## IMPORTANT DISCLOSURES

## Research Analyst Certification

I, Michael Gaugler, the Primarily Responsible Analyst for this research report, hereby certify that all of the views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views I expressed in this research report.

Chesapeake Utilities Corporation currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

South Jersey Industries, Inc. currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Unitil currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Janney Montgomery Scott LLC currently acts as a market-maker in the securities of AMETEK, Inc., American Water Works, American States Water, Calgon Carbon Corp., Consolidated Water Co., California Water Service, IDEX Corporation, Middlesex Water Co., New Jersey Resources Corp., Rexnord Corporation, Companhia de Saneamento Basico do Estado de Sao Paulo (ADR), South Jersey Industries, Inc., SJW Corp, Unitil, Aqua America, Inc., Watts Water Technologies, Inc. and Xylem, Inc..

Janney Montgomery Scott LLC managed or co-managed a public offering of securities for Chesapeake Utilities Corporation, South Jersey Industries, Inc. and Unitil in the past 12 months.

Janney Montgomery Scott LLC received compensation for investment banking services from Chesapeake Utilities Corporation and South Jersey Industries, Inc. in the past 12 months.

Janney Montgomery Scott LLC intends to seek or expects to receive compensation for investment banking services from Avangrid, Inc., AMETEK, Inc., American Water Works, American States Water, Calgon Carbon Corp., Chesapeake Utilities Corporation, Consolidated Water Co., California Water Service, Eversource Energy, IDEX Corporation, Middlesex Water Co., New Jersey Resources Corp., Rexnord Corporation, South Jersey Industries, Inc., SJW Corp, UGI Corporation, Unitil, WGL Holdings Inc., Aqua America, Inc., Watts Water Technologies, Inc. and Xylem, Inc. in the next three months.

The research analyst is compensated based on, in part, Janney Montgomery Scott's profitability, which includes its investment banking revenues.

Sources: FactSet (pricing, estimates), Janney Montgomery Scott, LLC Ratings/Fair Values

**Water utilities caught a bid, but it wasn't as strong as it appeared.** Water utilities (the Water-Distribution) segment rebounded last week, finishing up +2.9%. While 10 of 11 names finished higher, segment performance was boosted by the 4.9% gain in the shares/ADR's of Brazilian water utility SABESP, which had a magnified impact on our market cap-weighted calculation. The 10 year U.S. T-Note yield continued to climb, and finished the week at 2.64%, but investors decided to overlook that and buy water utilities anyway. The Water-Flow Technology segment added +0.9%, while the Water Solutions segment added 0.7%. The general market benchmarks finished higher (the S&P Composite and NASDAQ gained +0.9 and +1.0%, respectively) while the Powershares Water ETF added +1.0%.

YTD, the Water Flow Technology segment continues to outperform, at +5.3%. The Water Solutions segment is +3.2%, while the Water-Distributions segment is lower at -5.0%. With the U.S. government failing to reach a budget agreement Friday night, we'd expect continuing pressure on the 10 year T-Note, which could negatively impact yield-sensitive names (see Dan Wantrobski's note dated 1/18/18 for his opinion on where yields could be headed at https://jms.bluematrix.com/sellside/EmailDocViewer?encrypt=fbfc616f-a510-44b0-b997-5fa7297b0f51&mime=pdf&co=Janney&id=respub@janney.com&source=mail. The market benchmarks are all positive, with the S&P Composite +5.1%, the NASDAQ Composite +6.3% and the Powershares Water ETF at +3.5%.

**Utilitiy performance once again suffered as the 10-year T-Note rate rose.** Unlike the buying we observed in the water utilities last week, it was once again a sea of red in terms of electric & gas utility performance, as 6 of 7 segments finished lower. Last week's best performer was this week's worst performer (the Gas (with E&P) segment), which finished down by -2.5%. The best performance was from the Merchant segment, at +0.1%. The remaining segments finished in a range from -0.3% to -1.1%. Performance across the general market benchmarks was positive (the DJ Indu +1.0%, the S&P Composite +0.9% and the NASDAQ +1.0%), while the utility indexes all finished lower in a range of -0.2% to -0.5%.

YTD, 5 of 7 utility segments are lower. The Gas (with E&P) segment holds best-performer status at +1.6%, with the Merchant segment holding a +1.1% gain. All other utility segments are negative, with the Regulated Electric Only segment as the worst-performer at -7.4%. As we mentioned in our water industry overview on the previous page, pressure on the U.S. 10-year T-Note will likely lead to increasing yields for that investment product, putting pressure on utility shares near-term. The market benchmarks continue to welcome 2018 with strong positive returns; the DJ Industrials are up 5.5%, the S&P 500 is +5.1%, and the NASDAQ is +6.3%. The utility benchmarks are all negative, in a range of -5.1% to -5.6%.

**Commentary** – The big news in our coverage universe came late Friday afternoon, as the Federal Energy Regulatory Commission (FERC) finally approved the PennEast Pipeline. This is good news for 3 companies in our coverage universe, **New Jersey Resources (NJR), South Jersey Industries (SJI)** and **UGI Corp (UGI)**, which are all investors in the project. Other approvals remain, but the project continues to push forward, albeit at a slow pace. In the 106-page decision, we found comments that FERC made in response to objectors to the project regarding the necessity of the project as worthy of reprint: "*With respect to the ability of alternatives to meet the project's need, our environmental review considered the potential for renewable energy and energy conservation, and the availability of capacity on existing or proposed natural gas systems, to serve as alternatives to the project and concluded that they do not presently serve as practical alternatives to the project. Specifically, the EIS stated that renewable energy and energy efficiency measures to reduce the dependence on natural gas is not a comparable replacement for the transportation of natural gas to be provided by the project. Moreover, the final EIS found that there is not sufficient available capacity on existing pipeline systems to transport all of the volumes contemplated to be transported by the PennEast Project to the range of delivery points proposed by PennEast, and that expansion of existing pipeline systems was not a feasible alternative.*

*The EIS also found that the proposed Atlantic Sunrise Project could not serve as a practical system alternative because there is customer demand for both projects (noting that approximately 100 percent of capacity of the Atlantic Sunrise Project, and 90 percent of the capacity of the PennEast Project had been contracted for), as well as the fact that the Atlantic Sunrise Project would not provide for the same delivery points for customers that have been identified for the PennEast Project.*

*We also find that NJRC's assertion that the PennEast Project is not needed based on the fact that pipeline utilization on long-haul pipelines from the Gulf Coast to markets in the Northeast has declined in recent years is unavailing. Pipeline utilization rates reflect actual gas flows over the facilities but do not indicate whether there is available firm capacity on the pipelines. As indicated above, the EIS found that there was insufficient firm capacity availbale on existing pipeline systems to provide the service proposed by PennEast*".

The FERC decision systematically takes apart the major objections raised by opponents; that said, a coalition of NIMBY (not-in-my-back-yard) groups have already vowed to continue their opposition to the project. PennEast still requires other permits to proceed to the construction phase, and we'd expect challenges every step of the way, which has been the norm thus far in the history of this project. That said, it is moving forward, and we consider the potential addition of the pipeline a substantial net positive for the region, given it would provide an alternative (and inexpensive) source of Marcellus Shale natural gas supply transported over a relatively short distance, versus the gas supplies now being brought into the region on long-haul pipelines from the Gulf of Mexico.

Our chart of the week is **Mueller Water Products (MWA)**. The shares declined noticeably last week after a competitor downgrade, and are now trading at 15.5x the FY2020 consensus forecast of $0.76. We expect some (if not all) of the weakness being seen in the shares is due to concerns over raw material input costs (scrap steel and copper, used to make bronze) which have remained at elevated levels throughout the most recent quarter. We see several scenarios where Mueller can offset those impacts; the company typically raises prices annually in February, and should certainly benefit from the recently passed tax reform that lowers the corporate rate from 35% to 21%. We also note housing starts continue to improve; which we display in Exhibit #1.

Investors should get a better handle on recent developments when the company reports FY1Q18 developments on February 1st (after market close) and on the ensuing conference call on February 2nd at 9AM. Our view is that with the shares trading at the current depressed levels, MWA is a very attractive takeover candidate, given 1) its margin profile, 2) it's fairly unlevered balance sheet, 3) its market leading positions, and 4) its growth platforms in the Mueller Technologies segment. We remind investors that another company in our coverage universe, **Calgon Carbon Corp (CCC)** experienced a similar valuation disconnect; it's now in the final stages of being acquired.  MWA shares are now trading below the 50 and 200 day moving averages, and although we observed large volume last week, the shares did close off the lows and just below the 200 day moving average.

**Exhibit #1, U.S. Housing Starts / MWA Share Price/Volume Chart**

*Sources: Schnitzer Steel, FactSet*

**TOP IDEAS**

**Electric/Gas Utilities**

**SJI:** recently announced regulated utility acquisitions, ongoing midstream investment opportunities, a generous yield and favorable valuation all factor into our positive investment thesis on SJI shares.

**Industrials**

**MWA:** Ongoing cost-out activities and free cash flow capability to support future growth, coupled with an attractive valuation are the primary determinants for MWA's position as our #1 pick in our industrial coverage universe.

**Water Utilities**

**WTR**: Within the U.S. water utility group, Aqua America is our top pick.  We see several future catalysts, including M&A transactions across its regulated business platforms, and a significant rate case filing in Pennsylvania (approximately two-thirds of total rate base) in 2H18.  We consider the company's asset base to be very high quality, and we assign the shares the highest price-to-earnings multiple within its sector.  Valuation remains favorable, with an attractive yield.

SJW is not the typical water utility. Although the bulk of the company's revenues and earnings are derived from regulated water utility operations, other operations, including a real estate segment, add a non-regulated component to revenues. The company continues to look for external growth opportunities, and with its recent acquistion in Texas, has increased its geographic footprint.

## IMPORTANT DISCLOSURES

## Research Analyst Certification

I, Michael Gaugler, the Primarily Responsible Analyst for this research report, hereby certify that all of the views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views I expressed in this research report.

Chesapeake Utilities Corporation currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

South Jersey Industries, Inc. currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Unitil currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Janney Montgomery Scott LLC currently acts as a market-maker in the securities of AMETEK, Inc., American Water Works, American States Water, Calgon Carbon Corp., Consolidated Water Co., California Water Service, IDEX Corporation, Middlesex Water Co., Mueller Water Products, New Jersey Resources Corp., Rexnord Corporation, Companhia de Saneamento Basico do Estado de Sao Paulo (ADR), South Jersey Industries, Inc., SJW Corp, Unitil, Aqua America, Inc., Watts Water Technologies, Inc. and Xylem, Inc..

Janney Montgomery Scott LLC managed or co-managed a public offering of securities for Chesapeake Utilities Corporation, South Jersey Industries, Inc. and Unitil in the past 12 months.

Janney Montgomery Scott LLC received compensation for investment banking services from Chesapeake Utilities Corporation and South Jersey Industries, Inc. in the past 12 months.

Janney Montgomery Scott LLC intends to seek or expects to receive compensation for investment banking services from Avangrid, Inc., AMETEK, Inc., American Water Works, American States Water, Calgon Carbon Corp., Chesapeake Utilities Corporation, Consolidated Water Co., California Water Service, Eversource Energy, IDEX Corporation, Middlesex Water Co., Mueller Water Products, New Jersey Resources Corp., Rexnord Corporation, South Jersey Industries, Inc., SJW Corp, UGI Corporation, Unitil, WGL Holdings Inc., Aqua America, Inc., Watts Water Technologies, Inc. and Xylem, Inc. in the next three months.

The research analyst is compensated based on, in part, Janney Montgomery Scott's profitability, which includes its investment banking revenues.

Sources: FactSet (pricing, estimates), Janney Montgomery Scott, LLC Ratings/Fair Values

**<u>Water utilities continued to rebound, while the industrials raced ahead.</u>** The industrials (Water-Flow Technology) segment turned in another outstanding performance, finishing +2.9%. Water utilities (the Water-Distribution) segment continued to rebound, gaining back +1.9%, while the Water Solutions segment finished down slightly (-0.2%). Despite political turmoil in Brazil, water utility SABESP added another +4.0% to the week prior's +4.9% gain, and the shares/ADR's are now up 9.8% since January 1. The general market benchmarks again finished higher (the S&P Composite and NASDAQ gained +2.2 and +2.3%, respectively) while the Powershares Water ETF added +1.4%.

YTD, the Water Flow Technology (industrials) segment continues to outperform, at +8.4%. The Water Solutions segment is +3.1%, while the Water-Distribution segment is lower at -3.1%. The market benchmarks are all positive, with the S&P Composite +7.5%, the NASDAQ Composite +8.7% and the Powershares Water ETF at +4.9%. The general market rally continues onward, but we note valuation across our industrial coverage universe continues to expand to levels not seen previously.

*Source:Factset*

**Utilities and market benchmarks all finished higher.** Utilities reversed last week's losses, with a 7 segments rallying substantially higher. The Electric/Merchant segment turned in the best performance, finishing up +2.8% (which also outperformed the benchmarks). The remaining segments finished in a range from +1.2% to +2.1%. Performance across the general market benchmarks was positive (the DJ Indu +2.1%, the S&P Composite +2.2% and the NASDAQ +2.3%), while the utility indexes all finished higher in a range of +2.1% to +2.4%.

YTD, utilities continue to struggle, with 5 of 7 utility segments lower. The Gas (with E&P) segment holds best-performer status at +3.6%, with the Regulated Electric Only segment as the worst-performer at -6.2%. The market benchmarks continue to post strong positive returns thus far in 2018; the DJ Industrials are up +7.7%, the S&P 500 is +7.5%, and the NASDAQ is +8.7%. The utility benchmarks are all negative, in a range of -3.1% to -3.4%.

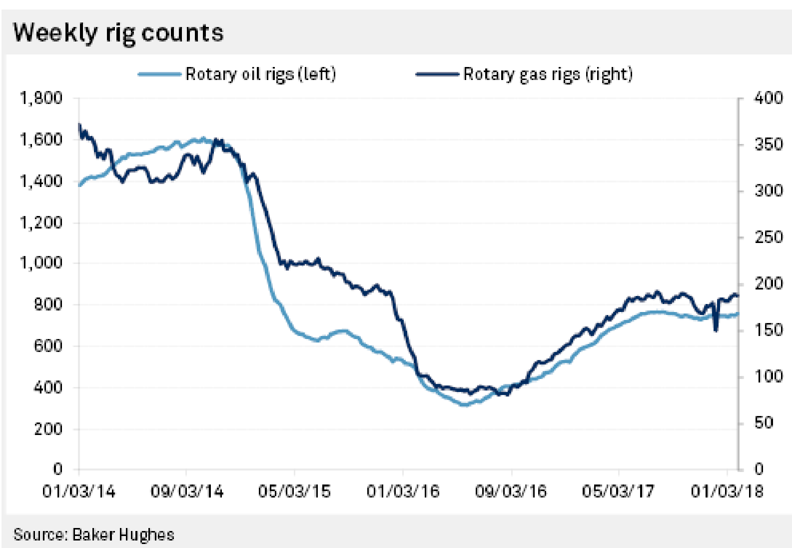
*Source:Factset*

**Commentary** – The biggest news last week in our coverage universe came from **Eversource Energy (ES)**, which was selected by the State of Massachusetts to supply renewable energy via its Northern Pass Transmission (NPT) project. The next important hurdle to overcome for this much-needed project is to gain approval from the New Hampshire Site Evaluation Committee (NHSEC), which could arrive in the next few weeks/months. The shares rallied strongly on the news, probably on expectations that construction can finally begin in 2018 and the line placed in-service by 2020. The new transmission line bringing hydroelectric power can't arrive soon enough for the New England ISO, which in a recent study of energy needs found "*that energy shortfalls occurred in almost every scenario in winter 2024/2025, which would require using emergency actions "to keep power flowing and protect the grid". The emergency actions range from requests for energy conservation to load shedding. All but four of the scenarios studied resulted in fuel shortages that required load shedding, which suggests the trends impacting New England may intensify the region's fuel security risk".* This risk assessment couldn't be more blunt and to the point.

Moving on to a different topic, it's been awhile since we looked meaningfully at the U.S. rig count, so we'll do so this week. It dipped a bit at year-end 2017, but now looks to continue its upward trend, given new natural gas pipelines and higher oil prices should provide a tailwind in terms of the demand outlook (FERC authorized work on both the Atlantic Coast Pipeline and the Mountain Valley Pipeline recently). It's unfortunate that new takeaway capacity from the Marcellus Shale region takes so long to construct and place into operation; as we referenced in our above commentary on the challenges in the New England ISO's forward outlook, it could very well take a sustained blackout/grid failure in that region to finally spur the political will to build new pipeline capacity into the Northeast. Escalating the rig count in the Marcellus Shale is likely to be a long, drawn-out affair; Pennsylvania Governor Tom Wolf proposed on Friday to hike fees for new natural gas well permits so the state can hire 35 new environmental regulators to reduce the backlog of new well applications (unfortunately that could take up to 18 months to complete given the necessity of formal rule-making processes).



Our chart of the week is **AmeriGas Partners (APU)**. The units have been trending solidly higher since the extreme cold weather that appeared in late December/early January gripped much of the United States. The company reports quarterly results on January 31st after-market-close.

*Source: FactSet*

**TOP IDEAS**

### Electric/Gas Utilities

**SJI:** recently announced regulated utility acquisitions, ongoing midstream investment opportunities, a generous yield and favorable valuation all factor into our positive investment thesis on SJI shares.

### Industrials

**MWA:** Ongoing cost-out activities and free cash flow capability to support future growth, coupled with an attractive valuation are the primary determinants for MWA's position as our #1 pick in our industrial coverage universe.

### Water Utilities

**WTR**: Within the U.S. water utility group, Aqua America is our top pick. We see several future catalysts, including M&A transactions across its regulated business platforms, and a significant rate case filing in Pennsylvania (approximately two-thirds of total rate base) in 2H18. We consider the company's asset base to be very high quality, and we assign the shares the highest price-to-earnings multiple within its sector. Valuation remains favorable, with an attractive yield.

## COMPANY SNAPSHOTS

Xylem is a global leader in water application solutions that focuses on the technology-intensive equipment and services end market (a sector of the $500 billion global water market), and should see increasing long-term demand from a favorable end market environment for investment in water due to population growth, economic development, and increasing (and tighter) water quality regulations. The company has exposure to many different end markets, including industrial, public utility, commercial, residential, and agriculture.

## IMPORTANT DISCLOSURES

## Research Analyst Certification

I, Michael Gaugler, the Primarily Responsible Analyst for this research report, hereby certify that all of the views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views I expressed in this research report.

Chesapeake Utilities Corporation currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

South Jersey Industries, Inc. currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Unitil currently is, or during the past 12 months was, a Janney Montgomery Scott LLC client. Janney Montgomery Scott LLC, provided investment banking related services.

Janney Montgomery Scott LLC currently acts as a market-maker in the securities of AMETEK, Inc., American Water Works, American States Water, Calgon Carbon Corp., Consolidated Water Co., California Water Service, IDEX Corporation, Middlesex Water Co., Mueller Water Products, New Jersey Resources Corp., Companhia de Saneamento Basico do Estado de Sao Paulo (ADR), South Jersey Industries, Inc., SJW Corp, Unitil, Aqua America, Inc., Watts Water Technologies, Inc. and Xylem, Inc..

Janney Montgomery Scott LLC managed or co-managed a public offering of securities for Chesapeake Utilities Corporation, South Jersey Industries, Inc. and Unitil in the past 12 months.

Janney Montgomery Scott LLC received compensation for investment banking services from Chesapeake Utilities Corporation and South Jersey Industries, Inc. in the past 12 months.

Janney Montgomery Scott LLC intends to seek or expects to receive compensation for investment banking services from Avangrid, Inc., AMETEK, Inc., American Water Works, American States Water, Calgon Carbon Corp., Chesapeake Utilities Corporation, Consolidated Water Co., California Water Service, Eversource Energy, IDEX Corporation, Middlesex Water Co., Mueller Water Products, New Jersey Resources Corp., South Jersey Industries, Inc., SJW Corp, UGI Corporation, Unitil, WGL Holdings Inc., Aqua America, Inc., Watts Water Technologies, Inc. and Xylem, Inc. in the next three months.

The research analyst is compensated based on, in part, Janney Montgomery Scott's profitability, which includes its investment banking revenues.

## Janney Montgomery Scott LLC ("Janney") Equity Research Disclosure Legend

Individual disclosures for the companies mentioned in this report can be obtained by accessing our Firm's Disclosure Site

Disclosure Site

## Definition of Ratings

BUY: Janney expects that the subject company will appreciate in value. Additionally, we expect that the subject company will outperform comparable companies within its sector.

NEUTRAL: Janney believes that the subject company is fairly valued and will perform in line with comparable companies within its sector. Investors may add to current positions on short-term weakness and sell on strength as the valuations or fundamentals become more or less attractive.

SELL: Janney expects that the subject company will likely decline in value and will underperform comparable companies within its sector.

1 Year Price History for WTR

February 23, 2017

# Aqua America, Inc. (WTR) - BUY

## Adjusting Forward Estimates; Trimming Fair Value from $39 to $38

### PORTFOLIO MANAGER BRIEF

WTR's 4Q16 results were just a touch below expectations, but within its previously communicated guidance range. Given the company just held its 2017 guidance call last month, the 4Q16 results provided reinforcement of the major themes and outlook presented back in January, which were 1) 2017 EPS guidance, 2) potential timing surrounding the filing of an infrastructure surcharge in Pennsylvania, and 3) potential timing surrounding the filing of a Pennsylvania rate case. We've made minor adjustments to our forward estimates, which did have a slight impact on valuation. We reiterate our BUY rating on WTR shares, but trim our Fair Value target from $39 to $38, based on a P/E of 26x our 2018 EPS estimate of $1.46.

### ANALYST NOTES

- 4Q16 results Just Shy of Expectations. Revenues of approximately $197MM were just below consensus of $208MM, but we noted looking through FactSet forecasts one outlier estimate pulled consensus higher. Most line items through the income statement met our expectations, and EPS of $0.28 was $0.01 below our forecast and consensus. We consider the shortfalls irrelevant, given 4Q and 1Q results are the seasonally lowest for WTR and typically do not impact valuation.
- 2016/2017/2018: Years of Significant Change at Aqua America. 2016 represented the first full year under CEO Christopher Franklin, and the company has undergone changes in operational personnel and strategic direction. Aqua has divested non-core non-regulated businesses that it determined were not scalable, and has fine tuned its acquisition target list by region and customer size. Beyond the positive long-term implications of a focused acquisition strategy, fair value legislation in many states should aid the process of growth through asset purchases. For 2017, the company has already essentially reached its acquisition target goal if it closes the deals already in process. Aqua has also indicated it would be open to utility acquisitions outside of the water space, but our view is that with generous valuations across the utility sector, there just isn't much to look at right now, and we don't see that changing anytime soon.
- Beyond acquisitions, 2017 marks the year that Aqua should file for an infrastructure surcharge in the all important State of Pennsylvania, signaling a future rate case perhaps in 2018, with a targeted decision (and new rates) potentially in 2019. With 2017 fairly de-risked given the acquisitions already underway and 2018 set-up for a PA rate case, we consider Aqua a very low-risk

proposition on a go forward basis, with upside into 2018 if additional sizable acquisitions are put under agreement.

- Adjusting Estimates. We chose to wait until 4Q16 results were posted before adjusting our forward estimates post last month's guidance call, and those changes had a minor impact on valuation (see table, this page).
- Summary/Valuation. Despite the downward revision to our Fair Value estimate by $1, we still consider Aqua America our top pick in the water utility sector. The business model has been de-risked further (not that we ever considered it to be risky), and the company appears to be on a glide path to higher earnings with some significant tailwinds to carry it along. Given the extremely warm end to February across much of Aqua's service territory, an early Spring could drive upside to water sales in 1Q and 2Q, and we note water supplies in Pennsylvania are at reasonably healthy levels. If the aforementioned scenario develops, we'd expect earnings at the top range (or beyond). We reiterate our BUY rating, and consider valuation attractive relative to other water utilities in the peer group.

## Company Description

Aqua America, Inc., serves residential, commercial, fire protection, industrial, other water, wastewater, and other utility customers in Pennsylvania, Texas, North Carolina, Ohio, Illinois, New Jersey, Indiana and Virginia. It also provides water and wastewater services through operating and maintenance contracts with municipal authorities and other parties, as well as offers sludge hauling, septage and grease services, backflow prevention services, and other non-regulated water and wastewater services.

## IMPORTANT DISCLOSURES

## Research Analyst Certification

I, Michael Gaugler and Katherine Burke, the Primarily Responsible Analyst for this research report, hereby certify that all of the views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views I expressed in this research report.

## Janney Montgomery Scott LLC ("Janney") Equity Research Disclosure Legend

Janney Montgomery Scott LLC currently acts as a market-maker in the securities of Aqua America, Inc..

Janney Montgomery Scott LLC intends to seek or expects to receive compensation for investment banking services from Aqua America, Inc. in the next three months.

The research analyst is compensated based on, in part, Janney Montgomery Scott's profitability, which includes its investment banking revenues.

## Definition of Ratings

BUY: Janney expects that the subject company will appreciate in value. Additionally, we expect that the subject company will outperform comparable companies within its sector.

NEUTRAL: Janney believes that the subject company is fairly valued and will perform in line with comparable companies within its sector. Investors may add to current positions on short-term weakness and sell on strength as the valuations or fundamentals become more or less attractive.

SELL: Janney expects that the subject company will likely decline in value and will underperform comparable companies within its sector.

1 Year Price History for AWK

### PORTFOLIO MANAGER BRIEF

American Water Works reported solid 4Q and fiscal 2016 results that were in line with our and consensus expectations. Adjusted EPS of $0.57 for the quarter was up $0.02, or 3.6% YoY, while adjusted 2016 fiscal year results of $2.84 were up $0.20, or 7.6%, YoY. Looking forward, the company's strong capital spending plans that extend well beyond our forecasts reinforces our positive investment thesis. We maintain our BUY rating and $80 Fair Value on AWK shares, based on a P/E of 25x our 2018 EPS estimate of $3.22.

### ANALYST NOTES

- One-Time Settlement Expense Creates Unfavorable YoY Comparisons on Non-adjusted Earnings. A one-time expense of $39MM, which equaled $0.22 in EPS, was taken in 2016 relating to the settlement of the Freedom Industries chemical spill in West Virginia. Excluding the settlement, net income for the year was up almost 8% versus 2015. The Regulated Business reported solid results for the both 4Q16 and fiscal year 2016; net income for 4Q16 increased slightly YoY, driven primarily by revenue from authorized rate increases and surcharges.
- Impressive Capital Spending Creates Earnings Visibility. In 2016, American Water Works made capital expenditures of $1.5B, a record for the company; $1.3B of that spend was for the regulated business. The company sees a potential to invest $10B over the next 5 years, and perhaps as much as $40B over 25 years based on a study by the American Water Works Association. The runway to higher earnings for AWK appears to be very, very long.
- 2017 Guidance Reaffirmed. Management reaffirmed 2017 guidance of EPS from $2.98 to $3.08. It also sees EPS CAGR of 7-10% for the 2017-2021 timeframe, with the bulk of the growth originating from regulated investment CAPEX and regulated acquisitions. Commentary from both AWK and its competitors in recent quarters indicates fair value legislation has significantly increased opportunities for water/wastewater acquisitions, which improves visibility as it pertains to asset purchase targets.
- Rate Case Updates. AWK is currently awaiting decisions on rate cases in four states, with proposed revenue increases totaling $57MM, $5MM in step increases, and $10MM in infrastructure surcharges. Surcharge mechanisms in many states where AWK operates has slowed the need for rate case filings, which lowers costs while allowing for faster recovery of investments. We note the company received $92MM in annual authorized revenues in 2016.

