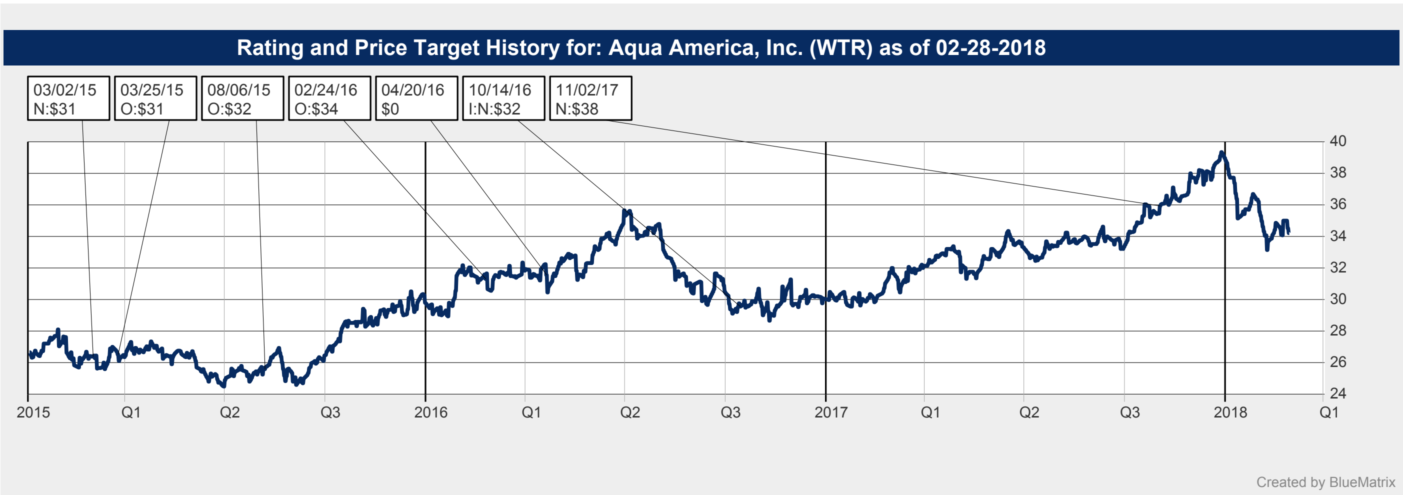
**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

# Appendix - Important Disclosures and Analyst Certification

Approved on 28 February 2018 21:59EST/ Published on 1 March 2018 01:00EST.



1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

Robert W. Baird & Co. Incorporated ("Baird") and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months. Baird may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

**Investment Ratings: Outperform (O)** - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. **Neutral (N)** - Expected to perform in line with the broader U.S. equity market over the next 12 months. **Underperform (U)** - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

**Risk Ratings: L - Lower Risk** – Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. **A - Average Risk** – Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. **H - Higher Risk** – Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. **S - Speculative Risk** – High growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

**Valuation, Ratings and Risks.** The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

**Distribution of Investment Ratings.** As of February 28, 2018, Baird U.S. Equity Research covered 692 companies, with 58% rated Outperform/Buy, 41% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 12% of Outperform/Buy-rated and 5% of Neutral/Hold-rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

**Analyst Compensation.** Research analyst compensation is based on: (1) the correlation between the research analyst's recommendations and stock price performance; (2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; (3) the research analyst's productivity, including the quality of such analyst's research and such analyst's contribution to the growth and development of our overall research effort; and (4) compliance with all of Baird's internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research

Oversight Committee. Research analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not compensate research analysts based on specific investment banking transactions.

**Other Disclosures**

The information and rating included in this report represent the research analyst's views based on a time horizon of 12 months, as described above, unless otherwise stated. In our standard company-specific research reports, the subject company may be designated as a "Fresh Pick", representing that the research analyst believes the company to be a high-conviction investment idea based on a subjective review of one or more fundamental or quantitative factors until an expiration date specified by the analyst but not to exceed nine months. The Fresh Pick designation and specified expiration date will be displayed in standard company-specific research reports on the company until the occurrence of the expiration date or such time as the analyst removes the Fresh Pick designation from the company in a subsequent, standard company-specific research report. The research analyst(s) named in this report may, at times and at the request of clients or their Baird representatives, provide particular investment perspectives or trading strategies based primarily on the analyst's understanding of the individual client's objectives. These perspectives or trading strategies generally are responsive to client inquiries and based on criteria the research analyst considers relevant to the client. As such, these perspectives and strategies may differ from the research analyst's views contained in this report.
Baird and/or its affiliates may provide to certain clients additional or research supplemental products or services, such as outlooks, commentaries and other detailed analyses, which focus on covered stocks, companies, industries or sectors. Not all clients who receive our standard company-specific research reports are eligible to receive these additional or supplemental products or services. Baird determines in its sole discretion the clients who will receive additional or supplemental products or services, in light of various factors including the size and scope of the client relationships. These additional or supplemental products or services may feature different analytical or research techniques and information than are contained in Baird's standard research reports. Any ratings and recommendations contained in such additional or research supplemental products are consistent with the research analyst's ratings and recommendations contained in more broadly disseminated standard research reports. Baird research analysts may provide incremental data points or views regarding covered companies in the form of Research Posts and Flash Reports. All Posts and Flash Reports are available to clients via https://bol.rwbaird.com/Login, but not all are sent directly to clients. Baird Associates may, at their discretion, choose whether to send these Posts and Flash Reports to Baird clients after they are posted online. Such decisions are based on, among other things, client interest, coverage, stock ownership and indicated email preferences. The incremental content and/or analysis contained in these pieces may be useful to investors as part of a broader investment thesis, but is not sufficient to warrant a change in the research analyst's published opinion, including rating, estimates and price targets. # Aqua America, Inc. (WTR)

## Q1 Results: First Look

**Reiterate Neutral rating after Q1 earnings release.** WTR missed consensus estimates on the top and bottom line due, in part, to decreased consumption. Importantly, the company reaffirmed EPS guidance of $1.34 to $1.39 for 2017, and indicated it is on track to invest more than $450M in capital improvements. The company has received $10.7M in annualized revenue increases in 2017 ($12.2M pending) and has four acquisitions under contract (~9,000 customers) it expects to close in 2017. We will look for additional information on the conference call.

- **Q1 results missed consensus estimates.** Q1 revenue was ~$188M vs. consensus estimates of $195M. Net income was $49M vs. $52M, and EPS was $0.28 vs. $0.30. Q1 revenue and EPS decreased ~3% y/y due to decreased consumption and difficult comps in Q1:16.
- **WTR reaffirmed 2017 guidance despite Q1 miss.** WTR continues to expect $1.34 to $1.39 in EPS, same-system O&M expenses to increase 1% to 2%, and more than $450M in capital investments during 2017 (>$1.2B through 2019). WTR invested ~$95M in water infrastructure in Q1:17.
- **We believe WTR should be able to achieve its customer growth targets of 1.5-2% in 2017.** WTR has added ~262 connections through acquisitions in Indiana thus far in 2017, leading to ~0.2% growth in its customer base YTD (including organic growth). Importantly, WTR has four municipal acquisitions under contract (~9,000 customers and $113M price) it expects to close in 2017.
- **Rate increases and surcharges continue to contribute to revenue growth.** WTR received $10.7M in annualized revenue increases thus far in 2017 due to favorable decisions in rate cases and infrastructure charges in five states. Additionally, a decision on a total of ~$12.2M in annualized revenue increase is pending in two states, although the timing of potential regulatory approvals remains unclear.
- **WTR's Q1 earnings call will be held today at 10:00 a.m. CT**. The call can be accessed at www.ir.aquaamerica.com . We will update our model following the call.

**Aqua America is a holding company for numerous regulated water/waste water utilities serving almost 3.0 million people in the eastern half of the U.S.**

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion between 2013 and 2033. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $450+ million annual capex investment. $1.2B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** Approximately 70% of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth

**M&A opportunities expand with focused growth strategy.** WTR completed 19 acquisitions in 2016, contributing to WTR's overall customer growth of 1.6%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions

**Valuation.** Our $32 price target is 22x our 2018 EPS estimate, in line with peers when fully valued (20x-22x 2018E EPS), reflecting average EPS growth opportunities and generally more constructive regulatory mechanisms.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

**Distribution of Investment Ratings.** As of April 28, 2017, Baird U.S. Equity Research covered 708 companies, with 53% rated Outperform/Buy, 46% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 10% of Outperform/Buy-rated, 5% of Neutral/Hold-rated and 9% of Underperform/Sell rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

**Analyst Compensation.** Analyst compensation is based on: 1) the correlation between the analyst's recommendations and stock price performance; 2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; 3) the analyst's productivity, including the quality of the analyst's research and the analyst's contribution to the growth and development of our overall research effort and 4) compliance with all of Robert W. Baird's internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee.

Analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not

compensate research analysts based on specific investment banking transactions.
A complete listing of all companies covered by Baird U.S. Equity Research and applicable research disclosures can be accessed at http://www.rwbaird.com/research-insights/research/coverage/research-disclosure.aspx. You can also call 800-792-2473 or write: Robert W. Baird & Co., Equity Research, 777 E. Wisconsin Avenue, Milwaukee, WI 53202.

**Analyst Certification**

The senior research analyst(s) certifies that the views expressed in this research report and/or financial model accurately reflect such senior analyst's personal views about the subject securities or issuers and that no part of his or her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in the research report.

**Disclaimers**

**Baird prohibits analysts from owning stock in companies they cover.**

This is not a complete analysis of every material fact regarding any company, industry or security. The opinions expressed here reflect our judgment at this date and are subject to change. The information has been obtained from sources we consider to be reliable, but we cannot guarantee the accuracy.

**ADDITIONAL INFORMATION ON COMPANIES MENTIONED HEREIN IS AVAILABLE UPON REQUEST**

The Dow Jones Industrial Average, S&P 500, S&P 400 and Russell 2000 are unmanaged common stock indices used to measure and report performance of various sectors of the stock market; direct investment in indices is not available.
Baird is exempt from the requirement to hold an Australian financial services license. Baird is regulated by the United States Securities and Exchange Commission, FINRA, and various other self-regulatory organizations and those laws and regulations may differ from Australian laws. This report has been prepared in accordance with the laws and regulations governing United States broker-dealers and not Australian laws.

**Other Disclosures**

The information and rating included in this report represent the Analyst's long-term (12 month) view as described above. The research analyst(s) named in this report may, at times and at the request of clients or their Baird representatives, provide particular investment perspectives or trading strategies based primarily on the analyst's understanding of the individual client's objectives. These perspectives or trading strategies generally are responsive to client inquiries and based on criteria the analyst considers relevant to the client. As such, these perspectives and strategies may differ from the analyst's views contained in this report.
Robert W. Baird & Co. Incorporated and/or its affiliates (Baird) may provide to certain clients additional or research supplemental products or services, such as outlooks, commentaries and other detailed analyses, which focus on covered stocks, companies, industries or sectors. Not all clients who receive our standard company-specific research reports are eligible to receive these additional or supplemental products or services. Baird determines in its sole discretion the clients who will receive additional or supplemental products or services, in light of various factors including the size and scope of the client relationships. These additional or supplemental products or services may feature different analytical or research techniques and information than are contained in Baird's standard research reports. Any ratings and recommendations contained in such additional or research supplemental products are consistent with the Analyst's ratings and recommendations contained in more broadly disseminated standard research reports.
Baird Research Analysts may provide incremental data points or views regarding covered companies in the form of Research Posts and Flash Reports. All Posts and Flash Reports are available to clients via www.bairdonline.com, but not all are sent directly to clients. Baird Associates may, at their discretion, choose whether to send these Posts and Flash Reports to Baird clients after they are posted online. Such decisions are based on, among other things, client interest, coverage, stock ownership and indicated email preferences. The incremental content and/or analysis contained in these pieces may be useful to investors as part of a broader investment thesis, but is not sufficient to warrant a change in the Research Analyst's published opinion, including rating, estimates and price targets. Access to www.bairdonline.com is available to all Baird Clients. Contact your Baird representative if you would like access to www.bairdonline.com.

**United Kingdom ("UK") disclosure requirements for the purpose of distributing this research into the UK and other countries for which Robert W. Baird Limited ("RWBL") holds a MiFID passport.**

The contents of this report may contain an "investment recommendation", as defined by the Market Abuse Regulation EU No 596/2014 ("MAR"). Please therefore be aware of the important disclosures outlined below. Unless otherwise stated, this report was completed and first disseminated at the date and time provided on the timestamp of the report. if you would like further information on dissemination times, please contact us. Please note, this report may provide views which differ from previous recommendations made by the same individual in respect of the same financial instrument or issuer in the last 12 months which is available at https://baird.bluematrix.com/sellside/MAR.action.
This material is distributed in the UK and the European Economic Area ("EEA") by RWBL, which has an office at Finsbury Circus House, 15 Finsbury Circus, London EC2M 7EB and is authorized and regulated by the Financial Conduct Authority ("FCA").
For the purposes of the FCA requirements, this investment research report is classified as investment research and is objective. The views contained in this report (i) do not necessarily correspond to, and may differ from, the views of Robert W. Baird Limited or any other entity within the Baird Group, in particular Robert W. Baird & Co. Incorporated, and (ii) may differ from the views of another individual of Robert W. Baird Limited.
All substantially material sources of the information contained in this report are disclosed. All sources of information in this report are reliable, but where there is any doubt as to reliability of a particular source, this is clearly indicated.
Robert W. Baird Group and or one of its affiliates may at any time have a long or short position in the company/companies mentioned in this report. Where the Group holds a long or short position exceeding 0.5% of the total issued share capital of the issuer, this will be disclosed separately by your RWBL representative upon request.
This material is only directed at and is only made available to persons in the EEA who would satisfy the criteria of being "Professional" investors under MiFID and to persons in the UK falling within articles 19, 38, 47, and 49 of the Financial Services and Markets Act of

2000 (Financial Promotion) Order 2005 (all such persons being referred to as “relevant persons”). Accordingly, this document is intended only for persons regarded as investment professionals (or equivalent) and is not to be distributed to or passed onto any other person (such as persons who would be classified as Retail clients under MiFID).
Robert W. Baird & Co. Incorporated and RWBL have in place organizational and administrative arrangements for the disclosure and avoidance of conflicts of interest with respect to research recommendations. Robert W. Baird Group and or one of its affiliates may be party to an agreement with the issuer that is the subject of this report relating to the provision of services of investment firms. An outline of the general approach taken by Robert W. Baird Limited in relation to conflicts of interest is available from your RWBL representative upon request. Baird’s policies and procedures are designed to identify and effectively manage conflicts of interest related to the preparation and content of research reports and to promote objective and reliable research that reflects the truly held opinions of research analysts. Analysts certify on a quarterly basis that such research reports accurately reflect their personal views.
This material is not intended for persons in jurisdictions where the distribution or publication of this research report is not permitted under the applicable laws or regulations of such jurisdiction.
Investment involves risk. The price of securities may fluctuate and past performance is not indicative of future results. Any recommendation contained in the research report does not have regard to the specific investment objectives, financial situation and the particular needs of any individuals. You are advised to exercise caution in relation to the research report. If you are in any doubt about any of the contents of this document, you should obtain independent professional advice.
RWBL is exempt from the requirement to hold an Australian financial services license. RWBL is regulated by the FCA under UK laws, which may differ from Australian laws. As such, this document has not been prepared in accordance with Australian laws.
**Dividend Yield.** As used in this report, the term “dividend yield” refers, on a percentage basis, to the historical distributions made by the issuer relative to its current market price. Such distributions are not guaranteed, may be modified at the issuer’s discretion, may exceed operating cash flow, subsidized by borrowed funds or include a return of investment principal.

# Aqua America, Inc. (WTR)

## Q1 Conference Call Highlights

**Reiterate Neutral rating.** WTR provided an update on executive team changes; Dave Smeltzer will retire following the Pennsylvania rate case, and will be replaced at CFO by Dan Schuller, who has been at the company since 2015. WTR continues to plan to file for a rate case in Pennsylvania in mid-2018, which could contribute to EPS growth when effective, and targets 2%-3% customer growth, which we believe is achievable. We will look for execution on WTR's acquisition pipeline or EPS growth to get more constructive.

- **Dave Smeltzer will retire from WTR following the Pennsylvania rate case, and will be replaced at CFO by Dan Schuller.** Mr. Smeltzer has been CFO of WTR for 19 years, and played an important role in closing 300 acquisitions and securing favorable regulatory mechanisms across WTR's footprint. Dan Schuller will take over as CFO following Smeltzer's retirement in October; Mr. Schuller has been at the company since 2015 and has previously worked in Infrastructure Investments at J.P. Morgan. Additionally, the company named Matthew Rhodes, a former investment banker at Goldman Sachs, EVP of Strategy and Corporate Development, and Christina Kelly, former VP of HR at AmerisourceBergen, as Chief Human Resources Officer.
- **WTR continues to plan to file for a rate case in Pennsylvania in mid-2018, which could contribute to EPS growth when effective in 2019.** WTR is currently overearning in certain geographies, which could dampen EPS growth in the intermediate term despite capital investment targets which we view favorably. Importantly, the company expects to file a rate case in Pennsylvania in mid-2018 to recover ~$2B of prior capital investment, which could contribute to EPS growth when rates come in effect in 2019.
- **WTR continues to target 2%-3% customer growth, which we believe is achievable given the company's acquisition pipeline.** The company has added 2,259 new customers YTD through three acquisitions and organic growth. Additionally, the company has signed six municipal deals, totaling ~16.3k customers and $150M purchase price, which are expected to close in 2018. We will look for execution on the acquisition pipeline or other indications WTR's intended shift towards larger, municipal acquisitions is progressing as planned to get more constructive.
- **Maintain $35 price target.** Our price target is based on a ~24x P/E multiple of our 2019 EPS estimate, which is in line with comps which are currently trading at a ~22x-26x multiple. We believe this is justified as WTR works to execute on earnings growth.

# Investment Thesis

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's ~$500 million annual capex investment. $1.4B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** The majority of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 2-3% customer growth in 2018 driven by acquisitions of municipal utilities. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth.

**$35 price target.** Our price target is based on a ~24x P/E multiple of our 2019 EPS estimate, which is in line with comps which are currently trading at a ~22x-26x multiple. We believe this is justified as WTR works to execute on earnings growth.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

# Appendix - Important Disclosures and Analyst Certification

Approved on 9 May 2018 12:20EDT/ Published on 9 May 2018 12:20EDT.

1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

Robert W. Baird & Co. Incorporated ("Baird") and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months. Baird may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

Investment Ratings: Outperform (O) - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. Neutral (N) - Expected to perform in line with the broader U.S. equity market over the next 12 months. Underperform (U) - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

Risk Ratings: L - Lower Risk – Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. A - Average Risk – Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. H - Higher Risk – Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. S - Speculative Risk – High growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

Valuation, Ratings and Risks. The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

Distribution of Investment Ratings. As of April 30, 2018, Baird U.S. Equity Research covered 688 companies, with 59% rated Outperform/ Buy, 40% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 12% of Outperform/Buy-rated and 6% of Neutral/Hold-rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

Analyst Compensation. Research analyst compensation is based on: (1) the correlation between the research analyst's recommendations and stock price performance; (2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; (3) the research analyst's productivity, including the quality of such analyst's research and such analyst's contribution to the growth and development of our overall research effort; and (4) compliance with all of Baird's internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee. Research analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not compensate research analysts based on specific investment banking transactions.

# Aqua America, Inc. (WTR)

## First Look at Q1 Results

**Reiterate Neutral rating after Q1 earnings release.** WTR reported results which were in line with our estimates but below consensus due to adverse impacts of tax reform and increased O&M expenses. Importantly, the company reaffirmed EPS guidance of $1.37 to $1.42 and indicated it is on track to invest ~$500M in capital improvements. WTR received $23.6M in annualized revenue increases YTD ($8.6M pending) and has several acquisitions totaling ~16k customers which are expected to close in 2018. We will look for additional information on the conference call.

- **Q1 results were in-line with our estimates, but missed consensus numbers due to adverse impacts of tax reform and increased O&M expenses.** Q1 revenue was ~$194M vs. our/consensus estimates of $197M/$203M, as additional revenue from infrastructure surcharges was partially offset by a $2.5M headwind from tax reform. Net income was $51M vs. $50M/$54M, and EPS was $0.29 vs. $0.28/$0.32, respectively, due to increased O&M expenses.
- **WTR reaffirmed 2018 guidance.** WTR continues to expect $1.37 to $1.42 in EPS, total customer growth of ~2%-3%, and ~$500M in infrastructure investments during 2018 (~$1.4B through 2020). WTR has invested ~$105M in water infrastructure YTD.
- **We believe WTR should be able to achieve its customer growth targets of ~2%-3% in 2018.** WTR has added ~448 customer connections through acquisitions YTD, and organic growth added an additional 1,811 customers. Importantly, WTR has several acquisitions under contract totaling ~16k customers which are expected to close in 2018, although the timing of acquisitions may vary.
- **Rate increases and surcharges continue to contribute to revenue growth.** WTR has received $23.6M in annualized revenue increases thus far in 2018 due to favorable decisions in rate cases and infrastructure charges in seven states. Additionally, a decision on a total of ~$8.6M in annualized revenue increases is pending in four states, although the timing of potential regulatory approvals remains unclear.
- **WTR's Q1 earnings call will be held today at 10:00 a.m. CT.** The call can be accessed at www.ir.aquaamerica.com. We will update our model following the call.

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/ wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's ~$500 million annual capex investment. $1.4B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** The majority of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 2-3% customer growth in 2018 driven by acquisitions of municipal utilities. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth.

**$35 price target.** Our price target is based on a ~24x P/E multiple of our 2019 EPS estimate, which is in line with comps which are currently trading at a ~22x-26x multiple. We believe this is justified as WTR works to execute on earnings growth.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

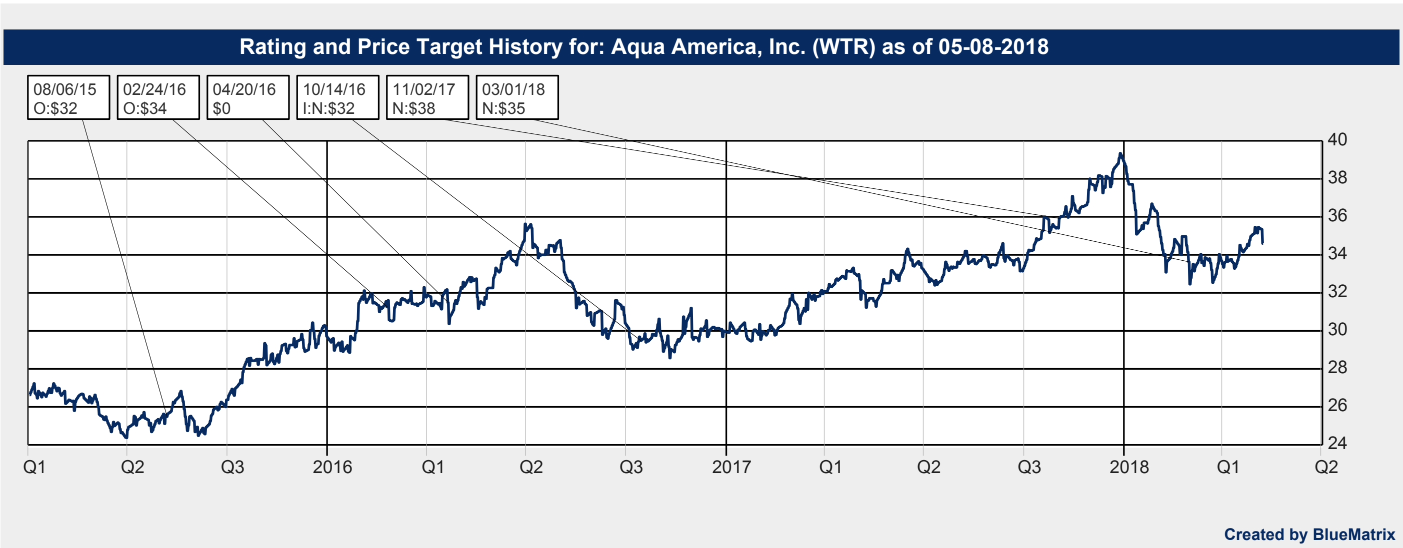
**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

# Appendix - Important Disclosures and Analyst Certification

Approved on 8 May 2018 21:01EDT/ Published on 9 May 2018 01:00EDT.



1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

Robert W. Baird & Co. Incorporated ("Baird") and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months. Baird may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

Investment Ratings: Outperform (O) - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. Neutral (N) - Expected to perform in line with the broader U.S. equity market over the next 12 months. Underperform (U) - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

Risk Ratings: L - Lower Risk – Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. A - Average Risk – Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. H - Higher Risk – Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. S - Speculative Risk – High growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

Valuation, Ratings and Risks. The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

Distribution of Investment Ratings. As of April 30, 2018, Baird U.S. Equity Research covered 688 companies, with 59% rated Outperform/Buy, 40% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 12% of Outperform/Buy-rated and 6% of Neutral/Hold-rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

Analyst Compensation. Research analyst compensation is based on: (1) the correlation between the research analyst's recommendations and stock price performance; (2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; (3) the research analyst's productivity, including the quality of such analyst's research and such analyst's contribution to the growth and development of our overall research effort; and (4) compliance with all of Baird's internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee. Research analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not compensate research analysts based on specific investment banking transactions.

ADDITIONAL INFORMATION ON COMPANIES MENTIONED HEREIN IS AVAILABLE UPON REQUEST

The Dow Jones Industrial Average, S&P 500, S&P 400 and Russell 2000 are unmanaged common stock indices used to measure and report performance of various sectors of the stock market; direct investment in indices is not available. Baird is exempt from the requirement to hold an Australian financial services license. Baird is regulated by the United States Securities and Exchange Commission, FINRA, and various other self-regulatory organizations and those laws and regulations may differ from Australian laws. This report has been prepared in accordance with the laws and regulations governing United States broker-dealers and not Australian laws.Other Disclosures

The information and rating included in this report represent the research analyst's views based on a time horizon of 12 months, as described above, unless otherwise stated. In our standard company-specific research reports, the subject company may be designated as a "Fresh Pick", representing that the research analyst believes the company to be a high-conviction investment idea based on a subjective review of one or more fundamental or quantitative factors until an expiration date specified by the analyst but not to exceed nine months. The Fresh Pick designation and specified expiration date will be displayed in standard company-specific research reports on the company until the occurrence of the expiration date or such time as the analyst removes the Fresh Pick designation from the company in a subsequent, standard company-specific research report. The research analyst(s) named in this report may, at times and at the request of clients or their Baird representatives, provide particular investment perspectives or trading strategies based primarily on the analyst's understanding of the individual client's objectives. These perspectives or trading strategies generally are responsive to client inquiries and based on criteria the research analyst considers relevant to the client. As such, these perspectives and strategies may differ from the research analyst's views contained in this report.

Baird and/or its affiliates may provide to certain clients additional or research supplemental products or services, such as outlooks, commentaries and other detailed analyses, which focus on covered stocks, companies, industries or sectors. Not all clients who receive our standard company-specific research reports are eligible to receive these additional or supplemental products or services. Baird determines in its sole discretion the clients who will receive additional or supplemental products or services, in light of various factors including the size and scope of the client relationships. These additional or supplemental products or services may feature different analytical or research techniques and information than are contained in Baird's standard research reports. Any ratings and recommendations contained in such additional or research supplemental products are consistent with the research analyst's ratings and recommendations contained in more broadly disseminated standard research reports. Baird research analysts may provide incremental data points or views regarding covered companies in the form of Research Posts and Flash Reports. All Posts and Flash Reports are available to clients via https://bol.rwbaird.com/Login, but not all are sent directly to clients. Baird Associates may, at their discretion, choose whether to send these Posts and Flash Reports to Baird clients after they are posted online. Such decisions are based on, among other things, client interest, coverage, stock ownership and indicated email preferences. The incremental content and/or analysis contained in these pieces may be useful to investors as part of a

broader investment thesis, but is not sufficient to warrant a change in the research analyst's published opinion, including rating, estimates and price targets. Access to https://bol.rwbaird.com/Login is available to all Baird Clients. Contact your Baird representative if you would like access to https://bol.rwbaird.com/Login.Dividend Yield. As used in this report, the term "dividend yield" refers, on a percentage basis, to the historical distributions made by the issuer relative to its current market price. Such distributions are not guaranteed, may be modified at the issuer's discretion, may exceed operating cash flow, subsidized by borrowed funds or include a return of investment principal.

United Kingdom ("UK") disclosure requirements for the purpose of distributing this research into the UK and other countries for which Robert W. Baird Limited holds a MiFID passport.

# Aqua America, Inc. (WTR)

## Q1 Conference Call Highlights

**Reiterate Neutral rating.** WTR provided an update on executive team changes; Dave Smeltzer will retire following the Pennsylvania rate case, and will be replaced at CFO by Dan Schuller, who has been at the company since 2015. WTR continues to plan to file for a rate case in Pennsylvania in mid-2018, which could contribute to EPS growth when effective, and targets 2%-3% customer growth, which we believe is achievable. We will look for execution on WTR's acquisition pipeline or EPS growth to get more constructive.

- **Dave Smeltzer will retire from WTR following the Pennsylvania rate case, and will be replaced at CFO by Dan Schuller.** Mr. Smeltzer has been CFO of WTR for 19 years, and played an important role in closing 300 acquisitions and securing favorable regulatory mechanisms across WTR's footprint. Dan Schuller will take over as CFO following Smeltzer's retirement in October; Mr. Schuller has been at the company since 2015 and has previously worked in Infrastructure Investments at J.P. Morgan. Additionally, the company named Matthew Rhodes, a former investment banker at Goldman Sachs, EVP of Strategy and Corporate Development, and Christina Kelly, former VP of HR at AmerisourceBergen, as Chief Human Resources Officer.
- **WTR continues to plan to file for a rate case in Pennsylvania in mid-2018, which could contribute to EPS growth when effective in 2019.** WTR is currently overearning in certain geographies, which could dampen EPS growth in the intermediate term despite capital investment targets which we view favorably. Importantly, the company expects to file a rate case in Pennsylvania in mid-2018 to recover ~$2B of prior capital investment, which could contribute to EPS growth when rates come in effect in 2019.
- **WTR continues to target 2%-3% customer growth, which we believe is achievable given the company's acquisition pipeline.** The company has added 2,259 new customers YTD through three acquisitions and organic growth. Additionally, the company has signed six municipal deals, totaling ~16.3k customers and $150M purchase price, which are expected to close in 2018. We will look for execution on the acquisition pipeline or other indications WTR's intended shift towards larger, municipal acquisitions is progressing as planned to get more constructive.
- **Maintain $35 price target.** Our price target is based on a ~24x P/E multiple of our 2019 EPS estimate, which is in line with comps which are currently trading at a ~22x-26x multiple. We believe this is justified as WTR works to execute on earnings growth.

# Investment Thesis

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's ~$500 million annual capex investment. $1.4B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** The majority of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 2-3% customer growth in 2018 driven by acquisitions of municipal utilities. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth.

**$35 price target.** Our price target is based on a ~24x P/E multiple of our 2019 EPS estimate, which is in line with comps which are currently trading at a ~22x-26x multiple. We believe this is justified as WTR works to execute on earnings growth.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

# Appendix - Important Disclosures and Analyst Certification

Approved on 9 May 2018 12:20EDT/ Published on 9 May 2018 12:20EDT.

1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

Robert W. Baird & Co. Incorporated ("Baird") and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months. Baird may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

Investment Ratings: Outperform (O) - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. Neutral (N) - Expected to perform in line with the broader U.S. equity market over the next 12 months. Underperform (U) - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

Risk Ratings: L - Lower Risk – Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. A - Average Risk – Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. H - Higher Risk – Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. S - Speculative Risk – High growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

Valuation, Ratings and Risks. The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

Distribution of Investment Ratings. As of April 30, 2018, Baird U.S. Equity Research covered 688 companies, with 59% rated Outperform/Buy, 40% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 12% of Outperform/Buy-rated and 6% of Neutral/Hold-rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

Analyst Compensation. Research analyst compensation is based on: (1) the correlation between the research analyst's recommendations and stock price performance; (2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; (3) the research analyst's productivity, including the quality of such analyst's research and such analyst's contribution to the growth and development of our overall research effort; and (4) compliance with all of Baird's internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee. Research analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not compensate research analysts based on specific investment banking transactions.

# Aqua America, Inc. (WTR)

## Q2 Conference Call Highlights

**Reiterate Neutral rating after Q2 conference call.** The exit of market-based business offset increases in regulated revenue in Q2, but increased consumption and favorable rate case decisions led to a ~3% increase in EPS, y/y. WTR has five acquisitions pending totaling ~12,000 customers, which should help the company reach targeted customer growth of 1.5%-2%, but we are looking for an indication WTR's intended shift towards larger, municipal acquisitions is progressing as planned. We remain rated Neutral and look for execution on EPS growth before becoming more constructive.

- **The exit of market-based business segments continued to offset revenue increases in Q2, but management indicated it has largely completed divestments.** Favorable rate decisions and regulated customer growth increased revenue by ~$2.9M y/y, but was more than offset by $4.4M in reduced revenue from market-based activities. For more information, please see Q2 First Look.
- **EPS increased ~3% y/y as increased consumption, favorable rate case decisions, and growth in regulated segments more than offset increased expenses.** Additionally, the company increased its quarterly dividend by 7%, relatively in line with the six-year dividend CAGR of 7.9%. WTR also reiterated its 2017 EPS guidance of $1.34 to $1.39.
- **WTR has five pending acquisitions which should contribute to growth in the intermediate term, but deals are towards the lower end (or below) the company's target deal size (2,500-25,000 customers).** WTR has five municipal deals pending, totaling ~12,000 customers and $126M purchase price, but deals are towards the lower end of the company's target size range. Importantly, WTR has identified 70 acquisition prospects totaling ~500k connections, which include 18 systems with >10,000 connections. While we expect the acquisition environment to remain favorable following positive legislative changes in key states (such as fair market value legislation), we will continue look for indications WTR's intended shift towards larger, municipal acquisitions is progressing as planned.
- **Updating estimates to reflect Q2 results.** For 2017 we now estimate revenue of $842M and EPS of $1.34 vs. our prior estimates of $847M/$1.34. For 2018, we now estimate revenue of $887M and EPS of $1.46, vs our prior estimates of $898M/$1.46.
- **Reiterate $32 price target.** Our $32 price target is 22x our 2018 EPS estimate, below peers (~25x 2018E EPS), which we believe will expand as WTR executes on EPS growth.

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/ wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion between 2013 and 2033. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $450+ million annual capex investment. $1.2B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** Approximately 70% of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth

**M&A opportunities expand with focused growth strategy.** WTR completed 19 acquisitions in 2016, contributing to WTR's overall customer growth of 1.6%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions

**Valuation.** Our $32 price target is 22x our 2018 EPS estimate, below peers (~25x 2018E EPS), which we believe will expand as WTR executes on EPS growth.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

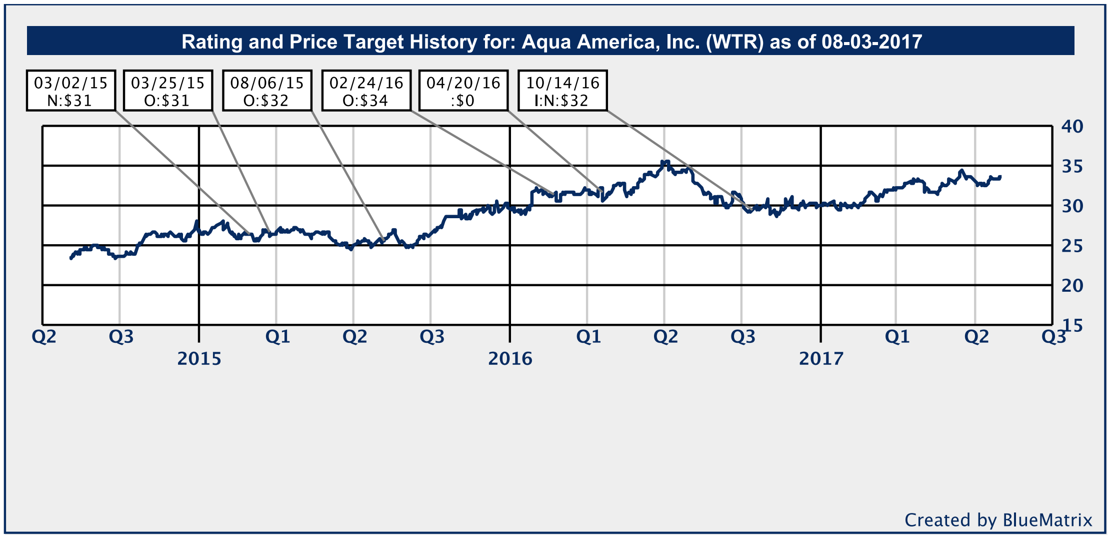
# Appendix - Important Disclosures and Analyst Certification

Approved on 3 August 2017 18:50EDT/ Published on 4 August 2017 01:00EDT.



1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

**Appendix – Important Disclosures and Analyst Certification**

Robert W. Baird & Co. Incorporated and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months.

Robert W. Baird & Co. Incorporated may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

**Investment Ratings: Outperform (O)** - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. **Neutral (N)** - Expected to perform in line with the broader U.S. equity market over the next 12 months. **Underperform (U)** - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

**Risk Ratings: L - Lower Risk** - Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. **A - Average Risk** - Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. **H - Higher Risk** - Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. **S - Speculative Risk** - High-growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

**Valuation, Ratings and Risks.** The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

**Distribution of Investment Ratings.** As of July 31, 2017, Baird U.S. Equity Research covered 712 companies, with 54% rated Outperform/Buy, 45% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 11% of Outperform/Buy-rated, 7% of Neutral/Hold-rated and 11% of Underperform/Sell rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

**Analyst Compensation.** Analyst compensation is based on: 1) the correlation between the analyst's recommendations and stock price performance; 2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; 3) the analyst's productivity, including the quality of the analyst's research and the analyst's contribution to the growth and development of our overall research effort and 4) compliance with all of Robert W. Baird's internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee.

Analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not compensate research analysts based on specific investment banking transactions.

A complete listing of all companies covered by Baird U.S. Equity Research and applicable research disclosures can be accessed at http://www.rwbaird.com/research-insights/research/coverage/research-disclosure.aspx. You can also call 800-792-2473 or write: Robert W. Baird & Co., Equity Research, 777 E. Wisconsin Avenue, Milwaukee, WI 53202.

**Analyst Certification**

The senior research analyst(s) certifies that the views expressed in this research report and/or financial model accurately reflect such senior analyst's personal views about the subject securities or issuers and that no part of his or her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in the research report.

**Disclaimers**

**Baird prohibits analysts from owning stock in companies they cover.**

This is not a complete analysis of every material fact regarding any company, industry or security. The opinions expressed here reflect our judgment at this date and are subject to change. The information has been obtained from sources we consider to be reliable, but we cannot guarantee the accuracy.

**ADDITIONAL INFORMATION ON COMPANIES MENTIONED HEREIN IS AVAILABLE UPON REQUEST**

The Dow Jones Industrial Average, S&P 500, S&P 400 and Russell 2000 are unmanaged common stock indices used to measure and report performance of various sectors of the stock market; direct investment in indices is not available.

Baird is exempt from the requirement to hold an Australian financial services license. Baird is regulated by the United States Securities and Exchange Commission, FINRA, and various other self-regulatory organizations and those laws and regulations may differ from Australian laws. This report has been prepared in accordance with the laws and regulations governing United States broker-dealers and not Australian laws.

**Other Disclosures**

The information and rating included in this report represent the Analyst's long-term (12 month) view as described above. The research analyst(s) named in this report may, at times and at the request of clients or their Baird representatives, provide particular investment perspectives or trading strategies based primarily on the analyst's understanding of the individual client's objectives. These perspectives or trading strategies generally are responsive to client inquiries and based on criteria the analyst considers relevant to the client. As such, these perspectives and strategies may differ from the analyst's views contained in this report.

Robert W. Baird & Co. Incorporated and/or its affiliates (Baird) may provide to certain clients additional or research supplemental products or services, such as outlooks, commentaries and other detailed analyses, which focus on covered stocks, companies, industries or sectors. Not all clients who receive our standard company-specific research reports are eligible to receive these additional or supplemental products or services. Baird determines in its sole discretion the clients who will receive additional or supplemental products or services, in light of various factors including the size and scope of the client relationships. These additional or supplemental products or services may feature different analytical or research techniques and information than are contained in Baird's standard research reports. Any ratings and recommendations contained in such additional or research supplemental products are consistent with the Analyst's ratings and recommendations contained in more broadly disseminated standard research reports.

Baird Research Analysts may provide incremental data points or views regarding covered companies in the form of Research Posts and Flash Reports. All Posts and Flash Reports are available to clients via https://bol.rwbaird.com/Login, but not all are sent directly to clients. Baird Associates may, at their discretion, choose whether to send these Posts and Flash Reports to Baird clients after they are posted online. Such decisions are based on, among other things, client interest, coverage, stock ownership and indicated email preferences. The incremental content and/or analysis contained in these pieces may be useful to investors as part of a broader investment thesis, but is not sufficient to warrant a change in the Research Analyst's published opinion, including rating, estimates and price targets. Access to https://bol.rwbaird.com/Login is available to all Baird Clients. Contact your Baird representative if you would like access to https://bol.rwbaird.com/Login.

**United Kingdom ("UK") disclosure requirements for the purpose of distributing this research into the UK and other countries for which Robert W. Baird Limited ("RWBL") holds a MiFID passport.**

The contents of this report may contain an "investment recommendation", as defined by the Market Abuse Regulation EU No 596/2014 ("MAR"). Please therefore be aware of the important disclosures outlined below. Unless otherwise stated, this report was completed and first disseminated at the date and time provided on the timestamp of the report. if you would like further information on dissemination times, please contact us. Please note, this report may provide views which differ from previous recommendations made by the same individual in respect of the same financial instrument or issuer in the last 12 months which is available at https://baird.bluematrix.com/sellside/MAR.action.

This material is distributed in the UK and the European Economic Area ("EEA") by RWBL, which has an office at Finsbury Circus House, 15 Finsbury Circus, London EC2M 7EB and is authorized and regulated by the Financial Conduct Authority ("FCA").

For the purposes of the FCA requirements, this investment research report is classified as investment research and is objective. The views contained in this report (i) do not necessarily correspond to, and may differ from, the views of Robert W. Baird Limited or any other entity within the Baird Group, in particular Robert W. Baird & Co. Incorporated, and (ii) may differ from the views of another individual of Robert W. Baird Limited.

All substantially material sources of the information contained in this report are disclosed. All sources of information in this report are reliable, but where there is any doubt as to reliability of a particular source, this is clearly indicated.

Robert W. Baird Group and or one of its affiliates may at any time have a long or short position in the company/companies mentioned in this report. Where the Group holds a long or short position exceeding 0.5% of the total issued share capital of the issuer, this will be disclosed separately by your RWBL representative upon request.

This material is only directed at and is only made available to persons in the EEA who would satisfy the criteria of being "Professional" investors under MiFID and to persons in the UK falling within articles 19, 38, 47, and 49 of the Financial Services and Markets Act of 2000 (Financial Promotion) Order 2005 (all such persons being referred to as “relevant persons”). Accordingly, this document is intended only for persons regarded as investment professionals (or equivalent) and is not to be distributed to or passed onto any other person (such as persons who would be classified as Retail clients under MiFID).

Robert W. Baird & Co. Incorporated and RWBL have in place organizational and administrative arrangements for the disclosure and avoidance of conflicts of interest with respect to research recommendations. Robert W. Baird Group and or one of its affiliates may be party to an agreement with the issuer that is the subject of this report relating to the provision of services of investment firms. An outline of the general approach taken by Robert W. Baird Limited in relation to conflicts of interest is available from your RWBL representative upon request. Baird’s policies and procedures are designed to identify and effectively manage conflicts of interest related to the preparation and content of research reports and to promote objective and reliable research that reflects the truly held opinions of research analysts. Analysts certify on a quarterly basis that such research reports accurately reflect their personal views.

This material is not intended for persons in jurisdictions where the distribution or publication of this research report is not permitted under the applicable laws or regulations of such jurisdiction.

Investment involves risk. The price of securities may fluctuate and past performance is not indicative of future results. Any recommendation contained in the research report does not have regard to the specific investment objectives, financial situation and the particular needs of any individuals. You are advised to exercise caution in relation to the research report. If you are in any doubt about any of the contents of this document, you should obtain independent professional advice.

RWBL is exempt from the requirement to hold an Australian financial services license. RWBL is regulated by the FCA under UK laws, which may differ from Australian laws. As such, this document has not been prepared in accordance with Australian laws.

**Dividend Yield.** As used in this report, the term “dividend yield” refers, on a percentage basis, to the historical distributions made by the issuer relative to its current market price. Such distributions are not guaranteed, may be modified at the issuer’s discretion, may exceed operating cash flow, subsidized by borrowed funds or include a return of investment principal.

# Aqua America, Inc. (WTR)

## Q3 Beat but Remain Cautious

**Reiterate Neutral and $32 price target.** Q3 results exceeded estimates across the board, and the company reaffirmed 2016 guidance. Importantly, WTR remains on track to reach its 2016 investment (>$350M) and customer growth targets. Additionally, WTR continues to see revenue expansion through rate increases and infrastructure charges. That said, the company continues to over earn in several states, which may make it challenging for the company to outperform peers in the intermediate-term. We are waiting for a clearer path to earnings growth before becoming more constructive.

- **Q3 results beat estimates across the board.** Q3 revenue was ~$226.6M vs. our/consensus estimates of $224.7M/$223.8M. Net income was $73.2M vs. $68.6M/$69.5M, and EPS was $0.41 vs. $0.38/$0.40. Q3 EPS results increased 7.9% y/y to $0.41 from $0.38 in Q3:15. The Y/Y EPS improvement primarily reflects higher regulated growth, consumption, and rates and surcharges, as well as lower production and acquisition costs.
- **WTR reaffirmed 2016 guidance.** WTR continues to expect $1.30 to $1.35 in EPS, same-system O&M expenses to increase 1% to 2%, and more than $350M in capital to be invested during 2016 (>$1.1B through 2018). WTR has invested ~$270M through Q3:16 in water infrastructure.
- **We believe WTR is on track to reach its customer growth targets.** WTR has added ~5,700 customers through acquisitions in 2016, reflecting ~1.3% YTD growth in its customer base. We believe WTR is positioned to reach its targeted customer base growth of 1.5%-2.0% in 2016.
- **Rate increases and surcharges continue to drive revenue expansion.** Aqua has received YTD awards from rate increases and infrastructure surcharges expects to increased annualized revenue by $5.5M (including revenue collected under interim rates from 2015 of $1.1M). Additionally, a total of ~$8.1M has been requested in filings which are pending in OH, VA, and IN, although the timings of potential regulatory approvals remain unclear.
- **Available credit should allow for continued acquisitions.** WTR has ~$160M available on its credit lines, which should provide sufficient liquidity for additional acquisitions.
- **Q3 earnings call will be held at 10:00 a.m. CDT**. The call can be accessed at aquaamerica.com.
- **$32 price target.** Our price target is based on a ~22x P/E multiple of our 2018 EPS estimate. This is in line with comps which are currently trading at a ~22x average multiple.

**Aqua America is a holding company for numerous regulated water/waste water utilities serving almost 3.0 million people in the eastern half of the U.S.**

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion between 2013 and 2033. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $350-$360 million annual capex investment, (~2.6x depreciation). $1.1B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** Approximately 70% of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth

**M&A opportunities expand with focused growth strategy.** WTR completed 16 acquisitions in 2015, providing 1.1% to WTR's overall customer growth of 1.9%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions

**Potential expansion into non-regulated water space could drive growth in the long run.** The company has recently divested from many of its market-based businesses that it considers too risky and hard to grow. WTR is actively evaluating other market-based activity, and believes that it will contribute to growth in the long run, but does not foresee non-regulated business becoming more than 15%-20% of Aqua America. WTR has also indicated that it would consider moving into other regulated utility space, believing the core competencies of the regulated water utility market would be profitable in other utility spaces.

**Valuation.** Our $32 price target is 22x our 2018 EPS estimate, in line with peers when fully valued (20x-22x 2018E EPS), reflecting average EPS growth opportunities and generally more constructive regulatory mechanisms.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

# Appendix - Important Disclosures and Analyst Certification

**Dividend Yield.** As used in this report, the term "dividend yield" refers, on a percentage basis, to the historical distributions made by the issuer relative to its current market price. Such distributions are not guaranteed, may be modified at the issuer's discretion, may exceed operating cash flow, subsidized by borrowed funds or include a return of investment principal.

# Aqua America, Inc. (WTR)

## 2017 Guidance Call Highlights

**Reiterate Neutral rating after WTR's 2017 guidance call**. EPS guidance for 2017 exceeded our estimate, but was lower than consensus (at the midpoint). WTR may see some rate relief in 2H:17 after filing for a infrastructure investment charge in Pennsylvania, and a strong acquisition environment may enable WTR to achieve customer growth targets. That said, we remain on the sidelines as WTR is overearning in several states, and we are waiting for a clearer path to EPS growth or better entry point before becoming more constructive.

- **WTR reaffirmed 2016 guidance and announced 2017 guidance which was above our estimates but below consensus, at the midpoint.** The company guided to 2017 EPS of $1.34-$1.39 which was above our estimate of $1.33 (consensus was $1.39). This represents a ~3% CAGR over 2016 guidance at the midpoints, although WTR reiterated 2016 EPS would come in at the mid-to-low end of the guided range.
- **Management expects to file for an infrastructure investment charge in Pennsylvania in 2017, which may provide some rate relief in 2H:17.** Management confirmed its plan to file to recover revenue in 2017 (once the company is able to demonstrate it is no longer overearning), and reiterated its intention to file a full rate case in Pennsylvania in 2018. We believe this may provide a positive catalyst for the stock when the company begins to recover revenue, which is not expected until 2H:17.
- **Management indicated the municipal acquisition market remains robust, which should help WTR to achieve its 1.5%-2.0% y/y customer growth target.** The company added 6,558 customers through 19 acquisitions in 2016, which contributed to a total customer growth rate of 1.6%. Additionally, WTR has four municipal deals pending in 2017, totaling nearly 9,000 customers, and has identified 70 additional acquisition prospects representing a total of ~390,000 customers. We expect the acquisition environment to remain favorable following positive legislative changes in key states (such as fair market value legislation), and WTR should benefit from its strategy emphasizing municipal water/wastewater acquisitions.
- **WTR plans to divest from three additional market-based businesses in 2017, which will reduce revenue but should ultimately be beneficial for net income.** WTR has already exited three of its market-based businesses and plans to divest three more in 2017. While the company will continue to evaluate market-based opportunities, WTR expects to focus more on its regulated segment, which provides greater growth opportunities.
- **WTR will hold its Q4:16 earnings conference call on February 23.** The call can be accessed at http://ir.aquaamerica.com/ .

**Aqua America is a holding company for numerous regulated water/waste water utilities serving almost 3.0 million people in the eastern half of the U.S.**

# Details

**Revising estimates to reflect increased acquisition activity.** We now estimate 2017 revenue of $851.8M and EPS of $1.34, vs. our previous estimates of $847.8M/$1.33, respectively. Additionally, we now anticipate 2018 revenue will be $908.1M and EPS $1.46 vs. our prior estimate of $904.1M/$1.45, respectively.

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion between 2013 and 2033. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $450+ million annual capex investment. $1.2B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** Approximately 70% of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth

**M&A opportunities expand with focused growth strategy.** WTR completed 19 acquisitions in 2016, contributing to WTR's overall customer growth of 1.6%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions

**Potential expansion into non-regulated water space could drive growth in the long run.** The company has recently divested from many of its market-based businesses that it considers too risky and hard to grow. WTR is actively evaluating other market-based activity, and believes that it will contribute to growth in the long run, but does not foresee non-regulated business becoming more than 15%-20% of Aqua America. WTR has also indicated that it would consider moving into other regulated utility space, believing the core competencies of the regulated water utility market would be profitable in other utility spaces.

**Valuation.** Our $32 price target is 22x our 2018 EPS estimate, in line with peers when fully valued (20x-22x 2018E EPS), reflecting average EPS growth opportunities and generally more constructive regulatory mechanisms.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

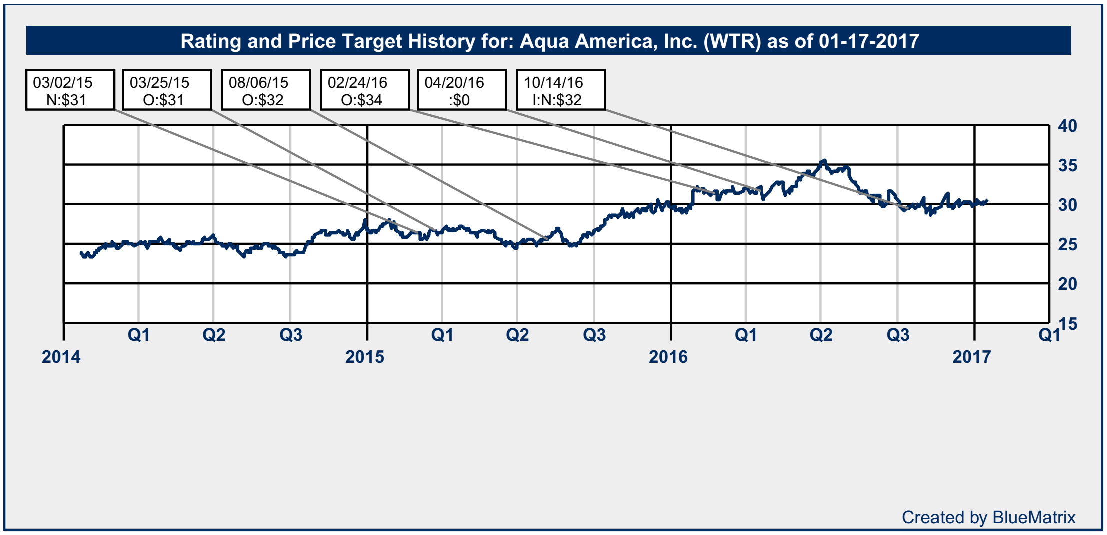
# Appendix - Important Disclosures and Analyst Certification

Approved on 17 January 2017 20:08EST/ Published on 18 January 2017 01:00EST.



1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

**Appendix – Important Disclosures and Analyst Certification**

Robert W. Baird & Co. Incorporated and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months.

Robert W. Baird & Co. Incorporated may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

**Investment Ratings: Outperform (O)** - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. **Neutral (N)** - Expected to perform in line with the broader U.S. equity market over the next 12 months. **Underperform (U)** - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

**Risk Ratings: L - Lower Risk** - Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. **A - Average Risk** - Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. **H - Higher Risk** - Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. **S - Speculative Risk** - High-growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

**Valuation, Ratings and Risks.** The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

**Distribution of Investment Ratings.** As of December 30, 2016, Baird U.S. Equity Research covered 703 companies, with 51% rated Outperform/Buy, 48% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 11% of Outperform/Buy-rated, 5% of Neutral/Hold-rated and 1% of Underperform/Sell rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

**Analyst Compensation.** Analyst compensation is based on: 1) the correlation between the analyst's recommendations and stock price performance; 2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; 3) the analyst's productivity, including the quality of the analyst's research and the analyst's contribution to the growth and development of our overall research effort and 4) compliance with all of Robert W. Baird's internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee.

Analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not

compensate research analysts based on specific investment banking transactions.

A complete listing of all companies covered by Baird U.S. Equity Research and applicable research disclosures can be accessed at http://www.rwbaird.com/research-insights/research/coverage/research-disclosure.aspx. **Other Disclosures**

The information and rating included in this report represent the Analyst's long-term (12 month) view as described above. The research analyst(s) named in this report may, at times and at the request of clients or their Baird representatives, provide particular investment perspectives or trading strategies based primarily on the analyst's understanding of the individual client's objectives. These perspectives or trading strategies generally are responsive to client inquiries and based on criteria the analyst considers relevant to the client. As such, these perspectives and strategies may differ from the analyst's views contained in this report.

Robert W. Baird & Co. Incorporated and/or its affiliates (Baird) may provide to certain clients additional or research supplemental products or services, such as outlooks, commentaries and other detailed analyses, which focus on covered stocks, companies, industries or sectors. Not all clients who receive our standard company-specific research reports are eligible to receive these additional or supplemental products or services. Baird determines in its sole discretion the clients who will receive additional or supplemental products or services, in light of various factors including the size and scope of the client relationships. These additional or supplemental products or services may feature different analytical or research techniques and information than are contained in Baird's standard research reports. Any ratings and recommendations contained in such additional or research supplemental products are consistent with the Analyst's ratings and recommendations contained in more broadly disseminated standard research reports.

Baird Research Analysts may provide incremental data points or views regarding covered companies in the form of Research Posts and Flash Reports. All Posts and Flash Reports are available to clients via www.BairdOnline.com, but not all are sent directly to clients. Baird Associates may, at their discretion, choose whether to send these Posts and Flash Reports to Baird clients after they are posted online. Such decisions are based on, among other things, client interest, coverage, stock ownership and indicated email preferences. The incremental content and/or analysis contained in these pieces may be useful to investors as part of a broader investment thesis, but is not sufficient to warrant a change in the Research Analyst's published opinion, including rating, estimates and price targets. Access to www.BairdOnline.com is available to all Baird Clients. Contact your Baird representative if you would like access to www.BairdOnline.com.

For the purposes of the FCA requirements, this investment research report is classified as investment research and is objective. The views contained in this report (i) do not necessarily correspond to, and may differ from, the views of Robert W. Baird Limited or any other entity within the Baird Group, in particular Robert W. Baird & Co. Incorporated, and (ii) may differ from the views of another individual of Robert W. Baird Limited.

All substantially material sources of the information contained in this report are disclosed. All sources of information in this report are reliable, but where there is any doubt as to reliability of a particular source, this is clearly indicated.

Robert W. Baird Group and or one of its affiliates may at any time have a long or short position in the company/companies mentioned in this report. Where the Group holds a long or short position exceeding 0.5% of the total issued share capital of the issuer, this will be disclosed separately by your RWBL representative upon request.

This material is only directed at and is only made available to persons in the EEA who would satisfy the criteria of being "Professional"

# Aqua America, Inc. (WTR)

## Q1 Conference Call Highlights

**Reiterate Neutral rating after WTR's Q1 conference call.** The exit of market-based business offset increases in regulated revenue in Q1, and one time benefits in Q1:16 led to challenging y/y EPS comps. That said, the company expects to close four acquisitions totaling almost 9,000 customers in 2017 (which should enable it to reach targeted customer growth of 1.5%-2%) and grow rate base by 6% to 7%. We remain Neutral-rated and look for execution on EPS growth before becoming more constructive.

- **The exit of market-based business segments continued to offset revenue increases in Q1, but management reiterated FY:17 guidance.** Favorable rate decisions and regulated customer growth increased revenue by ~$2.1M y/y, but was more than offset by $5.2M in reduced revenue from market-based activities. For more information, please see Q1 Results: First Look.
- **EPS decreased ~3% y/y year due to favorable one time benefits in Q1:16, and we believe Q2:17 may also face some difficult comps (we model Q2:17 EPS of $0.33, a ~2% decrease y/y).** Management indicated Q2:16 benefited from one-time expense decreases, which could again lead to challenging y/y comps. That said, WTR reiterated its 2017 guidance of $1.34 to $1.39.
- **WTR's strategy of focusing on larger municipal acquisitions may begin to pay off toward the end of the year.** WTR has four municipal deals it expects will close in 2017, totaling nearly 9,000 customers. We expect the acquisition environment to remain favorable following positive legislative changes in key states (such as fair market value legislation), and WTR should benefit from its strategy emphasizing municipal water/wastewater acquisitions.
- **Updating estimates to reflect Q1 results.** For 2017 we now estimate revenue of $847M and EPS of $1.34 vs. our prior estimates of $852M/$1.34. For 2018, we now estimate revenue of $898M and EPS of $1.46, vs our prior estimates of $908M/$1.46.
- **Reiterate $32 price target.** Our $32 price target is 22x our 2018 EPS estimate, below peers (~25x 2018E EPS), which we believe will expand as WTR executes on EPS growth.

**Aqua America is a holding company for numerous regulated water/waste water utilities serving almost 3.0 million people in the eastern half of the U.S.**

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion between 2013 and 2033. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $450+ million annual capex investment. $1.2B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** Approximately 70% of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth

**M&A opportunities expand with focused growth strategy.** WTR completed 19 acquisitions in 2016, contributing to WTR's overall customer growth of 1.6%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions

**Valuation.** Our $32 price target is 22x our 2018 EPS estimate, below peers (~25x 2018E EPS), which we believe will expand as WTR executes on EPS growth.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

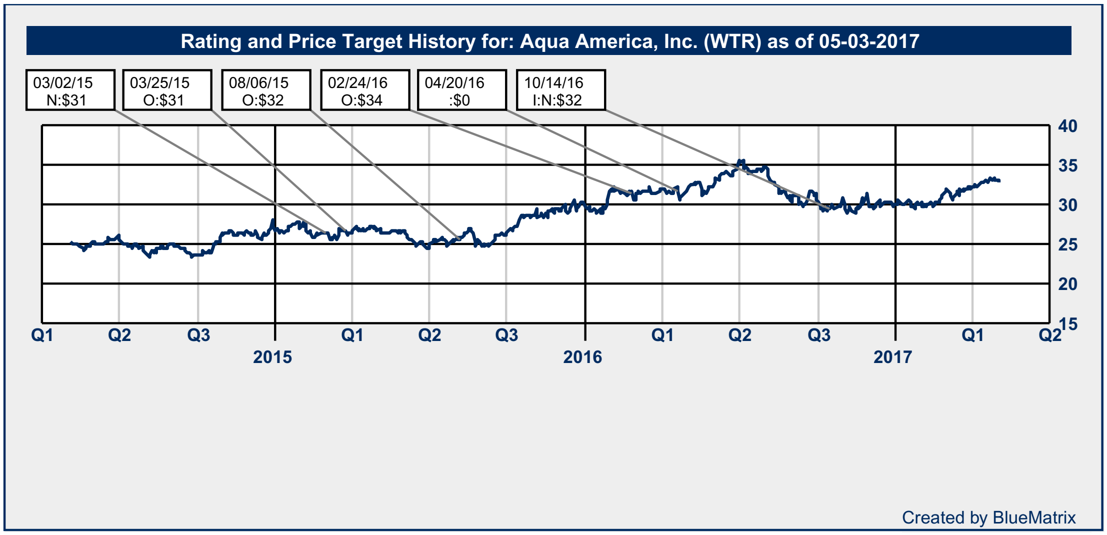
# Appendix - Important Disclosures and Analyst Certification

Approved on 4 May 2017 17:15EDT/ Published on 4 May 2017 17:15EDT.



1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

**Appendix – Important Disclosures and Analyst Certification**

Robert W. Baird & Co. Incorporated and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months.

Robert W. Baird & Co. Incorporated may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

**Investment Ratings: Outperform (O)** - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. **Neutral (N)** - Expected to perform in line with the broader U.S. equity market over the next 12 months. **Underperform (U)** - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

**Risk Ratings: L - Lower Risk** - Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. **A - Average Risk** - Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. **H - Higher Risk** - Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. **S - Speculative Risk** - High-growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

**Valuation, Ratings and Risks.** The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

**Distribution of Investment Ratings.** As of April 28, 2017, Baird U.S. Equity Research covered 708 companies, with 53% rated Outperform/Buy, 46% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 10% of Outperform/Buy-rated, 5% of Neutral/Hold-rated and 9% of Underperform/Sell rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

**Analyst Compensation.** Analyst compensation is based on: 1) the correlation between the analyst's recommendations and stock price performance; 2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; 3) the analyst's productivity, including the quality of the analyst's research and the analyst's contribution to the growth and development of our overall research effort and 4) compliance with all of Robert W. Baird’s internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee.

Analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not

compensate research analysts based on specific investment banking transactions.

A complete listing of all companies covered by Baird U.S. Equity Research and applicable research disclosures can be accessed at http://www.rwbaird.com/research-insights/research/coverage/research-disclosure.aspx. You can also call 800-792-2473 or write: Robert W. Baird & Co., Equity Research, 777 E. Wisconsin Avenue, Milwaukee, WI 53202.

**Analyst Certification**

The senior research analyst(s) certifies that the views expressed in this research report and/or financial model accurately reflect such senior analyst's personal views about the subject securities or issuers and that no part of his or her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in the research report.

**Disclaimers**

**Baird prohibits analysts from owning stock in companies they cover.**

This is not a complete analysis of every material fact regarding any company, industry or security. The opinions expressed here reflect our judgment at this date and are subject to change. The information has been obtained from sources we consider to be reliable, but we cannot guarantee the accuracy.

**ADDITIONAL INFORMATION ON COMPANIES MENTIONED HEREIN IS AVAILABLE UPON REQUEST**

The Dow Jones Industrial Average, S&P 500, S&P 400 and Russell 2000 are unmanaged common stock indices used to measure and report performance of various sectors of the stock market; direct investment in indices is not available.

Baird is exempt from the requirement to hold an Australian financial services license. Baird is regulated by the United States Securities and Exchange Commission, FINRA, and various other self-regulatory organizations and those laws and regulations may differ from Australian laws. This report has been prepared in accordance with the laws and regulations governing United States broker-dealers and not Australian laws.

**Other Disclosures**

The information and rating included in this report represent the Analyst's long-term (12 month) view as described above. The research analyst(s) named in this report may, at times and at the request of clients or their Baird representatives, provide particular investment perspectives or trading strategies based primarily on the analyst's understanding of the individual client's objectives. These perspectives or trading strategies generally are responsive to client inquiries and based on criteria the analyst considers relevant to the client. As such, these perspectives and strategies may differ from the analyst's views contained in this report.

Robert W. Baird & Co. Incorporated and/or its affiliates (Baird) may provide to certain clients additional or research supplemental products or services, such as outlooks, commentaries and other detailed analyses, which focus on covered stocks, companies, industries or sectors. Not all clients who receive our standard company-specific research reports are eligible to receive these additional or supplemental products or services. Baird determines in its sole discretion the clients who will receive additional or supplemental products or services, in light of various factors including the size and scope of the client relationships. These additional or supplemental products or services may feature different analytical or research techniques and information than are contained in Baird's standard research reports. Any ratings and recommendations contained in such additional or research supplemental products are consistent with the Analyst's ratings and recommendations contained in more broadly disseminated standard research reports.

Baird Research Analysts may provide incremental data points or views regarding covered companies in the form of Research Posts and Flash Reports. All Posts and Flash Reports are available to clients via www.bairdonline.com, but not all are sent directly to clients. Baird Associates may, at their discretion, choose whether to send these Posts and Flash Reports to Baird clients after they are posted online. Such decisions are based on, among other things, client interest, coverage, stock ownership and indicated email preferences. The incremental content and/or analysis contained in these pieces may be useful to investors as part of a broader investment thesis, but is not sufficient to warrant a change in the Research Analyst's published opinion, including rating, estimates and price targets. Access to www.bairdonline.com is available to all Baird Clients. Contact your Baird representative if you would like access to www.bairdonline.com.

**United Kingdom ("UK") disclosure requirements for the purpose of distributing this research into the UK and other countries for which Robert W. Baird Limited ("RWBL") holds a MiFID passport.**

The contents of this report may contain an "investment recommendation", as defined by the Market Abuse Regulation EU No 596/2014 ("MAR"). Please therefore be aware of the important disclosures outlined below. Unless otherwise stated, this report was completed and first disseminated at the date and time provided on the timestamp of the report. if you would like further information on dissemination times, please contact us. Please note, this report may provide views which differ from previous recommendations made by the same individual in respect of the same financial instrument or issuer in the last 12 months which is available at https://baird.bluematrix.com/sellside/MAR.action.

This material is distributed in the UK and the European Economic Area ("EEA") by RWBL, which has an office at Finsbury Circus House, 15 Finsbury Circus, London EC2M 7EB and is authorized and regulated by the Financial Conduct Authority ("FCA").

For the purposes of the FCA requirements, this investment research report is classified as investment research and is objective. The views contained in this report (i) do not necessarily correspond to, and may differ from, the views of Robert W. Baird Limited or any other entity within the Baird Group, in particular Robert W. Baird & Co. Incorporated, and (ii) may differ from the views of another individual of Robert W. Baird Limited.

All substantially material sources of the information contained in this report are disclosed. All sources of information in this report are reliable, but where there is any doubt as to reliability of a particular source, this is clearly indicated.

Robert W. Baird Group and or one of its affiliates may at any time have a long or short position in the company/companies mentioned in this report. Where the Group holds a long or short position exceeding 0.5% of the total issued share capital of the issuer, this will be disclosed separately by your RWBL representative upon request.

This material is only directed at and is only made available to persons in the EEA who would satisfy the criteria of being "Professional" investors under MiFID and to persons in the UK falling within articles 19, 38, 47, and 49 of the Financial Services and Markets Act of

2000 (Financial Promotion) Order 2005 (all such persons being referred to as “relevant persons”). Accordingly, this document is intended only for persons regarded as investment professionals (or equivalent) and is not to be distributed to or passed onto any other person (such as persons who would be classified as Retail clients under MiFID).
Robert W. Baird & Co. Incorporated and RWBL have in place organizational and administrative arrangements for the disclosure and avoidance of conflicts of interest with respect to research recommendations. Robert W. Baird Group and or one of its affiliates may be party to an agreement with the issuer that is the subject of this report relating to the provision of services of investment firms. An outline of the general approach taken by Robert W. Baird Limited in relation to conflicts of interest is available from your RWBL representative upon request. Baird’s policies and procedures are designed to identify and effectively manage conflicts of interest related to the preparation and content of research reports and to promote objective and reliable research that reflects the truly held opinions of research analysts. Analysts certify on a quarterly basis that such research reports accurately reflect their personal views.
This material is not intended for persons in jurisdictions where the distribution or publication of this research report is not permitted under the applicable laws or regulations of such jurisdiction.
Investment involves risk. The price of securities may fluctuate and past performance is not indicative of future results. Any recommendation contained in the research report does not have regard to the specific investment objectives, financial situation and the particular needs of any individuals. You are advised to exercise caution in relation to the research report. If you are in any doubt about any of the contents of this document, you should obtain independent professional advice.
RWBL is exempt from the requirement to hold an Australian financial services license. RWBL is regulated by the FCA under UK laws, which may differ from Australian laws. As such, this document has not been prepared in accordance with Australian laws.
**Dividend Yield.** As used in this report, the term “dividend yield” refers, on a percentage basis, to the historical distributions made by the issuer relative to its current market price. Such distributions are not guaranteed, may be modified at the issuer’s discretion, may exceed operating cash flow, subsidized by borrowed funds or include a return of investment principal.

# Aqua America, Inc. (WTR)

## Q3 Conference Call Highlights

**Reiterate Neutral rating after WTR's Q3 conference call.** Q3 beat estimates as favorable weather led to increased consumption, although WTR expects to be at the mid-to-low point of its EPS guidance range for 2016. Additionally, management indicated higher-than-expected organic growth and a strong acquisition pipeline should ensure customer growth going forward. WTR tentatively plans to file for DSIC in 2017 and a full rate case in 2018, which should help EPS growth. We continue to wait for a clearer path to earnings growth before becoming more constructive.

- **Management expects to be at the mid to low point of EPS guidance range for FY:16.** Q3 was stronger than expected due to increased consumption, larger-than-expected organic growth, and fee recognition in its JV. Despite the strong Q3, Management expects to be at the mid to low point of its FY:16 EPS guidance as the one-time fee benefits in Q3 will not continue in Q4, and we have adjusted our model accordingly. For additional details about Q3 performance see: Q3 First Look Note.
- **Acquisition opportunities remain robust and competing bidders are acting rationally.** WTR completed 13 acquisitions through November 1, adding ~5,707 total customers. WTR also has 6 pending acquisitions for an additional 4,700 customers. The company has achieved 1.3% customer growth YTD (~12,900 customers), and continues to expect y/y customer growth of 1.5%-2.0%. Management is optimistic about future acquisitions and municipals seeking to sell their water businesses are at an all-time high.
- **WTR tentatively plans to file for a rate case in Pennsylvania in 2018 (2019 effective date), and potentially DSIC in 2017.** WTR expects to file to recover some revenue in 2017, with a full rate case in 2018. Under this timeline, new rates from a 2018 rate case filing would likely come into effect in 2019. WTR currently has pending rate cases in IN, VA, and OH with requested annualized revenue increase of $8.1M.
- **Warmer weather in Pennsylvania, Virginia, and Ohio, drove increased consumption during Q3.** Warmer-than-expected weather in several service territories led to increased consumption y/y. Given unfavorable weather conditions in Q2 and expectations for a typical Q4, however, management expects the effect of weather to be neutral overall in FY:16.
- **$32 price target.** Our price target is based on a ~22x P/E multiple of our 2018 EPS estimate. This is in line with comps which are currently trading at a ~22x average multiple.

**Aqua America is a holding company for numerous regulated water/waste water utilities serving almost 3.0 million people in the eastern half of the U.S.**

# Investment Thesis

**Aqua America (WTR) is the second-largest investor-owned water utility in the US.** WTR operates in eight states largely in the eastern half of the U.S. and serves ~3 million people. WTR maintains over 12,500 miles of pipe, of which almost half are located in PA. WTR has completed over 75 acquisitions in the past five years. Known as Philadelphia Suburban Corporation until 2004, Aqua America is headquartered in a Philadelphia suburb where its corporate roots date back to 1886 for providing water/wastewater services to the suburbs of Philadelphia.

**US water infrastructure needs should drive long-term earnings growth.** The water infrastructure in the United States is in significant need of upgrade and expansion between 2013 and 2033. We believe a significant long-term earnings growth driver for WTR comes from substantial capital investment opportunities, which contribute to rate base growth, and in turn, drives earnings.

**Planned capital investment should expand rate base and generate growth for the company in the long run.** We expect Aqua America's long-term EPS growth to be fueled in part by the company's $350-$360 million annual capex investment, (~2.6x depreciation). $1.1B is expected to be invested into system upgrades (main, pipes, hydrants, etc.) over the next three years, which provides direct value to customers. Discretionary system investments are typically targeted for states with enhanced recovery mechanisms which help stabilize margin and earnings consistencies despite accelerated investment.

**The majority of WTR's regulatory operations are located in states that maintain enhanced regulatory recovery mechanisms.** Approximately 70% of WTR's current operating system employs infrastructure mechanisms, which allow a return on investment outside of a full rate case, substantially reducing regulatory lag time and minimizing rate case activity. These regulatory mechanisms include infrastructure investment riders, statewide rates and incentive mechanisms for acquisitions of troubled water systems. We believe such mechanisms provide a constructive regulatory environment in which to make capital investments, enabling improved and more consistent earned returns, which should lead to a premium peer valuation.

**Continued acquisitions should help customer growth.** The company targets 1.5-2.0% customer growth going forward, 0.5% from organic growth and 1% through acquisitions. Aqua has successfully acquired hundreds of water and waste water systems in the past decade to supplement its internal growth. Acquisitions also provide significant follow-on investment opportunities as WTR improves the quality of an acquired water system. The company is expected to be a key player in consolidating some of the 53,000 private water systems in the U.S., and rehabilitating those systems to improve water quality and drive investment growth

**M&A opportunities expand with focused growth strategy.** WTR completed 16 acquisitions in 2015, providing 1.1% to WTR's overall customer growth of 1.9%. We expect M&A to remain at heightened levels reflecting recent legislative changes in key states and WTR's realigned corporate organization and expanded executive team tasked with executing a focused growth strategy that emphasizes larger (mainly municipal) water/wastewater acquisitions

**Potential expansion into non-regulated water space could drive growth in the long run.** The company has recently divested from many of its market-based businesses that it considers too risky and hard to grow. WTR is actively evaluating other market-based activity, and believes that it will contribute to growth in the long run, but does not foresee non-regulated business becoming more than 15%-20% of Aqua America. WTR has also indicated that it would consider moving into other regulated utility space, believing the core competencies of the regulated water utility market would be profitable in other utility spaces.

**Valuation.** Our $32 price target is 22x our 2018 EPS estimate, in line with peers when fully valued (20x-22x 2018E EPS), reflecting average EPS growth opportunities and generally more constructive regulatory mechanisms.

# Risks & Caveats

Our suitability rating on Aqua America is Lower Risk. Key risks include the following.

**Regulation.** Regulated operations are subject to local, state and federal regulations. Changes in the regulatory environment can affect WTR's near-term and long-term performance.

**Weather.** WTR's businesses are sensitive to fluctuations in the weather. Particularly wet or dry weather can impact near-term financial results.

**Acquisition risk.** WTR may have the opportunity to purchase assets or companies in the near future. Acquisitions carry risks related to personnel, expected-versus-actual growth and a myriad of unforeseen hurdles, all of which can negatively affect earnings.

**Product quality.** Unique among its sister regulated utility sectors, water utilities provide a product that is ingested. Despite robust mandated service quality standards that lower risk, a quality failure could materially impact the earnings and stock of WTR.

# Company Description

Aqua America is a holding company for regulated utilities providing water and waste water services to nearly 3 million people located in the eastern half of the U.S. Over 50% of operating revenues and net income are derived from Pennsylvania.