RESEARCH ANALYST CERTIFICATIONS AND IMPORTANT DISCLOSURES ARE ON PAGES 3 - 4 OF THIS REPORT

- Summary/Valuation. Our view on AWK has evolved substantially since we first began covering the company after its IPO. In those days, it was an under-earning story, and the upside would be driven by continual rate case activity, which turned out to be correct. Years later, as the company pulled closer to its achievable ROE, a prevailing view we heard often was that the "easy" money had been made by investors, and that growth would slow.
- As we look forward, we see an entirely different story, and more compelling with a longer time line than the "ROE catch-up" period referenced previously. The long term capital investment needs, coupled with a national focus on infrastructure, augmented by fair value legislation to encourage acquisitions should drive consistent rate base growth for many years. Surcharge mechanisms reducing regulatory lag and extending the intervals between rate cases de-risks the long term earnings profile, and the market-based businesses provide a capital-lite source of additional cash flow to increase dividends or re-invest.
- With that thought process framing our investment thesis, all we're left with is valuation. We're currently using a P/E of 25x our 2018 EPS forecast to derive an $80 Fair Value, but we're actively reconsidering that multiple with an upward bias. Utilities in general have been trading at elevated multiples despite the turn higher in the macro interest rate environment, and continued investor enthusiasm may drive utility multiples higher given the strong long-term investment trends.

## Company Description

American Water is the largest investor-owned water and wastewater utility in the U.S., serving 14 million people across 40 states (16 regulated). Its primary business as a regulated utility accounts for 90% of revenue, supplemented by growing, non-regulated businesses such as service line protection and military base operations.

| Year: | $820A | $821E | $881E |

1 Year Price History for WTR

### PORTFOLIO MANAGER BRIEF

WTR's 2Q17 EPS results met consensus expectations, and the company reaffirmed 2017 guidance. During the quarter, the company wrapped up its portfolio optimization, jettisoning the last market-based businesses that were slated for divestiture. Looking forward, rate activity continues in the form of rate awards and infrastructure surcharges, and WTR anticipates filing of a Pennsylvania Distribution System Improvement Charge (DSIC) this year, a rate case in 2018 and new rates effective in 2019. We've made minor adjustments to our forward estimates, and introduced 2019 forecasts, which we move to for valuation purposes. We reiterate our BUY rating on WTR shares, and raise our Fair Value estimate from $38 to $41.

### ANALYST NOTES

- 2Q17 EPS Matched Consensus Expectations. EPS of $0.34 met the consensus forecast and was $0.01 above our estimate. Notable items affecting 2Q17 results included the divestiture of previously identified market-based businesses, and on a go forward basis, non-regulated operations will only comprise approximately $4MM of annual revenues. OPEX expenses were significantly lower YoY (down $2.1MM) due to the aforementioned exit of some market-based businesses, lower production and employee related expenses.
- Regulatory Update. The company remains busy on the regulatory front, already receiving an additional $11.1MM in additional annualized revenue in 2017. Pending rate activity in two states (IL and VA) requests another $14MM in annualized revenue. WTR plans to file for its DSIC later this year in Pennsylvania, and then a rate case shortly thereafter in 2018 with new rates effective in 2019.
- Quarterly Dividend Increased. WTR increased its quarterly dividend 7%, which marks the 27th increase in the last 26 years. The company has paid continuous dividends for the last 72 years. We currently project a pay-out ratio of 58%, leaving sufficient capacity for future dividend increases.
- Summary/Valuation. We remain impressed with Aqua America's recent performance. The narrowed focus, centered on regulated operations and building rate base through investments and acquisitions should continue to expand the company's market capitalization for the benefit of shareholders. Looking forward, we've introduced (and moved to) 2019 estimates for valuation purposes, and the upward trajectory we see in the company's earnings allows us to raise our Fair Value on the shares from $38 to $41, based on a P/E of 26x our $1.59 EPS estimate. We see plenty of upside in WTR shares, especially in the coming quarters as the company begins to enter the rate case "window" in Pennsylvania, its largest state.

| Q4 | $201E | $211E | $221E |
| Year: | $807E | $867E | $932E |

### PORTFOLIO MANAGER BRIEF

Aqua America's 3Q17 EPS results of $0.43 met expectations, although revenues of $215MM came in below the $234MM consensus forecast due primarily to unfavorable weather during the all-important summer season. Looking forward, the company continues to roll-up water/wastewater systems, and its recent DSIC filing in Pennsylvania puts the company solidly on the path to its next (and long-awaited) Pennsylvania rate case filing. We've made minor adjustments to our forward estimates, and reiterate our BUY rating and $41 Fair Value target on WTR shares, our top pick in the water utility sector.

### ANALYST NOTES

- 3Q17 Results Met Expectations. The wet summer months experienced across a large portion of Aqua America's service territory negatively impacted financial performance, with revenues of $215MM below the consensus forecast of $234MM. Despite the weather, the company still managed to match the consensus EPS forecast of $0.43. In our forecast model, lower O&M and tax expenses offset the revenue shortfall and benefitted quarterly results (all other income statement line items were as expected).
- Regulatory Update. Aqua has received rate awards in Indiana, Illinois, New Jersey, North Carolina, Pennsylvania and Ohio totaling $21.4MM annually. It currently has in in-process rate/surcharge proceedings in Illinois, North Carolina and Virginia totaling $14.1MM. The company filed a Distribution System Improvement Charge (DSIC) on 10/1/17 in Pennsylvania for 2.5%, and WTR will mostly likely file for another 2.5% on 1/1/18 and then again on 4/1/18, with a Pennsylvania rate case filing in summer, 2018 with new permanent rates effective in 2019.
- Guidance Maintained. EPS guidance for 2017 remains $1.34 to $1.39, and WTR still expects customer growth of 1.5%-2% for 2017.
- Summary/Valuation. The company's forward outlook continues to improve, and that assessment is based on 1) the upcoming rate case in Pennsylvania, and 2) an ever-improving outlook for acquisitions. The company announced another sizable municipal asset purchase (3,800 customers) and we're aware of others like Hazleton, PA (which serves 15K customers) that are considering selling their systems. In terms of valuation, the shares represent excellent value; the 22.7x P/E multiple is one of the lowest in the peer group, and the dividend yield of 2.3% is the highest. We reiterate our BUY rating on WTR shares and $41 Fair Value, based on a P/E of 26x our 2019 EPS estimate of $1.56.

# Aqua America, Inc. (WTR) - BUY

## WTR: 1Q18 Results Inline with Expectations; Maintain BUY Rating, $39 Fair Value

### PORTFOLIO MANAGER BRIEF

WTR's 1Q18 results met expectations, and the company reaffirmed its full year EPS guidance range. Upcoming personnel changes in two key roles are being phased-in to smooth the transition; the company's upcoming Pennsylvania rate case will be overseen by current CFO David Smeltzer before his pending retirement in October, with incoming CFO Dan Schuller assisting with the process. That aside, we've made only minor adjustments to our forward estimates, and maintain our BUY rating and $39 Fair Value on WTR shares.

### ANALYST NOTES

- 1Q18 Results Met Expectations. EPS of $0.29 met the consensus forecast, and increased modestly (+$0.01) YoY. Rate activity, organic growth, lower income tax expense and increased volumes contributed to the improvement versus 1Q17 in what is typically the seasonally weakest quarter for the company in terms of earnings.
- Regulatory Update. In 1Q18, the company received rate cases and surcharges in 7 states (IL, IN, NJ, NC, OH, PA & TX) totaling $23.6MM in annualized revenues. Pending rate case and surcharge requests in IN, NC, OH & VA total $8.6MM. On the call, the company noted that current CFO David Smeltzer (retiring in October, 2018) will oversee the upcoming PA rate case filing. Incoming CFO Dan Schuller (current EVP of Strategy & Corporate Development) will also be a part of this important submission to the Pennsylvania Public Utility Commission (PAPUC).
- Bulking Up for Future Corporate Development? Mr. Smeltzer's retirement has created new roles for several people, including current EVP of Strategy & Corporate Development, Dan Schuller, Mr. Smeltzer's named replacement. Taking over for Mr. Schuller is Matthew Rhodes, an 11-year veteran in the investment banking division at Goldman Sachs covering the utility sector. Mr. Schuller was quite successful in bringing acquisitions into Aqua; going forward, the company will now have 2 strong business development backgrounds in both the CFO and Strategy & Corporate Development roles. On the surface, it appears WTR will become much more active and devote more resources to acquisitive growth. We noted on the call that when asked about the current M&A activity in sector, CEO Chris Franklin indicated WTR will remain "disciplined" in terms of what its willing to pay for assets.
- Summary/Valuation. Although we're happy for Mr. Smeltzer and wish him the best in his pending retirement, we're also sad to see him go. He added a level of gravitas to the CFO role that few (if any) have ever achieved in the industry. His continued presence in guiding WTR through its upcoming PA rate case filing

RESEARCH ANALYST CERTIFICATIONS AND IMPORTANT DISCLOSURES ARE ON PAGES 3 - 4 OF THIS REPORT

is certainly a positive, and having a top-quality replacement for him already in-house is a substantial plus going forward. In terms of valuation, there was nothing in the 1Q18 results to alter our positive investment thesis; we maintain our BUY rating and $39 Fair Value on WTR shares, based on a P/E of 25x our 2019 EPS estimate of $1.56.

# IMPORTANT DISCLOSURES

## Research Analyst Certification

I, Michael Gaugler, the Primarily Responsible Analyst for this research report, hereby certify that all of the views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views I expressed in this research report.

## Janney Montgomery Scott LLC ("Janney") Equity Research Disclosure Legend

Janney Montgomery Scott LLC currently acts as a market-maker in the securities of Aqua America, Inc..

Janney Montgomery Scott LLC intends to seek or expects to receive compensation for investment banking services from Aqua America, Inc. in the next three months.

The research analyst is compensated based on, in part, Janney Montgomery Scott's profitability, which includes its investment banking revenues.

## Definition of Ratings

BUY: Janney expects that the subject company will appreciate in value. Additionally, we expect that the subject company will outperform comparable companies within its sector.

NEUTRAL: Janney believes that the subject company is fairly valued and will perform in line with comparable companies within its sector. Investors may add to current positions on short-term weakness and sell on strength as the valuations or fundamentals become more or less attractive.

SELL: Janney expects that the subject company will likely decline in value and will underperform comparable companies within its sector.

1 Year Price History for WTR

### PORTFOLIO MANAGER BRIEF

Aqua America's analyst day/year end results presentation was long on details and held few surprises. 2018 CAPEX will be higher than 2017, its all-important Pennsylvania rate case filing is still expected this year, and acquisitions are expected to continue to be a driver of organic growth. We maintain our BUY rating on WTR shares, and our $39 Fair Value is based on a P/E on 25x our 2019 EPS estimate of $1.56.

### ANALYST NOTES

- <u>4Q17 Adjusted Results Inline with Expectations</u>. WTR's 4Q17 adjusted EPS of $0.32 matched our forecast and was a penny above consensus. The GAAP number (+$0.30) was negatively impacted by tax legislation passed at year-end 2017, which nicked EPS by $0.02. All-in, it was a solid quarter that met expectations and held no surprises beyond the tax legislation impact.
- <u>Robust System Investment to Continue in 2018</u>. The company's planned CAPEX for 2018 is $500MM, which would represent a record level of investment. 2017's $478MM also represented a record level of investment, with the bulk of the CAPEX targeted to water mains and services. The enhanced levels of investment should allow for meaningful future growth in rate base, and surcharge mechanisms currently in place should allow for more speedy recovery.
- <u>It's All About the PA Rate Case</u>. Given how important the State of Pennsylvania is to Aqua America in terms of customers and rate base, the importance of its upcoming rate case there can't be understated. Aqua hasn't been in for rates in PA for 7 years, and the upcoming rate case will represent 8 years of capital investment totaling just over $2B. We expect the PA Public Utility Commission to treat Aqua fairly; its past adoption of tax repair accounting methodology at the Commission's request is a primary reason why earnings growth has lagged somewhat in recent years. We believe the most recent water rate case before the PAPUC (American Water Works) turned out well, and we expect no less of a result for Aqua.
- <u>Acquisition Pipeline Looks Robust.</u> During analyst day, EVP of Strategy & Corporate Development Dan Schuller highlighted how the company's Investment Committee sifts through potential acquisitions on a regular basis, to the point where the process looks fairly routine (from the outside). Acquisition activity has been steady, although two deals expected to close in 2017 have slipped into 2018. The company seems to have a lot of large targets, including 7 with customer counts of 10,000 or more. The largest, 85K water customers, would be a substantial deal of size if consummated.

- Summary/Valuation. We see lots of reasons to like the forward outlook for WTR and recommend continuing purchases at current price levels. A strong pipeline of acquisitions, robust CAPEX driving 7% rate base growth, anticipated benefits from its upcoming PA rate case (for $2B of investments in that state) and a favorable valuation are all solid reasons, in our opinion. We do note that expected rising interest rates in 2018 could be a headwind near-term; the steep ascent of the U.S. 10-year yield toward 3% has negatively impacted all of the utilities within our coverage universe. The pullback creates an opportunity to acquire at more reasonable valuations; WTR shares are trading at a P/E of 22x our 2019 forecast, 3 full turns below the 25x we'd normally expect them to trade at. We maintain our BUY rating and $39 Fair Value on WTR shares.

1 Year Price History for WTR

### PORTFOLIO MANAGER BRIEF

We spent time recently with Aqua America CEO Christopher Franklin and Chief of Staff Brian Dingerdissen visiting investors in Boston. Just as its done in the past, Aqua appears to be re-inventing the utility model, this time by making unsolicited bids for municipal water and wastewater systems. It's a new method that could, at a minimum, augment what already appears to be an improving environment for municipal acquisitions under fair value legislation. We maintain our BUY rating and $38 Fair Value on WTR shares.

### ANALYST NOTES

- Unsolicited Bid an Innovative Way to "Start a Conversation". WTR's recent unsolicited bid for the Chester, PA water authority for $250MM marks a new path to strategic acquisitions of municipal water and wastewater systems. Previously, Aqua America would approach a municipality (or vice-versa), which would start a long gestation period that could include an open bid process or direct negotiation. Politics is always a factor as well, and a typical system purchase can take years. The unsolicited bid approach puts a large amount of cash in front of municipalities and ratepayers, which opens the discussion about what to do with the potential proceeds, which could range from infrastructure investments to returning funds to ratepayers. Municipal systems are noted as bastions of patronage; we see the potential for public information campaigns to enhance the narrative surrounding system sales (we're not aware of WTR choosing this tactic, but it could be a logical path for systems that push back). It's not hard to imagine ratepayers asking for a one-time benefit (sale proceeds) from municipalities, especially distressed municipalities.
- Is this a Game Changing Strategy, or a Trial Balloon? The only answer at this point we can offer is "time will tell". We got the sense that WTR has additional plans to use the unsolicited bid strategy to augment its current methodology as it relates to acquisitions. Aqua America was built on acquisitions, growing from a small regional suburban Philadelphia utility into a multi-state operation spanning a large portion of the United States. WTR's early-on innovative strategy of rolling up small municipal systems was copied by others; it was also the originator of the DSIC (Distribution System Improvement Charge), which has been copied by water, electric and gas utilities across the country. The use of Tax Repair Accounting Methodology (to the extent it's currently being utilized by WTR) was yet another innovation that created shareholder value. Aqua has shown a tendency to "shake things up" throughout the last few decades, and we believe this could be another inflection point in its growth trajectory.
- Upcoming Changes at the PAPUC Worth Watching. As many utility industry watchers are aware, Pennsylvania Public Utility Commission (PAPUC)

Commissioner Robert Powelson has been nominated to the Federal Energy Regulatory Commission (FERC), and could be seated as soon as July. That leaves an opening at the PAPUC, which Democrat Governor Tom Wolf will need to fill with a Republican. Commissioner Powelson is highly respected, and has been supportive of infrastructure investment within the state. His elevation comes at a time when American Water Works (AWK) has already filed a sizable rate case in Pennsylvania, and WTR is expected to file a sizable request in 2018 (WTR has not been in for rates since 2011). We'll be watching closely 1) the change in commissioners at the PAPUC and 2) how AWK is treated with its request. Pennsylvania is noted as a highly constructive state in terms of infrastructure investment and rate mechanisms, and comprises a large portion of WTR's overall geographic exposure.

- Interest in Potential Acquisitions in Other Regulated Arenas Appears Muted. In our meetings, the company was queried about potential acquisitions in regulated electric and gas utility operations. Based on clues in regulatory filings, WTR was widely speculated by investors as being interested in ITC Holdings when it was "in-play", and subsequent management commentary has left the door open for opportunities outside the water utility industry. The company indicated it would consider those types of opportunities, but valuation metrics have changed substantially, and our view based on the exchanges with investors in meetings we participated in lead us to conclude that something material isn't likely unless significant changes in valuation occur. WTR indicated the environment for municipal acquisitions has never been better, and there's plenty of opportunity within the water sector to grow meaningfully.
- Summary. We're thankful we had the opportunity to visit investors with WTR at this particular time, following its unsolicited bid for the Chester Water Authority. Our major takeaway from the meetings was that the environment for future growth from acquisitions remains exceptionally robust, with management indicating it's the strongest they've ever seen. Fair value legislation is a large part of that, but the unsolicited bid route could improve acquisition growth even more. We believe the tactic holds great promise, particularly if proceeds are returned to citizens/ratepayers or used for specific, targeted municipal purposes. Our positive investment thesis is maintained, and we reiterate our BUY rating and $38 Fair Value target on WTR shares, based on a P/E of 26x our 2018 EPS estimate of $1.46.

RESEARCH ANALYST CERTIFICATIONS AND IMPORTANT DISCLOSURES ARE ON PAGES 3 - 4 OF THIS REPORT

## Company Description

Aqua America, Inc., serves residential, commercial, fire protection, industrial, other water, wastewater, and other utility customers in Pennsylvania, Texas, North Carolina, Ohio, Illinois, New Jersey, Indiana and Virginia. It also provides water and wastewater services through operating and maintenance contracts with municipal authorities and other parties, as well as offers sludge hauling, septage and grease services, backflow prevention services, and other non-regulated water and wastewater services.

# Aqua America, Inc. (WTR) - BUY

## WTR: 2Q17 Results "On the Money"; Maintain BUY Rating, Raising Fair Value from $38 to $41

### PORTFOLIO MANAGER BRIEF

WTR's 2Q17 EPS results met consensus expectations, and the company reaffirmed 2017 guidance. During the quarter, the company wrapped up its portfolio optimization, jettisoning the last market-based businesses that were slated for divestiture. Looking forward, rate activity continues in the form of rate awards and infrastructure surcharges, and WTR anticipates filing of a Pennsylvania Distribution System Improvement Charge (DSIC) this year, a rate case in 2018 and new rates effective in 2019. We've made minor adjustments to our forward estimates, and introduced 2019 forecasts, which we move to for valuation purposes. We reiterate our BUY rating on WTR shares, and raise our Fair Value estimate from $38 to $41.

### ANALYST NOTES

- 2Q17 EPS Matched Consensus Expectations. EPS of $0.34 met the consensus forecast and was $0.01 above our estimate. Notable items affecting 2Q17 results included the divestiture of previously identified market-based businesses, and on a go forward basis, non-regulated operations will only comprise approximately $4MM of annual revenues. OPEX expenses were significantly lower YoY (down $2.1MM) due to the aforementioned exit of some market-based businesses, lower production and employee related expenses.
- Regulatory Update. The company remains busy on the regulatory front, already receiving an additional $11.1MM in additional annualized revenue in 2017. Pending rate activity in two states (IL and VA) requests another $14MM in annualized revenue. WTR plans to file for its DSIC later this year in Pennsylvania, and then a rate case shortly thereafter in 2018 with new rates effective in 2019.
- Quarterly Dividend Increased. WTR increased its quarterly dividend 7%, which marks the 27th increase in the last 26 years. The company has paid continuous dividends for the last 72 years. We currently project a pay-out ratio of 58%, leaving sufficient capacity for future dividend increases.
- Summary/Valuation. We remain impressed with Aqua America's recent performance. The narrowed focus, centered on regulated operations and building rate base through investments and acquisitions should continue to expand the company's market capitalization for the benefit of shareholders. Looking forward, we've introduced (and moved to) 2019 estimates for valuation purposes, and the upward trajectory we see in the company's earnings allows us to raise our Fair Value on the shares from $38 to $41, based on a P/E of 26x our $1.59 EPS estimate. We see plenty of upside in WTR shares, especially in the coming quarters as the company begins to enter the rate case "window" in Pennsylvania, its largest state.

1 Year Price History for WTR

### PORTFOLIO MANAGER BRIEF

Aqua America reported net income of $73.2MM and EPS of $0.41 for 3Q16, which was in line with consensus estimates. The company executed on key initiatives, including capex activity and acquisitions, as well as continuing its efforts to minimize the cost structure. Guidance for 2016 was reaffirmed, and while we made a few minor adjustments to our model the changes had no impact on valuation. We maintain our BUY rating and $39 Fair Value based on the shares trading to a P/E level of 26x our 2018 EPS forecast of $1.51.

### ANALYST NOTES

- Solid Quarter Across the Board. Aqua America reported a solid quarter with no surprises and in line results. Net income of $73MM was up 8.5% YoY, while reported EPS of $0.41 was up 7.9% YoY. The YoY growth was driven in part by increased revenues due to higher consumption, higher rates, and regulated growth. Additionally, Aqua America's continued focus on cost-cutting and cost-conscious decisions was also cited as having a positive impact on bottom line performance.
- Acquisitions Continue to Have a Positive Impact. Acquisitions and organic growth have increased Aqua's customer base by 1.3% so far in 2016, with acquisitions accounting for 5,700 of the 12,900 new customer connections. Aqua has made acquisitions this year in Pennsylvania, Indiana, North Carolina, Virginia, New Jersey, and Ohio. Of note was management's indication that opportunities for acquisitions are increasing as municipalities struggle to keep pace with necessary infrastructure improvements, and its current pending acquisition agreements will add another 4,700 customer connections.
- Continued Execution on Robust CAPEX Plan. Aqua America has continued to execute on its CAPEX plans; year to date, the company has invested $270MM in infrastructure improvements, with $80MM left in the budget to hit the $350MM goal for 2016 capital spending. These infrastructure improvements come as part of Aqua's $1.1B investment plan through 2018. As we have noted previously, the plan will add much needed improvements to infrastructure while also contributing to rate base growth.
- Guidance for 2016 Reaffirmed. Aqua reaffirmed guidance for the year, with EPS expected to be between $1.30 and $1.35. Customer growth is expected to be between 1.5% and 2.0%, while CAPEX will top $350MM. Aqua has not yet released 2017 guidance.

RESEARCH ANALYST CERTIFICATIONS AND IMPORTANT DISCLOSURES ARE ON PAGES 3 - 4 OF THIS REPORT

- Summary/Valuation - Aqua turned in yet another solid quarter with no surprises. Continued execution on initiatives, strong leadership, and growing opportunities for acquisitions all drive a strong story. As 2017 approaches, our focus now shifts to Aqua's next Pennsylvania rate case, which it expects to file in late 2018 with new rates effective in 2019. Given the ongoing capital program since they last visited with the PAPUC on the topic of rates, we note rate base should increase materially, which we'd expect to have a positive impact on WTR's bottom line. We maintain our Buy rating and $39 Fair Value target, based on the shares trading to a P/E of 26x our 2018 EPS estimate of $1.51.

## Company Description

Aqua America, Inc., serves residential, commercial, fire protection, industrial, other water, wastewater, and other utility customers in Pennsylvania, Texas, North Carolina, Ohio, Illinois, New Jersey, Indiana and Virginia. It also provides water and wastewater services through operating and maintenance contracts with municipal authorities and other parties, as well as offers sludge hauling, septage and grease services, backflow prevention services, and other non-regulated water and wastewater services.

## IMPORTANT DISCLOSURES

## Research Analyst Certification

I, Michael Gaugler, the Primarily Responsible Analyst for this research report, hereby certify that all of the views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers. No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views I expressed in this research report.

## Janney Montgomery Scott LLC ("Janney") Equity Research Disclosure Legend

Janney Montgomery Scott LLC currently acts as a market-maker in the securities of Aqua America, Inc..

Janney Montgomery Scott LLC intends to seek or expects to receive compensation for investment banking services from Aqua America, Inc. in the next three months.

The research analyst is compensated based on, in part, Janney Montgomery Scott's profitability, which includes its investment banking revenues.

**2016 closes out on a negative note.** With the exception of the Water-Distribution segment (+0.3%), our water-related segments and market benchmarks finished decidedly lower. The Water-Flow Technology and Water Solutions segments finished down by -0.9% and -1.0%, respectively, which was inline with our benchmarks (the S&P Composite -1.1%, the NASDAQ -1.5% and the PowerShares Water ETF -1.2%). While we're unable to point to any specific reasons for the market pullback, we noted political statements and actions by the outgoing U.S. administration late in the week appeared to have a negative impact on U.S. markets.

With 2016 now in the rear view mirror, water-related equities all finished positive for the year despite last week's disappointing finish. The Water-Distribution sector again outperformed by a wide margin against all benchmarks and sub-segments, +35.8%. The Water-Flow Technology segment also turned in a stellar performance despite a weak 1H16, +19.4%. The Water Solutions segment disappointed all year long, spending a good part of the year in negative territory, but managed to finish higher at year-end +4.0%. All of our market benchmarks (the S&P Composite, NASDAQ Composite and Powershares Water ETF) finished in positive territory in 2016, +9.5%, +7.5% and +13.5%, respectively.

*Source:Factset*

**<u>Utilities experienced selling pressure as 2016 trading closed out.</u>** None of our utility segments closed higher last week, with the best performance coming from the Electric/Merchant names, which managed breakeven status. Performance was all over the map, with the worst performance coming from the Gas (with E&P) names at -1.6%. Our broad market benchmarks were all lower, with the DJIA -0.9%%, the S&P Composite -1.1% and the NASDAQ -1.5%. The utility indexes all finished lower in a range of -0.2% to -0.1%.

2016 was an impressive year for most of our utility segments, with 5 of our 8 segments outperforming all broad market benchmarks. The stand-out was the Gas (Non–E&P) segment, which was atop the leaderboard in terms of performance consistently throughout the year, +50.3%. Gas (with E&P) also turned in an exceptional performance, +29.5%. The remaining sectors finished up in a range from +1.4% to +21.7%. 7 of 8 segments finished with double-digit gains, with only the Merchant names struggling. It was a wild ride for Merchant segment shareholders in 2016, which at one point were among the best performing, only to give it all back. The broad market benchmarks all finished in positive territory, with the DJIA up 13.4%, the S&P Composite up 9.5% and the NASDAQ higher by 7.5%. The utility benchmarks had a great year, finishing up in a range from +12.2% to +14.2%.

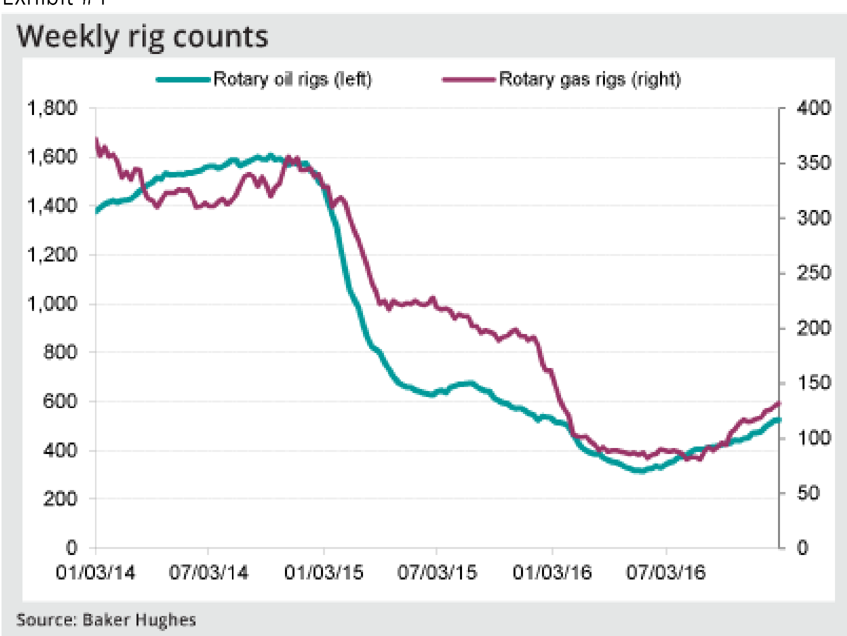
## WEEKLY COMMENTARY

For a holiday-shortened week, there were plenty of developments impacting our coverage universe. Among the water utilities, American Water Works announced it has closed its Scranton, Pennsylvania wastewater acquisition (purchase price, $195MM), and a story reported in the Pottstown Mercury highlighted that Aqua America would be purchasing the Limerick, Pennsylvania wastewater system for $75MM (expected to close in the fall of 2017) http://www.pottsmerc.com/general-news/20161228/2016-year-in-review-limerick-township-sells-sewer-system-for-751m. The Aqua/Limerick deal had been originally announced in the same publication on 11/16/16, which we didn't see at that time, and we found no press release from Aqua highlighting the transaction, which typically doesn't report acquisitions until they close.