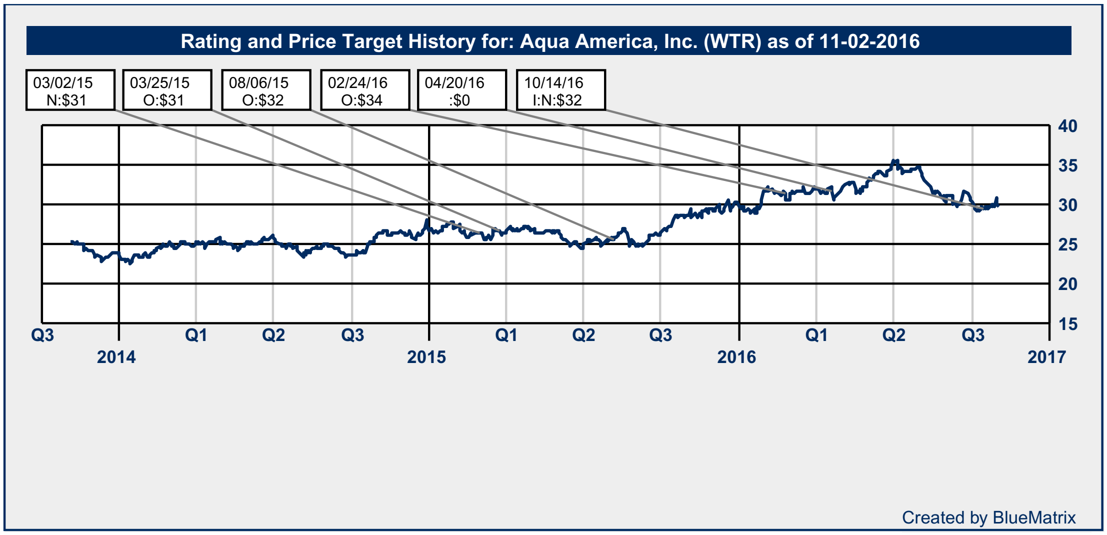
# Appendix - Important Disclosures and Analyst Certification

Approved on 2 November 2016 20:54EDT/ Published on 3 November 2016 01:00EDT.



1 Robert W. Baird & Co. Incorporated makes a market in the securities of WTR.

**Appendix – Important Disclosures and Analyst Certification**

Robert W. Baird & Co. Incorporated and/or its affiliates expect to receive or intend to seek investment-banking related compensation from the company or companies mentioned in this report within the next three months.

Robert W. Baird & Co. Incorporated may not be licensed to execute transactions in all foreign listed securities directly. Transactions in foreign listed securities may be prohibited for residents of the United States. Please contact a Baird representative for more information.

**Investment Ratings: Outperform (O)** - Expected to outperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months. **Neutral (N)** - Expected to perform in line with the broader U.S. equity market over the next 12 months. **Underperform (U)** - Expected to underperform on a total return, risk-adjusted basis the broader U.S. equity market over the next 12 months.

**Risk Ratings: L - Lower Risk** - Higher-quality companies for investors seeking capital appreciation or income with an emphasis on safety. Company characteristics may include: stable earnings, conservative balance sheets, and an established history of revenue and earnings. **A - Average Risk** - Growth situations for investors seeking capital appreciation with an emphasis on safety. Company characteristics may include: moderate volatility, modest balance-sheet leverage, and stable patterns of revenue and earnings. **H - Higher Risk** - Higher-growth situations appropriate for investors seeking capital appreciation with the acceptance of risk. Company characteristics may include: higher balance-sheet leverage, dynamic business environments, and higher levels of earnings and price volatility. **S - Speculative Risk** - High-growth situations appropriate only for investors willing to accept a high degree of volatility and risk. Company characteristics may include: unpredictable earnings, small capitalization, aggressive growth strategies, rapidly changing market dynamics, high leverage, extreme price volatility and unknown competitive challenges.

**Valuation, Ratings and Risks.** The recommendation and price target contained within this report are based on a time horizon of 12 months but there is no guarantee the objective will be achieved within the specified time horizon. Price targets are determined by a subjective review of fundamental and/or quantitative factors of the issuer, its industry, and the security type. A variety of methods may be used to determine the value of a security including, but not limited to, discounted cash flow, earnings multiples, peer group comparisons, and sum of the parts. Overall market risk, interest rate risk, and general economic risks impact all securities. Specific information regarding the price target and recommendation is provided in the text of our most recent research report.

**Distribution of Investment Ratings.** As of October 31, 2016, Baird U.S. Equity Research covered 739 companies, with 50% rated Outperform/Buy, 49% rated Neutral/Hold and 1% rated Underperform/Sell. Within these rating categories, 9% of Outperform/Buy-rated, 5% of Neutral/Hold-rated and 11% of Underperform/Sell-rated companies have compensated Baird for investment banking services in the past 12 months and/or Baird managed or co-managed a public offering of securities for these companies in the past 12 months.

**Analyst Compensation.** Analyst compensation is based on: 1) the correlation between the analyst's recommendations and stock price performance; 2) ratings and direct feedback from our investing clients, our institutional and retail sales force (as applicable) and from independent rating services; 3) the analyst's productivity, including the quality of the analyst's research and the analyst's contribution to the growth and development of our overall research effort and 4) compliance with all of Robert W. Baird’s internal policies and procedures. This compensation criteria and actual compensation is reviewed and approved on an annual basis by Baird's Research Oversight Committee.

Analyst compensation is derived from all revenue sources of the firm, including revenues from investment banking. Baird does not

compensate research analysts based on specific investment banking transactions.

A complete listing of all companies covered by Baird U.S. Equity Research and applicable research disclosures can be accessed at http://www.rwbaird.com/research-insights/research/coverage/research-disclosure.aspx. You can also call 800-792-2473 or write: Robert W. Baird & Co., Equity Research, 777 E. Wisconsin Avenue, Milwaukee, WI 53202.

**Analyst Certification**

The senior research analyst(s) certifies that the views expressed in this research report and/or financial model accurately reflect such senior analyst's personal views about the subject securities or issuers and that no part of his or her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in the research report.

**Disclaimers**

**Baird prohibits analysts from owning stock in companies they cover.**

This is not a complete analysis of every material fact regarding any company, industry or security. The opinions expressed here reflect our judgment at this date and are subject to change. The information has been obtained from sources we consider to be reliable, but we cannot guarantee the accuracy.

**ADDITIONAL INFORMATION ON COMPANIES MENTIONED HEREIN IS AVAILABLE UPON REQUEST**

The Dow Jones Industrial Average, S&P 500, S&P 400 and Russell 2000 are unmanaged common stock indices used to measure and report performance of various sectors of the stock market; direct investment in indices is not available.

Baird is exempt from the requirement to hold an Australian financial services license. Baird is regulated by the United States Securities and Exchange Commission, FINRA, and various other self-regulatory organizations and those laws and regulations may differ from Australian laws. This report has been prepared in accordance with the laws and regulations governing United States broker-dealers and not Australian laws.

**Other Disclosures**

The information and rating included in this report represent the Analyst's long-term (12 month) view as described above. The research analyst(s) named in this report may, at times and at the request of clients or their Baird representatives, provide particular investment perspectives or trading strategies based primarily on the analyst's understanding of the individual client's objectives. These perspectives or trading strategies generally are responsive to client inquiries and based on criteria the analyst considers relevant to the client. As such, these perspectives and strategies may differ from the analyst's views contained in this report.

Robert W. Baird & Co. Incorporated and/or its affiliates (Baird) may provide to certain clients additional or research supplemental products or services, such as outlooks, commentaries and other detailed analyses, which focus on covered stocks, companies, industries or sectors. Not all clients who receive our standard company-specific research reports are eligible to receive these additional or supplemental products or services. Baird determines in its sole discretion the clients who will receive additional or supplemental products or services, in light of various factors including the size and scope of the client relationships. These additional or supplemental products or services may feature different analytical or research techniques and information than are contained in Baird's standard research reports. Any ratings and recommendations contained in such additional or research supplemental products are consistent with the Analyst's ratings and recommendations contained in more broadly disseminated standard research reports.

Baird Research Analysts may provide incremental data points or views regarding covered companies in the form of Research Posts and Flash Reports. All Posts and Flash Reports are available to clients via www.BairdOnline.com, but not all are sent directly to clients. Baird Associates may, at their discretion, choose whether to send these Posts and Flash Reports to Baird clients after they are posted online. Such decisions are based on, among other things, client interest, coverage, stock ownership and indicated email preferences. The incremental content and/or analysis contained in these pieces may be useful to investors as part of a broader investment thesis, but is not sufficient to warrant a change in the Research Analyst's published opinion, including rating, estimates and price targets. Access to www.BairdOnline.com is available to all Baird Clients. Contact your Baird representative if you would like access to www.BairdOnline.com.

**United Kingdom ("UK") disclosure requirements for the purpose of distributing this research into the UK and other countries for which Robert W. Baird Limited ("RWBL") holds a MiFID passport.**

The contents of this report may contain an "investment recommendation", as defined by the Market Abuse Regulation EU No 596/2014 ("MAR"). Please therefore be aware of the important disclosures outlined below. Unless otherwise stated, this report was completed and first disseminated at the date and time provided on the timestamp of the report. if you would like further information on dissemination times, please contact us. Please note, this report may provide views which differ from previous recommendations made by the same individual in respect of the same financial instrument or issuer in the last 12 months which is available at https://baird.bluematrix.com/sellside/MAR.action.

This material is distributed in the UK and the European Economic Area ("EEA") by RWBL, which has an office at Finsbury Circus House, 15 Finsbury Circus, London EC2M 7EB and is authorized and regulated by the Financial Conduct Authority ("FCA").

For the purposes of the FCA requirements, this investment research report is classified as investment research and is objective. The views contained in this report (i) do not necessarily correspond to, and may differ from, the views of Robert W. Baird Limited or any other entity within the Baird Group, in particular Robert W. Baird & Co. Incorporated, and (ii) may differ from the views of another individual of Robert W. Baird Limited.

All substantially material sources of the information contained in this report are disclosed. All sources of information in this report are reliable, but where there is any doubt as to reliability of a particular source, this is clearly indicated.

Robert W. Baird Group and or one of its affiliates may at any time have a long or short position in the company/companies mentioned in this report. Where the Group holds a long or short position exceeding 0.5% of the total issued share capital of the issuer, this will be disclosed separately by your RWBL representative upon request.

This material is only directed at and is only made available to persons in the EEA who would satisfy the criteria of being "Professional"

investors under MiFID and to persons in the UK falling within articles 19, 38, 47, and 49 of the Financial Services and Markets Act of 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). Accordingly, this document is intended only for persons regarded as investment professionals (or equivalent) and is not to be distributed to or passed onto any other person (such as persons who would be classified as Retail clients under MiFID).

Robert W. Baird & Co. Incorporated and RWBL have in place organizational and administrative arrangements for the disclosure and avoidance of conflicts of interest with respect to research recommendations. Robert W. Baird Group and or one of its affiliates may be party to an agreement with the issuer that is the subject of this report relating to the provision of services of investment firms. An outline of the general approach taken by Robert W. Baird Limited in relation to conflicts of interest is available from your RWBL representative upon request. Baird's policies and procedures are designed to identify and effectively manage conflicts of interest related to the preparation and content of research reports and to promote objective and reliable research that reflects the truly held opinions of research analysts. Analysts certify on a quarterly basis that such research reports accurately reflect their personal views.

This material is not intended for persons in jurisdictions where the distribution or publication of this research report is not permitted under the applicable laws or regulations of such jurisdiction.

Investment involves risk. The price of securities may fluctuate and past performance is not indicative of future results. Any recommendation contained in the research report does not have regard to the specific investment objectives, financial situation and the particular needs of any individuals. You are advised to exercise caution in relation to the research report. If you are in any doubt about any of the contents of this document, you should obtain independent professional advice.

RWBL is exempt from the requirement to hold an Australian financial services license. RWBL is regulated by the FCA under UK laws, which may differ from Australian laws. As such, this document has not been prepared in accordance with Australian laws.

**Dividend Yield.** As used in this report, the term "dividend yield" refers, on a percentage basis, to the historical distributions made by the issuer relative to its current market price. Such distributions are not guaranteed, may be modified at the issuer's discretion, may exceed operating cash flow, subsidized by borrowed funds or include a return of investment principal.

## 4Q Takeaways

**4Q and Full-year Results in Line with Expectations.** WTR reported operating earnings of $0.28 in 4Q16 and $1.32 in 2016. These results were in line with consensus of $0.29 and $1.33. The company recorded a record level of investment in the system in 2016 ($400MM) and is forecast to set a new record investment of approximately $450MM in 2017. Customer growth was 1.6% in 2016, with roughly 57% of the growth generated organically and the remainder acquired.

**2017 EPS Guidance Remains Intact at $1.34–1.39.** Guidance drivers include: customer growth of 1.5–2.0%, revenue increases ($5.6MM annualized revenue approved in 2016, $3.7MM annualized revenue approved so far in 2017, $5.6MM annualized revenue increase pending in OH, and PA DSIC filing with rates effective ~4Q17), 1–2% same-system O&M increase, 6–7% rate base growth, and $450MM capex.

**Acquisitions May Impact Future O&M Efficiency Ratio.** WTR recorded a 33.4% O&M efficiency ratio (adjusted for purchased water) in 2016. WTR's rock-solid ratio may come under pressure in future periods as a result of the impact of municipal acquisitions. The acquisitions typically have delayed rate case impacts, so recovery may lag expenses briefly. It is also reasonable to assume that the efficiency ratios of the acquisition targets are somewhat worse than WTR's.

**We are maintaining our EPS estimates of $1.38 in 2017, $1.46 in 2018, and $1.55 in 2019. Our price target also remains unchanged at $33.**

| | |
|---|---|
| **Price (23-Feb-2017)** | **USD 30.73** |
| **Price Target** | **USD 33.00** |

**Why Equal Weight?** While we believe WTR is a well-run utility and appreciate the relatively high earned ROE, the uncertainty associated with overearning in two of their largest jurisdictions keeps us at an Equal Weight rating.

**Upside case** — **USD 40.00**

If results improve at a faster rate than we expect or if the market-based opportunities develop at a faster pace, a 15% premium to the group average multiple would be warranted.

**Downside case** — **USD 25.00**

If regulatory issues impact earnings negatively or cost pressures occur, the stock trading at a group average multiple would be a reasonable assumption.

**Upside/Downside scenarios**

## ANALYST(S) CERTIFICATION(S):

I, Daniel Ford, CFA, hereby certify (1) that the views expressed in this research report accurately reflect my personal views about any or all of the subject securities or issuers referred to in this research report and (2) no part of my compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this research report.

## IMPORTANT DISCLOSURES

Barclays Research is a part of the Investment Bank of Barclays Bank PLC and its affiliates (collectively and each individually, "Barclays").

**Availability of Disclosures:**

Where any companies are the subject of this research report, for current important disclosures regarding those companies please refer to https://publicresearch.barclays.com or alternatively send a written request to: Barclays Research Compliance, 745 Seventh Avenue, 13th Floor, New York, NY 10019 or call +1-212-526-1072.

The analysts responsible for preparing this research report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by investment banking activities, the profitability and revenues of the Markets business and the potential interest of the firm's investing clients in research with respect to the asset class covered by the analyst.

All authors contributing to this research report are Research Analysts unless otherwise indicated.

The publication date at the top of the report reflects the local time where the report was produced and may differ from the release date provided in GMT.

Analysts regularly conduct site visits to view the material operations of covered companies, but Barclays policy prohibits them from accepting payment or reimbursement by any covered company of their travel expenses for such visits.

In order to access Barclays Statement regarding Research Dissemination Policies and Procedures, please refer to https://publicresearch.barcap.com/static/S_ResearchDissemination.html. In order to access Barclays Research Conflict Management Policy Statement, please refer to: https://publicresearch.barcap.com/static/S_ConflictManagement.html.

The Investment Bank's Research Department produces various types of research including, but not limited to, fundamental analysis, equity-linked analysis, quantitative analysis, and trade ideas. Recommendations contained in one type of research product may differ from recommendations contained in other types of research, whether as a result of differing time horizons, methodologies, or otherwise.

**GE:** One of the analysts on the fundamental equity coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

**H:** This issuer beneficially owns more than 5% of any class of common equity securities of Barclays PLC.

**I:** Barclays Bank PLC and/or an affiliate is party to an agreement with this issuer for the provision of financial services to Barclays Bank PLC and/or an affiliate.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities of this issuer and/or in any related derivatives.

**K:** Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from this issuer within the past 12 months.

## IMPORTANT DISCLOSURES CONTINUED

**L:** This issuer is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

**M:** This issuer is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

**N:** This issuer is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.

**O:** Not in use.

**P:** A partner, director or officer of Barclays Capital Canada Inc. has, during the preceding 12 months, provided services to the subject company for remuneration, other than normal course investment advisory or trade execution services.

**Q:** Barclays Bank PLC and/or an affiliate is a Corporate Broker to this issuer.

**R:** Barclays Capital Canada Inc. and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

**S:** This issuer is a Corporate Broker to Barclays PLC.

**T:** Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.

**U:** The equity securities of this Canadian issuer include subordinate voting restricted shares.

**V:** The equity securities of this Canadian issuer include non-voting restricted shares.

**Risk Disclosure(s)**

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

**Guide to the Barclays Fundamental Equity Research Rating System:**

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

**Stock Rating**

**Overweight** - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Equal Weight** - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Underweight** - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Rating Suspended** - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

**Industry View**

**Positive** - industry coverage universe fundamentals/valuations are improving.

**Neutral** - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

**Negative** - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

**North America Power & Utilities**

| | | |
|---|---|---|
| AES Corp. (AES) | Alliant Energy (LNT) | Ameren Corp. (AEE) |
| American Electric Power (AEP) | American States Water Company (AWR) | American Water Works (AWK) |

**Distribution of Ratings:**

Barclays Equity Research has 1775 companies under coverage.

40% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 49% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 36% of companies with this rating are investment banking clients of the Firm; 62% of the issuers with this rating have received financial services from the Firm.

**Guide to the Barclays Research Price Target:**

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

**Top Picks:**

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

**Explanation of other types of investment recommendations produced by Barclays Equity Research:**

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

**Disclosure of previous investment recommendations produced by Barclays Equity Research:**

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/ResearchInvestmentRecommendations*.

Historical stock prices and price targets may have been adjusted for stock splits and dividends.

*The rating for this security remained Equal Weight during the relevant period.

*Link to Barclays Live for interactive charting*

**CE:** Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by Aqua America.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by Aqua America and/or in any related derivatives.

**Valuation Methodology:** Our price target is based on applying a 5% discount the water group average 2019 P/E multiple of 22.2x to our 2019 EPS estimate of $1.55.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to WTR include a potential acquisition of a gas ldc or non water utility, an inability to maintain cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential, and potential tax reform.

**DISCLAIMER:**

This publication has been produced by the Investment Bank of Barclays Bank PLC and/or one or more of its affiliates (collectively and each individually, "Barclays"). It has been distributed by one or more Barclays legal entities that are a part of the Investment Bank as provided below. It is provided to our clients for information purposes only, and Barclays makes no express or implied warranties, and expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to any data included in this publication. To the extent that this publication states on the front page that it is intended for institutional investors and is not subject to all of the independence and disclosure standards applicable to debt research reports prepared for retail investors under U.S. FINRA Rule 2242, it is an "institutional debt research report" and distribution to retail investors is strictly prohibited. Barclays also distributes such institutional debt research reports to various issuers, regulatory and academic organisations for informational purposes and not for the purpose of making investment decisions regarding any debt securities. Any such recipients that do not want to continue receiving Barclays institutional debt research reports should contact debtresearch@barclays.com. # North America Power & Utilities
# Q2 2017 Quarterly Earnings Preview

INDUSTRY UPDATE

North America Alternative Energy & Environmental Services
NEUTRAL
Unchanged

North America Power & Utilities
NEUTRAL
Unchanged

For a full list of our ratings, price target and earnings changes in this report, please see table on page 2.

**Regulated Utilities:** On average, we are in line with consensus, looking for a flat comparison of 2Q earnings to the year-ago period; however, there are some company-specific estimates where we differ from consensus. Positive variances to consensus include AEE, NEE, PCG, SCG and SRE. Negative variances to consensus include AEP, DUK, EMA-T, and POR. Companies that could raise EPS guidance or point to the upper-end of a range are DTE, EIX, NI, and PPL. We don't expect any companies to lower guidance. We are looking for updates from CNP (ENBL ownership options), SO and SCG (nuclear construction and Toshiba), FE (exiting merchant generation and asset sales), and project updates from D (Cove Point), ES (Northern Pass) and SRE (Cameron). We also expect companies to discuss prospects for baseload generation subsidies, grid modernization investment opportunities and cyber security.

**Power:** For power we see weather worse year over year in the south central region, which might be muted as we don't see a similar strong wind resource in ERCOT this June versus June 2016. Weather was significantly better in California, however the positive impact is likely to be muted due to markedly better hydro year on year. Overall we see adjusted EBITDA ~7% below current consensus estimates and down ~15% year over year, for both NRG Energy due to the GenOn deconsolidation and for Vistra Energy using a not directly comparable predecessor TCEH adjusted EBITDA for Q2 '16. We don't anticipate management will need to update 2017 guidance ranges, save for NRG providing an update for achievable portions of the transformation plan announced on July 12. Calpine is likely to have the most interesting conference call (July 28), given it is reportedly in a sale exploration process with a second round auction to end by August (see *CPN: Reports: To Finish Next Auction in Sale Exploration Process by August*, June 9 2017).

**Alternative Energy**: We expect 2Q17E gross margin for the module manufacturers to increase by 20bps sequentially, following a 20bps increase in manufacturing entitlement as a percentage of the average wholesale module price. We expect 2Q17 gross margin of 10.0% on average for FSLR, SPWR, and CSIQ. During the quarter, module prices continued a steady downward trend. The pace of project sales activity slowed considerably in 2Q17, with only the 13 July announcement that FSLR had sold its 179MW Switch Station project to EDF Renewable Energy in late June.

**Environmental Services**: We expect 2Q17 adj. EBITDA per share growth of 6.2% y/y on average for the MSW names. Most of the key indicators we track for the Environmental Services space are pointing toward continued positive momentum. 2Q17 is typically when management teams provide revised guidance, and we currently expect a guidance increase for WCN and upward bias to guidance for WM, ADSW, and CWST. We take a wait-and-see approach on RSG given the implied ramp in 2Q-4Q EBITDA margin based on somewhat weaker 1Q17 performance. In specialty waste, we generally expect maintained guidance ranges with potential positive commentary on 2H17 momentum following continued strong reading in the ISM industrial index.

## Regulated Update

### Southern Company

We believe Southern Company will have one of the more important conference calls on the regulated side this quarter. We have revised our numbers to account for the Kemper County impacts, but also we are interested in any update management can provide around ultimate equity need and likely parameters regarding any potential settlement in Mississippi. Further, we would look for any color management can provide on the ongoing construction, financial, and regulatory process around the Vogtle new nuclear project. We continue to see the "go-zone" of cost increases for moving forward with the project as the Toshiba financial guarantee, which we presume is viable ($3,680 million) plus the layup costs of abandonment ($750mln), and the cost of a new CCGT fired gas plant to replace needed capacity within the context of the current integrated resource plan ($1,000 million), or roughly $5.4 billion.

Key to this "go-zone" is assurance of the financial guarantee from Toshiba which, while an agreement is signed with Southern Company to begin monthly payments this fall the resolution of the Westinghouse bankruptcy process and the sale of Toshiba's memory chip business remain critical factors in the surety of the guarantee. Toshiba remains in a legal battle with Western Digital over joint-venture rights and the sale of the chip business and faces an extended deadline of August 10, 2017, to file certified financials or face risk of delisting from the Nikkei. We believe the August 2 conference call for Southern will come at a critical time in the process and are hopeful that management can provide more color on the path, or potential paths forward.

### SCANA Corp

SCANA Corp's conference call on August 3 will also be interesting from a timing perspective related to the new nuclear construction project at the V.C. Summer site. SCANA's interim agreement with Westinghouse is set to expire on August 10, the same date, as indicated above that Toshiba faces to file financials or risk potential delisting from the Nikkei. Unlike Southern, SCANA has no set payment agreement with Toshiba for its ~$1.6-$1.7 billion financial guarantee, and we see a smaller "go-zone" than for Southern contextualized by the lower financial guarantee, and the lack of a need for as much replacement capacity should the project be abandoned.

### DTE Energy

When DTE reports earnings on July 26 we expect the company to acknowledge a delay in NEXUS start-up to 2018, but the company could still raise 2017 EPS guidance. Our forecasts assume a mid-2018 start-up for NEXUS. Barring additional contracted capacity (60% currently), DTE expects the project to earn around its cost of capital initially. DTE reported strong Q1'17 earnings ($1.70 versus $1.43 for the growth segments) and the trailing 12 month EPS is above guidance. We expect at least a small beat versus consensus at $1.03 versus $1.01 in Q2'16.

### NiSource

Following NI's refinancing and tender for debt, the company could be more bullish on its EPS guidance when it reports earnings on August 2. On the Q1'17 conference call the company already stated that it expected to be in the top-half of its $1.12-$1.18 2017 EPS guidance. Over the longer term NI sees 5-7% EPS growth and Barclays and consensus is at 7% to $1.39 for 2019. In Q2'17 the company issued $2B of debt at 3.93% and tendered for $1B in a range of 5.45-6.8%.

### Centerpoint Energy

We expect an update on the company's 54.1% stake in ENBL when the company reports on August 3. On July 18 the company took the technical steps to keep its options open to sell stock if that is the path it pursues. We believe the preferred path is a swap or spin of their interest to a c-corp.

### FirstEnergy

We believe weather and low power prices could push FE to the lower half of its $0.55-$0.65 EPS range when it reports on July 28 although this is relatively unimportant. We don't think investors expect much progress on their plan to exit merchant generation as the next meaningful steps are private (potentially engaging FES creditors) or out of their control (progress on nuclear subsidies). However, an agreement to move forward with the Allegheny Energy Supply asset sale or announcement of other potential asset sales at FES would add value. FE continues to work with LS Power and Dominion to move forward on the asset sale which was $925M gross for 1,572 MW including a 713 MW stake in the Bath County pumped storage plant. Please see "*Time to Buy*" (6/19/17) for more details.

## Power Update and Mark to Market

For power we are marking our estimates and valuations to market on the forward curve as of July 11, 2017. Further, we see several drivers for the IPPs in particular and also believe the market is anticipating commentary from management on several strategic processes currently underway. Overall, quarter on quarter we see spreads higher in ERCOT and New England and spreads lower in California and PJM. While natural gas prices have recovered year over year from the lower $2.00 range to the $3.00 range, power prices, and therefore spark spreads have not moved in kind in the coal-heavier markets of MISO and PJM. This results from coal fired generation switching back into the dispatch stack and limiting upside in spark spreads while dark spreads expand. This is less of a prominent phenomenon in less coal heavy markets like New England and New York. Further ERCOT also has higher spreads on less coal switch as well as a non-recurrence of the significant wind resource dispatched in June of 2016. Lastly, California, while not susceptible to coal switch, experienced a significantly more abundant hydro resource year on year, which kept spread expansion limited.

Overall we anticipate EBITDA for the quarter to be down 15% year on year, although that is inclusive of a prior quarter number for Vistra Energy Corp that is from the prior TCEH financials and not necessarily a fair direct comparison. Further, it is also inclusive of an estimated Q2 2016 number for NRG Energy, which removes the GenOn results so that our estimate for Q2 2017 in which NRG will deconsolidate GenOn can be compared more directly. Consensus estimates are approximately 7.5% lower than last year's reported numbers inclusive of the adjustments noted, and our estimates are approximately 7% below consensus numbers. Overall, however, we do not anticipate managements will need to update 2017 Adjusted EBITDA guidance ranges beyond NRG, where it will need to be updated for the elements of the transformation plan achievable in the current year.

For NRG we expect guidance to be lowered to $2,300 - $2,500 million in Adjusted EBITDA for the full year from their prior guidance level of $2,700 - $2,900 million. This accounts for our estimate of the transformation plan changes achievable in 2017 including $65 million in achievable costs cuts, and the deconsolidation of the GenOn subsidiary. Dynegy may walk to the lower half of its range as its original guidance in November 2016 for 2017 did not contemplate the sale of Troy and Armstrong at the half year, nor did it contemplate closing the ENGIE asset acquisition six weeks into 2017 rather than at the start of the year.

FIGURE 4

**Estimated Adjusted EBITDA vs. Consensus and Guidance**

| US$m | Q2 2017 | | 2017 | | |
|---|---|---|---|---|---|
| | Barclays | | Barclays | | |
| | Est. EBITDA | Consensus | Est. EBITDA | Consensus | Guidance |
| CPN | 375 | 420 | 1,866 | 1,858 | 1,800 - 1,950 |
| DYN | 220 | 211 | 1,240 | 1,253 | 1,200 - 1,400 |
| NRG | 575 | 613 | 2,376 | 2,671 | 2,300 - 2,500 |
| VST | 290 | 342 | 1,446 | 1,389 | 1,350 - 1,500 |

Source: Company Presentations & Filings, ThomsonOne, Barclays Research Estimates

We also don't believe Street estimates for 2018, which is our current valuation year will come under significant pressure for downside revisions, as 2018 forward spreads are slightly lower in PJM, New England and New York while being slightly higher in MISO. Spreads are markedly lower in California, which potentially prices in too much of this year's better hydro environment, while forward spreads in ERCOT are markedly higher.

FIGURE 5

**Forward Spreads End of Q2 2017 vs. End of Q1 2017**

Source: S&P Global Market Intelligence, Barclays Research Estimates

## Calpine Corp.

For Calpine we see lower adjusted EBITDA year on year to $375 million from $452 million, resulting from offsetting spark spreads, which moved up in ERCOT and New England but down in California and PJM. The Delta plant, which was offline for one month of 1Q '17 was out for the entire quarter and will impact year-on-year results. Further, there was a $40 million non-recurring gain from a gas transportation contract in Q2 '16, and we estimate there will be an annualized $45 million impact from asset sales and closures in 2017 versus 2016 that will also impact year-on-year results in the quarter. Lastly, we expect lower overall volumes due to markedly better hydro conditions in California and coal switching in PJM as dark spreads expanded year on year.

Calpine is also likely to have the most interesting conference call this quarter among the power names as they are purportedly in a process to potentially sell the company with the auction process reportedly ending by August. (see our note: *CPN: Reports: To Finish Next Auction in Sale Exploration Process by August*, published June 9 2017).

### Dynegy Inc.

For Dynegy our Adjusted EBITDA estimate increases year on year to $220 million from $187 million last year driven by a majority of the Q2 '16 outage expenses of $50 million not recurring this year, some proportion of the $30 million impact of burning coal out of merit order not recurring (although this impact was mostly in Q3 '16), and higher projected coal volumes year on year resulting from increasing dark spreads. Further, the ENGIE assets are now added to the portfolio. Offsetting these positive drivers is the sale of the Elwood plant, the retirement of Moss Landing 6 & 7, lower capacity payments, and lower gas volumes from tightening spark spreads due to coal switching.

### NRG Energy

For NRG our Adjusted EBITDA estimate reflects the deconsolidation of GenOn, and we also estimate a prior year comparable number of $749 million as GenOn reported $30 million of EBITDA in Q2 '16, net of $59 million of impairment losses. Results are down year on year related to GenOn as well as advisory fee impacts, and accounting for the GenOn shared services payment which eliminated on NRG consolidation. We estimated that management would have to adjust 2017 guidance for the portions of the transformation plan achievable in 2017 as well as the full impact of advisory fees around the strategic transformation plan. We estimated the updated guidance range to be $2,300 - $2,500 million, in line with our updated annual Adjusted EBITDA estimate of $2,376 million.

### Vistra Energy Corp.

For Vistra Energy, estimating the current quarter is made more difficult by not having a clean prior quarter number to start from given the company's emergence from bankruptcy in Q4 2016. However, at least a mark for a starting point is the $330 million in non-adjusted EBITDA reported in prior entity TCEH's financials for 2Q 2016. One major difference between the TCEH number and the Vistra number will be treatment of major maintenance expense. Further, we believe market consensus estimates for Vistra are high as, despite better spreads in ERCOT, the annual guidance of $1,350 - $1,500 million should be weighted to 3Q given the company is an ERCOT-only generator and only 17% - 23% should be allocated to a shoulder quarter like 2Q. This puts a reasonable range around results between $240 - $320 million and is roughly in line with our estimate of $290 million.

## Alternative energy 2Q17 preview

### Solar developers

*Gross margin trends*

In our view, gross margins are a key indicator of the overall health of the module manufacturing business and are a key driver of the direction of stock prices. We expect 2Q17E gross margin for the module manufacturers to increase by 20bps sequentially, following a 20bps increase in manufacturing entitlement as a percentage of the average wholesale module price. We define entitlement as module price minus the cost of polysilicon, which provides an approximate indication of the amount of money left for the module manufacturer after buying the raw materials.

We expect 2Q17 gross margin of 10.0% on average for FSLR, SPWR, and CSIQ. Despite the 20bps sequential improvement, we expect gross margins will remain depressed relative to 2Q16 average gross margin of 16.9%, driven by overcapacity and a persistently weak demand environment in the U.S. However, we note that margins can be volatile due to cost of inventory and realized prices booked in each quarter.

FIGURE 6

**Solar developer gross margins**

| Gross margin | 2Q16 | 1Q17 | 2Q17E |
|---|---|---|---|
| FSLR | 20.5% | 9.4% | 13.5% |
| SPWR | 13.0% | 6.5% | 2.0% |
| CSIQ | 17.2% | 13.5% | 14.5% |
| Average | 16.9% | 9.8% | 10.0% |

Source: Company reports, Barclays Research estimates

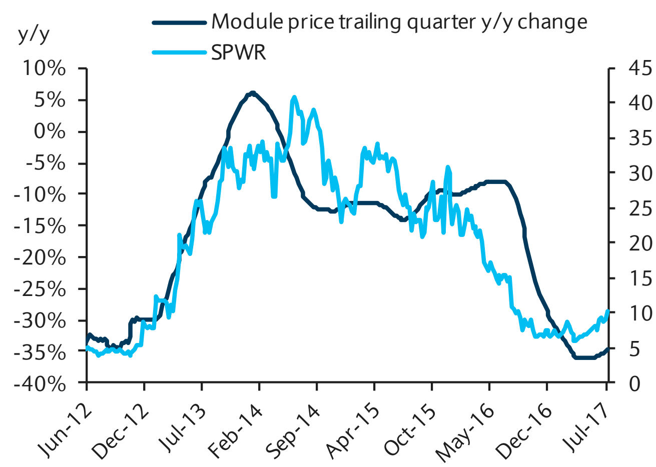
Note: Includes FSLR, SPWR, and CSIQ. 2Q17 gross margin is Barclays estimate

FIGURE 8

**Module wholesale price and SPWR stock**



Source: PV insights, Thomson Reuters, Barclays Research

*Pricing*

Polysilicon costs were down 14% sequentially in 2Q17, while module prices were down 5% sequentially. During the quarter, module prices continued their steady decline, showing no impact of a potential increase in prices due to pull-forward demand in the U.S. caused by the pending Suniva 201 trade case, in our view.

*Project sales*

The pace of project sales activity slowed considerably in 2Q17, with only the 13 July announcement that FSLR had sold its 179MW Switch Station project to EDF Renewable Energy in late June (no financial details were disclosed). We had previously expected the pace of project sales by FSLR and SPWR to slow in 2017 following the announcement of the strategic alternatives process for 8point3 Energy Partners (CAFD).

- For further detail on the strategic alternative announcement, please see our 6 April 2017 note: *CAFD: Sponsor files for divorce*

## Environmental services 2Q17 preview

### Municipal solid waste

We expect 2Q17 adj. EBITDA per share growth of 6.2% y/y on average for the MSW names. Most of the key indicators we track for the Environmental Services space are pointing toward continued positive momentum. Housing starts were the key exception, being relatively weak in April and May. However, the recently released June number was strong, with June starts increasing by 2.4% y/y, the fastest pace since March 2017. The ISM industrial continues to trend above 50, indicating increased economic activity and averaged 55.83 during 2Q17 compared to 51.5 in 2Q16 and 57.0 in 1Q17.

- **WM**: Recycled commodity prices as indicated by recycled waste paper are up ~5% q/q and 7.3% y/y, and we would expect this increase to disproportionately benefit WM, which has the largest exposure to recycled commodity prices in the group at 8% of revenue.

- **RSG**: We expect RSG to be facing a relatively high bar for 2Q17 results given previously maintained full-year guidance suggests adj. EBITDA margins ramping to 29.1% on average 2Q-4Q following a relatively low 27.4% reported for 1Q17. We currently model RSG adj. EBITDA margin of 28.5% for the full-year, in-line with the low-end of company guidance.

- **WCN**: We see upside risk to consensus and guidance as the positive recovery in onshore drilling continues. We expect positive commentary from management on this business on the 2Q results calls. WCN has the largest exposure to E&P and the most room for an increase in 2017 guidance, in our view. However, E&P was only 3% of WCN revenue in 1Q17. On fully recovered annualized basis we estimate E&P could represent ~6% of revenues. In our view, expectations for WCN are at all time highs given management's well-telegraphed positive outlook on pricing in the Northeast disposal market and continued tuck-in opportunities around the legacy BIN footprint. While we expect a strong 2Q17 guidance beat, we note that we believe valuation already reflects above-consensus expectations.

- **ADSW**: We expect continued volume headwinds as management nears the end of its process to shed low-margin routes. We model 2Q17 volumes of -2.0%, the lowest among the MSW group. Recall that ADSW will be starting a new municipal contract in Polk County, FL in October 2017, and we expect volume headwinds to abate in 4Q17.

## Specialty waste 2Q expectations

### *Hazardous waste*

We continue to expect earnings for CLH and ECOL to be 2H17 loaded, however, we look for more clarity from management on the pipeline build for cleanup projects. With the continued strength in industrial activity through 2Q17 we would expect managements to re-affirm full year 2017 guidance with potential bias to the higher-end of the range if early indications in 3Q17 and improving pipeline visibility point to a stronger than expected 2H17. Additionally, following CLH's 12 July announcement that it was increasing its used oil collection and stop fees, we see possible upside to consensus estimates in the second half given continued strong performance from CLH's Safety Kleen segment.

### *Waste to energy*

We recently upgraded CVA following weakness in shares due to negative headlines around a chemical leak at CVA's Dublin incineration facility, which forced the plant to halt test burns. See our 12 July 2017 note: *Another buying opportunity*. Broadly we expect an in-line 2Q result and look for management commentary reiterating that the Dublin plant remains on-track for full operation in 4Q17.

We do not expect a change to the guidance range, but would highlight that we forecast adj. EBITDA to be depressed in 2Q as the Fairfax incineration facility remains offline following a fire in late-2016. However, we believe this impact is reflected in sell-side estimates, so do not view it as a downside risk heading into the quarter. We expect an update on the timeline for restarting operations at the Fairfax facility on the 2Q17 call. As a reminder, CVA expects to receive business interruption insurance proceeds for any lost revenue (net of any forgone expenses) as a result of the incident. We currently forecast \$10-\$12mn of insurance recovery proceeds in 2H18.

## Price Target Methodologies and Estimate Updates

### American States Water

Our new $43 price target is premised upon an average water multiple of 23.2x our 2019E EPS of $1.87. Our previous price target of $41 was premised upon an average water multiple of 22.1x our 2019E of $1.87.

### Brookfield Renewable Partners LP

We are updating our estimates and valuation for Brookfield Renewable Partners LP to account for the recent C$550mln equity issuance. We anticipate that earnings will be higher year on year in the quarter related to production levels closer to long term averages for both hydro and wind assets likely offset by lower prices in Colombia. We are updating our EBITDA estimates to $1,770/$1,795/$1,915 million from $1,766/$1,791/$1,918 million for ‘17/18/19, respectively. We are updating our valuation to $34 from $32 as a result of lower net debt and a higher valuation multiple. We are updating our EBITDA estimates for the Canadian ticker BEP.UN-T to C$2,318/C$2,350/C$2,507 million from C$2,313 /C$2,345/C$2,511 million and our price target to C$45 from C$42 consistent with our estimates for BEP and an exchange rate of 1.26.

*Current Price Target*

Our current $34 price target is premised upon the average of two methodologies: (1) the yield co group multiple of 11.5x our 2019 estimated EBITDA of $1,915 million, $11,042 million in net debt, and 322.1 million projected shares outstanding to fund the growth through 2019 which yields $34; (2) a one year forward look at a 5.5% dividend yield which also yields $34.

*Prior Price Target*

Our prior price target of $32 was premised upon the average of two methodologies: (1) the yield co group multiple of 12.0x our 2019 estimated EBITDA of $1,918 million, $13,200 million in net debt, and 307.5 million projected shares outstanding to fund the growth through 2019 which yielded $32; (2) a one year forward look at a 5.8% dividend yield which yielded $33.

## Brookfield Infrastructure Partners LP

We are updating our estimates and valuation for the Canadian ticker of Brookfield Infrastructure Partners LP on currency movements. Our price target and estimates for Brookfield Infrastructure Partners in US$ remain unchanged. For the quarter we expect that FFO same store growth will show continued strength and the UK distribution business will be a leading contributor year on year. However, these items are likely to be offset by movements in FX and lower regulated returns at the Australian coal export terminal.

For BIP we reiterate our price target of $42 and our EBITDA estimates of $1,710 /$1,893/$2,025 million for ‘17/18/19 respectively. For BIP.UN-T we are updating our price target to C$52 from C$57 and our EBITDA estimates to C$2,155/C$2,385/C$2,552 million from C$2,239/$2,479/C$2,652 million to be consistent with an exchange rate of 1.26.

## Calpine Inc.

We are updating our estimates and valuation on a mark to market to the forward curve as of July 11, 2017. We anticipate EBITDA for the quarter will be lower year on year at $375 million driven by lower volumes due to higher natural gas prices driving coal switching and better hydro conditions in California, lower spreads in California and PJM, the non-recurring natural gas transportation contract with PG&E, portfolio changes, and Delta being offline for the full quarter. These negative drivers will be partially offset by higher spreads in Texas and New England, and retail acquisitions. We are updating our price target to $17 from $18 and our EBITDA estimates to $1,866/$1,928/$1,913 million from $1,895/$2,000/$1,987 million for ‘17/18/19 respectively.

*Current Price Target*

Our current price target of $17 is premised upon a half turn discount to the mid-cycle multiple, or 7.1x our 2018 estimated EBITDA of $1,928 million, net debt of $9,821million and an NPV of NOLs of $1.1 billion on 359 million shares outstanding.

*Prior Price Target*

Our prior target of $18 was premised upon a half turn discount to the mid-cycle multiple, or 7.1x our 2018 estimated EBITDA of $2,000 million, net debt of $9,821million and an NPV of NOLs of $1.1 billion on 359 million shares outstanding.

## Dynegy Inc.

We are updating our valuation and estimates on a mark to market to the forward curve as of July 11 2017. We have fully accounted for the closing of the sale of the Troy and Armstrong plants in our updated numbers as well as the announced mitigation and Lee plant sale in our updated forecasts. We anticipate that EBITDA for the quarter will be up year on year at $220 million due to higher than normal outage costs in 2Q ’16, 200MWs of uprates year on year, the ENGIE assets acquisition, and increased coal fleet volumes due to higher year on year natural gas prices. These factors will be offset by the closure of Moss Landing 6 & 7, the sale of the Elwood plant, lower capacity revenues, and lower gas fleet volumes due to lower spark spreads in PJM. We expect management to maintain the 2017 EBITDA guidance range of $1,200 - $1,400 million, which was issued in November 2016. We do not believe the range given in November contemplated the Troy and Armstrong sale at mid-year, nor did it contemplate not closing the ENGIE asset acquisition until six weeks into 2017. Given these factors we now see 2017 EBITDA in the lower half of the company's guidance range at $1,240 million. We are updating our price target to $13 from $14 and our EBITDA estimates to $1,240/$1,415/$1,352 million from $1,298/$1,415/ $1,352 million for '17/18/19 respectively.

*Current Price Target*

Our $13 price target is premised upon a half turn discount to the mid-cycle multiple or 7.1x our 2018 EBITDA estimate of $1,415 million, net debt of $7,951 million, environmental capex and NPV of NOLs that offset and 151 million shares outstanding.

*Prior Price Target*

Our $14 price target was premised upon a half turn discount to the mid-cycle multiple or 7.1x our 2018 EBITDA estimate of $1,532 million, net debt of $8,521 million, environmental capex and NPV of NOLs that roughly offset and 161 million shares outstanding.

## Fortis Inc.

We are updating our estimates and valuation for the Waneta expansion acquisition, updated exchange rates of 1.26, and updated valuation multiples. We anticipate year on year earnings per share will be higher at C$0.53 driven by accretion from ITC net of financing charges and increased shares, stronger results from UNS driven by the rate increase year on year, as well as contributions from Aiken storage. These positive drivers will be offset by lower exchange rates (1.26 vs. 1.32), a lower equity ratio in Alberta, lower equity income from Belize and higher overall corporate expenses.

We are updating our price target to C$50 from C$49 on multiple expansion and higher probability of the Wantakaneyap transmission project going forward in Ontario. We are also updating our earnings per share estimates to C$2.41/C$2.67/C$2.72 from C$2.49/C$2.62/C$2.67 for '17/18/19, respectively. For US ticker FTS we are updating our price target to $40 from $37 and our earnings estimates $1.92/$2.12/$2.16 from $1.9/$2.00/$2.04 for '17/18/19, respectively, consistent with an updated exchange rate of 1.26.

*Current Price Target*

We derive a C$50 price target using an SOTP methodology. We use a 15% premium to the US regulated utility multiple of 16.5x 16.5x our '19E Canadian regulated eps of C$1.08 and a flat 16.5x multiple to our '19E US regulated utility eps of C$1.76. We used a multiple for Caribbean utilities of 14.9x our '19E Caribbean Utilities eps of C$0.12 and an IPP multiple of 18.4x our '19E Generation eps of C$0.18. We used a flat 16.5x multiple on our '19E corporate and other epx of (C$0.41). To this we added C$1.85/share of value for the estimated incremental capital growth projects of Tilbury 1B, Woodfibre LNG pipeline, and Ontario transmission at 30%, 60%, and 90% probabilities, respectively.

*Prior Price Target*

We derived our prior C$49 price target using an SOTP methodology. We used a 15% premium to the US regulated utility multiple of 16.5x our '19E Canadian regulated EPS of C$1.08 and a flat 16.5x multiple to our '19E US regulated utility eps of C$1.84. We used a multiple for Caribbean utilities of 15.4x our '19E Caribbean Utilities eps of C$0.12 and an IPP multiple of 16.7x our '19E Generation EPS of C$0.06. We used a flat 16.5x multiple on our '19E corporate and other epx of (C$0.43). To this we added C$1.90/share of value for the estimated incremental capital growth projects of Tilbury 1B, Woodfibre LNG pipeline, and Ontario transmission at 50%, 75%, and 50% probabilities, respectively.

### NRG Energy

We are reiterating our valuation at $27/share but are updating our EBITDA estimates to fully account for the portions of the transformation plan, announced on July 12, that will take effect by the end of 2017. Our updated EBITDA estimates are $2,376/$1,765/$1,768 million versus our prior EBITDA estimates of $2,711/$1,765/$1,768 million for '17/18/19 respectively.

### Southern Company

We are updating our estimates and valuation for the Kemper County equity need, which we estimate at approximately $750 million and a proportion of the lost rate base related to the plant. We are updating our earnings per share estimates to $2.94/$3.09/$3.25 from $2.98/ $3.17/$3.32 for '17/18/19, respectively. We are updating our price target to $54 from $55 as a result of our lower earnings per share estimates.

#### *Current Price Target*

Our current price target of $54 is premised upon our 2019 EPS estimate of $3.25 at a group average multiple of 16.5x, which incorporates a 15% discount from the historical 15% premium at which Southern has traded for overhang risks related to the Vogtle and Kemper construction projects.

#### *Prior Price Target*

Our prior price target of $55 was premised upon our 2019 EPS estimate of $3.32 at a group average multiple of 16.5x, which incorporates a 15% discount from the historical 15% premium at which Southern has traded for overhang risks related to the Vogtle and Kemper construction projects.

### SCANA Corp

We are updating our valuation to $65 from $67 on multiple compression. Our earnings per share forecast remains unchanged at $4.11/$4.43/$4.68 for '17/18/19, respectively.

#### *Current Price Target*

Our current price target of $65 is premised upon the regulated average multiple of 16.5x our 2019E earnings per share of $4.68.

#### *Prior Price Target*

Our prior price target of $67 was premised upon the regulated average multiple of 17.0x our 2019E earnings per share of $4.68.

### Vistra Energy

We are updating our estimates and valuation for a mark to market on the power curve as of July 11 2017. We are increasing our price target to $17 from $16 and our EBITDA estimates to $1,446/$1,374/$1,513 million from $1,546/$1,428/$1,523 million for '17/18/19 respectively.

#### *Current Price Target*

Our current price target of $17 is premised upon a half turn discount to the mid-cycle multiple or 7.1x our 2018E EBITDA of $1,374 million, $3,130 million in net debt and 427.56 million shares outstanding.

*Prior Price Target*

Our prior price target of $16 was premised upon a 7.6x mid-cycle multiple on our ‘18E EBITDA of $1,428 million, net debt of $3,340 million and shares outstanding of 427.56 million.

| | |
|---|---|
| **Price (19-Jul-2017)** | **USD 48.09** |
| **Price Target** | **USD 43.00** |

**Why Underweight?** AWR is a solid well-run utility with average-to-below average growth compared to its peers. The single state regulatory jurisdiction argues for a premium valuation. The ASUS business is a great asset light business but has more risk than the regulated water business. As such, at current levels we feel the name is overvalued compared to peer companies.

**Upside case** — **USD 45.00**

Our upside case assumes that regulatory issues and ASUS growth are at the top end of expectations, driving a further premium valuation to the group.

**Downside case** — **USD 38.00**

Our downside case assumes a reduction to ROE at the utility combined with slowed growth from bonus depreciation and lack of other investment from CPUC restrictions as well as low contract win rates from ASUS driving AWR to a group average multiple.

| | |
|---|---|
| **Price (19-Jul-2017)** | **USD 39.79** |
| **Price Target** | **USD 42.00** |

**Why Equal Weight?** While we do see growth opportunities begining to percolate we view the shares as fairly valued with near term headwinds related to trade rhetoric becoming tariff reality for the ports business, FX headwinds, and potentially riskier investment opportunities in more developing economies.

**Upside case** — **USD 48.00**

Our upside case is premised upon a 2020 valuation year and 11% per annum distribution per unit growth at a constant yeild. This yields an indicative valuation of $48/unit.

**Downside case** — **USD 36.00**

Our downside case assumes a 2019 valuation year on a SOTP valuation of the subsequent businesses versus various appropriate comp groups. This yields a valuation of $36/unit.

| Regulated (%) | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |

| Price (19-Jul-2017) | USD 33.57 |
|---|---|
| Price Target | USD 34.00 |

**Why Equal Weight?** We see good distribution per unit growth of 5%-7% and a solid dividend yield of 4.5% balanced off by risks related to re-contracting and/or uncontracted risks at lower power prices, and risks of being a more pure developer on wind with economic drop downs to TERP should that transaction close, that coalesce inot a view of the shares as fairly valued.

**Upside case** USD 49.00

Using forward power curves and contracted pricing a DCF valuation out to 2035 with an 8% discount rate results in a valuation of $39. In this analysis, post 2021, we assume a 3%/yr uptake in volumes sold and a 3%/yr decline in the proportion of sales under long-term contracts.

**Downside case** USD 24.00

We run the current asset base at contracted pricing for the portion under long-term contracts and take market pricing down $5/MWh from current levels for the un-contracted portion with no new acquistions or new development. We also continue the impact of the Brazilian drought.

**Upside/Downside scenarios**

| Price (19-Jul-2017) | USD 14.16 |
|---|---|
| Price Target | USD 17.00 |

**Why Overweight?** We like CPN for: 1) its 11-15% FCF yield 2016E-18E; 2) cash allocation toward deleveraging through 2019; 3) a clean and geographically diverse asset mix, and 4) its leverage to lower natural gas prices with a pure spark spread fleet.

**Upside case** — **USD 20.00**

Our upside case is reflective of current 2018 strip natural gas, capacity prices moving back to $200/MW-day, a 7.6x mid-cycle EV/EBITDA multiple

**Downside case** — **USD 6.00**

Our downside case is reflective of $2.50/MMBtu perpetual natural gas, no upside to capacity prices, a discounted 7.1x EV/EBITDA multiple, and no credit for indicated deleveraging.

| | |
|---|---|
| **Price (19-Jul-2017)** | **USD 9.04** |
| **Price Target** | **USD 13.00** |

**Why Overweight?** With the recent acquisitions of the ENGIE assets, and the rationalization of IPH and MISO Zone 4 Dynegy continues to move further toward a spark spread fleet, with assets in PJM, ERCOT and New England and MISO. This will also leave the fleet less exposed to natural gas prices, and no longer exposed to MISO capacity auctions.

**Upside case** — **USD 25.00**

The upside case is based on a $2.50/MWh expansion in spark and dark spreads.

**Downside case** — **USD 5.00**

The downside case is based on a 7.1x EV/EBITDA valuation off of 2017 estimates and no credit for incremental deleveraging

| | |
|---|---|
| Price (19-Jul-2017) | CAD 44.28 |
| Price Target | CAD 50.00 |

**Why Overweight?** We see shares as undervalued. Upside can come from higher sales growth and potential JV transmission projects in Ontario, and LNG related projects in BC. This is offset by growth and execution risk related to completion of large construction projects, and economic and regulatory headwinds in Alberta and election risk in BC.

**Upside case** — **CAD 55.00**

We increase sales growth by 1%, include the value of incremental capital opportunities in full, and value Canadian utility operations at a 20% premium. This leads to an indicative valuation of C$55.

**Downside case** — **CAD 44.00**

We decrease sales growth by 1%, do not include any incremental capital opportunities, and value Canadian utility operations at a 10% premium. This leads to an indicative valuation of C$44.

|---|---|
| Price (19-Jul-2017) | USD 24.00 |
| Price Target | USD 27.00 |

**Why Overweight?** We like NRG for the accretive transformation plan through 2020 that simplifies the business, acheives $1.0Bln+ in cost savings, raises $2-$4.5Bln in asset sale proceeds, delverages the balance sheet by $13Bln, and generates allocable cash of $4.8-$6.3Bln.

**Upside case** USD 38.00

Our upside case uses our base valuation for NRG excluding allocable cash of $18 and adds $20/share for cash as the high end at $6.3Bln with no haircut for execution risk.

**Downside case** USD 17.00

Our downside case assumes assumes a $0 value for allocable cash either from significant execution issues, or from deployment of allcoable cash into poor return projects

| **Price (19-Jul-2017)** | **USD 64.30** |
| **Price Target** | **USD 65.00** |

**Why Equal Weight?** We have an EW rating on SCG because while the company is meaningfully growing rate base and earnings through the construction of V.C. Summer, construction risk, Toshiba risks, and potential regulatory risk as rate fatigue mounts over time keep us on the sidelines.

**Upside case** **USD 78.00**

Our upside case assumes that SCG completes the Summer project and trades at a group average multiple.

**Downside case** **USD 51.00**

Our downside case assumes that SCG trades at a 10% discount to the regulated group excluding $1.22/share of earnings power and growth in an abandonment scenario for Summer.

| **Price (19-Jul-2017)** | **USD 47.23** |
| **Price Target** | **USD 54.00** |

**Why Overweight?** Southern is a quality company with an above average dividend, which deserves a group valuation despite new nuclear and Kemper construction risks, based upon consistency in regulatory outcomes and visibility for earnings growth.

**Upside case** — **USD 65.00**

We apply a 20% premium to the group average P/E for 2019 and use our 2019 estimate

**Downside case** — **USD 44.00**

We apply a 10% discount to the group average P/E for 2019, combined with $0.27/share of earnings power related to a proportion of non-recovery of Vogtle and Kemper constructon projects.

| Price (19-Jul-2017) | USD 15.96 |
|---|---|
| Price Target | USD 17.00 |

**Why Equal Weight?** We are Equal Weight on valuation, while conceding there could be upside as our '18E EBITDA is likely the trough year. We see headwinds to near term performance as large holders are likely to be incremental sellers over time and speculation on strategic deployment of the under-levered balance sheet may include an equity issuance.

**Upside case** — **USD 21.00**

Our upside case incorporates the forward curve for natural gas, a $5/MWh expansion of retail margins and a 7.6x EV/EBITDA mid-cycle multiple.

**Downside case** — **USD 10.00**

Our downside case incorporates $2.50/MMBtu natural gas, a $5/MWh compression in natural gas prices, and a 0.5x discount to the 7.6x EV/EBITDA mid-cycle multiple.

**Upside/Downside scenarios**

## Valuation Methodology and Risks

### North America Alternative Energy & Environmental Services

### North America Power & Utilities

**AES Corp. (AES)**

**Valuation Methodology:** Our valuation is the average of $16 for a global average P/E of 13.1x in 2018E applied to $1.23 and $9.50 for our sum of the parts, which includes $18 for the businesses using regional EBITDA and P/E multiples less $6 for recourse debt and $2 for tax policy exposure. As comps we use Caribbean Utilities (CUP'U-T), EDP Energia (ENBR3-BR), Emera (EMA-T), Enel Americas (ENELAM-SA), E'on (EOAN-XE), Kansai Electric (9503-TO) and U.S. Regulated Utilities.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** As a global power company and electric utility, AES is exposed to merchant power risk, country risk, currency risk (particularly in South America), regulatory risk, and counterparty risk.

**Alliant Energy (LNT)**

**Valuation Methodology:** Our $43 price target is premised on a 9.85% premium to the 2019 regulated group average P/E multiple of 17.4x applied to our 2019 earnings estimate of $2.28.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include utility regulation; execution of its renewable generation expansion program; commodity prices; and interest rates.

**Ameren Corp. (AEE)**

**Valuation Methodology:** Our $58 target is a 5% premium to the 17.2x Regulated Utility group applied to our $3.20 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the Ameren outlook are interest rates, regulation (Missouri, Illinois and the Federal Energy Regulatory Commission), outlook for Missouri legislation and the capital markets.

**American Electric Power (AEP)**

**Valuation Methodology:** Our $76 price target is a 8% premium to the group including -0.6% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 17.0x and our $4.08 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks include wholesale commodity prices, state and federal regulation, interest rates, and asset sale execution.

**American States Water Company (AWR)**

**Valuation Methodology:** Our price target is premised upon the 2019 water group average multiple of 23.2x applied to our 2019 estimate of $1.87.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory issues resulting in lower ability to spend capital or a lower ROE, ability to obtain additional military contracts and perform on the current contracts are all risks.

**American Water Works (AWK)**

**Valuation Methodology:** Our $86 price target is derived from applying a 10% high-quality premium to a water group average of 22.2x P/E multiple to our $3.51 2019 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to AWK include an inability to achieve tighter cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential.

**Aqua America (WTR)**

**Valuation Methodology:** Our price target is based on applying a 5% premium the water group average 2019 P/E multiple of 22.1x to our 2019 EPS estimate of $1.55.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to WTR include a potential acquisition of a gas ldc or non water utility, an inability to maintain cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential, and potential tax reform.

**Brookfield Infrastructure Partners LP (BIP)**

**Valuation Methodology:** Our valuation is the average of two methodologies: First, a YieldCo comparable multiple of 11.6x our 2019E EBITDA of $2,025 million, net debt of $7.9 billion, and 382.2 million units outstanding, which yields $41/share. Second, a one year forward dividend yield method which yields $44/share. The average yields $42/share.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Global growth will impact activity at several of the company's infrastructure assets over time. Ability of management team to find investment opportunities above hurdle rates to continue to fuel growth, ability to recycle capital over time, foreign exchange risk, political risk in the countries the company operates in, in particular Brazil, Chile, and Colombia.

**Brookfield Infrastructure Partners LP (BIP-U CT / BIP_u.TO)**

**Valuation Methodology:** We use a US$/C$ exchange rate of $1.26 to convert our price target for BIP into C$, which yields a price target of C$52.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Global growth will impact activity at several of the company's infrastructure assets over time. Ability of management team to find investment opportunities above hurdle rates to continue to fuel growth, ability to recycle capital over time, foreign exchange risk, political risk in the countries the company operates in, in particular Brazil, Chile, and Colombia.

## Valuation Methodology and Risks

**Brookfield Renewable Energy Partners LP (BEP-U CT / BEP_u.TO)**

**Valuation Methodology:** We use a US$/C$ exchange rate of $1.26 to convert our price target for BEP into C$, which yields a price target of C$45.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks included rising interest rates, dilution from sale of Brookfield Asset Management's ownership position in the LP units, hydrology and water conditions/weather for their hydroelectric dams, foreign exchange risk especially to the Brazilian Real, Brazilian political risk, lack of acquisition or new build opportunities to continue to meet growth targets.

**Brookfield Renewable Energy Partners LP (BEP)**

**Valuation Methodology:** Our current $34 price target is premised upon the average of two methodologies: (1) the yield co group multiple of 11.5x our 2019 estimated EBITDA of $1,915 million, $11,042 million in net debt, and 322.1 million projected shares outstanding to fund the growth through 2019 which yields $34; (2) a one year forward look at a 5.5% dividend yield which also yields $34.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks included rising interest rates, dilution from sale of Brookfield Asset Management's ownership position in the LP units, hydrology and water conditions/weather for their hydroelectric dams, foreign exchange risk especially to the Brazilian Real, Brazilian political risk, and lack of acquisition or new build opportunities to continue to meet growth targets.

**California Water Service Group (CWT)**

**Valuation Methodology:** Our price target is premised upon applying the 2019 water group average multiple of 22.2x to our 2019 estimate of $1.34.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Main risks are regulatory given the significant impact the outcome and timing of the California general rate case can have. Also the California drought and associated recovery has impacted results in the past several years. Interest rates impact commission granted return on equity levels as well as impacting the rate paid on short term debt. National policy such as bonus depreciation and EPA actions will also impact spending levels and financing for the utility.

**Calpine Corp. (CPN)**

**Valuation Methodology:** Our current price target of $17 is premised upon a half turn discount to the mid-cycle multiple, or 7.1x our 2018 estimated EBITDA of $1,928 million, net debt of $9,821million and an NPV of NOLs of $1.1 billion on 359 million shares outstanding.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks for Calpine are the higher reserve margins, recession, wholesale market regulatory risk; risk of environmental mandates, and the gas price.

**Canadian Utilities Ltd. (CU CN / CU.TO)**

**Valuation Methodology:** Our current price target of C$40 was premised upon a sum-of-the-parts valuation. This valuation uses the 2019 US regulated utility multiple of 16.6x our Canadian utility operations 2019E EPS of C$2.46. The 5% premium is premised upon the 15% premium for Canadian vs. US operations less a discount for exposure to Alberta's economy and regulatory environment. We use a 15% premium to our estimate for the Australian utility operations 2019E EPS of C$0.13. We value the Mexican investments at a 10% discount to the regulated utility multiple of 16.6x our estimated 2019 eps contribution of C$0.09. We value the midstream operations using a comparable group 2019E multiple of 17.5x our 2019E midstream EPS of C$0.12. For power, we use the US comparable IPP 2019E EPS multiple of 16.7x on our 2019E EPS of (C$0.18). Lastly we value other segment EPS of (C$0.21) at a 16.6x multiple. We also add a 5% discount for the closely held nature of the company.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks include economic growth in Alberta and Western Australia, execution risks related to capital deployment, levels of the demand for power in the UK and Alberta and their impact on spark spreads, and the Alberta regulatory environment.

**Caribbean Utilities Ltd. (CUP / CUPu.TO)**

**Valuation Methodology:** Our $13 price target is premised upon using a 5% liquidity/closely held discount and a 2.5% small cap/single regulator discount to the US regulated utility comp multiple of 16.6x.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Tourism to Grand Cayman, Regulatory and Governmental relationships on the island, Grand Cayman economy, overall global financial regulations impact on financial services on Grand Cayman, Fortis' majority ownership of 60% of the shares, and hurricanes.

**CenterPoint Energy Inc. (CNP)**

**Valuation Methodology:** Our $29 price target reflects $20 for the utility based on a 14% premium (include 5% for tax) to the '19 Regulated Utility average of 16.6x and $1.08 EPS and $9/share for mark-to-market of CNP's stake in ENBL.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks include regulatory lag and changes in demand growth at the utility. For the company's Enable stake, risks include pipeline contract renewal risk, and potential for weaker production in the natural gas basins in which Enable's gather and processing assets operate and potential distribution reduction.

**CMS Energy (CMS)**

**Valuation Methodology:** Our price target of $49 is premised upon a 15% premium to the current 2019E regulated utility multiple of 17.0x our 2019E EPS of $2.53.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** CMS Energy faces risk from Michigan utility regulation, commodity prices, and interest rates.

## Valuation Methodology and Risks

**Connecticut Water Service Inc. (CTWS)**

**Valuation Methodology:** Our $53 price target is premised upon applying the 2018 water group average PE multiple of 22.2x to our 2019 estimate of $2.40.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory risk are the main issues even with positive regulatory mechanisms in both CT and ME, the eventual true up or consideration surrounding repair tax flow through accounting could cause a potential larger than expected rate increase to customers limiting capital recovery in that year.

**Consolidated Edison (ED)**

**Valuation Methodology:** Our $82 price target is a 6% premium to the group including +0.8% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 17.0x and our $4.57 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include rating agency actions, regulatory risk, interest rates, and access to the capital markets.

**Dominion Energy (D)**

**Valuation Methodology:** We use a sum of the parts methodology on 2019 estimates to derive the valuation for Dominion Resources. We value VEPCO, the regulated electric utility subsidiary at a 15% premium to to the average regulated utility P/E multiple. We value D Energy at a 5% premium to the average midstream P/E multiple.We value Corp & Other at a regulated utility average multiple. We value the merchant generation at 7.6x EBITDA and deduct allocated debt. We value Atlantic Coast Pipeline at a 14.2x MLP multiple to EBITDA, discounted back one year to 2019. We add $2 value for D's LP ownership stake in DM.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Changes to the regulatory landscape could change D's earnings potential. In addition, D has an extensive capital expenditure forecast driving its growth strategy. Changes to availability of capital could impede its growth objectives. Project delays could push out projected earnings growth. A decline in the forward power curves could reduce earnings coming from Millstone's unhedged production. There is also uncertainty with regard to potential tax reform.

**DTE Energy (DTE)**

**Valuation Methodology:** Our $115 price target is a 12% premium to the group including 1.5% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 17.0x and our $6.07 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include wholesale commodity prices, generation development market conditions, the outcome of regulatory proceedings, rating agency actions, interest rates, IRS tax regulations, the outlook for energy technology, and access to the capital markets.

**Duke Energy (DUK)**

**Valuation Methodology:** Our valuation for DUK is based upon a 0.6% premium to the industry average P/E on our 2019E earnings. The premium reflects the net of a 5% premium offset by a 4.4% discount for potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to regulated utilities, and DUK specifically, include weakening demand, higher than expected inflationary pressures, interest rates, regulatory lag and greater scrutiny from regulators and politicians around investment and operating decisions. Lingering political effects and regulatory recovery of the coal ash spill in NC remains an outstanding risk specific to DUK. There is also uncertainty with regard to potential tax reform.

**Dynegy Inc. (DYN)**

**Valuation Methodology:** Our $13 price target is premised upon a half turn discount to the mid-cycle multiple or 7.1x our 2018 EBITDA estimate of $1,415 million, net debt of $7,951 million, environmental capex and NPV of NOLs that offset and 151 million shares outstanding.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Dynegy Inc. is an independent power company with a 50% natural gas 50% coal fired fleet diversified across MISO, PJM, New England, and New York. Risks to performance include natural gas, coal, and power prices, as well as annually set capacity prices in PJM and MISO. Risks to our valuation also include the ENGIE asset acquisition not closing as expected.

**Edison International (EIX)**

**Valuation Methodology:** Our $84 price target is a 4% premium to the group including -0.5% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 17.0x and our $4.76 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include wholesale commodity prices, generation development market conditions, the outcome of regulatory proceedings, rating agency actions, interest rates, and access to the capital markets.

**Emera Inc. (EMA CN / EMA.TO)**

**Valuation Methodology:** Our current C$53 price target is premised upon a sum of the parts approach. We value Canadian utility operations at a 15% premium to the '19E US regulated utility multiple of 16.5x our '19E earnings per share of C$1.40. US regulated utility operations use a multiple of 16.5x our '19E eps of C$0.45. For Caribbean operations we use a '19E multiple of 15.1x based upon the current multiple of publically traded Caribbean Utilities Corporation Ltd. We apply this to our '19E Caribbean eps of C$0.30. We use '19E pipeline comp multiple of 17.8x our '19E pipeline eps of C$0.32. For other operations, mainly energy trading and the US power plants we use a power comparable multiple of 16.3x our '19E eps of C$0.63. For corporate and other earnings of (C$0.50) in '19E we use the straight US regulated multiple of 16.5x. To this we add C$9/share related to the Teco acquisition accretion of C$0.54/share at a 16.5x multiple. We also discount our entire valuation by 4% related to the overhang of potential non-interest deductibility in any US tax policy changes for the intermediate HoldCo leverage.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Economic growth and regulatory

## Valuation Methodology and Risks

environment in Nova Scotia. Execution of large scale capital projects. Government environmental policy in Nova Scotia. Regulation by the Federal Energy Regulatory Commission and state regulators in Maine. Execution on capital deployment projects in joint ventures to achieve appropriate hurdle rates.

**Entergy Corp. (ETR)**

**Valuation Methodology:** Our price target is derived by applying the industry average multiple of 17.0x to our 2019E of $4.85 for UPO. Our price target also reflects a 5.6% discount for potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** EWC-related risks include: negative developments related to all operating and closed nuclear facilities, declining forward price curves, and unscheduled non-regulated plant outages. Utility-related risks include: regulatory lag, poor rate case outcomes, and ANO-related remediation expenses. There is also uncertainty regarding potential tax reform.

**Eversource Energy (ES)**

**Valuation Methodology:** Our price target reflects a 10% premium to the industry average multiple of 17.4x our 2019E estimate. We also apply a 0.75% discount to reflect uncertainty related to potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risk factors include regulatory approval and permitting of Access Northeast and Northern Pass projects, changes to prevailing local, state and federal governmental policies and regulatory actions with respect to allowed rates of return, rate structure, continued recovery of regulatory assets and energy costs, financing, changes in tax laws and policies, and changes in compliance with environmental and safety laws and policies among other risks. There is also uncertainty regarding potential tax reform.

**Exelon Corp. (EXC)**

**Valuation Methodology:** Our current $43 price target is premised upon a 2019 group average multiple of 16.8x applied to the utility net parent earnings of $1.81 resulting in $31 of utility value. Exgen is valued at 6.6x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, the combined value is $43.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

**FirstEnergy Corp. (FE)**

**Valuation Methodology:** Our revised $37 target is a 5% discount to the Regulated Utility 2019 average P/E of 17.3x applied to UNOP EPS of $2.25. Our base case valuation subtracts ½ of the Ohio rider mechanism ($0.27/share) which is approved for 3 years and extendable to 5 years starting January 1, 2017. We also assume 25% equity funding for $1.5B of liabilities (-$0.14/share) and ongoing support services for FES (-$0.10/share).

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks are an interruption in the delevering strategy from failure to close/announce asset sales, nuclear plant performance, interest rates, and the economy.

**FORTIS INC (FTS)**

**Valuation Methodology:** Our price target of $40 is consistent with our price target on FTS.TO and a 1.26 US$/C$ exchange rate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulation across their 17 regulatory jurisdictions, weather variations, hurricanes effecting their Caribbean operations or Newfoundland, economic growth and capital needs in their jurisdictions in the US and Canada, and tax policy.

**Fortis Inc. (FTS CN / FTS.TO)**

**Valuation Methodology:** We derive a C$50 price target using an SOTP methodology. We use a 15% premium to the US regulated utility multiple of 16.5x 16.5x our '19E Canadian regulated eps of C$1.08 and a flat 16.5x multiple to our '19E US regulated utility eps of C$1.76. We used a multiple for Caribbean utilities of 14.9x our '19E Caribbean Utilities eps of C$0.12 and an IPP multiple of 18.4x our '19E Generation eps of C$0.18. We used a flat 16.5x multiple on our '19E corporate and other epx of (C$0.41). To this we added C$1.85/share of value for the estimated incremental capital growth projects of Tilbury 1B, Woodfibre LNG pipeline, and Ontario transmission at 30%, 60%, and 90% probabilities respectively.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulation across their 17 regulatory jurisdictions, weather variations, hurricanes effecting their Caribbean operations or Newfoundland, economic growth and capital needs in their jurisdictions in the US and Canada, and tax policy.

**Hawaiian Electric Inds (HE)**

**Valuation Methodology:** Our price target reflects a 5% discount to the Regulated Utility average P/E of 17.0x our 2019E utility earnings of $1.33, plus a 1.5% premium to 14.4x bank earnings of $0.50.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** HE has regulatory and political risk moving forward on a stand alone basis. Executing on the legislated goal of 100% renewable energy by 2045 also carries execution risk. HE has a robust capital expenditure plan to meet the state targets, but will require PUC support to successfully execute. Ultimately the dividend could be at risk in a more extreme scenario where HE's margins come under increased pressure or there is customer erosion. There is also uncertainty regarding potential tax reform.

**NextEra Energy (NEE)**

**Valuation Methodology:** Our price target is based on applying a 10% premium to the regulated utility multiple of 17.5x to our 2019 EPS estimate

## Valuation Methodology and Risks

of $7.74. We also assign a 1.25% premium to reflect opportunity related to potential tax reform. In addition, we add $8.50/share value for NEE's pro rata ownership of NEP.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** NextEra Energy Resources has merchant exposure to volatile gas and power prices, and risks associated with expansion in the size of its wind asset base. In addition, volatility around fuel prices and high levels of capital spending at its utility present regulatory risk. There is also uncertainty regarding potential tax reform.

**NextEra Energy Partners, LP. (NEP)**

**Valuation Methodology:** We value NEP at $39/share on the basis of the 2018E annualized LP distribution rate of $1.77 and a yield of 4.5%. The base case for NEP relies on a high quality, long-term contracted asset base, highly visible long-term growth rate in the range of 12-15% per year for the next several years, high level of operating competence by the management team, and continuing investor demand for yielding equity vehicles.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** The risks to the business model and our thesis are diminished investor appetite for yielding equities; rising interest rates, and/or fluctuating wind resource impairs short-term cash generation abilities which could create problems funding and growing the distributions; operational issues surrounding the wind and solar assets; and the elimination of production tax credits as a result of political maneuvering.

**NiSource, Inc. (NI)**

**Valuation Methodology:** Our $26 price target is a 15% premium to the group including -0.6% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 17.4x and our $1.33 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks include adverse regulatory outcomes, lower sales growth, higher cost of capital, and earlier than expected equity needs.

**NRG Energy (NRG)**

**Valuation Methodology:** Our $27 price target is premised upon a half turn discount to the mid-cycle multiple of 7.6x our run-rate post transformation execution EBITDA of $1,848 million, less net debt of $5,985 million, PV of NOLs of $655 million, with a 20% underachievement on cost and margin improvement, resulting in a value of $18/share. To this we add the value of allocable cash discounted to 2018 at 10% and haircut by 33% for execution risk, resulting in $9/share.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks include commodity prices, regulation, capital markets, interest rates and environmental policy.

**NRG Yield Inc. (NYLD)**

**Valuation Methodology:** Our $24 price target uses the average of two methodologies – a yield co. average multiple of 11.1x '19E EBITDA of $1,099 million less net debt of $4.8 billion and 263 million shares projected by 2019 to fund the EBITDA growth, which is $28, and a one year forward yield at our forecast 15% growth rate, which is $20.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks are equipment reliability, sales demand, environmental regulation, taxes and political uncertainty.

**OGE Energy Corp. (OGE)**

**Valuation Methodology:** Our price target is $38. This comprises '19E EPS of $1.77 at OG&E (utility), using a 2.9% discount to the 16.9x utility group multiple equating to $29, plus $9 for OGE's 26.5% ownership of Enable Midstream Partners LP (ENBL), marked to current price.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Federal (FERC, EPA) and state (Oklahoma, Arkansas) regulation, costs of compliance with environmental laws and regulations, Operational risks associated with OGE's businesses, economic conditions, climate change, cyber security risks and increased reliance on automated processes. Enable share price may be impacted by volumes or commodity prices on their system as well as changes to the distribution.

**PG&E Corp. (PCG)**

**Valuation Methodology:** Our $69 price target is a 5% premium to the group applied to the 2019 Regulated Utility P/E of 16.5x and our $3.96 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are California and Federal regulation, rating agency actions, interest rates and access to capital markets.

**Pinnacle West Capital (PNW)**

**Valuation Methodology:** Our $87 price target is premised on a 4.9% premium to the 2019 group average P/E of 17.6x applied to our 2019 EPS estimate of $4.71.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are Arizona state and Federal (FERC and NRC) regulation. Demand and rooftop solar can impact earnings significantly under current regulatory construct.

**PNM Resources (PNM)**

**Valuation Methodology:** Our price target of $36 is premised upon a 5% premium to the industry average multiple of 16.9x our 2019E EPS of $2.06. We also assign a 1.9% discount to reflect uncertainty associated with potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are environmental regulation, regulatory environment in Texas and New Mexico, weather, and the New Mexico and Texas economies. There is modest risk that the NM commission adjusts or rejects PNM's rate case settlement. There is also uncertainty with regard to potential tax reform.

**Portland General Electric Co. (POR)**

## Valuation Methodology and Risks

**Valuation Methodology:** Our $44 price target reflects  the 2019 group average P/E multiple of 17.0x applied to our 2019 eps estimate of $2.59.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** The main risks to our valuation are the commercial operation of the Carty Generating Station, regulatory filings and outcomes, as well as economic issues impacting demand growth and inflation.  In the event that demand growth accelerates given the local Portland economy, our estimates would prove to be conservative.

**PPL Corporation (PPL)**

**Valuation Methodology:** Our $42 target reflects a 2% discount for UK pound/US$ currency mark-to-market applied to the U.S. Regulated Utility average P/E of 17.5x applied to $2.44 in 2019 EPS.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include the outcome of regulatory proceedings, rating agency actions, foreign currency translation, interest rates, and access to the capital markets.

**Public Service Enterprise Gp (PEG)**

**Valuation Methodology:** Our $49 target reflects a sum of the parts including $42 for PSE&G at a 11% premium including +2% for exposure to tax reform applied to the 2019 Regulated Utility average of 17.4x and our $2.29E, $5 for PSEG Power at 7.4x '19 Open EBITDA of $0.8B less $3.66B of net debt.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are wholesale power prices, New Jersey and federal utility regulation, and interest rates.