Eversource Energy was also in the news last week, receiving approval from the Massachusetts DPU approving the construction of 62MW of solar facilities in 2016. The company expects to invest approximately $178.9MM.

The Federal Energy Regulatory Commission (FERC) was busy last week with positive commentary on two midstream projects, the Atlantic Coast and Atlantic Sunrise. FERC also authorized UGI Corp to put its Sunbury pipeline into service in Pennsylvania, which will provide service to Panda Power's Hummel Station in 2017. These important projects will help move Appalachian/Marcellus Shale gas to end markets where additional natural gas supply is needed, and should lead to improved drilling activity in the regions once brought online. The natural gas rig count has been steadily improving (Ex #1), which has incremental benefits across our utility and industrial coverage universe.

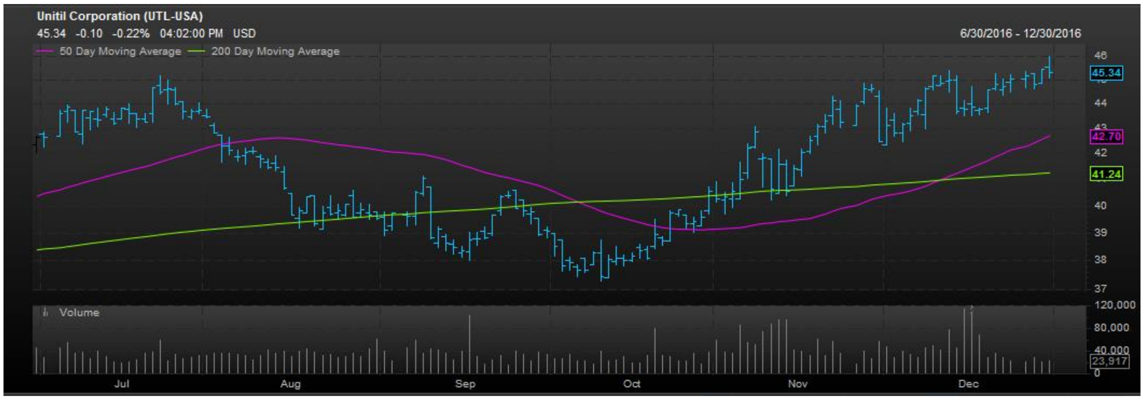
Exhibit #1



*Source: Baker Hughes*

Our chart of the week is Unitil (UTL). The chart is among the strongest in our coverage universe. We note the shares are trading above both the 50 and 200 day moving averages.

**Chart of the Week – Unitil (UTL)**



*Source: FactSet*

**TOP IDEAS**

**Electric/Gas Utilities**

**ES:** An attractive investment profile, strong track record of execution and favorable valuation all factor into our positive investment thesis. We consider ES a "best in class" combination electric and gas utility.

**Industrials**

**AME:** Recent acquisitions, ongoing cost-out activities and free cash flow capability to support future growth, coupled with an attractive valuation are the primary determinants for AME's position as our #1 pick in our industrial coverage universe.

**MLPs/Yieldcos**

**CAFD:** We consider CAFD "best-in-class" among the yieldcos in the sector. It's strong, multiple sponsors (First Solar, SunPower) provide superior opportunities for portfolio and distribution growth. Valuation relative to other yield-related investments remains extremely attractive.

**Water Utilities**

**WTR**: Within the U.S. water utility group, Aqua America is our top pick. We see several future catalysts, including M&A transactions across both its regulated and non-regulated business platforms, and a significant rate case filing in Pennsylvania (approximately two-thirds of total rate base) in late 2017 or 2018. We consider the company's asset base to be very high quality, and we assign the shares the highest price-to-earnings multiple within its sector. Valuation remains favorable, with an attractive yield.

Calgon Carbon provides services and solutions for purifying water & air, food, beverage and industrial process streams. It operates three business segments: Activated Carbon & Services, Equipment and Consumer. The Activated Carbon and Services segment manufactures granular activated carbon (GAC), which is used to remove inorganic compounds from water, air, liquids and gases, and powdered activated carbon (PAC), used for mercury removal from coal-fired electric powerplant emissions (MATS compliance). The Equipment segment designs and fabricates systems that provide solutions to water and air process problems. The Consumer segment manufactures and sells carbon cloth for a variety of applications including medical and military.

CPK's regulated energy business delivers natural gas to customers located in central and southern Delaware, Maryland's Eastern Shore, and Florida and electricity to customers in northeast and northwest Florida. CPK's regulated energy business also offers natural gas transmission service primarily through a 400+-mile interstate pipeline from various points in Pennsylvania and northern Delaware to natural gas distribution affiliates in Delaware and Maryland as well as to other utility and industrial customers in Pennsylvania, Delaware and the Eastern Shore of Maryland. CPK's unregulated energy business includes natural gas marketing, propane distribution and propane wholesale marketing operations. The natural gas marketing operation sells natural gas supplies directly to commercial and industrial customers in Florida, Delaware and Maryland. CPK distributes propane to customers in Delaware, the Eastern Shore of Maryland and Virginia, southeastern Pennsylvania and Florida. The propane wholesale marketing operation markets propane to wholesale customers including large independent oil and petrochemical companies, resellers and propane distribution companies in the southeastern United States.

Xylem is a global leader in water application solutions that focuses on the technology-intensive equipment and services end market (a sector of the $500 billion global water market), and should see increasing long-term demand from a favorable end market environment for investment in water due to population growth, economic development, and increasing (and tighter) water quality regulations. The company has exposure to many different end markets, including industrial, public utility, commercial, residential, and agriculture.

1 Year Price History for WTR

### PORTFOLIO MANAGER BRIEF

Aqua America reported first quarter results of $0.28, which was essentially in line with our expectations. Results were lower YoY, but non-recurring items that had a positive impact on earnings last year created an unfavorable comparison. Looking forward, a robust capital expenditure budget, acquisition growth, and a continued commitment to cost efficiency continues to create shareholder value. We've made minor adjustments to our forward estimates, and we reiterate our BUY rating and $38 Fair Value.

### ANALYST NOTES

- Solid first quarter results suffered unfavorable YoY comparisons. Net income of $49MM for 1Q17 was slightly below the net income of $51MM for 1Q16. Last year the company included the positive impacts of the sale of a utility system and a tax settlement. EPS of $0.28 was $0.01 below our expectations ($0.02 below consensus), but we consider the shortfall meaningless given 1Q results are the seasonally weakest and rarely impact valuation.
- Regulatory update. Completed rate cases and infrastructure surcharges in Indiana, Illinois, New Jersey, North Carolina, and Ohio were completed, adding $10.7MM in revenue increases. There are still two pending base rate cases in Illinois and Virginia, with requested increases of $12.2MM. In terms of expected rate case activity, Aqua's Pennsylvania subsidiary is expected to file for an infrastructure investment charge in 2017 with a rate case filing likely in 2018, with a resolution and new rates anticipated in 2019.
- Guidance reaffirmed. Aqua America expects 2017 earnings per share between $1.34 and $1.39, with reasonable O&M growth of 1% to 2%. The company also forecasts customer growth of 1.5% to 2%, which looks readily obtainable just by closing the acquisitions already in process.
- Summary/valuation -we consider 1Q17 results in line with expectations, and we note the set-up so far from a weather perspective is extremely favorable for the company to achieve the upper end of its guidance range. Water supplies are ample, and summer-like temperatures have already appeared in many of the areas Aqua operates in. In terms of valuation, WTR shares remain attractive at 22x our 2018 EPS estimate of $1.46. We maintain our BUY rating and $38 Fair Value, based on a P/E of 26x our aforementioned EPS forecast.

RESEARCH ANALYST CERTIFICATIONS AND IMPORTANT DISCLOSURES ARE ON PAGES 2 - 3 OF THIS REPORT

## Company Description

Aqua America, Inc., serves residential, commercial, fire protection, industrial, other water, wastewater, and other utility customers in Pennsylvania, Texas, North Carolina, Ohio, Illinois, New Jersey, Indiana and Virginia. It also provides water and wastewater services through operating and maintenance contracts with municipal authorities and other parties, as well as offers sludge hauling, septage and grease services, backflow prevention services, and other non-regulated water and wastewater services.

1 Year Price History for WTR

### PORTFOLIO MANAGER BRIEF

Aqua America's 2Q16 results slightly exceeded our expectations, with revenues of $204MM and EPS of $0.33. Recent strategic actions reduced OPEX materially, offsetting lower consumption. Looking forward, we've introduced (and moved to) 2018 estimates for valuation purposes, which increases our Fair Value assumption on WTR shares to $39 from $35. We continue to recommend accumulation at current price levels.

### ANALYST NOTES

- 2Q16 results a touch above forecasts. On the top line, revenues of $204MM were actually below our $208MM forecast, before adjusting for divestitures in market-based activities. Making that adjustment, WTR came within $1MM of our estimate. More interesting though was the OPEX improvement, which decreased by 7.2% YoY. The aforementioned sales of market-based activities appears to have had a noticeable impact. Otherwise, most other income statement line items were within normal statistical bounds of what we were expecting. EPS of $0.33 was $0.01 ahead of our $0.32 estimate, which was also consensus.
- Dividend increase announced. The company boosted its dividend 7.5%, to $0.1913 per share, payable to shareholders of record on 8/18. This marks the 26th dividend increase in 25 years.
- Guidance reaffirmed. Aqua America reaffirmed its 2016 EPS guidance of $1.30 to $1.35. The company also expects in excess of $350MM of CAPEX to be deployed during the year, and customer growth of 1.5% to 2.0%. Thus far, WTR has invested $168.8MM and increased its customer count by 1.1%.
- Adjusting pre-existing estimates; introducing 2018 forecasts. We've made minor adjustments to our 2016 and 2017 estimates, and introduced 2018 forecasts. The move to 2018 forecasts for share valuation purposes had a material impact on our Fair Value assumption.
- Summary/Valuation. The move to 2018 forecasts for valuation purposes allows us to increase our Fair Value target for WTR shares from $35 to $39, based on a 26 P/E multiple. What we saw in the 2Q16 results was a widening focus on improving operational margins, in addition to solid execution against the guidance parameters laid out for 2016. We've also noted from recent activity that WTR is not content to just "work around the edges" to improve its performance; if it sees large scale opportunities to grow the business, it steps

RESEARCH ANALYST CERTIFICATIONS AND IMPORTANT DISCLOSURES ARE ON PAGES 3 - 4 OF THIS REPORT

right up to the plate and takes its swings. We differ with those that believe multiple contraction would occur should WTR move outside water/wastewater utilities; we believe most analysts would simply incorporate a "sum-of-the-parts" methodology to the various earnings streams generated, much like we do in our electric & gas utility universe. That said, we continue to recommend accumulation at current share price levels.

Macquarie Capital (USA) Inc.

# US Utilities

## Weekly Snapshot

- This past week, **AEP**, **NEE** and **NEP** reported earnings. Please see brief write ups on the earnings releases inside.
- **AEP** kicked off the 4Q17 earnings season for US utilities with an earnings call heavily focused on the implications from the tax reform. **AEP**'s FFO/debt should bottom around 14% in 2020 down from the current 18.7% when the company should become a meaningful cash taxpayer. We admit that the US$700-800m reduction in operating cash flows exceeded our expectations by ~US$150m. The company did not add more equity to its plan, and instead reduced its previous 2020 capex plan by ~8% or US$500m.
- Last Monday, **FE** announced a US$1.62bn private placement of mandatory convertible preferred equity to a consortium of Elliott, Bluescape and GIC, and US$850m in common equity from Zimmer Partners. Additionally, **FE** and its new investors created a Restructuring Working Group to facilitate a constructive exit from the merchant power business (FES) and refocus **FE** on fully regulated electric T&D growth. While the issuances are more dilutive than we would have hoped for, they remove one out of two major overhangs from the **FE** story.
- **NEE**'s FPL convinced its regulators to use tax-related savings from 2018 through 2020 to recover US$1.3bn in Hurricane Irma-related expenses. Tax savings for 2021-2022 could delay FPL's next base rate case. The drop in the tax rate should add US$0.45 to the EPS of NextEra Energy Resources; together with record-high new contracted wind and solar additions, **NEE** managed to increase its 2018 EPS guidance by US$0.65. Management extended its 6-8% EPS CAGR from 2020 to 2021 off of the new midpoint of its 2018 EPS guidance of US$7.70.
- **NEP**'s management expects "one of the best renewables development environments in our history over the next several years," and suggested that the long-lasting tax shield in the US could create an incremental opportunity to sell its Canadian portfolio and invest the proceeds in the US. We think the timing for such a recycling of the Canadian portfolio is particularly ripe given the recent substantial weakening of the US dollar vs the Canadian dollar.
- Last Monday, Axios published a draft version of the White House's infrastructure plan. We don't expect the proposed federal support for water infrastructure upgrades to discourage municipal M&A if only because they should struggle with coming up with 80% of funding needed for upgrades and the federal support likely being allocated to larger-ticket items. We remain optimistic about the future water sector consolidation, especially for **AWK** and **WTR**.

*Companies mentioned:*

# The week in review: January 22 – January 26, 2018

*AEP*

## American Electric Power (Outperform) – FFO weakness higher than expected, but growth prospects largely unchanged

AEP kicked off the 4Q17 earnings season for US utilities with an earnings call heavily focused on the implications from the tax reform. We had expected AEP's FFO/debt to weaken on the back of the tax reform due to lower customer collections. AEP's FFO/debt should bottom around 14% in 2020 down from the current 18.7% when the company should become a meaningful cash taxpayer. We admit that the US$700-800m reduction in operating cash flows exceeded our expectations by ~US$150m. The company did not add more equity to its plan, and instead reduced its previous 2020 capex plan by ~8% or US$500m, and still expects its credit rating to remain at Baa1, its EPS CAGR to remain at 5-7% through 2020, with the rate base growing at a 9% CAGR over this period.

Separately, management was very disappointed with a recent ALJ recommendation in PSO's pending rate case in OK, which could further put into question the proposed 2,000MW Wind Catcher project in the state. Management hopes the OK Corporation Commission does not side with the ALJ recommendation, and that a settlement with industrial customer together with lower energy prices fully offsetting the cost of the Wind Catcher project to OK ratepayers should bode well for the future of the project. Our estimates do not account for the wind project. Our 2018-2020 estimates remain unchanged, and our TP remains at US$76.

AEP reported 2017 operating EPS of US$3.68 ahead of our/consensus estimates are US$3.60/3.61 with the beat coming from cost efficiencies and stronger than expected load growth on the industrial side partly offset by mild weather.

*Weekly snapshot only (29 January).*

*FE*

## FirstEnergy (Outperform) - One down, one more to go

With the US$2.47bn equity offering FE has addressed its equity needs through at least 2020, and while the issuances are more dilutive than we would have hoped for, they remove one out of two major overhangs from the FE story. The impending bankruptcy of FES and financial implications on FE still need to be addressed, and that could take time, but FE's current market valuation more than reflects any FES-related implications, we believe. Hence we reiterated our Outperform rating, but trimmed our TP to US$37.50 from US$38.50 in recognition of the higher dilution and the tax reform.

Yesterday, FE announced a US$1.62bn private placement of mandatory convertible preferred equity to a consortium of Elliott, Bluescape and GIC, and US$850m in common equity from Zimmer Partners. Additionally, FE together with its new investors created a Restructuring Working Group to facilitate a constructive exit from the merchant power business (FES) and refocus FE on fully regulated electric T&D growth.

*Please see our report, FirstEnergy - One down, one more to go (23 January).*

*NEE*

## NextEra Energy (Neutral) – No tax detriment to FPL, tax benefit and accelerating renewable new build benefit at NEER

FPL convinced its regulators not to reduce its customer rates on the back of the tax reform, but instead to use tax-related savings from 2018 through 2020 to recover US$1.3bn in Hurricane Irma-related expenses. Tax savings for 2021-2022 could delay FPL's next base rate case.

The drop in the tax rate should add US$0.45 to the EPS of NextEra Energy Resources, together with record-high new contracted wind and solar additions, NEE managed to increase its 2018 EPS guidance by US$0.65. Management extended its 6-8% EPS CAGR from 2020 to 2021 off of the new midpoint of its 2018 EPS guidance of US$7.70.

NEE reported adjusted 2017 EPS of US$6.70 vs. our/consensus expectations of US$6.69/6.75. Management raised its 2018-2020 EPS projections to account for the US$0.45 EPS benefit associated with the tax reform and growth in signed wind/solar contracts. Our new '18/'19/'20 EPS estimates are US$7.70/8.15/8.55 up from US$7.32/7.71/-, respectively. We are raising our TP to US$152 from US$140 along with higher estimates and as have rolled forward our valuation to 2020.

*Weekly snapshot only (29 January).*

***NEP***

## NextEra Energy Partners (Neutral) – Partial relief on a few fronts

NEP's management expects "one of the best renewables development environments in our history over the next several years." The US Congress did not change the PTC retroactively, and NextEra Energy Resources was able to close its four remaining 2017 tax equity financings at "substantially similar" economics vs what they expected before the tax reform, which is a partial relief to us as it relates to NEP's opportunities for dropdown acquisitions, though we think it's too soon to tell what the ultimate impacts will be on the growth outlook from the lower corporate tax rate. As expected, NEE's tax shield should be maintained beyond 15 years despite the lower tax rate because of ongoing tax loss generation; management suggested that the long-lasting tax shield in the US could create an incremental opportunity to sell its Canadian portfolio and invest the proceeds in the US. We think the timing for such a recycling of the Canadian portfolio is particularly ripe given the recent substantial weakening of the US dollar vs the Canadian dollar.

NEP reported 2017 adjusted EBITDA of US$743m vs our/consensus US$826/784m on lower-than-expected wind resource. The company announced a quarterly distribution increase to US$0.4050/unit and reduced EBITDA guidance due to a lower pre-tax value of NEP's tax credits resulting from the tax reform; 12/31/17 run rate adjusted EBITDA guidance has fallen to US$830-930m from US$875-975m, and the 12/31/18 run rate guidance fell to US$1,000-1,150m from US$1,050-1,200m. CAFD guidance is unchanged. Our new '18/'19/'20 EBITDA estimates are US$889/1,018/1,197m vs US$968/1,112/- previously. However, we increase our TP to US$43 from US$41 to reflect opportunities for recycling Canadian assets into the US on the back of tax reform. We reiterate Neutral as we view NEP's debt-financed growth as fully valued.

*Weekly snapshot only (29 January).*

***US Utilities***

## US Utilities: MacqCharts – Tax reform and cash taxes

AEP kicked off the 4Q17 earnings season for US utilities. The earnings call focused on large ~15% reductions in management's projections for cash flows from operations in 2018 and 2019 on the back of the tax reform, which in turn could lead to AEP's FFO/debt dropping by more than 400bps. The impact is particularly high for AEP given its lack of NOLs which should make the company a cash tax payer. Below please find federal NOLs positions as of the end of 2016 for regulated utilities under our coverage. While those will be re-measured under the lower tax rate, and SCG should gain a sizeable NOL position on the back of its abandoned nuclear plant, the chart should be a good starting point for future assessment of the FFO degradation for US utilities.

*Please see our report, US Utilities: MacqCharts – Tax reform and cash taxes (25 January).*

***Water Utilities***

## Water utilities: Infrastructure plan should not discourage muni water system privatization

We don't expect the proposed federal support for infrastructure upgrades, including those in the water segment, to discourage mid-size munis from privatizing their underinvested water systems if only because they should struggle with coming up with 80% of funding needed for upgrades and the federal support likely being allocated to large ticket items such as water treatment plants. Importantly, the proposed infrastructure plan would lift caps on tax-exempt private activity bonds (PABs) and allow investor-owned water utilities to qualify for funds from state revolving water funds, in turn minimizing the cost of needed upgrades and their impact on customer bills. We remain optimistic about the future water sector consolidation, especially for AWK and WTR, as both companies focus on mid-sized municipal water systems. Last Monday, Axios published a draft version of the White House's infrastructure plan.

*Please see our report, Water utilities: Infrastructure plan should not discourage muni water system privatization (24 January).*

## Important disclosures:

### Recommendation definitions

**Macquarie - Australia/New Zealand**
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

**Macquarie – Asia/Europe**
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

**Macquarie – South Africa**
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

**Macquarie - Canada**
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

**Macquarie - USA**
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

### Volatility index definition*

This is calculated from the volatility of historical price movements.

**Very high–highest risk** – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

**High** – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

**Medium** – stock should be expected to move up or down at least 30–40% in a year.

**Low–medium** – stock should be expected to move up or down at least 25–30% in a year.

**Low** – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

**Recommendations** – 12 months
**Note:** Quant recommendations may differ from Fundamental Analyst recommendations

### Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

**EPS** = adjusted net profit / efpowa*
**ROA** = adjusted ebit / average total assets
**ROA Banks/Insurance** = adjusted net profit /average total assets
**ROE** = adjusted net profit / average shareholders funds
**Gross cashflow** = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

### Recommendation proportions – For quarter ending 31 December 2017

| | AU/NZ | Asia | RSA | USA | CA | EUR | |
|---|---|---|---|---|---|---|---|
| Outperform | 51.82% | 55.57% | 44.05% | 45.06% | 60.00% | 42.51% | (for global coverage by Macquarie, 4.36% of stocks followed are investment banking clients) |
| Neutral | 35.40% | 28.60% | 36.90% | 47.59% | 28.67% | 40.42% | (for global coverage by Macquarie, 2.58% of stocks followed are investment banking clients) |
| Underperform | 12.77% | 15.83% | 19.05% | 7.34% | 11.33% | 17.07% | (for global coverage by Macquarie, 0.69% of stocks followed are investment banking clients) |

**GLOBAL**

# Global Water

## Rising capex quenches thirst

### Comparing European, US, and Chinese water names

We have benchmarked 11 investor-owned water utilities in the US, the UK, France, and China and compared invested capital, capex, opex, returns and consumer water bills. US and UK water stocks are comparable asset companies whilst French and Chinese water companies operate concession models.

**American Water, Severn Trent, Suez, and Beijing Enterprises Water** are our preferred global water investments.

### We see global water capex rising

US utilities show strong (and accelerating) growth in Earnings base (5-9% per annum) when compared to their UK peers (2-5%). Earnings base per household is similar between the UK and US. We see US Earnings base rising faster than UK from similar levels, but both are below modern equivalent asset values. We anticipate that UK water capex will plateau at current high levels into the next review, whilst in the US, excessive levels of lead being detected in numerous US municipal water systems and wastewater overflow upgrades intensify the push for sharply higher spending on water capex with little help provided by the federal government. China will see increasing environmental renovation projects.

### Consumers pay for these improvements

The range in water bills between regions is large (Fig. 10), with UK and US water and wastewater bills already well above those of other countries where greater cross subsidy exists with Government. Overall, Water bills are the highest in Northern Europe, but the US is likely to soon catch up on the back of rising water and wastewater investments. US investor-owned water utilities have water bills typically twice as high as those of municipality owned companies. Excluding newly acquired muni systems, an average water bill for a US listed water stock should be rising at a ~3% CAGR nominal through 2020, we estimate. We expect UK bills to rise by 0.5% per annum real out to 2030.

### Efficiency, improved economies of scale and falling cost of capital will mitigate rising bills

UK utilities lead in operational efficiencies; with small-cap US water names showing the highest opex metrics (Fig. 15). French and large-cap US names are similar. In the US we see regulatory and political support for muni wastewater acquisitions, and that, together with economies of scale, could moderate water bill increases, though bill rises are inevitable. Current low bond yields will flow into a lower cost of debt. Ofwat is also likely to reduce baseline RORE expectations (guideline to be published in December).

### AWK, SVT, SEV, 371HK are our preferred water stocks

We used: i) a regulatory ROE vs regulatory asset growth and RAB premium, ii) economic PE, and iii) sustainable growth DDM models (Fig. 2). Whilst US water companies have the highest asset growth rates, we believe these are more than adequately reflected in high EV/RAB and PEs. DDM implies modest upside, with **American Water** our preferred US water name. **Severn Trent** appears to have good value on all metrics with high asset growth, an adjusted PE of just 14.0x and the highest global DDM upside of c.50%. We see **Suez** as a key beneficiary of the big expected uplift in future US water investment (purchase of GE Water and ownership of United Water). **Beijing Enterprises Water** is the largest water and wastewater treatment play by capacity in China. Trading on a 2017E PER of ~14.9x with 30% growth, we see BEW's valuation as attractive.

# Rising capex quenches thirst

## Not all water tastes the same

We have compared 11 global water stocks in the US, the UK, France and China. We have examined a number of common drivers for these stocks:

- Allowed returns, regulatory framework and political environment.
- Operating cost comparisons and relative efficiencies.
- Investment requirements in water, and wastewater, infrastructure.
- Current bills, and expected growth in bills.

Key distinctions include the following:

1) UK and US water companies are more closely comparable with each other with an Earnings Base driving an achieved return (Asset companies).
2) French and Chinese water companies are also more comparable with each other. Both sets of companies follow a concession business model (outside of Suez ownership of US Water) with individual contracts with municipalities without asset ownership (Concession companies).

## American Water, Severn Trent, Suez, and Beijing Enterprises Water are our preferred global water investments

Overall we see the most attractive water companies as those with the highest returns, the highest investment profiles and in a regulatory environment where political intervention should be at a minimum.

We have compared earnings using three measures:

- i) a regulatory ROE versus regulatory asset growth and valuation premium,
- ii) economic PE earnings and
- iii) sustainable growth DDM model.

**Fig 1 Asset based water company valuation summary: US water stocks have generally higher growth and higher valuations (the size of the bubble indicates earnings base growth 2015-2020). UK water looks cheaper.**

## Key stock calls

**American Water Works (Outperform, PT US$84.0)**

- American Water Works (AWK) is our favoured US water play and also a key water pick on a global basis. We have raised our PT to US$84 (from US$80) in recognition of the earnings upside from higher same-system or M&A-driven capex.
- There should be plenty of municipal M&A targets for all investor-owned water utilities in the US given how highly fragmented and underinvested the municipal water sector is. Yet, it's tough to deny AWK's competitive edge in municipal M&A given its unmatched access to cheap financing (~US$14bn market cap), the scale of regulated operations and large presence in PA/NJ, where the M&A activity is concentrated, and best in class operational and management practices. AWK remains upbeat about the recent pickup in acquisitions of municipal (and private) water and wastewater systems. The company has just closed acquisitions of two privately held water systems, Shorelands Water Company in NJ (11,000 accounts) and Meadowbrook Water Company in CA (1,600 accounts), and should close on a pending acquisition of a wastewater system in McKeesport, PA (22,000 accounts) in 2H17.
- Though AWK has a list of targeted municipal systems covering ~145,000 accounts, it's difficult for us to assess how many of the targets will be acquired by AWK, how soon such deals would close and how accretive such transactions should be. AWK has not yet raised its annual 1-2% EPS growth target associated with municipal M&A; to put that in perspective, AWK currently serves ~3.3m customer accounts. AWK's operating costs look largely in line with those of its UK peers, though AWK's headcount (even when we exclude ~550 employees of market-based businesses) looks relatively high vs its customer base. The incremental cost efficiencies could translate into more capex and thus higher earnings growth.