**SCANA Corp. (SCG)**

**Valuation Methodology:** Our current price target of $65 is premised upon the regulated average multiple of 16.5x our 2019E earnings per share of $4.68.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Primary risk factors are construction risk associated with the V.C. Summer nuclear facilities, regulatory risk from frequent proceedings and rate fatigue in the company's service territory, financing risk from the frequent need to come to market for new equity, and economic risk connected to the South Carolina economy.

**Sempra Energy (SRE)**

**Valuation Methodology:** Our price target is premised upon a sum of the parts valuation, applying a 5% premium to the regulated utility group average multiple to our 2019 EPS estimate of $6.85 for the majority of SRE's regulated and contracted businesses, adding $23/share for trains 1-3 at Cameron, and $19/share for the value inherent in SRE's ownership interest in IEnova.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** SRE's long-term earnings growth is largely dependent on successful completion of Cameron trains 1-3. Construction delays present a risk to valuation. A portion of earnings are also exposed to international, political, and currency risk. Tail risk from the Aliso Canyon gas leak persists, as does ongoing regulatory risk in CA. There is also uncertainty with regard to potential tax reform.

**Southern Co. (SO)**

**Valuation Methodology:** Our current price target of $54 is premised upon our 2019 eps estimate of $3.25 at a group average multiple of 16.5x, which incorporates a 15% discount from the historical 15% premium at which Southern has traded for overhang risks related to the Vogtle and Kemper construction projects.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory risks associated with closing the SNG pipeline venture with KMI, construction risk for Vogtle and Kemper, as well as standard regulatory risk associated with regulated assets.

**Vistra Energy Corp. (VST)**

**Valuation Methodology:** Our current price target of $17 is premised upon a half turn discount to the mid-cycle multiple or 7.1x our 2018E EBITDA of $1,374 million, $3,130 million in net debt and 427.56 million shares outstanding.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are Texas and Federal environmental regulations, Texas regulation or lack thereof in the retail market, power and natural gas prices, weather, interest rates, and credit ratings.

**WEC Energy Group (WEC)**

**Valuation Methodology:** Our price target for WEC is predicated on a 15% premium to the industry average P/E multiple of 17x our 2019E of $3.55. We also assign a 2.0% discount to reflect potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** FERC is currently reviewing a complaint filed against MISO transmission owners, of which WEC is an owner through its share in ATC. A revision in the allowed ROE by FERC to a base ROE that is significantly lower than FERC's recent order in MISO complaint #1 could negatively impact WEC. Also, continued cost escalation or execution delays to the pipeline replacement program (AMRP) in Illinois could create political and regulatory pressure. Regulatory risk is also a factor in WEC's various jurisdictions. There is also uncertainty with regard to potential tax reform.

**Xcel Energy (XEL)**

**Valuation Methodology:** Our XEL valuation is premised upon a 10% premium to the regulated utility average P/E multiple on our 2019 estimate of $2.59. We also assign a 2.4% discount to reflect uncertainty related to potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks are interest rates, state and federal utility regulation, and access to external capital to fund capital expenditures. XEL operates in multiple jurisdictions and often has multiple rate cases pending which carry knowable and unforseeable risks. There is also uncertainty with regard to potential tax reform.

**Disclosure Legend:**

**A:** Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of the issuer in the previous 12 months.

**B:** An employee or non-executive director of Barclays Bank PLC and/or an affiliate is a director of this issuer.

**CD:** Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by this issuer.

**CE:** Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by this issuer.

**D:** Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

**E:** Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer within the next 3 months.

**FA:** Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with US regulations.

**FB:** Barclays Bank PLC and/or an affiliate beneficially owns a long position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

**FC:** Barclays Bank PLC and/or an affiliate beneficially owns a short position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

**GD:** One of the analysts on the fundamental credit coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

**GE:** One of the analysts on the fundamental equity coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

**H:** This issuer beneficially owns more than 5% of any class of common equity securities of Barclays PLC.

**I:** Barclays Bank PLC and/or an affiliate is party to an agreement with this issuer for the provision of financial services to Barclays Bank PLC and/or an affiliate.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities of this issuer and/or in any related derivatives.

**K:** Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from this issuer within the past 12 months.

**L:** This issuer is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

**M:** This issuer is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

**N:** This issuer is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.

**O:** Not in use.

**P:** A partner, director or officer of Barclays Capital Canada Inc. has, during the preceding 12 months, provided services to the subject company for remuneration, other than normal course investment advisory or trade execution services.

**Q:** Barclays Bank PLC and/or an affiliate is a Corporate Broker to this issuer.

**R:** Barclays Capital Canada Inc. and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

**S:** This issuer is a Corporate Broker to Barclays PLC.

**T:** Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.

**U:** The equity securities of this Canadian issuer include subordinate voting restricted shares.

**V:** The equity securities of this Canadian issuer include non-voting restricted shares.

**Risk Disclosure(s)**

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

**Guide to the Barclays Fundamental Equity Research Rating System:**

## IMPORTANT DISCLOSURES CONTINUED

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

**Stock Rating**

**Overweight** - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Equal Weight** - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Underweight** - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Rating Suspended** - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

**Industry View**

**Positive** - industry coverage universe fundamentals/valuations are improving.

**Neutral** - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

**Negative** - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

**North America Alternative Energy & Environmental Services**

| | | |
|---|---|---|
| 8point3 Energy Partners LP (CAFD) | Advanced Disposal Services, Inc. (ADSW) | Azure Power Global Ltd. (AZRE) |
| Canadian Solar Inc. (CSIQ) | Casella Waste Systems (CWST) | Clean Harbors (CLH) |
| Covanta Holding Corp. (CVA) | First Solar Inc. (FSLR) | Hannon Armstrong Sustainable Infrastructure Capital, Inc (HASI) |
| Ormat Technologies (ORA) | Republic Services (RSG) | SolarEdge Technologies Inc. (SEDG) |
| Stericycle Inc. (SRCL) | SunPower Corp. (SPWR) | Sunrun Inc. (RUN) |
| Terraform Global Inc. (GLBL) | TPI Composites, Inc. (TPIC) | US Ecology, Inc. (ECOL) |
| Waste Connections (WCN) | Waste Connections (WCN.TO) | Waste Management (WM) |

**North America Power & Utilities**

| | | |
|---|---|---|
| AES Corp. (AES) | Alliant Energy (LNT) | Ameren Corp. (AEE) |
| American Electric Power (AEP) | American States Water Company (AWR) | American Water Works (AWK) |

**Distribution of Ratings:**

Barclays Equity Research has 1719 companies under coverage.

42% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 61% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 52% of companies with this rating are investment banking clients of the Firm; 73% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 35% of companies with this rating are investment banking clients of the Firm; 60% of the issuers with this rating have received financial services from the Firm.

**Guide to the Barclays Research Price Target:**

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

**Top Picks:**

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

**Explanation of other types of investment recommendations produced by Barclays Equity Research:**

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

**Disclosure of previous investment recommendations produced by Barclays Equity Research:**

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/ResearchInvestmentRecommendations*.

**Barclays legal entities involved in publishing research:**

# North America Power & Utilities

# Why Invest in Water Utilities?

**In this report, we are going to outline several compelling reasons to consider investing in water utilities. We are also initiating coverage of Connecticut Water Service Inc. (CTWS) with an Equal Weight rating and adjust price targets for AWK, AWR, CWT, and WTR.** First, water utilities provide above-average ratebase growth as compared to other utilities. Second, state regulatory and legislative initiatives have broadly acted to reduce regulatory lag and improve opportunity. Third, consolidation will likely continue and unlike corporate M&A, states are providing incentives for consolidation of water systems. Fourth, scarcity value, there is only $25B in market capitalization of water companies in the US. Finally, simply put we view the risk reward as favorable.

**Industry structure helps to support the first three reasons to invest in water.** As with electric utilities, water investment involves long-lived assets that fundamentally impact everyday necessities of modern life. Water utilities are mainly owned by municipalities. In fact, 85% of the water industry is under municipal ownership, with only 15% privately owned. This ownership profile has led to years of under spending putting the collective US water system in desperate need of upgrade. The fragmented nature means state regulators have an overload of water cases and as such look for ways to standardize rates and/or incentivize use of riders and surcharges. Finally, the fragmented nature allows for a significant number of acquisition targets.

**We are initiating coverage of Connecticut Water Service Inc. (CTWS) with an Equal Weight rating and $53 price target. Additionally we are adjusting our price targets premised upon a reduction of the 2018 group average multiple. As such, our price targets decrease by $6 for AWK, by $5 for AWR, by $4 for WTR, and by $2 for CWT. We are reiterating our ratings and earnings estimates for AWK, AWR, CWT and WTR. We continue to view our Overweight-rated AWK as the best way to invest in the water sector.**

# Rate Base Growth

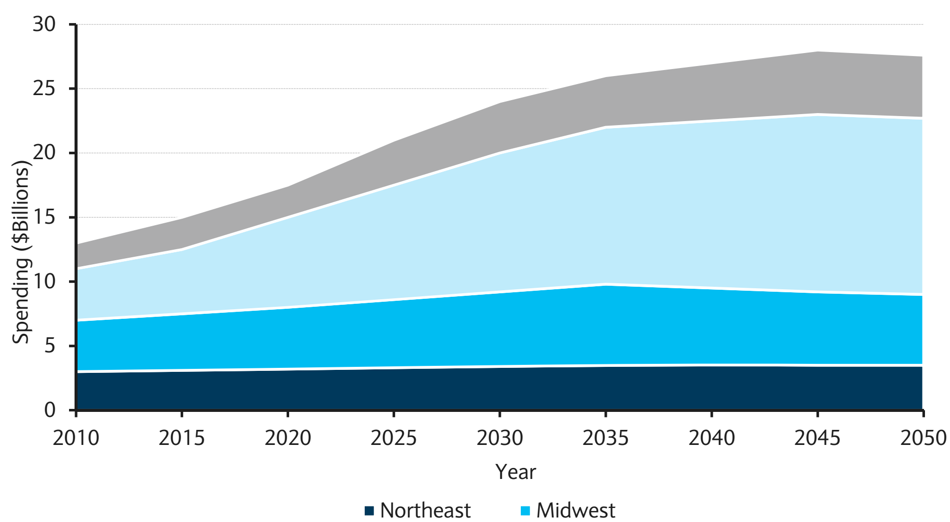
## The System Needs Updating

The single most compelling argument for why such large levels of investment are need in water infrastructure is how old and outdated the system is in general. Three numbers really highlight this need: 225 – the average pipe replacement cycles in years for the industry, 2.8% - the average depreciation rate for the industry (which is 3.8% for gas and 4.0% for electric), 25% - the percent of potable water lost as a result of system leakage.

Just to put some numbers around projected spending needs, the EPA estimates $384B of spending over the next 20 years excluding waste water systems simply to keep water systems operating. The ASCE estimates that replacing water infrastructure could cost $1 trillion over 25 years. The cost for water main replacement alone could approach $25B annually by 2030 (see Figure 1).

FIGURE 1

**Water Main Replacement Projected Annual Cost**



Source: NAWC, Barclays Research

## Past and Future Industry Regulations Drive Investments

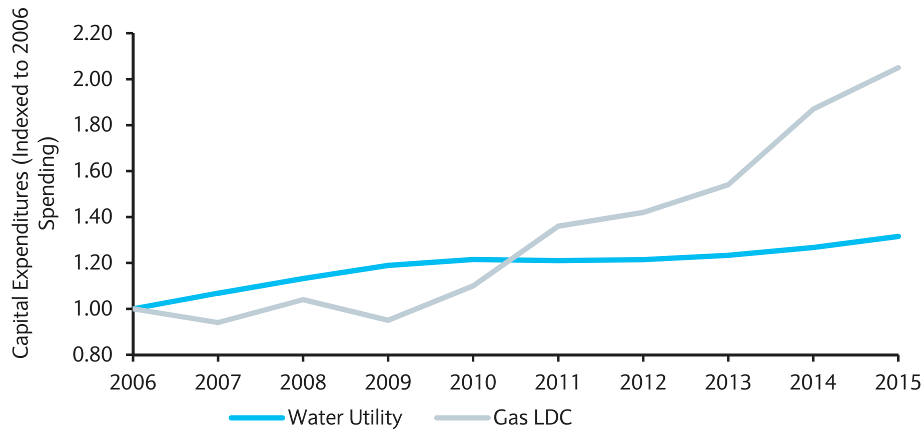
The tragic events in Flint, MI, combined with several pending regulatory requirement will likely drive an increase in spending much like the fatal pipeline explosion in San Bruno California drove a significant uptick in natural gas pipeline replacement spending (see Figure 2). An example of regulatory requirement driven costs was the Lead and Copper Rule (LCR), which cost $19B to implement. It should also be noted that a revision to that rule is expected next year, which is expected to address partial lead service replacement along with increased testing.

As we have pointed out in previous research, a parallel can be drawn between the events in Flint, its repercussions on regulatory policy and spending for water utilities and the impact of the San Bruno explosion for natural gas distribution systems. It is unfortunate that systematic improvements in US infrastructure are often reactionary in this way, but on the bright side, policy does catch up leading to improved safety and reliability in the end. In

Figure 2, we compare the spending pattern for gas distribution over the last decade with that of water. The San Bruno incident took place on September 9, 2010.

FIGURE 2

**Capital Spending Trend for LDC's Before and After San Bruno Explosion**



Source: Company Filings, Barclays Research

### Industry Structure

The fragmented industry lends itself to underspending as smaller systems can't raise the necessary funds through taxes, bonds and/or rate requests. This leads to significant leakage and water quality issues. As sad as that may be nationwide given 85% of systems are public, it provides an opportunity for investor owned utilities to take the lead on addressing industry issues and concerns through capital spending.

## Improving Regulatory/Legislative Constructs

### More Regulatory Mechanisms to Reduce Lag

With significant upgrades needed to the system, water companies have and will continue to file frequent rate cases. The investor owned utilities have tried to work with regulators to get rider and surcharge treatment in order to stay out of general rate cases for longer periods of time. This is evident by the increased number of states DSIC, non-DSIC riders, rate consolidation, forward test years, decoupling and CWIP (see Figure 3). However, as compared to electric utilities, there is still room for improvement (see Figure 4).

FIGURE 3

### Legislation Enables Consolidation

Aside from providing direction to state regulators, the single biggest benefit legislation has provided the water industry is the fair value legislation. This legislation whether for any water system or for troubled systems facilitates acquisition of public and private water and waste water entities. The main benefit here is that it provides for the lower of purchase price or fair market value to be included as rate base. This is critical as many older systems may have little book value but still have debt and would sell the water system to financially benefit the community. Figure 5 shows the states with fair value legislation and the investor owned water companies that operate in those states.

FIGURE 5

Fair Value Legislation by State and Company

| State | IOU's Operating in the State |
|---|---|
| California | AWK, AWR, CWT |
| Illinois | AWK, WTR |
| Indiana | AWK, WTR |
| Kentucky | AWK |

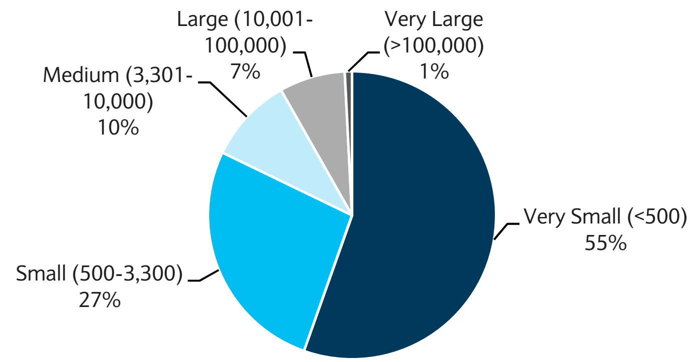
## Consolidation

### Going From Pull to Push

Historically water systems sold because they were approached and were offered the right amount of money. Going forward, while there still needs to be a willing seller, regulators (utility commissions, EPA, state environmental agencies, etc) are doing more to encourage troubled systems and/or poor operators to sell or outsource operations. As discussed previously the fair value legislation adopted in several states also helps to facilitate deals. Following the events in Flint, MI, system owners may no longer want to wear the legal responsibility that will increasingly be associated with owning a water utility. Taken all together we expect by late 2017 or early 2018 a meaningful acceleration of tuck in acquisitions for the water sector. As a reminder of how many of the over 52,000 systems belong to each size category please see Figure 6.

FIGURE 6

**Water Systems by Customer Count**



Source: EPA, Barclays Research

## Scarcity Value

### Few Companies, Thematic Investment

As shown in Figure 7, there are only a handful of investor owned water companies in the US, representing just under $25B in market cap. This is significant as there are infrastructure funds and social and environmentally conscious funds that have mandates to own water utilities. This underlying bid in the context of a relatively small market cap likely works to inflate multiples over time, not unlike what happens with Canadian pension investments.

FIGURE 7

**Investor Owned Water Companies**

| Company | Ticker | Market Capitalization ($ Millions) | Customers |
|---|---|---|---|
| American Water Works Inc. | AWK | $13,050 | 3,250,000 |
| Aqua America Inc. | WTR | $5,385 | 960,000 |
| American States Water Company | AWR | $1,420 | 260,000 |
| California Water Service Group | CWT | $1,455 | 509,000 |
| SJW Corp | SJW | $864 | 36,000 |
| Connecticut Water Service, Inc. | CTWS | $513 | 123,600 |
| Middlesex Water Company | MSEX | $539 | 60,000 |
| York Water Company | YORW | $365 | 65,000 |

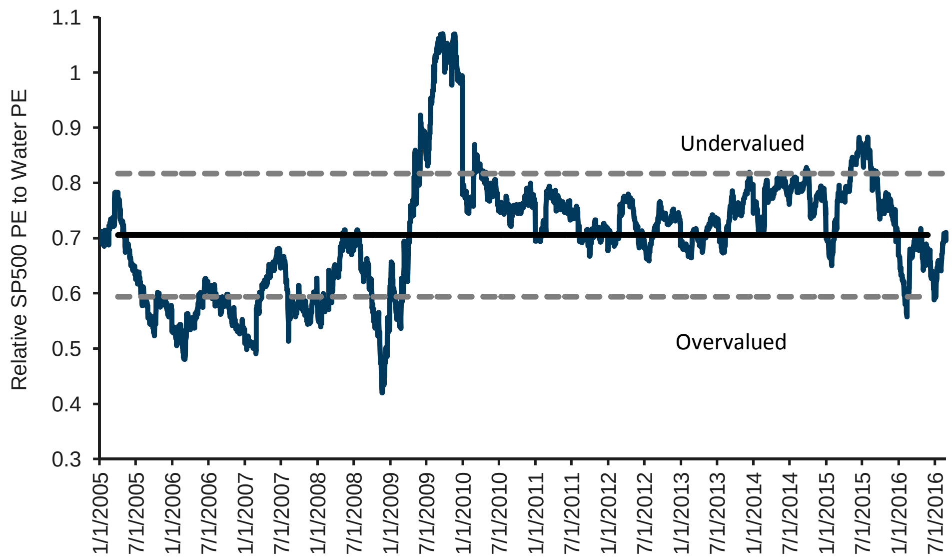
## Risk Reward

### Solid, Stable and Predictable Growth

The main takeaway for the water sector should be that growth will be stable to increasing given the significant capital investment needed. It is not common to find an investment thesis with such long-term visibility surrounding the capital spend, where in general the annual spend is more limited by customer bill impacts than financing or other concerns. Additionally, our view remains that consolidation of the public companies will begin to accelerate over the next 12-24 months as fair value legislation combined with the likelihood of enhanced oversight following the events in Flint, MI, encourage system owners to sell.

FIGURE 8

**Relative Value of Water Companies to the S&P 500**



Source: Thomson One, Barclays Research

As we see in figure 8, the water group has traded at a premium to the S&P 500 over the previous 15 years with the exception of part of 2009. On average the water group trades at a 43% premium to the S&P 500 resulting in an S&P500 P/E relative to the water group of 0.7x. The tolerance range of the S&P500 relative P/E to the water group has been 0.56x to 0.85x, representing an 80% premium down to a 17% premium, respectively. The group currently trades at a 43% premium to the S&P500 suggesting the group is fairly valued.

As a group the average annual EPS growth is approximately 7% with a projected annual dividend growth of 6% off of a current average yield of 2.2%. This results in a projected annual total shareholder return of 9.2% for the sector. Figure 9 shows the comparison for EPS growth, total return and dividend growth for water utilities, electric utilities, gas utilities and the S&P500.

FIGURE 9

**Projected Total Return by Sector**

| Sector | EPS Growth | Dividend Growth | Dividend Yield | Total Return | Beta |
|---|---|---|---|---|---|
| Water Utilities | 7.00% | 6.00% | 2.20% | 9.20% | 0.36 |
| Electric Utilities | 4.50% | 5.80% | 3.50% | 8.00% | 0.30 |
| Gas Utilities | 5.30% | 5.00% | 2.91% | 8.21% | 0.51 |
| S&P500 | 8.25% | | 2.01% | 10.26% | 1.00 |

Source: Thomson One, Barclays Research

### Rising Long-term Interest Rates Are the Biggest Risk for Water

The biggest risk we see for Water utilities is raising long-term interest rates. While we view relative valuation of the space in line with historic ratios to the market, and the annual total return potential of the group is competitive with alternatives, particularly when adjusting for relative volatility, all of the utility groups are viewed and behave as income substitutes. In a recent note *North America Power & Utilities: Still a Place for Utilities*; 13 July 2016, we calculate the equity duration of Water and Transmission companies at just over 24 years. As such, valuations can be quite sensitive to the long end of the yield curve.

## Initiating Coverage of CTWS at Equal Weight

We are initiating coverage of Connecticut Water Service Inc. (CTWS) with an Equal Weight rating and $53 price target. Our EPS estimates are $2.12/$2.21/$2.31 for 2016/2017/2018, respectively. Our price target of $53 is premised upon a 2018 group average P/E of 22.8 applied to our 2018 EPS estimate of $2.31.

**Earnings growth and stability are coming into focus:** The last several years have solid but driven more from a combination of capital investment, O&M efficiency and the benefit of repair tax expense usage. Although these items will all carry forward at least until the next major rate case in Connecticut, the increasing benefit from the repair tax expense accounting has likely peaked as CTWS experienced a negative income tax rate in 2015. As such earnings growth is more in line with capital spending through our forecast period.

**There are several main risks to consider for CWT:** First and foremost is regulatory risk, as approximately 95% of the company's earnings are regulated. The company operates in Connecticut and Maine, with the Connecticut jurisdiction being consolidated and Maine having multiple regulatory jurisdictions. Both Maine and Connecticut have decoupling in place as well as DSIC like trackers to allow for the contemporaneous return of certain capital investments.

| | |
|---|---|
| **Price (01-Sep-2016)** | **USD 45.70** |
| **Price Target** | **USD 52.00** |

**Why Equal Weight?** Our Equal Weight rating is based on an earnings growth rate consistent with the water group average. We see potential upside growth from tuck in acquisitions and acceleration of main replacement. We see potential downside risks from regulatory outcomes and customer bill impacts if repair tax accounting does not continue.

**Upside case** **USD 57.00**

We see the potential for a 10% upside based upon finding additional growth through either tuck in acquisitions or an accelerated water main replacement program, both of which could drive earnigns growth above the group average

**Downside case** **USD 47.00**

We see the potential for a 10% discount based upon poor regulatory outcomes, although this has not been the case, changes to regulatory commissions, and or external impacts to customer bills (repair tax flow through being discontinued) could provide adverse outcomes.

**Upside/Downside scenarios**

## Water Group Comparables

Figure 10 shows the other investor owned water utilities and their valuation on a PE basis, using Barclays estimates for AWK, WTR, AWR, CWT and CTWS, while using consensus estimates from Thomson One for the names covered by Barclays Research. The current implied PE shows CTWS to be a modestly undervalued company as compared to peers.

FIGURE 10

**Comparables for Water Sector**

| Ticker | Company | Price | 2018 EPS | PE |
|---|---|---|---|---|
| AWK | American Water Works Co. | $73.36 | $3.28 | 22.4 |
| AWR | American States Water Co. | $38.85 | $1.84 | 21.1 |
| CWT | California Water Service Group | $30.34 | $1.38 | 22.0 |
| MSEX | Middlesex Water Co. | $33.11 | $1.47 | 22.5 |
| SJW | SJW Corp. | $42.26 | $1.80 | 23.5 |
| WTR | Aqua America Inc. | $30.37 | $1.50 | 20.2 |
| YORW | York Water Co. | $28.36 | $1.16 | 24.4 |
| CTWS | Connecticut Water Service | $45.70 | $2.31 | 19.8 |
| | Group Average | | | 22.4 |

Source: Thomson One, Barclays Research

Note: Prices reflect 9/1/16 closing prices, 2018 EPS is consensus from Thomson One for MSEX, SJW and YORW.

## Connecticut Water Service Inc.

Connecticut Water Service Inc is a non-operating holding company that earns over 90% of its revenue and income from regulated water operations. They operate in 2 regulatory jurisdictions: Connecticut and Maine. Additionally they have a business that provides contract water and sewer operations through a services and rentals company, and finally they have some modest real estate holdings.

### Regulatory Overview

As approximately 95% of revenues and earnings are derived from the regulated water companies, it is important to understand the regulatory constructs facing the company. In Connecticut, water utilities make general rate case (GRC) filings as needed. CTWS has not filed a general rate case since 2010. In the interim, there are three regulatory mechanisms that have provided CTWS the ability to offset regulatory lag. These mechanisms are the Water Infrastructure and Conservation Adjustment (WICA), the Water Revenue Adjustment mechanism (Repair Tax), and Decoupling. Also there is a 6 month regulatory timeline which better than many states is still not as beneficial as a forward test year. In Maine, CTWS has multiple regulatory jurisdictions the multiple mechanisms to help minimize regulatory lag: Water Infrastructure Surcharge (WISC), Water Revenue Adjustment (Repair Tax), Decoupling, a streamline rate approach resulting in virtually all cases being settled.

The Water Revenue Adjustment mechanisms are basically Repair Tax. The important facts for these mechanisms are as follows:

A vast majority of annual investment in infrastructure replacement is immediately deductible for tax purposes. The same investment continues to grow rate base as it always has. This is flow-through accounting, as such it benefits customers as well as shareholders as customers see lower bills without having to pay the flow through on income taxes, while the shareholders experience higher returns, better cash flow and lower regulatory lag.

### Connecticut General Rate Case

Based on approaching the 10% cumulative increase for WICA along with a large treatment addition, it is estimated that CTWS will file a general rate case in Connecticut in the 2018 time frame for new rates in 2019 if not earlier. The issues surrounding this case will be very important as CTWS has not had a general rate case in CT since 2011. Our overall expectation is for a 50bp reduction in ROE based on trends for other utilities in CT. perhaps just as big of issues are the equity layer and how repair expense tax treatment might be continued or discontinued going forward. The equity layer could theoretically go higher offsetting some of the projected 50bp decrease in allowed ROE. The repair expense tax has been helping earnings, but at the same time limiting customer bill increases given the amount of pipe replacement occurring. Without repair tax expensing, the company and customers will start having to pay for the income taxes that have been avoided in recent years, which could result in a larger than expected year 1 rate increase. Given the mutual benefit of the repair tax, it is unclear what happens to this treatment in the next general rate case.

## Price Target Changes

We are updating the price targets for our water coverage universe based upon a move in the group average multiple from 24.1x 2018 to 22.8x 2018 earnings. Additionally, for WTR, instead of using a 5% premium to the group average we now use the group average without a multiplier. For AWK we are moving to a 5% discount to the group average from the group average without a multiplier. As such our price targets are as follows: for AWK the price target decreases by $5 to $82, our AWR price target decreases by $4 to $40, our CWT price target decreases by $1 to $32 and our WTR price target decreases by $4 to $34. No estimates or ratings changes were made.

## Best Way to Play the Water Sector

We are reiterating our Overweight rating on AWK and view AWK as the best way to invest the water sector. The company has the highest earnings and dividend growth in the sector (7-10% and 10%, respectively). Also, we believe AWK has a strong management team with a solid track record or achieving and/or exceeding their targets since 2010. We see AWK as having the significant opportunity in the consolidation of public and privately owned water system, which could result in an increased growth rate.

## Valuation Methodology and Risks

**North America Power & Utilities**

**American States Water Company (AWR)**

**Valuation Methodology:** Our $39 price target is premised upon a 5% discount to the 2018 water group average multiple of 22.8x applied to our 2018 estimate of $1.84.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory issues resulting in lower ability to spend capital or a lower ROE, ability to obtain additional military contracts and perform on the current contracts are all risks.

**American Water Works (AWK)**

**Valuation Methodology:** Our $81 price target is derived from applying a 10% high-quality premium to a water group average of 22.8x P/E multiple to our $3.28 2018 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to AWK include an inability to achieve tighter cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential.

**Aqua America (WTR)**

**Valuation Methodology:** Our $34 price target is based on applying the water group average 2018 P/E multiple of 22.8x to our 2018 EPS estimate of $1.50.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to WTR include an inability to maintain cost control, sub-par regulatory results from pending and future rate cases, and a slowdown in acquisition activity that would impact sales growth potential.

**California Water Service Group (CWT)**

**Valuation Methodology:** Our $31 price target is premised upon applying the 2018 water group average multiple of 22.8x to our 2018 estimate of $1.38.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Main risks are regulatory given the significant impact the outcome and timing of the California general rate case can have. Also the California drought and associated recovery has impacted results in the past several years. Interest rates impact commission granted return on equity levels as well as impacting the rate paid on short term debt. National policy such as bonus depreciation and EPA actions will also impact spending levels and financing for the utility.

**Connecticut Water Service Inc. (CTWS)**

**Valuation Methodology:** Our $52 price target is premised upon applying the 2018 water group average PE multiple of 22.8x to our 2018 estimate of $2.31.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory risk are the main issues even with positive regulatory mechanisms in both CT and ME, the eventual true up or consideration surrounding repair tax flow through accounting could cause a potential larger than expected rate increase to customers limiting capital recovery in that year.

**V:** The equity securities of this Canadian issuer include non-voting restricted shares.

**Risk Disclosure(s)**

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

**Guide to the Barclays Fundamental Equity Research Rating System:**

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

**Stock Rating**

**Overweight** - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Equal Weight** - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Underweight** - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Rating Suspended** - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

**Industry View**

**Positive** - industry coverage universe fundamentals/valuations are improving.

**Neutral** - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

**Negative** - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

**North America Power & Utilities**

| | | |
|---|---|---|
| AES Corp. (AES) | Alliant Energy (LNT) | Ameren Corp. (AEE) |
| American Electric Power (AEP) | American States Water Company (AWR) | American Water Works (AWK) |
| Aqua America (WTR) | Brookfield Infrastructure Partners LP (BIP) | Brookfield Infrastructure Partners LP (BIP_u.TO) |
| Brookfield Renewable Energy Partners LP (BEP) | Brookfield Renewable Energy Partners LP (BEP_u.TO) | California Water Service Group (CWT) |
| Calpine Corp. (CPN) | Canadian Utilities Ltd. (CU.TO) | CenterPoint Energy Inc. (CNP) |
| CMS Energy (CMS) | Connecticut Water Service Inc. (CTWS) | Consolidated Edison (ED) |

## IMPORTANT DISCLOSURES CONTINUED

| | | |
|---|---|---|
| Dominion Resources (D) | DTE Energy (DTE) | Duke Energy (DUK) |
| Dynegy Inc. (DYN) | Edison International (EIX) | Emera Inc. (EMA.TO) |
| Entergy Corp. (ETR) | Eversource Energy (ES) | Exelon Corp. (EXC) |
| FirstEnergy Corp. (FE) | Fortis Inc. (FTS.TO) | Great Plains Energy Inc. (GXP) |
| Hawaiian Electric Inds (HE) | Hydro One Ltd. (H.TO) | ITC Holdings (ITC) |
| National Grid Plc (NG.L) | National Grid Plc (NGG) | NextEra Energy (NEE) |
| NextEra Energy Partners, LP. (NEP) | NiSource, Inc. (NI) | NRG Energy (NRG) |
| NRG Yield Inc. (NYLD) | OGE Energy Corp. (OGE) | Ormat Technologies (ORA) |
| PG&E Corp. (PCG) | Pinnacle West Capital (PNW) | PNM Resources (PNM) |
| Portland General Electric Co. (POR) | PPL Corporation (PPL) | Public Service Enterprise Gp (PEG) |
| SCANA Corp. (SCG) | Sempra Energy (SRE) | Southern Co. (SO) |

| WEC Energy Group (WEC) | Westar Energy (WR) | Xcel Energy (XEL) |

**Distribution of Ratings:**

Barclays Equity Research has 1759 companies under coverage.

39% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 59% of companies with this rating are investment banking clients of the Firm; 78% of the issuers with this rating have received financial services from the Firm.

41% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 50% of companies with this rating are investment banking clients of the Firm; 75% of the issuers with this rating have received financial services from the Firm.

16% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 45% of companies with this rating are investment banking clients of the Firm; 68% of the issuers with this rating have received financial services from the Firm.

**Guide to the Barclays Research Price Target:**

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

**Top Picks:**

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to http://publicresearch.barclays.com.

**Explanation of other types of investment recommendations produced by Barclays Equity Research:**

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

**Disclosure of previous investment recommendations produced by Barclays Equity Research:**

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/ResearchInvestmentRecommendations*.

**Barclays legal entities involved in publishing research:**

Barclays Bank PLC (Barclays, UK)

**CE:** Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by American States Water Company.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by American States Water Company and/or in any related derivatives.

**Valuation Methodology:** Our $39 price target is premised upon a 5% discount to the 2018 water group average multiple of 22.8x applied to our 2018 estimate of $1.84.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory issues resulting in lower ability to spend capital or a lower ROE, ability to obtain additional military contracts and perform on the current contracts are all risks.

**CE:** Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by American Water Works.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by American Water Works and/or in any related derivatives.

**Valuation Methodology:** Our $81 price target is derived from applying a 10% high-quality premium to a water group average of 22.8x P/E multiple to our $3.28 2018 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to AWK include an inability to achieve tighter cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential.

|---|---|---|---|
| 13-Jul-2016 | 33.65 | | 33.00 |
| 17-Jun-2016 | 31.90 | | 32.00 |
| 04-Apr-2016 | 27.01 | Equal Weight | 29.00 |

Source: Thomson Reuters, Barclays Research

Historical stock prices and price targets may have been adjusted for stock splits and dividends.

*Link to Barclays Live for interactive charting*

**CD:** Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by California Water Service Group.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by California Water Service Group and/or in any related derivatives.

**Valuation Methodology:** Our $31 price target is premised upon applying the 2018 water group average multiple of 22.8x to our 2018 estimate of $1.38.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Main risks are regulatory given the significant impact the outcome and timing of the California general rate case can have. Also the California drought and associated recovery has impacted results in the past several years. Interest rates impact commission granted return on equity levels as well as impacting the rate paid on short term debt. National policy such as bonus depreciation and EPA actions will also impact spending levels and financing for the utility.

## IMPORTANT DISCLOSURES CONTINUED

| Connecticut Water Service Inc. (CTWS / CTWS) | Stock Rating | Industry View |
|---|---|---|
| **USD 45.70 (01-Sep-2016)** | **EQUAL WEIGHT** | **NEUTRAL** |

**Rating and Price Target Chart - USD (as of 01-Sep-2016)**

Source: IDC, Barclays Research

**Currency=USD**

| Publication Date | Closing Price | Rating | Adjusted Price Target |
|---|---|---|---|

Source: Thomson Reuters, Barclays Research

Historical stock prices and price targets may have been adjusted for stock splits and dividends.

*Link to Barclays Live for interactive charting*

**CD:** Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by Connecticut Water Service Inc..

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by Connecticut Water Service Inc. and/or in any related derivatives.

**Valuation Methodology:** Our $52 price target is premised upon applying the 2018 water group average PE multiple of 22.8x to our 2018 estimate of $2.31.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory risk are the main issues even with positive regulatory mechanisms in both CT and ME, the eventual true up or consideration surrounding repair tax flow through accounting could cause a potential larger than expected rate increase to customers limiting capital recovery in that year.

Impact Series

# The water challenge: preserving a global resource

Barclays and the Columbia Water Center explore how energy companies and public utilities can help alleviate water shortages and improve water quality through new technologies and better practices

BARCLAYS

# Foreword

Welcome to the second report in our Impact Series, in which we shine a spotlight on how the energy industry – and, in particular, the oil and gas sector and public utilities – can improve the way it uses and recycles water.

March 22, 2017

Water is arguably the most important natural resource, essential both for human survival and for the effective functioning of many industries. As climate variability impacts the availability of freshwater, and economic growth puts pressure on global water supplies, households as well as industrial, energy and agriculture sectors are increasingly likely to experience supply disruptions in the near and long term.

The data point to some clear challenges. Only 2.5% of the world's water is fresh[*], yet the US depends on it for nearly 90% of withdrawals for public and industrial use[**]. At the same time, groundwater, which is present under the earth's surface and makes up 30% of all freshwater, is under wide-spread stress, with NASA reporting that a third of major water basins globally are being rapidly depleted by human consumption[***].

The human cost of water scarcity is likely to be high. The Organisation for Economic Cooperation and Development (OECD) estimates that about 1.5 billion people today live in areas seriously affected by shortages, predicting that it will rise to 4 billion by 2050, accompanied by a 50% increase in the demand on water resources.

While individuals, governments and other consumer and policy organisations are all instrumental to preserving this precious commodity, the energy industry in particular can have a positive impact on alleviating water shortages. Oil and gas companies, as well as power and water utilities, are ideally placed not only to be more efficient users of water but also to be pioneers in finding alternative water sources and introducing innovative technologies to counter wastage.

We believe this report makes a valuable contribution to the debate on the future of water.

Jes Staley, Chief Executive Officer of Barclays

"Only 2.5% of the world's water is fresh, yet in the US we depend on it for nearly 90% of our withdrawals for public and industrial use."

# What this report is about

Global water stresses are not only a serious challenge for society and the environment, but can also be viewed as a sustainable investment opportunity. This report is the result of a collaboration between Barclays Research and Columbia University to explore how investment in new technologies and infrastructure can help alleviate the social, environmental and development problems associated with water shortages and increased usage.

While the report focuses on the U.S., the issues discussed can be extended globally across industries - water risk and scarcity is a universal problem.

The U.S. energy industry uses substantial amounts of water in the course of its business operations and we think new technologies and practices present an opportunity to use water resources more efficiently. While water use in the energy industry is small relative to agriculture, usage is increasingly in the oil and gas industry, and underinvestment by public utilities presents infrastructure, environmental, and public health challenges.

In the U.S. oil and gas industry, for example, fracking operators have increased their use of freshwater from 5,600 barrels per oil well in 2008 to more than 128,000 barrels in 2014 and over 300,000 barrels in some areas today. Yet we are confident that oil and gas operators can substantially increase water reuse, learning from countries such as Canada, where regulations mandate water reuse and limit fresh water acquisition for oil sands operations.

Water scarcity could also pose a financial risk to both the utility and the oil and gas sectors, while shareholders and the general public are encouraging corporations to improve their transparency around water usage.

## The structure of the report

- In the first part of the report we highlight the extent of the water challenge, how the energy industry contributes to the problem and the different technologies companies can apply to reuse or recycle the wastewater they create in the course of their business.
- The second part is divided into three: the oil and gas sector, power companies, and water utilities. We investigate the issues that are particular to each industry, but also explore the commonalities. We identify opportunities for them to collaborate through shared learning and innovation, and also look at areas where more can be done to protect water resources, and how the sector can collaborate with other industries. Through several case studies, we look at examples of best practices where companies are utilizing new technologies and methodologies to lower water related costs, improve their freshwater footprint, and help the communities where they operate.

# The water mandate for energy companies and utilities

Worldwide, there is growing pressure on the availability of freshwater: the effects of climate variability are becoming clearer at a time when a growing global population is placing greater demands on resources and often has to compete with industry and agriculture for access to clean, safe water.

Water is a shared resource and all users and industries can help safeguard water supplies throughout the world. Lack of access to clean water is a global problem, but low income countries generally experience the burdens of water stress more acutely than developed countries. In the United States, too, inadequate water quantity and quality disproportionately impacts low income users. This has been exemplified by the lead contamination of drinking water in Flint, Michigan, where a combination of underinvestment, inadequate water treatment and poor regulation proved catastrophic for the community in 2014. The incident remains the focus of ongoing criminal investigations.

The challenge therefore is to ensure that there is enough water for humans to consume safely and sustainably, while also safeguarding policies and regulatory support for the reuse and recycling of industrial wastewater, as well as desalination programs.

In this report we first turn to the oil and gas industry because water is crucial to its operations, and it has long been scrutinized over poor water management issues. While the industry has improved practices in recent years, more can be done to protect water supplies, and there is room for collaboration with other industries. In this report, we highlight two case studies of progressive practices by oil and gas companies.

Collective action is needed not only from oil and gas operators, but also the utility industry and government, to improve transparency around water usage, invest in innovative technologies, and to improve data collection and sharing across sectors. Robust water management, combined with innovative technologies and forward-looking practices, are not only good for the environment and society, but could also benefit companies' bottom line.

In essence, we believe the industry could consume less freshwater and do more to access alternative sources through recycling and reusing more of the waste water it produces as a by-product of its operations.

# The importance of the water cycle

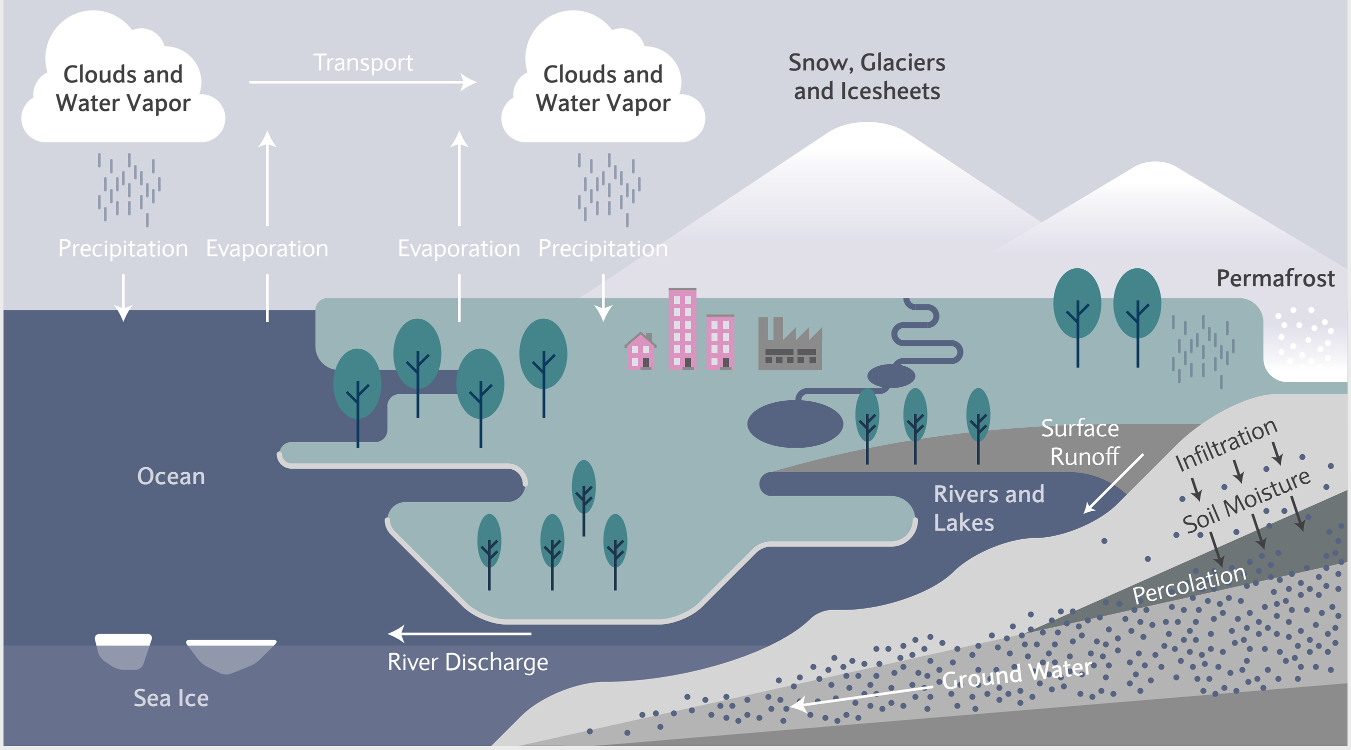
Freshwater undergoes a cycle of precipitation, evaporation and transpiration. Water evaporates from water sources, such as dams, rivers and the sea, into the atmosphere where it transforms into precipitation (rain and snow). Some of this water evaporates into clouds and returns to the atmosphere beginning the cycle again, while other precipitation is stored in reservoirs, aquifers or dams and rivers.

Subterranean water bodies, such as aquifers, are replenished at a slow rate because the water must pass through soil, gravel and other sediment. Physical water stress happens when water is depleted at rates faster than they can be recharged.

A large part of water shortages is due to inefficient use and losses from inadequate infrastructure to capture rain and snow. In urban areas, for example, between 10% and 50% of water is lost. Because rainfall is variable depending on the climate and time of year, some regions may have surplus water, while others may not have enough. “The greatest challenge is that water is not available when we need it,” according to Upmanu Lall, Director of the Columbia Water Center.

We define the main water constraints as:

- groundwater depletion
- poor water quality
- the potential for future scarcity because of droughts
- lack of storage



Source: NASA

## Ripple effect: a local problem with wider repercussions

Water scarcity has a direct effect on public health, availability of food and, ultimately, public safety. In an increasingly interlinked world, with ever-expanding trade routes, water stress in one geographic region not only affects local populations, it can also have a reverberating impact in other regions.

In agriculture, for example, a shock like a drought or blight (a fungal disease that spreads rapidly in wet weather) can have a high human cost through famine, but also have global implications for food supplies. Countries that import water are especially vulnerable to such shocks.

Other industries can be impacted too. For example, in the United States several regions import hydroelectricity from Washington State. When dry years or reduced snowmelt impact Washington's capacity to generate hydropower, it reduces its ability to export electricity to other states. Climate scientists predict that by 2040, lower snowmelt in the state could decrease hydro generation by between 18% and 21%.

## Taking responsibility: how the energy industry uses water, and what it can do better

While oil and gas companies do not use as much water as other industries, including agriculture, in certain contexts their water usage may be significant. More importantly, although the industry is improving the way it deals with wastewater, in particular, it has been responsible for spillages and other problems. Companies that implement sustainable water practices, such as reusing water and building efficient infrastructure, could lessen the industry's contribution to water scarcity and quality issues, allowing them to act as water stewards.

The electric utility industry has large water withdrawals compared to other industries, but much of this water is returned to the water cycle. The problem lies not so much in contributing to water scarcity as protecting against it. However, in water-stressed regions, these withdrawals may contribute to supply and demand imbalances. We believe that when possible and economical, electric utilities could use alternative sources of water such as treated saline or recycled water for cooling purposes.

Policy and economics will be the biggest drivers of innovation for power and water utilities. In an uncertain regulatory future, we believe that utilities that incorporate water risk planning into their strategic planning and engage in integrated water resources management will be better positioned for unforeseen water shocks. Water utilities must prioritize infrastructure investments and maintenance before they can invest in new technologies and cooperate with power utilities for shared resources.

# Practical steps to tackle water shortages

Many entities can make a difference – governments, individuals, non-governmental organizations (NGOs) and others - but crucially also the companies that are high-volume users of water.

## What individuals can do

Individuals and society can begin thinking about water constraints as part of an overarching climate variability problem. Because climate variability exacerbates water-related shortages through droughts, for example, efforts to mitigate global warming could help relieve future water stresses. Individuals and society should consider their energy and food choices as directly shaping future climate scenarios and indirectly influencing their future water resources.

## The role of government and water agencies

US government research and development is an important funding source for new water technologies. The government also oversees crucial accounting agencies like the United States Geological Survey, and could play a leading role in developing a national data repository that enables more shared learning and cross-industry collaboration. Enforcing and standardizing water reporting across industries can also help improve water management. Current regulation around reporting for the oil and gas industry is inconsistent and voluntary for some states, and data from the water and electric utility industries is fragmented. Because larger companies have research and development budgets for water technologies, smaller companies could receive support from government agencies to engage in more research and development. In addition, state and federal governments could standardize regulations.

## Companies can step up too

Companies could accurately measure and disclose their water usage. Steps have been taken to improve accountability for water supply chain operations, and to illustrate the connection between improved water management and reduced greenhouse gas emissions. Formerly known as the Carbon Disclosure Project, CDP has a water program aimed at motivating companies to disclose their water data. In the most recent CDP survey, only 34% of energy and utility companies disclosed their water use to CDP, suggesting room for improved transparency.

Energy companies should not only consider water as a shared resource, but invest in ways to reduce freshwater usage by collaborating with other industries like agriculture, municipalities and utilities for alternative water sources for drilling and cooling activities. Companies - particularly utilities - can also consider implementing simple measures such as demand management, energy efficiency and consumer education. These strategies have worked well in drought-prone California to promote water conservation.

## Collaboration, shared learning and innovation

Despite differences between the three industries we profile - the oil and gas sector, electricity providers, and water utilities - there are opportunities for them to collaborate through shared learning and innovation. The energy industry can also protect water resources by collaborating with other industries. For example, larger, well-capitalized companies in the oil and gas industry, as well as some utilities, can help finance upgrades for capital-constrained small public wastewater utilities in exchange for use of wastewater.

## Glossary

**Freshwater** is deemed safe for human consumption, occurring naturally through precipitation and in dams, river and some underground sources.

**Brackish** water is a naturally occurring mixture of fresh and salt water, also known as brine.

**Saline** occurs naturally in oceans, has a salt content higher than brackish water, and is not drinkable.

**Recycled water** is wastewater that has undergone a robust treatment in order to be used again.

**Reused water** is wastewater reused within an oil or gas well, requiring little or no treatment.

# The technologies that could make a difference

Water scarcity is a problem for all of the industries examined in this study, but there is a host of technologies and practices that can transform alternative sources of water for drinking and industrial use. Evidence shows that energy companies can be incentivized to put effort into research and development that can deliver technologies to benefit all. The following is a list of technologies that can help curb water wastage.

**Desalination:**
Widely used in the Middle East, desalination treats non-potable brackish (a naturally occurring mixture of fresh and salty water, also known as brine) as well as sea water to freshwater standards to be used for oil and gas drilling, irrigation, industrial use, power plant cooling and drinking water. The main technologies associated with desalination include the membrane method, whereby water is pushed through a membrane to remove the salt, and heat-based treatments. While costs and energy usage have declined, treating highly saline water remains energy-intensive and expensive. Renewable powered desalination and energy recovery technologies can reduce electricity costs.

**Recycled effluent water (municipal wastewater):**
Reusing wastewater is another method of reducing dependence on freshwater supplies. We look at examples of recycled municipal effluent in both the oil and gas sectors and the electric utility sector.

**Indirect potable reuse (IDPR) and direct potable reuse (DPR):**
These incorporate the practice of treating wastewater to drinkable standards and then either indirectly (through a natural buffer like a river or reservoir) or directly reintroducing the treated water into drinking water sources. Although the treatment technology for direct potable reuse is proven, regulatory hurdles and public acceptance are some of the largest obstacles, and only a handful of examples of potable reuse exist in the U.S.

**Advanced metering infrastructure (AMI):**
Also known as the smart grid, electronic metering and software is installed on customers' water or electric meters. The system utilizes automated meters (smart meters) to read energy usage in real time, and sends it back to the utilities. AMI not only shows customers how much water they consume, it also provides utilities with continuous data on water consumption through data analytics packages. Already widely practiced in the electric utility industry, water companies are beginning to adopt AMI to improve accuracy in billing and evaluate consumption. AMI systems can help utilities identify water leaks, reduce operating and maintenance costs, and communicate the value of water to customers.

**Leak detecting technologies:**
Technologies such as acoustic monitoring can help water utilities identify expensive pipe leakage and water loss. Acoustic monitoring uses devices to listen for leak "noise" or vibrations on a nightly basis when there is little background noise and low water usage. Usually paired with AMI, the acoustic monitors gather data and send the noise signals to the field office, where it is analyzed and the physical leak location is identified.

**Dry cooling:**
Thermoelectric power utilities withdraw large amounts of water for their cooling needs. Dry cooling can reduce water use significantly, but these savings may come with efficiency losses. Water-stressed regions may retrofit existing plants with dry or hybrid cooling systems or build new dry or hybrid cooling plants to reduce overall withdrawals.

# What does good water management mean?

**For energy companies:**

- Sustainable water practices will increasingly be a part of energy companies' social license to operate in a water-constrained world.
- The economics of adopting efficient water usage, through various improved technologies and innovative practices, are compelling and could drive further adoption.
- Despite a relatively more relaxed regulatory environment under the new U.S. Administration, we think the risks (reputational, legal, and financial) are increasing, particularly in water-conscious and -constrained communities.
- Public-private partnerships can lead to "win-win" outcomes for corporations and communities by saving costs, improving infrastructure, and reducing fresh water usage.

**For investors in energy companies:**

- Companies that are able to lower fresh water usage and costs will be better positioned for an uncertain water future.
- Oil and gas companies are able to lower costs and water usage by utilizing more efficient sourcing methods and technologies.
- As water becomes a growing input for oil and gas and energy companies, security of supply to support growth plans will be increasingly considered.
- Water and soil contamination related liabilities represent significant investor risks, particularly with the rise of public water awareness in the wake of the events in Flint, MI.
- Smart technologies including meters and monitors can boost returns by reducing water loss and identifying damaged infrastructure.

Figure 3

Where the salt flows: sources of brackish water in the US

Source: US Geological Survey

## Alternative sources of water

Recycled municipal water, as well as brackish and saline water create alternative sources of water for many industries, including the energy sector.

Developments in desalination have generated interest by the US Geological Survey and the Texas Water Development Board in better mapping brackish groundwater recharge and availability. The map above illustrates the amount of brackish water present in aquifers throughout the U.S., which are unsuitable for human consumption without treatment, and may even require additional treatment before use by some industries. However, new technologies mean brackish water can be used for power plant cooling and oil and gas operations, and could even be transformed into drinking water through desalination treatment.

## The water-climate nexus: the impact of climate change on water

While demographic and economic pressures are increasing the global demand for water, a major source of increasing stress on the supply side is climate variability. Over time, the climate could have an increasing impact on the availability and quality of water that industries can access.

Climate change and water are interconnected in several ways. The Intergovernmental Panel on Climate Change (IPCC) cites robust evidence in the scientific community that increasing greenhouse gas concentrations raise freshwater-related risks, and that climate change will reduce both renewable surface water (dams, rivers, reservoirs) and subterranean groundwater. In fact, the IPCC estimates that between 7% and 20% of the global population could be exposed to reduced freshwater supply for each degree of global warming.

The IPCC also shows some evidence of additional water-related risks caused by climate change including reduced water quality and increased frequency of droughts.

## Climate changes and the impact on global water supplies

In terms of the water risks expected to be exacerbated by climate change over time, the IPCC singles out in particular the following:

- Climate change is likely to lead to a significant reduction in renewable water in most dry sub-tropical regions
- Climate change is likely to negatively impact freshwater ecosystems by changing streamflow and raw water quality
- In dry areas, climate change is likely to increase the severity and frequency of droughts, both meteorological droughts (less rainfall) and agricultural droughts (less soil moisture)
- Climate-change projections imply increased flooding risk at a global level but especially in south, southeast, and northeast Asia, tropical Africa, and South America
- Climate change is likely to cause decreases in the extent of permafrost and glaciers, in turn releasing more greenhouse-gases with consequences not yet modeled by the IPCC

## The key regulations governing water use

**Drinking water:**
Safe Water Drinking Act

**Groundwater:**
Ground Water Rule, Source Water Protection

**Fracking:**
Underground Injection Control Program

## The connection with droughts

Columbia Water Center scholars have made pioneering connections between California's recent drought and climate change. In 2015, scientists argued that while precipitation acts as the primary driver of drought variability, human-driven warming has been a secondary driver of the California drought from 2012-2014. Scientists at the Lamont Doherty Earth Observatory say the evidence indicates that while droughts have cycles, over the past two centuries droughts in the American West have increasingly worsened due to climate change.

The map from Columbia Water Center illustrates water stress as a result of climate-driven drought. The red areas illustrate regions where demand exceeds average annual supply in the county.

## Paying attention to groundwater depletion

A commonly cited statistic is that 97.5% of earth's water is saline, while only 2.5% is fresh. Only 0.3% of all freshwater is stored on the surface in dams and rivers; 30.8% is groundwater and the vast majority of freshwater is frozen in glaciers, snow and icecaps. The main users of groundwater include agriculture (irrigation), industry, public supply, and thermoelectric power generation.

Both pollution and natural processes lead to variations in groundwater levels but there is little data on the effects of climate change. Nevertheless, the dearth of clean fresh groundwater is likely to become a concern in the future.

Groundwater is a form of subterranean water storage that naturally recharges through precipitation like rain and snowfall. However, because the precipitation enters into the water table through pores of soil and rocks, it takes time to replenish, especially if it is withdrawn at a faster rate than it is recharged. Improvements in water recycling and treatment technologies could be used to recharge aquifers artificially.

Recent mapping from NASA shows that groundwater stress is widespread, and in fact a third of major groundwater basins show depletion.

## Good quality water is essential

In addition to the quantity of fresh groundwater, quality is also important for humans, animals and other living organisms as well as industries. Groundwater contains dissolved chemicals, particulates and organic materials, some of which are natural while others are caused by human activity. Of particular concern to humans is groundwater with high levels of arsenic, chloride and nitrate. Only a portion of the available groundwater in the United States is fit for human consumption and industrial reuse without additional treatment.

# Going with the flow: How energy companies and utilities use water

Energy companies need water for most aspects of their supply chain, from pumping to treatment and cooling. For its part, the water industry requires large amounts of electricity to treat water and convey it from source to destination. In this part of the report we look at just how interconnected these two industries are, and discuss some of the most efficient solutions to water shortages that can reduce both energy and water usage.

Our research shines a spotlight on how the energy sector – and, in particular, the oil and gas, and power industries – use water in the United States. We use our findings to forecast how water constraints can act as either a barrier or a driver of investment opportunities, and make recommendations for sustainable solutions to water-related shortages. By examining industry growth, and analyzing data on water consumption by industry, we compare water consumption data from Barclays Research, the Columbia Water Center, Digital H20*, as well as publicly available information.

Improved water management can help energy companies' supply chains, and could protect resources by using alternative water sources when possible. At the same time, water scarcity also poses a financial risk[1] to companies with shareholders and the general public demanding that they improve transparency. Reputational risk and regulatory actions are also important considerations.

* Digital H20 is a digital oilfield solution company focused on developing software-based insights and solutions for the end-to-end management of water in oil and gas production

## Acting together to avoid a crisis

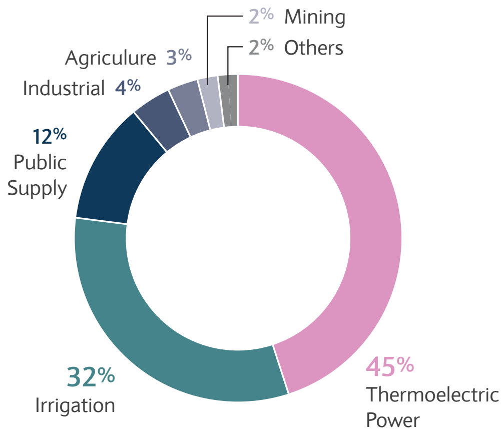
We first turn our gaze on the oil and gas sector because cost-effective water management is crucial in a low oil price environment, and is also important for companies' social license to operate. It is clear that both the oil and gas sector and the power industry can do more to find alternative forms of water and invest in new technologies. However, they also face common regulatory, logistical and economic challenges in sourcing adequate alternatives such as saline or municipal effluent water. We believe that with enabling regulations, and improvements in data management, these industries are well-placed to invest in infrastructure, enter into public-private partnerships and collaborate with other industries.

In the water utility industry, especially, the infrastructure crisis is so acute that it needs immediate attention both from a human rights and a business perspective. There is a significant opportunity for public-private partnerships and capital investment, and we believe that collective action is needed to improve transparency and encourage investment in innovative technologies. Robust water management can lead to lower operating costs and can also preserve resources for future operations.

Each industry has a unique set of challenges related to water scarcity, but some solutions can be applied across sectors. As climate variability and competition for resources put pressure on the availability of freshwater, some industries will be impacted more than others. For example, cooling for thermoelectricity - the name given to electricity that is generated by heat – has one of the highest withdrawals, while mining (including oil and gas extraction) requires far less water.

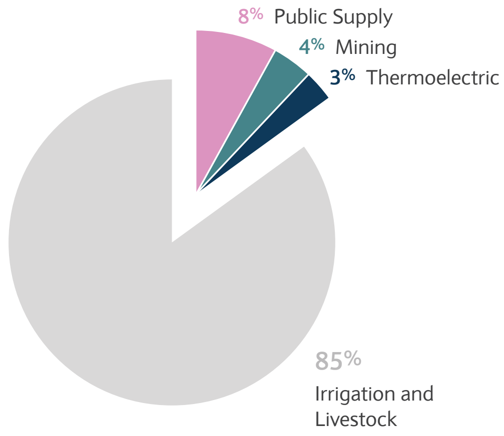
It is important to note that while withdrawals from the thermoelectric power industry are large, it is not regarded as a major water consumer. The US Geological Survey defined consumptive use as water that has been withdrawn and incorporated into a product or crop – and therefore not returned to the water cycle. By this definition, irrigation and livestock are by far the largest water consumer. This means that users with little consumptive use are not large contributors to water scarcity. However, water is essential to their functionality, and so competition with other industries like agriculture could have investment ramifications.

## Figure 6
### Water withdrawals by industry



Source: US Geological Survey

## Figure 7
### Water consumption usage by industry



Source: US Geological Survey

# The oil and gas industry

One of the most controversial methods for extracting oil and gas is hydraulic fracturing, known as fracking, in which water is injected at high pressure into subterranean rocks in order to open fissures and release oil or gas. Fracking has a reputation for being a highly water intensive industry compared to other industries, but it actually uses a fraction of the available freshwater in the U.S.,[2] according to the USGS. For example, water use by the mining industry (which comprises extraction of coal and iron, and liquids like petroleum, and natural gas) in 2010 was 1% to 2% of total U.S. freshwater withdrawals.

As a whole, the oil and gas industry uses less freshwater than the electric utility industry, but in some regions it may be substantial relative to the amount of available water.[3] In addition, the amount of consumptive water used by oil and gas producers varies by operating region and basin.

## What are the challenges?

Exploration and production companies in the oil and gas industry face two obstacles: 1) obtaining water for fracking (or "completing" oil and gas wells that have been drilled); and 2) finding a place to put the large volumes of wastewater produced by the fracking process.

Oil and gas operations are becoming more water intensive. While withdrawals are small compared to irrigation (32%), thermoelectric power (45%) and industrials (4%), according to USGS data, we think that future reductions in the quality and quantity of water as well as competition from other industries will create additional pressure points.

Another challenge is that increased amounts of produced water – the term used to describe water that is produced as a byproduct along with oil and gas - is problematic for surrounding communities and the environment due to its high salt content. In addition, water scarcity may drive up the price of freshwater, while disposal of produced water may increase costs and pose environmental and social stresses.

## Where there are risks, there are opportunities too

The use of water for fracking varies from location to location depending on the availability of water in a particular year and the type of well drilled. Regulatory challenges, wastewater disposal options, and competition between agriculture, energy and industrials, all impose geographically specific water constraints on U.S. oil and gas producers.[4] Due to uncertainty in water availability and quality, we forecast that competition between users will increase in the future, forcing some companies to pay more for water, increase investment in water management or even face curbed usage.

The low oil prices in recent years have forced producers to cut capital spending and operating expenses, which has encouraged more innovative and efficient water management, and we expect this trend to continue.[5] Public concern over the lack of sustainable water practices could lead to state regulations, potentially impacting water handling operations associated with oil and gas. Since regulation on water disposal and acquisition varies by state, shale exploration in particular could face unique regulatory water constraints.

Given the central role of water in oil and gas production, we believe the industry will rethink conventional water acquisition and disposal methods and invest in more efficient and sustainable water technologies and practices. We also believe that the industry can substantially increase water reuse, learning from countries such as Canada, which has brought in regulations mandating water reuse, monitoring and evaluation and limiting fresh water acquisition for oil sands operations.[6] Pennsylvania has also made strides reusing produced water (reusing 80-90%, versus the industry 10-20%) due to regulations and limited saltwater disposal options.

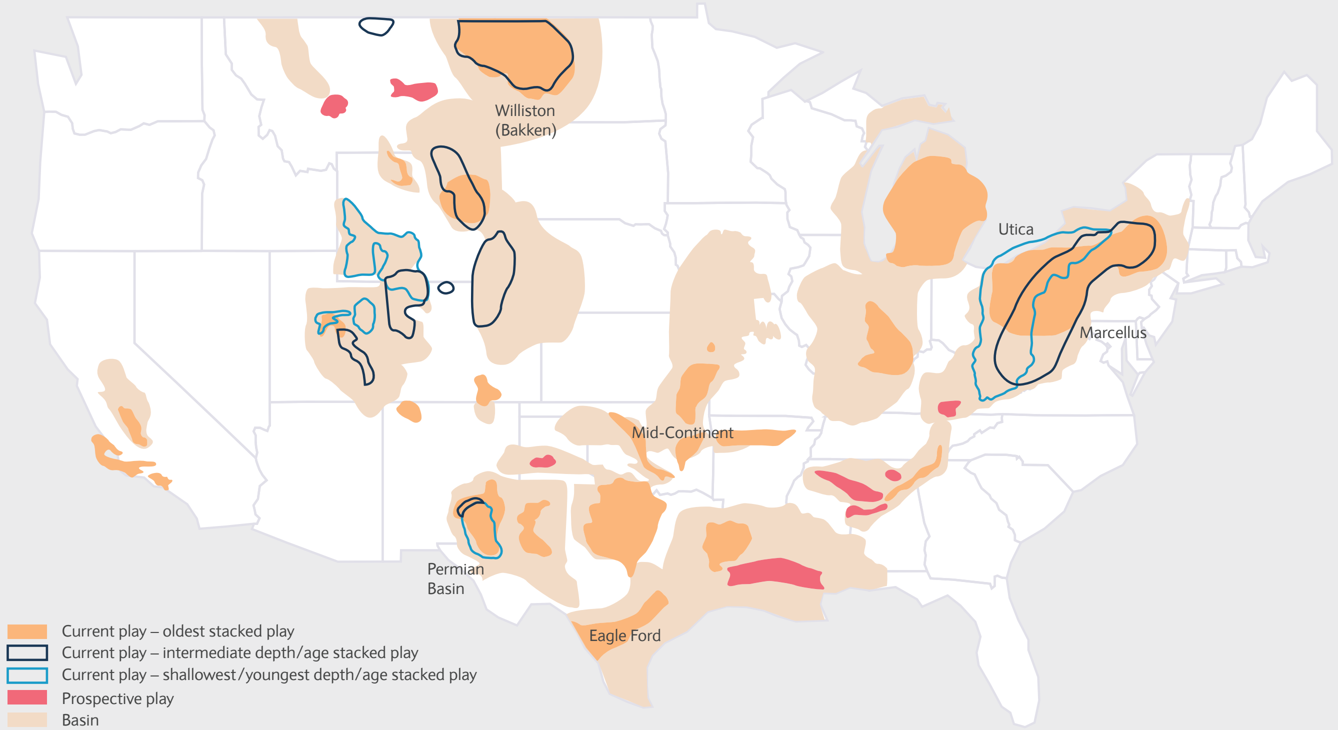
Although oil and gas market regulations under a Trump administration are uncertain, we project that the industry will show sustainable growth in parts of the United States. Based on its high oil and gas production despite lower oil prices, the Permian basin, which stretches across West Texas and New Mexico, is an example of overall water trends for shale production in the United States, and we look to the Permian for our analysis throughout this paper.

The companies that will be best positioned for an uncertain water future will be those that engage in sustainable water management practices by cutting down or eliminating freshwater usage, and treating wastewater as a resource. First, we estimate that reusing produced water in fracking operations could lower water costs by about 45% and save over 300,000 barrels of freshwater per well, improving company economics and the industry's environmental footprint, and enhancing security of supply.

The industry can help alleviate water shortages and create a new resource for other industries through the development of recycled water (which is more intensely treated than reused water and has a broader range of application). States could introduce regulations to incentivize smaller companies to finance and construct the necessary infrastructure and technologies. In addition, we believe that long-term water quality testing is important to ensure recycled water is safe for human and agriculture use.

Figure 8

## The main oil and gas basins in the US as of 2016 (current and future)



This map shows the oil and gas basins throughout the U.S. as of 2016 – regions where the oil and gas industry is drilling today and in the future.

Source: EIA and Barclays Research

## Rising pressure

While water use varies by play and region, overall, water use has been rising since 2008. The USGS found that between 2008 and 2014 median freshwater use for the injection stage in hydraulic fracturing increased from 5,618 barrels to nearly 128,102 barrels per oil well and 162,906 barrels per gas well, largely due to a shift to more water-intensive horizontal drilling.[7] The below chart by Digital H20, shows the increase in water use per well since 2013 broken down by the three main U.S. onshore oil plays, including the Permian Basin (up 434%), the Williston Basin (up 103%), and the Eagle Ford (up 64%).

Gradual supply constraints and regulations have also shaped how water is acquired and disposed of. In a business-as-usual scenario, operators will face gradual reductions in water supplies from both ground and surface water due to natural causes. In the context of extreme droughts or supply shocks, some local governments may prioritize the needs of agricultural producers over oil and gas operators. Each state has its own unique water rights, which determine water availability for producers in emergency situations.

## Water sources for the industry

The availability and quality of freshwater both pose constraints for the oil and gas industry. For example, highly saline water may require treatment before storage and reuse. Similarly, producers may be constrained by water availability through droughts, distance to water sources, regulation around water withdrawals from river basin commissions and state water boards, and public scrutiny.[8]

If operators have diversified water sources, little competition with other industries, water infrastructure and plentiful surface water, a drought itself may not curb production activity. In times of drought users often turn to groundwater pumping, which can put pressure on supplies.[9]

## The case for brackish water

The Permian Basin, which stretches underneath western Texas and southern New Mexico, is a large oil and natural gas producing region. However, a combination of multiyear droughts, low groundwater levels and competition with the agriculture industry also means it is highly water stressed.[10]

Oil and gas operators in the Permian depend on the High Plains aquifer (an underground rock formation that contains and enables the flow of groundwater) for its freshwater withdrawals. This aquifer is one of the most important yet highly depleted aquifers in the United States[11], which presents a challenge for operators.

Exploration and production companies have begun to think of brackish water (a naturally occurring mix of salty and freshwater) as a potential new source for their extractions.[12][13] In Texas, for example, almost 80% of water in many parts of Delaware side of the Permian Basin is sourced from brackish water, according to the Texas Railroad Commission, while the Midland side of the Permian uses about 30% brackish water.[14] Although brackish water can be used for drilling, it may require additional treatment and, because it is corrosive, may be subject to more transportation and storage restrictions, which will add to the costs.

In addition, pumping groundwater is energy intensive and expensive. Texas has plentiful brackish water aquifers, which can be thought of as an opportunity for future production. Recent developments in desalination have led the state of Texas to see brackish water as potential drinking and irrigation sources, which mean such aquifers may be better protected in the future.[15][16]

## The role of water in hydraulic fracturing

### Initial water

Water is involved in many stages of unconventional oil and gas production. At the beginning of the supply chain, a drilling company will typically acquire large volumes of freshwater to be transported to the well site, or alternatively source brackish, municipal or produced and flowback water. Producers will transport water from the source through truck or pipeline to the well, and store it in large impoundments. Once the well is ready for fracking, the water is mixed with proppants like sand and chemicals. The resulting fluid is injected into the well at high pressures with the intention of creating small cracks in the rock formation of the well. The fissures allow gas and oil to escape from the well and rise to the surface.

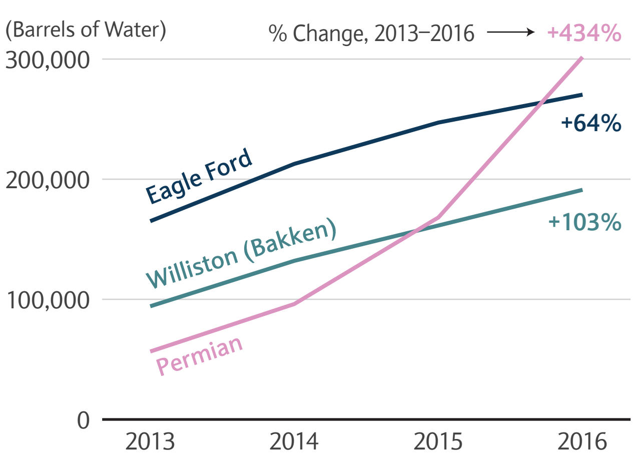
Once the pressurized fluid has been released, a combination of flowback and produced water will rise to the surface along with gas and oil. Flowback is fluid that was originally injected into the well, which flows to the surface after the frack is completed, whereas produced water is naturally occurring water in the shale formation, that typically has high salt content. Both flowback and produced water continue to rise to the surface throughout the life of the well. Because both contain oil, radioactive material, chemicals and dissolved solids such as salt, it must be handled and treated according to state regulations before disposal.[17]

### Coping with 'flowback' and 'produced water'

The amount of produced water and the water to oil ratio will influence water management costs and choices for the operator. The Marcellus formation is a bedrock in eastern North America that typically generates the lowest quantity of produced water of all the major shale regions in the United States.

Figure 9

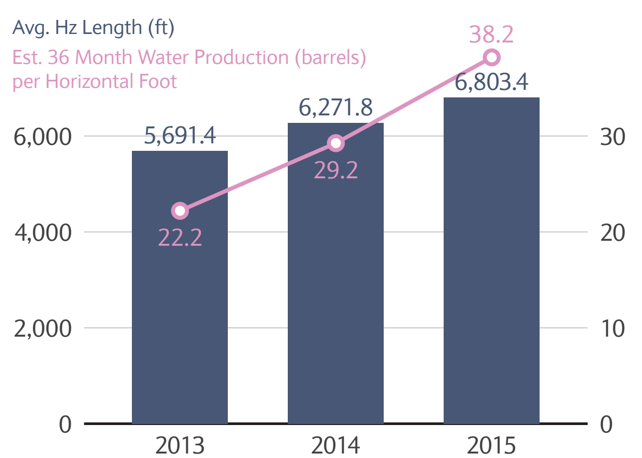
Average Water Used per Frack in the three major U.S. onshore oil plays



Source: Digital H20

Figure 10

Average Horizontal Length and 36 Month Water Production Per Horizontal Foot in the Permian Basin



Source: Digital H20

By contrast, the Permian Basin has the highest amount of produced water among all of the U.S. oil and gas basins. On an absolute basis, produced water in the Permian Basin ranged from 358 million barrels to 286 million barrels between June 2015 and May 2016, compared with 14.8 million barrels to 11.8 million barrels in the Marcellus.[18]

The Permian Basin also has the highest water-to-oil ratio among the three major U.S. onshore oil basins. For every barrel of oil produced in the Permian Basin in 2016, over 6.5 barrels of water were produced. This compares with around 1.1 barrels of water produced for every barrel of oil in the Williston Basin (Bakken), and 0.9 barrels of water in the Eagle Ford. While Texas has hundreds of disposal wells in the state to accommodate the high volumes of produced water from the Permian Basin, disposal wells may not be sufficient and could reach capacity, and also overlooks the potential value of produced water.[19] As a result, reuse, and recycling could eventually become a necessary and attractive option.

Figure 11

Permian Basin Total Produced Water Forecast Scenario Analysis

# Putting a price on water

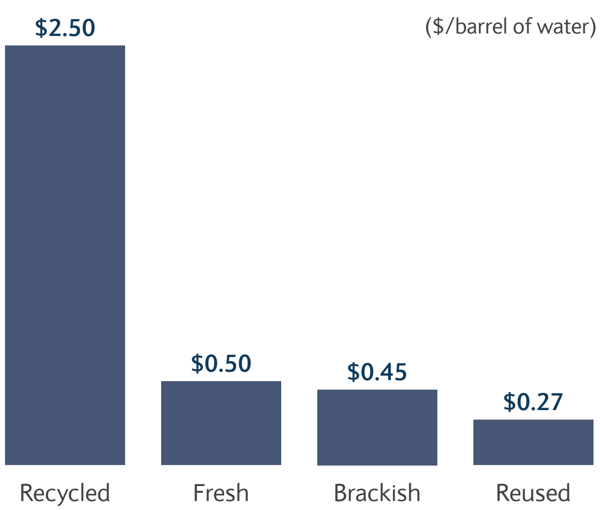
Approximately 10% to 30% of a well's capital expenditure is water related, while 40% to 55% of operating costs come from produced water management and disposal.[20] This percentage will vary considerably by basin due to factors including fresh water availability, competing uses, water quality and distance from water acquisition and disposal site, state and federal regulations and disposal and wastewater management selection.

While variable costs differ across basins, transportation of fresh and wastewater remains a universally high operating cost. According to the U.S. government's Energy Information Administration (EIA), water disposal including trucking and injection, ranges from $1 to $8 per barrel of water.[21]

The chart below illustrates water costs for fracking in the Permian Basin, excluding transportation costs for trucking, which generally ranges from $1 to $3 per barrel.

Figure 13

Average Water Costs for Oil and Gas Completions in the Permian



Source: Barclays Research

### Options for wastewater management

Depending on the quantity of produced water and the water-to-oil ratio it contains, oil and gas producers have several methods for managing wastewater, including injecting it into deep underground wells, recovering some of the oil it contains, and treating for reuse and recycling. Reusing wastewater does not only cut water acquisition costs but also disposal and trucking costs, and it is also crucially an opportunity for improved sustainability and cooperation with other industries.[22] There are currently studies underway to test the selling of treated produced water for agriculture.

### Water treatment

There are different levels of water treatment, and the quality of the wastewater determines to a large extent whether wastewater will be injected, reused or recycled for use in another industry. The basic level is direct reuse within a well, which requires little treatment, while recycling to fresh water standards will require several intensive steps of treatment.[23]

The next level of treatment is the most common and economic: simple filtration, which removes large organic particles, oil, and gas bubbles known as suspended solids. Another, more complex, treatment produces clean brine while a third level removes salts and naturally occurring minerals, particles and salts, collectively known as total dissolved solids (TDS).[24] Low-cost technologies exist to treat suspended solids and large particles, but removing salts is the most difficult and expensive.

The final stage of treating water to near-fresh standards is to remove bacteria, ammonia, heavy metals and other materials,[25] requiring technologies such as oxidation and biological treatment.[26] A last option is zero liquid discharge treatment, which converts wastewater into a dry solid, to be used for other purposes.[27]

Light treatment is sufficient to prepare water for injection into a saltwater disposal well, but more robust treatment methods are necessary for recycling for other purposes. Typically, producers transport their wastewater to a specialized treatment center specific to oil and gas production, which creates an additional transportation cost. However, larger companies are moving towards onsite water treatment to reduce transportation costs, discussed later in this report.

## Putting a lid on disposal

We believe that a useful mechanism for incentivizing recycling and reuse is to restrict the disposal of wastewater. Two factors will create such a constraint: on the one hand disposal wells (used for storing wastewater) are reaching capacity and, on the other hand, an increase in regulation governing wastewater. Both of these factors will drive up the price of oil and gas extraction. If the oil price recovery continues, and subsequently more wells are completed, produced water volumes will increase, putting more pressure on disposal wells.

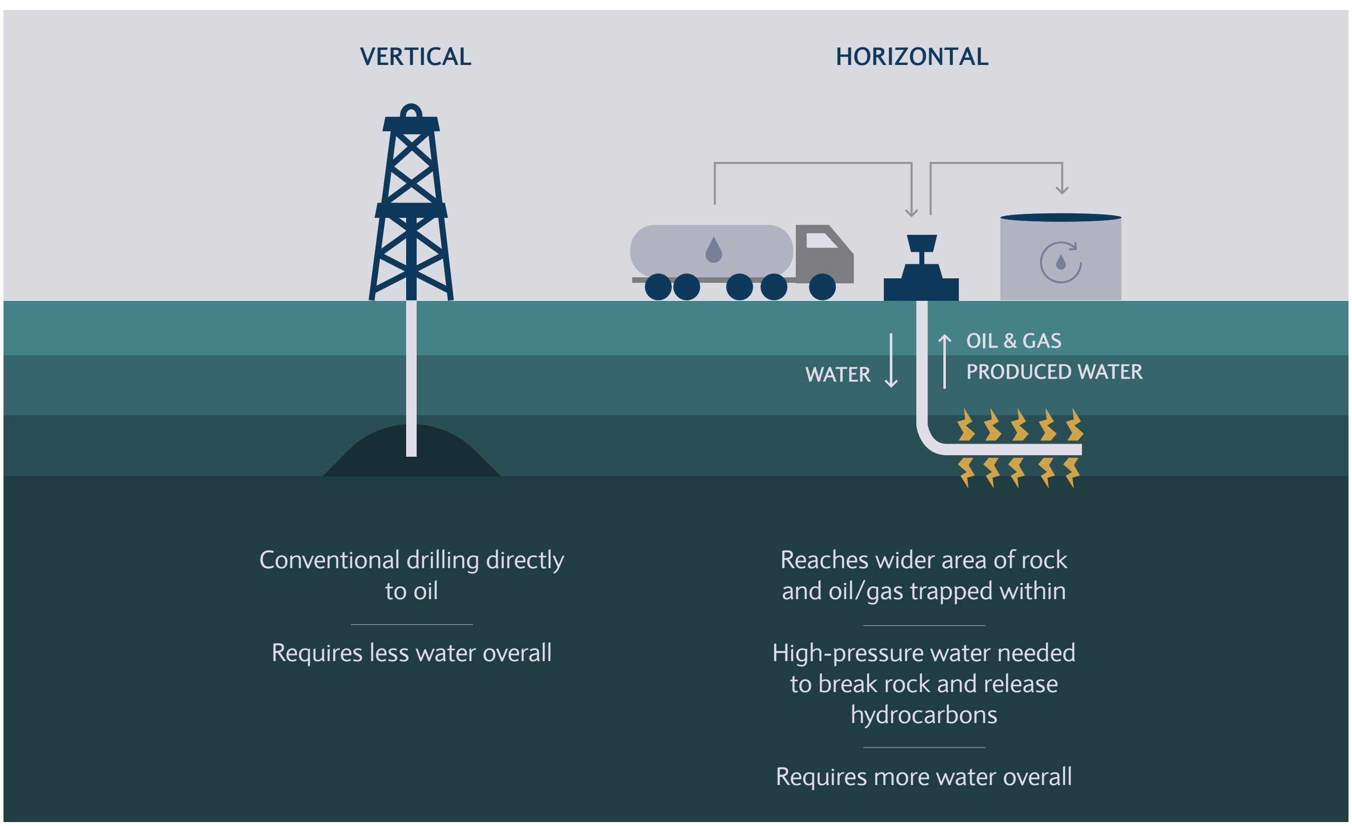
Regulations around earthquakes and new environmental rules, including potential protection of brackish groundwater, could also make disposal wells more expensive. In some parts of the United States deep-well injection has been connected with earthquakes, which could lead to regulatory limits. This could force exploration and production operators to look for other options for managing wastewater. In Oklahoma, for example, the Oklahoma Corporation Commission's oil and gas division recently issued restrictions on disposal wells in an area deemed susceptible to earthquakes, shutting down existing wells and reducing injection volumes in other ones.

Another factor that could influence the cost of disposal wells is research by the Texas Water Development Board on brackish water, which could see the Environmental Protection Agency give brackish aquifers the same protection as freshwater ones under the Safe Drinking Water Act.[28] The Texas Energy Alliance speculates that the cost of a disposal well could double, which could be a driver for reuse.

Favorable regulations such as the passage in 2015 of bill HB2767[29][30] could increase the price of wastewater injection wells by transferring the ownership and liability of wastewater from the producer to the person who takes possession of the wastewater.

Figure 14

New oil wells, new water demands



Source: EPA[31]

# The two Rs:

## Reuse…

While the terms recycling and reuse are used interchangeably, we define reuse as wastewater reused within a well, which requires very little additional treatment, while recycling is treating wastewater to acceptable standards through robust treatment. Economics, water availability, water quality logistics, and disposal options dictate whether an operator reuses or recycles, and so recycling and reuse rates vary across the country. Reusing water is logistically challenging for companies without enough connected land (known as contiguous acreage), because wastewater rises to the surface over variable periods (sometimes months), depending on the location and must be stored and later transported to a new well for reuse. The chance of spilling toxic wastewater increases when the water is moved and stored.

**Reuse:**
Wastewater reused within a well, which requires very little additional treatment

**Recycling:**
Treating wastewater to acceptable standards through robust treatment

## … and recycling

Over the past few years, new opportunities for collaboration with industries, such as agriculture, have created sustainable solutions for water management. The industry calls these collaborations “beneficial reuse”, though we refer to them as recycling.

There are many possible uses for recycled wastewater, especially for livestock watering, irrigation or industrial reuse for crops. For example, in Midland, Texas some farmers are experimenting with using recycled water from oil and gas for irrigation on non-food crops such as cotton.[32] In California, Chevron sells 21 million gallons per day of its treated wastewater to neighboring farmers for irrigation, according to the LA Times. However, such projects have not been tested long term and it is unclear whether radioactive material or metals in the recycled water has any harmful effects on soil and crops. For these reasons, many environmental groups and other public groups oppose the practice.[33]

Opportunities for the industrial use of wastewater include cooling power plants, process water and vehicle wash water. The National Energy Technology Laboratory has done several studies on using alternative sources of water for cooling including treated produced water, and we discuss their pros and cons in the chapter on power and utility companies. In addition, some states approve the use of solid wastewater for use on public roadways during winter weather. However, environmental groups are concerned that the salt and metal content could be hazardous to the ecology of roadside streams and farmlands.[34]

# Our recommendations for better water use in the oil and gas industry

Barclays Research shows how the oil and gas industry could implement the following steps:

**1) Operators can increase water reuse by:**

a. Increased regulatory clarity, further data transparency, and enhanced industry and company coordination.

b. Additional research and development and progressive pactices and partnerships to drive costs lower.

**2) Once operators substantially increase reuse the next steps for recycling include:**

a. Technologies including membranes and distillation must improve and become cheaper, and storage tanks and pits must be engineered to prevent spillage.

b. Greater investment is needed around water infrastructure, to facilitate safe transportation of wastewater to centralized treatment facilities and to other operators.

c. Operators, the Government, and policy groups can coordinate research and development on long-term health and environmental effects of using produced water for alternative uses including irrigation, drinking water and industrial purposes.

# Case Study

## Laredo production corridors: efficient water treatment and reuse

**Background:**
Laredo Petroleum is an independent oil and gas company. With the primary objective of building blocked-up acreage throughout the Permian Basin, it began acquiring land in 2008, ending up with about 149,000 acres in 2015.[35] Its position facilitates the ability to construct production corridors and drill long lateral wells. In 2014, it created a long-term plan for full-scale and cost-effective development of its acreage. It decided to build four production corridors, which would help develop horizontal wells and improve efficiency and reduce costs. In addition, Laredo hoped to improve sustainability by reducing freshwater through reuse of produced and flowback water in new fracking operations.

**Solution:**
Laredo aimed to change its water usage through production corridors and building centralized infrastructure. The production corridors are designed to efficiently move oil, gas and water on site, process water at a centralized water treatment center, and transfer oil and gas products to market.

The largest corridor, Reagan North, holds the centralized water recycling facility, while the three smaller corridors - JECox, Reagan South and Lacy Creek - have water service lines connecting to, or the ability to build-out lines that connect to the water recycling facility. Overall, these production corridors and the treatment facilities have connected storage capacity of more than 5 million barrels of water and would be able to recycle 30,000 barrels of water per day.[36] By the first quarter of 2015, the Reagan North production corridor was fully operational. Spanning 7 miles, it was designed to provide services to 450 or more horizontal wells.[37]

**Layout:**
The Reagan North corridor is unique because it has a water storage facility and three different water lines to transport fresh, produced and recycled water. The corridor also has three different gas lines and an oil gathering line. By using a combination of robust 16-inch steel pipes and 10-inch poly pipes, rather than smaller pipes, the water is transported at faster rates. The buried pipelines have a monitored cathodic protection system and robust maintenance procedures to mitigate spills and leaks. An advantage of the corridor and the installed infrastructure is the efficient delivery and takeaway of water in efficient manner, minimizing spills and trucking.

The water treatment facility uses filtering and oxidation to remove solid particles and kill bacteria from flowback water that is piped to the facility. The treated water is then piped to a series of on-site storage ponds with a total capacity of 1.4 million barrels of water. The water can then be used for completions and is transported to the well-site by pipe. To date the company is recycling almost 40% of its produced and flowback water.

**Cost Savings:**
Laredo has currently invested around $100 million in its production corridor infrastructure, including roughly $56 million in water infrastructure assets. Additionally, Laredo has invested approximately $50 million in additional infrastructure assets not associated with the four production corridors.

Overall, Laredo estimates the production corridors provide around $1.3 million in benefits per 10,000’ horizontal well, recognizing about 25% of savings in the first six months of the wells’ life. In 2016, Laredo estimates water infrastructure generated capital and operating cost savings of $12.7 million. Recycling produced water instead of sending it to a salt water disposal well saved $0.32 per barrel of water in 2016. Gathering and transporting produced water by pipe as opposed to truck displaced around 95,000 truckloads of water, at a savings of $0.85 per barrel of water. Finally, using recycled water in well completions as opposed to purchasing freshwater saved around $0.26 per barrel of water. In the fourth quarter of 2016, Laredo estimates its production corridors reduced its lease operating expense by approximately $0.51 per barrel of oil equivalent.

**Lessons:**
Laredo is unique in the Permian, because of its large, contiguous acreage, which means it can effectively and safely deploy infrastructure that facilitates the reuse of wastewater. Companies with as much land would benefit from following its lead, while ones that are more spread out would gain from enhanced inter-industry collaboration, consistent regulations around water storage, and pipeline integrity to encourage safe reuse.

# Case Study

## City of Midland, Texas, and Pioneer: working hand in hand in a public-private partnership

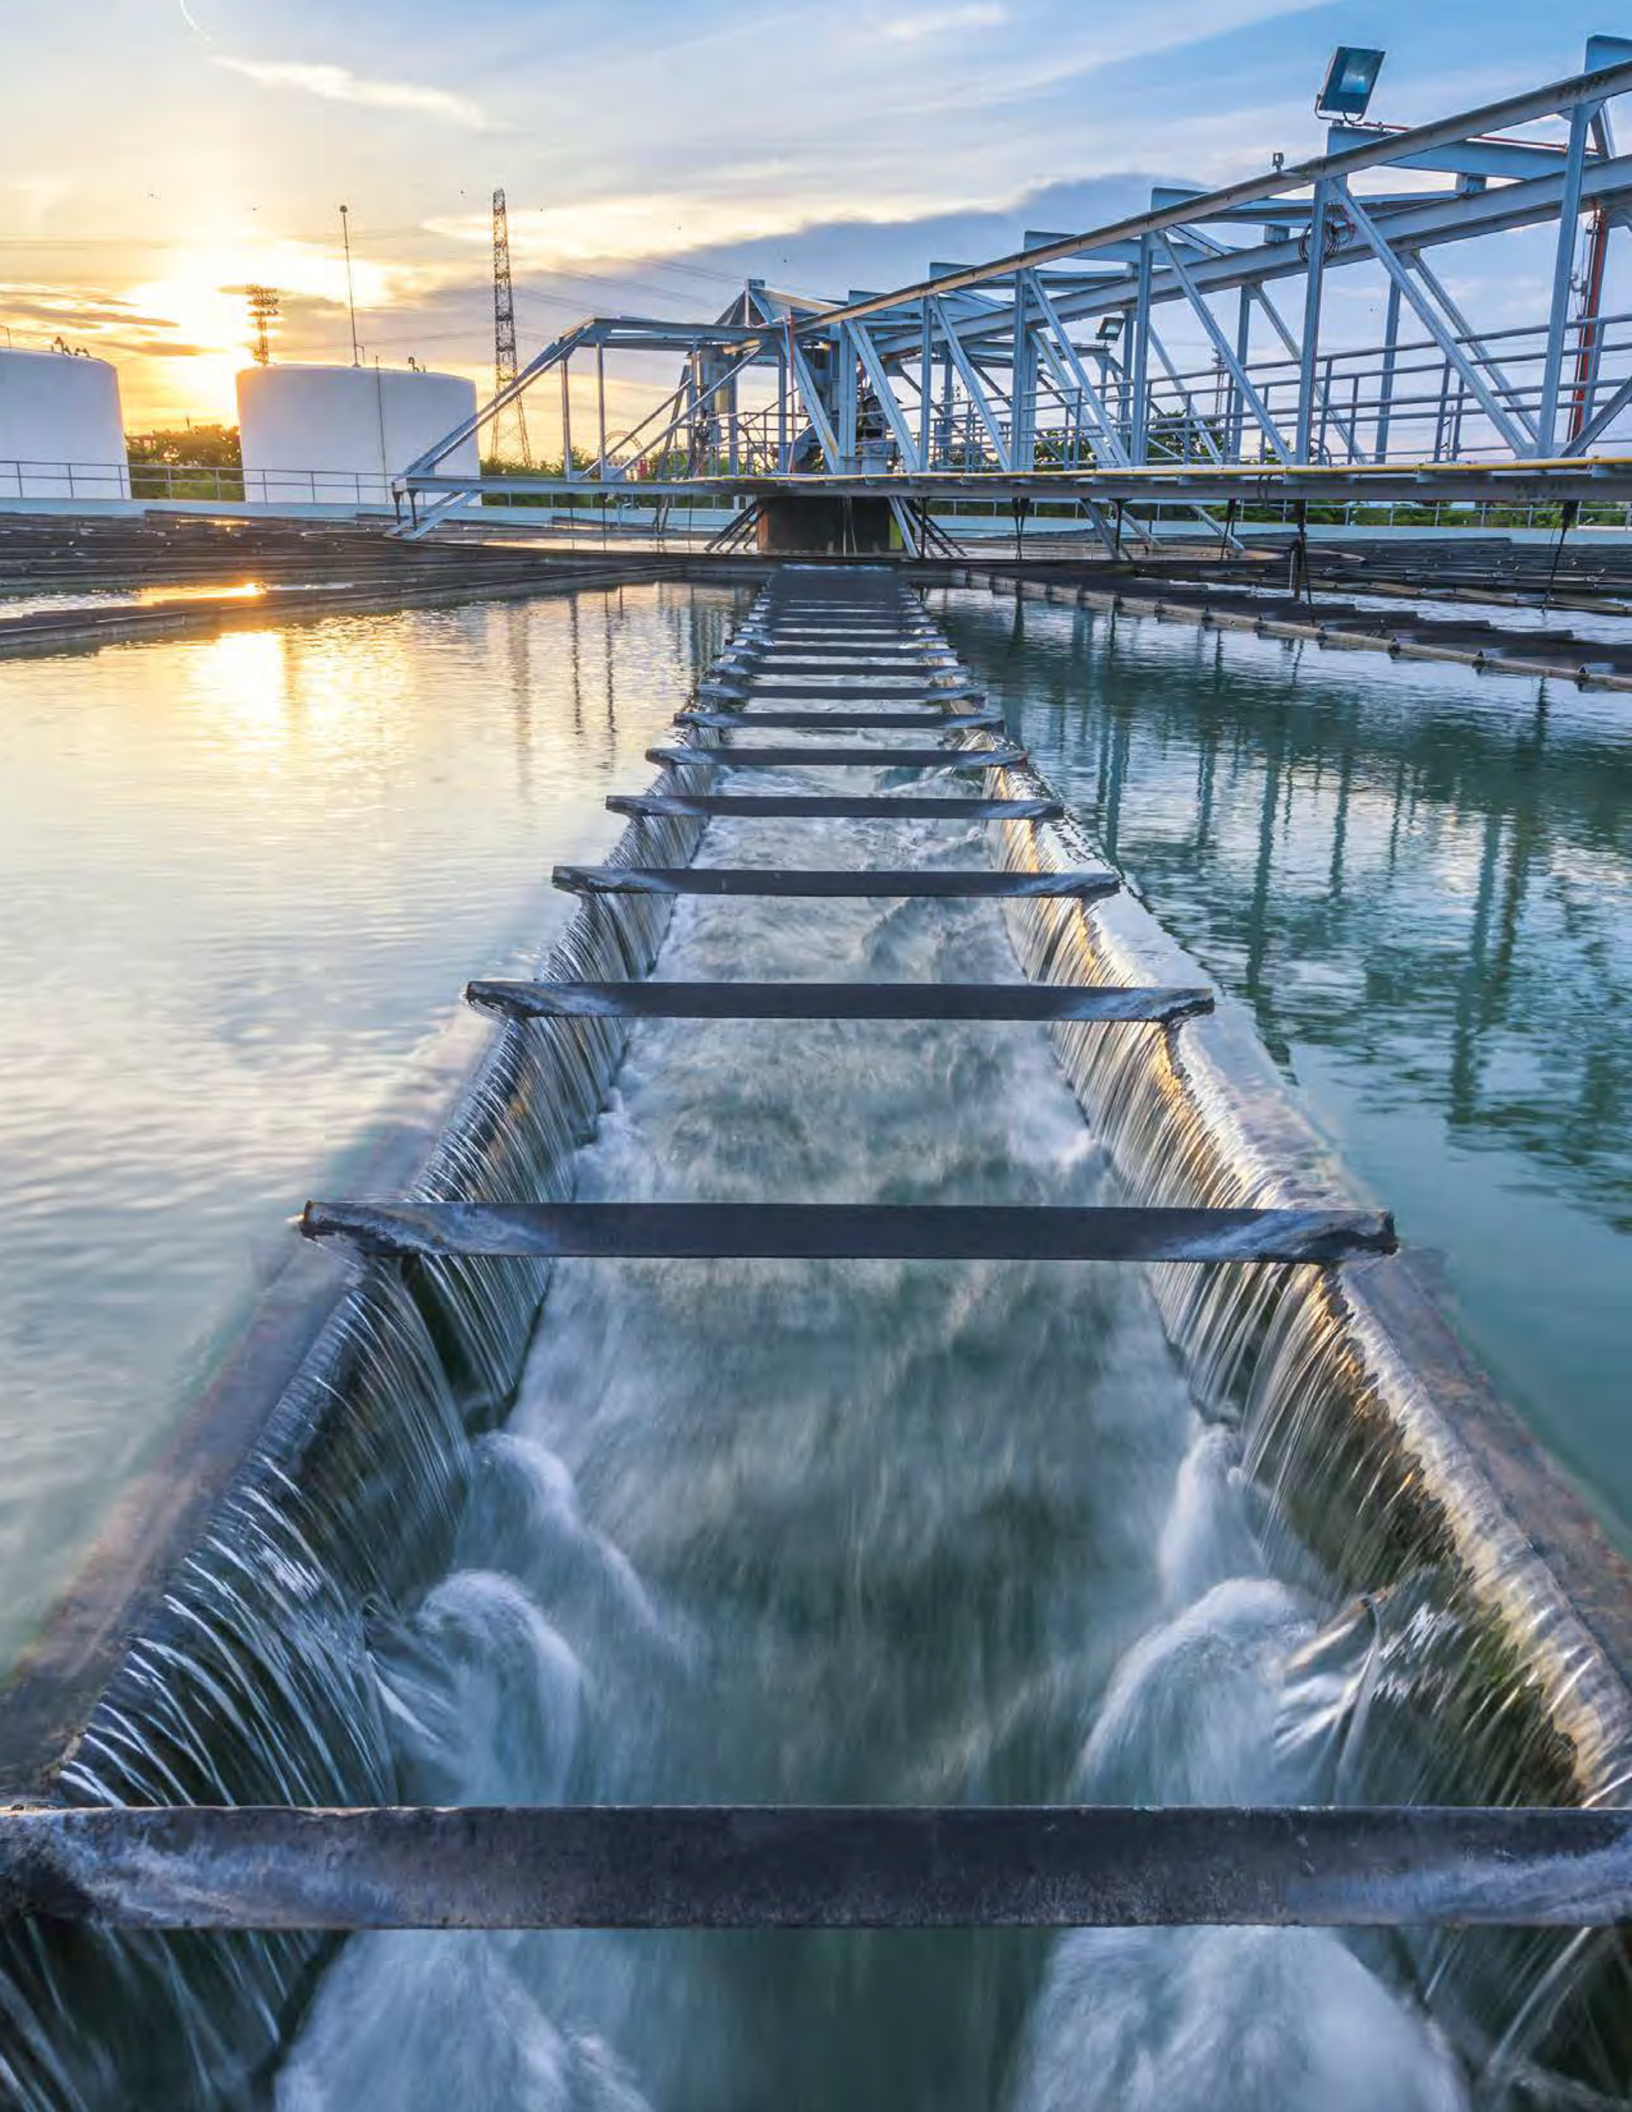
**Background:**
Midland County, Texas is one of the most drought-prone areas of the state. A large county in the Permian Basin, it has high oil field activity, economic growth and water scarcity. It relies on the Colorado River Municipal Water District and maintains 1,400 miles of sewage pipes serving a population of 161,077.[38] The City of Midland is part of the West Texas Water Partnership, whose mission is to "form partnerships, leverage financial capacity and knowledge, maximize existing water sources, minimize impacts to the environment and eliminate the adverse effects of competing for water."[39]

The city not only forecasts freshwater shortages in the near to long term but also anticipated environmental restrictions around municipal wastewater treatment. The City of Midland currently has a no-discharge permit, which means that wastewater cannot be moved from the collection site. It was therefore necessary to upgrade its wastewater treatment plant just to meet current standards, at a cost of $60 million to $80 million, a burden that would have been transferred to rate payers. In order to avoid raising rates, the city put out a Request for Proposal for a company to help finance the upgrades and benefit from the treated municipal water.

Pioneer Natural Resources, one of the largest exploration and production companies in the Permian Basin, also faces water-related challenges. In 2016, the company's Permian Basin operations used roughly 300,000 barrels per day on average for its 14 rigs, with plans for further growth. Considering the regional economic development, unfolding draught, and community and social considerations, Pioneer was looking for innovate solutions to achieve water security and lower its freshwater footprint.

**Opportunity:**
After reviewing several proposals, the City of Midland accepted Pioneer's proposal to upgrade the water system at a cost of $115 million. The city stated that what differentiated Pioneer's proposal was its use of pipelines rather than trucks to transport wastewater. The contract provides 2 billion barrels (or lasts 28 years) commencing in 2019, providing up to 240,000 barrels of water per day. In addition to paying for the capital upgrades, Pioneer will pay the city $0.029 per barrel, which equates to $2.5 million annually. The net cost to Pioneer will be $0.06-$0.10 barrel of water, or roughly 84% below the cost of freshwater in the region at $0.40-$0.60 per barrel of water.

By using municipal wastewater, Pioneer will reduce its freshwater usage, cuts water acquisition costs, save freshwater in a constrained environment, and reduce competing usage in the Texas Water Development Board Region F (West Texas), which the Texas Water Development Board predicts will have shortages of roughly 2.1 billion barrels of freshwater by 2040.[40]



# Public Utilities

## Coming clean on innovation in the utilities sector

This part of the report focuses on public utilities*, and in particular on electricity and water companies. It is notoriously one of the least innovative sectors in the United States when it comes to water.

While there are exceptions, such as research conducted by investor-owned utilities, the National Regulatory Research Institute has found that the industry spent only 0.1% of revenue on research and development in 2014. This is partially due to its highly regulated nature: both electric and water utilities have an obligation to provide reliable, safe, quality public goods at an affordable rate, while also complying with environmental regulations and standards. As a result, utilities tend to be more risk averse than oil and gas and other energy companies.

However, there are differences between power and water utilities. One key factor is that power companies are largely investor-owned, giving them access to a higher capital spend, while water utilities are mainly in public ownership. According to data from the Regulator Assistance Program (RAP), only 16% of water companies are owned by their investors in contrast to 75% of electric utilities.

The power industry is usually first to adopt new technologies, followed slowly by water companies. Advanced metering infrastructure, for example, has been widely used by power utilities, but is only now starting to find traction among water companies.

The Energy Information Administration (EIA) estimates that since 2015 electric utilities had installed almost 64.7 million advanced metering systems for residential, commercial, industrial and transportation use, largely driven by state policies. Exact numbers are unknown for the water sector, but we estimate the adoption rate is much lower. Because the water sector is so fragmented and also suffers from budget constraints, most public water utilities prioritize maintaining and repairing infrastructure in the short term rather than investing in new technologies.

As climate change causes increased temperatures and extreme weather events that affect the quantity and quality of freshwater, utilities could face increasing challenges to consistently deliver services and protect vulnerable infrastructure without driving up prices for ratepayers. Water and electricity companies will have to innovate and invest in new technologies and infrastructure. At the same time, a favorable regulatory environment and long-term planning through integrated water management would be beneficial.

* In this paper we focus on water consumption for power production (cooling) and not primary energy production (supply chain).

## Wired for change: electric utilities

In the coming decades, electric utilities across the U.S. will likely have to carefully manage their water demands and look to alternative technologies and water sources. They use a lot of water, and will therefore be especially susceptible to climate-induced stresses in water scarce regions.

In addition to installing hybrid cooling technologies in power plants and reducing freshwater usage through saline and recycled municipal water, power companies can deploy demand-side management and energy efficiency. Like the oil and gas sector, alternative water sources used with additional treatment can be an opportunity, but they also require additional infrastructure, and are costly and energy intensive.

Changes in how electricity is generated will indirectly impact water use. Although regulations will be the strongest propeller, low natural gas prices and aging coal power plants are all contributing to the demise of coal.[41] Natural gas is less water intensive than coal, while clean energy uses less water than fossil fuel power generation. This means that state level energy mixes will determine water usage by region.

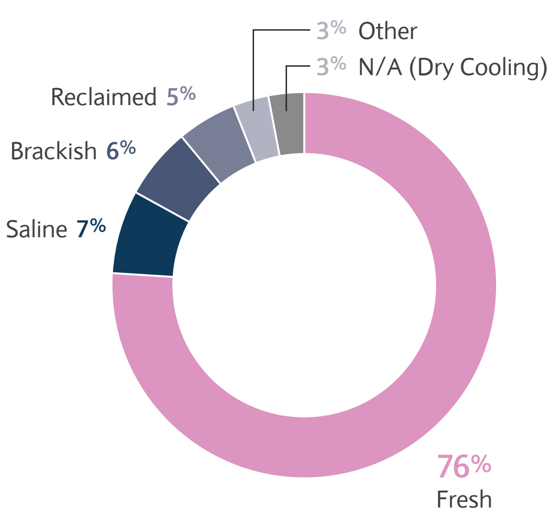
But with uncertain regulations, we believe that customer engagement, including demand-side management and energy efficiency, and careful planning and cooperation between water planning boards and other industries, could prevent long-term water stress. More importantly, there could be greater cooperation on a state and local level between water and electric utilities in managing water supplies and planning for future water scarcity, as advocated by the Department of Energy. Several utilities have already developed proposals to meet future water and energy needs through integrated resource plans in the face of supply and regulatory uncertainty.

## Types of electricity generation and their relationship to water

In 2015, the United States derived about 87% of its electricity from thermoelectric (heat-generating) sources such as coal, natural gas, petroleum and nuclear. Hydropower generated about 6% of the country's electricity needs, with the remainder coming from renewable energy sources, according to data from the US Energy Information Administration (EIA). Most of the hydroelectric power comes from the Northwest, while thermoelectric power generation in the form of coal dominates in the Northern Plains, Midwest, East Coast and Rockies. Each type of power generation withdraws different quantities of water.

Figure 15

Water sources for thermo-electric cooling



Source: Argonne National Lab, Department of Energy

### Thermoelectric power and water cooling

According to the United States Geological Survey (USGS), the thermoelectric power industry accounted for 45% of the nation's total water withdrawals, making it the largest water user. In its accounting, USGS does not include hydroelectric power for overall withdrawals because thermoelectric is classified as generating electricity with steam-driven turbine generators.

Unlike irrigation and mining, a large percentage of thermoelectric water withdrawals are not consumptive, so the water is returned to the water cycle. Nevertheless, water is still a crucial part of wet cooling systems for thermoelectric power generation. In water-poor environments, reduced supply will impact power plant production and efficiency. Because water use varies by electricity source, it is important that regional water groups work with transmission planning agencies, and local utilities engage in their planning discussions.

Nationally, groundwater makes up only 0.5% of the water needed for cooling at thermoelectric plants, while 99.5% comes from surface water.[42] Drought-prone states like Nevada and Arizona which depend heavily on groundwater, have introduced conservation measures, such as new dry cooling plants, encouraging the use of reclaimed water. Most of the water for power plants comes from rivers, streams, seawater and groundwater and reclaimed water.

### Hydroelectricity

Hydropower generation depends on water as much as thermoelectric power, and works in a very similar way. However, hydro harnesses energy from the natural flows of a body of water rather than withdrawing it from a source.[43] Nevertheless, hydroelectricity does have high evaporation rates, making it a high consumer of water.

### Renewable sources (wind and solar)

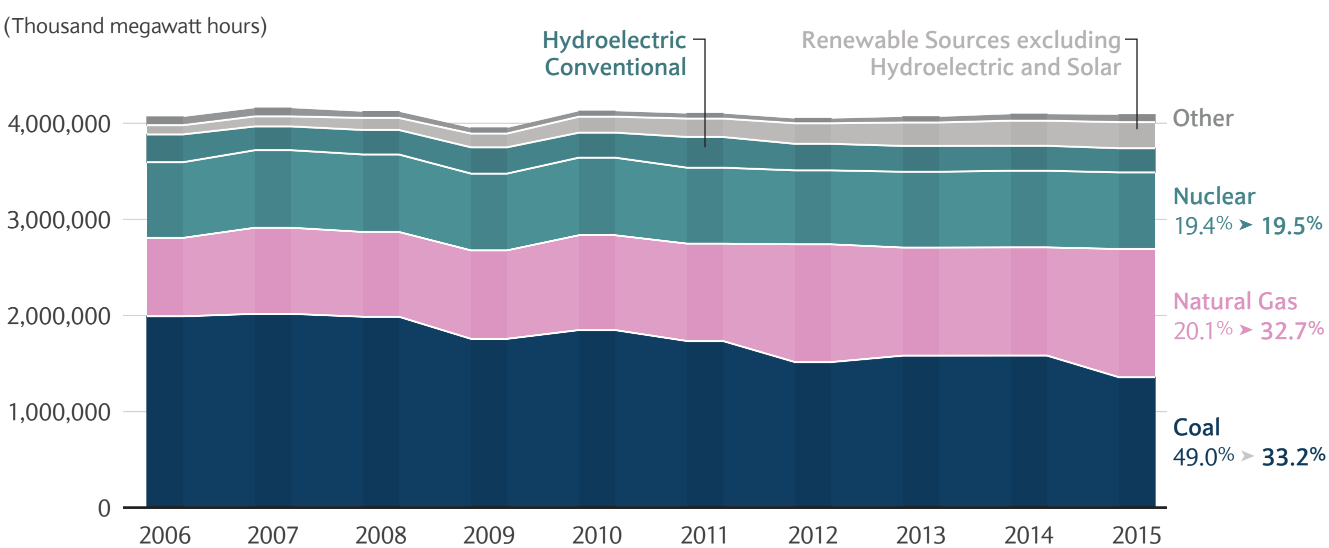
Neither wind power nor small scale rooftop solar uses large amounts of water, except for cleaning purposes. However concentrating solar, where lenses and mirrors are used to concentrate sunlight, does have high associated water use depending on the cooling technology. According to the National Climate Assessment, wet cooling on a concentrating solar plant can require between 750 and 900 gallons/MWh, which is almost as much as coal.

## Finding the right mix of power sources

In the decade between 2004 and 2014, coal-powered electricity generation decreased by 22% in the United States, while natural gas increased by 151%. Why does this matter from a water use standpoint? Water use for cooling varies by fuel source and cooling type.[44] Though estimates vary widely, NREL found that withdrawals using tower cooling for nuclear had the highest withdrawals, followed by coal. Withdrawals for a combined cycle natural gas plant were almost a quarter of those of coal.[45] Apart from concentrating solar, renewables like solar and wind use no water.[46] Because renewable energy and natural gas use less water than other generation sources, a shift to these sources can help decrease the amount of water needed, which is an important consideration for planning in water stressed regions like the Western United States.

Figure 16

U.S. Electricity Generation by Fuel Source



Source: EIA Electric Power Annual

We expect that water withdrawals will increase with population growth and resulting demand for electricity. Electricity planners in water-stressed regions should not only work with statewide regulators to determine the best fuel mix for individual states, but they could also consider the impact on water supplies.

## Water shortages reach boiling point

Water constraints include both shortages and regulatory restrictions from governing agencies such as water development boards, river basin commissions and state water rights. Nationally, water rights can influence how much water a permit holder can use and may result in restrictions for various users depending on the water right type in times of drought. However, the US Government Accountability Office found that even under normal conditions, 40 states anticipate fresh water shortages.

## Getting on-stream with technology-alternatives to fresh water

### Saline water

Treated saline water is suitable in conventional cooling towers while untreated saline or brackish water can be used in specially designed towers. Saline is therefore increasingly used for power plants' cooling needs. This practice in states like Georgia and Delaware has led to a reduced reliance on freshwater between 2005 and 2010,[47] with 97% of all saline withdrawals in the U.S. coming from the thermoelectric power industry.[48]

### Recycled and reclaimed water

Power utilities can also use waste products such as produced water from oil and gas operations, treated municipal effluent or reclaimed water from mining and natural gas extraction. Using alternative sources of water gives power companies more flexibility when choosing a site for a new plant, and also eliminates the needs for water permits. Given the high volumes of produced water from fracking, as well as municipal effluent water, many energy agencies have studied the feasibility of using wastewater.

Some states are taking steps to reduce freshwater usage for cooling purposes by requiring companies to source alternatives and to improve measuring and accounting of reclaimed water usage. The California Water Board, for example, evaluates permits for freshwater sources for power plant cooling based on future water needs and compares these with the potential for the plant to use alternative water sources. The Texas Water Development Board estimates that reuse could produce 4.7 billion barrels of water per year over the next several decades. The total reuse volumes for treated effluent water to cool power plants have doubled from just over 10 billion gallons in 2009 to 20 billion gallons in 2015.[4950]

### When sun and wind can alleviate water shortages

Water-scarce states and those dependent on hydropower could consider implementing Renewable Portfolio Standards (RPS) which make provision for the likes of solar, wind and storage as a form of long-term resiliency planning.[51] These recommendations will not only offer protection against water shortages, but also make provisions to smooth out the load as more solar and wind is added to the grid.

Though it will have a less dramatic impact on water use than coal shutdowns, we believe that renewables will alleviate water shortages in some regions. In order to diversify energy supplies, hydro dependent states like Washington should consider diversifying their energy mixes with more wind and solar.

However, solar and wind energy requires additional storage to smooth gaps between intermittent generation, caused by the fact that solar generation is limited to sunlight hours, while peak demand for electricity is in the evenings.

### Planning for supply and regulatory uncertainty

Electricity utilities can plan for regulatory uncertainty and water supply shortages through Integrated Resource Plans, which allow investor-owned utilities to evaluate supply and demand scenarios, and to work with stakeholders to minimize environmental impacts and diversify their energy portfolios.[53] Although Integrated Resource plans are long-term, labor-intensive processes, we consider them best-practices for investor-owned utilities because the process is collaborative, inclusive and plans for uncertainty.

### Low tech/cost effective solutions and policies

Reductions in electricity production result in reductions in water use for cooling, and vice versa. Like the water utility industry, the electricity industry and governments can facilitate these reductions through low-technical solutions, including demand-side management and energy conservation.

Other solutions include reducing load growth through energy efficiency, which is usually policy driven at both the state and federal level. Energy efficiency involves the deployment of technologies that reduce energy waste from transmission through building, appliance and automobile and power plant retrofits. In the United States, for example, weak economic growth and energy efficiency programs, such as low-energy light bulbs, have resulted in no electricity growth since the mid-2000s.

Energy efficiency projects have high upfront capital costs, but the availability of financing mechanisms can help offset costs through state and federal government programs.[54] Utilities can incentivize efficiency programs for residential customers through rebates.

However, while economic growth is showing signs of improvement, energy efficiency and meeting demand remain headwinds to electricity sales growth.

# Case Study

## Wind-water desalination in Seminole

### Background:

In 2010 the city of Seminole, Texas, began exploring strategies to reduce dependence on the Ogallala aquifer. The aquifer is over-used by farmers in the region and many of Seminole's wells were below EPA drinking water standards.[55] Ideas included treating brackish water aquifers like the Santa Rosa and Dockum aquifers. Since neither aquifer had been drilled and the depth was unknown, city planners hoped to conduct a pilot project to explore their sustainability. Located in the Texas Panhandle, with abundant wind capacity, the city saw a wind-powered reverse osmosis plant as a viable option.

The city approached Texas Tech University National Wind Institute and Water Resources Center to create a pilot grid connected to a wind powered reverse osmosis desalination project. The goal was to reduce electricity costs related to reverse osmosis, boosting water savings for the town. After securing funds from the Texas Department of Agriculture (TDA), the State Energy Conservation Office and the Texas Water Development Board (TWDB), the project began the permitting and planning process and drilled the Dockum well. By 2011 the drilling and pump testing was completed and by 2012 the construction consultants finished installing the reverse osmosis system.[56]

### Costs:

The total project cost was $1.625 million sponsored by several agencies including the TWDB, the TDA and the city of Seminole. TWDB donated $300,000 to drill the Dockum well and the TDA $724,624 for other project components. Additional funding came from Texas Tech University. Although the city retained the infrastructure for the project and would manage the daily operations, the operational costs and monitoring would come from Texas Tech.

### Project Layout:

The pilot project consisted of a pump, and reverse osmosis system, powered by a grid-connected 50kW wind turbine provided and installed by Entegrity Wind Systems.[57] The project would operate over a one year and five month period.

### Challenges:

Although the turbine generated enough electricity to meet approximately 47% of the demand of the well pumping and the reverse osmosis system, the turbine operation and the desalination process were not timed to coincide. The project developers argue this could have been solved through long-term planning.[58]

Overall, the renewable technology was not an issue, and in fact, worked due to the grid back-up. Other short-term problems included a broken well pump and lighting strike.[59]

The biggest challenges had to do with characteristics and depth of the aquifer and problems with the membrane. The combination of the high TDS levels and challenges with pre-treatment caused the membrane to foul, a common occurrence in reverse osmosis systems.[60]

A second problem was that the Dockum aquifer produced too little water for the project to be a viable long-term water source for the city. The depth of the water decreased in the first year of drilling and ended up producing a mere 20-25 gallons per minute, short of an optimal rate of 50 gallons per minute. Although the wind power resulted in electricity cost reductions of $0.33/1,000 gallons, the town did not find the cost to be worthwhile for the amount of water the well generated.

### Solutions and Outlook:

The project participants concluded that regular maintenance of the reverse osmosis system and better characterization of brackish water aquifers would lend to future brackish water desalination systems powered by any type of energy system. Future studies of brackish water systems will help municipalities understand depths, salinity and limitations of brackish water resources. In general, wind power proves to be a viable source of electricity to power reverse osmosis plants, especially when it is grid connected or backed by batteries.

# Tapping into the water utilities

The biggest challenges for water utilities are forecasting demand from a growing population, planning for extreme weather events and updating aging infrastructure. At the same time, the industry has to deliver consistent and clean water to its users at an affordable rate.

Water companies tend to have more budget constraints than electric utilities and are therefore less able to invest in innovation. The industry is also highly fragmented, which means that in a disaster, responsibility is spread over many agencies and institutions.[61] Across the United States, investment in water-related solutions often comes about as a result of regulations introduced after a crisis event, and often far too long after the fact. While the lead contamination of the drinking water in Flint, Michigan, was caused by a combination of issues, budget constraints and mismanagement were primary drivers.

Many public water utilities prioritize infrastructure investments, including maintenance and upgrades, and few have sufficient funds for research and development. Investor-owned water utilities usually lead the way in the development of new technologies, such as leak detecting and advanced metering infrastructure (AMI). These technologies have high upfront capital costs but in the long term they save money and water, and also benefit public utilities.

## How much water does the US public consume?

Public water supply in the United States in 2010 averaged 335 billion gallons per day, a decline from 2005 when the daily average was 409 billion gallons. Average per capita water usage has been declining steadily, mostly due to improved water metering and conservation measures, and we expect this trend to continue.

However, it is expected that competition with other industries, population growth and potential climate change induced shortages will make water use an increasing concern for the utility sector.

# The challenges ahead

Given the integral role of water to their business, water utilities face challenges such as a decline in supply due to lower precipitation levels, reduced groundwater, and increased demand for freshwater. Other risks include extreme weather events and a rise in sea level, both of which can impact the quality of freshwater supplies and tax existing infrastructure.

### Water quality and quantity

Contaminated water is a great concern for freshwater utilities, because clean water is central to their function, and treatment to remove arsenic, chloride and nitrates is expensive. Besides naturally occurring changes in groundwater, and reductions in water quality due to human, agricultural and industrial activity, other natural occurrences can compromise groundwater quality. Flooding for example, is an important risk because it can cause storm water overflow and saltwater intrusion into freshwater sources.

Water scarcity is another challenge, especially in regions that face dramatic and unplanned increases in population. Water companies also have to manage supply and demand balances with adequate storage. For example, persistent drought has plagued Southern Nevada, which relies on the Colorado River Basin and sparse groundwater for much of its supply. However, communities in the area have continued to grow at unprecedented rates, creating uncertainty for water planners.[63]

Areas with supply constraints and under-developed infrastructure must transport water over distances, which not only requires additional power, but also makes infrastructure more susceptible to failure.[64] The Southern Nevada Water Authority has reacted by prioritizing conservation efforts and developing innovative solutions including water reuse, water-smart landscaping and building standards, and implementing conservation tools such as education, and conservation rate restructuring.[65,66,67]

# Where the water flows

### Drinking water

Drinking water undergoes several steps before it reaches the tap. A water utility will source its water from either surface or groundwater, or in some instances reclaimed water, though this is less common in the United States. Freshwater will be pumped or transported from its source to a facility, where it is treated and tested to EPA Drinking Water Act standards.[68] The water then enters a transmission main and is distributed to residents.[69]

### Wastewater utilities

There are two types of wastewater utilities: municipal and industrial, which have different standards for treatment depending on the effluent.[70] Wastewater from residential and industrial users is collected in a sewer system, along with rainwater and storm water runoff.[71] From the sewer, the water is transported to treatment plants where the water undergoes several steps before it is discharged to water sources or used for other purposes such as groundwater recharge.

## Our recommendations

Infrastructure requires the most funding in the water industry, which could be solved in the following ways:

- More consolidation of utilities
- Increased funding from the private sector and/or partnerships between private and public sectors to bridge funding gaps
- There are long-term opportunities in potable reuse to alleviate water scarcity, but it requires more consistent regulations.

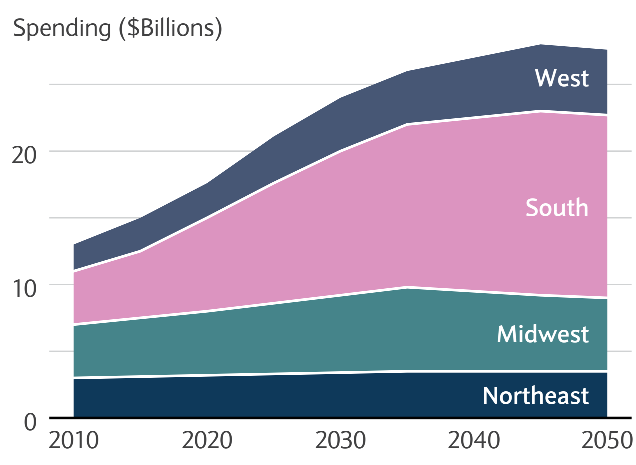
# How to value the cost of water

Many users are not aware of the significant infrastructure, treatment and maintenance costs that go into delivering clean, uninterrupted water to their homes and businesses. Unlike electricity or natural gas, customers rarely consider their water consumption or the reliability or their water and waste water systems. Maintaining infrastructure, while keeping affordable rates for customers, remains one of the biggest challenges for water utilities.

Drinking water utilities spend almost 40% of their operating costs on electricity used for pumping, conveyance and treatment, according to the Environmental Protection Agency (EPA).[72] The Pacific Institute found that using conservation and efficiency measures on the customer side like replacing residential showerheads and retrofitting appliances are more cost effective than investing in new technologies such as desalination and potable and non-potable reuse.[73] Other energy efficiency methods include introducing efficiency measures into pumping and conveyance systems. For example, the EPA recommends that wastewater utilities retrofit pumps with energy efficient motors and also replace large pumps that operate infrequently with smaller pumps that operate continuously. [74]

Figure 19

Water Main Replacement
Annual Cost Forecast – 2010 to 2050E



Source: ASCE[75]

### Liquid investment

Projected spending needs vary but the American Society of Civil Engineers (ASCE) estimates that drinking water investment will be more than $1 trillion in the next 25 years, while the EPA predicts that the infrastructure needs will reach $384.2 billion over the next 20 years, excluding waste water systems.

However, as water utilities are mainly owned by municipalities and publicly traded water companies have a combined market capitalization of only $18 billion to $20 billion, it is evident that investment will need to come from both the public and private sectors. The outdated water infrastructure is the main reason such large investments are needed.

The EPA estimates that the cost of replacing water mains alone could approach $25 billion annually by 2030.

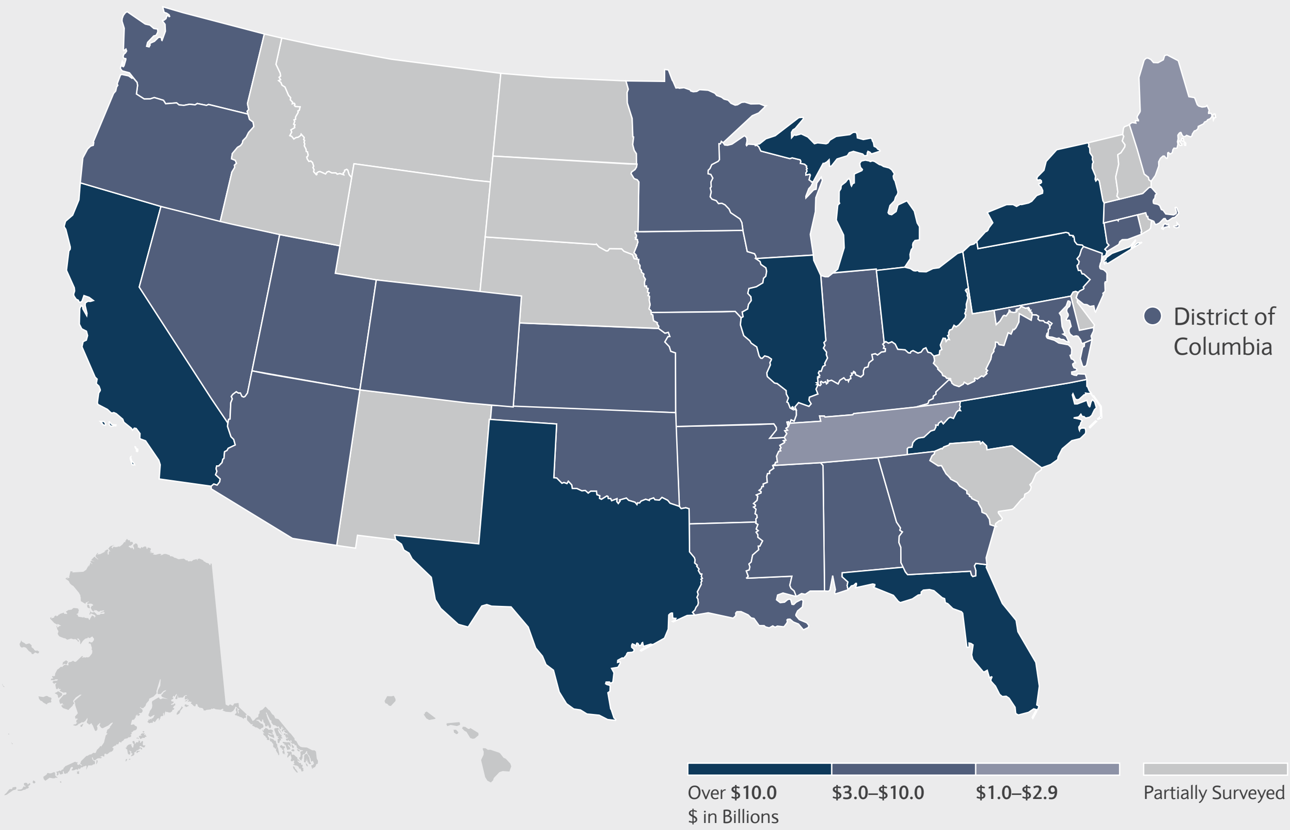
Different regions will need different levels of investment – some areas need infrastructure upgrades because they suffer from scarcity and population growth, while other states may not have had the budgets in the past to maintain their infrastructure.[76] As expected, drought prone states like California, Nevada and Texas, and states with growing populations like New York have the highest sourcing needs.[77]

### Counting the losses

According to the American Water Works Association, there are two types of water losses: “real losses” from leaks in mains and storage vessels, and “apparent losses” also known as non-physical losses caused by ineffective metering or theft.[79] In 2015, the Water Research Foundation assessed water losses in distribution systems across five regions in the United States and found that the median real losses for water mains was 785.54 gallons per mile of main per day.[80]

Figure 20

## Overview of 20-Year Need by State



Source: EPA[78]

## Current methods for treating water

### Drinking water utilities

Drinking water utilities must abide by the Safe Drinking Water Act Standards,[81] which regulate the allowable limits of microorganisms, disinfectants, organic chemicals and inorganic chemicals.[82] In addition, EPA also has secondary drinking water regulations or voluntary guidelines for contaminants that still render the water safe to drink but may have undesirable aesthetic effects.[83] Though the Safe Drinking Water Act is enacted on a federal level, states have individual standards for water quality.

Water utilities have access to several step-like treatment processes, including coagulation, flocculation, sedimentation, filtration, and disinfection.[84] In the first few steps - coagulation and flocculation - particles are suspended in the water, to later be removed through filters. The last step, disinfection, uses a disinfectant to remove bacteria and viruses.

### Wastewater

The primary treatment for wastewater is to remove suspended solids, and other large items like trash, while secondary treatment breaks down organic materials. Tertiary treatment, or disinfection, usually occurs through chlorine,[85] aimed at killing organisms and pathogens that could cause disease, though the level of treatment varies by water quality and local standards.[86] Treatment levels are regulated by the Environmental Protection Agency.

## New technologies and solutions as game changers

As water scarcity continues to limit existing freshwater supplies, water-scarce utilities are looking at alternatives to freshwater sources including treated brackish water, saline water and wastewater, all of which require expensive treatments. Other solutions to water shortages include managing existing supplies through conservation, smart water management and leak detection.

### Thinking smart: Smart meters and advanced metering infrastructure

Smart meters and grids are a crucial investment for utilities to properly gauge how much water their customer use, track unauthorized consumption and detect leaks. Automatic metering infrastructure was initiated by the electric utility industry, and not only allows for more accurate billing, but it can also help with detecting real water losses and reduce apparent losses – and reduce labor costs associated with meter readings.[87] Meters can also communicate the value of water to customers, by increasing awareness of actual water consumption.[88]

### Leak detection

Household leaks in the United States waste 1 trillion gallons of water each year, according to the EPA.[89] Much of this can be avoided by regular maintenance and leak-detecting technologies. Traditional leak detection is a slow and labor-intensive manual process conducted at night. New leak detection devices make the process faster and save money. These include satellite imagery to detect leaks, flow-sensitive meters and acoustic monitoring. Still in the pilot phase, satellite systems work by detecting unexplained puddles of subsurface water with an accuracy unavailable to acoustic monitoring.[90] They eliminate the need for metering infrastructure, but still provide comprehensive data. Flow meters detect leaks by monitoring high night flows – when users are normally inactive.[91] Lastly, acoustic monitoring detects noise or vibrations from leaks in the water pipe.[92] The most effective way to detect leaks is to use a toolbox of detecting methods, with acoustic monitoring, for example, usually paired with advanced metering infrastructure.

## Treatments

### Making wastewater drinkable again

Indirect potable reuse is the practice of treating wastewater to non-drinking standards and releasing into an environmental buffer, to further dilute.[93] After a period of time the water from the aquifer, lake, groundwater or reservoir is treated to drinking water standards and reintroduced as a drinking water source.

Direct potable reuse on the other hand, allows a utility to treat wastewater to potable standards and then directly introduce the treated wastewater into the drinking water system. Indirect potable reuse is successfully practiced throughout the United States, but the direct method has only had a few successful pilot projects to date. Although the treatment technology is proven, regulation, cost and public acceptance are some of the largest obstacles to wider adoption. Nevertheless, favorable regulation in some states has spurred pilot projects and small scale projects for utilities servicing small communities. California and Texas are two state leaders for such regulations, and Texas recently allowed the country's first direct potable reuse project.

### Desalination

In coastal areas or regions with brackish aquifers, desalination is an alternative treatment for providing freshwater. Desalination is deployed successfully, with 18,426 worldwide desalination plants worldwide and 1,300 in the U.S., according to the American Membrane Technology Association and the International Desalination Association.[94]

As discussed in the oil and gas chapter, desalination comes in two main types of technologies: thermal and membrane technology. The majority of American desalination systems are membrane based systems, mainly for brackish water.[95] While desalination has the potential to provide alternative water supplies to water-scarce regions, barriers include its high capital cost, and the high quantities of energy it consumes.

Costs for desalination depend on variables such as the costs of building the plant, and its operating and maintenance expenses, such as electricity and labor. Compared to other water sources it remains the most expensive form of treated water. For example, water at the Carlsbad desalination facility in San Diego costs between $2,131 and $2,367 per acre foot, compared to recycling potable water at $1,200-$1,800 per acre foot,[96] according to the California Energy Commission.[97] Seawater desalination is typically more expensive than brackish water because it has higher levels of dissolved solids.[98]

### Conserving water the non-technical way

In California, the cheapest form of water recycling is generally still hundreds of dollars more expensive than the cheapest water strategies like conservation, according to research by the Public Utilities Commission.[1003] The context matters of course, as well as the location. In areas with high priced water, recycling may indeed be less expensive.[1014]

The EPA has numerous recommendations for utilities to improve the value of water, including designing price structures like "time of day pricing" and "water surcharging" where any overuse would be charged a higher rate through smart water management.

Water trading is another form of conservation, and particularly transferring water from regions with abundant water supplies to arid regions. Some parts of the U.S. like California have instigated small-scale water trading markets. These could be used to transfer surplus water to users in need. However, water markets in the US are not as efficient as they could be, with obstacles including the difficulty of physically transporting water, patchwork infrastructure and bureaucracy of various agencies.[102]

# Case Study

## American Water- Acoustic monitoring

### Background:

In 2014, American Water in Charleston, West Virginia, was suffering non-revenue water loss estimated at $500 per million gallons. Leaks present a large cost to a drinking water utility, because for every leak, the company is throwing away water and the associated costs from chemicals and electricity to treat and convey the water. It is known as "non-revenue water loss" because it is water that the customer is not paying for. Contrary to public perception, a large percentage of water loss comes from small subsurface leaks rather than large noticeable main breaks.

### Solution:

After many years of piloting the software in other locations, American Water in 2015 deployed the first large-scale project of acoustic monitoring software by technology company Echologics, installing 386 sensors in Charleston.[103]

American Water, one of the few investor-owned water utilities, is a pioneer in pairing acoustic monitoring and advanced metering. In 2005 it developed continuous acoustic monitoring (CAM), a process that not only listens for vibrations, but transmits that information to a utility.[104] In 2009 the company helped to develop an acoustic monitoring software prototype through synergies between Echologics leak detecting equipment and Mueller Co's communication meter reading, which had previously been used on fire hydrants.

The result was Echologics Echo Shore DX, which works by installing sensors and communication devices in fire hydrant caps. On a nightly basis, the sensors listen for leaks and then transmit the reports remotely through the communication device to the utility. Most leak detection is conducted at night, when there is very little ambient noise from traffic, and when customer water use levels are at their lowest.

### Challenge:

The main challenge for the Charleston project was that some of the sensors were installed along the Kanawha River, which made the leaks easily hidden as they flowed directly into the river. Other obstacles included the fact that as leaks are repaired, pressure in pipeline mains increases, and new leaks develop. Although it was not the result of a flaw in the software, the new leaks required additional maintenance.

### Success:

Over the course of the first four months of operation, Echologics' monitors detected 45 leaks resulting in an overall reduction of non-revenue water loss of 2.3 million gallons per day for Charleston.[105] The system also found a large leak in a transmission main of 2 million gallons per day, which was identified through ground vibration.

### Costs and scalability:

The high capital cost of acoustic monitoring (approximately $1,200 per unit at seven units per mile) renders the system most attractive to utilities with expensive water supplies and those who suffer large amounts of real water loss, or those located in water-scarce areas. However, the technology makes the most sense from an investment perspective in areas where water mains are buried and leaks would be harder to detect without the technology. For systems with low water costs and system leaks that could rise to the surface quickly, it would be more cost effective to reactively identify the leak manually or use options like district metering, or manual leak surveys. Echologics monitoring systems work best with metallic pipes rather than plastic pipes because they best carry sound.

# Case Study

## San Diego: Potable reuse demonstration project

### Background:

To reduce consumption of imported water from Northern California and the Colorado River, 10909 San Diego embarked on a multi-phase project to turn wastewater into a drinking source. It aims to address water shortages caused by the drought, and planning for population growth. The project also hoped to minimize the amount of water treated and discharged to the ocean by the Point Loma Wastewater Treatment Plant, and eliminate the need for plant upgrades at an estimated cost of $1.8 billion.[107]

A multi-phase reuse project would not only contribute 83 million gallons of freshwater to the city by the year 2035, it would also divert a portion of the Ponta Loma's 240 million gallons/day of wastewater to a pure water facility and transform it into freshwater.[108,109]

### Process:

In 2004, the San Diego  City Council approved research on the feasibility of a water reuse project, its requirements for water recycling, and its health effects. The second step was a demonstration recycled water project from 2009 to 2013, which examined the feasibility of potable reuse in San Diego. The results showed that the technologies used to purify the municipal wastewater met all drinking water standards.[110,111]

Using a five-step toolkit of technologies including membrane filtration as pretreatment, reverse osmosis and ultraviolet light to purify the wastewater, the treated water was released into the San Vincente Reservoir, which is later used as one of the sources for a drinking water treatment plant. After a year of testing, the project proved the water met purification standards and was approved for a large-scale reuse project called Pure Water San Diego.[112]

Implemented over a 20-year period, the project will operate in two phases in two locations. The first phase is scheduled for completion in 2021 and will produce 30 million gallons per day, while the second phase, due to complete in 2035, aims to deliver 53 million gallons per day. In each project, wastewater from the Ponta Loma facility will be treated at a Pure Water facility, where it will then be released into a reservoir. After a period of time, the reservoir water will be blended with the city's imported water supplies and then treated at a drinking water plant. In total, the project will reduce Ponta Loma's wastewater discharges by 50%.

### Costs:

The cost of the demonstration project was approximately $11.3 million, including the advanced water purification facility and the public outreach component quality testing, and was funded through a temporary rate increase between 2008 and 2009.[113] Pure Water San Diego is budgeted to cost $3 billion, spread out over cost-sharing agreements for wastewater agencies.

Overall, the project will save rate payers money over time by reducing the amount of water imported from other parts of California. In addition, several studies illustrate that the cost of purified water at $5.2 to $5.8 per 1000 gallons is less expensive than seawater desalination water at $6.5 to $7.3 per 1000 gallons.[114]

### Challenges:

An objective of the project was garnering public support through education and public outreach. Public acceptance was the largest obstacle, which the city overcame by launching an education campaign consisting of tours at the demonstration facility, social media, and a speaker's bureau. The city said the combination of public education and awareness of water scarcity caused by the drought encouraged people to embrace the idea of wastewater recycling.[115] Opinion polls between 2004 and 2012 on the use of advanced treated recycled water found that public opposition decreased by 75%.

Challenges for the demonstration project included the many required permits and lack of standard regulations. A lack of federal regulations on direct potable reuse meant that in 2010 the California Legislature enacted Senate Bill 918, which requires the state Department of Public Health to conduct a feasibility study on developing uniform criteria for direct potable reuse.

# Important Content Disclosures

## Personal Use Only

All information contained herein shall only be used by the recipient for his/her own personal reference. Any other use, including any disclosure or distribution to of any information to any third party, requires the express written permission of Barclays.

## For Information Purposes Only

This information has been prepared by the Research Department within the Investment Bank of Barclays Bank PLC and is distributed by Barclays Bank PLC and/or one or more of its affiliates (collectively and each individually, “Barclays”). The views expressed in this publication are those of the author(s) alone and are subject to change without notice. Barclays has no obligation to update this publication. This information is intended for informational purposes only and should not be regarded as an offer to sell or a solicitation of an offer to buy the products or securities to which it applies. No representation is made that any returns will be achieved through its use.

## Information Provided May Not Be Accurate or Complete and May Be Sourced from Third Parties

All information, whether proprietary to Barclays or a third party, is provided “as is” and Barclays makes no express or implied warranties, and expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to any data included herein. Other than disclosures relating to Barclays, the information contained in this publication has been obtained from sources that Barclays Research believes to be reliable, but Barclays makes no representations that the information contained herein is accurate, reliable, complete, or appropriate for use by all investors in all locations. Further, Barclays does not guarantee the accuracy or completeness of information which is obtained from, or is based upon, trade and statistical services or other third party sources. Because of the possibility of human and mechanical errors as well as other factors, Barclays is not responsible for any errors or omissions in the information contained herein. Barclays is not responsible for, and makes no warranties whatsoever as to, the content of any third-party web site accessed via a hyperlink contained herein and such information is not incorporated by reference.

## Information Provided Is Not Indicative of Future Results

Any data on past performance, modelling or back-testing contained herein is not necessarily indicative of future results. All levels, prices and spreads are historical and do not represent current market levels, prices or spreads, some or all of which may have changed. The information referenced herein or any of the results derived from any analytic tools or reports referenced herein are not intended to predict actual results and no assurances are given with respect thereto. The value of and income from any investment may fluctuate from day to day as a result of changes in relevant economic markets (including changes in market liquidity).

## No Liability

To the extent permitted by law, in no event shall Barclays, nor any affiliate, nor any of their respective officers, directors, partners, employees or third party licensors have any liability, direct or indirect, including but not limited to (a) any special, punitive, indirect, or consequential damages; or (b) any lost profits, lost revenue, loss of anticipated savings or loss of opportunity or other financial loss, even if notified or advised of the possibility of such damages or potential loss, arising from any use of the information provided herein.

## No Advice

The information provided does not constitute investment advice or take into account the individual financial circumstances or objectives of the clients who receive it. You should consult with your own accounting, legal or other advisors as to the adequacy of this information for your purposes.

## No Use For Valuation Purposes

No data or price information should be used for any valuation, trading, settlement, accounting purposes or other related functions.

## Not Available In All Jurisdictions

Not all products or services mentioned are available in all jurisdictions. No offers, sales, resales, or delivery of any products or services described herein or any offering materials relating to any such products or services may be made in or from any jurisdiction except in circumstances which will result with compliance with any applicable laws and regulations and which will not impose any obligations on Barclays.

## Tax Disclaimer

Barclays does not provide tax advice and nothing contained herein should be construed to be tax advice. Accordingly, you should seek advice based on your particular circumstances from an independent tax advisor.

## Intellectual Property

Barclays Bank PLC is registered in England No. 1026167. Registered office 1 Churchill Place, London, E14 5HP.

# About the authors

BARCLAYS

**Zachary Sadow** is an energy equity research analyst at Barclays. He is also a PhD candidate at the University of Nottingham's School of Politics and International Relations, and a Visiting Scholar at Columbia University's School of International and Public Affairs (Harriman Institute).

**Daniel F. Ford, CFA**, is Managing Director and Head of North America Utilities Equity Research at Barclays. In this position, he and his team are responsible for research coverage on a group of 61 energy stocks. Prior to joining Barclays in September 2008, Mr. Ford served as managing director at Lehman Brothers covering the US electric utility and power industries. Previously, he covered electric utility stocks at ABN AMRO, HSBC Securities, Dean Witter, Merrill Lynch, and Morgan Stanley. With more than 20 years experience in the industry, Mr. Ford has received a number of awards. Most recently, he was ranked third in the 2016 Institutional Investor All-Star Analyst Survey. He has been ranked in the top three in both the Institutional Investor All-Star Analyst Survey and Greenwich Survey since 2001. Mr. Ford is a Chartered Financial Analyst and holds a bachelor's degree in economics from Dartmouth College.

**Mark Lewis** is a Managing Director and Head of European Utilities research at Barclays. Mark has 18 years' experience as a financial analyst covering global energy markets, and since May 2016 he has been a member of the Financial Stability Board's Task Force on Climate-related Financial Disclosure, which was established by FSB Chairman Mark Carney in January 2016 under the chairmanship of the Honourable Michael J. Bloomberg. Mark holds a BA (First-Class Hons) from Sheffield University, an MPhil from Cambridge University, and an MA from London University.

**Rose-Lynn Armstrong** is an electric utilities research analyst at Barclays. She has covered the electric utility sector for twelve years on the sell side and buy side. She received an MBA from New York University and a B.S. from the State University of New York at Geneseo.

# Columbia Water Center

EARTH INSTITUTE | COLUMBIA UNIVERSITY

The Columbia Water Center's mission is to creatively tackle water challenges of a rapidly changing world where water and climate interact with food, energy, ecosystems and urbanization. Combining the rigor of scientific research with the impact of effective policy, we aim to design reliable, sustainable models of water management and development that can be implemented on local, regional and global levels. The Columbia Water Center, in collaboration with other Earth Institute units and external partners, is leading intellectual inquiry into the assessment, understanding and resolution of the global crisis of freshwater scarcity.

**Professor Upmanu Lall** is the Alan and Carol Silberstein Professor of Earth and Environmental Engineering and the director of the Columbia Water Center, a unit of the Columbia University's Earth Institute. Lall has over 35 years of experience in statistical and numerical modeling of hydrologic and climatic systems and water resource planning and management. Lall has pioneered an approach to applied research that emphasizes the importance of viewing water issues through several different traditional academic disciplines in order to understand the global dimension and interconnected nature of water challenges. He received his B.S. from the Indian Institute of Technology and both his M.S. and Ph.D. in Civil Engineering from the University of Texas.

**Michelle Ho** is a Post-Doctoral Research Scientist at the Columbia Water Center. Her research focuses on hydroclimatic variability and water resource risk analysis using paleoclimate information in the US.

**Angela LaSalle** is an environmental and sustainability analyst. She holds a Masters of International Affairs from Columbia University's School of International and Public Affairs focused on Energy and Natural Resource Management, and a Masters of Fine Arts from Hunter College in Integrated Media with a focus on documentary film. She participated in the 2016 Barclays-Columbia Workstudy Program (Capstone) focused on water in the U.S. oil and gas industry, and subsequently worked as a consultant at Barclays in the Research Department as part of the Barclays-Columbia Water Center water-energy project.

Barclays thanks **Professor Natasha Udensiva** at Columbia's School of International and Public Affairs for her leadership in the Barclays-Columbia workstudy program (Capstone).

BARCLAYS

# North America Power & Utilities

# Q4 2016 Quarterly Earnings Preview

**Regulated Utilities:** We expect Q4 Regulated Utility EPS to rise 0.8% versus last year, but come in 1.1% below the consensus expectation. For the year we expect growth of 6.1% versus a consensus expectation of 5.5%. Heating degree days rose in all regions, with the East regions experiencing the biggest changes. Q4 is also a time where companies reinvest in O&M if they are ahead of plan. To the extent quarterly results matter to Regulated Utility stock performance, they matter the most to Q4 results likely because that is when companies give forward year guidance. Please see our "February Preview/January Review" published today for more analysis.

**Power:** For power, we expect results broadly in line with consensus estimates for the fourth quarter with CPN in line, DYN a slight beat, and NRG a slight miss. Our estimated EBITDA is also within each company's 2016 guidance range. Weather could be an upside driver as year on year the quarter was 17% colder than last year despite being 12% milder than normal. Further we are marking to market our EBITDA estimates through 2019 for the forward curves as of January 13, and are updating our valuations as well as shown in

## IPP Update and Mark to Market

The fourth quarter was the third of what we believe will be four consecutive relatively easy weather comparison quarters for the power sector. 4Q16, while 12% milder than normal, HDD were up nationally by 17% year-on-year. CDD are not included as they are not relevant for fourth quarter results. Impacts will be most significant in all regions outside of the West, which saw milder winter temperatures than last year, which was much closer to normal levels.

FIGURE 4

**Q4 Heating Degree Days**

| | Heating | % Change vs. | |
|---|---|---|---|
| **Region** | **Degree Days** | **Normal** | **Q4 2015** |
| New England | 1,844 | -5% | 27% |
| Mid-Atlantic | 1,646 | -7% | 35% |
| E N Central (IL, IN, OH, MI, WI) | 1,826 | -9% | 26% |
| W N Central (IA, KS, MN, ND, NE, SD) | 1,893 | -14% | 11% |
| South Atlantic | 814 | -14% | 49% |
| E S Central | 1,028 | -16% | 39% |

We are updating our Q4 '16 and full year 2016 EBITDA estimates for the Independent Power Producers (IPPs) to reflect a mark to market on the power and commodity forward curves as of 1/13/2017. We expect CPN and DYN to be slightly ahead of consensus while NRG is expected to be slightly below consensus estimates. Our annual estimates for all three IPPs are consistent with the companies' guidance ranges for the year.

FIGURE 5

**EBITDA Estimates and Consensus for 3Q '16 and 2016 Annual for the IPPs ($ in mn)**

| | 4Q 2016 | | 2016 | | |
|---|---|---|---|---|---|
| | **EBITDA** | **Consensus** | **EBITDA** | **Consensus** | **Guidance** |
| CPN | 360 | 354 | 1,832 | 1,817 | 1,800-1,850 |
| DYN | 269 | 232 | 1,057 | 1,029 | 1,000-1,100 |
| NRG | 476 | 495 | 3,240 | 3,252 | 3,250-3,350 |

Source: Thomson, Barclays Research Estimates

We are also refreshing valuations and our 2017-2019 EBITDA estimates for the IPPs. We will discuss catalysts for each name separately in our January Review/February Preview monthly publication. The updated estimates and price targets are shown in

Figure 6 below.

## Price Target Methodologies

### *Ameren Corp*

We are raising our price target $3 to $56. Our $56 target is a 9% premium to the 15.7x Regulated Utility group including -1% for exposure to tax changes applied to our $3.25 EPS estimate. Previously our $53 target included the same 9% premium applied to the 2019 Regulated Utility P/E of 15.1x and our $3.20 EPS estimate.

We are fine-tuning our EPS estimates for the impact of Illinois legislation to $2.74 for 2016, $2.75 for 2017, $3.03 for 2018 and $3.25 for 2019 versus $2.70/$2.77/$2.99/$3.20. Our estimates imply 7% from a $2.63 normalized 2016 base to 2019.

In the near-term the drivers include Missouri regulatory lag and a fine-tuning of Illinois ratebase. Starting in June 2017 we assume a 1-2 cents EPS benefit for capitalizing smart meter spending in Illinois.

### *Calpine Corp*

Our prior $17 price target was premised upon the mid-cycle multiple of 7.6x our 2018E Open EBITDA of $1.889 billion, net debt of $11.2 billion and an NPV of NOLs of $2.9 billion on 359 million shares outstanding.

Our current $18 price target is premised upon the mid-cycle multiple of 7.6x our 2018E Open EBITDA of $1.901 billion, net debt of $10.7 billion and an NPV of NOLs of $2.6 billion on 359 million shares outstanding.

*DTE Energy*

We are raising our price target $5 to $106. Our $106 price target is a 12% premium to the group including +1.5% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.7x and our $6.07 EPS estimate. Previously our $101 price target was a 12% premium to the group applied to the 2019 Regulated Utility P/E of 15.1x and our $6.00 EPS estimate.

We are fine-tuning our EPS estimates to $5.29 for 2017, $5.74 for 2018 and $6.07 for 2019 versus $5.35/$5.75/$6.07 for 2017-2019, respectively to assume a 10.2% ROE in the company's current DTE Electric rate case.

*Dynegy Inc.*

Our prior $13 price target was premised upon closing the ENGIE transaction, a 7.1x EV/EBITDA mid-cycle multiple, and our post-close 2019E EBITDA of $1.5 billion net of debt of $8.5 billion, environmental capex of $0.5 billion, and a NPV of NOLs of $0.3 billion. We use shares outstanding of 161.08 million.

Our current $14 price target is premised upon closing the ENGIE transaction, a 7.1x EV/EBITDA mid-cycle multiple, and our post-close 2019E EBITDA of $1.543 billion net of debt of $8.521 billion, environmental capex of $0.5 billion, and a NPV of NOLs of $0.3 billion. We use shares outstanding of 151.08 million.

*Edison International*

We are raising our price target $4 to $77. Our $77 price target is a 4% premium to the group including -0.5% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.7x and our $4.70 EPS estimate.

Our prior $73 price target reflected a 4% premium to the group, including -0.5% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.1x and our $4.68 EPS estimate.

We are fine-tuning our EPS estimates to $3.93 for 2016, $4.11 for 2017, $4.30 for 2018 and $4.70 for 2019 versus $3.95/$4.28/$4.37/$4.68 for 2016-2019, respectively.

*FirstEnergy*

We are revising our EPS estimates for a mark-to-market of the forward power curves. Our new EPS estimates are $2.37 for 2018 and $2.21 for 2019 versus $2.31/$2.23 previously.

*Hawaiian Electric Industries*

We are raising our price target to $27 from $25. Our $27 PT reflects a 5% discount to the Regulated Utility average P/E of 15.7x our 2019E utility earnings of $1.32, plus a 1.5% premium to 14.4x bank earnings of $0.50.

Our previous PT reflected a 5% discount to 14.5x our 2019E utility earnings of $1.32, plus a 1.5% premium to 14.4x bank earnings of $0.50.

*NRG Energy Inc.*

Our prior $16 price target was premised upon a half turn discount to the mid-cycle multiple of 7.6x our recourse basis '18E Open EBITDA of $1.6 billion, $1.3 billion for NYLD at market value, $1.1 billion in NPV of NOLs, $0.2 billion in environmental capex, and $8.2 billion in recourse only net debt.

Our current $18 price target is premised upon a half turn discount to the mid-cycle multiple of 7.6x our recourse basis '18E Open EBITDA of $1.7 billion, $1.5 billion for NYLD at market value, $1.1 billion in NPV of NOLs, $0.2 billion in environmental capex, and $8.2 billion in recourse only net debt.

*OGE Energy.*

We are raising our price target $2 to $36. This comprises '19E EPS of $1.75 at OG&E (utility), using a 2.9% discount to the 15.7x utility group multiple equating to $28, plus $9 for OGE's 26.3% ownership of Enable Midstream Partners LP (ENBL), marked to current price. Previously our $34 target was comprised of '19E EPS of $1.75 at OG&E (utility), using a 2.9% discount to the 15.1x utility group multiple equating to $25, plus $8 for OGE's 26.3% ownership of Enable Midstream Partners LP (ENBL), marked to current price

*Portland General.*

We are raising our price target $2 to $41. Our price target reflects the 2019 group average P/E multiple of 15.7x applied to our 2019 EPS estimate of $2.61. Previously our $39 target reflected the 2019 group average P/E multiple of 15.1x applied to our 2019 EPS estimate of $2.61.

*PPL Corporation*

We are raising our price target $2 to $37. Our $37 price target is a 2019 Regulated Utility average P/E of 15.7x applied to $2.35 in Open EPS reflecting a 1.24x $/British Pound exchange rate and $0.21/share for the NPV of hedges. Our $35 price target was a 2019 Regulated Utility average P/E of 15.1x applied to $2.34 in Open EPS reflecting a 1.24x $/British Pound exchange rate and $0.19/share for the NPV of hedges.