**Severn Trent (Outperform, TP 2570p)**

- Severn Trent ticks the wish list of our preferred water stock for four reasons: i) strong RAB growth (25% rise 2015 to 2020e) ii) strong RORE performance (11-12%), iii) we see it maintaining outperformance in the next review and iv) the lowest water bills in the country (£329 in 2016/17 rising to £339 in 2017/18e).
- We see RAB continuing to grow through to 2025 at a faster rate than the other water companies at 5% p.a. Severn Trent has one of the lowest RAB/MEA multiples and its central UK location has potential water trading asset build out
- Severn Trent should provide a total annual TSR of c.8.2% each year out to 2020e (using a RPI of 3%).
- PE at 22.5x (2017/18e) looks optically high. However adjusting for IFRS/Regulatory accounting drops this PE to a low 14.0x.
- We estimate that SVT is trading at a 19% premium to March 2018e RAB, and this falls to a 13% premium to RAB in March 2020e. A 40% premium to RAB valuation, in line with recent M&A multiples would value SVT at 3180p/share

**Suez (Outperform, PT €19)**

- We see Suez as a key beneficiary of the big expected uplift in future US water investment, highlighted by our global water sector report, first through the purchase of GE Water (~15% of GE Water's 2016 revenue is with US municipal clients) and second through its ownership of the #3 regulated US water utility United Water (we expect ~5% RAB growth per annum between 2016A-20E). We are therefore reiterating our Outperform rating with an unchanged €19.0 price target.
- There has been continued market scepticism over the merits of Suez's $3.4bn acquisition of GE Water (70%/30% transaction with CDPQ), which is expected to close in 3Q17. Based on our analysis there is a significant need for investment in US water infrastructure over the next decades. In our view Suez through GE Water is uniquely set up to profit from this development based on its unparalleled industrial water solutions & services platform and leading presence across the entire industrial water value chain, particularly in the US.

- Suez shares have underperformed the European utility sector by ~5% since the first press speculation emerged mid-February of a possible bidding interest in the GE Water assets. Based on the EPS accretive transaction reaching 10% in 2019 and the ~€1.0/share value creation, we see this underperformance as unjustified. Although there might be concerns that Suez overpaid, we believe the ultimate market assessment of the deal will be positive based on the historic importance of the EPS evolution for Suez.
- We see an attractive investment case in Suez (GE Water deal, cost cutting, regulated exposure, possible Engie buyout and waste recovery). Shares are trading at a 2018E PE of ~14x with a 2016E- 20E EPS CAGR of ~14% (of which ~50% is self-help), with a dividend yield of ~4.5% in 2017E reaching ~6% in 2020.

**Beijing Enterprises Water (Outperform, PT HK$7.50)**

- Beijing Enterprises Water is the largest water and wastewater treatment play by capacity in China. In addition, BEW is one of the few water plays that have a track record in undertaking environmental renovation projects in China. We think BEW will benefit from China's water clean-up development with projects likely in the form of PPP due to its track record. In addition, its SOE background should help it to manage receivables collection risk in undertaking PPP projects. Together with a market leadership position, this should help BEW to develop PPP projects using an asset-light strategy.
- At its recent analyst briefing, management guided towards bottom-line growth of 30% in 2017. A good amount of growth will be driven by environmental renovation construction and technical services, confirming our view that BEW will benefit form a pick-up in environmental renovation project activities in 2017. We expect a major catalyst will be the finalization of the Chifeng PPP, which is expected to complete soon. This PPP has a size of RMB4bn and management expects the fund to go off-balance-sheet. This is a milestone for BEW's asset-light strategy.
- Trading on a 2017E PER of ~14.9x vs. our core earnings growth est. of ~30% in 2017, we see BEW's valuation as attractive, considering its industry position and competitive advantages in the wastewater and water PPP space.

**United Utilities (Neutral, TP 1040p)**

- We downgrade United Utilities to Neutral from Outperform following strong performance. We estimate United Utilities is trading at a 15% premium to RAB, has a 3% annual RAB growth rate, and is now trading close to our Target Price (new TP 1040p/share versus 1000p/share previous). We estimate an annual TSR of 6.9% out to 2020.

# Investment thesis

We have compared 11 global water stocks in the US, the UK, France and China. We have examined a number of common drivers for these stocks:

- Allowed returns, regulatory framework and political environment.
- Operating cost comparisons and relative efficiencies.
- Investment requirements in water, and wastewater, infrastructure.
- Current bills, and expected growth in bills.

Key distinctions include the following:

1) UK and US water companies are more closely comparable with each other, with an Earnings Base driving an achieved return (Asset companies).
2) French and Chinese water companies are also more comparable with each other. Both sets of companies follow a concession business model (outside of Suez ownership of US Water), with individual contracts with municipalities without asset ownership (Concession companies).

### Regulatory comparisons

The key difference between the water companies we cover is the regulatory regime they operate under. Whereas the listed UK and US water companies follow a regulated regime, the listed French and Chinese water companies mainly operate under a concessions model. This means that the UK and US water companies operate under an incentivised regulatory framework, where there is a regulated asset base (RAB) generating an allowed return. Suez, Veolia, Beijing Enterprises Water Group and Guangdong Investment on the other hand have numerous concession agreements for their water activities. This means there are individual negotiated contracts between the companies and public entities that give them the right to operate the water businesses subject to certain conditions (mainly without actual asset ownership).

**Fig 5 Listed UK and US water companies follow regulated regime / listed French and Chinese water companies mainly operate under concessions model**

| | UK Water | US Water | France Water | China Water (WWT) |
|---|---|---|---|---|
| Regulator | Ofwat | State | | |
| Ex-post/Ex-ante | Ex-ante | Ex-post | Ex-post | Ex-post |
| Regulatory period | 5 years | Indeterminate | Indeterminate, average 15-20 year contracts | BOT contract (25 to 30 yrs) |

Source: Company data, Macquarie Research, April 2017

## We see global water capex rising

As stated earlier, a key differentiating factor for the UK and US water groups is the existence of a regulated asset base (RAB). It is important to highlight that when comparing the respective companies it is apparent that even though RAB is growing in both regions US RAB growth is greater than in the UK.

A comparison of capex levels across the water companies we cover highlights the very low capex per customer for the French groups Suez and Veolia. This is not surprising as the French water industry works under a concession model, where Suez and Veolia do not own the water network assets. Interestingly, capex levels for US water companies are significantly higher than for UK water companies.

US utilities show strong (and likely accelerating) growth in Earnings base (5-9% per annum) when compared to their UK peers (2-5%).

Our analysis shows that UK water capex will plateau at current high levels into the next review. Whilst in the US, excessive levels of lead being detected in numerous US municipal water systems and overflows of wastewater systems following large storms intensify the state and local push for sharply higher spending on water capex with little help provided by the federal government.

Earnings base per household is similar between the UK and US. We see US Earnings base rising faster, but both earnings base are significantly below the Modern Equivalent Asset Value (MEAV), with a discount of nearly 80%.

**Fig 6 US water capex levels are towards the top end for our coverage universe**

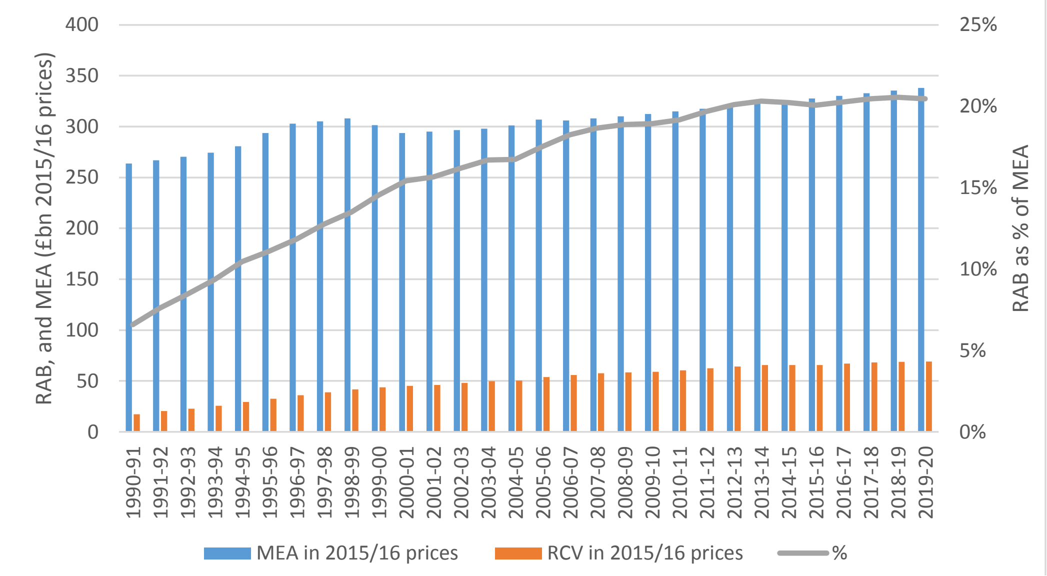
**Fig 9 And Earnings base is at a huge discount (c.80%) to underlying modern asset cost**



**Source:** Ofwat, Macquarie Research, April 2017

## Consumers pays for these improvements

It is important to highlight that UK water bills are towards the top end of the global comparison and are significantly higher than in most major US cities and France. This is most likely a result of the significant historic capex over recent decades to modernise the respective UK water network assets. What is also apparent from this analysis is the low average household bill in Beijing, which can be used as a read-through to the rest of China.

The range in water bills between regions is large (Fig. 10), with UK and US water and wastewater bills already well above those of other countries where greater cross subsidy exists with Government, as well as how the water is sourced.

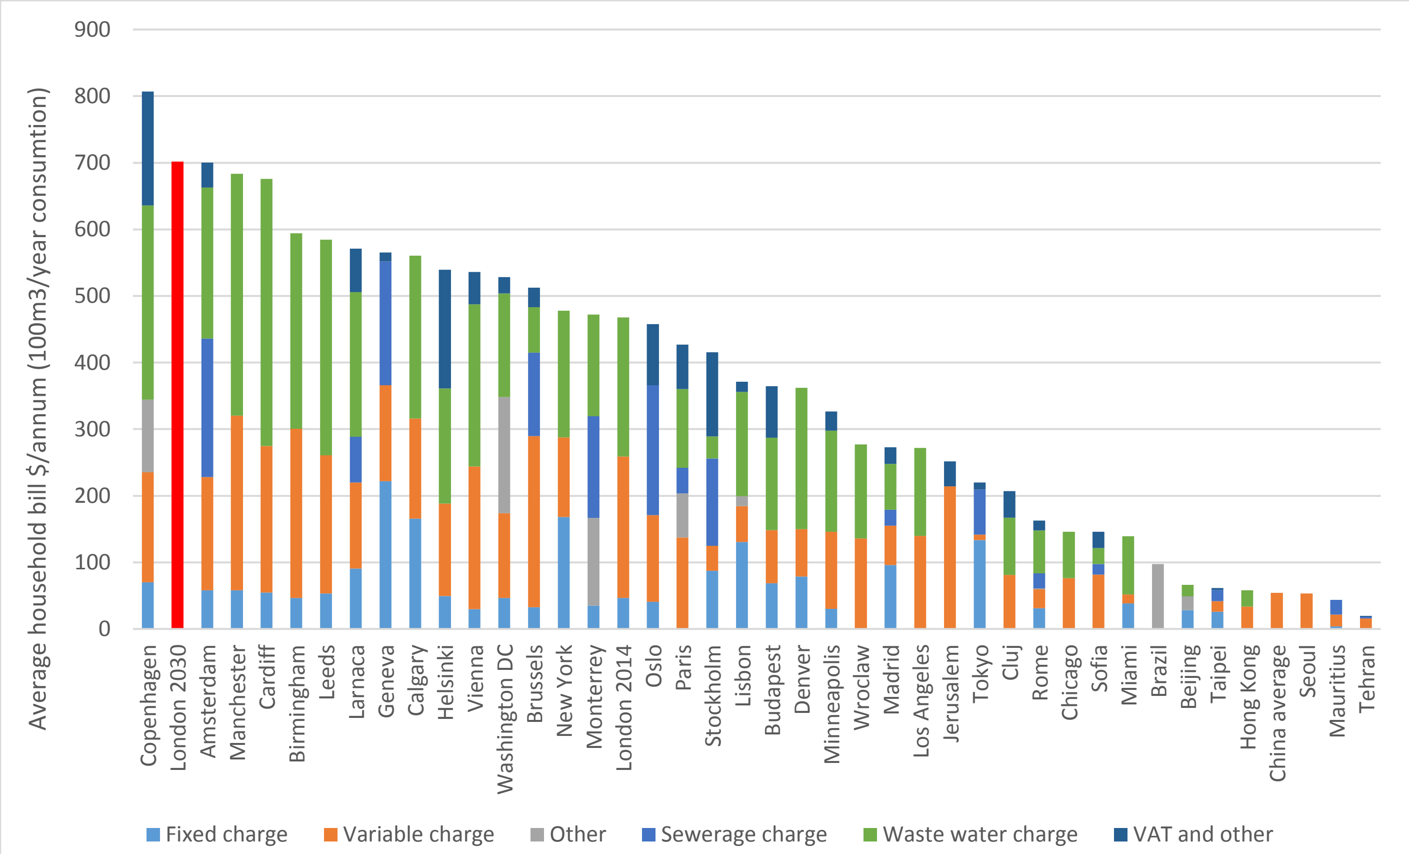
Overall, Water bills are the highest in Northern Europe (Figs 10, 12). The US is likely to soon catch up to the level in the UK on the back of rising water and wastewater investments. US investor-owned water utilities have water bills typically twice as high as those of munis.

Excluding newly acquired muni systems, an average water bill for a US listed water stock should be rising at a ~3% nominal CAGR through 2020 based on guidance from American Water, the largest investor-owned water utility in the US. We expect UK bills to rise by 0.5% per annum real out to 2030.

Our normalised bills also assume constant use of 100m3 per household. There is a wide range in per capita consumption. Looking at the average per capita household consumption of water across the world, there is a clear relationship between lower water bills and higher consumption of water. This is shown by all European countries, which in general have high water bill levels, having a much lower water consumption than in all US cities that form part of this analysis.

We also believe costs may differ between regions where water is abstracted using different sources. Ground water will be more expensive to abstract in our view than surface water.

**Fig 10 Global water bills vary enormously across regions - with UK and US towards more expensive bills**



Source: IWA, April 2017

**Fig 11 Rate increases for residential water/wastewater charges in major US cities: Muni water bills are lower than those of investor-owned utilities, but they are rising rapidly**

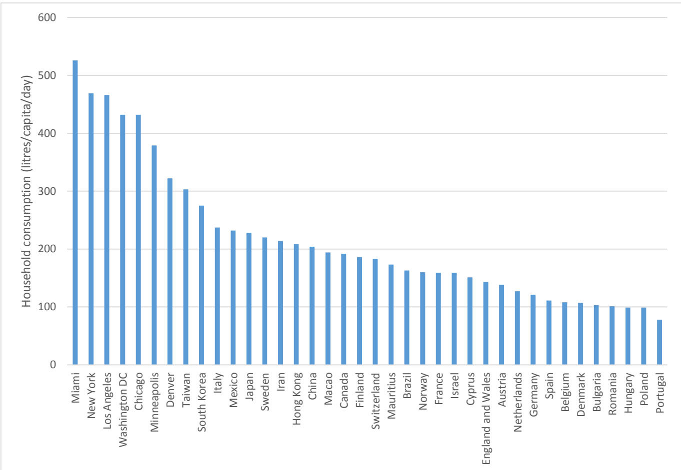
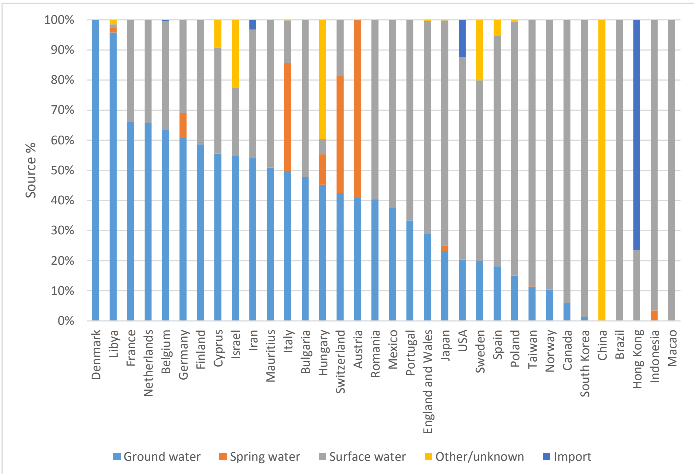
### Fig 13 US water consumption per household is nearly 2x that of Europe



Source: IWA, April 2017

### Fig 14 Water abstraction costs rise with lower reliance on surface water



Source: IWA, April 2017

## Efficiency, improved economies of scale and falling cost of capital will mitigate rising bills

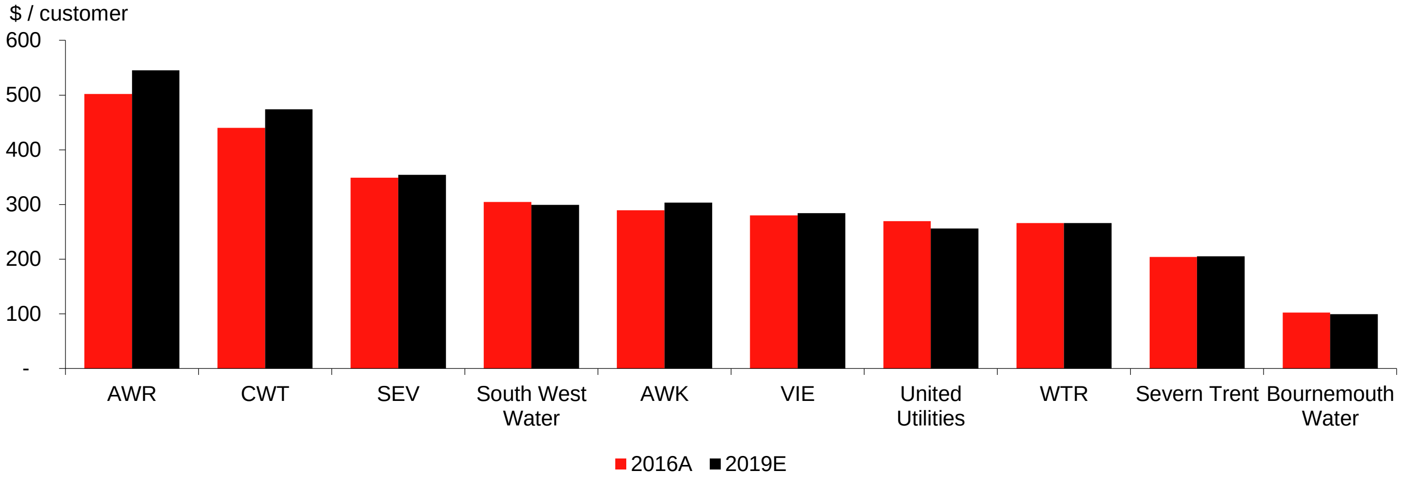
### UK water companies have lowest operating costs per consumer

A key conclusion from our cross-company analysis is that small cap US water companies have significantly higher operating costs than their UK and French counterparts. As shown in the following chart, the smaller US water groups American States Water and California Water Service have an operating cost per customer which is 50-60% higher than the level of South West Water. Large cap US water utilities, American Water Works and Aqua America, are as efficient as an average UK or French water utility which is a reflection of ongoing cost cutting initiatives as well as economies of scale.

UK utilities lead in operational efficiencies, with small-cap US water names showing the highest opex metrics (Fig. 15, 16). French and large-cap US are similar.

In the US we see regulatory and political support for muni wastewater acquisitions, and that together with economies of scale, could moderate water bill increases, though bill rises are inevitable.

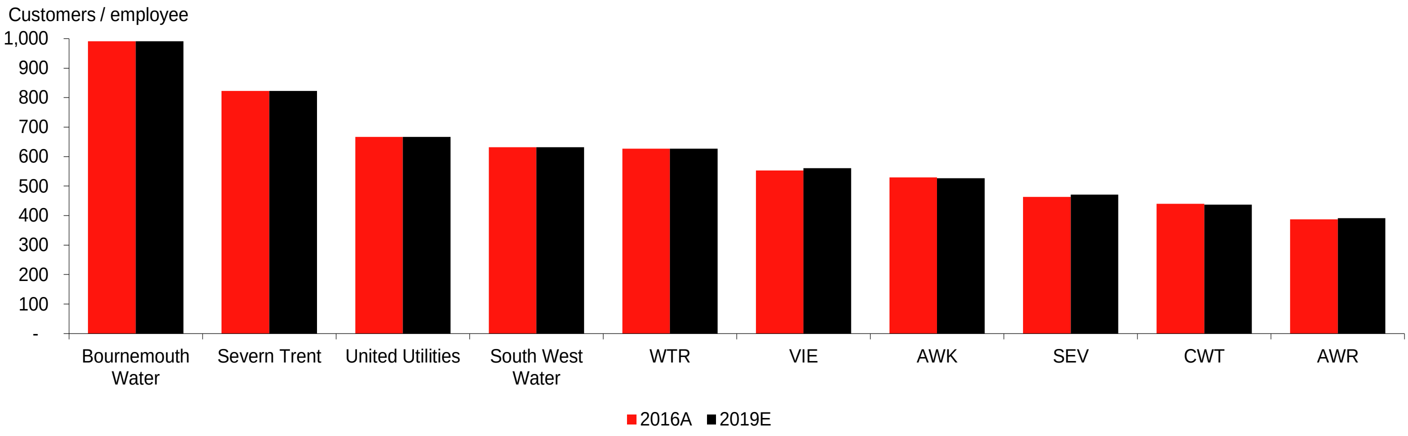
**Fig 15 Small cap US water companies have significantly higher operating costs than their peers (opex per customer for domestic water business)**



Source: Company data, Macquarie Research, April 2017

As argued in our report in the UK there has been a multi-decade efficiency push to lower operating costs since the privatisation of the industry. As a result UK water companies have among the highest efficiency levels in the world. This is underlined by the big positive difference in customers per employee for UK water companies when compared to other countries.

**Fig 16 UK water companies have among the highest efficiency levels in the world (customers per employee for domestic water business)**

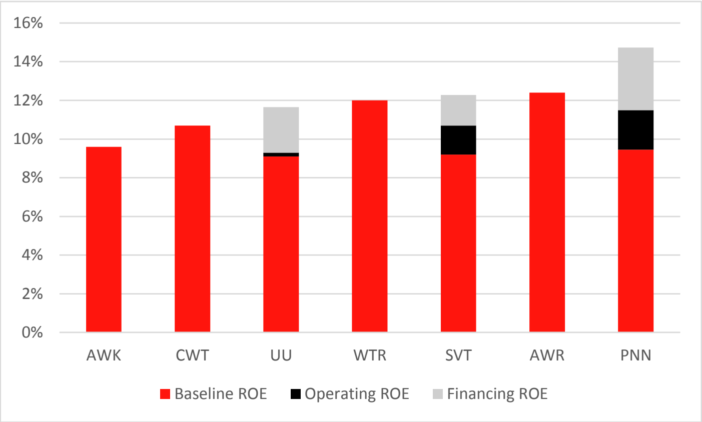


Source: Company data, Macquarie Research, March 2017

### Allowed returns comparisons: cost of debt to fall, but US baseline ROE should remain higher than the UK

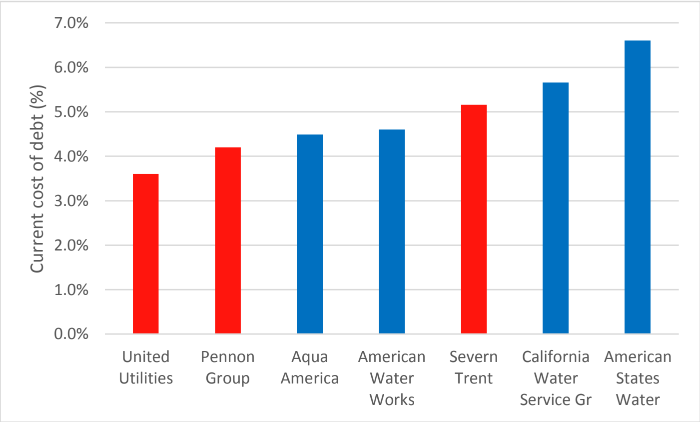
Current low bond yields are flowing into a lower cost of debt, which in all jurisdictions are eventually passed through to consumers. In the UK, we estimate that Ofwat is also likely to reduce baseline RORE expectations (guideline to be published in December) to 4.5% RPI real (7.5% nominal, assuming 3% RPI inflation) from 2020. However including incentives we estimate UK water will achieve RORE pick-ups of 50-200bps. UK achieved ROREs, should reach between 8.0-9.5%, Fig 19. These are close to our estimate of US allowed ROEs which will remain at c.9.8-10%.

**Fig 17 UK baseline ROEs are lower than the US, but similar once ROE incentives are included**



Source: Company data, April 2017

**Fig 18 Current cost of debt in water companies is higher than marginal cost of debt and should continue to fall**



Source: Company data, April 2017

**Fig 19 We estimate Ofwat will allow a 7.5% baseline nominal (4.5% real) allowed return on equity in the next review (2020-2025)but achieved ROE will be 50-200bps higher**

| | Equity return base (nominal) | Totex outperformance | ODI outperformance | Financing outperformance @3% RPI | Total ROE |
|---|---|---|---|---|---|
| Pennon Group | 7.5% | 0.5% | 0.5% | 1.0% | 9.5% |
| Severn Trent | 7.5% | 1.0% | 0.5% | 0.0% | 9.0% |
| United Utilities | 7.5% | 0.0% | 0.0% | 0.5% | 8.0% |

## Valuation comparison: achieving consistent earnings

In this section we compare valuation metrics across the major global water companies based on a consistent economic basis and approach. This allows a proper assessment of the valuation levels these companies trade at and is an important process behind our relative preferences. We focus on three metrics:

1) Economic PEs
2) Regulatory ROE versus regulatory asset growth and RAB premium
3) Sustainable growth DDM models

### PE comparison show US water as having highest PE (and high growth), UK and China water the lowest PEs

One of the key factors that needs to be adjusted for in a global comparison of the water sector is the different accounting approach and leverage situation of the respective companies. As part of this report we have pursued a standardised accounting and valuation approach in our analysis of the Chinese, French, UK and US water groups. This is particularly relevant for the UK water companies where overly high reported PEs are not a true reflection of the true economic PEs.

The material differences between US GAAP and IFRS accounting standards are exhibited in the following table. It shows the material differences in PE multiples between UK and US water companies as US regulation provides less capital growth, but more cash upfront.

**Fig 20 US regulation provides more cash up front, but less capital growth (all things equal) which means material difference in PE multiples between regions**

| | UK Profit and Loss account | | US profit and loss | |
|---|---|---|---|---|
| RCV | 100 | | 100 | |

Source: Company data, Macquarie Research, April 2017

Our analysis shows that UK and Chinese water companies trade at a lower 2017E economic PE than the French and particularly the US water groups. Although the attractive economic ROE and the predominantly regulated nature of the US water companies explains some of the valuation premium, economic PEs of over 20x still seem high compared to the valuation levels of other water companies.

### RAB based valuation metrics mainly used in Europe: UK looks cheapest

The following table provides an overview of the key RAB-based valuation metrics for the major water companies. It is important to highlight that the French and Chinese groups mainly operate a concession-based business model for their water activities. Based on our analysis, UK water companies trade at significantly lower RAB premiums than the US groups. Despite the higher RAB growth of the US water companies, the valuation levels of Pennon, Severn Trent and United Utilities seem too low.

The superior RORE level for UK water names, which we highlighted earlier, is supported by a comparison with other European regulated utilities. In the European context, UK water companies have the highest return on equity coupled with a low premium to the earnings base and decent RAB growth.