*Public Service Enterprise Group*

We are raising our price target $2 to $48. Our $48 target reflects a sum of the parts including $37 for PSE&G at a 11% premium including +2% for exposure to tax reform applied to the 2019 Regulated Utility average of 15.7x and our $2.11E, $10 for PSEG Power at 7.4x '18 Open EBITDA of $1.1B less $3.2B of net debt and $2 for Enterprises and other at a 2019 Regulated Utility average multiple of $0.12 EPS.

Previously our $46 target reflected a sum of the parts including $34 for PSE&G at a 11% premium to the 2019 Regulated Utility average of 15.1x and our $2.08E, $10 for PSEG Power at 7.4x '18 Open EBITDA of $1.1B less $3.2B of net debt and $2 for Enterprises and other at a 2019 Regulated Utility average multiple of $0.12 EPS.

We are fine-tuning our EPS estimates to $2.92 for 2017, $2.98 for 2018 and $2.84 for 2019 versus $2.99/$2.98/$2.87 for 2017-2019, respectively. Reasons for the change in our EPS estimates are a mark-to-market of PSEG Power and increased cap-ex spending at PSE&G that has not been added to the forecast.

**Why Overweight?** With Missouri legislation AEE can grow EPS and the dividend at 6-7% with rates that are substantially formula driven. The company maintains a strong balance sheet without the need to issue equity.

**Upside case** — **USD 58.00**

Our upside case reflects a 10% premium to the average Regulated Utility multiple of $3.39 in 2019 EPS which assumes 5% ratebase growth in Missouri.

**Downside case** — **USD 48.00**

Our downside case reflects a 5% discount P/E of the 2019 Regulated Utility multiple applied to downside case EPS of $3.23 in '19 which reflects 50 bp of Missouri regulatory lag and a lower ROEs at FERC (10.2%).

| Price (19-Jan-2017) | USD 11.73 |
|---|---|
| Price Target | USD 12.00 |

**Why Equal Weight?** We like AES' plan to delever and simplify the outlook, but we believe the company is facing long-term pressures as a global fossil generator which are beginning to play out in Chile, the U.S. and eventually in other places.

**Upside case** USD 20.00

A Regulated Utility average P/E multiple applied to $1.35 EPS in 2019 which reflects execution of the strategy and delevering.

**Downside case** USD 8.00

A sum of the parts which includes $8 for market values of the publicly traded Lat Am subsidiaries and Regulated U.S. utilities at 15.7x 2019 net income and -$0.15/sh for 6.7x $954M in proportional EBITDA for unlisted subsidiaries and parent expenses less $6.4B in net debt & NOLs.

| | |
|---|---|
| Price (19-Jan-2017) | USD 42.39 |
| Price Target | USD 43.00 |

**Why Underweight?** AWR is a solid well-run utility with average-to-below average growth compared to its peers. The single state regulatory jurisdiction argues for a premium valuation. The ASUS business is a great asset light business but has more risk than the regulated water business. As such, at current levels we feel the name is overvalued compared to peer companies.

**Upside case** USD 48.00

Our upside case of assumes that regulatory issues and ASUS growth are at the top end of expectations, driving a further premium valuation to the group.

**Downside case** USD 38.00

Our downside case of assumes a reduction to ROE at the utility combined with slowed growth from bonus depreciation and lack of other investment from CPUC restrictions as well as low contract win rates from ASUS driving AWR to a group average multiple.

| Price (19-Jan-2017) | USD 12.19 |
|---|---|
| Price Target | USD 18.00 |

**Why Overweight?** We like CPN for: 1) its 11-15% FCF yield 2016E-18E; 2) a shareholder-friendly management with allocations toward buybacks; 3) a clean and geographically diverse asset mix, and 4) its leverage to lower natural gas prices with a pure spark spread fleet.

**Upside case** USD 21.00

Our upside case is reflective of current 2018 strip natural gas, capacity prices moving back to $200/MW-day, a 7.6x mid-cycle EV/EBITDA multiple, and indicated deleveraging of $573 million.

**Downside case** USD 11.00

Our downside case is reflective of $2.50/MMBtu perpetual natural gas, no upside to capacity prices, a discounted 7.1x EV/EBITDA multiple, and no credit for indicated deleveraging.

| Price (19-Jan-2017) | USD 32.95 |
|---|---|
| Price Target | USD 29.00 |

**Why Underweight?** We rate shares of CWT Underweight as the theorhetic earnings power of the utility is lower than previously expected as rate base is lower as outlined in the settlement for their California rate case.

**Upside case** USD 35.00

Applying a multiple on EV/EBITDA more commensurate with transaction multiples would yield upside, assuming 11x 2018 EV/EBITDA. Continued consolidation would lead to either higher growth or higher valuations

**Downside case** USD 22.00

Water assets are valuable as shown by the various roll up and tuck in strategies in the industry. As such we have not seen assets valued at less than 1.5x book and use this multiple for our downside.

| Price Target | USD 106.00 |

**Why Overweight?** Our target implies a reasonable 7% consolidated premium to the RU group for DTE's best in-class Regulated Utility and Michigan regulatory environment along with the company's track record for investing in the unregulated businesses. On the unregulated side, DTE has generated growth complementary to the regulated business with upside potential.

**Upside case** — **USD 116.00**

We assume stronger growth at the gas and electric business of +1%, positive results from the trading business and 25-50bp of higher allowed ROEs from the next rate case process. We also assume a slight premium in the midstream business as growth becomes more visible.

**Downside case** — **USD 95.00**

We assume weaker growth at the gas and electric business of -1%, negative results from the trading business, 25-50bp of lower allowed ROEs from the next case and higher corporate costs. We assume a slight discount for midstream as the MLP opportunity becomes less visible.

| Price (19-Jan-2017) | USD 77.12 |
|---|---|
| Price Target | USD 78.00 |

**Why Equal Weight?** We believe DUK is a premium regulated utility and the sale of the international assets removes an overhang. As such, we value DUK at a 5% premium to the industry average multiple.

**Upside case** — **USD 82.00**

Now that the headwinds at the International segment have been removed, the remaining overhang to resolve is and the coal ash recovery; the stock could trade to a 10% premium vs. the regulated group over time.

**Downside case** — **USD 70.00**

We see the downside as being that DUK is unable to produce earnings growth in 2018, and the stock trades at an average regulated utility multiple on flat earnings.

| | |
|---|---|
| **Price (19-Jan-2017)** | **USD 9.70** |
| **Price Target** | **USD 14.00** |

**Why Overweight?** With the recent acquisitions of the ENGIE assets, and the rationalization of IPH and MISO Zone 4 Dynegy continues to move further toward a spark spread fleet, with assets in PJM, ERCOT and New England and MISO. This will also leave the fleet less exposed to natural gas prices, and no longer exposed to MISO capacity auctions.

**Upside case** — **USD 19.00**

The upside case is based on a $2/MWh expansion in spark and dark spreads.

**Downside case** — **USD 9.00**

The downside case is based on a 23% - 55% compression in spark spreads across all markets and the 2018 position remaining unhedged. This reduction equates to a $3/MWh compression.

**Why Equal Weight?** We rate ED as Equal Weight as we believe the current valuation balances ED's above-average yield, liquidity and rate base growth with regulatory risk overhang.

**Upside case** — **USD 78.00**

Our upside case implies a 10% premium of the 2019 Regulated Utility average P/E applied to $4.51 which reflects a 9.5% electric and gas ROE at CECONY and a modest penalty for East Harlem fine.

**Downside case** — **USD 68.00**

Our downside case assumes a 9.0% earned ROE and $4.59 EPS in 2019 applied to a modest discount of the average Regulated Utility multiple.

**Why Equal Weight?** We are Equal Weight on EIX for 9% total return potential but like the company's 7% rate-base growth and California regulatory environment.

**Upside case** USD 82.00

The upside case is a 10% premium to the group average 2019 P/E applied to $4.70.

**Downside case** USD 72.00

Our downside case is a Regulated Utility average 2019 P/E applied to $1B lower ratebase and $4.62 EPS.

| | |
|---|---|
| **Price (19-Jan-2017)** | **USD 71.08** |
| **Price Target** | **USD 73.00** |

**Why Equal Weight?** Our base case presumes that the Utility/Parent segments trade at the industry average multiple. We include no incremental value for EWC.

**Upside case** — **USD 79.00**

Upside case reflects Utility/Parent segments trading at a 5% premium to the group average multiple due to an improving regulatory outlook and diminished merchant nuclear exposure. It also reflects EWC valued at the high end of our DCF analysis, assuming IP remains operational.

**Downside case** — **USD 65.00**

Our downside case applies a 5% discount to the average group multiple for the Utility/Parent earnings. The downside reflects zero value for EWC.

| Price (19-Jan-2017) | USD 30.31 |
|---|---|
| Price Target | USD 34.00 |

**Why Equal Weight?** We like FE's focus on getting more Regulated and believe acceleration of that would help the stock. The company's biggest strengths are the strategy, regulatory relationships and operations.

**Upside case** — **USD 38.00**

Our upside case reflects a sum of the parts asset values which includes a DCF of the merchant generation cash flows and $41 for the Regulated Utility net of parent EPS of $2.68 in 2019 and a 9% discount to the average multiple.

**Downside case** — **USD 30.00**

Our downside case values the Ohio rate relief as a 3 year NPV and uses a 10% Regulated Utility P/E discount applied to $2.42 in '19 less $3/share for the merchant unfunded pension NPV.

**Why Equal Weight?** We are Equal Weight GXP following completion of the equity offerings for the WR merger. We like the 6-8% EPS growth for the merged company and regulation is the key risk.

**Upside case** — USD 32.00

Our upside case assumes a 50 bp reduction in regulatory lag which adds 9 cents to EPS. We also see 7-8% EPS growth to 2020. We value GXP at a modest 2.5% discount to the '19 Regulated Utility average applied to $2.13.

**Downside case** — USD 26.00

Our downside case reflects failure of the WR merger to close and a $380M break fee (pre-tax). We assume GXP repurchases the deal stock and cancels the mandatory. The valuation reflects a 10% discount to the Regulated Utility 2019 average P/E and $1.88.

|---|---|
| Price Target | USD 27.00 |

**Why Underweight?** The Underweight rating reflects the ongoing challenges to HE continuing to operate on a stand alore basis. The merger with NEE was rejected by the PUC.

**Upside case** USD 29.00

Our upside case considers the possibility of increased PUC support for a standalone HE, reflecting a 10% premium to the Regulated Utilities industry average P/E and the replacement of the revenue adjustment mechanism.

**Downside case** USD 25.00

On a stand alone basis, potential erosion to HE's customer base could negatively impact onoging earnings and put the dividend at risk. In this scenario, HE utility earnings could trade down to a 15% discount to the average multiple.

|---|---|
| Price Target | USD 133.00 |

**Why Overweight?** NEE's Overweight rating is supported by 6-8% earnings growth and 12-14% dividend growth which exceeds the industry average. NEE is also considered one of the premier renewable developers in the industry.

**Upside case** — **USD 138.00**

We assume in this scenario that NEE's core earnings trade at a 15% premium to the regulated utility group on the strength of its growth. We do not include incremental value from NEE's GP stake in NEP, so further upside potential is possible as that value becomes evident.

**Downside case** — **USD 108.00**

Our downside case applies an industry average multiple to 2018E earnings and excludes value for the yieldco.

| Price (19-Jan-2017) | USD 27.64 |
|---|---|
| Price Target | USD 34.00 |

**Why Overweight?** The base case for NEP relies on a high quality, long-term contracted asset base, highly visible long-term growth in the range of 12-15% per year for the next several years, high level of operating competence by the management team, and continuing investor demand for yielding equity vehicles.

**Upside case** — USD 44.00

Our upside case applies applies a target yield of 3.5% to the 2017E annualized distribution rate of $1.54 for NEP. This gets us to our $44 upside case.

**Downside case** — USD 24.00

Our downside case assumes that, despite the characteristics we describe in our base case, NEP's yield widens. At 200bps wide of our base case - or a 6.5% yield - that implies downside to $24.

|---|---|
| **Price (19-Jan-2017)** | **USD 15.56** |
| **Price Target** | **USD 18.00** |

**Why Overweight?** We like NRG for 1) diversified business mix; 2) leverage to higher PJM capacity prices; 3) limited recourse leverage; and 4) solid retail franchise protecting gross margins in lower power environments.

**Upside case** — **USD 25.00**

Includes the ringfenced GenOn subsidiary in the valuation and expands spark and dark spreads by $2/MWh.

**Downside case** — **USD 11.00**

Assumes 1x multiple discount and closes several plants in a $2.50/MMBtu perpetual natural gas price scenario, which reduces Open EBITDA by approximately $275 million.

**Why Equal Weight?** We rate OGE EW for its combination of a well run utility with below average rate base growth and above average dividend growth. The uncertainty associated with midstream markets provides an overhang based on the ownership stake in ENBL.

**Upside case** — USD 39.00

Our upside case factors in a 5% utility P/E premium based on 2018 utility EPS combined with ENBL valued at $9/share for OGE and a $1 adder of GP value of ENBL.

**Downside case** — USD 25.00

Our downside case factors in a 15% discount to the group average at the utility, for regulatory risk and uncertainty; and $1.50 downside case for ENBL associated with a sale of the units in the $4-$5/unit range.

| | |
|---|---|
| **Price (19-Jan-2017)** | **USD 33.45** |
| **Price Target** | **USD 33.00** |

**Why Equal Weight?** We see above average earnings growth potential into 2019 as a result of the rate cases and several projects moving into rate base.

**Upside case** — **USD 34.00**

Our upside case reflects an 8% premium for PNM driven by favorable rate case outcomes and continued high takeout premiums paid in the industry.

**Downside case** — **USD 28.00**

Our downside case assumes that growth proceeds at a slower pace and the regulatory and/or economic landscape in NM does not improve. PNM could trade down to a 10% discount in this environment.

|---|---|
| Price (19-Jan-2017) | USD 43.68 |
| Price Target | USD 48.00 |

**Why Equal Weight?** Three positives for PEG are: 1) Ability to operate in the New Jersey regulatory environment and grow regulated earnings attractively; 2) PSEG Power assets in the relatively tight PJM East zone called PS North; and 3) a strong balance sheet.

**Upside case** USD 51.00

Our upside case reflects an incremental $1B in ratebase and 50 cent increase in gas prices. We include $37 for PSE&G using a 11% premium to the Regulated Utility average applied to $2.11, $12 for PSEG Power at 7.6x $1.2B in Open EBITDA less $3.2B in debt and $2 at Enterprises.

**Downside case** USD 41.00

Our downside case is $1B less ratebase and 50 cent decrease in gas prices. We include $31 for PSE&G using a Regulated Utility average applied to $1.97, $8 for PSEG Power at 7.4x $0.8B in Open EBITDA less $3.2B in debt and $1 at Enterprises.

| | |
|---|---|
| **Price (19-Jan-2017)** | **USD 43.58** |
| **Price Target** | **USD 41.00** |

**Why Underweight?** We rate POR as Underweight. Even though we expect the company to raise the dividend at 5-7% near term, cap-ex spending is dropping over the next few years and is dependent on the IRP to remain above D&A levels. We value POR at a 6% discount to the group average multiple to reflect the low rate base growth.

**Upside case** — **USD 47.00**

Our upside case reflects an 5% premium to the utility group average multiple, applied to higher earnings driven by additional rate base growth and higher sales growth

**Downside case** — **USD 37.00**

Our downside case reflects a 10% discount to the regulated group, applied to lower earnings driven by lower sales growth and issues with Carty and/or regulatory lag.

**Upside/Downside scenarios**

**Why Equal Weight?** We like PPL's fully regulated busines model and 4.4% dividend yield. PPL represents attractive value and a 9-10% total return comprised of 5% EPS growth and 4% DPS growth.

**Upside case** USD 39.00

Our upside case reflects an average '19 Regulated Utility P/E multiple applied to $2.42 of EPS net of hedges.

**Downside case** USD 34.00

Our downside case is a 5% discount to the '19 Regulated Utility P/E multiple and a downside currency translation of 1.15x applied to Open EPS of $2.27 plus $0.21/share for the NPV of hedges at a 3% discount rate.

| Price (19-Jan-2017) | USD 102.08 |
|---|---|
| Price Target | USD 108.00 |

**Why Overweight?** We believe SRE's conglomerate utility model has several valuable assets and deserves a premium to the industry average overall. We value the majority of SRE's regulated and contracted earnings streams based on the regulated industry average multiple. We also include $20/share of value for the Cameron LNG facility and $17/sh for incremental IENOVA value.

**Upside case** USD 120.00

Our upside case increases the premium for the core business growth to 10% and assumes execution of the $7-8B development opportunities, which could add $10 per share of value.

**Downside case** USD 92.00

Our downside case assumes the CA utilities trade at an average group multiple, applies a discounted MLP multiple to Cameron trains 1-3 earnings, and gives no credit for future development opportunties.

| | |
|---|---|
| **Price (19-Jan-2017)** | **USD 79.73** |
| **Price Target** | **USD 86.00** |

**Why Overweight?** Our OW recommendation is based on stronger than peer group expected growth and potential upside from synergies in the Progressive Waste Solutions transaction.

**Upside case** — **USD 93.00**

Our upside case is based on a 10% premium to the 3-year peak EV/EBITDA multiple of 11.6x on 2018E estimates of the combined entity, driven by faster than expected synergies and accretive asset swaps.

**Downside case** — **USD 53.00**

Our downside case is based on a 10% discount to the 3-year trough EV/EBITDA multiple of 9.1x on 2018E estimates and would be driven by higher than expected integration costs and dilutive asset swaps.

## Valuation Methodology and Risks

### North America Alternative Energy & Environmental Services

**Waste Connections (WCN)**

**Valuation Methodology:** Our $86 TP is based on 12x 2018E EV/EBITDA for the combined entity. WCN is currently trading at 12.9x 12-month forward EV/EBITDA. We see potential for medium-term upside in growth if WCN is able to quickly execute accretive asset swaps.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Further weakness in recycled commodity prices, lower U.S. housing construction in WCN's core markets and lower E&P activities are the key macroeconomic risks in 2016, in our view. WCN has the highest expected growth in the industry. Any missteps in execution could drive multiple contraction and downside risk to our estimates. WCN also has the highest exposure to E&P waste disposal and while we expect this business to recover from its current lows, further drops in domestic E&P drilling would impact WCN relatively more than peers. Given a successful merger in 2Q16, key risks to our recommendation are a slowing Canadian economy and weaker CAD/USD FX rate, as well as potentially slower revenue growth due to the larger scale of the combined entity.

**Waste Connections (WCN CT / WCN.TO)**

**Valuation Methodology:** Our C$120 price target for WCN.TO Canadian listed share is based on a conversion of our price target for WCN U.S. listed shares using a 0.72 USD per CAD exchange rate, Barclays' forecast 2H17 average exchange rate. Our $86 TP is based on 12x 2018E EV/EBITDA for the combined entity. WCN is currently trading at 12.9x 12-month forward EV/EBITDA. We see potential for medium-term upside in growth if WCN is able to quickly execute accretive asset swaps.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Further weakness in recycled commodity prices, lower U.S. housing construction in WCN's core markets and lower E&P activities are the key macroeconomic risks in 2016, in our view. WCN has the highest expected growth in the industry. Any missteps in execution could drive multiple contraction and downside risk to our estimates. WCN also has the highest exposure to E&P waste disposal and while we expect this business to recover from its current lows, further drops in domestic E&P drilling would impact WCN relatively more than peers. Given the successful merger in 2Q16, key risks to our recommendation for Canadian dollar investors is a stronger CAD/USD FX rate given over three-quarters of recurring cash flow is expected to be generated in the US.

### North America Power & Utilities

**AES Corp. (AES)**

**Valuation Methodology:** Our $12 price target reflects the average of: $16 for P/E, which is a 20% discount to the 15.1x 2019 Regulated Utility average applied to $1.35, and $8 for a sum of the parts, which includes $8 for market values of the publicly traded Lat Am subsidiaries and Regulated U.S. utilities at 15.1x 2018 net income and -$0.15/share for 6.7x $954M in proportional EBITDA for unlisted subsidiaries and parent expenses less $6.4B in net debt and NOLs.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** As a global power company and electric utility, AES is exposed to merchant power risk, country risk, currency risk (particularly in South America), regulatory risk, and counterparty risk.

**Alliant Energy (LNT)**

**Valuation Methodology:** Our $38 price target is premised on a 9.85% premium to the 2019 regulated group average P/E multiple of 15.1x applied to our 2019 earnings estimate of $2.28.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include utility regulation; execution of its renewable generation expansion program; commodity prices; and interest rates.

**Ameren Corp. (AEE)**

**Valuation Methodology:** Our $56 target is a 9% premium to the 15.7x Regulated Utility group including -1% for exposure to tax changes applied to our $3.25 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the Ameren outlook are interest rates, regulation (Missouri, Illinois and the Federal Energy Regulatory Commission), outlook for Missouri legislation and the capital markets.

**American States Water Company (AWR)**

**Valuation Methodology:** Our $43 price target is premised upon the 2019 water group average multiple of 22.2x applied to our 2019 estimate of $1.93.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory issues resulting in lower ability to spend capital or a lower ROE, ability to obtain additional military contracts and perform on the current contracts are all risks.

**American Water Works (AWK)**

**Valuation Methodology:** Our $86 price target is derived from applying a 10% high-quality premium to a water group average of 22.2x P/E multiple to our $3.51 2019 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to AWK include an inability to achieve tighter cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential.

**Aqua America (WTR)**

**Valuation Methodology:** Our price target is based on applying a 5% discount the water group average 2019 P/E multiple of 22.2x to our 2019 EPS estimate of $1.55.

## Valuation Methodology and Risks

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to WTR include a potential acquisition of a gas ldc or non water utility, an inability to maintain cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential, and potential tax reform.

### California Water Service Group (CWT)

**Valuation Methodology:** Our $29 price target is premised upon applying the 2019 water group average multiple of 22.2x to our 2018 estimate of $1.32.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Main risks are regulatory given the significant impact the outcome and timing of the California general rate case can have. Also the California drought and associated recovery has impacted results in the past several years. Interest rates impact commission granted return on equity levels as well as impacting the rate paid on short term debt. National policy such as bonus depreciation and EPA actions will also impact spending levels and financing for the utility.

### Calpine Corp. (CPN)

**Valuation Methodology:** Our $18 price target is premised upon the mid-cycle multiple of 7.6x our 2018E Open EBITDA of $1.901 billion, net debt of $10.7 billion and an NPV of NOLs of $2.6 billion on 359 million shares outstanding.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks for Calpine are the higher reserve margins, recession, wholesale market regulatory risk; risk of environmental mandates, and the gas price.

### Connecticut Water Service Inc. (CTWS)

**Valuation Methodology:** Our $53 price target is premised upon applying the 2018 water group average PE multiple of 22.2x to our 2019 estimate of $2.40.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory risk are the main issues even with positive regulatory mechanisms in both CT and ME, the eventual true up or consideration surrounding repair tax flow through accounting could cause a potential larger than expected rate increase to customers limiting capital recovery in that year.

### Consolidated Edison (ED)

**Valuation Methodology:** Our $74 price target is a 6% premium to the group including +0.8% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.1x and our $4.64 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include rating agency actions, regulatory risk, interest rates, and access to the capital markets.

### DTE Energy (DTE)

**Valuation Methodology:** Our $106 price target is a 12% premium to the group including +1.5% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.7x and our $6.07 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include wholesale commodity prices, generation development market conditions, the outcome of regulatory proceedings, rating agency actions, interest rates, IRS tax regulations, the outlook for energy technology, and access to the capital markets.

### Duke Energy (DUK)

**Valuation Methodology:** We believe DUK is worth $78/share, which is based on applying a 5% premium to the 15.1x industry average P/E on our 2019E earnings of $5.12. Our PT also reflects a 4.4% discount for potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to regulated utilities, and DUK specifically, include weakening demand, higher than expected inflationary pressures, interest rates, regulatory lag and greater scrutiny from regulators and politicians around investment and operating decisions. Lingering political effects and regulatory recovery of the coal ash spill in NC remains an outstanding risk specific to DUK. There is also uncertainty with regard to potential tax reform.

### Dynegy Inc. (DYN)

**Valuation Methodology:** Our $14 price target is premised upon closing the ENGIE transaction, a 7.1x EV/EBITDA mid-cycle multiple, and our post-close 2019E EBITDA of $1.543 billion net of debt of $8.521 billion, environmental capex of $0.5 billion, and a NPV of NOLs of $0.3 billion. We use shares outstanding of 151.08 million.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Dynegy Inc. is an independent power company with a 50% natural gas 50% coal fired fleet diversified across MISO, PJM, New England, and New York. Risks to performance include natural gas, coal, and power prices, as well as annually set capacity prices in PJM and MISO. Risks to our valuation also include the ENGIE asset acquisition not closing as expected.

### Edison International (EIX)

**Valuation Methodology:** Our $77 price target is a 4% premium to the group including -0.5% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.7x and our $4.70 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include wholesale commodity prices, generation development market conditions, the outcome of regulatory proceedings, rating agency actions, interest rates, and access to the capital markets.

### Entergy Corp. (ETR)

**Valuation Methodology:** Our $73 price target is derived by applying the industry average multiple of 15.1x to our 2019E of $5.12 for UP&O. Our

## Valuation Methodology and Risks

price target also reflects a 5.6% discount for potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** EWC-related risks include: negative developments related to all operating and closed nuclear facilities, declining forward price curves, and unscheduled non-regulated plant outages. Utility-related risks include: regulatory lag, poor rate case outcomes, and ANO-related remediation expenses. There is also uncertainty regarding potential tax reform.

**Exelon Corp. (EXC)**

**Valuation Methodology:** Our $40 price target is premised upon a 2019 group average multiple of 15.1x applied to the utility net parent earnings of $1.81 resulting in $28 of utility value. Exgen is valued at 6.5x 2018 EBTIDA netted against debt resulting in $12 of value for Exgen, The combined value is $40.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** The major risks for the utility are regulatory outcomes given the multiple regulatory districts combines with the expectation of reducing regulatory lag. For Exgen the major risks are commodity price, supply rationalization or lack thereof and unplanned outages.

**FirstEnergy Corp. (FE)**

**Valuation Methodology:** Our $34 price target is a 9% discount to the group including -4.0% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.1x and our $2.68 EPS estimate for Utility net of parent EPS.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks are an interruption in the delevering strategy from failure to close/announce asset sales, nuclear plant performance, interest rates, and the economy.

**Great Plains Energy Inc. (GXP)**

**Valuation Methodology:** Our $27 price target is an average of $29 for a 9% discount (including 4% for tax policy) to the 2019 Regulated Utility average P/E multiple of 15.6x applied to $2.04 in merged EPS and $26 for a 5% discount to the 2019 Regulated Utility average P/E multiple applied to $1.88 in 2019 EPS post a potential broken deal.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include the outcome of regulatory proceedings, construction risk, rating agency actions, interest rates, and access to the capital markets.

**Hawaiian Electric Inds (HE)**

**Valuation Methodology:** Our $27 PT reflects a 5% discount to the Regulated Utility average P/E of 15.7x our 2019E utility earnings of $1.32, plus a 1.5% premium to 14.4x bank earnings of $0.50.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** HE has regulatory and political risk moving forward on a stand alone basis. Executing on the legislated goal of 100% renewable energy by 2045 also carries execution risk. HE has a robust capital expenditure plan to meet the state targets, but will require PUC support to successfully execute. Ultimately the dividend could be at risk in a more extreme scenario where HE's margins come under increased pressure or there is customer erosion. There is also uncertainty regarding potential tax reform.

**NextEra Energy (NEE)**

**Valuation Methodology:** Our price target of $133 is based on applying a 10% premium to the regulated utility multiple of 15.1x to our 2019 EPS estimate of $7.46. We also assign a 1.25% premium to reflect opportunity related to potential tax reform. In addition, we add $7.50/share value for NEE's pro rata ownership of NEP.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** NextEra Energy Resources has merchant exposure to volatile gas and power prices, and risks associated with expansion in the size of its wind asset base. In addition, volatility around fuel prices and high levels of capital spending at its utility present regulatory risk. There is also uncertainty regarding potential tax reform.

**NextEra Energy Partners, LP. (NEP)**

**Valuation Methodology:** We value NEP at $34/share on the basis of the 2017E annualized LP distribution rate of $1.54 and a yield of 4.5%. The base case for NEP relies on a high quality, long-term contracted asset base, highly visible long-term growth rate in the range of 12-15% per year for the next several years, high level of operating competence by the management team, and continuing investor demand for yielding equity vehicles.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** The risks to the business model and our thesis are diminished investor appetite for yielding equities; rising interest rates, and/or fluctuating wind resource impairs short-term cash generation abilities which could create problems funding and growing the distributions; operational issues surrounding the wind and solar assets; and the elimination of production tax credits as a result of political maneuvering.

**NiSource, Inc. (NI)**

**Valuation Methodology:** Our $23 price target is a 15% premium to the group including -0.6% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.1x and our $1.33 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks include adverse regulatory outcomes, lower sales growth, higher cost of capital, and earlier than expected equity needs.

**NRG Energy (NRG)**

**Valuation Methodology:** Our $18 price target is premised upon a half turn discount to the mid-cycle multiple of 7.6x our recourse basis '18E Open EBITDA of $1.7 billion, $1.5 billion for NYLD at market value, $1.1 billion in NPV of NOLs, $0.2 billion in environmental capex, and $8.2 billion in recourse only net debt.

## Valuation Methodology and Risks

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks include commodity prices, regulation, capital markets, interest rates and environmental policy.

**OGE Energy Corp. (OGE)**

**Valuation Methodology:** Our price target is $36.  This comprises '19E EPS of $1.75 at OG&E (utility), using a 2.9% discount to the 15.7x utility group multiple equating to $28, plus $9 for OGE's 26.3% ownership of Enable Midstream Partners LP (ENBL), marked to current price.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Federal (FERC, EPA) and state (Oklahoma, Arkansas) regulation, costs of compliance with environmental laws and regulations,  Operational risks associated with OGE's businesses, economic conditions, climate change, cyber security risks and increased reliance on automated processes.  Enable share price may be impacted by volumes or commodity prices on their system as well as changes to the distribution.

**PG&E Corp. (PCG)**

**Valuation Methodology:** Our $63 price target is a 4% premium to the group including a modest negative exposure to tax changes applied to the 2019 Regulated Utility P/E of 15.1x and our $4.02 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are California and Federal regulation, rating agency actions, interest rates and access to capital markets.

**Pinnacle West Capital (PNW)**

**Valuation Methodology:** Our $77 price target is premised on a 4.9% premium to the 2019 group average P/E of 15.6x applied to our 2019 estimate of $4.71

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are Arizona state and Federal (FERC and NRC) regulation.  Demand and rooftop solar can impact earnings significantly under current regulatory construct.

**PNM Resources (PNM)**

**Valuation Methodology:** Our price target of $33 is premised upon a 5% premium to the industry average multiple of 15.1x our 2019E EPS of $2.13. We also assign a 1.9% discount to reflect uncertainty associated with potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are environmental regulation, regulatory environment in Texas and New Mexico, weather, and the New Mexico and Texas economies. PNM's anticipated future rate case in NM also presents risk. There is also uncertainty with regard to potential tax reform.

**Portland General Electric Co. (POR)**

**Valuation Methodology:** Our price target reflects  the 2019 group average P/E multiple of 15.7x applied to our 2019 eps estimate of $2.61.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** The main risks to our valuation are the commercial operation of the Carty Generating Station, regulatory filings and outcomes, as well as economic issues impacting demand growth and inflation.  In the event that demand growth accelerates given the local Portland economy, our estimates would prove to be conservative.

**PPL Corporation (PPL)**

**Valuation Methodology:** Our $37 price target is a 2019 Regulated Utility average P/E of 15.7x applied to $2.35 in Open EPS reflecting a 1.24x $/British Pound exchange rate and $0.21/share for the NPV of hedges.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include the outcome of regulatory proceedings, rating agency actions, foreign currency translation, interest rates, and access to the capital markets.

**Public Service Enterprise Gp (PEG)**

**Valuation Methodology:** Our $48 target reflects a sum of the parts including $37 for PSE&G at a 11% premium including +2% for exposure to tax reform applied to the 2019 Regulated Utility average of 15.7x and our $2.11E, $10 for PSEG Power at 7.4x '18 Open EBITDA of $1.1B less $3.2B of net debt and $2 for Enterprises and other at a 2019 Regulated Utility average multiple of $0.12 EPS.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are wholesale power prices, New Jersey and federal utility regulation, and interest rates.

**SCANA Corp. (SCG)**

**Valuation Methodology:** Our current price target of $71 is premised upon our 2019 EPS estimate of $4.68E applied to the regulated group's 2019  P/E ratio of 15.1x.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Primary risk factors are construction risk associated with the V.C. Summer nuclear facilities, regulatory risk from frequent proceedings and rate fatigue in the company's service territory, financing risk from the frequent need to come to market for new equity, and economic risk connected to the South Carolina economy.

**Sempra Energy (SRE)**

**Valuation Methodology:** Our price target is premised upon a sum of the parts valuation, applying a 5% premium to the regulated utility group average multiple to our 2019 EPS estimates for the majority of SRE's regulated and contracted businesses, adding $20/share for trains 1-3 at Cameron, and $17/share for the value inherent in SRE's ownership interest in IEnova.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** SRE's long-term earnings growth is largely dependent on successful completion of Cameron trains 1-3. Construction delays present a risk to valuation. A portion of earnings are also exposed to international, political, and currency risk. Tail risk from the Aliso Canyon gas leak persists, as does ongoing regulatory risk in CA. There is also uncertainty with regard to potential tax reform.

## Valuation Methodology and Risks

| Southern Co. (SO) |
| --- |
| **Valuation Methodology:** Our current price target of $55 is based upon a 8.95% premium to the utility group average multiple of 15.1x applied to our 2018 estimate. |
| **Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory risks associated with closing the SNG pipeline venture with KMI, construction risk for Vogtle and Kemper, as well as standard regulatory risk associated with regulated assets. |
| **Westar Energy (WR)** |
| **Valuation Methodology:** Our $60 target reflects closing of the merger with Great Plains Energy. |
| **Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks include but are not limited to utility regulation by Kansas Corporation Commission and FERC Transmission Regulation. |

**Disclosure Legend:**

**A:** Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of the issuer in the previous 12 months.

## IMPORTANT DISCLOSURES CONTINUED

**B:** An employee or non-executive director of Barclays Bank PLC and/or an affiliate is a director of this issuer.

**CD:** Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by this issuer.

**CE:** Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by this issuer.

**D:** Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

**E:** Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer within the next 3 months.

**FA:** Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with US regulations.

**FB:** Barclays Bank PLC and/or an affiliate beneficially owns a long position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

**FC:** Barclays Bank PLC and/or an affiliate beneficially owns a short position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

**GD:** One of the analysts on the fundamental credit coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

**GE:** One of the analysts on the fundamental equity coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

**H:** This issuer beneficially owns more than 5% of any class of common equity securities of Barclays PLC.

**I:** Barclays Bank PLC and/or an affiliate is party to an agreement with this issuer for the provision of financial services to Barclays Bank PLC and/or an affiliate.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities of this issuer and/or in any related derivatives.

**K:** Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from this issuer within the past 12 months.

**L:** This issuer is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

**M:** This issuer is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

**N:** This issuer is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.

**O:** Not in use.

**P:** A partner, director or officer of Barclays Capital Canada Inc. has, during the preceding 12 months, provided services to the subject company for remuneration, other than normal course investment advisory or trade execution services.

**Q:** Barclays Bank PLC and/or an affiliate is a Corporate Broker to this issuer.

**R:** Barclays Capital Canada Inc. and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

**S:** This issuer is a Corporate Broker to Barclays PLC.

**T:** Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.

**U:** The equity securities of this Canadian issuer include subordinate voting restricted shares.

**V:** The equity securities of this Canadian issuer include non-voting restricted shares.

### Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

### Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

### Stock Rating

**Overweight** - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Equal Weight** - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

## IMPORTANT DISCLOSURES CONTINUED

**Underweight** - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Rating Suspended** - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

**Industry View**

**Positive** - industry coverage universe fundamentals/valuations are improving.

**Neutral** - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

**Negative** - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

| North America Alternative Energy & Environmental Services | | |
|---|---|---|
| 8point3 Energy Partners LP (CAFD) | Advanced Disposal Services, Inc. (ADSW) | Azure Power Global Ltd. (AZRE) |
| Canadian Solar Inc. (CSIQ) | Clean Harbors (CLH) | Covanta Holding Corp. (CVA) |
| First Solar Inc. (FSLR) | Hannon Armstrong Sustainable Infrastructure Capital, Inc (HASI) | Republic Services (RSG) |
| SolarEdge Technologies Inc. (SEDG) | SunPower Corp. (SPWR) | Sunrun Inc. (RUN) |

## IMPORTANT DISCLOSURES CONTINUED

**Guide to the Barclays Research Price Target:**

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

**Top Picks:**

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

**Explanation of other types of investment recommendations produced by Barclays Equity Research:**

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

**Disclosure of previous investment recommendations produced by Barclays Equity Research:**

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. **2017 Guidance Short vs. Consensus…** WTR provided 2017 EPS guidance of $1.34–1.39. This compares to our ingoing estimate of $1.41 and consensus of $1.39. The guidance reflects modest growth (below rate base growth of 6–7%) over the 2016 guidance range of $1.30–1.35. Management explained that overearnings in PA should cause earnings growth to lag rate base growth in 2017 and 2018; however, the company expects to file a rate case in 2018 for rates effective in 2019, which should true-up the regulatory lag.

**…but Acquisition Opportunities Abound.** Despite the slight disappointment in the guidance, it is apparent that management is invigorated by the prospects for future acquisitions of water and wastewater companies. WTR indicated that they are seeing an unprecedented level of deal activity, particularly in states where fair value legislation exists. In some case, WTR is even approaching potential muni targets with unsolicited offers. Management reiterated its sweet spot is targets with ~ 2,500–25,000 customers.

**Gas LDC Acquisitions are Not on the Front Burner.** Management also took the opportunity to temper market concerns that the company might stray from its core competency into gas LDCs. Management acknowledged that while gas is interesting because of the distribution pipe and customer profile similarities, management and the board are not looking for gas LDC acquisitions.

**Early Look at Tax Reform Appears Neutral to Negative.** WTR outlined four potential tax reform policy changes, the implications of which appear to be neutral (lower tax rate, excess deferred taxes) to negative (reduced repair tax deduction, accelerated depreciation) to earnings.

**Reducing '17/'18 estimates; PT revised to $33.** We are revising our '17 and '18 estimates to reflect the regulatory lag in PA. Our estimates for 2016/17/18/19 are $1.33, $1.38, $1.46, and $1.55 compared to our prior estimates of $1.33, $1.41, $1.49, and $1.59. Our PT is reduced to $1 to $33. The methodology applies a 5% discount to the average water P/E multiple (22.2x) to our 2019E ($1.55 new, $1.59 old).

| Price (17-Jan-2017) | USD 30.49 |
|---|---|
| Price Target | USD 33.00 |

**Why Equal Weight?** While we believe WTR is a well-run utility and appreciate the relatively high earned ROE, the uncertainty associated with overearning in two of their largest jurisdictions keeps us at an Equal Weight rating.

**Upside case** USD 40.00

If results improve at a faster rate than we expect or if the market-based opportunities develop at a faster pace, a 15% premium to the group average multiple would be warranted.

**Downside case** USD 26.00

If regulatory issues impact earnings negatively or cost pressures occur, the stock trading at a group average multiple would be a reasonable assumption.

**Upside/Downside scenarios**

**U:** The equity securities of this Canadian issuer include subordinate voting restricted shares.

**V:** The equity securities of this Canadian issuer include non-voting restricted shares.

**Risk Disclosure(s)**

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

**Guide to the Barclays Fundamental Equity Research Rating System:**

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

**Stock Rating**

**Overweight** - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Equal Weight** - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Underweight** - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Rating Suspended** - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

**Industry View**

**Positive** - industry coverage universe fundamentals/valuations are improving.

**Neutral** - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

**Negative** - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

**North America Power & Utilities**

| | | |
|---|---|---|
| AES Corp. (AES) | Alliant Energy (LNT) | Ameren Corp. (AEE) |
| American Electric Power (AEP) | American States Water Company (AWR) | American Water Works (AWK) |

**Distribution of Ratings:**

Barclays Equity Research has 1780 companies under coverage.

40% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 60% of companies with this rating are investment banking clients of the Firm; 77% of the issuers with this rating have received financial services from the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 49% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 40% of companies with this rating are investment banking clients of the Firm; 63% of the issuers with this rating have received financial services from the Firm.

**Guide to the Barclays Research Price Target:**

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

**Top Picks:**

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

**Explanation of other types of investment recommendations produced by Barclays Equity Research:**

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

**Disclosure of previous investment recommendations produced by Barclays Equity Research:**

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/ResearchInvestmentRecommendations*.

Historical stock prices and price targets may have been adjusted for stock splits and dividends.

*The rating for this security remained Equal Weight during the relevant period.

*Link to Barclays Live for interactive charting*

**CE:** Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by Aqua America.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by Aqua America and/or in any related derivatives.

**Valuation Methodology:** Our price target is based on applying a 5% discount the water group average 2019 P/E multiple of 22.2x to our 2019 EPS estimate of $1.55.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to WTR include a potential acquisition of a gas ldc or non water utility, an inability to maintain cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential, and potential tax reform.

## Aqua America

# Q1 on Track; No Change in Outlook

**Stock Rating/Industry View:** Overweight/Neutral
**Price Target:** USD 36.00
**Price (03-May-2017):** USD 32.72
**Potential Upside/Downside:** 10%
**Tickers:** WTR

### Q1 Results

Aqua America reported 1Q17 earnings of $0.28 compared to our estimate of $0.31 and consensus of $0.29. Earnings of $0.29 recorded in 1Q16 benefited from a one-time gain of approximately $0.01 related to the sale of North Carolina assets, somewhat skewing the year-over-year comparison. In the quarter, customer growth and revenue increases were offset by consumption declines. Tax repair benefits were a drag on earnings by approximately half a penny. WTR's exit from its market-based activities will create slightly negative quarterly comparisons for the next several quarters.

### Key Takeaways

Outlook: Management reiterated its 2017 guidance of $1.34–1.39. WTR is on track to invest approximately $450MM in new infrastructure assets in 2017, having invested approximately $95MM in 1Q17. The company also has four pending acquisitions that are expected to close by year-end 2017. These acquisitions should add 8,800 customers to WTR's system, accounting for roughly half of the targeted customer growth.

Our estimates are $1.38 in 2017, $1.46 in 2018, and $1.55 in 2019. Our Overweight rating and $36 price target reflects a 5% premium to the average multiple for water utilities based on our 2019 estimate. WTR's geographic footprint and industry leadership

BARCLAYS

North America Power & Utilities

# August Review/September Preview

INDUSTRY UPDATE

North America Power & Utilities
NEUTRAL
Unchanged

For a full list of our ratings, price target and earnings changes in this report, please see table on page 2.

**This report begins a multi-part look at efficient electrification with a review of electric vehicles and indoor farming.** While we are not expecting revolutionary changes which would reignite the sales growth seen in prior decades, we do see electricity taking share of end use Btu consumption globally and in North America. From our point of view there are three drivers: 1) Electrification improves the environment: Electric emissions per Btu of output are lower across a wide spectrum of pollutants including CO2; 2) Cost savings: Several electric applications have experienced efficiency improvements and are at, or approaching, cost parity with primary fuel uses; and 3) Electricity is compatible with technological trends: Advances in networks favour the flexibility and interconnectedness of electric grids for productivity improvements. Please see full report *Mary Jane Gets a New Car;* 8/28/17.

**Combined we expect EV's and indoor farming could add 12 GW of demand nationally by 2025. While not a game changer, anything that contributes to growth in electricity which has experienced stagnant sales for the last decade would be welcomed. Companies in areas with the largest sales increase that are not decoupled are: EXC, XEL, ES, BRKa, PNW, and PEG.**

**Consistent with Barclays Auto & Auto Parts research forecast for EVs and plug-in hybrids of 8M vehicles in 2025 we forecast 21 MMWhr or 9.6 GW of demand.** We expect California maintains the most share and utilities there have proposed $1B for charging infrastructure. Our estimates for the capital cost for charging installations nationwide are $13-$16B by 2025. At the extreme, should the entire US car fleet transition to electric, infrastructure costs could approach $186-$189B.

**On the indoor farming side, we focused on cannabis as a case study for the implications of growth in the 'locally grown' produce market.** Using Colorado's increase in electricity demand for Marijuana production, we see the potential for 13 MMwhrs or 2GW of need to fuel demand from 16 states that have or could adopt recreational cannabis. Extrapolating this to the 50% of the 'locally grown' produce market implies another 31 MMwhrs or another 5GW of load.

**Potential drivers of new solar and wind**: Of these two drivers of electrification, we forecast indoor agriculture to drive the majority of demand with 7GW of solar and 3GW of wind added through 2025. We forecast EV charging to be a smaller contributor, but still material at approximately 3GW of new wind capacity and 2GW of new solar capacity through 2025.

**Summary of our Ratings, Price Targets and Earnings Changes in this Report (all changes are shown in bold)**

| Company | Rating | | Price | Price Target | | | EPS FY1 (E) | | | EPS FY2 (E) | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Old | New | 25-Aug-17 | Old | New | %Chg | Old | New | %Chg | Old | New | %Chg |
| **North America Power & Utilities** | Neu | Neu | | | | | | | | | | |

Source: Barclays Research. Share prices and target prices are shown in the primary listing currency and EPS estimates are shown in the reporting currency.
FY1(E): Current fiscal year estimates by Barclays Research. FY2(E): Next fiscal year estimates by Barclays Research.
Stock Rating: OW: Overweight; EW: Equal Weight; UW: Underweight; RS: Rating Suspended
Industry View: Pos: Positive; Neu: Neutral; Neg: Negative

## Upcoming Events

- Adjudicative hearings scheduled at NH Site Evaluation Committee for Northern Pass Transmission – August 29–31, 2017 and September 11–13, 15, 18, 19, 21, 22, 25, 26, 28, 29, 2017
- Results of joint report from DOE and Dept of Homeland Security that assesses risk to the power system associated with a cyber incident – anytime
- Senate Energy and Natural Resources Committee scheduled to hold a nominations hearing for FERC nominees Kevin McIntyre and Richard Glick – September 7, 2017
- FERC to hold first open meeting regaining a quorum – September 20, 2017
- Anticipated deadline for cooperating agencies to complete their respective permit authorizations for FERC to issue certification for Mountain Valley Pipeline – late September 2017

## What Happened Last Month

From July 25 through August 24, 2017 the XLU (+4.7%) outperformed the S&P500 by 6%. Dark/Quark (+5.1%), Spark (+4.8%), Integrated (+4.8%), Top Growth (+4.5%), and Infrastructure (+4.3%) were the top 5 performing subsectors. Power Tech (-2.8%), Water (-1.4%), Renewable (-0.8%), Waste (-0.3%), Mid Cap (+0.9%) were the bottom 5 performing subsectors. Regulated Utilities rose 2.8% and outperformed the S&P 500 by 4.3%.

## Key regulatory updates and other key dates

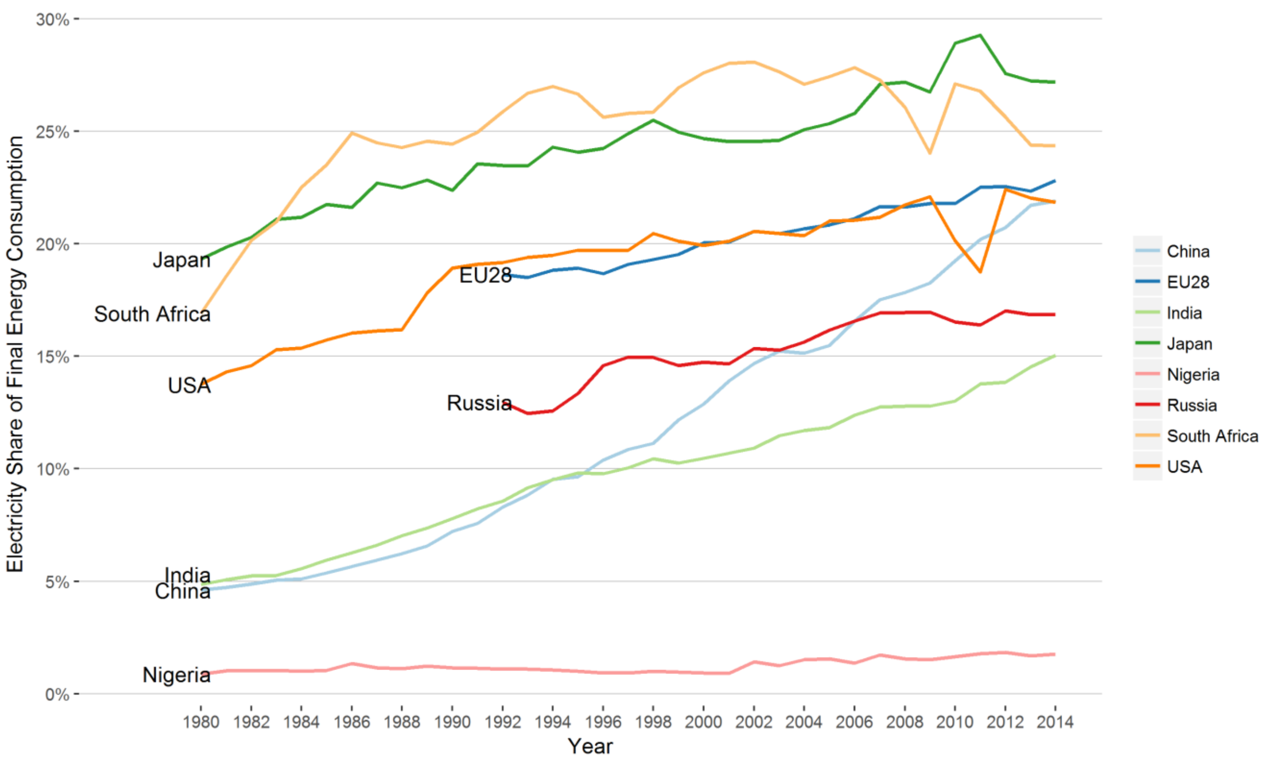
- AES Corp. DP&L Rate settlement: Potential ruling – *16-0395*
- American Electric Power – Potential settlement in Ohio electric security plan proceeding *16-1852*.
- Centerpoint Energy – The company could reach a conclusion in its review of option for its 54.1% stake in ENBL. On the Q2'17 conference call management indicated that they were working to identify a swap candidate.
- CMS Energy analyst conference – September 25. Also final ruling on Palisades securitization and decommissioning (*U-18250*).
- DTE Energy. Potential FERC notice to proceed on 50% owned NEXUS project. (*CP16-22*). Staff and Intervenor testimony due in electric general rate case (*U-18255*) August 29, 2017.
- Edison International – Potential update on unregulated business strategy and financial guidance implications. Also ALJ decision on San Onofre Order Initiating Investigation (*I12-10-013*).
- Emera/Eversource Energy/National Grid. FERC staff testimony in New England ROE complaint #4 (EL16-64) – September 18, 2017
- Eversource Energy. Staff and intervenor testimony for Northern Pass lease (DE15-464) – September 14, 2017
- Hawaiian Electric Industries. Consumer Advocate testimony due in Hawaiian Electric Company rate case (2016-0328) – September 22, 2017
- PG&E Corp. – Expects to file GT&S rate case.
- PNM Resources. PRC to hold public workshop on rulemaking on utility ratemaking policies (17-00046-UT) – September 14, 2017
- PPL Corporation – Preliminary filing in review of U.K.'s RIIO-ED rate framework.

## Mary Jane Gets a New Car

In this piece, we begin a multi-part look at efficient electrification  While, we are not expecting revolutionary change which reignites the sales growth seen in prior decades, we do see electricity taking share of end use Btu consumption globally and in North America. There are three drivers for our point of view:  1) Electrification improves the environment: Electric emissions per Btu of output are lower across a wide spectrum of pollutants including CO2; 2) Cost savings: Several electric applications have experienced efficiency improvements and are at, or approaching, cost parity with primary fuel uses; and 3) Electricity is compatible with technological trends: Advances in networks favour the flexibility and interconnectedness of electric grids for productivity improvements.

FIGURE 3

**Electrification – Everybody's Doing It**



Source: National Renewable Energy Laboratory

These trends have already resulted in share gains globally for electricity.  We believe a valid case can be made for an acceleration of this trend due to the combination of drivers noted above.  In several studies related to deep decarbonisation, models predict electricity could rise to a 50% share of end use Btu consumption by 2050 from approximately 20% today.

FIGURE 4

**Deep De-carbonization Waterfall**

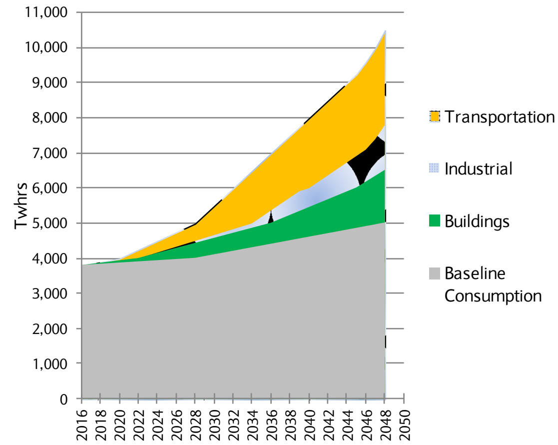
FIGURE 5

**Electrification Could Accelerate Sales Growth**



Source: NREL (Steinberg, et al., 2017)

What is in this report? In this report we examine models for 2 near-term electrification opportunities – Electric Vehicles and Indoor Farming.

## Electric Vehicles

There have been nearly 650 thousand electric vehicles and plug-in hybrids (PHEV) sold in the United States through June 2017. This compares to a total base of 263.6 million cars and light trucks on the road in 2015 (Source: Statista and the U.S. Department of Transportation). At only 0.3% share, EV's and PHEV's have significant upside. The drivers for sales growth are subsidies, costs travel range, and overall greater consumer acceptance of the technology. We expect that growth accelerates into and through the 2020s. Meaningful improvements in battery technology addressing cost and travel range are happening. Additionally, there are a number of federal and state led policies that have created incentive structures to grow the pool of EV's over time. We expect that the main drivers to reach cost parity with internal combustion engines will be reductions in the cell and pack cost. Please see "*European Autos: Future Powertrain Conference: Tesla's Competition hots up as the ICE melts*" (7/12/17)

(a) Phaseout begins following sales of 200,000 qualifying vehicles. The credit declines to 50% in the 2 quarters following the start of the phase-out and to 25% in the following 2 quarters prior to phase-out.
(b) Based on income eligibility
(c) First 250

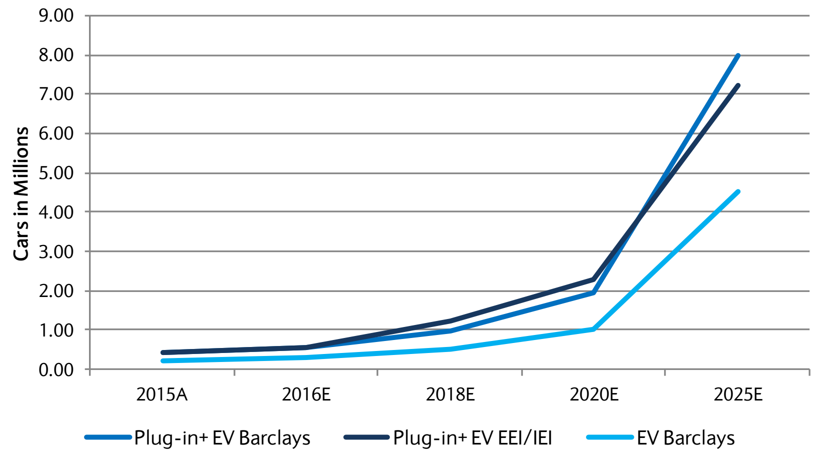
Source: Internal Revenue Service, Tesla.com, NESCAUM, Fleetcarma.com, Barclays Research

For structure of our analysis, we will: 1) discuss our model for EV and PHEV deployment; 2) Analyze what this means for incremental electricity usage and where; and 3) review the charging infrastructure needed to support EV growth and its costs.

## Our EV model

FIGURE 8

**Electric Vehicle Forecasts – United States**



Source: Edison Electric Institute, IEI, Barclays Research, EIA

The most significant EV policy initiative creating demand is in California and that is SB 350. There have been other significant initiatives but without the same level of commitment. In October 2013 8 states signed an MOU to have 3.3 M zero emission vehicles on the road by 2025 CA, CT, MD, MA, NY, OR, RI and VT. It is worth noting that plug-in hybrid electric vehicles can fulfil the mandate as well. At year-end 2016 we estimate that California had about a 46% share of the nation's electric vehicles which is far ahead of other states' based on 2016 sales data. Over time, we expect CA's share to drop relative to the rest of the country.

Market expectations are that growth accelerates in the 2020s for both plug-in hybrids and electric vehicles. Barclays expects sales of these cars to go from 1% of the market in 2018 to 7% for electric vehicles and 4% for plug-in hybrids by 2025. Plug-in hybrids are expected to be about 45% of electric vehicles and hybrids on the road in 2025.

## How Much Electricity Will EV's Consume and Where?

Fortunately, there is significant usage data for the US auto fleet. Assuming that EV and PHEV's are driven in a similar fashion, we can easily predict the electricity consumption likely given our sales forecast. Figure 11 below shows the demand formula per EV and PHEV.

FIGURE 11

**EV Charging Math at Current Fuel Prices**

**Electric Vehicle**

Electricity=10,000 miles/((240 miles range)/(70 kwhr))

Electricity=10,000 miles / (3.4 miles/kwhr)

Electricity=2,941 kwhrs

Electricity=2.94 Mwhrs per year * $100.28/MWhr average price

Electricity = $295/year

**Plug-in Hybrid Vehicle**

Assume 70% of Miles are Electric

Electricity=7,000 miles /(53 miles range/(20 kwhr)

Electricity=7,000 miles / (2.65 miles/kwhr)

Electricity=2,641 kwhrs

Electricity=2.64 Mwhrs per year * $100.28/MWhr average price

Electricity = $264/year

Assume 30% of Miles are Gas

Gas = 3,000 miles / 40 miles per gallon

Gas=75 gallons * $2.34/gallon=$175/year

Gas = $175/year

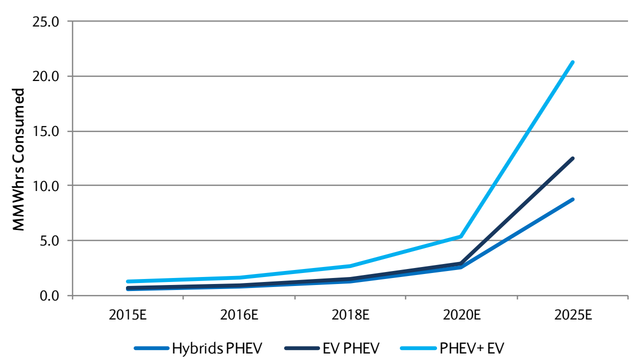
Total Cost per Year = $264 + $175 = $439

*Note: Volt Gen 2, Ford Fusion and Prius used to determine PHEV average battery and range and Bolt, Leaf and Model 3 were considered for pure electric.*

Source: Barclays Research, Department of Energy

FIGURE 12

**Electric Vehicle and Hybrid Mwhr Use Forecasts**



Source: Barclays Research, EIA

From a sales standpoint we expect that the combined use of hybrids and electric vehicles could total 21 twhrs in 2025 (0.54% of total U.S. retail sales) and cost $3.5B at a charging price of $164/Mwh in 2025. To derive this cost we used a base of the average retail price, state retail sales growth at EIA forecasted levels and grew the price by our nationally forecasted increases through 2025. The drivers for the price increases include cap-ex spending and fuel (where we use forwards and hold static starting in 2018).

FIGURE 13

**EV Electricity Usage Forecast – Units are Millions (except for miles)**

| | 2015E | 2016E | 2018E | 2020E | 2025E |
|---|---|---|---|---|---|
| Cumlative PEVs+EVs in Use | 0.41 | 0.56 | 0.95 | 1.95 | 8.00 |
| Cumlative PEVs in Use | 0.19 | 0.27 | 0.46 | 0.96 | 3.50 |
| Cumlative EVs in Use | 0.21 | 0.29 | 0.49 | 0.99 | 4.50 |
| | | | | | |
| Miles Per year | 10,000 | 10,000 | 10,250 | 10,750 | 12,000 |
| PEV Miles/kwhr | 2.49 | 2.57 | 2.73 | 2.90 | 3.36 |
| EV Miles/Kwhr | 3.20 | 3.30 | 3.50 | 3.72 | 4.31 |
| PEV electric % | 70% | 70% | 70% | 70% | 70% |
| | | | | | |
| Electricity Consumed PEVs | 0.55 | 0.72 | 1.21 | 2.48 | 8.76 |
| Electricity Consumed EVs | 0.67 | 0.89 | 1.45 | 2.87 | 12.54 |
| Total | 1.22 | 1.62 | 2.66 | 5.35 | 21.30 |

Source: Barclays Research, EIA, WardsAuto

Of the total we expect electric vehicles will consume 13 twhrs including efficiency improvements of 3% per year. Hybrids consume less electricity but will be a meaningful contributor at 9 twhrs. In the table below we highlight which states are likely to have the biggest sales impact. We also highlight the Utilities we expect to be most impacted. We also point out whether those companies have decoupled revenue streams or not.

FIGURE 14

**EVs and Retail Sales Implications**

| | Retail Mwhr Sales MM | % Electric Sales | | | | |
|---|---|---|---|---|---|---|
| | 2016 | 2016 | 2020 | 2025 | Ticker | Decoupled? |

| MD | 61.33 | 0.06% | 0.19% | 1.16% | EXC | No |
| NJ | 74.77 | 0.05% | 0.18% | 1.07% | PEG, FE, EXC | No |
| WI | 69.47 | 0.04% | 0.13% | 0.76% | LNT, WEC | No |
| NY | 146.68 | 0.03% | 0.12% | 0.74% | ED, NGG | Yes |
| NM | 23.06 | 0.04% | 0.12% | 0.71% | PNM, XEL | No |
| AZ | 78.05 | 0.03% | 0.10% | 0.57% | PNW | No |

Source: Edison Electric Institute, IEI, Electric Power Research Institute (EPRI), National Renewable Energy Laboratory (NREL), SNL, Barclays Research

The companies with the most sales in areas that are not decoupled are Overweight rated EMA-T and EXC and also Equal Weight rated XEL.

## How Will EV's Be Charged and How Much Infrastructure Is Needed?

We expect customers will charge their vehicles in different ways than they do today. Due to lengthy charging times compared to gasoline fuelling, we don't anticipate a filling station model. Rather, depending on local rate structures, we believe a majority of charging will take place at home or work. Rapid charging stations are likely to be focussed on the highway system for distance travel and in cities where space and time is dearer.

There are three levels of charger service. Level 1, mainly for the home user who has ample charging time; Level 2 for home and office; and Level 3 for fast charging in filling stations and cities. The table below shows cost and charging time estimates for each level.

FIGURE 15

**EV Charging Station Characteristics**

| | | Equipment Cost | | |
|---|---|---|---|---|
| Type | Time | Residential | Work | Commercial |
| 120v Level 1 | 3-5 miles/hr 17 hrs | $200 | $1,400 | $1,700 |
| 240v Level 2 | 10-20 miles/hr 4-7 hrs | $2,200 | $4,600 | $5,500 |
| 200-450v Fast Charger/ DCFC | 30 minutes | | | $5,000-$95,000 |

Use assumed 12,500 miles/year

Source: EEI, Department of Energy, Barclays Research

Right now there are about 43 thousand level 2 charging stations in the United States at 16 thousand locations according to EIA. California has the most charging stations with 4,482 locations and 15,888 stations.

The average EEI/IEI estimate is 4.95M chargers in 2025. The EEI/IEI estimate is the average of forecasts developed with National Renewable Energy Laboratory (4.4M) and EPRI (5.5M) forecasts. Before cost reductions we estimate infrastructure investment of $13-$16B for the range.

FIGURE 16

**EV Infrastructure Cost Scenarios for 2025 - $B**

In an upside case for electric cars we think a charging station away from home would be required for every 5 cars. In the United States there are about 1M gas pumps and on-average there are 8.5 pumps per gas station. Overall a fully built out infrastructure could cost $186-$189B. Realistically the costs of building the cost per station is likely to decline due to efficiency. To date Volkswagen has committed $2B to building out the infrastructure under "Electrify America" (*https://www.electrifyamerica.com/*). Tesla is also building out its supercharger network.

FIGURE 38

### *Case study for California*

Utilities will be a part of the charging infrastructure and we expect other companies (like ChargePoint) will participate competitively as well. The investor-owned utilities (EIX, PCG, SRE) have already proposed $1B of spending for their program in dockets 17-01-020 to 17-01-022. Hearings are scheduled during September 25–October 13, 2017 as needed with proposed decisions in Q1'18 and a final order on or about April 15, 2018. For more details on the process please see the scoping *memo*. We believe the developments in California are worth watching as it is the largest rollout of charging stations in the U.S. with direct investment from utilities.

FIGURE 20

**California Utility Proposed EV Infrastructure Spending**

| 2020 Spending Plans-$MM | Onroad Med-Heavy Infrastructure | Residential Infrastructure | Offroad Infrastructure | Public DC Fast Charging | Taxi/ Ridesharing | Education/ Outreach | Total |
|---|---|---|---|---|---|---|---|
| SRE | $4 | $226 | $5 | $4 | $4 | $2 | $244 |
| EIX | $558 | $4 | $5 | $4 | $4 | $0 | $575 |
| PCG | $217 | $0 | $3 | $22 | $0 | $2 | $244 |
| Total | $779 | $230 | $13 | $30 | $8 | $4 | $1,063 |

# Indoor Agriculture

Legalization of medicinal and recreational cannabis in various states is providing a model for Indoor Farming. Indoor Farming in not only a significant user of electricity for lighting, but has several other beneficial attributes compared to traditional farm models as well. Finally, it plays well into the 'Locally Grown or Farm to Table' trend in consumer purchases of produce.

FIGURE 21

**Indoor Farming Benefits**

| Benefit | Potential Impact |
|---|---|
| Crop Cycle | 10-30% reduction |
| Fertilizer Reduction | 20-50% reduction |
| Nurtritional Quality | 5-20% increase |
| Transportation Cost | Up to 54% reduction in cost of food |
| Water Usage | 70%+ reduction |

Source: Electric Research Power Institute, Barclays Research

Indoor farming locations include: custom warehouses, pods or shipping containers, controlled greenhouses, or variants on the first three areas.

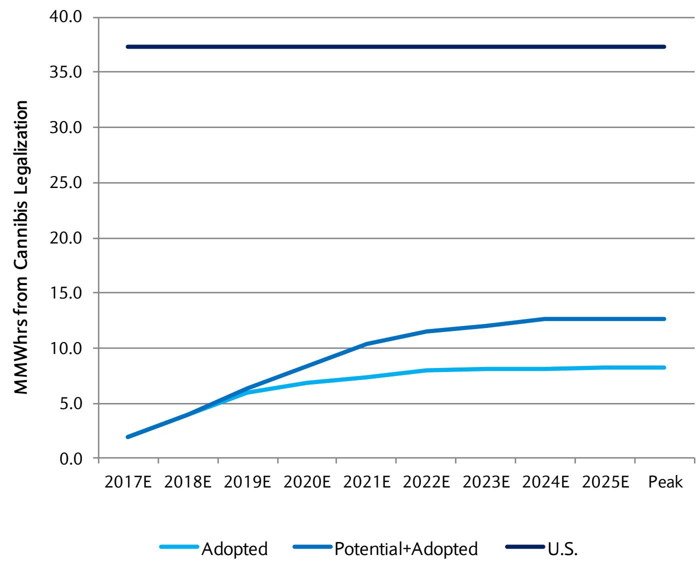
## Case study: Recreational Cannabis in Colorado

Colorado was one of the first 2 states to legalize recreational cannabis in 2012. Following legalization there was a scaling of the market over the first few years. Total demand in the last five years from these customers has grown from zero to approximately 75MW. On a MWh basis this represents approximately 0.5MM incremental sales. On an annualized basis, this load has added 0.5% per annum to Colorado's load and is still growing at double digits per year

To track the demand we also looked at tax revenues and fees. Last year, recreational cannabis taxes and fees in Colorado grew 19% which was a tapering of growth, and we expect that the taper will continue over the next few years. Based on XEL's Colorado experience we believe that the demand grows rapidly in the years following legalization and then growth tapers over a seven-year growth phase.

FIGURE 52

**Potential MMwhrs Consumed by Cannabis Customers**



Source: Company reports, Barclays Research , Colorado Department of Revenue, SNL

So far we have seen recreational marjiuana approved in 10 states and potentially another 6 in 2017 or 2018. Of the 6 states that could move forward with recreational cannabis they are all through ballott initiatives except for New Jersey. In Montana, medical cannabis was most recently approved in 2016.

We believe there is 8 twhrs of demand from states that have already implemented the law; 13 twhrs including the 6 states that could enact the law and 37 twhrs for all of the United States at peak levels.

FIGURE 63

**Potential Mwhrs Consumed from Cannabis Customers**

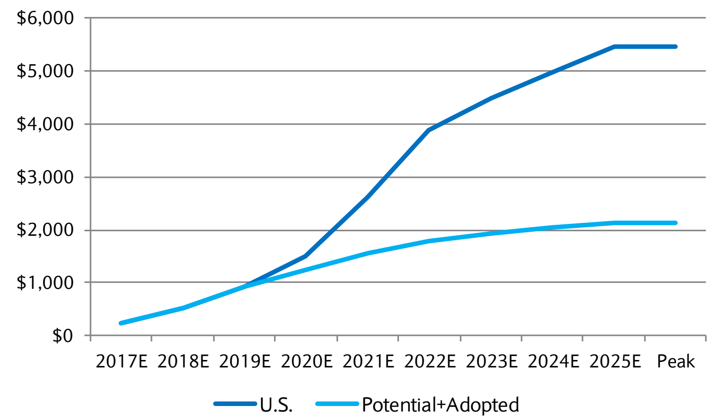
| States | 2017E | 2018E | 2019E | 2020E | 2021E | 2022E | 2023E | 2024E | 2025E | Peak | MW |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Adopted | 1.99 | 3.89 | 5.94 | 6.79 | 7.39 | 7.99 | 8.07 | 8.15 | 8.23 | 8.23 | 1,253 |
| Potential+Adopted | 1.99 | 3.89 | 6.33 | 8.35 | 10.38 | 11.56 | 12.07 | 12.58 | 12.69 | 12.70 | 1,933 |
| United States | | | | | | | | | | 37.25 | 5,670 |

Source: Company reports, Barclays Research , Colorado Department of Revenue, SNL

If you look at it in terms of retail electric revenues, the approved and likely states represent a $2.1B revenue opportunity and for all of the United States it is $5.5B.

FIGURE 74

Cannabis Related Electricity Spending



Source: SNL, company reports, Colorado Department of Revenue

## Electrification of Locally Grown Food Market

Using Cannabis as a model, we see significant upside in electric use should a small percentage of produce migrate to Indoor Farming. According to the USDA locally grown or direct to consumer (DTC) farming represented 7.8% of the industry or about 164K farms. There were 9,435 farms using greenhouses or high tunnel electrification and 3,867 were growing vegetables and herbs.

To estimate electricity demand we utilized the data from indoor cannabis farming. We assumed that customers with less than $75K in sales have one half of the demand of the usage of larger customers. We also assumed that the potential market is one-half of the 164K direct to consumer farms or 82K.

FIGURE 85

**Electrification of Farm to Table Presents Upside**

| | Direct to Consumer | Growth Rate 2007-2012 | Total | Current MWhrs | Potential MMWhrs |
|---|---|---|---|---|---|
| Farms | 163,675 | | 2,098,397 | | *Total electric use assuming 50% electrified.* |
| Greenhouse/High Tunnel Producers <$75K in sales | | | | | |
| Veg&herbs | 3,168 | 246% | 4,212 | 1.0 | |
| Total | 7,287 | 198% | 9,766 | 2.2 | |
| | | | | | |
| $/Acre Spent | | | | | |
| Utilities | $28.25 | | | | |
| Fuel | $31.99 | | | | |
| | | | | | |
| Greenhouse/High Tunnel Producers >$75K in sales | | | | | |
| Veg&herbs | 699 | 124% | 1,056 | 0.4 | |
| Total | 2,148 | 99% | 3,210 | 1.3 | |
| | | | | | |
| $/Acre Spent | | | | | |
| Utilities | $85.53 | | | | |
| Fuel | $106.68 | | | | |
| | | | | | |
| Total Greenhouse/High Tunnel Producers | | | | | |
| Veg&herbs | 3,867 | | | 1.4 | |
| Total | 9,435 | | | 3.6 | 31.0 |

## Retail sales implications from EV and Cannabis

From a retail sales standpoint the companies that have the most leverage to these 2 issues are: EXC, XEL, ES, BRKa, PNW, PEG, AEE, and SO. EXC benefits from higher sales in DC, DE and NJ. XEL benefits more from the impact of the legalization of recreational cannabis in Colorado and its impact on indoor farming. In Arizona decoupling is authorized but has not been implemented for PNW and the outlook for residential solar is a potential offsetting impact. For PEG the company's only jurisdiction is New Jersey where recreational cannabis legislation is stalled in Senate (S3195) but could come back.

FIGURE 26

**Summary of Retail Sales Implications and Related Company Impacts**

| State | % '16 Sales | Ticker | Decoupled |
|---|---|---|---|
| DC | 8.38% | EXC | EE and weather |
| VT | 7.98% | N/A | Partial |
| ME | 7.01% | IBE.MC | No |
| HI | 6.95% | HE | Yes |
| RI | 5.81% | NGG | Yes |
| AK | 5.23% | N/A | N/A |
| OR | 3.86% | POR | Yes |
| NH | 3.72% | ES | No |
| CA | 3.54% | EIX, PCG, SRE | Yes |
| DE | 3.46% | EXC | No |
| MA | 3.17% | ES, NGG | Yes |
| WA | 2.92% | BRKa | Yes |
| CO | 2.82% | XEL | Weather only |
| NV | 2.78% | BRKa | No |
| NJ | 2.65% | PEG, FE, EXC | No |
| UT | 2.52% | BRKa | No |
| CT | 2.47% | ES | No |
| AZ | 1.84% | PNW | No |
| MT | 1.82% | N/A | No |
| MN | 1.59% | XEL | Yes |
| MD | 1.43% | EXC | No |
| MO | 1.44% | AEE | No |
| GA | 1.16% | SO | No |

## EV and Indoor Agriculture Impact on Renewable Demand

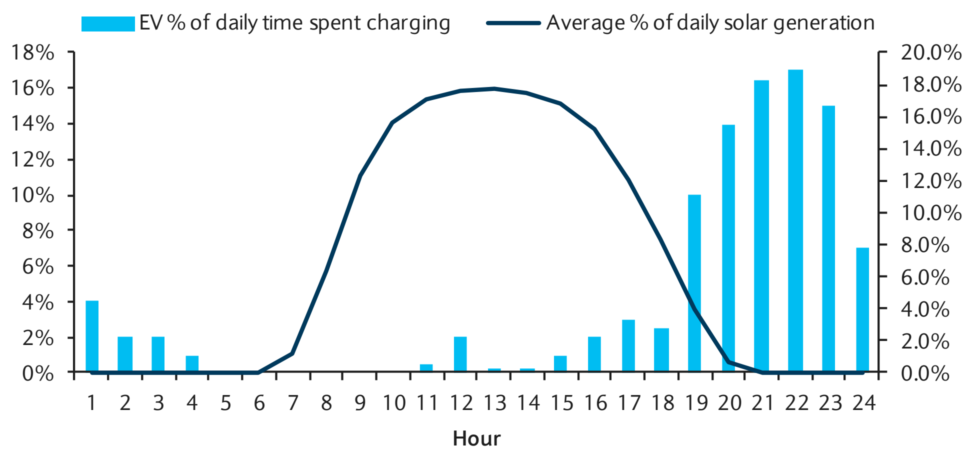
Given the potential electric demand growth driven by EVs and an increase in indoor agriculture, we look at potential new capacity demand for solar and wind that could be driven by these trends.

Based on the time of generation relative to the typical time of charging for EVs, we find that the solar 'generation curve' lines up poorly with the hours of highest electric demand for EV charging. This is somewhat intuitive, given the tendency for many EV owners to charge their vehicles overnight at home.

However, there are currently policy and rate-design initiatives underway (most notably in California) that include time of use rates and infrastructure spending on workplace chargers to incentivize EV charging at the workplace during off-peak hours. As a result we estimate solar will comprise 25% of renewable capacity deployed to meet EV charging demand.

FIGURE 97

**Solar average time of generation and EV daily time spent charging**

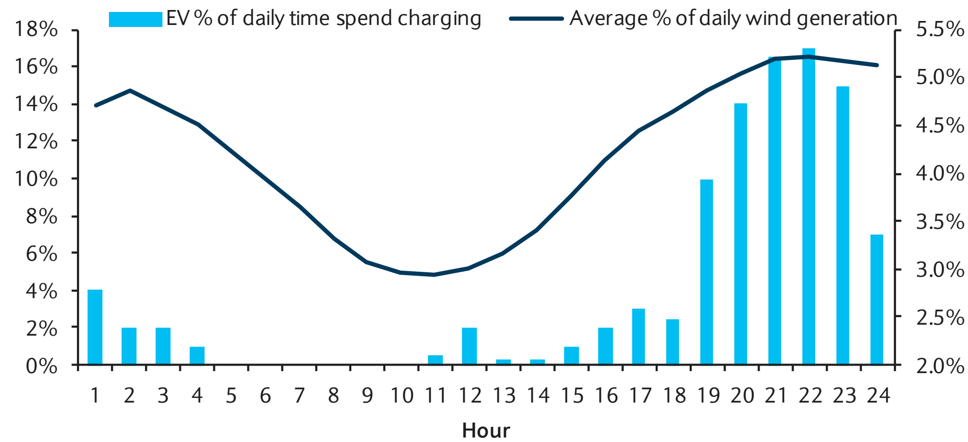


Source: CAISO, U.S. DOE, Barclays Research

Looking at the average time of generation for wind, we see that it lines up nicely to the average time of EV charging. Our forecast assumes wind comprises 75% of renewable capacity deployed to meet the increase in EV charging demand.

FIGURE 108

**Wind average time of generation and EV daily time spent charging**



Source: CAISO, U.S. DOE, Barclays Research

Overall we forecast that EV charging and indoor agriculture could drive a total of 15GW of new renewable demand through 2025. Our analysis assumes that capacity additions are comprised of two-thirds renewable sources split 50/50 between solar/wind for indoor agriculture and 25/75 for EV charging.

Of these two potential demand drivers, we forecast indoor agriculture to drive the majority of demand with 7GW of solar and 3GW of wind added through 2025. For comparison, these figures equate to roughly half of new U.S. solar installations and a third of new U.S. wind installations in 2016. We forecast EV charging to be a smaller contributor, but still material at approximately 3GW of new wind capacity and 2GW of new solar capacity through 2025.

FIGURE 119

## Current Thoughts on the 201 Solar Trade Case

The U.S. ITC held the injury hearing on 15 August 2017 with the actual vote on injury expected on 22 September 2017. We do not have a formal prediction on the outcome, except to say that it seems to us that there is at least a reasonable case to be made that imports were a substantial cause of harm to domestic based module producers (the trade case and our analysis here excludes thin-film solar modules). However, the small size of the U.S. module manufacturing industry and the potential harm on non-manufacturing solar jobs seems to suggest a small tariff ($0.01-0.05/w) could be used as a remedy, far below what the complaining parties have asked for in the case. The remedy hearing would be on 3 October 2017, if injury is found. The outcome of the injury finding and potential remedy is highly uncertain. We thought we would provide some context for investors to inform their own views.

FIGURE 30

**Key dates in 201 proceeding**

| Date | Event |
|---|---|
| 15 August 2017 | Injury hearing |
| 11 September 2017 | Injury report to the commission |
| 22 September 2017 | Proposed vote on injury |
| 3 October 2017 | Remedy hearing |
| 23 October 2017 | Remedy report to the commission |
| 31 October 2017 | Proposed vote on remedy |
| 13 November 2017 | Report submitted to President |

### Recent rulings

The U.S. ITC already imposes tariffs on solar modules imported from China and Taiwan, although these tariffs are imposed under different rules than the 201. The Chinese tariff stems from a U.S. ITC finding in November 2012 that was extended to Taiwan in February 2015. The U.S. ITC voted 6-0 in the original November 2012 China case and 5-0 in the Taiwan case as it related to solar modules (one commissioner not participating). Two of the six commissioner seats are currently vacant.

FIGURE 31

**Current U.S. ITC commissioners**

| Commissioner | Party | Nominated by | Vote for 2012 tariff on China | Vote for 2015 tariff on Taiwan |
|---|---|---|---|---|
| Rhonda Schmidtlein | Democrat | Obama | Not on ITC at the time | Yes |
| David Johanson | Republican | Obama | Yes | Yes |
| Irving Williamson | Democrat | G.W. Bush | Yes | Yes |
| Meredith Broadbent | Republican | Obama | Yes | Yes* |

Source: USITC, Barclays Research.

Note: * Commissioner Broadbent voted for the tariff on modules, but was the only commissioner to vote against extending the tariff to include solar cells.

### Criteria

Under section 201, the Commission is mandated to consider whether "an article is being imported into the United States in such increased quantities as to be a substantial cause of serious injury, or the threat thereof, to the domestic industry producing an article like or directly competitive with the imported article" and to take into account closing of domestic capacity and significant unemployment with the domestic industry.

In preparation for the injury hearing, the USITC reported that of the twenty-seven solar module manufacturing facilities that were confirmed open as of 1 January 2012, nineteen (70%) had closed by July 2017.

### Remedy

Not to get ahead of ourselves, but if the U.S. ITC finds injury, the asked for $0.75/w minimum price is not necessarily the end remedy. The U.S. ITC has discretion in proposing a remedy to the President and the President has discretion in what remedy, if any, would ultimately be imposed. Importantly, the tariff does not need to be high enough to make the domestic production competitive against imports.

The 201 safeguard is meant to help domestic industry make a positive adjustment to import competition through becoming "able to compete successfully with imports" without tariffs imposed or "***experiencing an orderly transfer of resources to other productive pursuits***." The later seems to apply here, in our view, as the U.S. solar module industry is already shielded by import tariffs and struggles to compete. In other words, remedy should focus on helping the domestic solar module manufacturing industry go do something else.

In 2014-2016 the U.S. annual imports of solar modules averaged 8.6GW of capacity at an average price of $0.47/w for an annual average of $4.0bn. By comparison, the total revenue reported to the USITC for domestic module manufacturing was only $470mnpa.

Assuming a similar import rate in 2018-2021, a tariff of just $0.05/w would off-set 100% of the domestic industries estimated historical annual revenue. A $0.01/w tariff would replace total manufacturing and related complete annual wages.

FIGURE 122

**Solar module production workers impacted by the 201 trade case**

| Metric | Unit | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Number of workers | (number) | 1,293 | 1,080 | 963 | 1,106 | 1,340 |
| Avg. weekly hours | (hours) | 47 | 43 | 37 | 41 | 38 |
| Hourly wage estimate* | ($/hr) | 25.00 | 25.00 | 25.00 | 25.00 | 25.00 |
| Annual avg. salary | $ | 61,149 | 56,213 | 48,436 | 52,799 | 48,876 |
| Total production wages | $mn | 79.1 | 60.7 | 46.6 | 58.4 | 65.5 |

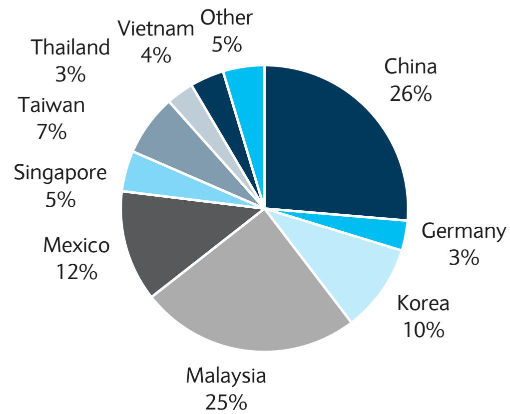
Source: USITC, Barclays Research estimates.
Note: * USITC has kept the actual hourly wage confidential; we have used $25/hr as an estimate.

### Module trade flows

We thought it would be helpful to give investors a sense of the shape of global module trade that may be impacted should the case result in a significant tariff. The U.S. imports modules primarily from Asia.

*The U.S. imports $8.2bn of solar modules in 2016, double the 2014 value imported.*

FIGURE 13
**Source of U.S. module imports 2014-2016**



Source: USITC, Barclays Research.

In response to the U.S. decision to apply tariffs on modules imported from both China (2012) and Taiwan (2015) manufacturers have expanded capacity in Southeast Asia to circumvent the U.S. import tariffs. As a result, China and Taiwan's share of U.S. solar module imports declined to just 21% of total U.S. imports in 2016. The expanded capacity in Southeast Asia is also a significant driver in the solar module manufacturing overcapacity, in our view.

*The U.S. imports from China declined 6% and declined 72% from Taiwan in 2016 compared to 2014 despite total U.S. imports doubling.*

## Valuation Methodology and Risks

### North America Power & Utilities

**AES Corp. (AES)**

**Valuation Methodology:** Our valuation is the average of $16 for a global average P/E of 13.1x in 2018E applied to $1.23 and $9.50 for our sum of the parts, which includes $18 for the businesses using regional EBITDA and P/E multiples less $6 for recourse debt and $2 for tax policy exposure. As comps we use Caribbean Utilities (CUP'U-T), EDP Energia (ENBR3-BR), Emera (EMA-T), Enel Americas (ENELAM-SA), E'on (EOAN-XE), Kansai Electric (9503-TO) and U.S. Regulated Utilities.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** As a global power company and electric utility, AES is exposed to merchant power risk, country risk, currency risk (particularly in South America), regulatory risk, and counterparty risk.

**Alliant Energy (LNT)**

**Valuation Methodology:** Our $43 price target is premised on a 9.85% premium to the 2019 regulated group average P/E multiple of 17.4x applied to our 2019 earnings estimate of $2.28.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include utility regulation; execution of its renewable generation expansion program; commodity prices; and interest rates.

**Ameren Corp. (AEE)**

**Valuation Methodology:** Our $58 target is a 5% premium to the 17.2x Regulated Utility group applied to our $3.20 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the Ameren outlook are interest rates, regulation (Missouri, Illinois and the Federal Energy Regulatory Commission), outlook for Missouri legislation and the capital markets.

**American States Water Company (AWR)**

**Valuation Methodology:** Our price target is premised upon the 2019 water group average multiple of 23.2x applied to our 2019 estimate of $1.87.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory issues resulting in lower ability to spend capital or a lower ROE, ability to obtain additional military contracts and perform on the current contracts are all risks.

**Aqua America (WTR)**

**Valuation Methodology:** Our price target is based on applying a 5% premium the water group average 2019 P/E multiple of 22.1x to our 2019 EPS estimate of $1.55.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to WTR include a potential acquisition of a gas ldc or non water utility, an inability to maintain cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential, and potential tax reform.

**California Water Service Group (CWT)**

**Valuation Methodology:** Our price target is premised upon applying the 2019 water group average multiple of 22.2x to our 2019 estimate of $1.34.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Main risks are regulatory given the significant impact the outcome and timing of the California general rate case can have. Also the California drought and associated recovery has impacted results in the past several years. Interest rates impact commission granted return on equity levels as well as impacting the rate paid on short term debt. National policy such as bonus depreciation and EPA actions will also impact spending levels and financing for the utility.

**CMS Energy (CMS)**

**Valuation Methodology:** Our price target of $49 is premised upon a 15% premium to the current 2019E regulated utility multiple of 17.0x our 2019E EPS of $2.53.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** CMS Energy faces risk from Michigan utility regulation, commodity prices, and interest rates.

**Connecticut Water Service Inc. (CTWS)**

**Valuation Methodology:** Our $53 price target is premised upon applying the 2018 water group average PE multiple of 22.2x to our 2019 estimate of $2.40.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Regulatory risk are the main issues even with positive regulatory mechanisms in both CT and ME, the eventual true up or consideration surrounding repair tax flow through accounting could cause a potential larger than expected rate increase to customers limiting capital recovery in that year.

**Consolidated Edison (ED)**

**Valuation Methodology:** Our $82 price target is a 6% premium to the group including +0.8% for exposure to tax changes applied to the 2019 Regulated Utility P/E of 17.0x and our $4.57 EPS estimate.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to the outlook include rating agency actions, regulatory risk, interest rates, and access to the capital markets.

**Dominion Energy (D)**

**Valuation Methodology:** We use a sum of the parts methodology on 2019 estimates to derive the valuation for Dominion Resources. We value VEPCO, the regulated electric utility subsidiary at a 15% premium to to the average regulated utility P/E multiple. We value D Energy at a 5%

## Valuation Methodology and Risks

premium to the average midstream P/E multiple.We value Corp & Other at a regulated utility average multiple. We value the merchant generation at 7.6x EBITDA and deduct allocated debt. We value Atlantic Coast Pipeline at a 14.2x MLP multiple to EBITDA, discounted back one year to 2019. We add $2 value for D's LP ownership stake in DM.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Changes to the regulatory landscape could change D's earnings potential. In addition, D has an extensive capital expenditure forecast driving its growth strategy. Changes to availability of capital could impede its growth objectives. Project delays could push out projected earnings growth. A decline in the forward power curves could reduce earnings coming from Millstone's unhedged production. There is also uncertainty with regard to potential tax reform.

**Duke Energy (DUK)**

**Valuation Methodology:** Our valuation for DUK is based upon a 0.6% premium to the industry average P/E on our 2019E earnings. The premium reflects the net of a 5% premium offset by a 4.4% discount for potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to regulated utilities, and DUK specifically, include weakening demand, higher than expected inflationary pressures, interest rates, regulatory lag and greater scrutiny from regulators and politicians around investment and operating decisions. Lingering political effects and regulatory recovery of the coal ash spill in NC remains an outstanding risk specific to DUK. There is also uncertainty with regard to potential tax reform.

**Entergy Corp. (ETR)**

**Valuation Methodology:** Our price target is derived by applying the industry average multiple of 17.0x to our 2019E of $4.85 for UPO. Our price target also reflects a 5.6% discount for potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** EWC-related risks include: negative developments related to all operating and closed nuclear facilities, declining forward price curves, and unscheduled non-regulated plant outages. Utility-related risks include: regulatory lag, poor rate case outcomes, and ANO-related remediation expenses. There is also uncertainty regarding potential tax reform.

**Eversource Energy (ES)**

**Valuation Methodology:** Our price target reflects a 10% premium to the industry average multiple of 17.4x our 2019E estimate. We also apply a 0.75% discount to reflect uncertainty related to potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risk factors include regulatory approval and permitting of Access Northeast and Northern Pass projects, changes to prevailing local, state and federal governmental policies and regulatory actions with respect to allowed rates of return, rate structure, continued recovery of regulatory assets and energy costs, financing, changes in tax laws and policies, and changes in compliance with environmental and safety laws and policies among other risks. There is also uncertainty regarding potential tax reform.

**FirstEnergy Corp. (FE)**

**Valuation Methodology:** Our revised $37 target is a 5% discount to the Regulated Utility 2019 average P/E of 17.3x applied to UNOP EPS of $2.25. Our base case valuation subtracts ½ of the Ohio rider mechanism ($0.27/share) which is approved for 3 years and extendable to 5 years starting January 1, 2017. We also assume 25% equity funding for $1.5B of liabilities (-$0.14/share) and ongoing support services for FES (-$0.10/share).

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks are an interruption in the delevering strategy from failure to close/announce asset sales, nuclear plant performance, interest rates, and the economy.

**Hawaiian Electric Inds (HE)**

**Valuation Methodology:** Our price target reflects a 5% discount to the Regulated Utility average P/E of 17.0x our 2019E utility earnings of $1.33, plus a 1.5% premium to 14.4x bank earnings of $0.50.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** HE has regulatory and political risk moving forward on a stand alone basis. Executing on the legislated goal of 100% renewable energy by 2045 also carries execution risk. HE has a robust capital expenditure plan to meet the state targets, but will require PUC support to successfully execute. Ultimately the dividend could be at risk in a more extreme scenario where HE's margins come under increased pressure or there is customer erosion. There is also uncertainty regarding potential tax reform.

**NextEra Energy (NEE)**

**Valuation Methodology:** Our price target is based on applying a 10% premium to the regulated utility multiple of 17.5x to our 2019 EPS estimate of $7.74. We also assign a 1.25% premium to reflect opportunity related to potential tax reform. In addition, we add $8.50/share value for NEE's pro rata ownership of NEP.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** NextEra Energy Resources has merchant exposure to volatile gas and power prices, and risks associated with expansion in the size of its wind asset base. In addition, volatility around fuel prices and high levels of capital spending at its utility present regulatory risk. There is also uncertainty regarding potential tax reform.

**OGE Energy Corp. (OGE)**

**Valuation Methodology:** Our price target is $38. This comprises '19E EPS of $1.77 at OG&E (utility), using a 2.9% discount to the 16.9x utility group multiple equating to $29, plus $9 for OGE's 26.5% ownership of Enable Midstream Partners LP (ENBL), marked to current price.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Federal (FERC, EPA) and state (Oklahoma, Arkansas) regulation, costs of compliance with environmental laws and regulations, Operational risks associated with OGE's businesses, economic conditions, climate change, cyber security risks and increased reliance on automated processes. Enable share price may be impacted

### Valuation Methodology and Risks

by volumes or commodity prices on their system as well as changes to the distribution.

**Pinnacle West Capital (PNW)**

**Valuation Methodology:** Our $87 price target is premised on a 4.9% premium to the 2019 group average P/E of 17.6x applied to our 2019 EPS estimate of $4.71.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are Arizona state and Federal (FERC and NRC) regulation. Demand and rooftop solar can impact earnings significantly under current regulatory construct.

**Portland General Electric Co. (POR)**

**Valuation Methodology:** Our $44 price target reflects the 2019 group average P/E multiple of 17.6x applied to our 2019 eps estimate of $2.49.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** The main risks to our valuation are the commercial operation of the Carty Generating Station, regulatory filings and outcomes, as well as economic issues impacting demand growth and inflation. In the event that demand growth accelerates given the local Portland economy, our estimates would prove to be conservative.

**Public Service Enterprise Gp (PEG)**

**Valuation Methodology:** Our $49 target reflects a sum of the parts including $42 for PSE&G at a 11% premium including +2% for exposure to tax reform applied to the 2019 Regulated Utility average of 17.4x and our $2.29E, $5 for PSEG Power at 7.4x '19 Open EBITDA of $0.8B less $3.66B of net debt.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Key risks are wholesale power prices, New Jersey and federal utility regulation, and interest rates.

**WEC Energy Group (WEC)**

**Valuation Methodology:** Our price target for WEC is predicated on a 15% premium to the industry average P/E multiple of 17x our 2019E of $3.55. We also assign a 2.0% discount to reflect potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** FERC is currently reviewing a complaint filed against MISO transmission owners, of which WEC is an owner through its share in ATC. A revision in the allowed ROE by FERC to a base ROE that is significantly lower than FERC's recent order in MISO complaint #1 could negatively impact WEC. Also, continued cost escalation or execution delays to the pipeline replacement program (AMRP) in Illinois could create political and regulatory pressure. Regulatory risk is also a factor in WEC's various jurisdictions. There is also uncertainty with regard to potential tax reform.

**Xcel Energy (XEL)**

**Valuation Methodology:** Our XEL valuation is premised upon a 10% premium to the regulated utility average P/E multiple on our 2019 estimate of $2.59. We also assign a 2.4% discount to reflect uncertainty related to potential tax reform exposure.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks are interest rates, state and federal utility regulation, and access to external capital to fund capital expenditures. XEL operates in multiple jurisdictions and often has multiple rate cases pending which carry knowable and unforseeable risks. There is also uncertainty with regard to potential tax reform.

The supervisory analyst who reviewed and/or approved this research report (or one or more of its sections) has a long position in the common stock of PG&E Corporation.

Prices are sourced from Thomson Reuters as of the last available closing price in the relevant trading market.

**Disclosure Legend:**

**A:** Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of the issuer in the previous 12 months.

**B:** An employee or non-executive director of Barclays Bank PLC and/or an affiliate is a director of this issuer.

**CD:** Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by this issuer.

**CE:** Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by this issuer.

**D:** Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

**E:** Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer within the next 3 months.

**FA:** Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with US regulations.

**FB:** Barclays Bank PLC and/or an affiliate beneficially owns a long position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

**FC:** Barclays Bank PLC and/or an affiliate beneficially owns a short position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

**GD:** One of the analysts on the fundamental credit coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

**GE:** One of the analysts on the fundamental equity coverage team (or a member of his or her household) has a financial interest in the debt or equity securities of this issuer.

**H:** This issuer beneficially owns more than 5% of any class of common equity securities of Barclays PLC.

**I:** Barclays Bank PLC and/or an affiliate is party to an agreement with this issuer for the provision of financial services to Barclays Bank PLC and/or an affiliate.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities of this issuer and/or in any related derivatives.

**K:** Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from this issuer within the past 12 months.

**L:** This issuer is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

**M:** This issuer is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

**N:** This issuer is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.

**O:** Not in use.

**P:** A partner, director or officer of Barclays Capital Canada Inc. has, during the preceding 12 months, provided services to the subject company for remuneration, other than normal course investment advisory or trade execution services.

**Q:** Barclays Bank PLC and/or an affiliate is a Corporate Broker to this issuer.

**R:** Barclays Capital Canada Inc. and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

**S:** This issuer is a Corporate Broker to Barclays PLC.

**T:** Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.

**U:** The equity securities of this Canadian issuer include subordinate voting restricted shares.

**V:** The equity securities of this Canadian issuer include non-voting restricted shares.

**Risk Disclosure(s)**

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

**Guide to the Barclays Fundamental Equity Research Rating System:**

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage

## IMPORTANT DISCLOSURES CONTINUED

universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

**Stock Rating**

**Overweight** - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Equal Weight** - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Underweight** - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Rating Suspended** - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

**Industry View**

**Positive** - industry coverage universe fundamentals/valuations are improving.

**Neutral** - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

**Negative** - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

| North America Power & Utilities | | |
|---|---|---|
| AES Corp. (AES) | Alliant Energy (LNT) | Ameren Corp. (AEE) |
| American Electric Power (AEP) | American States Water Company (AWR) | American Water Works (AWK) |
| Aqua America (WTR) | Brookfield Infrastructure Partners LP (BIP) | Brookfield Infrastructure Partners LP (BIP_u.TO) |
| Brookfield Renewable Energy Partners LP (BEP) | Brookfield Renewable Energy Partners LP (BEP_u.TO) | California Water Service Group (CWT) |
| Calpine Corp. (CPN) | Canadian Utilities Ltd. (CU.TO) | Caribbean Utilities Ltd. (CUPu.TO) |
| CenterPoint Energy Inc. (CNP) | CMS Energy (CMS) | Connecticut Water Service Inc. (CTWS) |

**Guide to the Barclays Research Price Target:**

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

**Top Picks:**

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

**Explanation of other types of investment recommendations produced by Barclays Equity Research:**

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

**Disclosure of previous investment recommendations produced by Barclays Equity Research:**

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/ResearchInvestmentRecommendations*.

**Since 27 April, 2017, when the first of our covered water companies reported Q1 results, water stocks have declined by 6%, underperforming the S&P 500 by a similar amount and giving up nearly all the gains the sector made earlier in the year.** Although we do not see a fundamental negative shift in outlook for the industry (in fact, quite the contrary) we cannot deny the correlation of the underperformance to the earnings reporting season, particularly in light of the relative strength of electric utilities to the broader market over that same period. In our opinion, investors should not be spooked by the modest shortfalls in Q1 earnings relative to consensus, or surprised by the increased attention on M&A by company managements. Despite the recent precipitous underperformance, the water stocks are still in the neutral zone of valuation relative to the S&P 500 (Figure 1).

**Consolidation was a high-profile topic on Q1 conference calls, and we expect it to remain a theme for the industry going forward.** The water companies are actively engaged in discussions with stakeholders to facilitate and encourage industry consolidation. Efforts include discussions with legislators and regulators regarding fair market value legislation, regulatory mechanisms that support infrastructure recovery, and equitable playing fields among publicly traded and municipals water utilities. AWK and CWT have bolstered their corporate development offices in recent months.

**Inside, as a case study, we take an illustrative look at three theoretical paths for privately held Aquarion Company.** Aquarion is the largest investor-owned water utility in New England and is among the 10 largest in the U.S., serving more than 200,000 customers in Connecticut, Massachusetts, and New Hampshire. **We chose Aquarion because of some questions we recently received about the company.**

**Barclays will host a Water Symposium on May 18, 2017 in New York City.** The event supports Barclays' Impact Series report, *The water challenge: preserving a global resource*.

Please click *here* to register for the Water Symposium.

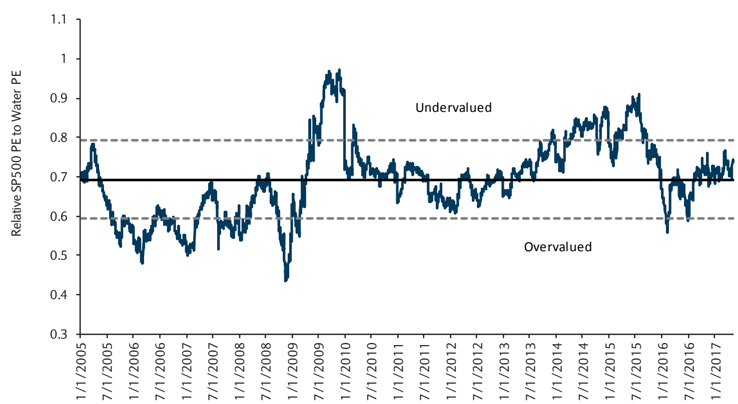
Completed: 10-May-17, 01:57 GMT Released: 10-May-17, 04:10 GMT

## S&P 500 Relative to the Waters: In the Neutral Zone

Historically, water utilities carry a 43% premium to the S&P 500. The sector is currently trading in the neutral zone of valuation relative to the broader market. Year to date, water utilities have underperformed the S&P 500 by six percentage points and the UTY (Philadelphia Utility Sector Index) by nearly five percentage points with the large-cap waters demonstrating the most resilience in a market that just recently turned fickle to the water sector. The water stocks reached their near-term peak performance at the market close on April 26, 2017 just prior to the first of our covered stocks reporting Q1 earnings. From January 1 to April 26, 2017 the water stocks increased 7%, or within 100 basis points of the S&P performance. Since CWT reported Q1 results, the water stocks have underperformed the S&P 500 by 6 percentage points, giving up the gains achieved since January 1. Although we do not see a fundamental negative shift in outlook for the industry, we cannot deny the correlation of the underperformance to the earnings reporting season, particularly in light of the relative strength of electric utilities to the broader market over that same period.

FIGURE 1

**S&P 500 P/E Relative to Water P/E, 2005–Present**



Source: Barclays Research, Thomson One

At the current valuations, we continue to see opportunity in AWK (PT $86) and WTR (PT $36), both Overweight rated, and we see risk in AWR (PT $41) and CWT (PT $30), both Underweight rated. In our view, because of their geographic diversity, AWK and WTR are better positioned to benefit from infrastructure spending and consolidation (two primary themes in the water sector that we've written about extensively) than their New England or California-concentrated IOU peers. As such, we assign a 10% premium to AWK (the industry flagship), a 5% premium to WTR, and an industry average multiple to AWR, CWT, and CTWS (PT $53; Equal Weight).

## Q1 Review

Our covered water companies wrapped up earnings reporting season earlier this week. We consider the results essentially in line with expectations, as we don't tend to sweat modest deviations that occur early in the year. Earnings guidance for 2017 was reaffirmed by AWK at $2.98–3.08 and by WTR at $1.34–1.39. AWR, CWT, and CTWS do not provide earnings guidance. Management scripts and Q&A focused on capital spending, rate cases, the outlook for regulatory/legislative initiations, and M&A.

FIGURE 3

**Q1 Earnings Review**

| | Reported | Adjusted | Adjusted +/- vs. | Consensus | Barclays | Consensus | Barclays | | |
|---|---|---|---|---|---|---|---|---|---|
| | 1Q17A | 1Q17A | Consensus | 1Q17E | 1Q17E | 2017E | 2017E | LTM | Guidance |
| AWR | $0.34 | $0.32 | -- | $0.32 | $0.31 | $1.70 | $1.69 | $1.66 | |
| AWK | $0.52 | $0.52 | -- | $0.52 | $0.53 | $3.04 | $3.06 | $2.91 | $2.98 - $3.08 |
| WTR | $0.28 | $0.28 | ($0.02) | $0.30 | $0.31 | $1.37 | $1.38 | $1.30 | $1.34 - $1.39 |
| CWT | $0.02 | $0.02 | ($0.03) | $0.05 | $0.06 | $1.30 | $1.21 | $1.05 | |
| CTWS | $0.36 | $0.36 | ($0.01) | $0.37 | $0.38 | $2.20 | $2.22 | $2.16 | |

Notes:
AWR: Adjusted EPS excludes previously incurred drought-related items recorded during 1Q17
AWK: Adjusted EPS includes $0.02 benefit from stock based compensation

Source: Barclays Research, Thomson One, company filings

Capital spending targets remain intact and on trend for Q1 seasonality. Spending levels for AWK, WTR, and CTWS are influenced by winter weather. As a result, we expect spending at those companies to ramp up in Q2 and Q3, whereas spending at the California-dominated utilities, AWR and CWT, is expected to occur more evenly throughout the year.

FIGURE 4

**Water Sector Capital Spending**

| ($ in millions) | 2015A | 2016A | 2017E | 1Q17A | 1Q as a % of 2017E |

## Consolidation as a Catalyst

Consolidation is a recurring theme in the sector. The U.S. water industry is highly fragmented, with approximately 85% of the water systems municipally-owned. Budgetary constraints and compliance mandates spurred by the Flint, Michigan tragedy are forcing municipalities to consider selling their water assets. The acquisitive appetites of IOUs make them willing counterparties to municipalities seeking to exit the business; and AWK and CWT have acknowledged bolstering their corporate development offices in recent months. WTR management has indicated they are seeing an unprecedented level of deal activity, particularly in states where fair value legislation exists; and CWT management expressed a sharp focus on M&A, looking at tuck-ins as well as larger acquisitions.

Consolidation is most easily accomplished in states that have fair market value legislation, which allows the IOU to include in ratebase the value of the assets based on an appraisal determination as opposed to the book value. Six states currently have fair value legislation. Other mechanisms, such as single tariff pricing and infrastructure recovery, can also be supportive of industry consolidation. Managements are actively engaged in discussions at the local level to educate stakeholders, regulators, and legislators about mechanisms that would strengthen and enhance water quality and encourage consolidation.

FIGURE 5

**Fair Value Legislation by State and Company**

| State | IOU's Operating in the State |
|---|---|
| Arizona | None |
| California | AWK, AWR, CWT |
| Illinois | AWK, WTR |
| Indiana | AWK, WTR |
| Kentucky | AWK |
| Missouri | AWK |
| New Jersey | AWK, WTR |
| Pennsylvania | AWK, WTR |
| Virginia | AWK, WTR |

Source: Barclays Research, S&P Global Market Intelligence, company filings

Most of the acquisitions that we see in the water sector have been smaller, tuck-in acquisitions; therefore, we don't have a ready data set of valuation comparisons for a large, strategic acquisition in the water industry. In our *April Preview/March Review*, March 17, 2017, we looked at acquisition premiums of historical transactions in the electric utility sector. We found that in the 14 deals announced since 2013, electric utility acquisitions of gas utilities garnered the highest average multiples on the basis of price/earnings-LTM, enterprise value/EBITDA-LTM, and price/book. We attribute this to the somewhat higher growth rates of gas utilities than electric utilities. The total return outlook for water utilities is also higher than electric utilities and similar to gas utilities. As a result, we might expect the transaction metrics of a strategic water acquisition to be on par with those of a gas utility.

FIGURE 6

**Total Return Relative to S&P 500**

| Sector | EPS Growth | Dividend Growth | Dividend Yield | Total |
|---|---|---|---|---|
| Water Utilities | 6.9% | 8.1% | 2.1% | 9.0 |
| Electric Utilities | 4.7% | 6.2% | 3.3% | 8.0 |
| S&P 500 | 8-10% | | 2.0% | 10-1 |

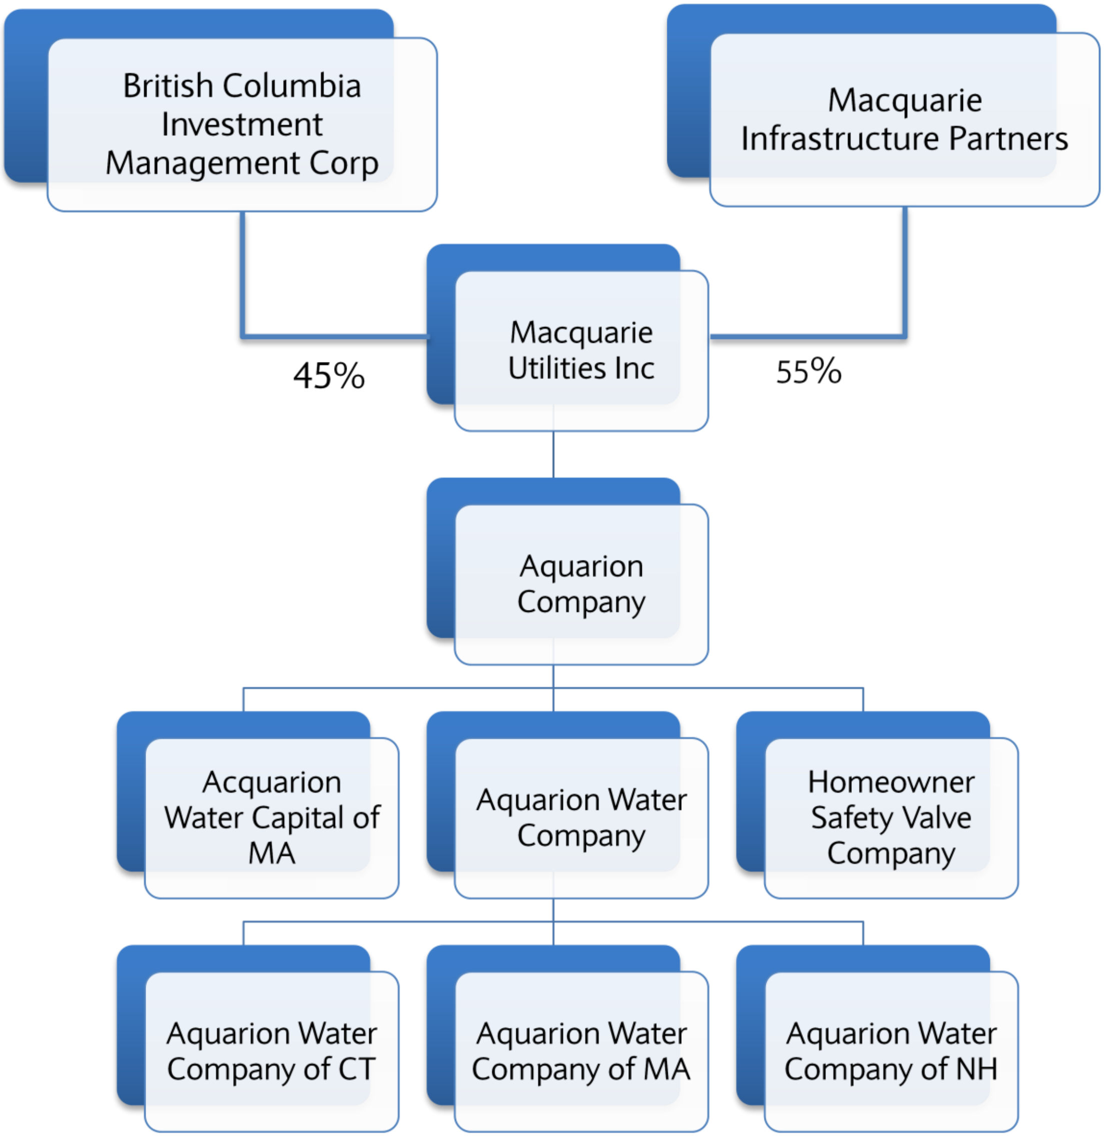
## Aquarion Company – A Case Study

In 2006, a Macquarie-led consortium purchased Aquarion Company from Kelda Group plc for $860MM. Aquarion Company is owned by Macquarie Utilities Inc., which is an infrastructure fund owned by Macquarie Infrastructure Partners (55%) and British Columbia Investment Management Corp (45%). Aquarion Company is the holding company of Aquarion Water Company, which in turn owns regulated public water utility operating subsidiaries in Connecticut, Massachusetts, and New Hampshire. Aquarion Company also owns Aquarion Water Capital of Massachusetts (AWCap) and Homeowner Safety Valve Company (HSV). AWCap is a non-regulated subsidiary that leases a water treatment plant to Aquarion Water Company of Massachusetts. HSV offers water service line and sewer line warranty protection programs. Figure 7 diagrams the corporate structure.

FIGURE 8

**Aquarion Company Corporate Structure**



Source: Company filings

Aquarion Company is the largest investor-owned water utility in New England, and is among the ten largest in the U.S. Aquarion serves over 200,000 customers in Connecticut, Massachusetts, and New Hampshire, with a total ratebase approximating $665MM. CT accounts for the vast majority of ratebase and earnings.

FIGURE 9

**Aquarion Company Approximate Financial and Operating Statistics**

| ($ in millions) | Connecticut | Massachusetts | New Hampshire | Aquarion Water Company | Aquarion Company |
|---|---|---|---|---|---|
| Customers | 196,000 | 19,600 | 9,400 | 225,000 | |

| Weighted average cost of debt | 4.76% | 5.50% | 5.90% | | |
| Cash | | | | | $7 |
| EBITDA | | | | | $115 |
| Net Income | $40 | $1 | $2 | $42 | $35 |

N/A = not available

All figures are approximate and reflect data collected from public filings for years ended 2015 and 2016

Note: On 4/13/17, Aquarion filed a rate case in MA, seeking a 10.5% ROE premised upon a 44.91% equity ratio, $38.6MM rate base for test year ended 12/30/16

Source: CT, MA and NH public regulatory commissions; S&P Global Market Intelligence

The increased emphasis on infrastructure spending and enhanced consolidation outlook for the water industry, present Macquarie and BCIMC with options for Aquarion, including continued ownership, IPO, or sale of the company. Some of the factors which could influence the potential value of Aquarion under each scenario include the lack of fair market value legislation in Aquarion's service territories; approximately $280MM of goodwill currently on Aquarion's balance sheet; and the relatively high parent company leverage (~66% debt ratio), among others. Below we examine the options from the perspective of water utility investors.

### *Remain Private*

Maintaining the status quo might be advantageous to Aquarion's current owners, but offers little appeal for public equity investors. As a stand-alone entity (either through the current ownership structure or an equitization, as we discuss below), Aquarion could choose to participate in the consolidation theme as an acquirer; however, the current financial leverage at the parent may be a limiting factor.

### *IPO*

An IPO would add another publicly traded water utility to the sector, which would generally be positive for public equity investors, as it would offer another avenue for sector-specific diversification. However, due to the limited historical context that investors would have for Aquarion, we estimate a trading range between the industry average multiple and a 10% discount to the average multiple. For purposes of our analysis we look at an implied market value based on estimated 2016 earnings of $35MM and a 2016 industry multiple of 26.2x. This implies a fair market equity value of approximately $825MM–$917MM for Aquarion Company on a stand-alone basis, which would put the stock roughly in the middle of the pack on a market capitalization basis among the publicly traded water utilities. However, sanity checking this math against our Enterprise Value math assuming a sale of the company (see below) indicates our equity value range may be overly generous. The amount of parent company leverage could result in an even steeper discount.

FIGURE 10

**Market Capitalization Ranking Including Theoretical Aquarion Company**

| Ticker | | Market Cap ($mn) |
|---|---|---|
| AWK | American Water Works | $13,644 |
| WTR | Aqua America Inc | $5,681 |
| CWT | California Water Service Group | $1,642 |
| AWR | American States Water | $1,611 |
| SJW | SJW Corp | $970 |
| | Aquarion Company - theoretical | $825-$917 |
| CTWS | Connecticut Water Service | $603 |
| MSEX | Middlesex Water Company | $583 |
| YORW | York Water Company | $437 |

Source: Barclays Research, Thomson One

### *Sale of the Company*

A potential sale of Aquarion would likely attract interest from publicly traded IOUs, infrastructure investors, or other strategic investors. Using the EV/EBITDA-trailing metrics from electric-gas acquisitions shown in Figure 7 as a proxy, we estimate potential Enterprise Value in the range of $1.1 billion to $1.4 billion. Applying the historical P/E transaction multiples would result in an Enterprise Value closer to $1.5 billion. As we mentioned, a sale of the company would not necessarily put Aquarion back on public equity investors' radar screens, as the assets could simply transfer to another private owner.

FIGURE 11

**Aquarion Company Theoretical Valuation Analysis**

| | ($ in millions) |
|---|---|
| **Equity Value** | |
| *Assumptions:* | |
| Net Income | $35 |
| Average 2016 market value multiple | 26.2x |
| Discount/premium | -10% - 0% |
| Theoretical Market Value | $825 - $917 |
| **Enterprise Value** | |
| *Assumptions:* | |
| EBITDA | $115 |
| Historical transactions EV/EBITDA range | 9.7x - 12.5x |
| Theoretical Enterprise Value | $1,100 - $1,400 |
| *Assumptions:* | |
| Net Income | $35 |
| Historical transaction P/E trailing multiple | 21.9x - 23.3x |
| Total debt | $750 |
| Theoretical Enterprise Value | $1,500 - $1,550 |

## Rate Cases and California Cost of Capital

AWK and WTR each have rate cases pending in several jurisdictions, which is typical for these multi-jurisdictional utilities. The companies continue to receive reasonable final orders, reducing the risk of unpredictable or adverse outcomes. AWR is on the second year of its three-year water rate plan and will file a new water general rate case in July for rates effective 2019–2021. Earlier this month, AWR filed an electric rate case for rates effective 2018–2021. A final decision in that case is scheduled by year-end 2017.

## CA Cost of Capital

On April 3, 2017, after being denied an extension of the existing authorization by the California Public Utilities Commission (CPUC), four California water companies filed their Cost of Capital applications for 2018–2020: California-American Water Company (AWK), Golden State Water Company (AWR), California Water Service Company (CWT), and San Jose Water (SJW Group; SJW $45.74; Not Rated). ALJ Karl Bernesderfer and Commissioner Martha Guzman Aceves have been assigned and a procedural schedule is expected in short order.

FIGURE 12

**California Cost of Capital**

| | AWR | AWK | CWT | San Jose Water Co. |
|---|---|---|---|---|
| Docket # | A.17-04-002 | A.17-04-003 | A.17-04-006 | A.17-04-001 |
| ***Requested:*** | | | | |
| ROE | 11.00% | 10.80% | 10.75% | 10.75% |
| Equity Ratio | 57.00% | 55.40% | 53.40% | 53.28% |
| Cost of Debt | 6.60% | 5.63% | 5.51% | 6.21% |
| Debt Ratio | 43.00% | 44.60% | 46.60% | 46.72% |
| ***Authorized:*** | | | | |
| ROE | 9.43% | 9.99% | 9.43% | 9.43% |
| Equity Ratio | 55.00% | 53.00% | 53.00% | 51.35% |
| Cost of Debt | 7.00% | 6.63% | 6.24% | 6.68% |
| Debt Ratio | 45.00% | 47.00% | 47.00% | 48.65% |

Note: The current ROE for AWR, CWT and San Jose Water was originally set at 9.99%. Due to a decline in the average Moody's Aa utility bond index rate, the Water Cost of Capital Mechanism was triggered, lowering the ROE to 9.43% effective 1/1/13. This adjustment did not apply to AWK.

Source: Barclays Research, California Public Utilities Commission

The California electric utilities – Southern California Edison (EIX), Pacific Gas & Electric (PCG), San Diego Gas & Electric and Southern California Gas (SRE) – reached a settlement with ORA (Office of Ratepayer Advocates) and TURN (The Utility Reform Network) to extend the existing Cost of Capital authorizations, with minor modifications to allowed ROE and cost of debt. The settlement was supported by a Proposed Decision from Commissioner Picker and was scheduled for a vote by the CPUC on April 27, 2017 However, one day before the CPUC meeting, the item was pulled from the agenda for unknown reasons. A coordinated ex parte meeting between the companies and commissioners occurred on May 8 and we are awaiting further updates as to the future of the settlement. It is unclear what impact, if any, the electric Cost of Capital proceeding will have on the water Cost of Capital proceeding.

Separately, CPUC staff recently issued a *white paper* on Cost of Capital, detailing shortcomings in the current methodology utilized by the commission. The paper highlights the opportunity for companies to over-earn the allowed equity return during the period. And cost of debt…It is also unclear what impact, if any, this paper will have on the electric Cost of Capital settlement or the water Cost of Capital proceeding.

**Risk Disclosure(s)**

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

**Guide to the Barclays Fundamental Equity Research Rating System:**

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

**Stock Rating**

**Overweight** - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Equal Weight** - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Underweight** - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Rating Suspended** - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

**Industry View**

**Positive** - industry coverage universe fundamentals/valuations are improving.

**Neutral** - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

**Negative** - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

**North America Power & Utilities**

| | | |
|---|---|---|
| AES Corp. (AES) | Alliant Energy (LNT) | Ameren Corp. (AEE) |
| American Electric Power (AEP) | American States Water Company (AWR) | American Water Works (AWK) |
| Aqua America (WTR) | Brookfield Infrastructure Partners LP (BIP) | Brookfield Infrastructure Partners LP (BIP_u.TO) |
| Brookfield Renewable Energy Partners LP (BEP) | Brookfield Renewable Energy Partners LP (BEP_u.TO) | California Water Service Group (CWT) |

**Distribution of Ratings:**

Barclays Equity Research has 1779 companies under coverage.

41% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 62% of companies with this rating are investment banking clients of the Firm; 76% of the issuers with this rating have received financial services from the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 51% of companies with this rating are investment banking clients of the Firm; 73% of the issuers with this rating have received financial services from the Firm.

16% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 37% of companies with this rating are investment banking clients of the Firm; 61% of the issuers with this rating have received financial services from the Firm.

**Guide to the Barclays Research Price Target:**

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

**Top Picks:**

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

**Explanation of other types of investment recommendations produced by Barclays Equity Research:**

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

**Disclosure of previous investment recommendations produced by Barclays Equity Research:**

**CE:** Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by Aqua America.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by Aqua America and/or in any related derivatives.

**Valuation Methodology:** Our price target is based on applying a 5% premium the water group average 2019 P/E multiple of 22.1x to our 2019 EPS estimate of $1.55.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Risks to WTR include a potential acquisition of a gas ldc or non water utility, an inability to maintain cost control, sub-par regulatory results from pending and future rate cases, a slowdown in acquisition activity that would impact sales growth potential, and potential tax reform.

**J:** Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by California Water Service Group and/or in any related derivatives.

**Valuation Methodology:** Our price target is premised upon applying the 2019 water group average multiple of 22.2x to our 2019 estimate of $1.34.

**Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target:** Main risks are regulatory given the significant impact the outcome and timing of the California general rate case can have. Also the California drought and associated recovery has impacted results in the past several years. Interest rates impact commission granted return on equity levels as well as impacting the rate paid on short term debt. National policy such as bonus depreciation and EPA actions will also impact spending levels and financing for the utility.

## Aqua America

# WTR: A Quiet Quarter

**Stock Rating/Industry View:** Equal Weight/Neutral
**Price Target:** USD 38.00
**Price (02-Aug-2016):** USD 34.40
**Potential Upside/Downside:** 10%
**Tickers:** WTR

**WTR Reported Q2 EPS of $0.33 and Reaffirmed 2016 Guidance**

WTR reported Q2 EPS of $0.33 in line with the consensus estimate of $0.34 and reaffirmed 2016 guidance $1.30-$1.35 versus the consensus estimate of $1.33. The main drivers for the quarter were lower expens regulated growth and rate case impacts partially offset by consumption, which was weather driven. The company expects to offset poor weather through continued cost controls and municipal acquisitions and a such expects to be in the middle of the $1.30-$1.35 guidance range. The water system acquisitions year date have added 5,396 customers (approximately 0.6% customer growth). The expectation is for an acceleration of acquisitions resulting from the increased number of states having fair value legislation for water system acquisitions.

Yesterday WTR announced a 7.5% increase in their annual dividend, consistent with expectations.

**Guide to the Barclays Fundamental Equity Research Rating System:**
Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry ("the industry coverage universe"). To see a list of companies that comprise a particular industry coverage universe, please go to http://publicresearch.barclays.com.
In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

**Stock Rating**

**Overweight** - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Equal Weight** - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Underweight** - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

**Rating Suspended** - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

**Industry View**

**Positive** - industry coverage universe fundamentals/valuations are improving.

**Neutral** - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

**Negative** - industry coverage universe fundamentals/valuations are deteriorating.

**Distribution of Ratings:**

Barclays Equity Research has 1762 companies under coverage.

40% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, i classified as a Buy rating; 59% of companies with this rating are investment banking clients of the Firm; 79% of the issuers with this rating have received financial services from the Firm.

40% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures is classified as a Hold rating; 50% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

16% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 45% of companies with this rating are investment banking clients of the Firm 68% of the issuers with this rating have received financial services from the Firm.

**Guide to the Barclays Research Price Target:**

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the sam 12-month period.

**Top Picks:**

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports ever quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to http://publicresearch.barclays.com.

**Explanation of other types of investment recommendations produced by Barclays Equity Research:**

Trade ideas, thematic screens or portfolio recommendations contained herein that have been produced by analysts within Equity Research shall remain open until they are subsequently amended or closed in a future research report.

**Disclosure of previous investment recommendations produced by Barclays Equity Research:**

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view previous investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to https://live.barcap.com/go/research/ResearchInvestmentRecommendations.

**Barclays legal entities involved in publishing research:**

Barclays Bank PLC (Barclays, UK)

## Aqua America

# WTR: Status Quo Remains

**Stock Rating/Industry View:** Equal Weight/Neutral
**Price Target:** USD 34.00
**Price (01-Nov-2016):** USD 29.99
**Potential Upside/Downside:** 13%
**Tickers:** WTR

**WTR reported Q3 results and reaffirmed 2016 guidance**

WTR reported $0.41 for Q3, in line with our estimate and a penny ahead of consensus.  2016 guidance was reaffirmed at $1.30-$1.35 with commentary on the call pointing to the middle to just below the middle of the range similar to previous quarters.  There was not much in terms of incremental information, however the following items should be of interest.

- Smaller tuck-in acquisitions are getting more competitive based on both strategics and other municipalities bidding.  This is especially the case in PA, IL and NJ based on recent legislation.

- The larger the acquisition, the more competitive they seem to be.  There has been a definite chase up in price; it remains to be seen whether under fair value legislation this will result in the winning bidders having to carry some level of goodwill.

- On the strategic front, WTR still sees opportunity to do a deal that leverages its regulatory expertise to the extent that it identifies a deal that would be accretive.  We continue to believe that the potential acquisition of a regulated asset or company outside of water is the primary overhang on the shares.

- Pennsylvania will see is DSIC filing in 2017 and a general rate case filed in 2018 for new rates in 2019.

FACTSET | streetaccount

**Barron's Summary**
**Saturday, June 18, 2016 08:17:57 PM (GMT)**

- **Cover**:
    - Barron's Penta picks the best watches of 2016 in eight different categories. (We're talking wristwatches here, not stocks to watch) (link).
- **Features**:
    - With bond yields historically low, stocks remain the best game in town. Barron's believes we'll see a worldwide relief rally if Britain votes to stay in the European Union on Thursday. Based on valuations and dividend yields, stocks in Europe and parts of Asia look more attractive than U.S. issues, and would get a bigger bump if Britain votes to stay. Gold could continue to strengthen as low inflation-adjusted interest rates remain. It's also a good time to hold some cash to balance your equity portfolio (and keep some dry powder on deck) (link).
    - **Square (SQ)**: Barron's is cautious on Square. While the payments processor continues to grow rapidly, it faces an uphill battle towards profitability as it navigates a tough, price-sensitive market and battles many competitors. The recent lockup expiration on more than 250M shares creates a menacing overhang. Square's focus on customers that operate volatile small businesses is also troublesome. Once retailers realize that they can pay less for similar services elsewhere, Square could wind up stuck with less-creditworthy borrowers who don't have other lending options. Shares could fall from a current $9 per share toward $5 to $6 a share (link).
    - Profile examines Jamie Wilhelm, manager of the Touchstone Focused fund. Buffett-inspired Wilhelm and his four analysts search for businesses that have a significant and sustainable competitive advantage, and then look to buy when a stock trades below their estimate of its intrinsic value (link).
    - Barron's interviews Russell Napier, a former equity-market and global-macro strategist at CLSA, who now publishes a global macroeconomic and strategy report on an online platform he cofounded for investment research. Napier has been bearish on equities and commodities since 2011, and expects deflation to eventually impact developed markets. With central banks running out of stimulus ammo, he think's we'll see a shift towards government stimulus to spur economic growth. Napier likes "U.S. 30-year bonds; Singapore government debt, which yields slightly more than U.S. government debt; gold; and Japanese equities hedged into the U.S. dollar." (link).
    - **Delphi Automotive (DLPH)**: Barron's is positive on auto-parts supplier Delphi Automotive, believing that concerns over peaking vehicle sales in the U.S. and China have created an opportunity to buy the stock at multiples that fail to reflect the company's expected earnings growth. Delphi's focus on fuel efficiency and electronics give it a more attractive growth portfolio than other parts suppliers. Delphi deserves to be valued more like the technology firm that it is than an auto-parts supplier. On a discounted cash flow basis, shares could be worth $110 vs a current price of $66.46. Shares could thus rise 60% or more over the next 12 months (link).
- **Columns**:
    - *The Trader:* Major U.S. indexes fell more than 1% in a week of volatile trading ahead of Britain's vote on EU membership; U.S. growth was also a concern, as the Fed lowered its forecasts of U.S. growth and future rate hikes; A U.K. exit from the EU could very well be priced in.
        - *Trader Extra:* Positive on **Bank of America (BAC)**, shares of which are 20% below recent highs; This looks like a good entry point, and the stock could rise 20% as near-term headwinds fade.
        - *Trader Extra:* Water utility **Aqua America (WTR)** is overvalued, though it could be supported as investors struggle to find yield.
    - *International Trader (Europe):* Not sure what to make of Brexit? No matter, **Adidas (ADS.GR)** and **Roche (ROG.SW)** should both thrive due to their durable businesses, solid balance sheets, and strong cash flow.
    - *International Trader (Asia):* Asian markets fell last week on concerns about the potential Brexit, though it's very much up for debate whether Asia has anything to worry about; CLSA tells clients to sell **Cheung Kong Infrastructure Holdings (1038.HK)** and **Power Assets Holdings (6.HK)**, which generate much of their revenue from U.K. operations; **Tata Motors (500570.IN)** would benefit from the cheaper pound that would follow a Brexit.
    - *Emerging Markets:* A big deficit and violent turmoil haven't prevented Turkey from outperforming other emerging markets as GDP growth remains solid; Positive mentions for **TAV Havalimanlari Holding (TAVHL.TI)** and **Coca-Cola Icecek (CCOLA.TI).**
    - *The Striking Price:* Shares of **Chipotle Mexican Grill (CMG)** could keep falling, and can still be played

with a put option strategy.
  - *Current Yield:* With rates low and a number of uncertainties looming (Brexit, slowing China, Fed), now is a good time to boost your cash holdings.
  - *Commodities Corner:* Hog production in the U.S. and Europe has expanded to meet China's massive demand, which should cap the recent climb in lean hog futures.
  - *Insider Transactions:* A list of recent purchases and sales of U.S. companies made by insiders.
  - *Up And Down Wall Street:* Market watchers are all revved up about the potential Brexit, but it could very well turn out to be a Y2K-style non-event; Democrats winning big in November would be positive for infrastructure stocks (JEC, PWR, FLR, AEGN, APOG, DY, EXP, EME, ROCK, GVA, GFF, HW, KBR, LII, NCS, NX, SSD, UFPI, VMC).
  - *Streetwise:* Wages are increasing after years of little or no real growth; In theory, companies like Netflix (NFLX), Nike (NKE), and Deere (DE), could outperform more labor-intensive outfits like FedEx (FDX) and VF Corp (VFC).
  - *Technology Trader:* **Microsoft (MSFT)** is paying a hefty premium for **LinkedIn (LNKD)**, but the price tag is not unreasonable if Microsoft can create synergies with its Azure machine learning.
  - *Speaking of Dividends:* Oil prices have stabilized and the rate of dividend cuts has slowed, but they aren't necessarily over.
  - *CEO Spotlight:* A profile of Stanley Bergman, CEO of **Henry Schein (HSIC)**, a multinational distributor of dental, veterinary, and medical products.
  - *Economic Beat:* Solid May retail sales and an upward revision to key parts of April's retail data somewhat brighten the economic outlook, albeit in an era of diminished expectations; Blame the internet retail stocks' poor performance.
  - *Follow-up:* Despite their big drop, shares of **Opko Health (OPK)** still look expensive.

**Industries:** Unspecified, Water Utilities, Alternative Energy, Constr. & Agric. Machinery, Constr. - Supplies & Fixtures, Construction - Raw Materials, Construction Services, Misc. Capital Goods, Apparel/Accessories, Auto & Truck Manufacturers, Auto & Truck Parts, Footwear, Beverages (Non-Alcoholic), Oil & Gas Operations, Forestry & Wood Products, Money Center Banks, Biotechnology & Drugs, Healthcare Services & Facilities, Major Drugs, Business Services, Recreational Activities, Iron & Steel, Restaurants, Computer & Internet Services, Misc. Fabricated Products, Software & Programming, Air Courier, Misc. Transportation
**Primary Identifiers:** 1038-HK, 500570-IN, 6-HK, ADS-DE, AEGN-US, APOG-US, BAC-US, CCOLA-TR, CMG-US, DE-US, DLPH-US, DY-US, EME-US, EXP-US, FDX-US, FLR-US, GFF-US, GVA-US, HSIC-US, HW-US, JEC-US, KBR-US, LII-US, LNKD-US, MSFT-US, NCS-US, NFLX-US, NKE-US, NX-US, OPK-US, PWR-US, ROCK-US, ROG-CH, SQ-US, SSD-US, TAVHL-TR, UFPI-US, VFC-US, VMC-US, WTR-US

Gabelli & Company

# Aqua America (WTR - $31.90 - NYSE) Lower '17 &'18; Growth Accelerates in 2019-Buy

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2018P | $1.45 | 22.1x | $39 | Dividend: $0.77 Current Return: 2.4% |
| 2017E | 1.35 | 23.7 | 37 | Shares O/S: 180.3 million |
| 2016A | 1.32 | 24.2 | 35 | 52-Week Range: $35.83 - $28.03 |
| 2015A | 1.26 | -- | -- | |

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about three million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

We continue to recommend long-term investor Buy WTR given its relatively low-risk business profile and long-term growth opportunities. We consider WTR to be one of the premier water utilities in the nation given its multi-state presence, strong financial condition, successful track record, and earnings and dividend outlook. Shares offer a 2.4% current return on the $0.77 per share annual dividend, which has increased at a 7.6% annual rate over the past ten years.

- WTR's 2017 earnings guidance range is $1.34-1.39 per share premised on 1.5-2.0% customer growth, 1-2% higher operating and maintenance (O&M) expense, $450 million of capital investment and 6-7% rate base growth. Earnings growth will continue to be driven by rate base investments, acquisitions, cost controls, general rate cases and infrastructure surcharges. In 2017, subsidiaries have received $1.8 million in annual rate increases and currently have requests totaling $8.0 million awaiting PUC decisions.

- We lowered our 2017 and 2018 earnings estimates to $1.35 and $1.45 per share, from $1.40 and $1.50 per share, respectrively, but maintained our 2019 earnings estimate of $1.60 per share. In 2012, the PA PUC which regulates $2.4 billion of WTR's $3.5 billion rate base authorized the use of repair tax deductions, which resulted in a significant ramp up in earnings and delayed the need for rate increases and/or quarterly distribution system improvement charges (DSIC). The program has resulted in signficnat customer bill savings but moderate earnings growth (following the initial 32% increase in 2013) over the last few years. The company plans to file for DSIC increases in 2017 and a ~15% annual rate increase in 2018 to be effective in 2019. As a result, we expect earnings growth to accelerate in 2019 and return to its historical high-single digit growth rate.

- The 2017-2019 capital investment program totals more than $1.2 billion, including $450 million in 2017, and is expected to lead to 6-7% annual rate base growth. Roughly 65% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, NC).

- Given strong cash flow and annual infrastructure surcharges, WTR has minimal external funding needs. As of December 31, 2016, the common equity ratio was 49%, and S&P credit rating was A+ for Aqua Pennsylvania.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Recent legislation in IL, IN, NJ and PA encourages consolidation by allowing the purchase price in rate base or applying uniform rates state-wide.

- The 2016 PA "fair-valuation" legislation has resulted in a dramatic acceleration of municipal water and wastewater evaluations. In other words, municipalities are engaging consulting firms to evaluate the value of water and wastewater systems. WTR currently has four pending municipal acquisitions adding 8,761 customers for a collective purchase price of $113.7 million and 70 municipal prospects representing 390,000 customers. We expect the pace of municipal acquisitions to accelerate.

- On February 23, WTR reported 2016 earnings of $1.32 per share compared with $1.26 per share for the same period last year. In 2016, WTR completed nineteen acquisitions adding 6,558 customers for a collective purchase price of $22.2 million. In 2016, WTR subsidiaries were awarded $5.5 million in annual rate increases.

**Valuation**

Shares trade at 23.7x and 22.1x our 2017 and 2018 earnings estimates and 311% of book value ($10.26 per share), which compares to group multiples of 24.1x and 22.8x earnings and 285% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. Our 2017-2018 PMVs are $37 and $39 per share, respectively, based on 3.5x book value. We continue to recommend purchase.

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about three million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

## Reason For Comment

As a result of a restructuring of the Gabelli & Company research department, we are terminating sell side coverage of this company as of May 1, 2018. The analyst has transitioned to an affiliated investment adviser. Gabelli & Company will no longer provide updates to our research or recommendations. Effective upon the termination of coverage, the last recommendation and estimates contained herein for this company should not be relied upon going forward.

## Final Recommendation – Buy

We continue to recommend long-term investors Buy WTR given its relatively low-risk business profile and long-term growth opportunities. We consider WTR to be one of the premier water utilities in the nation given its multi-state presence, strong financial condition, successful track record, and earnings and dividend outlook. Shares offer a 2.3% current return on the $0.82 per share annual dividend, which is secure and growing. Shares trade at 25.1x and 22.7x our 2018 and 2019 earnings estimates and 334% of book value ($10.52 per share), which compares to group multiples of 24.1x and 23.0x earnings and 285% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. Our 2018-2019 PMV estimates are $38 and $40 per share, respectively, based on 3.5x book value.

**Important Disclosures**

**ONE CORPORATE CENTER RYE, NY 10580 GABELLI & COMPANY TEL (914) 921-5130 FAX (914) 921-5098**

Gabelli & Company is the marketing name for the registered broker dealer G.research, LLC, which was formerly known as G.research, Inc., Gabelli & Company ("we" or "us") attempts to provide timely, value-added insights into companies or industry dynamics for institutional investors. Our research reports generally contain a recommendation of "buy," "hold," "sell" or "non-rated." We do not undertake to "upgrade" or "downgrade" ratings after publishing a report. We currently have reports on 382 companies, of which 59%, 30%, 1% and 9% have a recommendation of buy, hold, sell or non-rated, respectively. The percentage of companies so rated for which we provided investment banking services within the past 12 months is 0%, 0%, 0% and less than 1%.

Ratings

Analysts' ratings are largely (but not always) determined by our "private market value," or PMV methodology. Our basic goal is to understand in absolute terms what a rational, strategic buyer would pay for an asset in an open, arms-length transaction. At the same time, analysts also look for underlying catalysts that could encourage those private market values to surface.

A **Buy** rated stock is one that in our view is trading at a meaningful discount to our estimated PMV. We could expect a more modest private market value to increase at an accelerated pace, the discount of the public stock price to PMV to narrow through the emergence of a catalyst, or some combination of the two to occur.

A **Hold** is a stock that may be trading at or near our estimated private market value. We may not anticipate a large increase in the PMV, or see some other factors at work.

A **Sell** is a stock that may be trading at or above our estimated PMV. There may be little upside to the value, or limited opportunity to realize the value. Economic or sector risk could also be increasing.

We prepared this report as a matter of general information. We do not intend for this report to be a complete description of any security or company and it is not an offer or solicitation to buy or sell any security. All facts and statistics are from sources we believe to be reliable, but we do not guarantee their accuracy. We do not undertake to advise you of changes in our opinion or information. Unless otherwise noted, all stock prices reflect the closing price on the business day immediately prior to the date of this report. We do not use "price targets" predicting future stock performance. We do refer to "private market value" or PMV, which is the price that we believe an informed buyer would pay to acquire 100% of a company. There is no assurance that there are any willing buyers of a company at this price and we do not intend to suggest that any acquisition is likely. Additional information is available on request.

As of March 31, 2018,, our affiliates beneficially own on behalf of their investment advisory clients or otherwise less than 1% of Aqua America. Because the portfolio managers at our affiliates make individual investment decisions with respect to the client accounts they manage, these accounts may have transactions inconsistent with the recommendations in this report. These portfolio managers may know the substance of our research reports prior to their publication as a result of joint participation in research meetings or otherwise. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report. In addition, the undersigned lead analyst(s) has not and will not receive any compensation for providing a specific recommendation or view in this report. The analysts, who wrote this report, or members of their household, owns no shares of the above mentioned companies.

# -Water Utilities In Focus- Growing Market Share

## Investment Summary

The October 15-17, 2017 National Association of Water Companies (NAWC) Water Summit in Seattle, WA reinforced our view that water utility stocks are fundamentally strong and positioned to benefit from long-term infrastructure investment and consolidation. The NAWC has increased its focus on growing the investor-owned market share of the nation's water systems from the current 15% private/85% municipal and wastewater systems from 3% private/97% municipal. The 2014-2017 California drought highlights the need for water supply investment and management in the Arid West while the Flint, MI lead pipe events highlight the need for pipe replacement throughout the nation. Recent and pending state legislative and regulatory actions provide solutions to historical consolidation challenges and enable an easier course to the acquisition of municipal water and wastewater systems.

We consider water utilities to be among the lower risk groups in the equity markets, including strong credit ratings, defensive business profile, constructive regulation and considerable investment opportunity. The relatively small group of publicly traded companies offers an average 1.9% current return and mid-to-high single digit annual earnings growth. Over 2011-2016, the water utility sector grew EPS at a 9.3% CAGR and the nation's largest water utility continues to forecast 7-10% annual EPS growth. Strong earnings growth is driven by rate base investment, acquisitions and privatization.

The ten publicly-traded water utilities generated median and average year-to-date price changes of 17% and 19% through October 19, 2017 and trade at relatively high valuation multiples including 30.0x and 28.2x as well as 320% of book value. We recommend investors Buy shares of American Water Works (AWK) and Aqua America (WTR).

**Water Utility Investment Thesis**

We continue to expect water utility stocks to deliver low-risk mid-to-high single digit earnings and dividend growth for foreseeable future. While the sector has been ripe for growth for some decades, we expect growth to accelerate over the next several years. Our investment thesis is summarized below:

- Extremely fragmented industry (55,000 separate water systems)
- Roughly 80-85% of population served by municipal systems (16% investor-owned)
- Significant investment required to maintain and upgrade infrastructure
- Municipalities lack funding, desire and expertise
- Only ten publicly-traded water utilities
- Opportunity to grow through rate base investment, consolidation, and privatization
- Legislative and regulatory principles implemented to encourage consolidation

The following are key takeaways from the NAWC:

- **Consolidation Enabling Legislation and Regulation:** The Northeastern water managements expressed increased enthusiasm over the number of potential willing municipal sellers driven by recent legislative and political actions. On June 14, 2017, the Pennsylvania Public Utilities Commission (PPUC) approved WTR's acquisition of the New Garden Township (2,100 wastewater customers) for $29.5 million. The transaction was the first to test Pennsylvania's Act 12 (otherwise known as fair market value recognition) which became state law in April of 2016. Act 12 allows the PPUC to recognize the lesser of the fair market value or purchase price for municipal water and wastewater systems acquisitions in rate base. Fair market value is determined by averaging two estimated market valuations performed by PPUC approved consultants. Act 12 essentially allows goodwill into rate base as water and wastewater system market values are normally 1.3-2.0x rate base. Forms of fair market valuation adjustments are allowed in IL, NJ, CA, PA, MO, and IN. In addition, PA offers water and wastewater rate consolidation which allows for acquisition premiums of water and wastewater systems to be spread over a larger customer base.

- **Water Quality Accountability Act (WQAA):** Over the past decade, some municipal systems have deferred infrastructure investment and the regulatory agencies have delayed or neglected compliance enforcement. On July 21, 2017, New Jersey passed the WQAA that requires the state's water utilities to meet NJ Department of Environmental Protection (NJDEP) water quality and infrastructure standards and provide plans for improvement. The Act places accountability on municipal systems to invest in infrastructure or provide a plan of system improvement. We believe forcing municipalities to "comply" or "spend" will encourage some to seek alternatives to relieve the liability. In other words, the WQAA will "shake apples from the tree" and at least initiate the discussion of privatization.

- **Infrastructure Need Translates into Rate Base Growth and Privatization Opportunities:** Water utilities forecast significant infrastructure investment or rate base growth with a considerable portion (~60%) of capital allocated toward pipe replacement. In its Fifth (2015) national assessment and report to Congress, the EPA found that the nation's 52,000 community water systems and 21,400 not-for-profit non-community water systems needs to invest an estimated $384.2 billion in infrastructure improvement over the next twenty years. Roughly $247.5 billion, or 64.4%, of the national need is for transmission and distribution, $72.5 million, or 18.9%, for treatment and $39.5 million, or 10.3%, for storage. The 41,801 small systems serving 3,300 people or less require the greatest per capita need while the larger systems (over 100,000 people) require the least per capita investment. In 2017, the American Society of Civil Engineers (ASCE) gave the nation's drinking water infrastructure a grade of "D" and the wastewater infrastructure a grade of "D+". Improved regulatory principles allow greater opportunity to earn the allowed returns. Some examples inlcude revenue stabilization mechanisms, plant recovery mechanism, expense riders, and forward looking test years.

- **Distribution Surcharges for Pipe Replacement:** The average water pipe replacement rate is roughly 200 years, which is double the useful life of the pipes. Further, the American Water Works Association (AWWA) estimates that investment needs for buried drinking water infrastructure totals more than $1 trillion over the next 25 years. In several states, including IL, IA, IN, MO, NJ, NY, PA, TN, VA, and WV, regulatory principles allow for pipe replacement surcharges on a quarterly, semi-annual or annual basis. The timely investment returns translate into solid earnings growth.

- **Drought Over But not Forgotten:** On April 7, 2017, California Governor Brown declared an end to the 2014-2017 state-wide drought emergency and the state's water utilities ended mandatory conservation and rationing. The drought's financial impact on the publicly-traded water utilities was significantly minimized by the many financial protections afforded by the California Public Utility Commission (CPUC) regulation. The Water Revenue Adjustment Mechanism (WRAM) decouples consumption from revenues while the Modified Cost Balancing Account (MBCA) ensures recovery of changes in water supply costs. In addition, the drought highlighted significant investment in infrastructure and supply management required in the state and other arid geographies.

- **Allowed ROE's Likely Bottomed:** By year-end, California's four largest water utilities, AWK, CWT, AWR, and SJW, expect to receive a cost-of-capital decision, including allowed ROE's for a two or three-year period. In April 2017, the water utilities filed updated cost-of-capital (COC) applications to include allowed ROE's of 10.75-11.0% and equity ratio's ranging from 50-57% as well as a capital adjustment mechanism. California publicly-traded water utilities are currently allowed a 9.43% ROE following a formulaic "55-basis point" reduction from 9.99%, in January of 2013. In mid-2012, the California Public Utility Commission (CPUC) set the allowed ROE for the state's publicly-traded water utilities at 9.99% (53-55% common equity ratio) for the years 2012-2014, subject to a Cost of Capital Adjustment (CCA). The U.S. Treasury yields have risen nearly 100-basis points to 2.35% since reaching a bottom in June of 2016 when the 10-year US Treasury bond yielded 1.45%.

- **Military Based Privatization**: The privatization of the water and wastewater systems of US Department of Defense (DOD) Army and Airforce bases has proven to be a low-risk and "regulated-like" opportunity for water utilities. AWK (12 bases under management) and AWR (11 bases under management) have proven to be leaders. On October 2, 2017, AWR announced a 50-year $601 million contract to operate, maintain, and provide construction management for the water and wastewater systems of the U.S. Army's Fort Riley military base in Kansas. In 2017, AWR expects military base privatizations to contribute $0.34-$0.38 per share of our $1.70 per share estimate driven by ongoing construction activity, price redeterminations, and cost controls. On September 28, 2017, AWK announced a 50-year $490 million contract for ownership, operation and maintenance of the Wright-Patterson Air Force Base in Ohio. The Army, Air Force and Navy have 30-50 bases that could potentially be privatized, including 5-10 currently actively pursuing privatization.

- **Takeover Potential:** On June 2, 2017, EverSource (ES-62.13-Hold), a large New England electric distribution utility, agreed to buy Aquarion Water Company for an enterprise value of $1.675 billion, comprised of $880 million in cash and $795 million of assumed debt. Aquarion is the largest water utility in New England and serves nearly 230,000 customers in CT, MA, and NH. The transaction is expected to close by 12/31/17 after DOJ and state regulatory approvals are received. While it had been several years since a major water utility has been acquired, we consider the remaining utilities to be attractive candidates for private equity and or larger strategic utilities. Selected recent and historical acquisitions are listed below:

**Table 2** **Select Water Utility Acquisitions**

**Valuations Remain Higher Than Electric and Gas Utilities**

The water utility group's price to 2017 and 2018 earnings multiples of 30.1X, and 28.1X and its median price-to-book multiple of 319%, remain higher than regulated electric distribution utility (20.1X and 19.2X; 195%) and gas distribution utility (25.5X and 24.5X; 220%) multiples. Water utilities have traded at premium valuations over the past fifteen years owing to potential takeovers, lower risk and more consistent earnings growth potential. Historical takeover multiples have averaged roughly 25-30X forward earnings, 250-300% of book value and 1.25-1.5X rate base, but we believe a willing seller in the current environment would require higher multiples.

The sector's low-risk is a function of the following: a monopoly service territory, high barriers to entry, no alternative product, minimal commodity price exposure, price inelasticity, public and regulatory support for price increases, regulated rates of return and strong financial conditions. High quality financial conditions are evidenced by superior credit ratings and solid balance sheets. As can be seen in Table 1, Standard & Poor's rates the credit of most water utilities 'A' or higher.

**Why Such High Takeover Multiples?**

Over the past twenty years, electric utilities, European and Canadian utilities and larger, well-capitalized water utilities bought and sold water utilities as aspirations of consolidating and privatizing the U.S landscape. We believe premium multiples are warranted due to the scarcity of potential vehicles to participate in the low-risk earnings growth and longer-term consolidation and privatization potential. The inefficiencies of municipal and smaller water providers have been tolerated only due to the affordability of residential water utility bills and the fact that municipal water costs are often partially subsidized. With over 55,000 water systems in the U.S., 50,000 of which serve costumer bases under 3,000, and 80% of the population served by municipal systems, we expect the long-term consolidation trend to continue.

**American Water Works (AWK - $87.76 -NYSE) Nation's Premier Water Utility; 7-10% Growth - Buy**

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $3.45 | 25.4x | $93 | Dividend: $1.66 Current Return: 1.9 % |
| 2018P | 3.20 | 27.4 | 87 | Shares O/S: 178.3 million |
| 2017E | 3.00 | 29.3 | 82 | 52-Week Range: $87.87 - $69.41 |
| 2016A | 2.84 | - | - | BVPS (6/30/17): $22.50 |

**COMPANY OVERVIEW**

American Water Works (Voorhees, NJ) is the nation's largest investor-owned water/wastewater utility with regulated utilities in sixteen states (NJ-25% of 2016 regulated revenues; PA-22%, MO-10%, IL-10%) and serves 3.3 million customers. Market-based Business (MBB) generates ~10% of ongoing earnings and includes Keystone, Contract Services (military bases and municipalities) and Homeowner Services.

**Reason For Comment**

We reiterate our Buy recommendation on AWK. We regard AWK as the premier water utility in the nation with a unique long-term low-risk growth outlook. Given scale, geographic/regulatory diversity, managerial and technical expertise, and strong financial condition, AWK is positioned to capitalize on the long-term need to upgrade water and wastewater infrastructure as well as privatize and consolidate the fragmented industry. Shares offer a 1.9% current return on the $1.66 per share annual dividend, which represents a relatively low 55% payout of the mid-point of management's 2017 earnings guidance of $2.98-3.08 per share.

- AWK's 2017 earnings guidance range is $2.98-3.08 per share and targets long-term growth of 7-10% per annum consisting of 4-6% from rate base growth, 1-2% from regulated utility acquisitions, and 2% from non-regulated businesses. AWK expects the regulated utility to generate 85-90% of earnings for the foreseeable future. Our 2017-2019 earnings estimates are $3.00, $3.20 and $3.45 per share, respectively.

- Management expects ~5-6% annual rate base growth from $10.694 billion at year-end 2016 (10.783 billion ao 3/31/2017) driven primarily by pipe replacement due to the aging of infrastructure. In addition to the $65.4 million of revenue increases awarded this year, AWK subsidiaries have requests totaling $366.1 million in annual increases pending final orders. On October 16, 2017, Penn-American announced a rate settlement agreement calling for a $62 million annual revenue increase to be effective January 1, 2018. The case was initiated in April of 2017 when AWK requested a $108 million, or 16%, increase based on a 10.8% ROE ($3.2 billion of rate base). On June 30, 2017, Missouri-American requested an $84 million increase based on a 10.8% ROE ($1.35 billion of rate base). On July 1, 2017, California-American requested a $34.6 million annual revenue increase ($493.9 million) and has a Cost-of-Capital proceeding pending where it requested a 10.8% ROE and 55.4% equity ratio for the period 2018-2020. On September 15, 2017, New Jersey-American requested a $129.3 million annual revenue increase based on a 10.8% allowed ROE.

- AWK's five-largest water subsidiaries (and some smaller) operate in states (IL, IN, MO, NJ, NY, PA, TN and WV) that allow frequent/timely rate recognition of pipe replacement. Ongoing improvement in the regulatory process, including future test years in nine states (CA, HI, IL, IN, KY, NY, PA, TN and VA), revenue decoupling in three states (CA, IL and NY) and consolidated (uniform) tariffs in nine states (IA, IL, IN, KY, MD, MO, NJ, PA and WV) bode well.

- AWK currently has 15 acquisitions pending in six states to add 33,887 customers (9,368 water; 24,519 wastewater). Year-to-date, AWK closed 13 acquisitions adding 15,649 customers (15,254 water; 395 wastewater). In 2016, AWK completed fifteen acquisitions in eight states adding over 42,000 total customers (1,900 water; 40,300 wastewater).