Of note, the UK water sector trades in a relatively tight RAB valuation range, as Figure 24 summarises. This figure also shows the M&A multiples for UK regulated utilities. The average market value is a 15% premium to RAB, with 30% premium average for acquisition multiples. Recent acquisition multiples have been >50% premium to RAB. Total shareholder return in the listed UK water sector has averaged 15% per annum compounded in 30 years, even though premium to RAB valuation has remained constant.

**Fig 22 Analysis of RAB valuation metrics across our water coverage universe**

### DDM analysis is in our view the most consistent comparable valuation tool

Our detailed analysis highlighted in the previous tables allows us to build a DDM model, which can be used for a consistent valuation approach across our water coverage. This is important as different accounting, depreciation and tax regimes make a consistent valuation methodology very important. The main advantage of using a dividend discount model is that there is very little subjectivity in this valuation methodology as it only considers dividends as legitimate cash flows for shareholders. Our DDM valuation approach shows significant upside for the UK water companies, Beijing Enterprises Water Group and Suez. We see this as an important supporting factor for our relative rankings of the respective companies.

**Fig 25 DDM valuation approach shows significant upside for UK water companies, Beijing Water and Suez**

# In case you want to know more: country by country analysis

# US: Managing water system investment needs and customer bills

## It should be different this time around

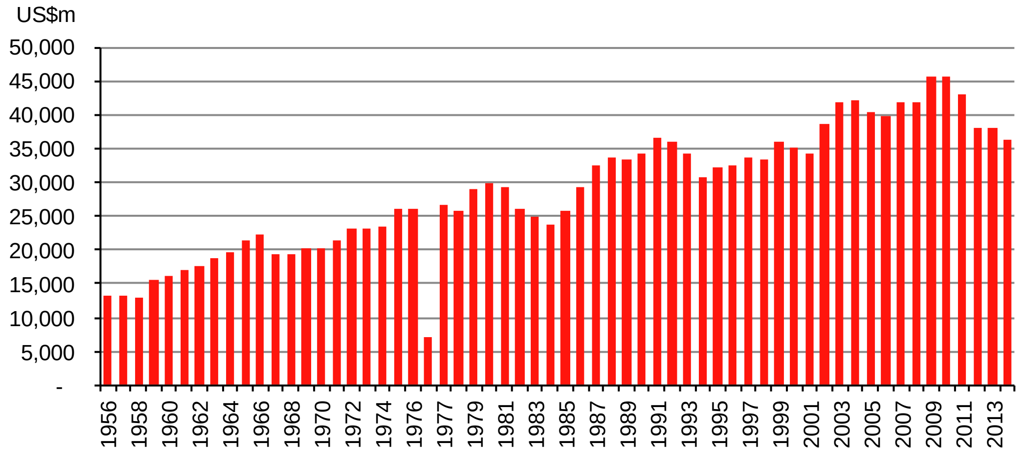
According to the 2017 Infrastructure Report Card, the American Society Civil Engineers grades the US drinking water infrastructure at D and wastewater systems at D+. A potentially eased burden on systems from water conservation efforts and efficiency upgrades will not change the growth in wastewater volumes. The useful life of US water pipes is 75-100 years and yet utilities are replacing them at a 200 year cycle/pace. The US EPA estimates that every year there are 23,000-75,000 wastewater system overflows in the US. The underinvestment of US water and wastewater systems is nothing new, however. While the EPA's water quality rule enforcement may become less stringent during Trump's term, the negative media coverage and political implications of water quality issues (especially with elevated lead levels) should lead to higher capex deployment and privatization of municipal water and wastewater systems. The transformation of the US water industry has already begun, but the question remains if the municipal consolidation becomes a widespread phenomenon and who will pay for necessary system upgrades.

## Only one-third of annual water infrastructure needs is being met

According to the EPA and the USGS, in the US, there are ~52,000 water distribution systems and ~16,000 water treatment plants serving ~86% of the US population and providing ~50% of the freshwater used by commercial and industrial customers, ~42 billion gallons/day. Additionally, there are ~15,000 wastewater systems (and treatment plants) that serve ~75% of the US population, treating ~32 billion gallons/day. Based on the population served, public systems, mostly municipally-owned, account for ~84% of all water distribution systems and ~98% of wastewater treatment in the US, with investor-owned utilities accounting for the rest.

The American Society of Civil Engineers estimates that the US needs to invest a minimum of US$123bn annually (in 2016 dollars) in its water infrastructure over the next decade to maintain a reliable clean water service, with the highest capex needs in the South (34%), the Midwest (23%), and the West (23%). The required spending would need to be three times higher than that incurred by federal, state and municipal water utilities in 2016 (~US$40bn), according to the US Congressional Budget Office (CBO).

**Fig 26 Federal, state and municipal capex of water utilities (2014 dollars)**

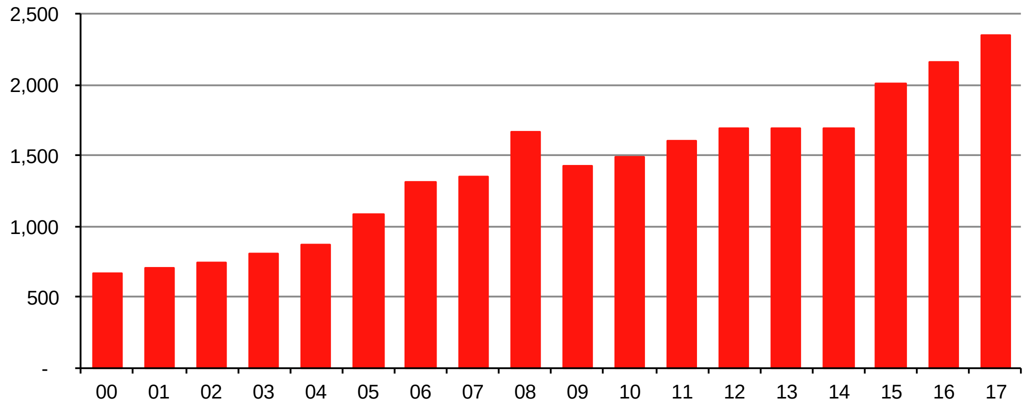


Source: CBO, Macquarie Capital (USA), April 2017

The need for a surge in the water-related replacement capex is driven by the 75-100 year lifespan and of the water mains and other equipment installed in US water systems over the last century. Back in 2011, the American Water Works Association estimated that by 2040 every third water main in the US would need to be replaced, and as they age, their breaks per year continue to rise. Strong storms and growing population density has been putting a particular strain on wastewater and stormwater systems, many of which were built in the early 1950s. Some estimates indicate that every year ~900 billion gallons of untreated wastewater and stormwater overflow are being released into nearby water reservoirs. The city of Washington D.C. is progressing with construction of a system of tunnels to deal with overflowing wastewater. The US$2.6bn project, funded with municipal debt, and thus by municipal water customers, should reduce the cases of wastewater overflow into the Potomac River, a major source of drinking water, from 80 to two per year.

Capital investments from nine investor-owned US water utilities continue to rise at a 5-6% CAGR. The investments of these utilities do not seem outsized; capex from investor-owned utilities should account for only ~5-6% of total water capex in the US in 2017, while they deliver water to 15% of the US population. Also, total water capex seems heavily skewed toward wastewater systems where investor-owned utilities have only a 2% market share.

**Fig 27 Water capex – investor-owned water utilities since 2000 (US$bn in nominal dollars)**



Source: Company data, Macquarie Capital (USA), April 2017

The Value of Water Campaign has recently released a report on "The Economic Benefits of Investing in Water Infrastructure" in the US. The report was put together to demonstrate that investments in water infrastructure can generate numerous, high-quality jobs and support strong economic growth in the US. Trump's proposed budget includes US$2.3bn for the State Revolving Funds, a mere US$4m increase from Obama's last budget, with an unchanged US$20m for the Water Infrastructure Finance and Innovation Act program. However, the budget eliminates the US$498m Water and Wastewater loan and grant program of the Department of Agriculture; the program currently provides funding for clean drinking water to communities with fewer than 10,000 people. Privatizations, or at least public-private partnerships, could become a more popular vehicle to modernize municipal water and wastewater systems as municipalities don't have much debt capacity left and federal funding is drying up.

Trump's budget plan also calls for a sharp reduction in the EPA's enforcement office and that in turn could reduce the EPA's ability to enforce drinking water violations, despite the fact that the EPA has been enforcing only ~11% of violations under the federal Lead and Copper rule per estimates from The National Resources Defence Council. Cognizant of that low enforcement rate, the state of New Jersey has been advancing a new state law, called the Water Quality Accountability Act, which would align investment and reliability standards between investor-owned and municipal water utilities, and would require the latter to report and address any EPA-related violations in a timely fashion. Management teams of investor-owned utilities often cite EPA-related violations at municipal systems as a key catalyst for growth in the M&A pipeline.

## Water bills remain low, but wastewater costs are already pretty high

The Circle of Blue and the Food & Water Watch estimate that an average monthly water-only bill for a residential customer in the US is just ~US$35 (below US$30/mo for public/ municipally-run water systems and closer to US$40/mo for investor-owned water systems), with the level of investments likely explaining the pricing difference, we believe (Fig 28).

**Fig 28 Average monthly water bills per region for residential customers (excluding wastewater or stormwater)**

| US$/month | Public water systems | Private water systems |
|---|---|---|
| Midwest | 25.46 | 42.59 |
| Northeast | 26.46 | 45.72 |
| South | 24.39 | 31.89 |
| West | 28.47 | 27.56 |
| **US** | **25.62** | **38.04** |

Source: Food & Water Watch, Macquarie Capital (USA), April 2017

However, when we add wastewater and stormwater costs, an average all-in water bill jumps to ~US$140/month (Fig 29), making it a very meaningful expense. Wastewater treatment costs are starting to comprise larger and larger portions of total water bills, with the rising frequency of strong storms and higher costs of water treatment. The all-in monthly water bills are in excess of US$300 in GA, WA, and parts of Florida. Investor-owned utilities are not to blame for those high and rising all-in water bills, as wastewater costs comprise the majority of all-in bills and wastewater systems are almost exclusively operated by municipalities. Yet, those rising water bills could limit the pace of capex deployment due to affordability issues and partly explain the strong emphasis from larger investor-owned water utilities on cost efficiencies, we believe.

The EPA estimates that for water service to remain affordable, all-in water bills should not exceed 4.5% of annual household income. At the current rate of ~US$140/month, that would imply a minimum income north of US$37,000. The median household income in 2014 was ~US$54,000, according to the US Census Bureau.

**Fig 29 Monthly residential bills for water only and water + wastewater in major US cities (US$/month per account)**

## Underinvestment in municipal water systems could accelerate their privatization

While all-in water bills in the US for now remain manageable, given needed water infrastructure upgrades, customers of municipally-managed water systems could see annual bill increases well in excess of 10% and in some cases as high as 50% over the next couple of years, especially for smaller muni systems. The alternative could be privatization of those systems in order to benefit from efficiencies and economies of scale of larger investor-owned water systems. The water bill increases are inevitable either way, though the increases could be more spread out if muni water systems were privatized, especially in states like Pennsylvania, where the cost of needed upgrades of a newly acquired water (or wastewater) system can be recovered over the total customer base of an investor-owned utility in the given state instead of just the acquired municipality.

We have been waiting for a wave of privatizations of municipal water systems for at least the last two decades, and while the recent pickup in municipal water system consolidation may signal a new trend, it’s too early to tell. For now, municipalities remain more open to sell their wastewater rather than water systems, with public referendums needed to sign off on the sale of more meaningful municipal water systems.

High lead levels in drinking water have been detected not only in Flint, MI, but in a number of large municipalities, with Pittsburgh, PA being the latest example. The need for lead pipe replacement could accelerate the decision on privatization of water systems, though it often turns out that the source of lead is water pipes on the customer-side of water mains. Water pipes on the customer-side are not a part of the assets of municipal or investor-owned water utilities.

Investor-owned water utilities tend to grow their same-system asset base at a 5-6% CAGR, with AmWater, the largest publicly traded water utility in the US, operating under a self-imposed 2.5-3.0% annual cap for water bill increases in its service territories (outside of CA). While other utilities have not explicitly stated their maximum water bill hike targets, water bill affordability is being widely discussed. AmWater recognizes that its regulators would want the utility to step up the pace of its water system upgrades, but prefer to up the bill increase cap only once it sees signs of a sustainable economic pickup in its service territories.

Large municipal M&A could create the need for higher capex and thus faster rate base growth for the largest investor-owned water utilities in the US, with AWK being the best positioned to lead here. However, the prospect of much higher water rates (on the back of incremental capex) and sharp cost reduction initiatives often discourage municipalities from pursuing privatization of their water systems.

## Pennsylvania most supportive of municipal water/wastewater M&A

The state of Pennsylvania has been the most active at supporting privatizations of municipal water systems – the PA Legislature has adopted bills that allow for consolidation of water and wastewater revenue requirements (Act 11) as well as fair market value assessments for municipal systems being acquired (Act 12). The latter, also in effect in New Jersey, Illinois, California, Indiana and Missouri, allows investor-owned utilities to largely eliminate the issue of goodwill on municipal deals. Instead, the purchase price of a system becomes an approximate rate base of the assets acquired and the new owner is allowed to earn a return on the entire amount.

The state of New Jersey, frustrated with the quality of water and service provided by municipal water utilities, has been advancing a new bill which would require municipal utilities in the state to comply with the same capex and service quality standards as those currently faced by investor-owned water utilities. While the EPA enforcement of violations of water quality laws remains weak and Scott Pruitt could run an even less-imposing EPA, the bill (The NJ Water Quality Accountability Act) would impose deadlines on municipalities to address any violations. The new rules, once adopted, could lead to more privatizations of municipal water systems or at the very least to public-private partnerships between municipalities and private water utilities, we believe. We expect the bill to become law by the end of 2017.

## Municipal M&A and earnings accretion – Show me the money

Given their large presence in Pennsylvania and New Jersey as well as sizeable balance sheets, American Water and Aqua America seem best positioned to benefit from the consolidation of the municipal water and wastewater market. However, it is difficult for us to assess the timing and size of likely municipal deals. For now, we can say that AmWater targets systems that can reach 50,000 accounts within five years from the acquisition, while Aqua focuses on systems with 5,000-40,000 accounts. Given the lack of official rate base numbers for municipal water systems, the M&A pricing is quoted in US$/account with an average residential system selling for US$3,000-5,000 per account depending on future capex needs (and thus growth prospects for investor-owned utilities) as well as an independent assessment of the value of such systems.

Consolidation in the US water system is not a new phenomenon, and both AmWater and Aqua seem to have learned from prior (bad) experiences on the financing of municipal acquisitions and capex needed to bring the systems back to EPA standards. Still, between a lengthy regulatory approval process for such muni deals, rate case stayouts or at least caps on annual rate increases, not to mention limits on near-term cost cutting, it could take even three years to see any meaningful earnings accretion from these municipal deals. For now, it seems like announcements of municipal water deals are enough to keep investors happy, but at some point we need to see that these transactions are creating meaningful earnings.

## US water stocks and rising water capex

There should be plenty of municipal M&A targets for all investor-owned water utilities in the US given how highly fragmented and underinvested the municipal water sector is. Yet, it's tough to deny the competitive edge in municipal M&A of **American Water Works (AmWater/AWK**), the largest private water utility.

The company has a strong presence in New Jersey and Pennsylvania, where most of the water M&A seems to be concentrated, it has an unmatched access to cheap financing (given its US$14bn market cap), and best in class operational and management practices, we believe. **AmWater** has just closed acquisitions of two privately held water systems, Shorelands Water Company in NJ (11,000 accounts) and Meadowbrook Water Company in CA (1,600 accounts), and should close on a pending acquisition of a wastewater system in McKeesport, PA (22,000 accounts) in 2H17. **AmWater** has a list of targeted municipal systems covering ~145,000 accounts, but to put that in perspective, the company currently serves more than 3.3m customer accounts.

As the second-largest publicly traded water utility, **Aqua America** (**Aqua/WTR**) seems well positioned to benefit from privatization of the US water sector, especially as ~70% of its current rate base is in Pennsylvania. **Aqua** needs meaningful deals to boost its anaemic ~4-4.5% EPS growth – its current water pipe replacement cycle (less than 100 years) is the shortest among investor-owned water utilities in the US, and as such does not offer much (if any) upside to the current capex level. In '17, **WTR** expects to close four pending municipal system deals for US$114m in total vs just US$22m in similar transactions completed in '16. Management is talking up the level of activity in the municipal space, and yet it has not given up on gas utility M&A.

**California Water Service Group (CalWater**) has a 200 year water pipe replacement cycle, more than twice longer than that of Aqua, even if it has recently improved from a 300 year cycle through to a large capex increase. As a result, it does not need to go after municipal M&A in order to boost its earnings growth.

**American Water Works (AWR)** would need municipal M&A for higher growth, but the company remains at a competitive disadvantage in the municipal M&A to its two larger and more geographically diverse peers, **AmWater** and **Aqua**, which have operations in M&A-ripe NJ and PA, and much larger balance sheets.

# UK: We see capex continuing at a rate of at least £5bn per annum

The UK Water Industry is facing some major long-term challenges. Population growth, climate change, tough economic conditions and tightening environmental legislation all provide a tough underlying backdrop to the business and regulators.

We have tried to estimate UK capex going forward based on a number of parameters:

1) UK historical spend and trend.
2) A comparison of the Modern Equivalent Asset value versus current spend and depreciation rates.
3) A bottom-up analysis of the needs and requirements for the future network.

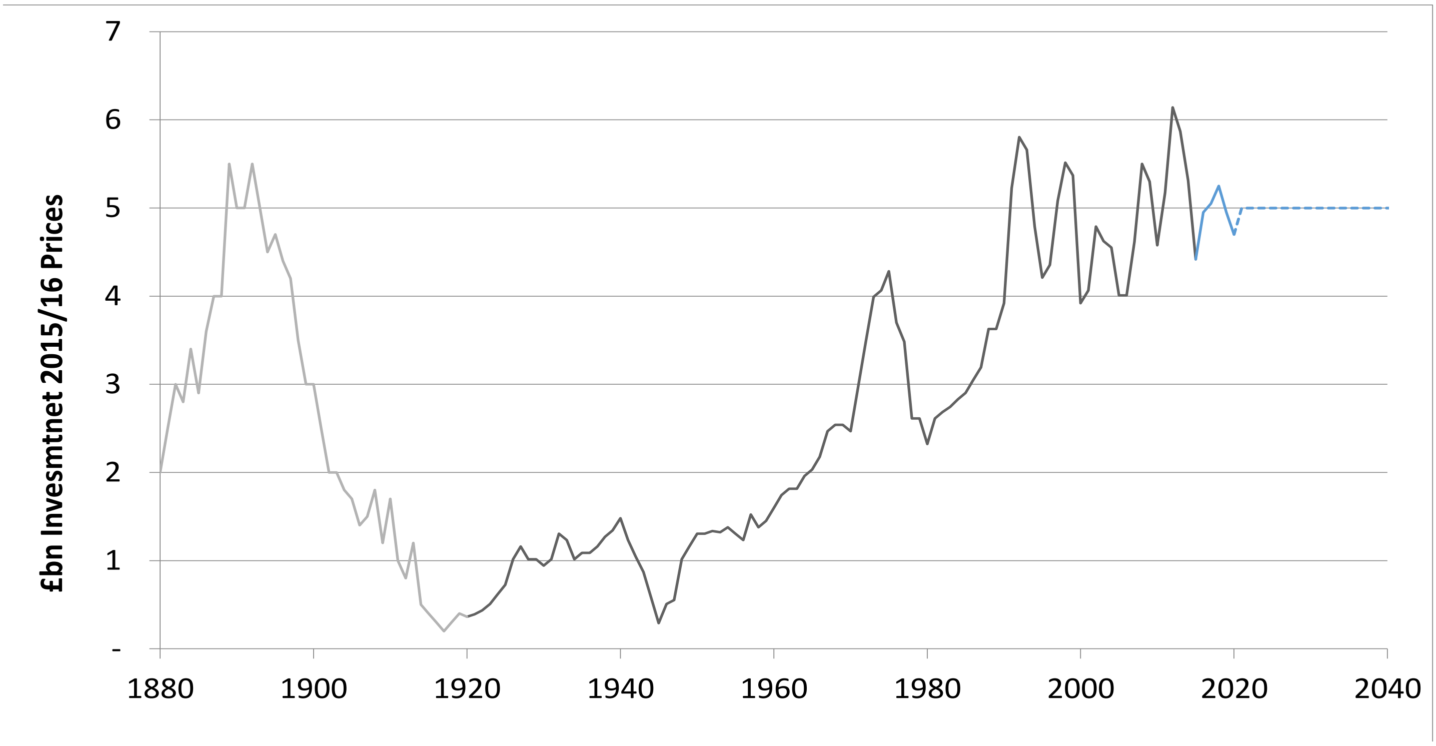
## 1) UK current spend at structural high point in cycle

We estimate that total UK water spend shows a cyclical nature, albeit one in which the cycle runs to over a hundred years or more. The following chart shows the investment in the English and Welsh water sector since 1880. We estimate that the roll out of the large scale clean water and sewerage systems happened in parallel with the large modern house building programmes of Victorian times.

Looking at the capex chart below, we estimate that the water sector saw significant capex at the end of the 19th Century. Investment then fell with annualised investments of around £1bn from 1920 to 1960. Whilst investment rose in the 70s and 80s, it was the huge increase in investment that was needed that was in part the reason why the sector was privatised. Privatisation, in 1989, saw investment double and it has been broadly flat in real terms since 1990, at c.£5bn in 2015/16 prices.

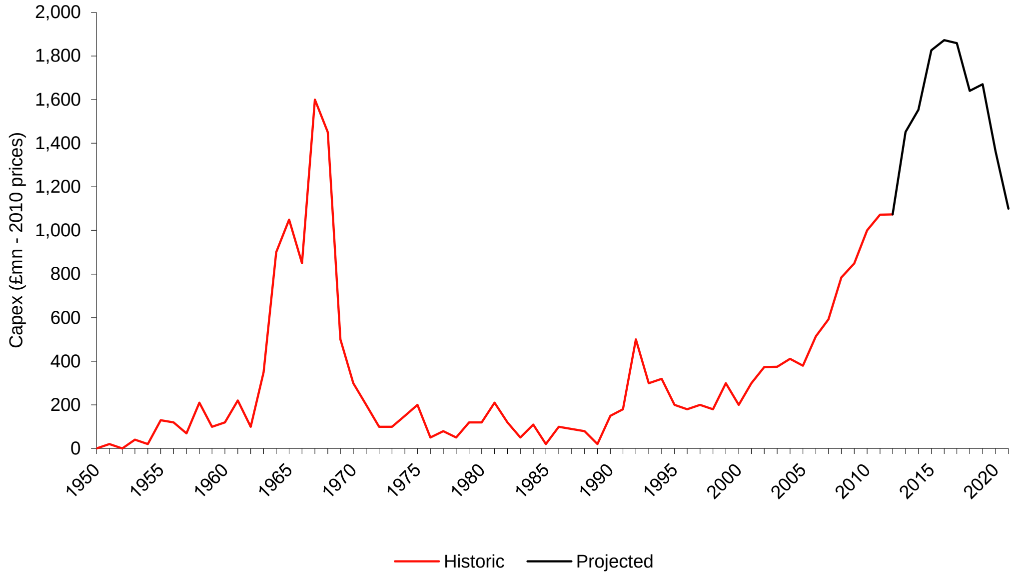
With now nearly 30 years at £5bn of investment we see no real reason why investment should fall off. Whilst a large part of the water and wastewater network may not need updating for another century, or more, replacements are now more expensive than greenfield water expansions.

**Fig 30 The capex cycle… Water has an extremely long asset life with rising capex lasting potentially decades**



Source: Ofwat, Macquarie Research, April 2017

**Fig 31 National Grid UK electricity transmission capex cycles are c.50 years**



Source: Ofgem, National Grid, April 2017

## 2) MEA is still 5x RAB and this gap is (slowly) closing

Ofwat publishes modern equivalent asset (MEA) values for the water network. This estimates the actual economic book value of the water companies, based on the current condition. The following chart shows that Ofwat estimated that the MEA at privatisation was over £200bn (2015/16 prices). The RAB at March 1990 was £14bn (2015/16 prices), which meant that the earnings base at privatisation was at a 93% discount to MEA.

We estimate that the water industry MEA has kept fairly constant in real terms since privatisation, rising to between £300bn and £340bn over the past two decades (in 2015/16 prices).

We estimate that asset lives of these water and wastewater assets is probably in the order of 75-100 years. This means that if the network were to be maintained in the current state, then we would estimate an annual maintenance annual capex of £4.0bn per annum.

The RAB of the UK water sector is currently £70bn, or just 21% of the MEA. We estimate that the depreciation life of the sector is currently c.25 year life. This means that the depreciation allowance passed through to consumer bills is in the order of £3.0bn per annum.

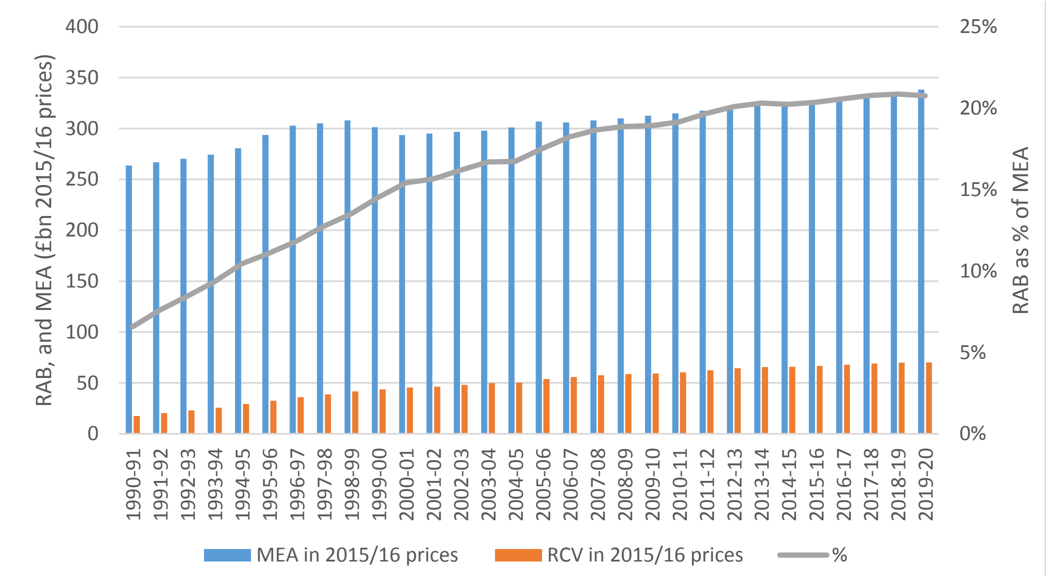
We estimate that on top of these long-run projects, the MEA should naturally rise as improvements are added to the network. These include tightening environmental standards as well as increased interconnectivity.

**Overall we estimate that in 2015/16 prices we see maintenance investment in the order of £4bn rising to a total investment need of £5bn per annum including improvements**.

Note on p19 of the December 2015 publication of the PR19 review, Ofwat state that RCV is c.12% of MEA, but we are unsure how they came to these numbers. In any case, a 12% RCV/MEA ratio would indicate scope for even greater future capex.

Within the three UK listed companies, we see the RAB/MEA for Severn Trent and United Utilities as the lowest (at 16-20%) with Pennon at 30%.

**Fig 32 Water companies were privatised with an extremely low earnings base (RAB) versus the Modern Equivalent Asset (MEA) (2015/16 prices)**



Source: Ofwat, April 2017

## 3) The UK faces structural water challenges: resilience will add >£1bn per annum in investment

We have also examined some of the structural challenges for the UK water sector in the coming decades. It might appear very long dated, but these assets need careful planning as once they are in place they are around for three generations or more.

Overall a recent long-term 'UK Water' report on long-term resource planning focuses on water resilience, and with changes in population growth and rainfall patterns we are looking at up to c.£1bn a year in extra investment to build resilience into the system, including increasing efficiency, leakage and recycling rates.