- Over 2017-2021, AWK plans to invest $6.7-7.3 billion and achieve a 32.5% O&M efficiency ratio in order to minimize customer rate impacts to 2.5% per annum. The $6.7-7.3 billion budget, includes $5.9 billion regulated investment, $0.6-1.2 billion in acquisitions, and $200 million other. The 2017 capital investment totals $1.5 billion, ($1.2 billion regulated).

## Valuation

Shares trade at 29.3x and 27.4x our 2017 and 2018 earnings estimates of $3.00 and $3.20 per share compared to the water utility group, which currently trades at 30.1x and 28.1x 2017 and 2018. On a price-to-book value basis, AWK shares trade at 390% of tangible book value versus group average multiples of 319%. We use a book value multiple of 3.5x forward book value given the recent legislation that could accelerate the consolidation and privatization dynamics of the industry. Our 2018 and 2019 PMV estimates are $87 and $93 per share, respectively.

## Aqua America (WTR - $36.02 - NYSE) PA DSIC Filed; Historical Growth to Return - Buy

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $1.60 | 22.5x | $41 | Dividend: $0.82 Current Return: 2.3% |
| 2018P | 1.45 | 24.9 | 39 | Shares O/S: 180.3 million |
| 2017E | 1.35 | 26.7 | 37 | 52-Week Range: $36.27 - $28.03 |
| 2016A | 1.32 | -- | -- | Book value (6/30/2017): $10.52 |

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about three million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

We continue to recommend long-term investors Buy WTR given its relatively low-risk business profile and long-term growth opportunities. We consider WTR to be one of the premier water utilities in the nation given its multi-state presence, strong financial condition, successful track record, and earnings and dividend outlook. Shares offer a 2.3% current return on the $0.82 per share annual dividend, which has increased at a 8% annual rate over the past ten years.

- WTR's 2017 earnings guidance range is $1.34-1.39 per share premised on 1.5-2.0% customer growth, 1-2% higher operating and maintenance (O&M) expense, $450 million of capital investment and 6-7% rate base growth. Our 2017-2019 earnings estimates remain $1.35, $1.45 and $1.60 per share, respectively. Earnings growth will continue to be driven by rate base investments, acquisitions, cost controls, general rate cases and infrastructure surcharges. In 2017, subsidiaries have received $11.1 million in annual rate awards and currently have requests totaling $14.0 million awaiting PUC decisions.

- Aqua-PA requested a 2.5% distribution system improvement charges (DSIC) increase effective October 1, 2017. We expect another two 2.5% requests to be effective in January and April of 2018 to be followed by a full PA rate increase to be effective in the first half of 2019. As a result, we expect earnings growth to accelerate in 2018 and return to its historical high-single digit growth rate. In 2012, the PA PUC which regulates $2.4 billion of WTR's $3.5 billion rate base authorized the use of repair tax deductions, which resulted in a significant ramp up in earnings and delayed the need for rate increases and/or quarterly (DSIC). The program has resulted in significant customer bill savings but moderate earnings growth (following the initial 32% increase in 2013) over the last few years.

- The 2017-2019 capital investment program totals more than $1.2 billion, including $450 million in 2017, and is expected to lead to 6-7% annual rate base growth. Roughly 65% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, and NC). Given strong cash flow and annual infrastructure surcharges, WTR has minimal external funding needs. As of June 30, 2017, the common equity ratio was 48%, and S&P credit rating was A+ for Aqua Pennsylvania.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Recent legislation in IL, IN, NJ and PA encourages consolidation by allowing the purchase price in rate base or applying uniform rates state-wide. The 2016 PA "fair-valuation" legislation has resulted in a dramatic acceleration of municipal water and wastewater evaluations. In other words, municipalities are engaging consulting firms to evaluate the value of water and wastewater systems.

- Year-to-date, WTR bought three small water systems adding 1,002 customers for $5.8 million and has four acquisitions pending to add 11,087 customers for $120.5 million. In addition, WTR identified 70 municipal prospects representing 500,000 customers. We expect the pace of municipal acquisitions to accelerate. In 2016, WTR completed nineteen acquisitions adding 6,558 customers for a collective purchase price of $22.2 million.

- First-half 2017 earnings were $0.62 per share compared with $0.63 per share for the same period last year. Lower results were due to lower consumption and lower non-regulated results partially offset by higher rates.

**Valuation**

Shares trade at 26.7x and 24.9x our 2017 and 2018 earnings estimates and 343% of book value ($10.52 per share), which compares to group multiples of 24.1x and 22.8x earnings and 285% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. Our 2017-2018 PMVs are $37 and $39 per share, respectively, based on 3.5x book value.

## American States Water (AWR-$55.61-NYSE) — Leader in Military Privatization - Hold

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $1.90 | 29.2x | $45 | Dividend: $1.02 Current Return: 1.8% |
| 2018P | 1.80 | 30.8 | 43 | Shares O/S: 36.6 million |
| 2017E | 1.70 | 32.7 | 42 | 52-Week Range: $55.86 - $37.47 |
| 2016A | 1.62 | - | - | BVPS (6/30/2016): $13.97 |

**COMPANY OVERVIEW**

American States Water (San Dimas, CA) is the parent company for Golden States Water Company (GSWC) and American States Utilities Services (ASUS). GSWC is a regulated water utility serving 256,000 customers throughout Northern, Coastal and Southern CA, as well as providing electric distribution to 23,000 customers in Big Bear, CA. ASUS provides non-regulated water/wastewater and construction services to ten military bases across the nation.

**Reason for Comment**

AWR is a high-quality utility with a strong balance sheet (55% common equity), high credit ratings (S&P: 'A+') and successful non-regulated water/wastewater contract services business..

- Our 2017-2019 earnings estimates remain $1.70, $1.80 and $1.90 per share, respectively. The outcomes of several pending regulatory filings will determine AWR's earnings power and growth potential, including a pending cost of capital filing, the 2019-2021 GRC, and a pending electric rate case.

- In July of 2017, GSWC filed its 2019-2021 GRC and requested a ~$125 million annual capital budget. A decision is expected in the fourth quarter of 2018. In April 2017, GSWC filed an updated cost-of-capital application to include an allowed ROE of 11.0%, which compares to the current allowed ROE of 9.43%. A decision is expected by year-end 2017. On May 1, 2017, AWR filed an electric rate case for the years 2018-2021 with a decision expected by the end of 2017.

- In 2017, AWR expects ASUS to contribute $0.34-0.38 per share driven by ongoing construction activity, price redeterminations, and cost controls. ASUS serves ten military bases under 50-year contracts and has ongoing economic price adjustments as well as pursuing new business with roughly twenty RFPs outstanding for the privatization of new bases. In mid-2017, ASUS began operating the water/wastewater systems at Eglin Air Force Base (Florida) under a 50-year contract. The value of the contract is estimated at approximately $510 million over the 50-year period and is subject to annual economic price adjustments.

- On October 2, 2017, AWR announced that it had been awarded a 50-year $601 million contract to operate, maintain, and provide construction management for the water and wastewater systems of the U.S. Army's Fort Riley military base in Kansas. At over 100,000 acres, Fort Riley has a daytime population of nearly 25,000. With the addition of Fort Riley, ASUS will be providing water and wastewater utility services at eleven military bases located within eight states.

- AWR reported second quarter 2017 earnings of $0.49 per share (excludes $0.13 per share gain on sale of small system) compared to $0.45 per share last year. On June 8, 2017, the Casitas Municipal Water District acquired GSWC's 2,900 customer Ojai water system by eminent domain for $34.3 million cash. As a result, AWR recorded a non-recurring $0.13 per share gain in the second quarter. Results by segment are outlined below:

- On April 7, 2017, Governor Brown declared an end to the drought emergency and GSWC ended its mandatory conservation and rationing. Following five years of drought, California experienced one of the wettest years in history in 2016. The drought's financial impact on AWR and its peers was significantly minimized by the many financial protections afforded by the publicly-traded utilities per California Public Utility Commission (CPUC) regulation. The Water Revenue Adjustment Mechanism (WRAM) decouples consumption from revenues while the Modified Cost Balancing Account (MBCA) ensures recovery of changes in water supply costs.

## Valuation

Shares offer a 1.8% current return on the $1.02 per share annual dividend, which represents a 60% payout ratio of our 2017 earnings estimate, which allows for dividend growth. We recommend investors Hold AWR shares given our belief that the water utility's strong fundamentals are fairly recognized in the share price. AWR shares trade at 32.7x and 30.8x our 2017 and 2018 earnings estimates compared to peer group multiples of 30.1x and 28.1x, respectively. Our 2018 and 2019 PMV estimates are $43 and $49 per share, respectively, which are based on a 300% price-to-book value multiple.

## California Water Service Group (CWT-$43.25-NYSE) EPS Rebound on GRC & Drought End -Hold

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $1.50 | 28.8 x | $48 | Dividend: $0.72 Current Return: 1.7% |
| 2018P | 1.40 | 30.9 | 46 | Shares O/S: 48.0 million |
| 2017E | 1.30 | 33.3 | 43 | 52-Week Range: $43.75 - $29.25 |
| 2016A | 1.01 | - | - | Book value (2Q/2017): $13.78 |

**COMPANY OVERVIEW**

Located in San Jose, CA, California Water Service Group is the third-largest publicly traded water utility in the U.S., providing service to roughly two million people (510,000 customers) primarily in California (482,400 customers), but also in Washington (16,700 customers), New Mexico (8,000 customers) and Hawaii (4,400 customers). Historically, ~50% of CWT's water supply is obtained from wells, ~45% is purchased and ~5% is from surface supplies.

**Reason For Comment**

We continue to view CWT as a high-quality water utility holding with healthy earnings and dividend growth potential, a strong balance sheet (54% common equity), high investment grade credit ratings (S&P rates credit A+) and a constructive regulatory environment. We expect recent and pending rate relief combined with constructive regulatory mechanisms to result in low-risk 5% annual earnings growth for the foreseeable future.

- Our 2017-2019 earnings estimates remain $1.30, $1.40 and $1.50 per share, respectively. In 2015 and 2016, CWT earned an 8.45% and 9.03% regulatory return on equity (ROE) when excluding CWIP, which compares to the 9.43% ROE allowed.

- In December 2016, the CPUC approved the 2017-2019 General Rate Case (GRC) settlement, which resulted in a $45 million annual revenue increase effective January 1, 2017, with another $17.2 million to be implemented in 2018 and $16.3 million in 2019. The order authorizes $658.8 million in water system improvements over the three-year period of 2016-2018, including $197.3 million subject to the CPUC's advice letter procedure. CWT expects an additional $30 million of annual revenues associated with advice letter projects through 2019.

- CWT's capital budget totaled $229 million in 2016 and is expected to be $200-220 million in 2017 and $215 million in 2018. CWT forecasts rate base CAGR of 8.5% from $1.058 billion in 2016 to $1.399 billion in 2019.

- In April 2017, CWT and three other water utilities, filed an updated cost-of-capital (COC) application to include an allowed ROE of 10.75% and a 53.4% equity ratio as well as a capital adjustment mechanism similar to that last adopted for the company. The CPUC schedule for the application anticipates an ALJ recommendation as early as November 14, 2017 with a final decision on the matter on December 14, 2017 with the COC effective for 2018 and 2019. The next GRC will be filed in July of 2018 for the 2020-2022 period.

- In April of 2017, the state of California's five year drought essentially ended following one of the wettest years in history in 2016. In 2015, CWT's CA's water consumption declined nearly 30% compared to 2013 and was in compliance with Governor Brown's 25% mandatory water reduction order (April 1, 2015). In 2017, water sales have increased 3.5%, but remain below levels used for revenue requirements.

- The drought's financial impact on CWT and its peers continues to be significantly minimized by the many financial protections and CPUC regulatory principles. The Water Revenue Adjustment Mechanism (WRAM) decouples consumption from revenues while the Modified Cost Balancing Account (MBCA) ensures recovery of changes in water supply costs. The California State Water Resources Control Board is pursuing permanent water use regulations which will likely be adopted by the CPUC.

- In May, CWT filed an application to include the Travis Air Force Base (TAFB) in its service area. On September 30, 2016, CWT entered into a 50-year agreement to acquire TAFB's water utility assets in 2018. The contract calls for CWT to make $12.7 million of initial capital investments and $52 million over the contract life.

## Valuation

Shares trade at 33.3x and 30.9x our 2017 and 2018 earnings estimates compared to peer group multiples of 30.1x and 28.1x, respectively, and provide a 1.7% current return on the $0.72 annual dividend, which we consider secure with growth potential. Our 2018 PMV is $46 per share based on 300% of book value.

**ONE CORPORATE CENTER RYE, NY 10580 GABELLI & COMPANY TEL (914) 921-5130 FAX (914) 921-5098**

Gabelli & Company is the marketing name for the registered broker dealer G.research, LLC, which was formerly known as G.research, Inc Gabelli & Company ("we" or "us") attempts to provide timely, value-added insights into companies or industry dynamics for institutional investors. Our research reports generally contain a recommendation of "buy," "hold," "sell" or "non-rated." We do not undertake to "upgrade" or "downgrade" ratings after publishing a report. We currently have reports on 568 companies, of which 50%, 33%, 3% and 14% have a recommendation of buy, hold, sell or non-rated, respectively. The percentage of companies so rated for which we provided investment banking services within the past 12 months is 0%, 0%, 0% and less than 1%.

Ratings

Analysts' ratings are largely (but not always) determined by our "private market value," or PMV methodology. Our basic goal is to understand in absolute terms what a rational, strategic buyer would pay for an asset in an open, arms-length transaction. At the same time, analysts also look for underlying catalysts that could encourage those private market values to surface.

A **Buy** rated stock is one that in our view is trading at a meaningful discount to our estimated PMV. We could expect a more modest private market value to increase at an accelerated pace, the discount of the public stock price to PMV to narrow through the emergence of a catalyst, or some combination of the two to occur.

A **Hold** is a stock that may be trading at or near our estimated private market value. We may not anticipate a large increase in the PMV, or see some other factors at work.

A **Sell** is a stock that may be trading at or above our estimated PMV. There may be little upside to the value, or limited opportunity to realize the value. Economic or sector risk could also be increasing.

We prepared this report as a matter of general information. We do not intend for this report to be a complete description of any security or company and it is not an offer or solicitation to buy or sell any security. All facts and statistics are from sources we believe to be reliable, but we do not guarantee their accuracy. We do not undertake to advise you of changes in our opinion or information. Unless otherwise noted, all stock prices reflect the closing price on the business day immediately prior to the date of this report. We do not use "price targets" predicting future stock performance. We do refer to "private market value" or PMV, which is the price that we believe an informed buyer would pay to acquire 100% of a company. There is no assurance that there are any willing buyers of a company at this price and we do not intend to suggest that any acquisition is likely. Additional information is available on request.

As of September 30, 2017, our affiliates beneficially own on behalf of their investment advisory clients or otherwise 2.94% of SJW Corp, 1.27% of Middlesex and less than 1% of all other companies mentioned. One of our affiliates serves as an investment adviser to AWK or an affiliated entity and has received compensation within the past 12 months for these non-investment banking securities-related services. Because the portfolio managers at our affiliates make individual investment decisions with respect to the client accounts they manage, these accounts may have transactions inconsistent with the recommendations in this report. These portfolio managers may know the substance of our research reports prior to their publication as a result of joint participation in research meetings or otherwise. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report. In addition, the undersigned lead analyst(s) has not and will not receive any compensation for providing a specific recommendation or view in this report. The analyst, who wrote this report, or members of his household, owns no shares of the above mentioned companies.

Gabelli & Company

## Aqua America (WTR - $35.43 - NYSE) Wet Summer; Guidance Affirmed -Buy

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $1.60 | 21.0x | $41 | Dividend: $0.82 Current Return: 2.3% |
| 2018P | 1.45 | 23.2 | 39 | Shares O/S: 180.3 million |
| 2017E | 1.35 | 24.9 | 37 | 52-Week Range: $36.27 - $28.03 |
| 2016A | 1.32 | -- | -- | Book value (6/30/2017): $10.52 |

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about three million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

- On October 31, 2017, WTR reported third quarter 2017 earnings of $0.43 per share compared to $0.41 per share for the same period last year. Regulated revenues declined 3.7% due to lower water consumption reflecting wet weather in more than half of the company's service areas. Lower consumption was offset by higher rates and 0.8% customer growth as well as the absence of losses from divested non-regualted businesses.

- WTR affirmed its 2017 earnings guidance range of $1.34-1.39 per share premised on 1.5-2.0% customer growth, 1-2% higher operating and maintenance (O&M) expense, $450 million of capital investment and 6-7% rate base growth. Our 2017-2019 earnings estimates remain $1.35, $1.45 and $1.60 per share, respectively. Earnings growth will continue to be driven by rate base investments, acquisitions, cost controls, general rate cases and infrastructure surcharges.

- In 2017, subsidiaries have received $21.4 million in annual rate awards/infrastructure surcharges and currently have requests totaling $14.1 million awaiting PUC decisions.

- Aqua-PA requested a 2.5% distribution system improvement charges (DSIC) increase effective October 1, 2017. We expect another two 2.5% requests to be effective in January and April of 2018 to be followed by a full PA rate increase to be effective in the first half of 2019. As a result, we expect earnings growth to accelerate in 2018 and return to its historical high-single digit growth rate. In 2012, the PA PUC which regulates $2.4 billion of WTR's $3.5 billion rate base authorized the use of repair tax deductions, which resulted in a significant ramp up in earnings and delayed the need for rate increases and/or quarterly (DSIC). The program has resulted in significant customer bill savings but moderate earnings growth (following the initial 32% increase in 2013) over the last few years.

- The 2017-2019 capital investment program totals more than $1.2 billion, including $450 million in 2017, and is expected to lead to 6-7% annual rate base growth. Roughly 65% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, and NC). Given strong cash flow and annual infrastructure surcharges, WTR has minimal external funding needs. As of June 30, 2017, the common equity ratio was 48%, and S&P credit rating was A+ for Aqua Pennsylvania.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Recent legislation in IL, IN, NJ and PA encourages consolidation by allowing the purchase price in rate base or applying uniform rates state-wide. The 2016 PA "fair-valuation" legislation has resulted in a dramatic acceleration of municipal water and wastewater evaluations. In other words, municipalities are engaging consulting firms to evaluate the value of water and wastewater systems.

- Year-to-date, WTR bought three small water systems adding 1,002 customers for $5.8 million and has five acquisitions pending to add 15,700 customers for $150 million. In addition, WTR identified 70 municipal prospects representing 500,000 customers. We expect the pace of municipal acquisitions to accelerate. In 2016, WTR completed nineteen acquisitions adding 6,558 customers for a collective purchase price of $22.2 million.

## Valuation

We continue to recommend long-term investors Buy WTR given its relatively low-risk business profile and long-term growth opportunities. We consider WTR to be one of the premier water utilities in the nation given its multi-state presence, strong financial condition, successful track record, and earnings and dividend outlook. Shares offer a 2.3% current return on the $0.82 per share annual dividend, which is secure and growing. Shares trade at 26.3x and 24.5x our 2017 and 2018 earnings estimates and 337% of book value ($10.52 per share), which compares to group multiples of 24.1x and 22.8x earnings and 285% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. Our 2017-2018 PMV estimates are $37 and $39 per share, respectively, based on 3.5x book value.

Gabelli & Company

# Aqua America (WTR - $35.15 - NYSE) Termination of Sell Side Coverage- Buy

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $1.55 | 22.7x | $40 | Dividend: $0.82 Current Return: 2.3% |
| 2018E | 1.40 | 25.1 | 38 | Shares O/S: 180.3 million |
| 2017A | 1.35 | 26.0 | 36 | 52-Week Range: $39.55 - $31.18 |
| 2016A | 1.32 | -- | -- | Book value (12/31/2017): $10.52 |

## COMPANY OVERVIEW

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about three million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

## Reason For Comment

As a result of a restructuring of the Gabelli & Company research department, we are terminating sell side coverage of this company as of May 1, 2018. The analyst has transitioned to an affiliated investment adviser. Gabelli & Company will no longer provide updates to our research or recommendations. Effective upon the termination of coverage, the last recommendation and estimates contained herein for this company should not be relied upon going forward.

## Final Recommendation – Buy

We continue to recommend long-term investors Buy WTR given its relatively low-risk business profile and long-term growth opportunities. We consider WTR to be one of the premier water utilities in the nation given its multi-state presence, strong financial condition, successful track record, and earnings and dividend outlook.  Shares offer a 2.3% current return on the $0.82 per share annual dividend, which is secure and growing.  Shares trade at 25.1x and 22.7x our 2018 and 2019 earnings estimates and 334% of book value ($10.52 per share), which compares to group multiples of 24.1x and 23.0x earnings and 285% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. Our 2018-2019 PMV estimates are $38 and $40 per share, respectively, based on 3.5x book value.

## Important Disclosures

**ONE CORPORATE CENTER RYE, NY 10580 GABELLI & COMPANY TEL (914) 921-5130 FAX (914) 921-5098**

Gabelli & Company is the marketing name for the registered broker dealer G.research, LLC, which was formerly known as G.research, Inc., Gabelli & Company ("we" or "us") attempts to provide timely, value-added insights into companies or industry dynamics for institutional investors. Our research reports generally contain a recommendation of "buy," "hold," "sell" or "non-rated." We do not undertake to "upgrade" or "downgrade" ratings after publishing a report. We currently have reports on 382 companies, of which 59%, 30%, 1% and 9% have a recommendation of buy, hold, sell or non-rated, respectively. The percentage of companies so rated for which we provided investment banking services within the past 12 months is 0%, 0%, 0% and less than 1%.

Ratings

Analysts' ratings are largely (but not always) determined by our "private market value," or PMV methodology. Our basic goal is to understand in absolute terms what a rational, strategic buyer would pay for an asset in an open, arms-length transaction. At the same time, analysts also look for underlying catalysts that could encourage those private market values to surface.

A **Buy** rated stock is one that in our view is trading at a meaningful discount to our estimated PMV. We could expect a more modest private market value to increase at an accelerated pace, the discount of the public stock price to PMV to narrow through the emergence of a catalyst, or some combination of the two to occur.

A **Hold** is a stock that may be trading at or near our estimated private market value. We may not anticipate a large increase in the PMV, or see some other factors at work.

A **Sell** is a stock that may be trading at or above our estimated PMV. There may be little upside to the value, or limited opportunity to realize the value. Economic or sector risk could also be increasing.

We prepared this report as a matter of general information. We do not intend for this report to be a complete description of any security or company and it is not an offer or solicitation to buy or sell any security. All facts and statistics are from sources we believe to be reliable, but we do not guarantee their accuracy. We do not undertake to advise you of changes in our opinion or information. Unless otherwise noted, all stock prices reflect the closing price on the business day immediately prior to the date of this report. We do not use "price targets" predicting future stock performance. We do refer to "private market value" or PMV, which is the price that we believe an informed buyer would pay to acquire 100% of a company. There is no assurance that there are any willing buyers of a company at this price and we do not intend to suggest that any acquisition is likely. Additional information is available on request.

Gabelli & Company

# Aqua America (WTR - $34.19 - NYSE) Disappointing '18 Guidance; To File in PA - Buy

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $1.55 | 22.0x | $40 | Dividend: $0.82 Current Return: 2.4% |
| 2018E | 1.40 | 24.4 | 38 | Shares O/S: 180.3 million |
| 2017A | 1.35 | 25.3 | 36 | 52-Week Range: $39.55 - $30.38 |
| 2016A | 1.32 | -- | -- | Book value (12/31/2017): $10.52 |

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about three million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

- On February 27, 2018, WTR reported full year 2017 earnings of $1.35 per share compared to $1.32 per share in 2016. The modest EPS improvement was driven by higher rates (+$0.03) and customer growth (+$0.01) partially offset by lower water consumption (-$0.03). Operation and maintenance (O&M) expenses declined 6% primarily due to the absence of market based activities and production costs (pass-through), but also lower employee-related expenses. In 2017, WTR subsidiaries invested $478 million in infrastructure and were awarded $22 million in annual rate increases/infrastructure surcharges.

- WTR established its 2018 earnings guidance range of $1.37-1.42 per share premised on 2-3% customer growth, infrastructure investment of $500 million and 7% rate base growth. We lowered our 2018-2020 earnings estimates to $1.40, $1.55 and $1.65 per share, respectively, from $1.45, $1.60 and $1.70 per share, respectively. Earnings growth drivers include rate base investment, acquisitions, cost controls, rate cases and infrastructure surcharges.

- In 2018, WTR subsidiaries have been awarded $11 million in annual rate increases and currently have requests totaling $16 million awaiting PUC decisions. Aqua-PA re-instituted its PA quarterly distribution system improvement charges (DSIC) program with 2.5% increases effective October 1, 2017 and January 1, 2018 and request pending for April 1, 2018. More importantly, Aqua-PA expects to file a full PA rate increase to be effective in the first half of 2019. Given that WTR has not filed in PA in seven years, the company will request recognition of $2 billion investment as well as 20 acquisitions using a fully-projected future test year.

- As a result, we expect earnings growth to accelerate in 2019 and return to its historical high-single digit growth rate. In 2012, the PA PUC which regulates $2.8 billion of WTR's $4.1 billion rate base authorized the use of repair tax deductions, which resulted in a significant ramp up in earnings and delayed the need for rate increases and/or quarterly (DSIC). The program has resulted in significant customer bill savings but moderate earnings growth (following the initial 32% increase in 2013) over the last few years.

- The 2018-2020 capital investment program totals more than $1.4 billion, including $500 million in 2018, and is expected to lead to 7% annual rate base growth. Roughly 60% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, and NC). Given strong cash flow and annual infrastructure surcharges, WTR has minimal external funding needs. As of year-end 2017, the common equity ratio was 48%, and S&P credit rating was A+ for Aqua Pennsylvania.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Legislation in IL, IN, NJ and PA encourages consolidation by allowing purchase price in rate base or applying uniform rates state-wide. The 2016 PA "fair-valuation" legislation has resulted in a dramatic acceleration of municipal water and wastewater evaluations. In other words, municipalities are engaging consulting firms to evaluate the value of water and wastewater systems.

- In 2017, WTR bought four small water systems adding 1,002 customers for $5.8 million and has six acquisitions pending to add 16,325 customers for $151 million. In addition, WTR identified and targeted 10 municipal prospects customers. We expect the pace of municipal acquisitions to accelerate. In 2016, WTR completed nineteen acquisitions adding 6,558 customers for a collective purchase price of $22.2 million.

**Valuation**

We continue to recommend long-term investors Buy WTR given its relatively low-risk business profile and long-term growth opportunities. We consider WTR to be one of the premier water utilities in the nation given its multi-state presence, strong financial condition, successful track record, and earnings and dividend outlook. Shares offer a 2.4% current return on the $0.82 per share annual dividend, which is secure and growing. Shares trade at 24.4x and 22.0x our 2018 and 2019 earnings estimates and 319% of book value ($10.52 per share), which compares to group multiples of 23.1x and 22.0x earnings and 285% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. Our 2018-2019 PMV estimates are $38 and $40 per share, respectively, based on 3.5x book value.

Gabelli & Company

## Aqua America (WTR - $33.59 - NYSE) Weak First-Half But Growth to Return -Buy

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $1.60 | 21.0x | $41 | Dividend: $0.77 Current Return: 2.3% |
| 2018P | 1.45 | 23.2 | 39 | Shares O/S: 180.3 million |
| 2017E | 1.35 | 24.9 | 37 | 52-Week Range: $34.41 - $28.03 |
| 2016A | 1.32 | -- | -- | Book value (6/30/2017): $10.52 |

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about three million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

- On August 2, 2017, WTR reported second quarter 2017 earnings of $0.34 per share compared to $0.33 per share for the same period last year. Higher earnings reflect higher consumption, higher rates, and customer growth offset by lower non-regulated results and higher expenses. In the quarter, the company completed the sale of its market-based activities that were slated for divestiture. The remaining O&M contract business and home services business are projected to earn roughly $4 million in annual revenues and less than a nickel per share in earnings.

- First-half 2017 earnings were $0.62 per share compared with $0.63 per share for the same period last year. Lower results were due to lower consumption and lower non-regulated results partially offset by higher rates.

- WTR affirmed its 2017 earnings guidance range of $1.34-1.39 per share premised on 1.5-2.0% customer growth, 1-2% higher operating and maintenance (O&M) expense, $450 million of capital investment and 6-7% rate base growth. Our 2017-2019 earnings estimates remain $1.35, $1.45 and $1.60 per share, respectively. Earnings growth will continue to be driven by rate base investments, acquisitions, cost controls, general rate cases and infrastructure surcharges. In 2017, subsidiaries have received $11.1 million in annual rate awards and currently have requests totaling $14.0 million awaiting PUC decisions.

- Aqua-PA plans to file for DSIC increases in late 2017 and a full PA rate increase in 2018 to be effective in 2019. As a result, we expect earnings growth to accelerate in 2019 and return to its historical high-single digit growth rate. In 2012, the PA PUC which regulates $2.4 billion of WTR's $3.5 billion rate base authorized the use of repair tax deductions, which resulted in a significant ramp up in earnings and delayed the need for rate increases and/or quarterly distribution system improvement charges (DSIC). The program has resulted in significant customer bill savings but moderate earnings growth (following the initial 32% increase in 2013) over the last few years.

- The 2017-2019 capital investment program totals more than $1.2 billion, including $450 million in 2017, and is expected to lead to 6-7% annual rate base growth. Roughly 65% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, and NC). Given strong cash flow and annual infrastructure surcharges, WTR has minimal external funding needs. As of June 30, 2017, the common equity ratio was 48%, and S&P credit rating was A+ for Aqua Pennsylvania.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Recent legislation in IL, IN, NJ and PA encourages consolidation by allowing the purchase price in rate base or applying uniform rates state-wide. The 2016 PA "fair-valuation" legislation has resulted in a dramatic acceleration of municipal water and wastewater evaluations. In other words, municipalities are engaging consulting firms to evaluate the value of water and wastewater systems.

- Year-to-date, WTR bought 3 small water systems adding 1,002 customers for $5.8 million and has four acquisitions pending to add 11,087 customers for $120.5 million. In addition, WTR identified 70 municipal prospects representing 500,000 customers. We expect the pace of municipal acquisitions to accelerate. In 2016, WTR completed nineteen acquisitions adding 6,558 customers for a collective purchase price of $22.2 million.

**Valuation**

We continue to recommend long-term investors Buy WTR given its relatively low-risk business profile and long-term growth opportunities. We consider WTR to be one of the premier water utilities in the nation given its multi-state presence, strong financial condition, successful track record, and earnings and dividend outlook. Shares offer a 2.4% current return on the $0.77 per share annual dividend, which has increased at a 7.6% annual rate over the past ten years. Shares trade at 24.9x and 23.2x our 2017 and 2018 earnings estimates and 320% of book value ($10.52 per share), which compares to group multiples of 24.1x and 22.8x earnings and 285% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. Our 2017-2018 PMVs are $37 and $39 per share, respectively, based on 3.5x book value.

**ONE CORPORATE CENTER RYE, NY 10580 GABELLI & COMPANY TEL (914) 921-5130 FAX (914) 921-5098**

Gabelli & Company is the marketing name for the registered broker dealer G.research, LLC, which was formerly known as G.research, Inc., Gabelli & Company ("we" or "us") attempts to provide timely, value-added insights into companies or industry dynamics for institutional investors. Our research reports generally contain a recommendation of "buy," "hold," "sell" or "non-rated." We do not undertake to "upgrade" or "downgrade" ratings after publishing a report. We currently have reports on 571 companies, of which 50%, 33%, 3% and 14% have a recommendation of buy, hold, sell or non-rated, respectively. The percentage of companies so rated for which we provided investment banking services within the past 12 months is 0%, 0%, 0% and less than 1%.

Ratings

Analysts' ratings are largely (but not always) determined by our "private market value," or PMV methodology. Our basic goal is to understand in absolute terms what a rational, strategic buyer would pay for an asset in an open, arms-length transaction. At the same time, analysts also look for underlying catalysts that could encourage those private market values to surface.

A **Buy** rated stock is one that in our view is trading at a meaningful discount to our estimated PMV. We could expect a more modest private market value to increase at an accelerated pace, the discount of the public stock price to PMV to narrow through the emergence of a catalyst, or some combination of the two to occur.

A **Hold** is a stock that may be trading at or near our estimated private market value. We may not anticipate a large increase in the PMV, or see some other factors at work.

A **Sell** is a stock that may be trading at or above our estimated PMV. There may be little upside to the value, or limited opportunity to realize the value. Economic or sector risk could also be increasing.

We prepared this report as a matter of general information. We do not intend for this report to be a complete description of any security or company and it is not an offer or solicitation to buy or sell any security. All facts and statistics are from sources we believe to be reliable, but we do not guarantee their accuracy. We do not undertake to advise you of changes in our opinion or information. Unless otherwise noted, all stock prices reflect the closing price on the business day immediately prior to the date of this report. We do not use "price targets" predicting future stock performance. We do refer to "private market value" or PMV, which is the price that we believe an informed buyer would pay to acquire 100% of a company. There is no assurance that there are any willing buyers of a company at this price and we do not intend to suggest that any acquisition is likely. Additional information is available on request.

As of June 30, 2017, our affiliates beneficially own on behalf of their investment advisory clients or otherwise less than 1% of Aqua America. Because the portfolio managers at our affiliates make individual investment decisions with respect to the client accounts they manage, these accounts may have transactions inconsistent with the recommendations in this report. These portfolio managers may know the substance of our research reports prior to their publication as a result of joint participation in research meetings or otherwise. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report. In addition, the undersigned lead analyst(s) has not and will not receive any compensation for providing a specific recommendation or view in this report. Gabelli & Company

# Aqua America (WTR - $30.49 - NYSE) '17 Guidance; Growth to Accelerate in 2019 - Buy

| Year | EPS | P/E | PMV |
|---|---|---|---|
| 2018P | $1.50 | 20.3x | $40 |
| 2017P | 1.40 | 21.8 | 37 |
| 2016E | 1.30 | 23.5 | 35 |
| 2015A | 1.26 | -- | -- |

Dividend: $0.77 Current Return: 2.5%
Shares O/S: 177.8 million
52-Week Range: $35.83 - $28.03

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about 3 million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

- On January 17, 2017, WTR management established a 2017 earnings guidance range of $1.34-1.39 per share premised on 1.5-2.0% customer growth, 1-2% higher operating and maintenance (O&M) expense, $450 million of capital investment and 6-7% rate base growth.

- WTR also affirmed its 2016 EPS guidance of $1.30-1.35 per share, but reiterated it was more likely to earn the lower-end of the range. The company experienced customer growth within its expected 1.5-2.0% range, controlled same-system O&M expense to a 1-2% increase, and invested ~$350 million of capital to support 6-7% annual rate base growth.

- In 2016, WTR completed nineteen acquisitions adding 6,558 customers for a collective purchase price of $22.2 million. In 2016, WTR subsidiaries were awarded $5.5 million in annual rate increases. In 2017, subsidiaries have received $1.8 million in annual rate increases and currently have requests totaling $8.0 million awaiting PUC decisions.

- The relatively flat 2015-2017 earnings growth rate of 4.5% relative to its longer-term historical growth rate of 7-10% is due to the absence of Pennsylvania general rate requests and quarterly distribution system improvement charges (DSIC). Given the use of repair tax deductions, Aqua-PA (55-60% of WTR) has delayed the need for a general rate case or DSIC since 2011, which has benefitted customers $10 per month. The company plans to file for DSIC increases in 2017 and a ~15% annual rate increase in 2018 to be effective in 2019. As a result, we expect earnings growth to accelerate in 2019 and beyond.

- We maintained our 2016-2018 earnings estimates of $1.30, $1.40 and $1.50 per share, respectively. Earnings growth will continue to be driven by rate base investments, acquisitions, cost controls, infrastructure surcharges, and the pipeline rehabilitation business.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Recent legislation in IL, IN, NJ and PA encourages consolidation by allowing the purchase price in rate base or applying uniform rates state-wide.

- Management highlighted that recent PA "fair-valuation" legislation has resulted in a dramatic acceleration of municipal water and wastewater evaluations. In other words, municipalities are engaging consulting firms to evaluate the value of water and wastewater systems. WTR currently has four pending municipal acquisitions adding 8,761 customers for a collective purchase price of $113.7 million and 70 municipal prospects representing 390,000 customers. We expect the pace of municipal acquisitions to accelerate.

- The 2017-2019 capital investment program totals $1.2 billion, including $450 million in 2017. Roughly 65% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, NC). The PA PUC which regulates $2.4 billion of WTR's $3.5 billion rate base allows for a quarterly DSIC.

- Given strong cash flow, infrastructure surcharges and cash from asset sales, WTR has minimal external funding needs. As of September 30, 2016, the common equity ratio was 49%, and S&P credit rating was A+ for Aqua Pennsylvania.

**Valuation**

WTR is a well-managed, low-risk, high-quality conservative utility with unique growth opportunities. Shares offer a 2.5% current return on the $0.77 per share annual dividend. Shares trade at 21.8x and 20.3x our 2017 and 2018 earnings estimates and 302% of book value ($10.09 per share), which compares to group multiples of 23.1x and 21.8x earnings and 275% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. We consider WTR to be one of the premier water utilities in the nation with a warranted premium, given the company's national presence, strong financial condition, successful track record, and earnings and dividend outlook. Our 2017-2018 PMVs are $37 and $40 per share, respectively, based on 3.5x book value.

Gabelli & Company

# Aqua America (WTR - $33.82 - NYSE) — Solid Results; Guidance Affirmed - Buy

| Year | EPS | P/E | PMV |
|---|---|---|---|
| 2018P | $1.55 | 21.9x | $40 |
| 2017P | 1.45 | 23.3 | 38 |
| 2016E | 1.35 | 25.0 | 35 |
| 2015A | 1.26 | -- | -- |

Dividend: $0.71 Current Return: 2.1%
Shares O/S: 178.1 million
52-Week Range: $35.83 - $24.45

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about 3 million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

- On August 2, 2016, WTR reported second quarter 2016 earnings of $0.33 per share compared to $0.32 per share last year. Rate increases, customer growth, and lower operating expenses more than offset the negative impact of lower consumption. Year-to-date, WTR subsidiaries were awarded $5.0 million in annual rate increases and currently have requests totaling $10.5 million awaiting PUC decisions. In addition, WTR closed on ten acqusitions adding 5,204 water and 192 wastewater customers.

- Second quarter operating and maintenance (O&M) expenses declined -7.2% and the first-half 2016 operating efficiency ratio (O&M as a percent of operating revenues) declined to 37.2%, from 38.6%, for the same period last year.

**Table 1** **WTR Selected Financial**

*($ in millions, except per share data)*

| | Second Quarter | | | Six Months | | | Full Year | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2015 | 2016 | Change | 2015 | 2016 | Change | 2014A | 2015A | Change | 2016E | 2017P | 2018P |
| **EBITDA** | $ 113.1 | $ 115.9 | 2.5% | $ 215.5 | $ 221.0 | 2.6% | $ 442.0 | $ 457.2 | 3.4% | $ 486.6 | $ 518.9 | $ 551.4 |
| **Net Income** | 57.4 | 59.6 | 3.9 | 105.9 | 111.4 | 5.1 | 213.9 | 223.2 | 4.3 | 240.7 | 258.0 | 274.7 |
| **EPS** | $ 0.32 | $ 0.33 | 3.1 | $ 0.60 | $ 0.63 | 5.0 | $1.20 | $1.26 | 4.3 | $1.35 | $1.45 | $1.55 |

- WTR affirmed 2016 EPS guidance of $1.30-1.35 per share based on 1.5-2.0% customer growth, same-sytem O&M increase of 1-2%, and more than $350 million in capital investments. Our 2016-2018 earnings estimates remain $1.35, $1.45, and $1.55 per share, respectively. Earnings growth will continue to be driven by rate base investments, acquisitions, cost controls, infrastructure surcharges, and the pipeline rehabilitation business.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Recent legislation in IL, IN, NJ and PA encourages consolidation by allowing the purchase price in rate base or applying uniform rates state-wide. We are encouraged by the possibility that the pace of municipal acqusitions could accelerate.

- Given the use of repair tax deductions, Aqua-PA has delayed the need for a general rate case or DSIC since 2011, which has benefitted customers $10 per month. The company plans to file a ~15% rate increase in late 2017 or 2018.

- The 2016-2018 capital investment program totals $1.1 billion, including $350 million in 2016. Roughly 63% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, NC). The PA PUC which regulates $2.4 billion of WTR's $3.5 billion rate base allows for a quarterly distribution system improvement charge (DSIC).

- WTR is in the process of divesting or liquidating five Market-based businesses, resulting in expected annual revenue reduction of $30.5 million and immaterial impact on net income. Management plans to opportunistically pursue Market-based ventures that would provide supplementary and complementary opportunities for the regulated business.

- Given strong cash flow, infrastructure surcharges and cash from asset sales, WTR has minimal external funding needs. As of June 30, 2016, the common equity ratio was 49%, and S&P maintained its A+ credit rating for Aqua Pennsylvania.

**Valuation**

WTR is a well-managed, low-risk, high-quality conservative utility with unique growth opportunities. Shares offer a 2.1% current return on the $0.71 per share annual dividend. Shares trade at 25.0x and 23.3x our 2016 and 2017 earnings estimates and 336% of book value ($10.06 per share), which compares to group multiples of 26.9x and 25.2x earnings and 310% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. We consider WTR to be one of the premier water utilities in the nation with a warranted premium, given the company's national presence, strong financial condition, successful track record, and earnings and dividend outlook. Our 2016-2017 PMVs are $35 and 38 per share, respectively, based on 3.5x book value.

| 2016E | 1.30 | 23.0 | 35 |
| 2015A | 1.26 | -- | -- |

Dividend: $0.77 Current Return: 2.6%
Shares O/S: 177.8 million
52-Week Range: $35.83 - $28.05

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about 3 million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

- On November 1, 2016, WTR reported third quarter 2016 earnings of $0.40 per share compared to $0.38 per share last year. Rate increases, customer growth, and lower operating expenses more than offset the negative impact of lower consumption. Year-to-date, WTR subsidiaries were awarded $5.5 million in annual rate increases and currently have requests totaling $8.1 million awaiting PUC decisions. In addition, WTR closed on thirteen acqusitions adding 5,298 water and 409 wastewater customers. Year-to-date, WTR added 12,900 customers, including oganic growth, for a 1.3% total customer growth rate.

- Year-ot-date operating and maintenance (O&M) expenses declined -1.8% and the first-half 2016 operating efficiency ratio (O&M as a percent of operating revenues) declined to 36.5%, from 37.5%, for the same period last year.

**Table 1** **WTR Selected Financial**

| | Third Quarter | | | Nine-Months | | | Full Year | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | 2015 | 2016 | Change | 2015 | 2016 | Change | 2014A | 2015A | Change | 2016E | 2017P | 2018P |
| EBITDA | $ 127.9 | $ 132.1 | 3.3% | $ 342.6 | $ 352.6 | 2.9% | $ 442.0 | $ 457.2 | 3.4% | $ 476.6 | $ 508.9 | $ 543.4 |
| Net Income | 67.4 | 73.2 | 8.5 | 173.4 | 184.5 | 6.4 | 213.9 | 223.2 | 4.3 | 231.7 | 249.0 | 267.5 |
| EPS | $ 0.38 | $ 0.41 | 7.9 | $ 0.98 | $ 1.04 | 6.1 | $1.20 | $1.26 | 4.3 | $1.30 | $1.40 | $1.50 |

*Source: Company data, Gabelli & Company estimates*

- WTR affirmed 2016 EPS guidance of $1.30-1.35 per share (but suggested the lower-end was more likely) based on 1.5-2.0% customer growth, same-sytem O&M increase of 1-2%, more than $350 million in annual capital investments and 6-7% annual rate base growth. Given the use of repair tax deductions, Aqua-PA (55-60% of WTR) has delayed the need for a general rate case or DSIC since 2011, which has benefitted customers $10 per month. The company plans to file a ~15% rate increase in late 2017 or 2018.

- We lowered our 2016-2018 earnings estiamtes to $1.30, $1.40 and $1.50 per share, from $1.35, $1.45, and $1.55 per share, respectively. Earnings growth will continue to be driven by rate base investments, acquisitions, cost controls, infrastructure surcharges, and the pipeline rehabilitation business.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Recent legislation in IL, IN, NJ and PA encourages consolidation by allowing the purchase price in rate base or applying uniform rates state-wide. We are encouraged by the possibility that the pace of municipal acqusitions could accelerate. WTR currently has four municipal and two private system acquisition pending, which would add 4,700 customers.

- The 2016-2018 capital investment program totals $1.1 billion, including $350 million in 2016. Roughly 63% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, NC). The PA PUC which regulates $2.4 billion of WTR's $3.5 billion rate base allows for a quarterly distribution system improvement charge (DSIC).

- Given strong cash flow, infrastructure surcharges and cash from asset sales, WTR has minimal external funding needs. As of September 30, 2016, the common equity ratio was 49%, and S&P credit rating was A+ for Aqua Pennsylvania.

**Valuation**

WTR is a well-managed, low-risk, high-quality conservative utility with unique growth opportunities. Shares offer a 2.6% current return on the $0.77 per share annual dividend. Shares trade at 22.9x and 21.3x our 2016 and 2017 earnings estimates and 296% of book value ($10.09 per share), which compares to group multiples of 23.9x and 22.2x earnings and 288% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. We consider WTR to be one of the premier water utilities in the nation with a warranted premium, given the company's national presence, strong financial condition, successful track record, and earnings and dividend outlook. Our 2016-2017 PMVs are $35 and 37 per share, respectively, based on 3.5x book value.

Gabelli & Company

# Aqua America (WTR - $33.59 - NYSE) Weak First-Half But Growth to Return -Buy

| Year | EPS | P/E | PMV | |
|---|---|---|---|---|
| 2019P | $1.60 | 21.0x | $41 | Dividend: $0.77 Current Return: 2.3% |
| 2018P | 1.45 | 23.2 | 39 | Shares O/S: 180.3 million |
| 2017E | 1.35 | 24.9 | 37 | 52-Week Range: $34.41 - $28.03 |
| 2016A | 1.32 | -- | -- | Book value (6/30/2017): $10.52 |

**COMPANY OVERVIEW**

Aqua America (Bryn Mawr, PA) is the second-largest publicly traded water utility in the US, serving about three million people in Pennsylvania (52% of earnings), Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, and Virginia.

**Reason For Comment**

- On August 2, 2017, WTR reported second quarter 2017 earnings of $0.34 per share compared to $0.33 per share for the same period last year. Higher earnings reflect higher consumption, higher rates, and customer growth offset by lower non-regulated results and higher expenses. In the quarter, the company completed the sale of its market-based activities that were slated for divestiture. The remaining O&M contract business and home services business are projected to earn roughly $4 million in annual revenues and less than a nickel per share in earnings.

- First-half 2017 earnings were $0.62 per share compared with $0.63 per share for the same period last year. Lower results were due to lower consumption and lower non-regulated results partially offset by higher rates.

- WTR affirmed its 2017 earnings guidance range of $1.34-1.39 per share premised on 1.5-2.0% customer growth, 1-2% higher operating and maintenance (O&M) expense, $450 million of capital investment and 6-7% rate base growth. Our 2017-2019 earnings estimates remain $1.35, $1.45 and $1.60 per share, respectively. Earnings growth will continue to be driven by rate base investments, acquisitions, cost controls, general rate cases and infrastructure surcharges. In 2017, subsidiaries have received $11.1 million in annual rate awards and currently have requests totaling $14.0 million awaiting PUC decisions.

- Aqua-PA plans to file for DSIC increases in late 2017 and a full PA rate increase in 2018 to be effective in 2019. As a result, we expect earnings growth to accelerate in 2019 and return to its historical high-single digit growth rate. In 2012, the PA PUC which regulates $2.4 billion of WTR’s $3.5 billion rate base authorized the use of repair tax deductions, which resulted in a significant ramp up in earnings and delayed the need for rate increases and/or quarterly distribution system improvement charges (DSIC). The program has resulted in significant customer bill savings but moderate earnings growth (following the initial 32% increase in 2013) over the last few years.

- The 2017-2019 capital investment program totals more than $1.2 billion, including $450 million in 2017, and is expected to lead to 6-7% annual rate base growth. Roughly 65% of the investment is allocated toward pipe replacement or upgrades in jurisdictions with surcharge eligible infrastructure programs (PA, IL, IN, OH, NJ, and NC). Given strong cash flow and annual infrastructure surcharges, WTR has minimal external funding needs. As of June 30, 2017, the common equity ratio was 48%, and S&P credit rating was A+ for Aqua Pennsylvania.

- We continue to believe WTR is well positioned to continue its successful acquisition strategy given U.S. water (53,000 systems) and wastewater (16,000 systems) industries are extremely fragmented and municipally dominated (water is 85% municipally-owned; wastewater 97%). Recent legislation in IL, IN, NJ and PA encourages consolidation by allowing the purchase price in rate base or applying uniform rates state-wide. The 2016 PA “fair-valuation” legislation has resulted in a dramatic acceleration of municipal water and wastewater evaluations. In other words, municipalities are engaging consulting firms to evaluate the value of water and wastewater systems.

- Year-to-date, WTR bought 3 small water systems adding 1,002 customers for $5.8 million and has four acquisitions pending to add 11,087 customers for $120.5 million. In addition, WTR identified 70 municipal prospects representing 500,000 customers. We expect the pace of municipal acquisitions to accelerate. In 2016, WTR completed nineteen acquisitions adding 6,558 customers for a collective purchase price of $22.2 million.

**Valuation**

We continue to recommend long-term investors Buy WTR given its relatively low-risk business profile and long-term growth opportunities. We consider WTR to be one of the premier water utilities in the nation given its multi-state presence, strong financial condition, successful track record, and earnings and dividend outlook. Shares offer a 2.4% current return on the $0.77 per share annual dividend, which has increased at a 7.6% annual rate over the past ten years. Shares trade at 24.9x and 23.2x our 2017 and 2018 earnings estimates and 320% of book value ($10.52 per share), which compares to group multiples of 24.1x and 22.8x earnings and 285% of book value. Over the past ten years, WTR shares have traded between 15-35x forward earnings and at significant premium multiples to the group. Our 2017-2018 PMVs are $37 and $39 per share, respectively, based on 3.5x book value.

**Important Disclosures**

ONE CORPORATE CENTER RYE, NY 10580 GABELLI & COMPANY TEL (914) 921-5130 FAX (914) 921-5098

Gabelli & Company is the marketing name for the registered broker dealer G.research, LLC, which was formerly known as G.research, Inc., Gabelli & Company ("we" or "us") attempts to provide timely, value-added insights into companies or industry dynamics for institutional investors. Our research reports generally contain a recommendation of "buy," "hold," "sell" or "non-rated." We do not undertake to "upgrade" or "downgrade" ratings after publishing a report. We currently have reports on 571 companies, of which 50%, 33%, 3% and 14% have a recommendation of buy, hold, sell or non-rated, respectively. The percentage of companies so rated for which we provided investment banking services within the past 12 months is 0%, 0%, 0% and less than 1%.

Ratings

Analysts' ratings are largely (but not always) determined by our "private market value," or PMV methodology. Our basic goal is to understand in absolute terms what a rational, strategic buyer would pay for an asset in an open, arms-length transaction. At the same time, analysts also look for underlying catalysts that could encourage those private market values to surface.

A **Buy** rated stock is one that in our view is trading at a meaningful discount to our estimated PMV. We could expect a more modest private market value to increase at an accelerated pace, the discount of the public stock price to PMV to narrow through the emergence of a catalyst, or some combination of the two to occur.

A **Hold** is a stock that may be trading at or near our estimated private market value. We may not anticipate a large increase in the PMV, or see some other factors at work.

A **Sell** is a stock that may be trading at or above our estimated PMV. There may be little upside to the value, or limited opportunity to realize the value. Economic or sector risk could also be increasing.

We prepared this report as a matter of general information. We do not intend for this report to be a complete description of any security or company and it is not an offer or solicitation to buy or sell any security. All facts and statistics are from sources we believe to be reliable, but we do not guarantee their accuracy. We do not undertake to advise you of changes in our opinion or information. Unless otherwise noted, all stock prices reflect the closing price on the business day immediately prior to the date of this report. We do not use "price targets" predicting future stock performance. We do refer to "private market value" or PMV, which is the price that we believe an informed buyer would pay to acquire 100% of a company. There is no assurance that there are any willing buyers of a company at this price and we do not intend to suggest that any acquisition is likely. Additional information is available on request.

As of June 30, 2017, our affiliates beneficially own on behalf of their investment advisory clients or otherwise less than 1% of Aqua America. Because the portfolio managers at our affiliates make individual investment decisions with respect to the client accounts they manage, these accounts may have transactions inconsistent with the recommendations in this report. These portfolio managers may know the substance of our research reports prior to their publication as a result of joint participation in research meetings or otherwise. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report. In addition, the undersigned lead analyst(s) has not and will not receive any compensation for providing a specific recommendation or view in this report. The analysts, who wrote this report, or members of their household, owns no shares of the above mentioned companies.

# Natural Gas Utilities

**PRICE PERFORMANCE**

Natural gas utilities slumped in December with our coverage group declining 7.64% on average, although this was in sympathy with the broader Utilities sector; the S&P 500 index gained just under 1% last month **(Exhibit 1)**. Merger-arbitrage play WGL Holdings (WGL) was our only name in positive territory for the month (+1.53%), while Northwest Natural Gas (NWN) was our top decliner at -13.74%.

2017 performance had been satisfactory up to December, in our view. Nonetheless, the magnitude of last month's decline compelled a full year of underperformance for the industry, where our coverage group finished the year higher by 10.29%, on average, versus an S&P 500 that gained 19.42% **(Exhibit 2)**. South Jersey Industries (SJI) and Northwest Natural Gas both ended the year with negative price returns, relative outliers in our group that otherwise saw double digit returns across the board.

Trailing 52-week returns for our coverage group are equivalent to 2017 returns at this point; perhaps worth noting, our gas coverage group largely mirrored the broader market up until an acute late-year selloff. Chesapeake Utilities and Spire Inc. have been our strongest names over the TTM period **(Exhibit 3)**.

Past performance is no guarantee of future results.

Since our prior *Utilities Monthly*, we have been fairly active on the publishing front. Most notably, we downgraded our rating on SJI to Neutral from Buy following the cancellation of their investor day. We also initiated 2019 estimates for NWN and adjusted OGS estimates following new guidance reflecting tax reform. Our ratings heading into earnings season stand at: SR and CPK at Long-term Buy; ATO, NJR, OGS, SJI and WGL are Neutral rated, while NWN remains our lone Underperform.

**COMMENTARY AND OUTLOOK**

The gas utility industry posted an extremely weak close to 2017, with our coverage group declining more than 7%, on average, in December. After more/less tracking the broader market for much of the year, performance diverged in late-2017, as the S&P 500 gained about 1% to finish out a year that saw the index rally nearly 20%. We expect the primary culprit of the turn in results was relative impact from the US Tax Cut and Jobs Act, which while seemingly a net positive for most sectors, brings some cash flow questions to the regulated utility space.

Follow through on late-year trends has persisted thus far in January, with gas utilities continuing to decline within a strong broader market, although the group has firmed somewhat on an absolute basis over the last week or so. Average valuation has improved, in our view, with the declining stock prices and little delta to our secular growth outlook for the space. Furthermore, we believe a material portion of the re-allocation that might be compelled as the economic outlook strengthens for other pockets of the market may have already taken place, and we suspect some of the macro concerns regarding tax changes for utilities may be in the market.

CPK and SR were ultimately the top two performers in our coverage. We expect relative valuation played a role in SR's performance, and believe a lack of further M&A (something we have been suggesting) helped improve sentiment over the course of 2H'17. We believe a unique growth outlook supported CPK throughout the year, and is a thesis we believe remains useful as we move into 2018. SJI was impacted by a Labor Day-announcement of transformative M&A, and while we anticipated new base rates in 2018 and a revamp of stretch targets could support the stock, this ultimately did not play out.

NWN posted a fractional decline for the year and, in our view, is positioned for negligible earnings growth (FY and Q4'17 results to be released in coming weeks). We remain relatively bearish entering 2018, based primarily on valuation, with the near-term growth outlook actually a bit stronger, in our view, based on the North Mist expansion that should be in service late this year, and a pending base rate case in Oregon.

We sit just ahead of calendar Q4 earnings season for the gas utility industry, with our fiscal Q1 reporters situated to be our first companies to report (ATO, NJR, SR and WGL). We expect to gain a great deal of clarity on implication from the tax plan as we move through the reporting cycle, which adds a whole extra layer of anticipation to the season versus the usual operational updates that can be material during the winter heating season. We anticipate that a range of one-time deferred asset/liability re-measurements may drive headlines, although more important for continuing operations, are likely to be any revisions to capital plans. Our fiscal Q4 reporters (CPK, NWN, OGS, and SJI) will likely be done reporting by late-February.

The core of our gas utility investment thesis continues to seek out the strongest and most attractively priced regulated growth stories; however, we reiterate a view that strong non-regulated business lines could see lasting positive impact from tax treatment (see above) are increasingly palatable for us. We continue to support major mid-stream investments by our local distribution utilities, but still see these items as slightly riskier than core system investment, despite what we view as a constructive pace of activity at the Federal Energy Regulatory Commission (FERC) since establishing a quorum.

We lowered our allocation recommendation for the gas utility industry to Underweight entering January on the back of the themes discussed above (i.e. tax, relative growth). Declines over the past couple of months have been constructive for valuation, in our view, although we believe timing is not yet right to suggest re-allocating to the industry.

Despite a mid-January bounce for Chesapeake Utilities Corp, the small-cap remains our top pick in the industry. Amongst our names, CPK has one of the most balanced regulated/non-regulated growth strategies, which we like in the context of tax changes; furthermore, we expect the premier growth profile of Chesapeake is likely to keep the company relatively attractive despite some broader concerns for the Utility sector. With respect to fundamentals, we are encouraged by recent performance in curbing operating expense growth, several projects continue to progress well, in our view, and we belive weather thus far in 2018 has likely been constructive. Our 2-yr price target is $97, which implies total return potential of ~31%.

**NATURAL GAS NEWS & PRICES**

The spot price of natural gas ended the last week of December at $2.95/Mcf, a decrease of a dime from the end of November, but up significantly from just mid-month. The front month gas contract lost about $0.75 relative to year-end 2016, with the commodity spending much of the year range bound in the low-$3s. We expect normal (to below normal) summer demand and mostly still-low oil prices helped subdue both prices and volatility over much of 2017, with the complex seemingly well situated to handle a rise in export activity. A noteworthy Atlantic hurricane season ultimately did little do disturb the supply/demand balance across the year. Most recently, a cold snap affecting much of the Eastern US has helped keep prices above the $3 mark in early-2018, with several city-gates registering rates an order of magnitude above the oft-quoted Henry Hub rate.

The US rig count (oil + gas) averaged 930 in December, up 19 from the November average, but higher by 296 over December 2016. Taking a snapshot at the end of last month, the US natural gas rig count marked 182, which was +6 from the last week in November and +50 on a yr/yr basis. In our view, the US energy complex substantially stabilized across 2017.

From the perspective of utility-centric investing, low and stable natural gas prices are a positive for regulated segments. Increased demand (including from the secular shift in power generation and growth in exports) presents growth opportunities for distribution and transportation companies. We believe prices generally at or below $5/Mcf are sufficient to keep our demand growth thesis intact, even allowing for significant volatility below our 'bogey' price. See prices over the last few years below in **Exhibit 4.** As we look toward earnings season, we believe the early-2018 cold spell may be a notable positive driver at some point (mostly for non-reg ops), but we typically refrain from making trading calls based on weather.

**RECENT EVENTS -- Hilliard Lyons Coverage Universe** (reverse chronological order)

*For earnings announcements, quarterly results and rating actions, please consult our most recently published notes. Dividend announcements outside of raises and special items are omitted.*

**New Jersey Resources (NJR - $39.45, Neutral) & South Jersey Industries (SJI - $29.94, Neutral)** 1/19/18—Approval was announced for the PennEast Pipeline (20% NJR interest/ 20% SJI interest) by the Federal Energy Regulatory Commission—or FERC; the ~$1B project was announced back in 2014 and is expected to be in service in early 2019.

**South Jersey Industries, Inc. (SJI - $29.94, Neutral)** 1/19/18—SJI announced it would postpone its January 23rd investor day event until a later date (perhaps March). The company cited a desire to wait for more clarity on funding its pending M&A and ramifications of the US tax changes.

**WGL Holdings Inc. (WGL - $84.50, Neutral)** 1/9/18—WGL announced that it plans to file in all three of its utility territories (DC, MD and VA) to pass ~$34MM in tax savings to customers via rate reductions.

**One Gas Inc. (OGS) - $69.51, Neutral)** 1/7/18—OGS initiated 2018 guidance of $2.96 to $3.20 per share and 2018 Cap Ex of $375MM. Five year growth forecasts were also updated to include capital expenditures in the range of $375MM to $415MM per year, 5% to 7% EPS growth, and rate base growth of 6%+. EPS guidance for 2017 was revised to $3.06 to $3.10, with +$0.03 of special items.

**One Gas Inc. (OGS) - $69.51, Neutral)** 1/7/18—OGS increased its quarterly dividend by over 9% to an annualized $1.84.

**Northwest Natural Gas (NWN - $57.70, Underperform, $53 TP)** 12/29/17—NWN filed its first Oregon general rate case in six years; the net revenue request of $40.4MM has an expected effective date of 11/1/2018.

**Northwest Natural Gas (NWN - $57.70, Underperform, $53 TP)** 12/21/17—NWN announced agreements to acquire privately owned water utilities Salmon Valley Water Company in Oregon and Falls Water in Idaho; these companies serve ~975 and ~5,500 customers respectively. Financial terms of the deal were not disclosed.

**Chesapeake Utilities Corp. (CPK - $75.50, Long-term Buy, $97 TP)** 12/14/17—CPK's subsidiary Eastern Shore Natural Gas Company announced the filing of an uncontested rate case settlement agreement with FERC. If accepted, the agreement would increase base rates by $9.8MM.

**WGL Holdings Inc. (WGL - $84.50, Neutral)** 12/4/17—WGL announced a settlement agreement with the Maryland Energy Administration, Montgomery and Prince George's counties, as well as with local labor unions in the DC area in regards to its proposed acquisition.

**Atmos Energy Corp. (ATO -$82.26, Neutral)** 11/28/17—ATO priced a $400MM equity offering at about $87.75/share; proceeds are to be applied to short-term debt balances, and are aimed at facilitating ATO's long-term Cap Ex plans.

**New Jersey Resources (NJR - $39.45, Neutral)** 11/21/17—Management initiated fiscal 2018 NFE guidance in the range of $1.75 to $1.85 per share.

## TEMPERATURE DATA

December brought fairly average temperature across most of the country. Compared to December 2016, temperatures were cooler across most of the east coast, while temperatures across the western half of the country trended warmer. (**Exhibit 5)**. New England continued its shift to cooler weather from the record highs seen in October.

In total, Q4 finished with widespread temperatures conditions warmer than average, but not quite matching the extent of warmth we saw in Q4'16, allowing for some favorable comp cushion, in our view. The predicted winter storm / cold snap rumored prior to December seemed to predominantly fall in January, leaving hope for a colder second half of the heating season. While not necessarily affecting our coverage, WY, NM, and AZ all saw record heat in Q4 (NM topping its previous record set just last year).

From a broad investment standpoint, we look to capitalize on dislocations that might be weather influenced, but also remain of the opinion that this type of trade is less prevalent than in years past as investors increasingly focus on multi-year growth stories at most of our utilities.

# Water Utilities

## PRICE PERFORMANCE

Our covered water faded a bit to close 2017, falling 4.06% on average; the S&P 500 gained 0.98% last month **(Exhibit 6)**. Stronger relative performance was weighted toward our large-cap names, with Aqua America (WTR) and American Water Works (AWK) both performing better than both peer water companies and the broader Utilities sector. WTR was our only name to post a positive return last month, gaining 3.26% in December; Connecticut Water Service Inc. (CTWS) fell 9.32% to lead on the downside.

2017 returns for our coverage group are spread across a broad range of 45 percentage points, but with 4 out of 6 companies gaining 20%+. Overall our group improved 17.18% on average in 2017, with California Water Service Group (CWT) leading the way at +33.8% in 2017; the average was pulled lower by The York Water Company (YORW), with fell 11.30% in the same period. Our group trailed the broader market by just over 200bps; excluding YORW that number flips to a +300bps outperformance **(Exhibit 7)**.

Trailing 52-week performance matches the full-year commentary on 2017, which was a year of substantial volatility for the industry. We largely attribute this to periods of SMID-cap strength and weakness **(Exhibit 8)**. Returns for AWK and WTR over the TTM demonstrate a more "smooth" trend.

Past performance is no guarantee of future results.

Since our last Utilities monthly we have published on small-caps CWT and ARTNA; perhaps more significantly, we added another name to our Underperform list in CWT, downgrading shares from Neutral citing the stock's valuation at its current point in the rate cycle. We reiterated our Neutral rating on ARTNA, initiating 2019 estimates. We continue to rate AWK as Long-term Buy, while ARTNA, CTWS, and WTR are rated at Neutral; CWT and YORW now carry our Underperform ratings.

**COMMENTARY AND OUTLOOK**

Water utilities were mixed in December to close out what we view as a mixed year of performance in 2017. Bifurcation of returns persisted across both periods, with resilient performance from AWK and WTR allowing for an average return from our water group of -4% to outpace the broader sector that fell sharply to close the year. During much of 2017 we believe style-based momentum (large vs small-cap) impacted performance, although to close out the year in December, we believe general pressure for utilities based on tax concerns was the most prescient issue.

Returns for water stocks last year were mixed. WTR was able to hold its valuation multiples ahead of material rate activity in Pennsylvania being a 2018/2019 item. Bellwether-AWK managed to just outpace the S&P and comfortably outpaced utility comp groups, while YORW significantly underperformed.

News flow over the past month has been highlighted, in our view, by AWK issuing tax-adjusted guidance for 2018. Although the prior-issued granular targets did not change, we see it as constructive that American Water's management explicitly guided to no new equity (under normal circumstances) across its 5-year planning horizon. Each of our covered water utilities closed the books on fiscal 2017 on December 31, and we expect the reporting cycle to stretch from late-February through mid-March.

Our core long-term investment thesis for the water space is to target names with robust regulated infrastructure investment opportunities, while tangentially supporting roll up acquisition activity. Much of the US water/wastewater infrastructure has surpassed its intended useful life, and we expect our companies can grow over a multi-decade time horizon by earning a return on their infrastructure investments. With guaranteed returns on equity, a primary focus of ours is determining what utilities have the best line of sight on deploying retained equity capital. We further look for rising earned-ROE scenarios (i.e. operational improvement) and/or special situations that may be misunderstood by the market. Federal policy shifts delivered by the Trump Administration have yet to materially shift our investment framework, although the recent US Tax Cuts and Jobs Act will likely drive some shifts to what normalized financials across the industry may look like.

We are reiterating our Underweight allocation recommendation to water stocks as we trade through January, which at this point flows in agreement with a skeptical tactical outlook for the Utility sector in general. Our somewhat negative stance across 2017 was not an easy one, but we were pleased with the outcome and we more/less keep our views intact into the New Year. Despite our persistent skepticism of water stocks over the past several quarters, we believe the long-term outlook for, and current health of, our coverage group is strong.

Our current top pick in the space remains Long-term Buy-rated American Water Works, and our call is somewhat strengthened by a mid-January sell off that we believe brings an opportunity to be aggressive. A long-favored core holding and the most geographically diverse investor-owned US water utility, we like AWK's robust stretch EPS guidance versus some inherent uncertainty for smaller peers. From a bottom-up perspective, we like adding the stock into what we expect will be a strong 2018-2019 of regulatory awards/activity. Our 2-year price target is $110, suggesting total return potential of ~35%.

**RECENT EVENTS -- Hilliard Lyons Coverage Universe** (reverse chronological order)
*For earnings announcements, quarterly results and rating actions, please consult our most recently published notes. Dividend announcements outside of raises and special items are omitted.*

**American Water Works (AWK – $84.20, Long-term Buy, $110 TP)** 1/16/18—AWK announced Paul J. Evanson would be resigning from the Board for personal reasons; Paul served as Chair of the Executive Development and Compensation Committees and was a member of the Finance and Risk committee.

**American Water Works (AWK - $84.20, Long-term Buy, $110 TP)** 1/16/18—AWK released guidance for 2018 that includes estimated impact from the Tax Cuts and Jobs Act (TCJA); 2017 GAAP EPS are now expected to fall in the wide range of $1.93 to $2.55, but adjusted 2017 EPS guidance remains $3.00-$3.06. All prior 2018 projections remain unchanged as well as a projection for no new outside equity over the planning horizon.

**California Water Service Group. (CWT - $44.70, Underperform, $37 TP)** 1/9/18—CWT announced that its Hawaii Water subsidiary filed a general rate case for its Waikoloa service areas. In total, the company is seeking $3.8MM in annualized revenue increases effective Q4'18.

**Aqua America, Inc. (WTR - $35.89, Neutral)** 1/4/18—WTR announced they would postpone a January 17th analyst/investor update event due to changes in the US tax situation.

**York Water Company (YORW - $32.20, Underperform, $27 TP)** 1/3/18—York appointed Matthew E. Poff, CPA, as the company's next CFO; he previously served as the company's controller since 2009. Poff replaces Kathleen Miller, who served as York's Chief Financial Officer from 2003 through 2017.

**California Water Service Group. (CWT - $44.70, Underperform, $37 TP)** 12/22/17—CWT entered into a settlement agreement with several large companies in the CA-area accused of contaminating the local water supply; plaintiffs CWT and the City of Bakersfield will receive $85MM.

**American Water Works (AWK - $84.20, Long-term Buy, $110 TP)** 12/19/17—AWK announced its McKeesport acquisition in Pennsylvania had closed; the 22,000 customer wastewater system ended up with a $159MM price tag.

**Aqua America, Inc. (WTR - $35.89, Neutral)** 12/14/17—Aqua America announced that Chris Franklin, current CEO, was elected as Chairman of the Board effective January 1, 2018. Franklin replaces former CEO Nicholas DeBenedictis, who is expected to continue to serve as chairman emeritus.

**Connecticut Water Service, Inc. (CTWS - $52.62, Neutral)** 12/14/17—CTWS announced the Maine Public Utility Commission approved its rate filing for an increase in revenue of $1.56MM effective retroactively to December 1, 2017.

**American Water Works (AWK - $84.20, Long-term Buy, $110 TP)** 12/8/17—The Pennsylvania Public Utility Commission (PUC) unanimously approved a settlement to Pennsylvania American Water's rate case, which includes $62MM in net revenue increases effective Jan. 1, 2018.

**PRECIPITATION DATA**

A dry November was followed by a dry December across a vast majority of the US, contrasting the year ago December where mostly average-to-wet conditions prevailed. To close out the year, only AR and MO saw above average precipitation. Nearly all of our important states saw below average conditions, with the most significant category shifts coming in WV, CA, NJ, PA, and DE **(Exhibit 9)**. Overall, Q4 proved drier when compared to Q4'16, especially across the West and mid-Atlantic.

Our drought monitor **(Exhibit 10)** showed improvement month/month in Montana and across the Dakotas; however, problem areas in the Southwest look to have mostly worsened, and drought conditions in some form now spread across nearly all the entirety of the Great Plains areas.

The most recent drought outlook, published on January 18th, largely corroborates the notes from above, with drought in Montana and the Dakotas potentially coming to an end **(Exhibit 11)**.

Revenue decoupling insulates CTWS and CWT (and the CA-subsidiary of AWK) from weather impact, and we mostly view rainfall as less of a concern than in years past with investors acclimating to 'extremes' becoming the norm. Having said that, all of our water utilities are levered to weather conditions to some extent, even if it is more from a cost perspective. From the standpoint of trading water stocks, we like capitalizing on weather fears and/or surprises to identify attractive long-term entry points.

| | Approx % of Water Rev from Important States | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | NJ | PA | IN | IL | WV | MO | TX | CA | OH | NC | ME | CT | DE |

**GLOSSARY**

**allowed rate of return-** the rate of return a regulatory commission allows on rate base in establishing reasonable rates for a utility; it is usually based on a blended cost of financing rate base via debt and equity

**decoupling-** breaks the link between earnings and revenues, allowing utilities to encourage conservation without being penalized from lower usage; also see 'WRAM'

**DSIC-** Distribution System Improvement Charge, revenue surcharge allowed in some states (incl. DE, IN, NJ, NY, & PA) that allows a portion of investment costs to be included in customer rates until a final award is agreed upon during the general rate case process

**Bcf-** one billion cubic feet

**Dekatherm-** (Dth) unit of heating value equivalent to 10 therms or 1,000,000 Btu's

**desalination-** removes salt and particulates from seawater, making it potable

**heating degree day-** based on extent to which the daily mean temperature falls below a reference temperature, usually 65°F

**IISM-** Infrastructure Investment Surcharge Mechanism, similar to DSIC in CA

**LDC-** local distribution company

**MCBA-** Modified Cost Balancing Account, tracks cost changes such as those for supply mix variations for later recovery or refund in rates and includes all wholesale costs, making balancing accounts more equitable in regards to changes in prices for purchased water, pump taxes, and mix for supply sources in California

**Mcf-** one thousand cubic feet

**MMcf-** one million cubic feet

**peak-shaving-** using sources of energy such as natural gas from storage to supplement the normal amounts delivered to customers during peak-use periods; using these supplemental sources prevents pipelines from having to expand their delivery facilities just to accommodate short periods of extremely high demand

**QIPS-** Qualifying Infrastructure Plant Surcharge, similar to DSIC in IL

**rate base-** the value established by a regulatory authority upon which a utility is permitted to earn a specified rate of return, generally representing the amount of property used in public service. Investment comprising rate base may be based on fair value, replacement cost or original cost; the rate base may provide for the inclusion of certain working capital items/allowances (i.e. gas in storage)

**therm-** unit of heating equivalent to 100,000 Btu's

**WNA-** weather normalization adjustment, the rate adjustment approved by certain regulatory commissions that allow a company to increase the base rate portion of customers' bills when weather is warmer than normal and decrease the base rate when weather is colder than normal

**WRAM-** Water Revenue Adjustment Mechanism, decouples water sales from revenues in CA and CT

## Analyst Certification

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

**Definitions of Ratings:** **Buy -** We believe the stock has significant total return potential in the coming 12 months. **Long-term Buy -** We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years. **Neutral -** We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise. **Underperform -** We believe the stock is vulnerable to a price decline in the next 12 months.

**Definitions of Suitabilities:** **1 -** A large cap, core holding with a solid history. **2 -** A historically secure company that could be cyclical, have a shorter history than a "1" or is subject to event driven setbacks. **3 -** An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage. **4 -** Speculative, due to small size, inconsistent profitability, erratic revenue, volatility, low trading volume or a narrow customer or product base.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Underperform-2

## Q4 Punctuates Another Year of Subdued Growth; Reiterating Underperform Rating.

### Investment Highlights

- Aqua America reported Q4'16 EPS of $0.28, down fractionally from adjusted results in the prior year and missing our target by $0.02. FY 2016 EPS grew 4.8% to $1.32, marking a third consecutive year of growth in the 4% to 5% range.
- Revenue grew -0.1% in Q4 and +0.7% in FY 2016. A substantial pivot away from upwards of 10 non-regulated business lines at the end of 2015 created a revenue drag in 2016, although no rate activity in PA made topline growth difficult as well.
- By our count, Aqua closed on 18 individual regulated deals last year, but just Superior Water in PA (closed 1/4/16) represented more than a couple hundred customers. We believe the narrative for WTR shares would benefit from a sizable 'win' in the M&A arena.
- O&M expense fell 0.4% in Q4 and slipped 1.4% during the full year, a function of both non-reg divestitures, and in our view, good operational execution. Same system O&M guidance for +1% to +2% in 2017 is achievable, in our view.
- FY 2016 Cap Ex of $338MM was modestly above 2015 spend, although 2017 is projected to spike to $450MM. M&A spend would be additive to this.
- Aqua reiterated EPS guidance for 2017 in the range of $1.34 to $1.39. Our EPS estimates are unchanged, with 2017/2018 targets of $1.37/$1.41. Ramping Cap Ex should help alleviate over earning more quickly; however, with TTM ROE still at 13.1%, we believe the issue persists into 2018 at a minimum.
- We are reiterating our Underperform rating and 1-year $27 price target. At our target, WTR would trade ~20x our 2017E EPS, which we view as fair value given continued expectations for ROE compression.

## ADDITIONAL DISCUSSION—Q4 RESULTS & FORWARD OUTLOOK

We view both the fourth quarter and (more so) the full year 2016 as adequate operationally for Aqua, highlighted by a string of non-regulated divestitures and good control of O&M costs. During the past year, WTR decided to liquidate or harvest its Field Service, Cross-Connect, and Consulting/Training businesses, while also deciding to flip Tri-State Grouting (sewer rehab), which was a strategic point of emphasis just ~18 months ago. We like the flexibility of management on this front, and like the read through that effort and resources are more likely to be focuses on core regulated growth, including pursuing M&A. Although difficult to pinpoint drivers at times, we remain impressed by the culture of efficiency at Aqua, which we assert at this point has thrived through the executive transition to current-CEO Christopher Franklin.

Projecting into 2017, we unfortunately do not see much potential for a material reacceleration of revenue growth, excluding the removal of divestitures that should anniversary over the course of this year. Although WTR has already received ~$4MM in regulatory awards thus far this year (NC and OH), we just do not see sufficient pipeline to drive a major uptick from a consolidated base of $800MM+. We would be remiss not mention management's expectation to file for a surcharge in PA this year; however, we expect it will be of little impact to 2017 results. The narrative gets a bit better for 2018, which in our view, is likely to be a bigger beneficiary of M&A, and could much more plausibly see material benefit from rate activity in Pennsylvania and/or benefit from the presumed spike in 2017 Cap Ex.