**Fig 33 Population growth is still expected to focus on South and East**

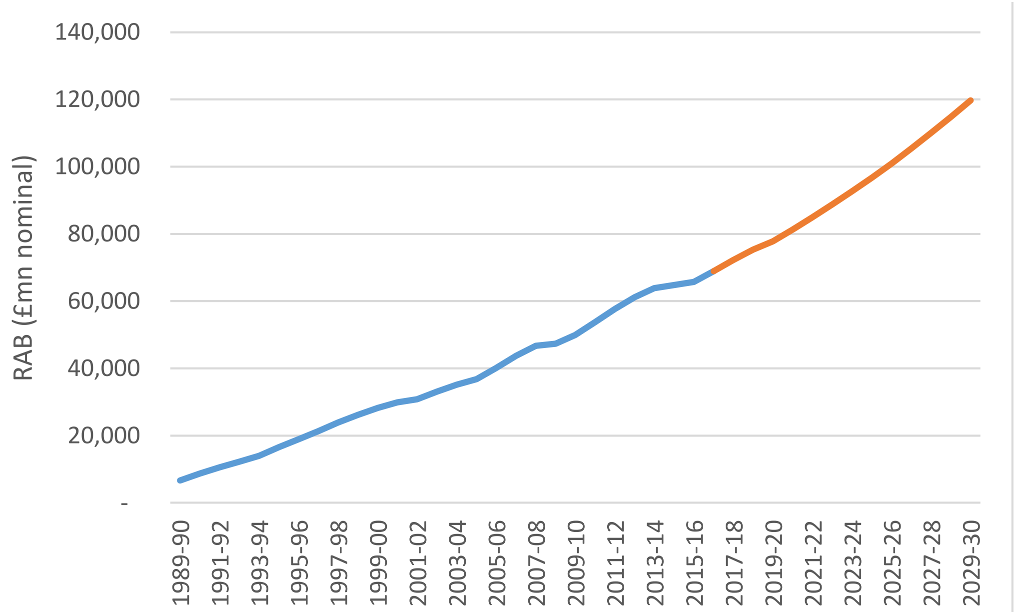
## RABs are going to rise: we see RAB rising by 75% in nominal terms in ten years

We estimate that RAB in the industry is going to rise (all things being equal re Pay As You Go (PAYG) ratios) by c.£2bn a year going forward in real terms. On top of this, if an inflation rate of c.2.5-3.0% is seen going forward, then we see the RAB of the UK water sector rising from c.£69bn in March 2017 to £120bn in 2030, a 75% rise.

**Fig 41 The UK Water sector RAB has grown by 10x in 28 years (nominal) and we see a further doubling out to 2030**



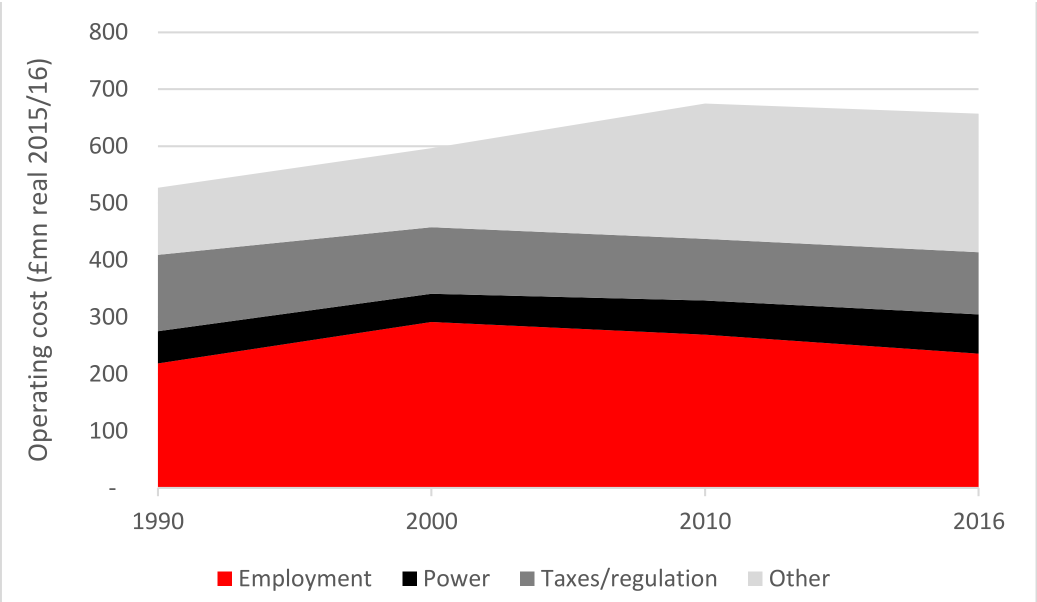
Source: Ofwat, Macquarie Research estimates, April 2017

## Operating performance efficiencies can limit water bill rises

Whilst RAB rose rapidly since privatisation, the UK water sector went through improving efficiencies which meant that bill rises were limited. We have used Severn Trent Water as an example, and it can be seen that whilst total operating costs have risen in real terms since 1990, these have been driven broadly by 'other' costs, in particular hired services and contractors. These will likely increase as investment size increases and the asset base increases.

However overall employment costs have fallen in real terms continuously since 2000, as productivity has increased.

**Fig 42 Employment increased initially as water investment increased, and has fallen in real terms since 2000 (Severn Trent Water taken as an example)**

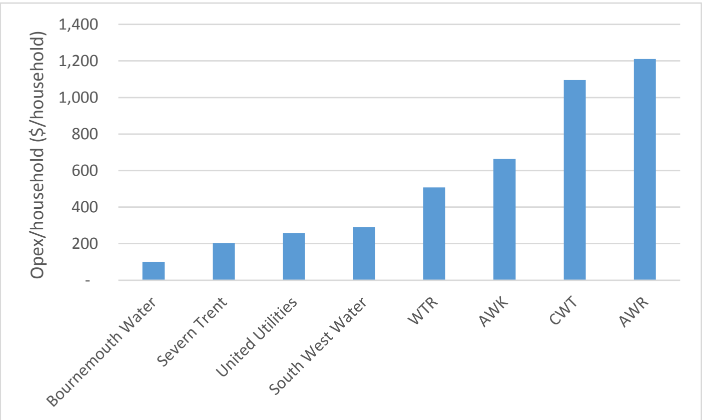


Source: Severn Trent Water, Companies House, April 2017

## UK water companies are amongst the most efficient in our global company index

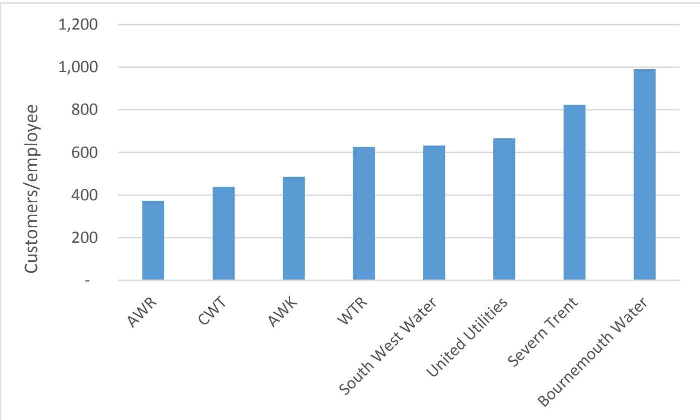
The following two charts summarise the operating costs for our global water companies. We estimate that UK water companies have an opex/customer on average at a 75% discount to their US peers and nearly 2x the number of employees/customer.

**Fig 43 UK companies 75% more efficient than US companies on opex…**



Source: Macquarie Research estimates, April 2017

**Fig 44 ...with nearly double the customers/employees**



Source: Macquarie Research estimates, April 2017

## Allowed returns keep falling: we estimate 4.5% real cost of equity (RPI based at 3%)

Looking at the return on regulated equity (RORE), it is important to highlight the attractive returns offered across the UK water names. Based on our projections, we see achieved ROREs for the UK water groups at between 10-13% over the next years. We view this RORE level as superior within the sector context.

**Fig 45 We see *achieved* ROREs in the UK water names between 10-13%**

| ROE progression | | 2015/16a | 2016/17e | 2017/18e | 2018/19e | 2019/20e |
|---|---|---|---|---|---|---|
| Base ROE infrastructure | Severn Trent | 5.3% | 5.3% | 5.3% | 5.3% | 5.3% |
| | South West | 5.6% | 5.6% | 5.6% | 5.6% | 5.6% |

Source: Macquarie Research, April 2017

Ofwat looks at three parameters within determining a cost of capital: i) leverage; ii) a cost of debt; and iii) a cost of equity. We estimate in the next review that the allowed cost of equity will be 7.5% nominal, or 4.5% real, using an RPI level of 3%. We also predict a cost of debt allowance of 1.5% real in the next review.

The regulator will be moving from RPI to 50% CPI for existing assets, and 100% CPI for new assets from 2020. CPI has traditionally been c.100bps lower than RPI, which would raise allowed ROE from 4.5% real (RPI) to 5.5% real (CPI).

**Fig 46 We estimate allowed returns will fall from 3.8% to 2.8% in the next review**

| | Ofwat Fast Track proposal | Ofwat Final Determination | Macquarie estimates next review 2020 |
|---|---|---|---|
| Period | April 2015 - March 2020 | April 2015 - March 2020 | **April 2020 - March 2025** |
| Regulator allowed gearing level | 62.50% | 62.50% | **62.50%** |
| Cost of debt (pre-tax real) allowed by regulator | 2.75% | 2.60% | **1.50%** |
| Cost of equity (post-tax real) allowed by regulator | 5.30% | 5.30% | **4.50%** |
| Tax rate | 20% | 20% | **20%** |
| Wholesale post tax real return | 3.34% | 3.26% | **2.44%** |
| Wholesale plain vanilla return | 3.70% | 3.60% | **2.63%** |
| Regulated HH retail margin | | 1% | **1%** |
| Regulated retail pick-up | 0.15% | 0.15% | **0.15%** |

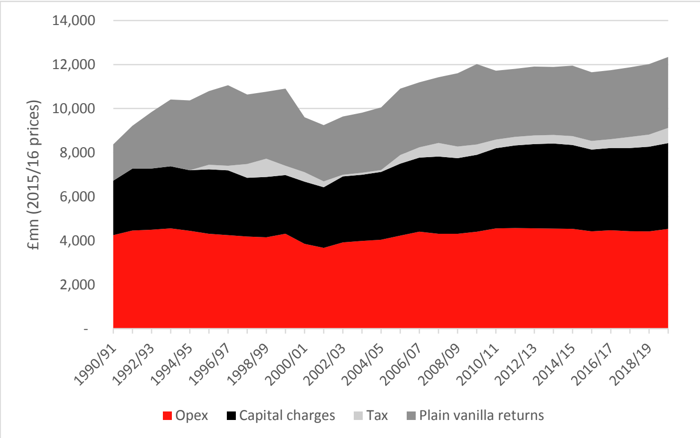
## We see UK water bills up 50% within a decade – and if the cost of capital were to rise from here we could see higher rises

One consequence of moving from an 'opex heavy' to 'asset heavy' model is that the make-up of a water bill moves from one where opex made up 50% of the bill at privatisation to one where it is now c.38%. We estimate it will fall to c.30% by 2030.

We have factored in a material cut to WACC, and improving real operating cost efficiencies. However, we still predict bills will rise by c.3.5% p.a. out to 2030, which is above the cost of inflation. If cost of capital were to increase from these historic lows, then we do see the risk that bills could be materially higher in the future.

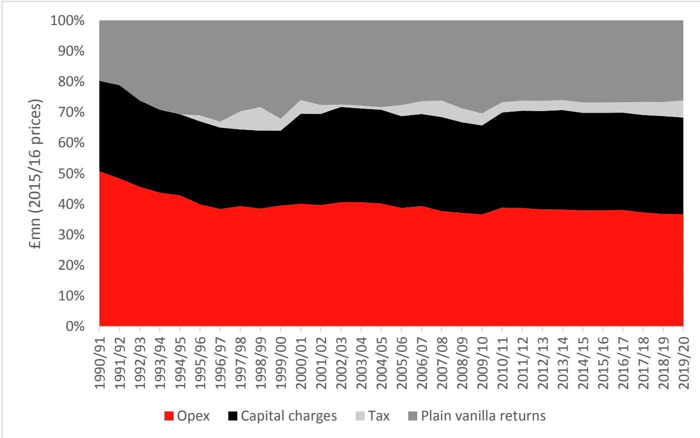
Overall we estimate UK water bills rising 50% in the coming decade to reach c.£600/household.

**Fig 51 Overall total revenues have risen slightly in real terms**



Source: Macquarie Research, April 2017

**Fig 52 And opex costs make up increasingly less of the bill versus capital costs**



Source: Macquarie Research, April 2017

**Fig 53 We estimate that total costs will rise at 3.5% per annum, or 0.5% real**

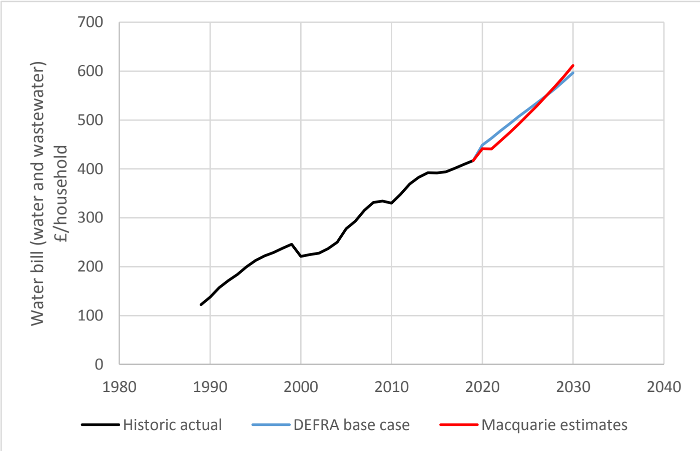
**Fig 55 We expect to see bills rise in real and nominal terms to reach over £600/household by end of next decade**



Source: Ofwat, Macquarie Research, April 2017

## We see Ofwat increasingly adopting innovation to minimise these potential bill rises

There have been broadly five major policy publications in the past seven years that are driving the industry towards meeting this brave new water world. A slightly more detailed explanation of the content within these reports is in the Appendices.

This research focuses on the impact of household retail competition in the sector, but the context in the content of the other associated documents is important to understand why Ofwat and the water sector are moving towards innovation and competition as a solution to meet industry challenges.

- Walker Report, 2009 (DEFRA)
- Cave Report, 2009 (DEFRA)
- The Water White Paper ‘Water for Life’, 2011 (DEFRA)
- The Water Act, 2014 (DEFRA)
- Water 2020, 2015-16 (Ofwat)
- Household Water Competition review, 2016 (Ofwat)

*Through all these documents we see a philosophy that the water industry should embrace innovation, using market forces, rather than rely on bilateral regulatory negotiations between Ofwat and companies.*

We explore these themes in considerable detail in the following notes:

1) Water 2020: Trust in Water February 2016
2) The Big Splash: Maximum hydration for your portfolio September 2016
3) UK utilities: The re-inflation trade, what public equity doesn’t get, private equity does January 2017

The current UK water industry has split the water sector into four components. All the existing RCV is in the wholesale business, which is remunerated with a return on regulated WACC methodology, whilst retail is remunerated based on a revenue margin and average cost-to-serve methodology.

**Wholesale**

⇒ Water wholesale

⇒ Wastewater wholesale

**Retail**

⇒ Household retail

⇒ Non-household retail

In the current review period (April 2015-March 2020) all four components started fully regulated, with competition being introduced in non-household retail in April 2017. The remaining three components will still be fully regulated by the end of the current review period.

The following table summarises the main components of the wholesale and retail regulation in the water sector, for both the enhanced submission as well as the standard Final Determination. The only material difference between the enhanced review and Final Determination was the allowed cost of debt, which fell from 2.75% real in the Draft determination to 2.6% in the Final Determination.

**Fig 56 Summary of the UK water Enhanced and Final Determination allowed returns and margins**

| | Ofwat enhanced Determination (PNN) | Ofwat Final Determination (SVT, UU) |
|---|---|---|
| **Period** | **April 2015 - March 2020** | **April 2015 - March 2020** |
| **Wholesale** | | |
| Regulator allowed gearing level | 62.5% | 62.5% |
| Cost of debt (pre-tax real) allowed by regulator | 2.75% | 2.6% |
| Cost of equity (post-tax real) allowed by regulator | 5.3% | 5.3% |
| Wholesale plain vanilla return | 3.7% | 3.6% |
| **Retail** | | |
| Household retail margin | 1.0% | 1.0% |
| Non-household margin (until 2017) | 2.5% | 2.5% |

Source: Ofwat, Macquarie Research, December 2014

On top of the ‘baseline’ ROREs, there are a number of incentives that can change the achieved ROREs significantly. These are broadly:

- Totex outperformance (efficiency savings ahead of regulatory targets in opex and capex)
- ODIs (Output delivery Incentives) which can provide a reward or penalty versus a number of qualitative and quantitative measures.
- Financing outperformance, coming from an achieved cost of debt differing from that set by Ofwat.
- SIM (Service Incentive Mechanisms), a retail only incentive and a subset of ODIs.

# China: Rising capex to tackle water pollution issues

## Strong capex underpinned by the State's 13-FYP surrounding pollution curing

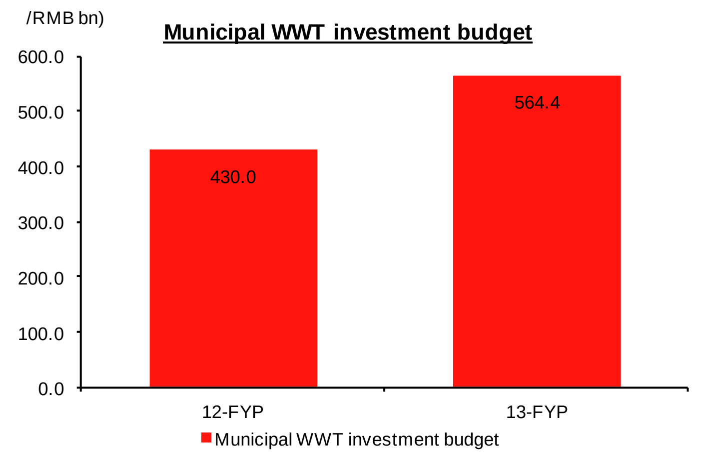
### Fig 57 Investment budget on municipal WWT (13-FYP vs. 12-FYP)

| (RMB mn) | 12-FYP | 13-FYP | Chg % |
|---|---|---|---|
| Sewage pipeline and upgrade - (a) | 244.3 | 262.8 | 7.6% |
| Rain water pipeline and upgrade - (b) | | 50.1 | |
| New WWT facilities - (c) | 104.0 | 150.6 | 44.8% |
| WWT facilities upgrade - (d) | 13.7 | 43.2 | 215.3% |
| Sludge treatment facilities - (e) | 34.7 | 29.4 | -15.3% |
| Recycled-water facilities - (f) | 30.4 | 15.8 | -48.0% |
| Rain water treatment facilities - (g) | | 8.1 | |
| Monitoring / others | 2.9 | 4.4 | 51.7% |
| **Total** | **430.0** | **564.4** | **31.3%** |
| | | | |
| Addressable market size (13-FYP includes 100% of pipeline investment budget) | 182.8 | 560.0 | 206.3% |
| Addressable market size (13-FYP includes 50% of pipeline investment budget) | 182.8 | 403.6 | *120.8%* |

Source: State Council, Macquarie Research, April 2017 Note: Scenario: 12-FYP includes (c) to (f); 13-FYP includes (a) to (g) with 50% to 100% applied to (a) to (b)

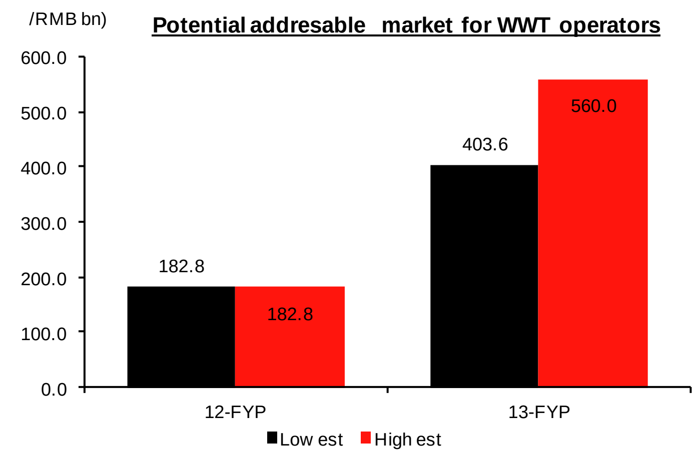
The total investment budgeted for municipal wastewater treatment during 13-FYP (Five-Year-Plan, 16-20) is to rise by 31% to RMB564bn than that of 12-FYP. The Chinese government has recently introduced the concept of plants + pipeline bundling. In the past, privatization opportunities for wastewater treatment (WWT) were largely surrounding the plants' assets. In the latest 13-FYP municipal wastewater treatment development plan, State Council has introduced the concept of pipeline + plants' bundling. Conceptually, BOT investment for a WWT project will become larger now, given operators will also need to invest in pipeline as well. If we were to assume a similar return as before, the addressable market size for China's wastewater treatment operators increased. If we were to run a scenario analysis that addressable market size during 13-FYP includes 50 to 100% of the sewage pipeline and rain water pipeline, the addressable market for WWT operators would increase by 121 to 206%.

### Fig 58 Municipal WWT investment budget



Source: State Council, Macquarie Research, April 2017

### Fig 59 Addressable market size est. for operators



Source: State Council, Macquarie Research, April 2017 Note: Est. for both 12-FYP and 13-FYP has ignored the privatization of existing projects or M&A in the consolidating market

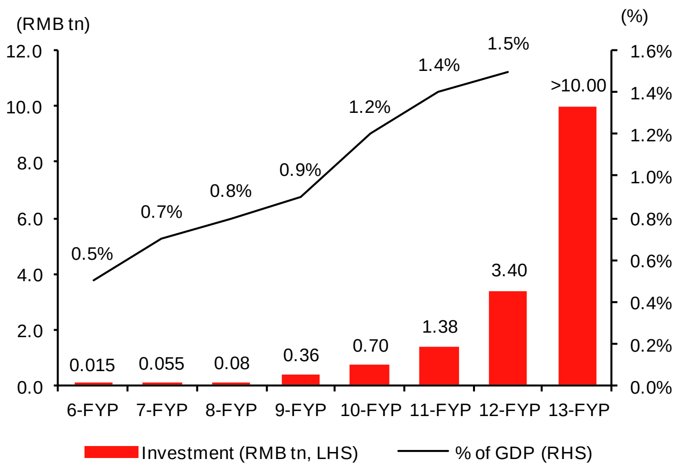
## River clean-up projects (aka environmental renovation) in the form of PPP are additional opportunities

In addition to further pushing urban municipal WWT by developing more WWT projects, the Chinese government has introduced the new focus on 'black and odorous water body' cleansing, environmental renovation and sponge city development during the 13-FYP. This type of water cleansing project will involve landscaping, pipeline building, construction works and misc. infrastructures building, which will most likely adopt a public-private-partnership (PPP) model.

In a nutshell, (i) with the expanding scope from municipal wastewater treatment to environmental cleansing, which requires more capex than before, (ii) the State Council's promotion on PPP and (iii) the industry's early adoption of PPP format (i.e. BOT wastewater treatment plan), we see the current PPP development as a natural extension to the water & environmental sector.

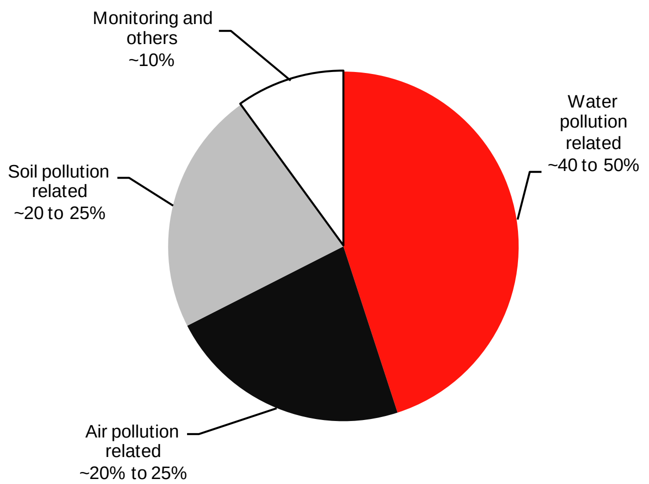
We think that water pollution-related investment (incl. renovation, landscaping and other misc. water related infrastructure) can go up to RMB4 to 5tn during the 13-FYP.

**Fig 60 China's environmental-related investment est.**



Source: CAEP, Macquarie Research, September 2016

**Fig 61 Estimated 13-FYP env. investment breakdown**

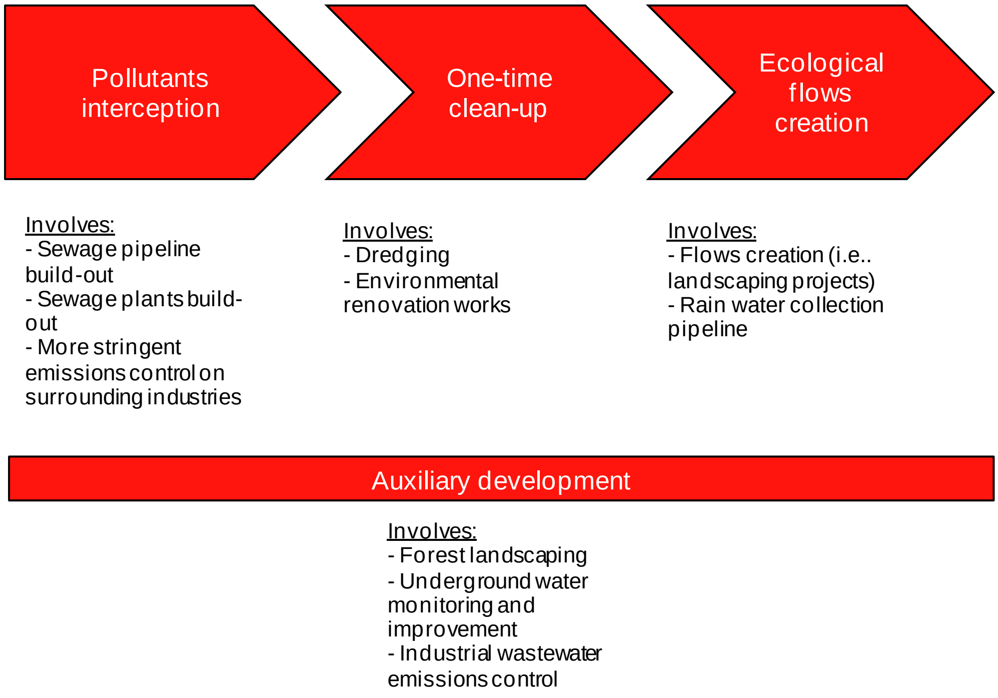


Source: CAEP, Macquarie Research, September 2016

### What is 'black and odorous water'?

Black and odorous water is a term coined by recent policy announcements such as the Water Action Plan. It refers to a water of body (incl. rivers, lakes or stale water body) that is at a distressed pollution level which has the characteristic of being black in color and has an offensive odor. We think that the situation of 'black and odorous water' can be proxied by the water quality of China's surface water. As of week 1 of 2016, ~22% of China's surface water is regarded Grade 4 of worse, which is not suitable for human consumption. Indeed, we see environmental cleansing, sponge city development and 'black and odorous water cleansing' are at times bundled together, as illustrated on the actual work that needs to be performed in the diagram below.

**Fig 62 Black and odorous water body cleansing**



Source: Macquarie Research, September 2016

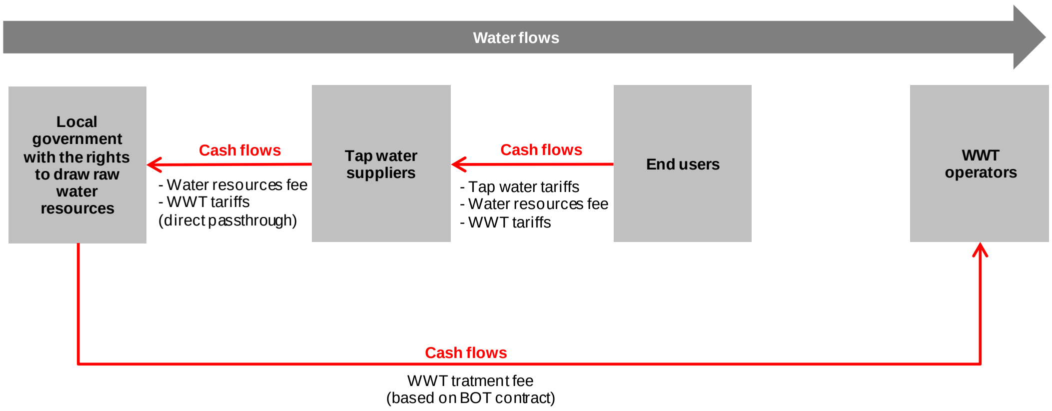
### Unique challenges and risks, we pick quality plays

We reckon water & environment projects account for 15% of the MOF's PPP projects database, making significant PPP opportunities in the segment. However, these opportunities are not without risk - in particular, execution, receivables collection, project selection and financing.

We think selecting a company that can mitigate project selection, execution and collection risks is important. Due to heavy capex and long payback periods, access to competitive finance cost is important if the co. invests using its own capital. In addition, the ability to attract LPs (limited partner) to go asset-light can enhance ROE. In this space, BEW (371 HK) is our top pick.

## China water: cash flows vs. water flows

**Fig 63 China water: cash flows vs. water flows**



Source: Macquarie Research, April 2017

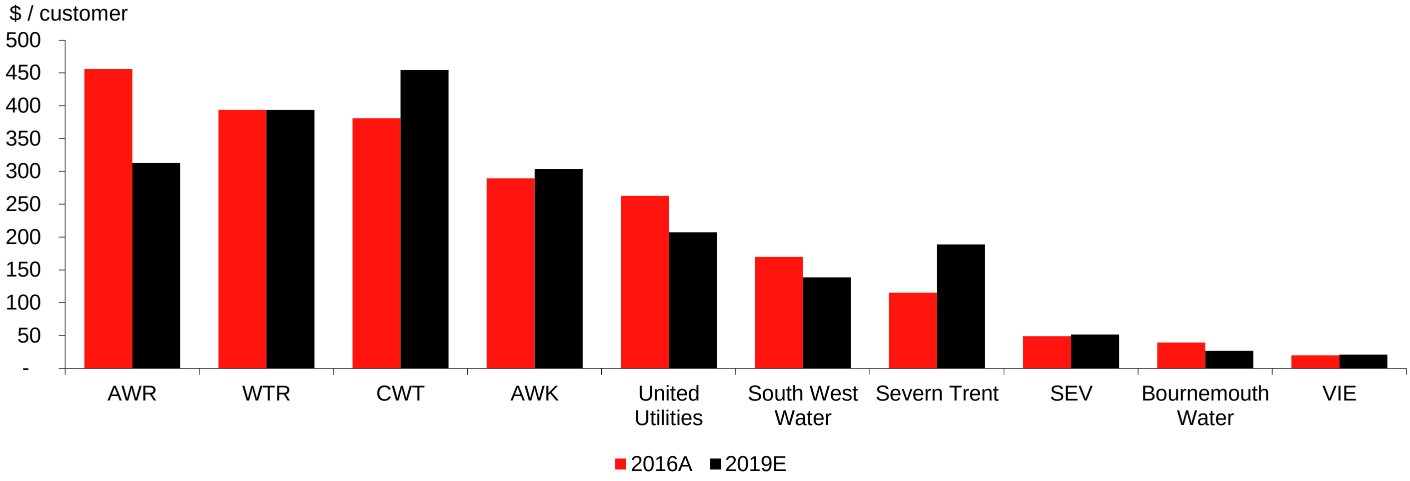
Most of HK-listed Chinese water companies are involved in municipal WWT (wastewater treatment) projects based on a BOT (build-operate-transfer) business model. The market opportunity is correlated with investment demand (capex). While a local government is the sole customer for a WWT operator, we do not see that WWT operators are relying on government subsidies because costs associated with WWT are largely passed through to end users. In China, end users will pay water fees for the amount of water consumed to tap water suppliers. The end-user water fees consist of tap water tariffs, water resource fees and WWT tariffs. Tap water suppliers will pass through the water resources fee portions and WWT tariffs to the local government and the local government will then leverage the WWT tariffs collected to make payment to WWT operators.

In the case of GDI (270 HK), the major business is water sales in HK. This is a unique project where GDI has the monopoly in selling raw water to the HK government at a fixed price. The contract is negotiated every three years. While there was no clear regulatory framework for downside protection, GDI has been able to raise its tariff since 2009, primarily due to its monopolistic position. The HK government subsidizes water for HK residents as it has no other alternatives to acquire fresh water resources.

# France: Suez is uniquely positioned to profit from US water investment

As stated before, a comparison of capex levels across the water companies we cover highlights the very low capex per customer for the French groups Suez and Veolia. This is not surprising to us as the French water industry works under a concession model with Suez and Veolia not owning the water network assets.

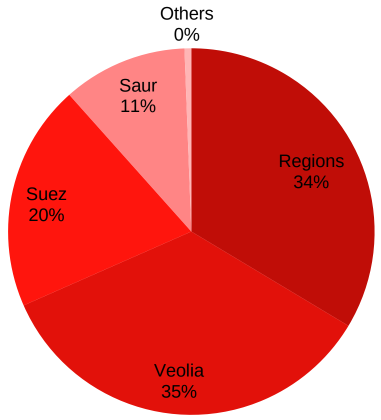
**Fig 64 Capex for Suez and Veolia relating to French water is very low due to concession operating model**



Source: Company data, Macquarie Research, April 2017

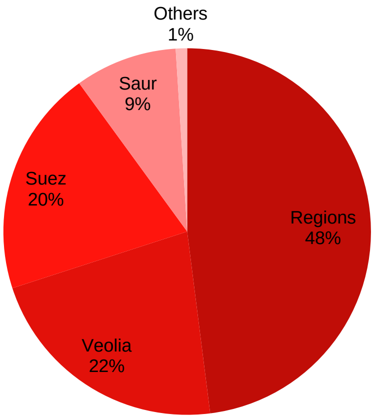
It is important to highlight that both Veolia and Suez are the dominant providers of drinking water and wastewater treatment in France. Both companies have an over 55% market share in drinking water and around 42% market share in wastewater treatment. The remainder of the French water market is mainly comprised by small municipal companies that provide the local drinking water and wastewater treatment services.

**Fig 65 Drinking water France market share**



Source: Veolia, December 2015

**Fig 66 Wastewater treatment France market share**



Source: Veolia, December 2015

Nevertheless, we see a significant positive read-through for Suez relating to the detailed water capex analysis of this report, mainly relating to the US. Our global water report highlights that according to the American Society of Civil Engineers the U.S. needs to invest a minimum of US$123bn annually (in 2016 dollars) in its water infrastructure over the next decade to maintain reliable clean water service. This is more than triple the ~US$40bn, which was invested by federal, state and municipal water utilities in 2016. This significant water-related replacement capex is driven by the 75-100 year lifespan and of the water mains and other equipment installed in US water systems over the last century.

We see Suez as a key beneficiary of the big expected uplift in future US water investment first through the purchase of GE Water and second through its ownership of the #3 regulated US water utility United Water. We are therefore reiterating our Outperform rating with an unchanged €19.0 price target.

## GE Water acquisition puts Suez into a unique position to profit from a big uplift in future US water capex

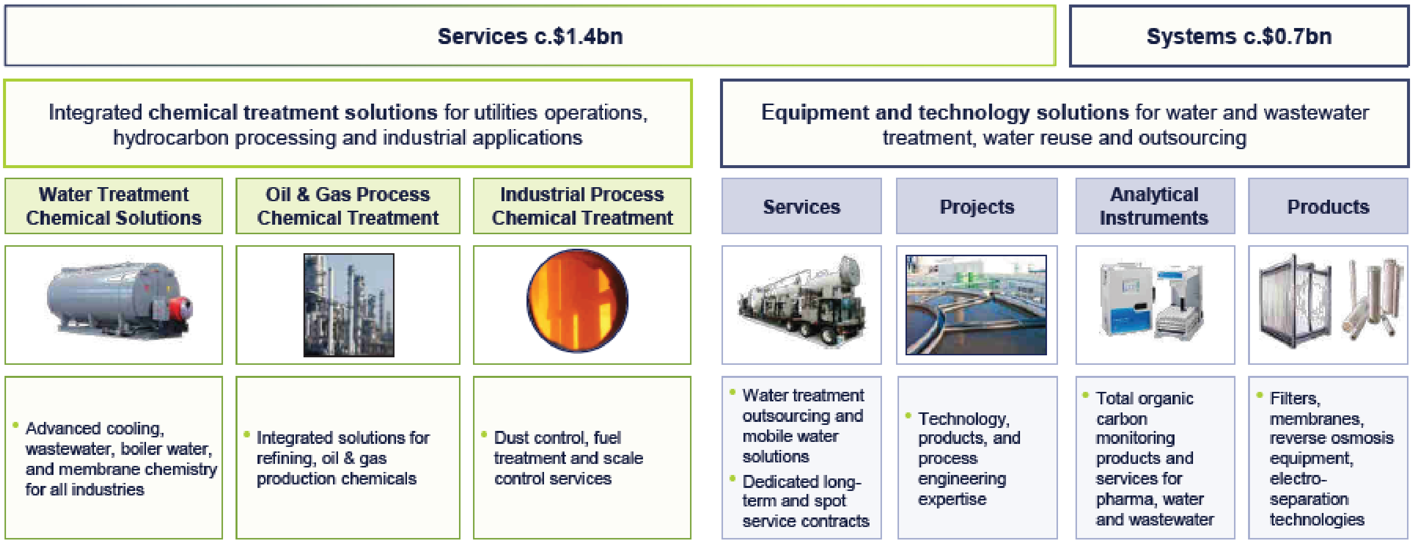
Suez announced on 8th March 2017 that it will purchase GE Water for ~€3.2bn (~$3.4bn) in a 70%/30% transaction with Caisse de dépôt et placement du Québec ("CDPQ"). This transaction will initially be financed by a bridge loan, which will be refinanced through a €0.75bn capital increase of Suez (existing shareholders will take up >€0.3bn), €0.7bn of equity provided by CDPQ, ~€0.6bn of hybrid debt and ~€1.1bn of senior debt of Suez (€1.2bn was raised on 28th March). The transaction should close in 3Q17.

This is a transformative transaction for Suez allowing it to become a key player in industrial water (GE Water 2016 services revenue ~$1.4bn and systems ~$0.7bn) building a dominant presence globally (half of revenues in the US and half of revenues outside US). We view this transaction positively driven by the expected ~5% revenue growth p.a. for the global industrial water market until 2020. Our positive view is reinforced by our analysis in this global water report showing the big required uplift in future US water capex. It is also important to highlight that we view the €65m p.a. target for EBITDA cost synergies as achievable for Suez. We have reflected the GE Water transaction in our financial forecasts and arrive at the targeted double-digit EPS accretion for Suez by 2019. Despite the deal looking pricey in the near term (2016 EV/EBITDA transaction multiple at 10.0x incl. cost synergies), we see a positive valuation uplift of ~€600m for Suez (~€1.0/share).

There has been continued market scepticism over the merits of Suez's $3.4bn acquisition of GE Water. This is evidenced by Suez shares underperforming the European utility sector by ~5% since the first press speculation emerged mid-February of a possible bidding interest in the GE Water assets. Based on our analysis, there is a significant need for investment in US water infrastructure over the next decades.

In our view Suez through GE Water is uniquely set up to profit from this development based on its unparalleled industrial water solutions & services platform and leading presence across the entire industrial water value chain, particularly in the US. This particularly relates to the systems' offering of Suez, which concentrates on equipment and technology solutions for water and wastewater treatment, outsourcing and water reuse. Around 15% of GE Water's 2016 revenue is with municipal clients. This masks the significant exposure of Suez to US local authorities' clients; after closing of the GE Water transaction Suez will have US revenues of ~€2.1bn (half with industrials, half with local authorities including regulated assets). We therefore believe that the revenue growth of the US operations GE Water under Suez ownership could be higher than in the past and potentially beat the mid-single digit growth target.

**Fig 67 GE Water offers broad industrial water solutions and services platform**



Source: Suez, March 2017

## RAB of United Water should continue to grow strongly

In our view the market underappreciates the significant regulated exposure of Suez as around 22% of its 2017E group EBITDA will come from its United Water business (#3 player in the US regulated water market; wholly owned) and controlled Aguas Andinas (largest regulated water company in Chile, direct Suez economic stake ~28.4%). United Water is the holding company for 16 regulated water utilities in the US, with a strong presence in New Jersey, New York, Pennsylvania, Delaware, Rhode Island and Idaho. We particularly view Suez's exposure to the regulated US water industry positively based on Macquarie's house view.

**Fig 68 Significant regulated EBITDA exposure of Suez**

| | 2015E | 2016E | 2017E | 2018E | 2019E | 2020E |
|---|---|---|---|---|---|---|
| United Water | 215 | 221 | 228 | 235 | 242 | 249 |
| Aguas Andinas | 361 | 382 | 394 | 405 | 418 | 430 |
| Total | 576 | 604 | 622 | 640 | 660 | 679 |
| Suez group EBITDA | 2,751 | 2,651 | 2,795 | 3,135 | 3,297 | 3,439 |
| % of group EBITDA | 20.9% | 22.8% | 22.2% | 20.4% | 20.0% | 19.8% |

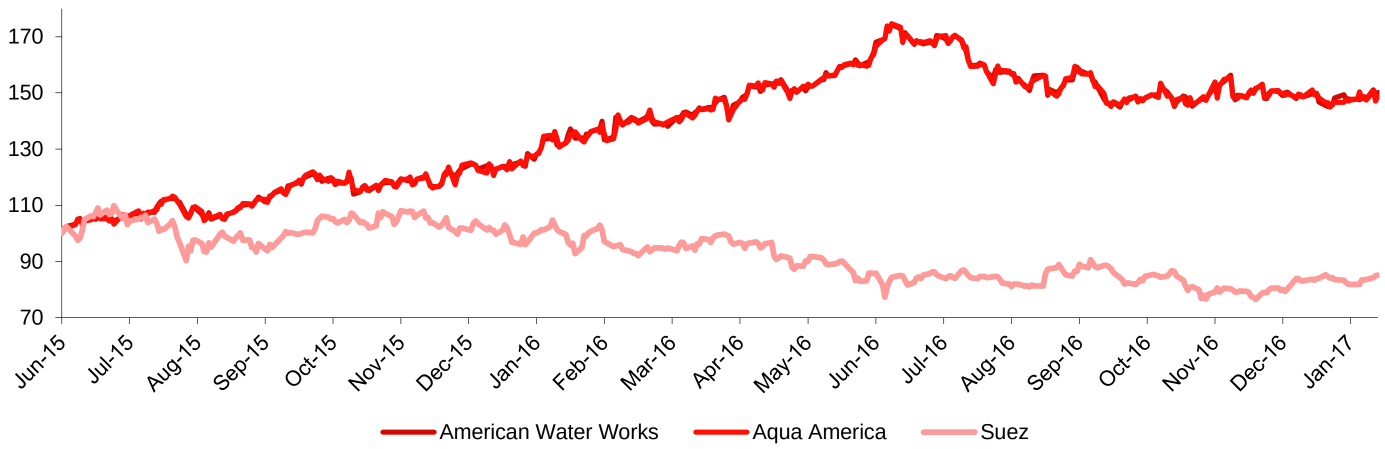
Source: Company data, Macquarie Research, April 2017

As argued in our sector report there is plenty of upside to US water utility investments (and thus water earnings) despite ongoing water usage efficiencies. The US water utility sector is the most capital-intensive of the US utility industries. The average water pipe replacement cycle in the US is ~240 years (with wooden water pipes still being used) and even investor-owned water utilities replace their pipes every ~150 years vs. their 100-year depreciation schedules. Our global water report highlights the potential future tripling of annual capex levels for US water utilities from the 2016 level. This supports the ~5.0% annual RAB growth we see for United Water over 2016A-20E, which has been an important part of our Bull case.

***Share price rally of regulated US peers should have had a positive impact on Suez shares***

There has been a significant recent rally in the share prices of the largest and second-largest listed regulated US water utilities. We believe this increase is mainly a result of the market appreciating their higher quality, defensiveness and future RAB growth. Although United Water only accounts for almost 11% of Suez's EV, we believe that the current share price ignores the recent significant re-rating we have seen for US regulated water utilities. Even though Suez owns the third-largest company in the regulated US water industry, its share price has declined by ~15% since the end of 1H15 vs. the around 50% average increase for the two largest peers. We see this underperformance as unjustified.

**Fig 69 Evolution of Suez share price vs American Water Works and Aqua America (30 Jun 2015 = 100)**

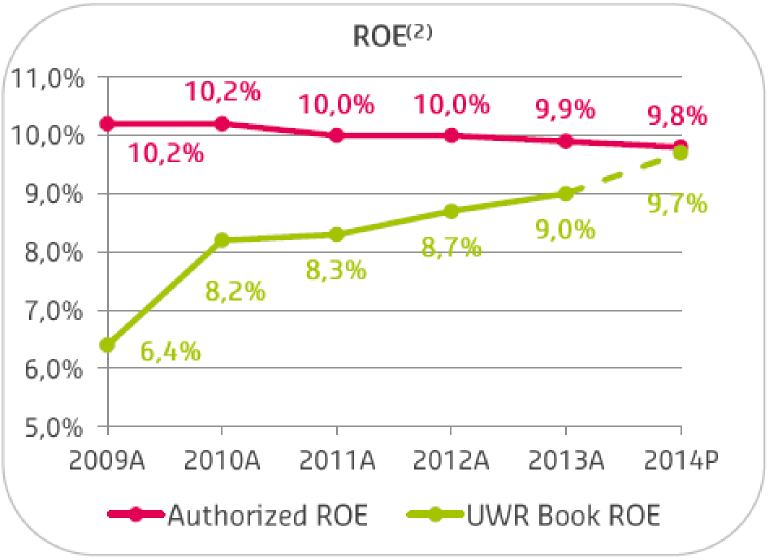


Source: Bloomberg, Macquarie Research, April 2017

***United Water ROE is almost 10%, which is very good***

Therefore, there is a significant positive read-through for the third-largest regulated US water company, United Water owned by Suez. In our view the present Suez share price does not reflect the recent re-rating of American Water Works and Aqua America . Based on Suez commentary at the education day on its regulated businesses on 15th Dec 2014 the 2014E ROE for United Water is ~9.7%. This is a very good ROE and based on United Water having a similar strong presence in Northeastern US, like American Water Works and Aqua America, we see a similarly large premium to the Rate Base as justified.

**Fig 70 ROE evolution for United Water over 2009-14**



Source: Suez, December 2014. (2) ROE normalized for leverage (55/45 debt-equity ratio).

A major factor behind our €19.0 price target for Suez is our ~€3.3bn EV valuation of United Water, which accounts for almost 30% of our equity value. Our valuation of United Water is based on using an 80% premium to the projected 2017E rate base, which is still almost 14 percentage points below the ~94% average of the peer group. As stated before, we do not see the around ~15% share price decline of Suez since the end of 1H15 as justified compared to the around 50% rally for the two largest regulated US water companies.

## Size matters for municipal M&A

### Event

- There should be plenty of municipal M&A targets for all investor-owned water utilities given how highly fragmented and underinvested the municipal water sector is. Yet, it's tough to deny AWK's competitive edge in municipal M&A given its unmatched access to cheap financing (~US$14bn market cap), the scale of regulated operations and large presence in PA/NJ, where the M&A activity is concentrated, and best in class operational and management practices.

### Impact

- **Municipal M&A is gaining momentum:** AWK remains upbeat about the recent pickup in acquisitions of municipal (and private) water and wastewater systems. The company has just closed acquisitions of two privately held water systems, Shorelands Water Company in NJ (11,000 accounts) and Meadowbrook Water Company in CA (1,600 accounts), and should close on a pending acquisition of a wastewater system in McKeesport, PA (22,000 accounts) in 2H17. Though AWK has a list of targeted municipal systems covering ~145,000 accounts, it's difficult for us to assess how many of the targets will be acquired by AWK, how soon such deals would close and how accretive such transactions should be. There is no rule of thumb on the incremental earnings power per each new account; it all depends on the terms of the acquisitions and the level of capex these systems require. AWK has not raised its annual 1-2% EPS growth target associated with municipal M&A; to put that in perspective, AWK currently serves ~3.3m customer accounts.
- **Cost efficiencies:** We have attempted to benchmark US, UK, French and Chinese water utilities based on their regulated O&M expenses/customer, regulated capex/customer, and customers/employee. AWK's operating costs look largely in line with those of its UK peers, though AWK's headcount (even when we exclude ~550 employees of market-based businesses) looks relatively high vs its customer base. The incremental cost efficiencies could translate into more capex and thus higher earnings growth; AWK remains focused on limiting its annual water bill increases for its existing customer base to ~2.5% (outside of CA). The faster pace of growth in water bills could be justified by improving macroeconomic conditions and the preference of AWK's state utility regulators for a faster pace of upgrades for AWK's water systems.

### Earnings and target price revision

- We've marginally lowered our '19 EPS to US$3.55 from US$3.57 due to tweaks to market-based earnings projections. We see some upside to our regulated earnings for AWK in 2019 (and beyond) stemming from already announced municipal acquisitions, but we struggle with quantifying the earnings uplift. We are raising our TP to US$84 (from US$80) in recognition of this earnings upside from higher same-system or M&A-driven capex.

### Price catalyst

- 12-month price target: US$84.00 based on a PER methodology.
- Catalyst: Updates on municipal acquisitions.

### Action and recommendation

- We reiterate our OP rating.

## Fig 1 AWK: EPS breakdown (US$)

# Macquarie Quant View

The quant model currently holds a marginally positive view on American Water Works. The strongest style exposure is Price Momentum, indicating this stock has had strong medium to long term returns which often persist into the future. The weakest style exposure is Profitability, indicating this stock is not efficiently converting investments to earnings; proxied by ratios like ROE or ROA.

## Lessons learned

### Event

- It's not easy for us to get constructive on WTR. Its earnings growth has been lacklustre, the company is heading into a major rate review in PA, and management keeps talking up the possibility of corporate M&A in the gas utility sector, which undermines the public confidence in growth prospects for the water sector. The significant underperformance of the stock against its US water peers over the last 12 months should have sent a strong message to WTR's management on gas M&A aspirations, and the company will be filing a rate case in PA voluntarily, which makes us hope for a settlement. Still, we expect WTR's EPS growth to trail its rate base growth at least until '20. Therefore we reiterate N.

### Impact

- **WTR's M&A strategy has been puzzling:** As the second-largest publicly traded water utility, WTR seems well positioned to benefit from privatization of the highly fragmented municipal water sector. In '17, WTR expects to close four pending municipal system deals for US$114m in total vs just US$22m in similar transactions completed in '16. We recognize, however, that we may need to wait a couple of years to see any earnings accretion on the back of these muni deals. Management is talking up the level of activity in the municipal space, and yet it has not given up on gas M&A. To us, gas and water don't mix.
- **PA regulatory filings and future earnings growth**: WTR's PA subsidiary, representing ~70% of WTR's consolidated rate base, plans to file for a higher capex rider (DSIC) in 2017 and a full-blown rate case in '18 with new (hopefully higher) rates becoming effective sometime in '19. Ahead of the PA filings, WTR has increased its capex spending to ~US$450m in '17 from ~US$370m, its previous capex run-rate, to bring its realized ROE in PA close to allowed levels. The goal of the PA rate case is to eventually align WTR's EPS growth with its 6-7% rate base growth, but it is likely to take some time. Also, WTR's water pipe replacement cycle seems the fastest among public water peers (less than 100 years vs 140 years for AWK) and as such we would not count on meaningfully higher capex for WTR's existing water systems.

### Earnings and target price revision

- We have marginally raised our '18 EPS to US$1.43 from US$1.42 to reflect some cost efficiencies. We have raised our TP to US$33 from US$32 as gas M&A prospects seem to have subsided and earnings could benefit from regulatory filings in PA as well as improving growth prospects from privatizations of municipal water systems.

### Price catalyst

- 12-month price target: US$33.00 based on a PER methodology.
- Catalyst: Announcements of additional municipal M&A, filing of rate applications in PA (DSIC and rate case).

### Action and recommendation

- We reiterate Neutral, but raise our TP to US$33 from US$32 as gas M&A prospects seem to have subsided.

# American States Water

## Regulatory hurdles but potential M&A

### Event

- More so than its relatively underinvested CA-peer, CWT, we see regulated municipal water and wastewater acquisitions as a likelier source of additional growth going forward. Admittedly, AWR remains at a competitive disadvantage in this regard to its two larger and more geographically diverse peers, AWK and WTR, which have operations in M&A-ripe NJ and PA. We expect to see more military bases awarded to AWR, but given the sporadic timing of those announcements, we are hopeful to hear of municipal acquisitions in the works. AWR's regulated water utility, GSWC, recently filed testimony for its 3-year '18-'20 cost of capital proceeding, and will soon file its four-year '18-'21 general rate case for BVES, its electric sub. We await the ORA testimony in GSWC's cost of capital proceeding, and expect it by late 2Q17. We reiterate our Neutral rating.

### Impact

- **Municipal acquisitions:** Unlike its larger peers in CA, AWR does not have any regulated operations outside of its home state. While this may make non-CA acquisitions less likely, management has expressed an interest in looking at regulated opportunities outside of the state. We acknowledge that AWR's operations on 10 military bases across the country do offer at least some local regulatory insights as well as positive regional PR.
- **Cost of capital proceeding:** GSWC, AWR's largest subsidiary, filed on April 3rd to commence its '18-'20 cost of capital proceedings. The utility asked for an 11.0% ROE and 57% equity ratio, vs its currently approved ROE of 9.43% with a 55% equity ratio. We expect strong pushback from the Office of Ratepayer Advocates (ORA), which opposed a joint attempt in Dec '16 by the four largest CA water IOUs to maintain the status quo for an additional year. GSWC's water operations make up ~94% of its non-administrative regulatory rate base. The next water GRC for '19-'21 is due to be filed by mid-'17.
- **Electric rate case:** We expect GSWC to soon file its anticipated four-year '18-'21 GRC for its Bear Valley Electric Service (BVES) subsidiary. BVES makes up ~6% of GSWC's non-administrative rate base. The electric utility currently has an allowed ROE of 9.95% in place until YE17.

### Earnings and target price revision

- No change to our EPS forecasts or '19 PE-based TP of US$43.

### Price catalyst

- 12-month price target: US$43.00 based on a PER methodology.
- Catalyst: Updates on Golden State Water's cost of capital proceeding; update on Bear Valley Electric's rate case; potential municipal acquisitions.

### Action and recommendation

- We reiterate our Neutral rating.

# Beijing Enterprises Water

## Quality play in China water space

### Event

- We think BEW will benefit from China's water clean-up development with projects likely in the form of PPP due to its previous track record of undertaking environmental renovation projects. In addition, its SOE background should help it to manage receivables collection risk in undertaking PPP projects. Together with a market leadership position, this should help BEW to develop PPP projects using an asset light strategy.