## ADDITIONAL DISCUSSION—M&A UPDATE

Aqua's Q4 release cited 4 pending municipal acquisitions, each of which is expected to close in 2017, although this is stable from guidance given back in January. The collective $114MM investment for ~9,000 customers (or 12,000 adjusted customer equivalents) would represent as much purchase consideration as the prior 5 years of WTR activity combined. Depending on certain other conditions (i.e. accretion timeline), this activity could be sufficient to reinvigorate the narrative, in our view, although our sense is a further build of the pipeline may be necessary, given what we view as long-term execution risk stemming from competition with the larger-American Water Works (AWK—$74.92, Long-term Buy, $84TP). AWK and WTR share a NJ/PA-centric footprint.

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Neutral-2

**Good Q4 from WTR, but Soft Guide for 2018; Reiterating Neutral Rating.**

**Investment Highlights**

- Aqua America reported adjusted Q4'17 EPS of $0.32, up from $0.28 in the year-ago period. GAAP results include a $3.1MM charge compelled by the US Tax Cuts and Jobs Act (TCJA). FY 2017 EPS grew 3.6% to $1.36, marking a fourth consecutive year of growth in the 3% to 5% range.
- Revenue grew 3.3% in Q4 and -1.3% in FY 2017. Net consumption/weather was a drag on the full year, but the primary headwind to sales in 2017 was the wind down of certain market-based operations, which had negligible total effect on net income. We expect further revenue pressure in 2018 as WTR accrues monies to be refunded under the TCJA, but again this should have little impact on EPS due to lower taxes.
- Aqua closed just four acquisitions in 2017, posting customer growth short of initial guidance; that said, six deals are signed and pending, and WTR expects to spend $150MM on deals in 2018.
- O&M expense grew 2.2% in Q4 but slipped 5.8% during the full year, due to both the non-reg shift discussed above and a special gain in Q3. We expect O&M to more/less track customer growth this year.
- FY 2017 Cap Ex of nearly $480MM was well above 2016's spend; Aqua plans to invest $500MM in 2018, and a total of $1.4B from 2018-2020.
- Aqua initiated EPS guidance for 2018 in the range of $1.37 to $1.43. Our 2018 and 2019 EPS estimates fall $0.02 and $0.05, respectively, to $1.41 and $1.45. TTM ROE in the mid-12% range still represents a headwind near-term, but over-earning should be alleviated in PA later this year.
- We are reiterating our Neutral rating. Valuation has improved, in our view, but we remain patient.

**Note Analyst Certification on Page 5**

## ADDITIONAL DISCUSSION—MULTIPLE ITEMS

In conjunction with releasing Q4/FY 2017 results, WTR hosted a relatively abbreviated analyst day event at the NYSE. The event keeps a bi-annual schedule for an elongated discussion intact, and fell at an opportune time, in our view, due to the recent TCJA passage. Although Aqua is in somewhat of a unique tax situation already due to heavy utilization of repair tax accounting, the company will still experience implications of the law that are more/less in line with utilities we have heard from thus far. A lower statutory rate will reduce revenue requirements across the regulated businesses, with benefit ultimately flowing back to ratepayers. Seemingly poised to effectively weather any cash flow implications of the tax plan, WTR related a suggestion that no new equity should be necessary over the 2018-2020 planning horizon, despite hiking both Cap Ex and M&A cash outlay expectations for the in-progress 2018

Following customer growth of about 1% in 2017, Aqua expects growth in the 2% to 3% range this year, heavily reliant on 6 pending M&A transactions, which in our view, can reasonably be expected to close. Despite a relatively full pipeline at this point, we still maintain that WTR's progress on this front has been somewhat disappointing over the past year or so, and believe a high profile 'win' could serve as a catalyst for the stock.

Aqua's prepared remarks alluded to the potential for M&A transactions outside of the core water utility business, which garnered considerable attention from analysts during the M&A portion of today's event. Management declined to comment on any specific target-type (i.e. electric utility), but pointed investors toward general strategic pillars that deals would leverage Aqua's core competencies, and/or be regulated businesses. Simply by our interpretation, we believe there are no imminent deals here.

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Neutral-2

## Waving the White Flag; Upgrading to Neutral.

### Investment Highlights

- We are upgrading our rating on shares of Aqua America to Neutral from Underperform; we are removing our prior price target of $30. Our suitability rating of '2' remains intact.
- Our rating change is substantially compelled by what we identify a more balanced set of positive/negative near term catalysts for the stock as we move toward the New Year, coupled with upside to our 2017-2019 financial estimates as we refine our expectations for the next couple of years.
- Earned-ROE compression at Aqua is still a concern for us relative to peers, but see this item as mostly understood by the market and further neutralized by the return of rate activity in Pennsylvania. Having implemented a DSIC surcharge for the in-progress Q4, Aqua PA is on pace to file a base rate case next year.
- We view the pace of M&A deals as somewhat disappointing over the course of our Underperform rating, but see risk here as having improved with progress on filling the pipeline. As of the most recently reported quarter (in early November), Aqua had 5 muni purchases pending, representing ~14k customers and purchase prices of ~$150MM.
- Aqua reiterated EPS guidance for 2017 in the range of $1.34 to $1.39 in early-November; we expect the range remains useful. Our 2017E EPS is unchanged at $1.35, but our 2018/2019 EPS estimates move +$0.03/+$0.04 as we refine our rate outlook for the out years and remove a small level of conservatism.
- Summarily, our Neutral rating reflects a positive view toward core operations and long-term fundamentals, offset somewhat by just average near-term growth prospects and what we view as 'full' valuation.

**Note Important Disclosures on Pages 5-6**
**Note Analyst Certification on Page 5**

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Underperform-2

**Initiating 2018 Estimates Ahead of 2017 Guidance Call; Reiterating Underperform Rating.**

**Investment Highlights**

- Aqua is expected to initiate 2017 guidance before the market opens on Tuesday, January 17; a conference call to discuss expectations is scheduled for 10a ET.
- Our 2016/2017 EPS estimates both rise a penny to $1.34/$1.37; current consensus calls for 2016/2017 EPS of $1.32/$1.39.
- Relative to Aqua's winter event at the NYSE in January 2016, we expect a relatively abbreviated presentation next week. We do not expect the company to unveil a long-term EPS growth target, but believe management may discuss the Cap Ex outlook past 2017. Our base case for 2017 EPS guidance is the range of $1.35 to $1.40.
- We hope to receive an update on the M&A pipeline, particularly the outlook for larger and/or municipal deals that were a source of optimism across 2H'15. We believe a lack of deal flow contributed to WTR's flattish stock performance in 2016.
- Separately, we are initiating 2018E EPS of $1.41 on revenue of $874.4MM. We expect revenue growth in the out-year to be mostly driven by rate activity outside of core-Pennsylvania, and model O&M expense growth to approximate 1.5%-2%. We expect WTR's effective tax rate to rise to ~12%.
- We are reiterating our Underperform rating and 1-year $27 price target. At our target, WTR would trade ~20x our 2017E EPS, which we view as fair value given stagnation of the M&A narrative and our view that ROE-compression will continue to hamper earnings growth over the next few years.
- At this point, our Underperform rating continues to flow in agreement with our Underweight allocation recommendation for the water utility industry.

**Note Important Disclosures on Pages 5-6**
**Note Analyst Certification on Page 5**

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Underperform-2

**Lowering Price Target to $27; Reiterating Underperform Rating.**

**Investment Highlights**

- We are reiterating our Underperform rating, and are lowering our 1-year price target to $27. Shares closed yesterday just above our prior target of $30.
- At $27, WTR would trade ~20x our 2017E EPS which we view as fair value given peer multiples, and more importantly, just sector-average growth prospects over next few years. Our target multiple falls from ~22x.
- Our target cut is compelled by the noted revision to our valuation framework, a change we make in the face of waning momentum for Utility stocks with our financial projections unchanged. Fundamentally, our view toward negatively skewed interest rate risk (i.e. eventually a rise) flows in agreement with our valuation revision as well.
- We project Aqua to post a third consecutive year of sub-5% EPS growth in 2016 (and a 4$^{th}$ in 2017), which is even below higher-end stories we target in the slower growth gas and electric utility industries.
- We currently suggest an Underweight allocation to each Utility sector vertical (water, gas, electric), and recommend investors consolidate positons into ideas with a strong growth component. We still view WTR as one of the more at-risk stocks in the sector, and support rotating out of positions.
- A complementary thesis in WTR across 2016 has been an expectation for valuation compression driven by falling earned-ROE. We expect further declines in ROE, and believe this theme remains an important consideration.
- Our FY 2016/2017 EPS estimates remain unchanged at $1.31/$1.35, with little fundamental news gaining our attention over the last few weeks.

**Note Important Disclosures on Pages 5-6**
**Note Analyst Certification on Page 5**

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Underperform-2

## Q3'16 Results from WTR; Reiterating Underperform.

### Investment Highlights

- Aqua America reported Q3'16 EPS of $0.41 versus $0.38 in the year-ago period. EPS in the quarter beat our estimate for $0.39, which equaled consensus. Core revenue/expense items were positive in Q3, although a $2.3MM swing in JV profit/loss helped growth too.
- Revenue grew 2.5% to $226.6MM in Q3, missing our estimate for fractional growth. Regulated revenues grew ~$9MM while non-reg fell ~$4MM, in a favorable trend we expect to persist in Q4.
- WTR has $8.1MM in rate and surcharge applications pending in IN, OH, and VA, with ~$4.4MM in net awards so far this year. We believe material rate activity in PA is still a couple years away, meaning dynamism to top line is likely to key off acquisitions.
- O&M expense grew 1.6% in Q2, which was ahead of our expectations but offset the revenue beat. Same system O&M is still expected to be +1% to +2% for 2016, although consolidated growth should remain subdued on non-reg divestitures.
- The effective tax rate in Q3 slipped to 10.3% from 12.4% in the year-ago period, as WTR continues to maximize its repair tax 'lever'.
- Management reiterated FY 2016 EPS guidance in the range of $1.30-$1.35. Reflecting upside to Q3, our FY 2016 estimate moves up $0.02 to $1.33; our 2017E rises $0.01 to $1.36.
- We are reiterating our Underperform rating and 1-year $27 price target. At our target, WTR would trade ~20x our 2017E EPS which we view as fair value given peer multiples, and more importantly, just sector-average growth prospects over the next few years.
- At this point, our Underperform continues to flow in agreement with our Underweight allocation suggestion to each utility vertical (gas, H20, electric).

**Note Analyst Certification on Page 5**

## ADDITIONAL DISCUSSION—Q3 RESULTS & FORWARD OUTLOOK

Q3 was another good quarter operationally, in our view, and a bit better quarter financially than we had seen yet this year. EPS growth of 8.3% marks the company's best growth rate since Q1 of 2014, a period over which most growth has been <5%. Revenue growth was perhaps our biggest surprise, although with Aqua citing increased usage to some extent, we believe there could be at least a hint of a tough comparison for next year.

Moving forward however, we believe the revenue environment remains challenging without rate activity in Pennsylvania being in the mix; however, we still like seeing the market-based businesses being either liquidated or disposed.

## ADDITIONAL DISCUSSION—FINAL THOUGHTS

Our negative thesis in Aqua for some time now has been multiple compression due to slowing earnings growth in conjunction with ROE-compression. Over the past couple of months however, we have been cultivating a complementary thesis that centers on M&A. Somewhat unfortunately, Aqua shares a footprint in two populous and important states (PA and NJ) with its primary rival for M&A transactions. Recently, we have seen a flurry of large deals 'won' by parties other than Aqua.

We believe much of the positive fervor across the back half of 2015 and into 2016 was tied to a refocused and revitalized M&A strategy, in which Aqua is pursuing larger deals. Should consensus wane from WTR's ability to consistently win these bigger deals long-term, we see risk for further re-rating lower.

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Underperform-2

**2017 Guidance; Reiterating Underperform Rating.**

**Investment Highlights**

- Aqua initiated EPS guidance for 2017 in the range of $1.34 to $1.39; consensus into the release was for $1.39. EPS guidance for 2016 remains $1.30 to $1.35, with a slight emphasis on the lower end.
- Our 2016/2017/2018 EPS estimates for $1.34/$1.37/$1.41 are unchanged at this point; we made slight revisions to our outlook early last week in conjunction with rolling out our 2018 forecast.
- Management unveiled a 3-year Cap Ex outlook (2017-2019) of $1.2B, up about $100MM from the year-ago forward outlook. Higher spend should help alleviate overearning more quickly; we now forecast 2018 earned ROE of 10.8% from a prior target of 11.3%.
- We like the M&A pipeline, which tabs four specific deals, expected to close in 2017, covering ~9,000 potential new customers at a price of ~$114MM.
- Tax reform has the potential to complicate the WTR narrative over the next couple of years, in our view. Specifically and simplistically, lower statutory rates and the resulting impact on the value of repair tax deductions could create earnings volatility before discrepancies might be eliminated via rate filings.
- Market-based revenue in '17 is expected to be $4MM, down from $35MM in '15 via a series of transactions we view in a very positive light. Divestitures should be complete in 2017, though we still want to see WTR bring its service line protection business in-house.
- We are reiterating our Underperform rating and 1-year $27 price target. At our target, WTR would trade ~20x our 2017E EPS, which we view as fair value given continued expectations for ROE compression.
- We expect WTR to report Q4/FY 2016 results in late-February.

**Note Analyst Certification on Page 5**

## ADDITIONAL DISCUSSION—M&A

As noted in our opening bullet points, we are pleased with the magnitude of the M&A pipeline, which if fully consummated, would represent as much purchase consideration as the prior 5 years of WTR activity combined. Prospective customer additions are much more subdued; however, prospective rate base growth (more closely aligned with purchase price) is the most important factor in gauging potential profit growth.

Having said that, we still see some execution risk deal-wise in both 2017 and beyond; unfortunately, we still need to be convinced that Aqua is capable of winning against the larger-American Water Works (AWK—$70.82, Long-term Buy, $84TP) when it comes to competing for the most impactful muni deals in the shared states of NJ and PA. Furthermore on the M&A front, we sense that Aqua is still at least somewhat open to acquiring either gas or electric utility operations, an item we believe brings an element of negative headline risk.

## ADDITIONAL DISCUSSION—FINAL THOUGHTS

Overall, we hold a quite neutral bias toward today's guidance release, a scenario under which we are inclined to reiterate our Underperform rating. On the positive side, we almost always like to see plans for escalating Cap Ex at our regulated utilities, and we like the still-evolving trend of Aqua minimizing its non-regulated or market-based footprint. Offsetting this however, is the relatively straightforward fact that guidance missed consensus, and in guiding toward a 2019-impact for general rate activity in PA (assuming stable tax regime), we believe subdued EPS growth is very likely to extend to 2018 as well.

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Underperform-2

**Down Q1 at WTR; Reiterating Underperform Rating.**

**Investment Highlights**

- Aqua America reported Q1'17 EPS of $0.28, down a penny from the year-ago period; results missed our estimate for $0.30, which was in line with consensus.
- Revenue slid 2.5% to $188MM in Q1, below our target of $194MM and consensus at $195MM. About $2.5MM of our miss is attributable to divesting market-based businesses, though this has little impact on overall profitability. A bit more impactful, we underestimated a $2MM headwind from usage trends.
- Four muni acquisitions representing ~8,800 customers and purchase consideration of $113.1MM remain in various pending stages. We maintain that a few 'wins' in the M&A arena would be positive for the narrative.
- O&M expense fell 6.0% in Q1, but similar to revenue, comparisons are a bit skewed by the exiting/divesture of market-based businesses. In our view, same system O&M growth of +1% to 2% in 2017 is achievable.
- Q1 Cap Ex at $95MM was below our model, but still well above Q1'16's $73MM spend. The 2017-2019 target for investment remains $1.2B, excluding M&A.
- Aqua reiterated EPS guidance for 2017 in the range of $1.34 to $1.39; given the downside to our Q1, our 2017E EPS now rests on the bottom bound of the range. Our 2018E EPS slides $0.02 to $1.41.
- We calculate TTM ROE at 12.7%, an (adjusted) low point since the Q4'12 implementation of 'repair tax' accounting. This bodes well for potential rate activity, with guidance firming around PA surcharge and general rate filings in 2017 and 2018, respectively.
- We are reiterating our Underperform rating and 1-year $27 price target. At our target, WTR would trade ~20x our 2017E EPS, which we view as fair value given continued expectations for ROE compression and projections for below-industry near-term EPS growth.

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Underperform-2

## Q2'16 Results from WTR; Reiterating Underperform but Raising Price Target.

### Investment Highlights

- Aqua America reported Q2'16 EPS of $0.33 versus $0.32 in the year-ago period. EPS in the quarter met consensus, falling a penny shy of our target. Lower operating expenses drove growth in the quarter.
- Revenue slipped 0.9% to $203.9MM in Q2, missing both our estimate and consensus. We expect nominal growth would have been positive if not for rationalization of market-based businesses, which weighed by ~$3MM in a trend we expect to persist across the balance of 2016.
- WTR has ~$10.5MM in rate and surcharge applications pending in NJ, IN, and OH, with ~$5MM extra in awards so far this year. Material rate activity in PA is still at least a couple years away, meaning dynamism to top line is likely to key off acquisitions.
- O&M expense fell 7.2% in Q2, driving our EPS beat; non recurrence of some executive severance and reduction on the market-based side were most impactful. Same system O&M is still expected to be +1% to +2% for 2016.
- The effective tax rate in Q1 ticked up to 8.5% from 7.9% in the year-ago period, as WTR continues to maximize its repair tax 'lever'.
- Management reiterated FY 2016 EPS guidance in the range of $1.30-$1.35. Our FY 2016 estimate is unchanged at $1.31; our 2017E slips $0.01 to $1.35.
- We are reiterating our Underperform rating, but raise our 1-year price target to $30, reflecting the current Utility sector valuation environment. At our $30, WTR would trade ~22x our 2016E EPS, in line with the stock's 5-yr average multiple. We still expect valuation compression on the grounds of slow growth in a falling earned-ROE environment.

**Note Important Disclosures on Pages 5-6**
**Note Analyst Certification on Page 5**

## Additional Discussion—Q2 Results

Q2 was a good quarter operationally, in our view, but just a decent quarter financially. EPS growth of 3.8% marks the fifth quarter of the past six in which WTR has grown earnings per share at a rate <5%. Revenue growth remains challenging without rate activity in Pennsylvania being in the mix; however, we are actually pleased to see some of the market-based businesses being either liquidated or disposed. As has been a staple at WTR for years, Operations & Maintenance was strong, in our opinion. Market-based rationalization helped with the yr/yr decline versus an easy comp, but WTR nonetheless bettered our expectations as the company is seemingly able to efficiently search for M&A targets.

## Additional Discussion—Final Thoughts

As our hike in price target should imply, we are cognizant of the current valuation environment for the Utility sector; however, we continue to flag WTR as one of the more at-risk stocks, if/when the sector sees waning tactical and/or top down support. We identify essentially no new information that neutralizes our view that earned-ROE will fall moving forward, which could occur in tandem with what we view as only average EPS growth. We project Aqua to post a third consecutive year of sub-5% EPS growth in 2016 (and a 4th in 2017), which is not even competitive with the higher-end stories we target in the slower growth gas and electric utility arena. With our view toward likely multiple compression at some point, we are compelled to reiterate our Underperform rating.

## Suitability

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

**Company Description**: *Aqua America is a water and wastewater utility holding company with operating subsidiaries serving ~3MM people. WTR provides regulated service to customers in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia. The company's history spans over 125 years.*

# Aqua America, Inc.

WTR – NYSE – Underperform-2

**Quiet Q2 at WTR; Reiterating Underperform Rating.**

**Investment Highlights**

- Aqua America reported Q2'17 EPS of $0.34, up a penny from the year-ago period; results missed our estimate for $0.35, but met consensus.
- Revenue slid 0.2% to $203.4MM in Q2; topline fell between our target for $200.9MM and consensus at $208.3MM. Market-based divestitures were a drag of about $4.4MM, although this has little impact on overall profitability.
- WTR firmed/reiterated its outlook for rate activity in PA, anticipating a DSIC (surcharge) filing to benefit Q4'17, with a base rate filing in 2018.
- Four muni deals representing ~11,000 customers and purchase consideration of $120.5MM remain in various pending stages. Included, WTR announced a first deal negotiated under PA Act 12 Fair Value legislation in Q2, marking investment of $29.5MM.
- O&M expense fell 4.2% in Q2, but comps are again skewed by the exiting of market-based businesses. As of Q2, WTR is essentially complete with its sales, retaining only limited O&M contracts and its service line protection royalties.
- YTD Cap Ex at $208MM versus $196MM in 1H'16 bodes well for eventual growth in our view, but we still site/calculate TTM ROE at 12.6% as somewhat of a limiting factor.
- Aqua reiterated EPS guidance for 2017 in the range of $1.34 to $1.39; our 2017E EPS continues to rest on the bottom bound of the range. Our 2018E EPS slides up $0.01 to $1.40.
- We are reiterating our Underperform rating but raise our 1-year price target to $30, allowing for a higher multiple based on market valuations across the water industry. We still see negative near-term risk/reward in WTR due to our relative growth outlook.

## SUITABILITY

We assign WTR a suitability rating of '2.' A complete description of our suitability scale is on page 5. We view Aqua America as a strong operator in the water space, and flag consistent cash flow and earnings predictability due to entrenched regulated monopoly franchises. High sensitivity to a single state (PA) versus some larger utility peers is the primary factor that pushes WTR just below our most conservative '1' suitability rating. A strong history of returning capital to shareholders, low cyclicality and industry-appropriate leverage keep the company well above our more aggressive '3' rating.

## CONSIDERATIONS AND RISKS

We view all companies in the Water Utilities industry as being subject to significant regulatory and political risk. Utility operations are heavily regulated; negative rate-making climates and/or new environmental restrictions may affect the company's ability to earn a sufficient return on invested capital. Weather, natural disaster, and availability of water supplies could negatively impact sources of water, demand for water services, and a utility's ability to supply water to customers. Risks associated with the collection, treatment, and disposal of wastewater could also impose significant costs.

Significant Cap Ex are required to maintain infrastructure and expand rate base. Should WTR suffer from the lack of ability to secure appropriate funding to make investments, or if delays are incurred in completing projects, operating results could be negatively affected. Contamination of water could result in service interruptions or cause enforcement actions. Assets can be subject to condemnation through eminent domain. The company's non-reg businesses provide performance guarantees and have long-term contracts. Additionally, WTR is subject to all other risks that result from operating as a public company.

Our Suitability rating is 2 on a 1-to-4 scale (1 = most conservative, 4 = most aggressive).

## Analyst Certifications

I, Spencer E. Joyce, CFA, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company(ies) and its (their) securities. I also certify that I have not been, am not, and will not be receiving direct or indirect compensation in exchange for expressing the specific recommendation(s) in this report.

## Important Disclosures

Hilliard Lyons' analysts receive bonus compensation based on Hilliard Lyons' profitability. They do not receive direct payments from investment banking activity.

### Suitability Ratings

**1** - A large cap, core holding with a solid history
**2** - A historically secure company which could be cyclical, has a shorter history than a "1" or is subject to event driven setbacks
**3** - An above average risk/reward ratio could be due to small size, lack of product diversity, sporadic earnings or high leverage
**4** - Speculative, due to small size, inconsistent profitability, erratic revenues, volatility, low trading volume or a narrow customer or product base

### Investment Ratings

**Buy** - We believe the stock has significant total return potential in the coming 12 months.
**Long-term Buy** - We believe the stock is an above average holding in its sector, and expect solid returns to be realized over a longer time frame than our Buy rated issues, typically 2-3 years.
**Neutral** - We believe the stock is an average holding in its sector, is currently fully valued, and may be used as a source of funds if better opportunities arise.
**Underperform** - We believe the stock is vulnerable to a price setback in the next 12 months.

# Aqua America (WTR US)

## Buy: A bright future; 2017 EPS guidance in line, more capex

**EQUITIES**
WATER UTILITIES

United States

- Earnings guidance for 2017 is in line with our expectations
- New tax implications, short-term uncertainty, but growth drivers remain
- Maintain Buy rating and USD36 target price

### Earnings guidance – capex target increased

Aqua America (WTR) hosted its earnings guidance call on 17 January 2017 wherein it reiterated its 2016 guidance of USD1.30-1.35 for 2016. Our estimate of USD1.33 is in the middle of the range. In addition, it confirmed its target of 1.5% to 2% customer growth. The company guided to a 2017 EPS in the range of USD1.34-USD1.39. Our EPS estimate for 2017 of USD1.38 is at the higher end of this range. The company reiterated its customer growth target of 1.5-2%, but it increased its capex target from USD1.1bn for 2016-18 to USD1.2bn for the period 2017-19. For 2017, it expects significantly higher capex of more than USD450m, in comparison to USD350m before.

**Growth:** The Company completed 19 acquisitions in 2016 and has 4 pending acquisitions totalling 8,761 customers that are expected to be closed by the end of 2017. In its regulated operations it received approval for an increase in rates in 6 states covering 10 rate cases. It is waiting for approval for 2 rate cases, which could increase its revenue by USD8m per year. It aims to grow its regulated rate base by 6-7% over the medium term.

### New administration – nothing concrete yet – but tax changes likely

A number of potential impacts from the new US government are being discussed in the market. The benefit of tax rate reductions would be passed back to customers, but in the view of management this would be deferred slightly unless each state made an immediate adjustment to rates. We discuss some of the resultant changes to the complex regulatory mechanisms in this report. These have developed precisely because of the relatively high corporate tax rate in the US. Changes would lead to a reclassification and simplification of some of these but we believe ultimately would not be detrimental to customers or investor-owned utilities as tax is essentially a pass through to customers.

### Maintain Buy rating and USD36 target price

We value Aqua America via three methodologies – DCF, dividend yield, and peer multiples. Under this methodology we take the average of the three methods to arrive at our fair value target price of USD36 (unchanged). We have rolled forward our estimates; reviewed our cost of capital; increased our medium-term assumptions in line with guidance; and increased our yield assumptions in line with the US water peer group.

# A bright future

- Earnings guidance for 2017 in line with our expectations
- New tax implications, short-term uncertainty, but growth drivers remain
- Maintain Buy rating and USD36 target price

## 2017 guidance unveiled

Aqua America (WTR) hosted its earnings guidance call on 17 January 2017 wherein it reiterated its 2016 guidance and introduced its guidance for 2017. Some of the key highlights are given below:

- **2016 guidance reiterated**: WTR reiterated its full-year EPS guidance range of USD1.30-1.35 for 2016. Our estimate of USD1.33 is in the middle of the range. In addition, it confirmed its other target of 1.5% to 2% customer growth.
- **2017 guidance unveiled**: The Company guided to a 2017 EPS in the range of USD1.34-USD1.39. Our EPS estimate for 2017 of USD1.38 is at the higher end of this range. The company reiterates its customer growth target of 1.5-2%. However, it increased its capex target from USD1.1bn for 2016-18 to USD1.2bn for the period 2017-19. For 2017, it expects significantly higher capex of more than USD450m in comparison to a cUSD350m target before.
- **Update on acquisitions**: The Company completed 19 acquisitions in 2016, adding 6,558 customers for USD22m. This represents customer growth of 1.6%. In addition, the company has 4 pending acquisitions totalling 8,761 customers, which are expected to be closed by the end of 2017.
- **Update on rate cases**: In 2016, the company received approval for rate increases in 6 states covering 10 rate cases. The total annualised revenue increase from these rate cases is USD5m, according to the company. In addition, it received an annualised revenue increase of USD1.8m in January 2017 and is waiting for approval for 2 rate cases, which could increase its revenue by USD8m per year.

## Positive elements for 2017

Both of the US water stocks under our coverage benefited from a decrease in US treasury yields in the first half of 2016, which reversed in H2. The reasons we remain confident for continued good relative performance in 2017 are slightly different: The fundamental need for water infrastructure rehabilitation remains, but a low US bond yield environment has been replaced, in our view, with optimism about the growth of the US economy driven by infrastructure investment. Water is regulated at a state, not federal level so current growth drivers remain.

**New administration nothing concrete yet – but tax changes afoot**
A number of potential impacts from the new US government are being discussed in the market but it is too early to determine the impact as yet for the water sector.

On the call, Aqua management discussed some of the implications from potential tax reform in the US including:

**Tax rate reductions** – the benefit of this would be passed back to customers, but in the view of management, this would be deferred slightly unless each state made an immediate adjustment to rates;

**Excess deferred taxes** post rate cuts would be reclassified as Regulatory Liabilities and returned to customers;

**Repair tax deduction would be reduced.** This has been a mechanism used by Aqua to increase below-the-line tax headroom in Pennsylvania, allowing it to maintain earnings without applying for rates to increased regulatory revenues. If this was reduced, Aqua would have to file for rates earlier than it otherwise would have.

**The increase in tax deductions** could slow long-term rate base growth.

These sometimes complex regulatory mechanisms have developed precisely because of the relatively high corporate tax rate in the US. Changes would lead to a reclassification and simplification of some of these but we believe ultimately would not be detrimental to customers or investor-owned utilities as tax is essentially a pass through to customers.

**Growth opportunities coupled with favourable regulatory developments in the US water sector**

We discussed in our report *UK-US Regulated Utilities: The end of the UK regulatory asset growth model* (15 January 2016) that the US water sector has significant investment needs for replacing aging infrastructure. The American Water Works Association estimates that USD40bn might be needed to meet America's Water Infrastructure Challenge.

What has emerged in the last few years are favourable regulatory developments such as infrastructure surcharges, tax incentives and the Fair Value Market legislation, which we discuss below.

As a result of these regulatory developments, earnings growth and cash flow generation have been more immediate compared to the UK, where network regulation leads to a lag between investment and earnings growth. Historically, US water companies have invested in infrastructure and waited to file rate cases in order to recover costs. This has meant a period of under-earning relative to a growing asset (rate) base. Because these initiatives speed up the recovery of regulated earnings, EPS growth is steady and the companies are able to fund their investments from FCF.

This is in contrast to the UK regulated system, which has a high degree of regulatory lag. Long-term rate plans are set on a real basis with revenue and asset indexation to RPI, which protects against inflation, but high levels of capitalisation and incentive targets are only reflected at best on a two-year forward basis or at the end of a five-year period (in the case of water). This means that earnings growth tends to lag investment growth.

**Fair value market legislation**

In particular, fair value market legislation – the ability for regulated asset systems to be sold at a fair value that is then eligible for regulated returns – has been adopted in a number of states. Increasing use of this will facilitate public authorities selling assets for a profit and private purchasers such as WTR being able to earn on the fair value to finance asset rehabilitation rather than under-earning on a regulated asset value.

This underpins our confidence in the earnings growth potential of the US water stocks, and its confidence in achieving medium term 6-7% rate base growth.

**Retrenchment from market-based activities**

Management confirmed that it would develop only two of its eight non-regulated activities – O&M activities and Home Services – the remainder will be divested in 2017.

## Valuation and risks

**Maintain Buy rating with an unchanged TP of USD36**

We value Aqua America via three methodologies – DCF, dividend yield and peer multiples. Under this methodology we take the average of the three methods to arrive at our fair value target price of USD36. Our target price implies upside of 19.8%. We maintain our Buy rating because we believe that with significant investment needs in water infrastructure in the US, future US water growth will be faster than in the UK. The stock further offers regulated stability and high levels of earnings visibility.

We have made the following changes to our valuation:

- We have rolled forward our valuation to 2017e from 2016e.
- In our DCF valuation, we have reduced our risk-free rate assumption from 3% to 2.5%, in line with our HSBC strategists' assumptions.
- We have used a weighted average PE of 21x for 2017 for our peer group valuation.
- We have increased our yield assumption from 2% to 2.5% with higher bond yields. American Water (AWK US; CP USD71.72; Buy) and Aqua America yield around 2.5% for 2017.
- We have marginally increased our capex assumption for 2017 and 2018, in line with the company's guidance. This has resulted in a slight change to our 2018 financial estimates

### Summary of valuation

### Key downside risks

Aqua America fails to achieve the desired rate case revisions from rate cases; lack of organic growth from housing recovery and water usage; it grows its dividend at a lower rate than we estimate.

# Disclosure appendix

**Analyst Certification**

The following analyst(s), economist(s), and/or strategist(s) who is(are) primarily responsible for this report, certifies(y) that the opinion(s) on the subject security(ies) or issuer(s) and/or any other views or forecasts expressed herein accurately reflect their personal view(s) and that no part of their compensation was, is or will be directly or indirectly related to the specific recommendation(s) or views contained in this research report: Verity Mitchell, Adam Dickens and Pablo Cuadrado

**Important disclosures**

**Equities: Stock ratings and basis for financial analysis**

HSBC believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

**From 23rd March 2015 HSBC has assigned ratings on the following basis:**

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

**Prior to this date, HSBC's rating structure was applied on the following basis:**

For each stock we set a required rate of return calculated from the cost of equity for that stock's domestic or, as appropriate, regional market established by our strategy team. The target price for a stock represented the value the analyst expected the stock to reach over our performance horizon. The performance horizon was 12 months. For a stock to be classified as Overweight, the potential return, which equals the percentage difference between the current share price and the target price, including the forecast dividend yield when indicated, had to exceed the required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). For a stock to be classified as Underweight, the stock was expected to underperform its required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). Stocks between these bands were classified as Neutral.

*A stock was classified as volatile if its historical volatility had exceeded 40%, if the stock had been listed for less than 12 months (unless it was in an industry or sector where volatility is low) or if the analyst expected significant volatility. However, stocks which we did not consider volatile may in fact also have behaved in such a way. Historical volatility was defined as the past month's average of the daily 365-day moving average volatilities. In order to avoid misleadingly frequent changes in rating, however, volatility had to move 2.5 percentage points past the 40% benchmark in either direction for a stock's status to change.

**Rating distribution for long-term investment opportunities**

**As of 26 January 2017, the distribution of all independent ratings published by HSBC is as follows:**

| | | |
|---|---|---|
| **Buy** | 44% | ( 25% of these provided with Investment Banking Services ) |
| **Hold** | 41% | ( 27% of these provided with Investment Banking Services ) |
| **Sell** | 15% | ( 20% of these provided with Investment Banking Services ) |

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures.

**HSBC & Analyst disclosures**

None of the below disclosures applies to any of the stocks featured in this report.

1 HSBC has managed or co-managed a public offering of securities for this company within the past 12 months.
2 HSBC expects to receive or intends to seek compensation for investment banking services from this company in the next 3 months.
3 At the time of publication of this report, HSBC Securities (USA) Inc. is a Market Maker in securities issued by this company.
4 As of 31 December 2016 HSBC beneficially owned 1% or more of a class of common equity securities of this company.
5 As of 30 November 2016, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of investment banking services.
6 As of 30 November 2016, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of non-investment banking securities-related services.
7 As of 30 November 2016, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of non-securities services.
8 A covering analyst/s has received compensation from this company in the past 12 months.
9 A covering analyst/s or a member of his/her household has a financial interest in the securities of this company, as detailed below.
10 A covering analyst/s or a member of his/her household is an officer, director or supervisory board member of this company, as detailed below.

11 At the time of publication of this report, HSBC is a non-US Market Maker in securities issued by this company and/or in securities in respect of this company

12 As of 23 January 2017, HSBC beneficially held a net long position of more than 0.5% of this company's total issued share capital, calculated according to the SSR methodology.

13 As of 15 December 2016, HSBC beneficially held a net short position of more than 0.5% of this company's total issued share capital, calculated according to the SSR methodology.

HSBC and its affiliates will from time to time sell to and buy from customers the securities/instruments, both equity and debt (including derivatives) of companies covered in HSBC Research on a principal or agency basis.

Analysts, economists, and strategists are paid in part by reference to the profitability of HSBC which includes investment banking, sales & trading, and principal trading revenues.

Whether, or in what time frame, an update of this analysis will be published is not determined in advance.

Economic sanctions imposed by the EU and OFAC prohibit transacting or dealing in new debt or equity of Russian SSI entities. This report does not constitute advice in relation to any securities issued by Russian SSI entities on or after July 16 2014 and as such, this report should not be construed as an inducement to transact in any sanctioned securities.

For disclosures in respect of any company mentioned in this report, please see the most recently published report on that company available at www.hsbcnet.com/research. In order to find out more about the proprietary models used to produce this report, please contact the authoring analyst.

**Additional disclosures**

1. This report is dated as at 27 January 2017.
2. All market data included in this report are dated as at close 25 January 2017, unless a different date and/or a specific time of day is indicated in the report.
3. HSBC has procedures in place to identify and manage any potential conflicts of interest that arise in connection with its Research business. HSBC's analysts and its other staff who are involved in the preparation and dissemination of Research operate and have a management reporting line independent of HSBC's Investment Banking business. Information Barrier procedures are in place between the Investment Banking, Principal Trading, and Research businesses to ensure that any confidential and/or price sensitive information is handled in an appropriate manner.
4. You are not permitted to use, for reference, any data in this document for the purpose of (i) determining the interest payable, or other sums due, under loan agreements or under other financial contracts or instruments, (ii) determining the price at which a financial instrument may be bought or sold or traded or redeemed, or the value of a financial instrument, and/or (iii) measuring the performance of a financial instrument.

**Production & distribution disclosures**

1. This report was produced and signed off by the author on 26 Jan 2017 20:16 GMT.
2. In order to see when this report was first disseminated please see the disclosure page available at https://www.research.hsbc.com/R/34/npjFvkh

HSBC Global Research

# Aqua America (WTR US)

## Buy: A reality check in Q1, but growth continues

**EQUITIES**
WATER UTILITIES

**United States**

- 2017Q1 results show 3.4% EPS growth – solid, not spectacular
- Underperformer despite steady growth story
- Maintain Buy rating and TP of USD35

**2017Q1 results 3.4% EPS growth – solid, not spectacular**

Aqua America (WTR) posted its 2017Q1 results on 3 May 2017, with earnings per share growth rate of 3.4%. It also posted dividend growth of 7.5%, in line with guidance. Aqua benefited from the sale of a utility system in North Carolina as well as a favourable tax settlement in Ohio during the first quarter of 2016, which impacted the year-on-year comparison.

**Underperformer**

WTR has underperformed its water peers over 1m and 3m. Over 1m, it is down 8% against our MSCI European utilities benchmark. We believe this is because of buoyant US bond yields, given that US water stocks have some negative correlation with US yields (chart below). Because of the many opportunities flagged for growth through the purchase of asset systems from municipalities, which has caught investors' imagination, the negative correlation has been limited. The reality, as set out in the American Water Q1 call (AWK US, USD76.6, Buy, TP USD79), is that municipal acquisitions take time to deliver. They do not have such a clearly defined process as corporate acquisitions. The municipality is responsible to a wider range of stakeholders and must be seen to be delivering long-term value and service to customers. There is growth from these acquisitions, but market sentiment must not get ahead of guidance, which it did for Q1, in our view.

**Growth, rate cases and outlook for 2017**

Year to date, Aqua has added approximately 262 customer connections through acquisitions in Indiana. These, together with organic growth, have increased the company's customer base by more than 0.2% so far in 2017. It has four municipal systems under negotiation for purchase. These represent a purchase price of USD113m and nearly 9,000 customers or 12,000 equivalent households. WTR is targeting earnings per diluted share in the range of USD1.34-1.39, with total customer growth of 1.5-2% in 2017. It has reiterated its target of USD450m of investments for 2017.

**Maintain Buy rating with unchanged TP of USD35**

We value Aqua America via three methodologies: DCF, dividend yield, and peer multiples, taking the average of the three methods to arrive at our fair value target price of USD35 (unchanged). Our TP implies 8.8% upside; we maintain our Buy rating as we believe the combination of regulated investment and earnings growth is attractive.

Source: DataStream, Eikon

**Still driving growth through organic investment**
To date in 2017, the company's state subsidiaries in Indiana, Illinois, New Jersey, North Carolina and Ohio have received rate awards or infrastructure surcharges totalling USD10.7m. Additionally, the company currently has rate proceedings pending in Illinois and Virginia for USD12.2m.

**The big picture**
The US Environmental Protection Agency's (EPA) 2013 estimate of the National Need for Infrastructure Investment in water is USD384.2bn and USD298.2bn for waste water. This is a significant driver for investment in order to grow future regulated earnings for US water companies for the next 5-10 years. Fair value legislation was introduced as follows: Illinois 8/2013; New Jersey 5/2015; Indiana 5/2015; Pennsylvania 4/2016. Virginia already has a form of FV adjustment in place.

## Valuation and risks

We value Aqua America via three methodologies – DCF, dividend yield, and peer multiples. Under this methodology we take the average of the three methods to arrive at our fair value target price of USD35 (unchanged). We set out the details below. Our target price implies upside of 8.8%; we maintain our Buy rating for the stock because we believe the combination of regulated investment and earnings growth is attractive compared with the UK water stocks on similar PE multiples, but offering lower EPS growth.

**Key downside risks**
Aqua America fails to achieve the desired rate case revisions; lack of organic growth from asset replacement; it cannot take advantage of the FV market legislation opportunity; its dividend grows at a lower rate than estimated.

### Summary of valuation (USD)

# Disclosure appendix

**Analyst Certification**

The following analyst(s), economist(s), and/or strategist(s) who is(are) primarily responsible for this report, certifies(y) that the opinion(s) on the subject security(ies) or issuer(s) and/or any other views or forecasts expressed herein accurately reflect their personal view(s) and that no part of their compensation was, is or will be directly or indirectly related to the specific recommendation(s) or views contained in this research report: Verity Mitchell, Adam Dickens and Pablo Cuadrado

**Important disclosures**

**Equities: Stock ratings and basis for financial analysis**

HSBC believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

**From 23rd March 2015 HSBC has assigned ratings on the following basis:**

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

**Prior to this date, HSBC's rating structure was applied on the following basis:**

For each stock we set a required rate of return calculated from the cost of equity for that stock's domestic or, as appropriate, regional market established by our strategy team. The target price for a stock represented the value the analyst expected the stock to reach over our performance horizon. The performance horizon was 12 months. For a stock to be classified as Overweight, the potential return, which equals the percentage difference between the current share price and the target price, including the forecast dividend yield when indicated, had to exceed the required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). For a stock to be classified as Underweight, the stock was expected to underperform its required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). Stocks between these bands were classified as Neutral.

*A stock was classified as volatile if its historical volatility had exceeded 40%, if the stock had been listed for less than 12 months (unless it was in an industry or sector where volatility is low) or if the analyst expected significant volatility. However, stocks which we did not consider volatile may in fact also have behaved in such a way. Historical volatility was defined as the past month's average of the daily 365-day moving average volatilities. In order to avoid misleadingly frequent changes in rating, however, volatility had to move 2.5 percentage points past the 40% benchmark in either direction for a stock's status to change.

**Rating distribution for long-term investment opportunities**

**As of 24 May 2017, the distribution of all independent ratings published by HSBC is as follows:**

| | | |
|---|---|---|
| **Buy** | 45% | ( 25% of these provided with Investment Banking Services ) |
| **Hold** | 40% | ( 26% of these provided with Investment Banking Services ) |
| **Sell** | 15% | ( 16% of these provided with Investment Banking Services ) |

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures.

**HSBC & Analyst disclosures**

None of the below disclosures applies to any of the stocks featured in this report.

1 HSBC has managed or co-managed a public offering of securities for this company within the past 12 months.

2 HSBC expects to receive or intends to seek compensation for investment banking services from this company in the next 3 months.

3 At the time of publication of this report, HSBC Securities (USA) Inc. is a Market Maker in securities issued by this company.

4 As of 30 April 2017 HSBC beneficially owned 1% or more of a class of common equity securities of this company.

5 As of 31 March 2017, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of investment banking services.

6 As of 31 March 2017, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of non-investment banking securities-related services.

7 As of 31 March 2017, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of non-securities services.

8 A covering analyst/s has received compensation from this company in the past 12 months.

9 A covering analyst/s or a member of his/her household has a financial interest in the securities of this company, as detailed below.
10 A covering analyst/s or a member of his/her household is an officer, director or supervisory board member of this company, as detailed below.
11 At the time of publication of this report, HSBC is a non-US Market Maker in securities issued by this company and/or in securities in respect of this company
12 As of 19 May 2017, HSBC beneficially held a net long position of more than 0.5% of this company's total issued share capital, calculated according to the SSR methodology.
13 As of 19 May 2017, HSBC beneficially held a net short position of more than 0.5% of this company's total issued share capital, calculated according to the SSR methodology.

HSBC and its affiliates will from time to time sell to and buy from customers the securities/instruments, both equity and debt (including derivatives) of companies covered in HSBC Research on a principal or agency basis.

Analysts, economists, and strategists are paid in part by reference to the profitability of HSBC which includes investment banking, sales & trading, and principal trading revenues.

Whether, or in what time frame, an update of this analysis will be published is not determined in advance.

Economic sanctions imposed by the EU and OFAC prohibit transacting or dealing in new debt or equity of Russian SSI entities. This report does not constitute advice in relation to any securities issued by Russian SSI entities on or after July 16 2014 and as such, this report should not be construed as an inducement to transact in any sanctioned securities.

For disclosures in respect of any company mentioned in this report, please see the most recently published report on that company available at www.hsbcnet.com/research. HSBC Private Banking clients should contact their Relationship Manager for queries regarding other research reports. In order to find out more about the proprietary models used to produce this report, please contact the authoring analyst.

**Additional disclosures**

1. This report is dated as at 25 May 2017.
2. All market data included in this report are dated as at close 23 May 2017, unless a different date and/or a specific time of day is indicated in the report.
3. HSBC has procedures in place to identify and manage any potential conflicts of interest that arise in connection with its Research business. HSBC's analysts and its other staff who are involved in the preparation and dissemination of Research operate and have a management reporting line independent of HSBC's Investment Banking business. Information Barrier procedures are in place between the Investment Banking, Principal Trading, and Research businesses to ensure that any confidential and/or price sensitive information is handled in an appropriate manner.
4. You are not permitted to use, for reference, any data in this document for the purpose of (i) determining the interest payable, or other sums due, under loan agreements or under other financial contracts or instruments, (ii) determining the price at which a financial instrument may be bought or sold or traded or redeemed, or the value of a financial instrument, and/or (iii) measuring the performance of a financial instrument.

HSBC Global Research

# Aqua America (WTR US)

## Buy: Still some upside, raise TP to USD40

EQUITIES
WATER UTILITIES

United States

- Q2 2017: 2% regulated revenue growth; dividend growth 7%
- Promising growth potential; still some upside
- Maintain Buy rating, raise TP to USD40 from USD35

**Q2 2017 2.3% growth in net income; revenues weighed down by disposal**

Aqua America (WTR) reported its Q2 2017 results with 2% growth in regulated revenues due to an increase in rates, surcharges, consumption and customer growth. However, total revenues declined 0.2% due to the disposal of much of its market-based activities segment. Future market-based activities will be focused on limited O&M and home services segments with a smaller cUSD4m revenue and won't represent more than 10% of total earnings. EPS was USD0.62 compared to USD0.63 in 2016. It announced a dividend increase of 7%, in line with its guidance, and an improved O&M efficiency ratio that declined 4.2%.

**Water investors want growth: US water and Veolia best performers**

WTR has outperformed all the stocks in our water coverage universe y-t-d except American Water (AWK US, Hold, USD81.08) and Veolia (VIE FP, Buy, EUR19.06). Because of the many opportunities flagged for growth through the purchase of asset systems from municipalities and lack of regulatory risk, the US water stocks have done well. The challenge for the next leg up to our 2% assumed yield (compared to 2.4% at present) is an accelerated growth outlook.

**Rate case and outlook**

Year-to-date, Aqua has added more than 1,000 customer connections through acquisitions. These, together with organic growth, have increased the company's customer base by more than 0.5% so far in 2017. It has four municipal systems under negotiation for purchase. These represent a purchase price of USD121m and nearly 12,000 customers. It is also going to file for rate case in Pennsylvania in 2018 with the resolution expected in 2019. WTR is targeting earnings per diluted share in the range of USD1.34-1.39, with total customer growth of 1.5-2% in 2017. It has reiterated its target of USD450m of investments for 2017.

**Maintain Buy rating and raise TP to USD40 from USD35**

We value Aqua America via three methodologies: DCF, dividend yield, and peer multiples, taking the average of the three methods to arrive at our new fair value target price of USD40, which reflects our updated US water peer valuation multiple from 24x to 27.8x. We also consider the dividend yield of 2%, which is in line with its peers. Our target price implies c18.7% upside. We maintain our Buy rating as we believe the combination of regulated investment and earnings growth is attractive.

**MAINTAIN BUY**

| TARGET PRICE (USD) | PREVIOUS TARGET (USD) |
|---|---|
| **40.00** | **35.00** |

| SHARE PRICE (USD) | UPSIDE/DOWNSIDE |
|---|---|
| **33.71** | **+18.7%** |
| (as of 04 Aug 2017) | |

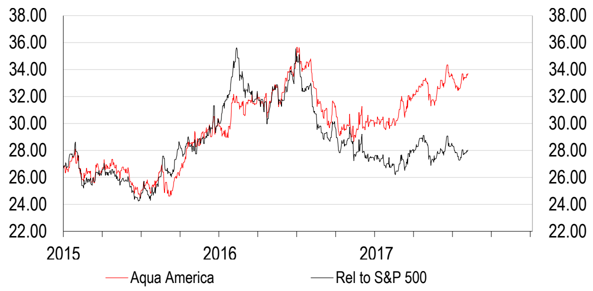
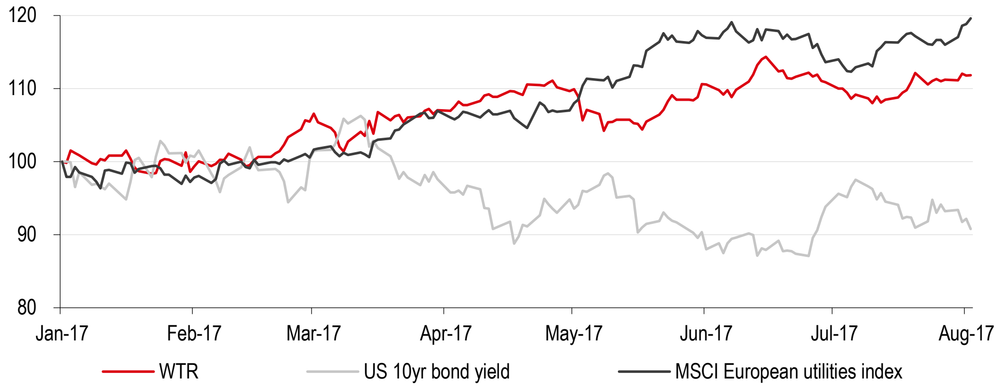
## Price relative



Source: HSBC

Note: Priced at close of 04 Aug 2017

**Y-t-d performance of WTR vs MSCI European utilities index vs US 10yr bond yield**



Source: MSCI, Thomson Reuters Datastream

**Less of a bond proxy**

We compare the performance of WTR against the US 10-year bond yield. We believe that because WTR is less liquid than AWK, it has been less perfectly correlated with rising US bond yields. It trade more in line with our European utility peers.

**Growth driver: Organic investment**

To date in 2017, the company's subsidiaries in Indiana, Illinois, New Jersey, North Carolina, Pennsylvania and Ohio have received rate awards or infrastructure surcharges totalling USD11.1m. Additionally, the company currently has rate proceedings pending in Illinois and Virginia for USD14m.

During conference call, the CEO mentioned that WTR will apply for a rate case in Pennsylvania in 2018. WTR has not filed for a rate case in the state since 2011, utilising deferred tax balances to fund its investments. It will apply for an infrastructure surcharge (DSIC) in 2017 for 7.6%. WTR will opt for a gradual rate increase, which will be beneficial for customers as it will smooth the bill increase over several quarters.

**The big picture**

The US Environmental Protection Agency's (EPA) 2013 estimate of the National Need for Infrastructure Investment in water is USD384.2bn, and USD298.2bn for waste water. This is a significant driver for investment in order to grow future regulated earnings for US water companies for the next five to ten years.

## Valuation and risks

**Maintain Buy rating, TP raised to USD40 from USD35**

We value Aqua America via three methodologies: DCF, dividend yield, and peer multiples. We take the average of the three methods to arrive at our new fair value target price of USD40, which reflects our updated US water peer valuation multiple from 24x to 27.8x. We also consider the dividend yield of 2%, which is in line with its peers. Our target price implies c18.7% upside. We maintain our Buy rating as we believe the combination of regulated investment and earnings growth is attractive and WTR has underperformed relative to its US peer, which offers a similar investment model. It is also not perfectly correlated to US bond yields.

### Summary of valuation (USD)

| Particulars | New | Previous |
|---|---|---|
| **Current price as on 4-Aug-17** | **33.7** | **NA** |
| DCF | 40.9 | 40.8 |
| Yield | 40.6 | 32.4 |
| Peer multiple | 38.2 | 33.0 |
| **Target price (average rounded)** | **40.0** | **35.0** |
| Upside | 18.7% | NA |
| **Rating** | **Buy** | **Buy** |

Source: HSBC estimates

### WACC inputs and DCF valuation

| WACC inputs | | Equity valuation | USDm |
|---|---|---|---|
| **Cost of debt** | | **+ DCF value** | **8,378** |
| Pre-tax cost of debt | 4.3% | + ST marketable assets | - |
| Marginal tax rate | 19.0% | + Value of associates | - |
| **Cost of equity** | | + Other assets | 949 |
| Risk-free rate | 2.5% | **EV (asset side)** | **9,326** |
| Equity risk premium | 3.5% | - Net debt (+ if Net cash) | (2,086) |
| Additional risk | | - Quasi debt (pension) | - |
| **Beta** | **0.49** | - Value of minorities | 0 |
| Debt - 24% | 3.5% | Total non-equity claims | (2,086) |
| Equity - 76% | 4.2% | Value of equity | 7,240 |
| **Cost of capital** | **4.0%** | **Value per share (USD)** | **40.9** |

Source: HSBC estimates

### Peer multiple valuation

| | USD |
|---|---|
| **2017e EPS** | **1.37** |
| PE multiple | 27.8x |
| **Equity value per share (USD)** | **38.2** |

Source: HSBC estimates

### Key downside risks

Aqua America fails to achieve the desired rate case revisions and infrastructure surcharges; it lacks organic growth from asset replacement; it cannot take advantage of the FV market legislation opportunity; its dividend grows at a lower rate than we assume.

# Disclosure appendix

**Analyst Certification**

The following analyst(s), economist(s), and/or strategist(s) who is(are) primarily responsible for this report, certifies(y) that the opinion(s) on the subject security(ies) or issuer(s) and/or any other views or forecasts expressed herein accurately reflect their personal view(s) and that no part of their compensation was, is or will be directly or indirectly related to the specific recommendation(s) or views contained in this research report: Verity Mitchell, Adam Dickens and Pablo Cuadrado

**Important disclosures**

**Equities: Stock ratings and basis for financial analysis**

HSBC believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

**From 23rd March 2015 HSBC has assigned ratings on the following basis:**

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

**Prior to this date, HSBC's rating structure was applied on the following basis:**

For each stock we set a required rate of return calculated from the cost of equity for that stock's domestic or, as appropriate, regional market established by our strategy team. The target price for a stock represented the value the analyst expected the stock to reach over our performance horizon. The performance horizon was 12 months. For a stock to be classified as Overweight, the potential return, which equals the percentage difference between the current share price and the target price, including the forecast dividend yield when indicated, had to exceed the required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). For a stock to be classified as Underweight, the stock was expected to underperform its required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). Stocks between these bands were classified as Neutral.

*A stock was classified as volatile if its historical volatility had exceeded 40%, if the stock had been listed for less than 12 months (unless it was in an industry or sector where volatility is low) or if the analyst expected significant volatility. However, stocks which we did not consider volatile may in fact also have behaved in such a way. Historical volatility was defined as the past month's average of the daily 365-day moving average volatilities. In order to avoid misleadingly frequent changes in rating, however, volatility had to move 2.5 percentage points past the 40% benchmark in either direction for a stock's status to change.

**Rating distribution for long-term investment opportunities**

**As of 07 August 2017, the distribution of all independent ratings published by HSBC is as follows:**

| | | |
|---|---|---|
| **Buy** | 45% | ( 25% of these provided with Investment Banking Services ) |
| **Hold** | 41% | ( 25% of these provided with Investment Banking Services ) |
| **Sell** | 14% | ( 16% of these provided with Investment Banking Services ) |

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures.

**HSBC & Analyst disclosures**

None of the below disclosures applies to any of the stocks featured in this report.

1 HSBC has managed or co-managed a public offering of securities for this company within the past 12 months.

2 HSBC expects to receive or intends to seek compensation for investment banking services from this company in the next 3 months.

3 At the time of publication of this report, HSBC Securities (USA) Inc. is a Market Maker in securities issued by this company.

4 As of 30 June 2017 HSBC beneficially owned 1% or more of a class of common equity securities of this company.

5 As of 30 June 2017, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of investment banking services.

6 As of 30 June 2017, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of non-investment banking securities-related services.

7 As of 30 June 2017, this company was a client of HSBC or had during the preceding 12 month period been a client of and/or paid compensation to HSBC in respect of non-securities services.

8 A covering analyst/s has received compensation from this company in the past 12 months.

9 A covering analyst/s or a member of his/her household has a financial interest in the securities of this company, as detailed below.

10 A covering analyst/s or a member of his/her household is an officer, director or supervisory board member of this company, as detailed below.

11 At the time of publication of this report, HSBC is a non-US Market Maker in securities issued by this company and/or in securities in respect of this company

12 As of 02 Aug 2017, HSBC beneficially held a net long position of more than 0.5% of this company's total issued share capital, calculated according to the SSR methodology.

13 As of 02 Aug 2017, HSBC beneficially held a net short position of more than 0.5% of this company's total issued share capital, calculated according to the SSR methodology.

HSBC and its affiliates will from time to time sell to and buy from customers the securities/instruments, both equity and debt (including derivatives) of companies covered in HSBC Research on a principal or agency basis.

Analysts, economists, and strategists are paid in part by reference to the profitability of HSBC which includes investment banking, sales & trading, and principal trading revenues.

Whether, or in what time frame, an update of this analysis will be published is not determined in advance.

Economic sanctions imposed by the EU and OFAC prohibit transacting or dealing in new debt or equity of Russian SSI entities. This report does not constitute advice in relation to any securities issued by Russian SSI entities on or after July 16 2014 and as such, this report should not be construed as an inducement to transact in any sanctioned securities.

For disclosures in respect of any company mentioned in this report, please see the most recently published report on that company available at www.hsbcnet.com/research. HSBC Private Banking clients should contact their Relationship Manager for queries regarding other research reports. In order to find out more about the proprietary models used to produce this report, please contact the authoring analyst.

**Additional disclosures**

1. This report is dated as at 08 August 2017.
2. All market data included in this report are dated as at close 04 August 2017, unless a different date and/or a specific time of day is indicated in the report.
3. HSBC has procedures in place to identify and manage any potential conflicts of interest that arise in connection with its Research business. HSBC's analysts and its other staff who are involved in the preparation and dissemination of Research operate and have a management reporting line independent of HSBC's Investment Banking business. Information Barrier procedures are in place between the Investment Banking, Principal Trading, and Research businesses to ensure that any confidential and/or price sensitive information is handled in an appropriate manner.
4. You are not permitted to use, for reference, any data in this document for the purpose of (i) determining the interest payable, or other sums due, under loan agreements or under other financial contracts or instruments, (ii) determining the price at which a financial instrument may be bought or sold or traded or redeemed, or the value of a financial instrument, and/or (iii) measuring the performance of a financial instrument.

**Production & distribution disclosures**

**2018 opened with notable selling in the utility space.** In a mostly positive opening to 2018 last week, utilities notably underperformed. The Water-Distribution segment fell -3.8%, with none of the utility names finishing in positive territory. The news was better in the Water-Flow Technology and Water Solutions segments, which each finished up +2.5%. The general market benchmarks also finished higher (The S&P Composite and NASDAQ gained +2.6 and +3.4%, respectively) as did the Powershares Water ETF +0.8%.

**<u>Mixed performance greeted the utility sector in the opening week of 2018.</u>** The opening week of the new year brought uneven results to the utility sector, with a wide range of results. The best performance came from last year's laggard, the Gas (with E&P) segment, which finished up +3.2% (this was the only segment to finish down in 2017). The worst performance came from the Electric/Merchant segment, which fell -3.0%. The remaining segments finished in a range from +0.8% to -2.7%. Performance across the general market benchmarks was positive (the DJ Indu +2.3%, the S&P Composite +2.6% and the NASDAQ +3.4%), while the utility indexes all finished lower in a range of -2.6% to -3.1%.

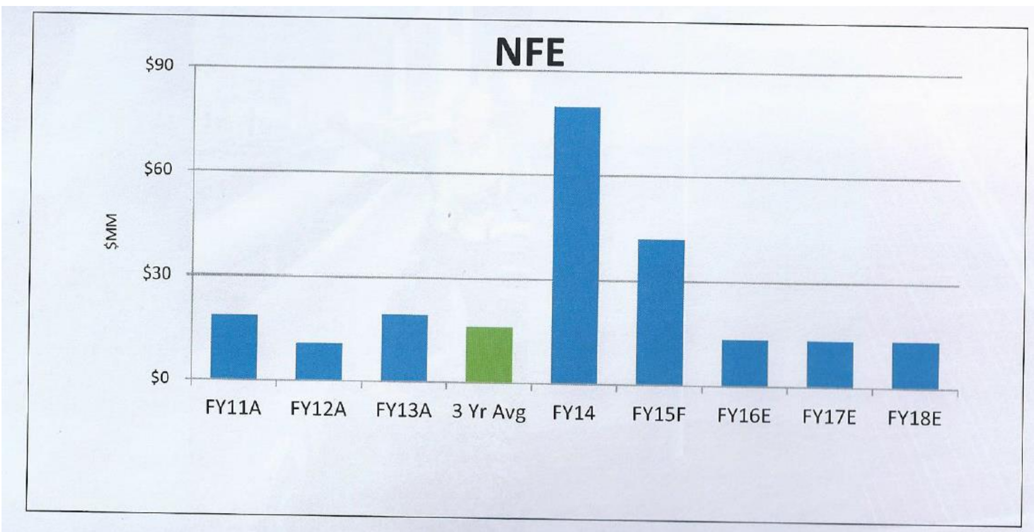
**Commentary** – The big news last week was the cold temperatures across our utility coverage universe, with Bloomberg reporting a daily peak record set on Monday, higher even than during the Polar Vortex in 2014. Beyond the increased usage benefits we'd expect to see show up in gas utility company financials for calendar 1Q18, we remembered the impact high prices had on New Jersey Resources Energy Services business. We dug through our old presentations, and came across this exhibit (#1), which displays the impact on earnings the Polar Vortex had on FY2014 and then the extremely cold weather in FY2015. It wouldn't surprise us to see NJR report outsized earnings again in its FY2018 (which began in October 2017). Bloomberg also reported natural gas prices surged to 60 times the going rate, to $175 per BTU, versus the $2.93 average price seen over the course of the winter prior to last week.

**Exhibit #1 – NJR Energy Services Net Financial Earnings, FY11 – FY15.**



*Source: NJR Presentation*

Beyond NJR, We noted the unit prices for AmeriGas picked up nicely; we'd expect the company to benefit as well from the cold temperatures gripping much of the company. APU is our chart of the week; the shares are now solidly above the 50 and 200 day moving average. Despite the move, the units still yield 7.99%.

*Source: FactSet*

**TOP IDEAS**

**Electric/Gas Utilities**

**SJI:** recently announced regulated utility acquisitions, ongoing midstream investment opportunities, a generous yield and favorable valuation all factor into our positive investment thesis on SJI shares.

**Industrials**

**MWA:** Ongoing cost-out activities and free cash flow capability to support future growth, coupled with an attractive valuation are the primary determinants for MWA's position as our #1 pick in our industrial coverage universe.

**Water Utilities**

**WTR**: Within the U.S. water utility group, Aqua America is our top pick. We see several future catalysts, including M&A transactions across its regulated business platforms, and a significant rate case filing in Pennsylvania (approximately two-thirds of total rate base) in 2H18. We consider the company's asset base to be very high quality, and we assign the shares the highest price-to-earnings multiple within its sector. Valuation remains favorable, with an attractive yield.

Calgon Carbon provides services and solutions for purifying water & air, food, beverage and industrial process streams. It operates three business segments: Activated Carbon, Advanced Water Purification and Alternative Materials. The Activated Carbon segment manufactures granular activated carbon (GAC), which is used to remove inorganic compounds from water, air, liquids and gases, and powdered activated carbon (PAC), used for mercury removal from coal-fired electric powerplant emissions (MATS compliance). The Advanced Water Purification segment designs and fabricates systems that provide solutions to water problems. The Alternative Materials segment manufactures and sells carbon cloth, diatomaceous earth and perlite

CPK's regulated energy business delivers natural gas to customers located in central and southern Delaware, Maryland's Eastern Shore, and Florida and electricity to customers in northeast and northwest Florida. CPK's regulated energy business also offers natural gas transmission service primarily through a 400+-mile interstate pipeline from various points in Pennsylvania and northern Delaware to natural gas distribution affiliates in Delaware and Maryland as well as to other utility and industrial customers in Pennsylvania, Delaware and the Eastern Shore of Maryland. CPK's unregulated energy business includes propane distribution and propane wholesale marketing operations. The natural gas marketing operation sells natural gas supplies directly to commercial and industrial customers in Florida, Delaware and Maryland. CPK distributes propane to customers in Delaware, the Eastern Shore of Maryland and Virginia, southeastern Pennsylvania and Florida. The propane wholesale marketing operation markets propane to wholesale customers including large independent oil and petrochemical companies, resellers and propane distribution companies in the

## IMPORTANT DISCLOSURES

## Research Analyst Certification

I, Michael Gaugler, the Primarily Responsible Analyst for this research report, hereby certify that all of the views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views I expressed in this research report.

AmeriGas Partners, LP currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Chesapeake Utilities Corporation currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

South Jersey Industries, Inc. currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Unitil currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Janney Montgomery Scott LLC currently acts as a market-maker in the securities of AMETEK, Inc., American Water Works, American States Water, Calgon Carbon Corp., Consolidated Water Co., California Water Service, IDEX Corporation, Middlesex Water Co., Mueller Water Products, New Jersey Resources Corp., Rexnord Corporation, Companhia de Saneamento Basico do Estado de Sao Paulo (ADR), South Jersey Industries, Inc., SJW Corp, Unitil, Aqua America, Inc., Watts Water Technologies, Inc. and Xylem, Inc..

Janney Montgomery Scott LLC managed or co-managed a public offering of securities for Chesapeake Utilities Corporation, South Jersey Industries, Inc. and Unitil in the past 12 months.

Janney Montgomery Scott LLC received compensation for investment banking services from Chesapeake Utilities Corporation and South Jersey Industries, Inc. in the past 12 months.

Janney Montgomery Scott LLC intends to seek or expects to receive compensation for investment banking services from Avangrid, Inc., AMETEK, Inc., Ampco-Pittsburgh Corporation, AmeriGas Partners, LP, American Water Works, American States Water, Calgon Carbon Corp., Chesapeake Utilities Corporation, Consolidated Water Co., California Water Service, Eversource Energy, IDEX Corporation, Middlesex Water Co., Mueller Water Products, New Jersey Resources Corp., RGC Resources, Inc., Rexnord Corporation, South Jersey Industries, Inc., SJW Corp, UGI Corporation, Unitil, WGL Holdings Inc., Aqua America, Inc., Watts Water Technologies, Inc. and Xylem, Inc. in the next three months.

The research analyst is compensated based on, in part, Janney Montgomery Scott's profitability, which includes its investment banking revenues.

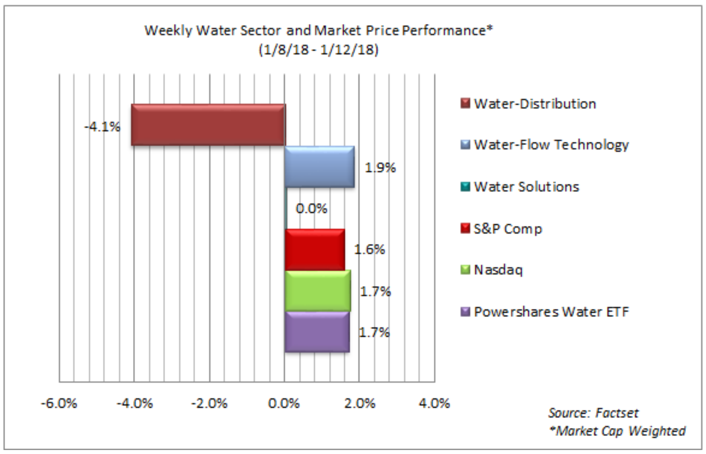
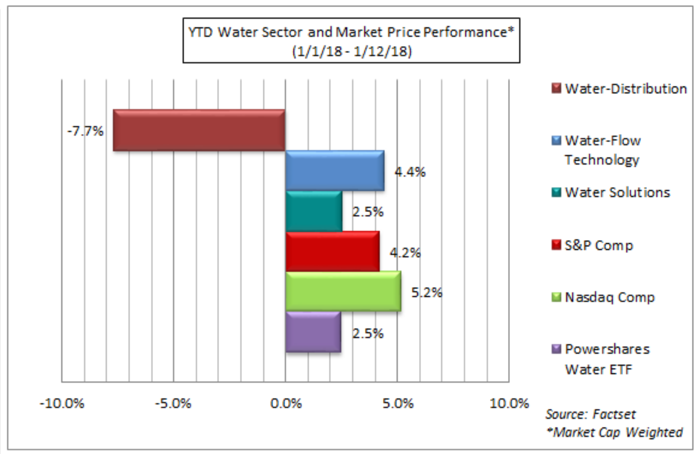
RESEARCH ANALYST CERTIFICATIONS AND IMPORTANT DISCLOSURES ARE ON PAGES 45 - 46 OF THIS REPORT

**Water utilities declined significantly for the second week in a row.** For the second week in a row, utilities notably underperformed. The Water-Distribution segment fell -4.1%, with 8 of 11 names finishing down. American Water Works and Aqua America, the two biggest U.S.-based names in terms of market capitalization, declined by -6.8% and -6.9%, respectively. The Water-Flow Technology segment added +1.9%, while the Water Solutions segment managed a breakeven performance. The general market benchmarks finished higher (the S&P Composite and NASDAQ gained +1.6 and +1.7%, respectively) while the Powershares Water ETF added +1.7%.

YTD, it's a disappointing start to 2018 for the water utilities, which are down -7.7%. At the other end of the performance spectrum, the Water Flow Technology segment is off to great start, at +4.4%. The Water Solutions segment has also opened 2018 on a positive note, +2.5%. The market benchmarks are all positive, with the S&P Composite +4.2%, the NASDAQ Composite +5.2% and the Powershares Water ETF at +2.5%.





| Largest Gains Last Week | | | Largest Losses Last Week | | |
|---|---|---|---|---|---|
| **Company Name** | **Ticker** | **Gain** | **Company Name** | **Ticker** | **Loss** |

*Source:Factset*

**Utilitiy performance suffered as the 10-year T-Note rate rose.** It was a sea of red in terms of utility performance last week, as 7 of our 9 segments finished down. The best performance came from the Gas (with E&P) segment, which finished +0.9%. The worst performance was from the Regulated Electric Only segment, at -3.8%. The Gas (LDC) names also took a large hit, finishing lower by -2.8%. The remaining segments finished in a range from +0.2% to -2.1%. Performance across the general market benchmarks was positive (the DJ Indu +2.0%, the S&P Composite +1.6% and the NASDAQ +1.7%), while the utility indexes all finished lower in a range of -2.4% to -2.1%.

YTD, it's been a difficult start for utilities where earnings are largely regulated. The Gas (with E&P) segment holds best-performer status at +4.2%, and the Merchant segment has managed a +1.0% gain. All other utility segments are negative, with the Regulated Electric Only segment as the worst-performer at -6.4%. The damage to returns inflicted early-on in 2018 is meaningful, and with the 10-year U.S. T-Note yield rising, the carnage may not be over for quite some time. That said, the market benchmarks have opened 2018 with strong positive returns; the DJ Industrials are up 4.4%, the S&P 500 is +4.2%, and the NASDAQ is +5.2%. The utility benchmarks are all negative, in a range of -4.6% to -5.5%.

*Source:Factset*

**Commentary** – We had the opportunity to spend time with **Chesapeake Utilities (CPK)**'s management team in NYC last week, and it appears the company is off to a busy start in 2018, due to the extremely cold weather. We expect weather impacts in both 4Q17 and 1Q18 to be meaningfully positive when the company reports quarterly results; temperatures were below normal in the Mid-Atlantic, Midwest and Florida service territories (the company experienced snow at its Amelia Island facility). The comps in terms of weather impact impacts should be very favorable, given 4Q16 and 1Q17 experienced much milder temperatures versus the last several weeks. That should benefit not only the regulated operations, but the unregulated propane operations, as well. We believe the results could exceed the winter of 2013/2014, if current temperature trends continue.

The extra anticipated cash could come in handy as 2018 unfolds, given the preliminary CAPEX forecast of $182MM (the final tally for 2017 looks to be $193MM). The company continues to find new attractive investment opportunities, particularly with service expansions. In Florida alone, the company highlighted 3 separate expansions (Northwest Florida, New Smyrna and Belvedere). The expansion in Florida (pipeline service) caught our attention, given that asset isn't yet in-service (but investment is increasing). The company sees solid growth prospects across its entire service territory, but we noted that the Florida Natural Gas projects were broken out in a separate slide in the investor deck. The service expansions are expected to add an incremental $7.7MM in margin after completion.

Across our utility coverage universe, the sell-off in equity prices was severe last week, accelerating from the opening week of 2018. Most of the utility charts are broken, with many already closing below key support levels (the 200 and 50 moving averages). The significant rise in the U.S. 10-year T-Note (it finished at 2.55% at the end of last week, Exhibit #1) and was the primary cause we can identify as driving utility shares lower.

**Exhibit #1, U.S. 10-year T-Note Yield**

*Source: FactSet*

We have several charts to display this week, and we begin by showing **American Water Works (AWK**) and **Aqua America (WTR)** side-by-side. Both experienced substantial drops in their share prices last week, approximately 7%. The difference we observed was that the shares of AWK move decidedly below their 200 day moving average, and on heavy volume while WTR's shares remain above that key support level.

*Source: FactSet*

Looking beyond the two largest water utilities, which are primarily East Coast-based, we examine the West Coast names, where the charts look a bit better. None of the West Coast names have breached the 200 day moving average, which generates two questions for us: are AWK shares the bellwether (which would imply the remaining names in the water utility peer group can be expected to breach their respective 200 day moving averages) or are AWK shares oversold and set to bounce back to the 200-day MA?

*Source: FactSet*

Next up we take a look at our Electric & Gas utility coverage. Our New Jersey-based utilities had already pulled back ahead of last week's decline, and both **New Jersey Resources** (**NJR)** and **South Jersey Industries** (**SJI)** showed relatively stability while others were in a free fall.

*Source: FactSet*

The best chart in our electric & gas utility coverage universe is **Avangrid (AGR**). The shares have been holding above the 200 day moving average, but are getting close. **Eversource Energy (ES)** closed below the 200 day moving average last week, but performance in both names last week didn't raise any alarm bells; they held up fairly well given the performance of some of the other names in the peer group.

*Source: FactSet*

Taking everything into account across all our utility sectors, it appears the market finally got around to selling the water utilities down last week, at least the two biggest U.S.-based names. Many of the charts have similar patterns; some are showing signs of potentially bottoming-out. The big remaining question is where the 10-year T-Note yield goes from here; its already moved well beyond Janney's fixed income internal forecasts out through 2019. That said, positives for our utility coverage are numerous; the bulk of the names have relatively low pay-out ratios and can raise dividends to make equity values more attractive, and the group in general also has significant investment opportunities where rates of return are guaranteed by state and federal regulators.

## TOP IDEAS

### Electric/Gas Utilities

**SJI:** recently announced regulated utility acquisitions, ongoing midstream investment opportunities, a generous yield and favorable valuation all factor into our positive investment thesis on SJI shares.

### Industrials

**MWA:** Ongoing cost-out activities and free cash flow capability to support future growth, coupled with an attractive valuation are the primary determinants for MWA's position as our #1 pick in our industrial coverage universe.

### Water Utilities

**WTR**: Within the U.S. water utility group, Aqua America is our top pick. We see several future catalysts, including M&A transactions across its regulated business platforms, and a significant rate case filing in Pennsylvania (approximately two-thirds of total rate base) in 2H18. We consider the company's asset base to be very high quality, and we assign the shares the highest price-to-earnings multiple within its sector. Valuation remains favorable, with an attractive yield.

Calgon Carbon provides services and solutions for purifying water & air, food, beverage and industrial process streams. It operates three business segments: Activated Carbon, Advanced Water Purification and Alternative Materials. The Activated Carbon segment manufactures granular activated carbon (GAC), which is used to remove inorganic compounds from water, air, liquids and gases, and powdered activated carbon (PAC), used for mercury removal from coal-fired electric powerplant emissions (MATS compliance). The Advanced Water Purification segment designs and fabricates systems that provide solutions to water problems. The Alternative Materials segment manufactures and sells carbon cloth, diatomaceous earth and perlite filtration media products for a variety of applications.

CPK's regulated energy business delivers natural gas to customers located in central and southern Delaware, Maryland's Eastern Shore, and Florida and electricity to customers in northeast and northwest Florida. CPK's regulated energy business also offers natural gas transmission service primarily through a 400+-mile interstate pipeline from various points in Pennsylvania and northern Delaware to natural gas distribution affiliates in Delaware and Maryland as well as to other utility and industrial customers in Pennsylvania, Delaware and the Eastern Shore of Maryland. CPK's unregulated energy business includes propane distribution and propane wholesale marketing operations. The natural gas marketing operation sells natural gas supplies directly to commercial and industrial customers in Florida, Delaware and Maryland. CPK distributes propane to customers in Delaware, the Eastern Shore of Maryland and Virginia, southeastern Pennsylvania and Florida. The propane wholesale marketing operation markets propane to wholesale customers including large independent oil and petrochemical companies, resellers and propane distribution companies in the southeastern United States.

Xylem is a global leader in water application solutions that focuses on the technology-intensive equipment and services end market (a sector of the $500 billion global water market), and should see increasing long-term demand from a favorable end market environment for investment in water due to population growth, economic development, and increasing (and tighter) water quality regulations. The company has exposure to many different end markets, including industrial, public utility, commercial, residential, and agriculture.