### Impact

- **Chifeng PPP fund is close to finalization** with major contracts signed. It has a size of RMB4bn. Management expects the fund to go off-balance-sheet. This is a milestone for BEW's asset-light strategy. While the 2nd PPP fund for the Beijing Tongzhou project is already underway, management shared that for this particular high-quality project, they will develop with or without the support of the PPP fund. For other PPP projects, BEW will employ the asset light strategy in partnering with the PPP fund.
- **Positive guidance for FY17**. During the recent analyst briefing, management guided towards bottom-line growth of 30% in 2017. A good amount of growth will be driven by environmental renovation construction and technical services, confirming our view that BEW will benefit form a pick-up in environmental renovation project activities in 2017. Project gains targeted are 3.0mn tons/day for traditional BOT water projects and gaining RMB30bn of PPP projects in 2017. While FY17 guidance on traditional BOT project gains is lower than FY16's gain (3.57mn tons/day + another 2.0mn tons/day embedded in Tongzhou PPP), management has a track record of providing conservative guidance at the beginning of the year and over-delivering.
- **Reputable name in the Chinese water space.** BEW is the largest WWT play by capacity in China. In addition, BEW is one of the few water plays that has a track record of undertaking environmental renovation projects. Such a track record should help it to gain projects and attract LPs (limited partners) to develop PPP projects using an asset light strategy.

### Earnings and target price revision

- No change.

### Price catalyst

- 12-month price target: HK$7.50 based on a DCF methodology.
- Catalyst: project wins, earnings growth, +ve development from PPP fund

### Action and recommendation

- Trading on a 14.9x FY17E PER vs. our core earnings growth est. of ~30% in 2017, we see BEW's valuation as attractive, considering its industry position and competitive advantages in the wastewater and water PPP space. Maintain OP.

# Macquarie Quant View

The quant model currently holds a neutral view on Beijing Enterprises Water Group. The strongest style exposure is Price Momentum, indicating this stock has had strong medium to long term returns which often persist into the future. The weakest style exposure is Quality, indicating this stock is likely to have a weaker and less stable underlying earnings stream.

# California Water Service Group

## A Cali pure play at any rate

### Event

- CWT's successful bid for Travis Air Force Base should see it make US$12.7m of initial capital improvements and ~US$52m in total over the life of the 50-year contract, beginning in 2018. The contract is unique in that the CPUC will regulate water rates and tariffs for the base as part of Cal Water's three-year rate case cycle. Although Army/Air Force contracts are awarded only intermittently, we are hopeful that CWT will take on more bases, especially because we already struggle with the high level of growth expectations which seem to be priced into the stock. Cal Water generates nearly all of CWT's earnings, and finalized its '16-'19 GRC in Dec '16. As a result, the current '18-'20 cost of capital proceeding will be particularly in focus for CWT. We expect a regulatory overhang in the stock at least until the ORA submits its proposed rate of return, and depending on the spread vs the company's request, that drag could continue until the CPUC staff weigh in. We continue to view CWT's valuation as stretched, even within the water group, but acknowledge that its clear capex-driven path to rate base growth will continue for the foreseeable future. We reiterate our Neutral rating.

### Impact

- **Victory declared:** On Mar 14th, CWT officially secured a 50-year contract to acquire the water distribution assets of Travis Air Force base and to provide the base with water utility service. Originally awarded in Sep '16, the bids were re-evaluated after another bidder filed a complaint. CWT was selected again by the Defense Logistics Agency in Feb '17, and no further protests were filed. This contract differs from those of other military bases in that it will be CPUC-regulated.
- **Cost of capital proceeding:** Cal Water, CWT's largest subsidiary, filed to commence its '18-'20 cost of capital proceedings on Apr 3rd. The utility asked for a ROE of 10.75%, vs its currently approved ROE of 9.43%, with an unchanged equity ratio of 53.4%. We expect strong pushback from the Office of Ratepayer Advocates (ORA), which opposed a joint attempt in Dec '16 by the four largest CA water IOUs to maintain the status quo for an additional year. Given Cal Water's significance to CWT (nearly all of its rate base), we expect the proceeding to be an overhang on the stock at least until the ORA specifies how much of a reduction it is looking for. This should come by late 2Q17, we believe.

### Earnings and target price revision

- No change to our EPS forecasts or '19E PE-based TP of US$32.

### Price catalyst

- 12-month price target: US$32.00 based on a PER methodology.
- Catalyst: 2Q17 ORA testimony in cost of capital proceeding; further clarity from CPUC on treatment of Travis Air Force Base.

### Action and recommendation

- We reiterate our Neutral rating.

## Slow and steady wins the race

### Event

- We maintain our OP rating on GDI (270 HK). With a strong balance sheet and cash flow generation from the HK water business, we think GDI can either get more value accretive projects or potentially lift its dividend payout ratio. In addition, we see upcoming HK water tariff negotiations at end-17 standing as potentially a positive catalyst.

### Impact

- **FY16 results:** Excl. one-off items such as FX and valuation gains, core earnings were HK$4,320mn, in-line with our/consensus of HK$4,460/4,500mn. Dongshen Water's PBT rose 4.4% YoY to HK$3,266mn and PBT for toll roads rose from FY15's HK$78mn to FY16's HK$366mn due to the first FY contribution. On the other hand, department store and hotel operations' PBT registered declines but the contribution of these 2 segments was small; this has a limited impact on GDI's overall earnings profile.
- **More projects or dividend raise?** As of end-16, GDI had a net cash position. Together with healthy cash flow generation from the HK water sales business and limited CAPEX commitment, we see room for GDI to further leverage its balance sheet to undertake new projects or to raise the dividend payout ratio. Indeed, GDI has lifted its payout ratio in the last few years.
- **HK tariff negotiations will happen at end-17.** Water sales to the HK government is a lump-sum payment contract and each contract term is good for 3 years. The negotiation for the 18-20 term should be finalized around end-17. Considering cost increases, negotiation power between Guangdong and HK, as well as alternatives for HK to secure safe drinking water resources, we expect a hike of 2.5% p.a. during the 18-20 term.

### Earnings and target price revision

- No change

### Price catalyst

- 12-month price target: HK$13.10 based on a Sum of Parts methodology.
- Catalyst: project wins and/or dividend payout ratio increase

### Action and recommendation

- Trading at a 14.8x FY17E PER against defensive growth. We see GDI's valuation as attractive. Maintain our OP.

# Macquarie Quant View

The quant model currently holds a marginally positive view on Guangdong Investment. The strongest style exposure is Profitability, indicating this stock is efficiently converting investments to earnings; proxied by ratios like ROE or ROA. The weakest style exposure is Earnings Momentum, indicating this stock has received earnings downgrades and is not well liked by sell side analysts.

# Pennon Group

## Highest dividend growth in sector

### Pennon Group own a best in class Water Company

South West Water provides the empirical evidence that being best in class provides superior returns. We estimate ROREs now peaking at c.15% in South West Water due to rising RPI expectations. Every 1% rise in RPI adds 2.2% to RORE.

We believe this underpins a 22% premium to underlying RAB. Pennon believe (with alarming accuracy) that they have a 94% probability of being in top quartile water at the end of this review. Some of this outperformance comes from the £27mn synergies with their acquisition of Bournemouth Water.

Pennon have also unwound their Peninsular off-balance sheet financial swap. Overall unwind cash cost is £35mn post-tax payable in June 2018. There has been a provision booked for £39.5mn which was recognised at the half-year results, but not put through the P&L. We have included an extra £35mn cash cost in our valuation.

### Viridor transformation nearly done

Viridor's exposure to landfill and recycling falls as the ERFs are ramped up. We see EBITDA from legacy business falling to £83.4mn by 2020 (from a £160mn peak in 2011/12). Viridor is still the UK's largest recycler processing 1.8mn tonnes per annum and it operates 97MW of landfill gas.

Conversely Viridor will have invested £1.7bn in ERFs (including JVs), operating 12 plants by 2020 (processing c.3mn tonnes of waste, or c.5% of all UK waste). These should provide an EBITDA (including IFRIC12 and proportional JV accounting) of c.£220mn by 2020. With 80% of gate fees contracted to municipalities for around 20 years with RPI indexed contracts, we see the risk profile of these assets as lower than market expectations.

A weak sterling makes waste export to European ERFs more expensive and Brexit/currency should increase demand for UK waste processing facilities.

### Valuation TP trimmed slightly to 940p/share

Pennon should be providing a 38.7p/share DPS in 2017/18e (4.4% yield) rising at RPI+4% until 2020. This is supported by rising EPS. We have trimmed our EPS forecasts for coming two years to c.43p/share, but are still 6% ahead of 2016/17e consensus and then we see a step up to c.51p and c.55p/share EPS in 2018/19e and 2019/20e. This increases dividend cover. There aren't too many utilities with c.10% EPS CAGR out to 2020.

Headline 2017/18e PE, of 20.3x, falls to just 14.0x on an economic basis once IFRS/regulatory accounting is taken into account.

We see net debt peak in March 2018, at £3.0bn, and thereafter cashflow to equity reaches c.£350mn per annum pre-dividends (10% cashflow yield), as capex in both SWW and Viridor falls and EBITDA rises. We see scrip no longer needed post 2018/19 and the £300mn hybrids due to be refinanced will be earnings accretive at current rates.

At consensus Viridor value, we see Pennon trading at a 30% premium to RAB (March 2018), falling to a 15.7% premium to RAB with our value of Viridor.

We would value Pennon at 1080p/share at a 40% premium to RAB valuation.

## Inside

# Pennon Group: compelling value

## Company profile

Pennon Group is a £3.6bn market cap company that has two major subsidiaries: South West Water and Viridor Waste.

- ⇒ South West Water is a water and waste-water company covering Devon and Cornwall in the UK. It has a March 2018e RAB of £3.25bn and has regulatory clarity out to 2020. Bournemouth Water is a water only company and has a March 2017e RAB of c.£150mn.
- ⇒ Pennon Water Services (PWS) is a non-household water retail JV company between South West Water, Bournemouth, Cambridge and South Staffs. It will be the 4th largest water retailer with 180,000 accounts.
- ⇒ Viridor Waste is one of the UK's largest waste companies. Its 2015/16 EBITDA was £116.5mn, coming from recycling, contracts, landfill and landfill gas. Viridor Waste is investing up to £1.5bn into a total of ten new Energy Recovery Facilities (ERF) plants. Eight plants are now operating as of March 2016.

# Highest dividend growth in sector

## We value Pennon at 940p/share: maintain Outperform rating

We have decreased our 2016/17e EPS to 43.1p/share due to a combination of higher profitability at South West Water, better recyclate prices offset by a higher depreciation and interest charge . We see consensus EPS at 42.0p/share for 2016/17e, and we are c.3% ahead of consensus.

**Fig 3 We have decreased our EPS forecasts slightly as RPI has increased**

## Macquarie Quant View

The quant model currently holds a reasonably negative view on Pennon Group. The strongest style exposure is Growth, indicating this stock has good historic and/or forecast growth. Growth metrics focus on both top and bottom line items. The weakest style exposure is Price Momentum, indicating this stock has had weak medium to long term returns which often persist into the future.

**331/432**

# Severn Trent

## Still our preferred water stock

### Severn Trent has highest RAB growth in sector

Severn Trent ticks the wish list of our preferred water stock for four reasons: i) strong RAB growth (25% rise 2015 to 2020e) ii) strong RORE performance (11-12%), iii) we see it maintaining outperformance in the next review and iv) the lowest water bills in the country (£329 in 2016/17 rising to £339 in 2017/18e).

We see RAB continuing to grow through to 2025 at a faster rate than the other water companies at 5% p.a. Severn Trent has one of the lowest RAB/MEA multiples and its central UK location has potential water trading asset build out.

### Sector leading RORE: peaking at 12.3% with high exposure to RPI

Severn Trent tops the list in ODIs, and we estimate it is a top quartile performer on meeting regulatory targets. Whilst Severn Trent is not top class in its cost of debt versus Pennon and United Utilities, it has high exposure to RPI. Every 1% change in RPI increases total return by 2% each year.

### We believe scope for increased dividend payment

The dividend yield is 3.4% for 2017/18e and is currently set to rise at least in line with RPI out to 2020e. We believe the dividend cut in 2015/16 was prudent based on EPS forecasts at the time: c.95p/share for 2016/17e. These EPS expectations have now risen to c.105p/share (Bloomberg consensus) and once the ODI in-period starts to come through (£18mn in 2017/18e) we could potentially see their ordinary dividend raised.

On top of this we see debt/RAB fall to c.59% in 2019/2020. Raising to the regulatory 62.5% leverage baseline would release a special of c.£400mn, or 170p/share. This is a c.8% special coming from off-balance sheet earnings, which if spread over the remaining three years increases dividend yield to c.6%.

### Valuation is low versus comps

Severn Trent should provide a total annual TSR of c.8.2% each year out to 2020e (using a RPI of 3%).

We have trimmed our 2016/17e and 2017/18e (see Fig 3) to take into account higher inflation, leading to higher financing costs as well as increased set-up costs for retail competition.

PE at 22.5x (2017/18e) looks optically high. However adjusting for IFRS/Regulatory accounting drops this PE to a low 14.0x.

A slightly higher pension liability leads to a marginally lower valuation of 2570p/share (from 2660p/share).

We expect to see a strategy develop for their retail JV (Water Plus) through 2017 – where we see a potential mini-Centrica in the making (is the 'Plus' in the name a clue...?)

We estimate that SVT is trading at a 19% premium to March 2018e RAB, and this falls to a 13% premium to RAB in March 2020e. A 40% premium to RAB valuation, in line with recent M&A multiples would value SVT at 3180p/share.

## Inside

# Severn Trent

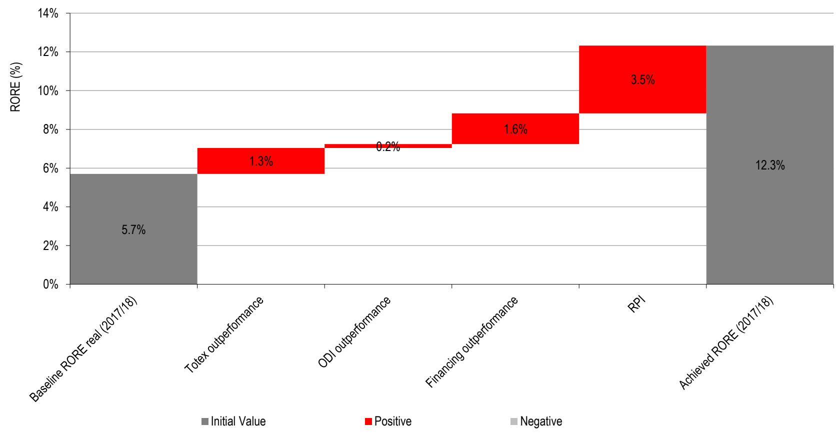
## Still our preferred water company

Severn Trent is a water and wastewater company operating in central England and Wales. It is the third largest water company in the UK with an RCV of c.£8.8bn and 4.3mn properties served.

Its network business is regulated by Ofwat, and the current review runs to March 2020. Its non-household retail business has been folded into a JV with United Utilities and its household retail business is regulated with a 1% margin.

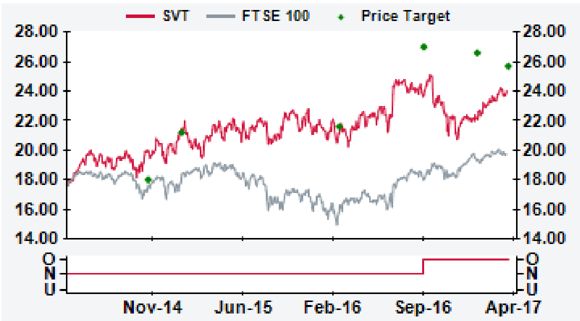
Severn Trent has a material renewable energy and services division.

**Fig 1 We see Severn Trent achieving a 12.3% RORE in 2017/18e**



Source: Ofwat, Macquarie Research estimates, April 2017

**Fig 2 SVT LN vs FTSE 100, & rec history**



Note: Recommendation timeline - if not a continuous line, then there was no Macquarie coverage at the time or there was an embargo period.

## Macquarie Quant View

The quant model currently holds a reasonably negative view on Severn Trent. The strongest style exposure is Profitability, indicating this stock is efficiently converting investments to earnings; proxied by ratios like ROE or ROA. The weakest style exposure is Earnings Momentum, indicating this stock has received earnings downgrades and is not well liked by sell side analysts.

# SUEZ

## US growth opportunity

### Event

- Suez is still our preferred French water & waste company. Our global water report highlights that the US needs to invest a minimum of US$123bn annually (in 2016 dollars) in its water infrastructure over the next decade. This is more than triple the ~US$40bn, which was invested in 2016. We see Suez as a key beneficiary of this development firstly through the purchase of GE Water and secondly through its ownership of the third largest regulated US water utility United Water. We are therefore reiterating our Outperform rating with an unchanged €19.0 price target.

### Impact

- There has been continued market scepticism over the merits of Suez's $3.4bn acquisition of GE Water (70%/30% transaction with CDPQ), which is expected to close in 3Q17. Based on our analysis there is a significant need for investment in US water infrastructure over the next decades. In our view Suez through GE Water is uniquely set up to profit from this development based on its unparalleled industrial water solutions & services platform and leading presence across the entire industrial water value chain, particularly in the US. Around 15% of GE Water's revenue is with municipal clients. This masks the significant exposure of Suez to US local authorities' clients; after closing of the GE Water transaction Suez will have US revenues of ~€2.1bn (half with industrials, half with local authorities including regulated assets).

### Earnings and target price revision

- No change

### Price catalyst

- 12-month price target: €19.00 based on a Sum of Parts methodology.
- Catalyst: 1Q17 results on 10th May 2017

### Action and recommendation

- Suez shares have underperformed the European utility sector by ~5% since the first press speculation emerged mid of February of a possible bidding interest in the GE Water assets. Based on the transaction being EPS accretive reaching 10% in 2019 and the ~€1.0/share value creation, we see this underperformance as unjustified. Although there might be concerns that Suez overpaid we believe the ultimate market assessment of the deal will be positive based on the historic importance of the EPS evolution for Suez.
- We see an attractive investment case in Suez (GE Water deal, cost cutting, regulated exposure, possible Engie buyout and waste recovery). Shares are trading at a 2018E PE of ~15x with a 2016E- 20E EPS CAGR of ~14% (of which ~50% is self-help), with a dividend yield of ~4.3% in 2017E reaching ~6% in 2020.

## Analysis

# United Utilities Group

## Downgrade to Neutral

### RORE to peak at 12%, but trading at our TP

Whilst United Utilities scores weakly on ODIs and totex outperformance, it has amongst the lowest cost of debt in UK water companies. Consequently we see its RORE peaking at c.12% in this review. This should underpin a 17.5% premium to RAB valuation in our view (March 2018.)

We see allowed 'baseline' RORE at 7.5% nominal (c.4.5% real, RPI-only, with RPI at 3%) in the next review, but that United Utilities should be able to Outperform by between 50-100bps in the medium term.

We value United Utilities at a 15% premium to RAB in 2020.

### United Utilities is in a weaker position than others

United Utilities has a number of factors which puts it in a structurally challenging environment. These are: i) it has the highest exposure to coming competition in both water resources and sludge trading, ii) high bad debt rates, with amongst the highest rates in the country, iii) lowest RAB growth and iv) a legacy of being a persistent poor performer which takes time to turn around (which we believe management are indeed now doing).

### Pension surplus a plus, but lowest +ve RPI exposure

United Utilities have put into place a pension contribution policy that now means a pension surplus, even as other pension shortfalls have increased.

United Utilities has the highest level of RPI indexed debt out of the listed water companies, and every 1% increase in RPI increases RORE by just 1.5%.

### Trading at our price target: downgrade to Neutral

- We estimate that United Utilities trades at a 15.2% premium to March 2018 RAB, in line with the sector, and at our valuation. We estimate at the current share price, the premium to RAB falls to 12% premium at March 2020.
- Total return is 6.9% annual TSR out to 2020, and we have a 7.7% 12-month TSR. Our new price target is 1040p/share and we therefore downgrade to Neutral.
- Our quant analysis shows a poor score for United Utilities where the stock is ranked in the bottom quartile (see back page).
- Headline 2017/18e PEs, at c.23.7x, look optically high. However once IFRS/regulatory accounting is taken into account and an economic earnings number calculated, PE falls to a reasonable 13.8x.
- Dividend yield, at 4.0% for 2017/18e is in line with the utility sector, however we estimate the debt/RAB position falls to 59% by 2020, and raising leverage to the regulatory 62.5% level would allow up to £400mn special dividend, or c. 7% distribution.
- A 40% premium to RAB would value United Utilities at 1400p/share, 40% upside from here.

## Inside

# United Utilities

## Company profile

United Utilities is a water and wastewater company operating in Northwest England and Wales. It is the second largest water company in the UK with a RCV of c.£11.0bn and 3.3mn properties served.

Its network business is regulated by Ofwat, and the current review runs to March 2020. Its non-household retail business has been folded into a JV with Severn Trent and its household retail business is regulated with a 1% margin.

**Fig 1 2017/18e RORE outperformance is driven by financing rather than totex**

11 April 2017
Macquarie Capital (Europe) Limited

# Veolia Environnement

## Too soon to buy

### Event

- Our view remains that although Veolia's valuation might seem attractive it is still too early to buy Veolia. FY16 results on 23 Feb supported our existing cautious view of the EPS evolution of the group (updated 2017-2019 outlook implied EPS consensus downside / management stepped away from 10% DPS CAGR target). Investors have become more concerned about future EPS evolution as evidenced by Veolia's ~12% share price decline since 1 Nov 2016 (~16% underperformance over the European utility sector).

### Impact

- We expect the market will pay close attention to the financial performance of Veolia at quarterly results in 2017 (1Q17 results on 4 May, 2Q17 on 31 Jul and 3Q17 on 7 Nov). We see the main market focus on the financial outturn compared to expectations. This includes further evidence of improved operational performance because of better macro conditions and cost cutting.

### Earnings and target price revision

- No change

### Price catalyst

- 12-month price target: €16.00 based on a Sum of Parts methodology.
- Catalyst: 1Q17 results on 4th May 2017

### Action and recommendation

- Our main concern on Veolia remains centred on the expected lack of near-term positive EPS revisions. We however disagree with the view of bears that Veolia is trading at overly high valuation metrics as the shares are currently below their historic average for PER both absolute & against the European Industrial Goods & Services sector (Veolia is ~35% below the long-term valuation average). In our view the five-year 2016-21E EPS CAGR of around 5% we project for Veolia is attractive as it is superior to many companies in its peer group. This strong EPS growth drives a ~5% dividend yield of Veolia from 2017E, which compares favourably.

## Analysis

### Fig 1 Veolia – Sum-of-the-parts valuation

## Important disclosures:

### Recommendation definitions

**Macquarie - Australia/New Zealand**
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

**Macquarie – Asia/Europe**
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

**Macquarie – South Africa**
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

**Macquarie - Canada**
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

**Macquarie - USA**
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

### Volatility index definition*

This is calculated from the volatility of historical price movements.

**Very high–highest risk** – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

**High** – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

**Medium** – stock should be expected to move up or down at least 30–40% in a year.

**Low–medium** – stock should be expected to move up or down at least 25–30% in a year.

**Low** – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

**Recommendations** – 12 months
**Note:** Quant recommendations may differ from Fundamental Analyst recommendations

### Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

**EPS** = adjusted net profit / efpowa*
**ROA** = adjusted ebit / average total assets
**ROA Banks/Insurance** = adjusted net profit /average total assets
**ROE** = adjusted net profit / average shareholders funds
**Gross cashflow** = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

### Recommendation proportions – For quarter ending 31 March 2017

| | AU/NZ | Asia | RSA | USA | CA | EUR | |
|---|---|---|---|---|---|---|---|
| Outperform | 47.26% | 55.50% | 38.46% | 45.47% | 59.09% | 48.21% | (for global coverage by Macquarie, 8.20% of stocks followed are investment banking clients) |
| Neutral | 38.01% | 29.31% | 42.86% | 48.77% | 37.88% | 36.79% | (for global coverage by Macquarie, 8.25% of stocks followed are investment banking clients) |
| Underperform | 14.73% | 15.19% | 18.68% | 5.76% | 3.03% | 15.00% | (for global coverage by Macquarie, 8.00% of stocks followed are investment banking clients) |

# Aqua America

## Slow growth for longer

### Event

- WTR's EPS growth of ~4% through at least 2019 continues to trail the ~7% rate base growth as the company gradually reduces its overearning (in PA) through accelerated investments into its rate base in the state. The reduction in the federal tax rate should weigh on WTR's earnings in PA until new rates are implemented in the state. We recognize PA's premium regulatory environment and WTR's strong regulatory relationships in the state, but years of overearning of the allowed ROE by WTR's PA subsidiary together with a highly aggressive capital plan could complicate the upcoming rate case, we believe. Even before the capex step up, WTR's rate base per customer for its PA utility is already close to 50% higher than that for AWK's subsidiary in the state. We reiterate our Neutral rating as we await the filing of the PA rate case.
- WTR hosted an analyst day and launched its 2018 EPS guidance range of US$1.37-1.42 below our/consensus expectations at that time of US$1.42/1.43.

### Impact

- **PA rate case:** The rate case, to be filed by early summer, will include two years of projections and given the sharp pick-up in spending (ahead of the rate case), WTR's PA subsidiary should start underearning its ROE come late 2019. We recognize PA's premium regulatory environment and WTR's strong regulatory relationships in the state, but years of overearning of the allowed ROE by WTR's PA subsidiary together with a highly aggressive capital plan could complicate the upcoming rate case, we believe. To us, WTR's PA water system is already seemingly overinvested vs. that of AWK, even before the capex step-up. (Fig. 1).
- **Municipal M&A:** WTR has six signed municipal acquisitions that should close in 2018, though we note that half of them are below the company's targeted customer threshold of 2,500-25,000 connections. That together with management's comments from the analyst day underscores the challenging environment for meaningful municipal acquisitions even in states seemingly open to muni deals, such as PA.

### Earnings and target price revision

- We have lowered our earnings estimates to reflect an increase in WTR's effective income tax rate given the lower reduction associated with the flow-through repair tax accounting. Our new '18/'19/'20 EPS estimates are US$1.39/1.46/1.56 down from US$1.42/1.51/1.59, respectively. We recognize some upside to our '20 estimate depending on the outcome of the PA rate case and cost trends, and most importantly, approved capex levels. We lower our TP to US$36 (23x '20 EPS) from US$38.50 (24.2x '20 EPS) in recognition of WTR's slow earnings growth through at least 2019.

### Price catalyst

- 12-month price target: US$36.00 based on a PER methodology.
- Catalyst: General rate case in PA, new municipal M&A.

### Action and recommendation

- We reiterate our Neutral rating.

**Please refer to page 4 for important disclosures and analyst certification, or on our website www.macquarie.com/research/disclosures.**

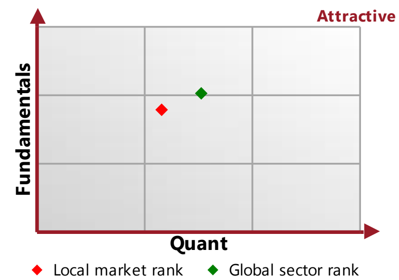
# Macquarie Quant View

The quant model currently holds a neutral view on Aqua America. The strongest style exposure is Price Momentum, indicating this stock has had strong medium to long term returns which often persist into the future. The weakest style exposure is Earnings Momentum, indicating this stock has received earnings downgrades and is not well liked by sell side analysts.

**215/436**

Global rank in Utilities

| | |
|---|---|
| **% of BUY recommendations** | 44% (4/9) |
| **Number of Price Target downgrades** | 4 |
| **Number of Price Target upgrades** | 0 |

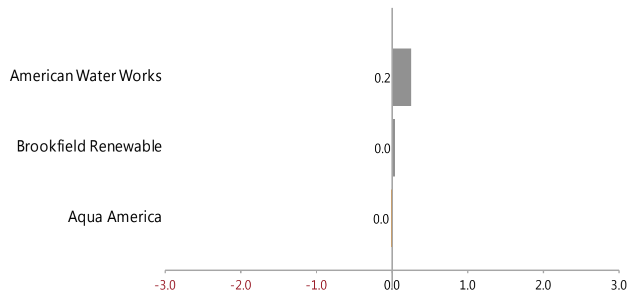


Displays where the company's ranked based on the fundamental consensus Price Target and Macquarie's Quantitative Alpha model.

Two rankings: Local market (United States) and Global sector (Utilities)

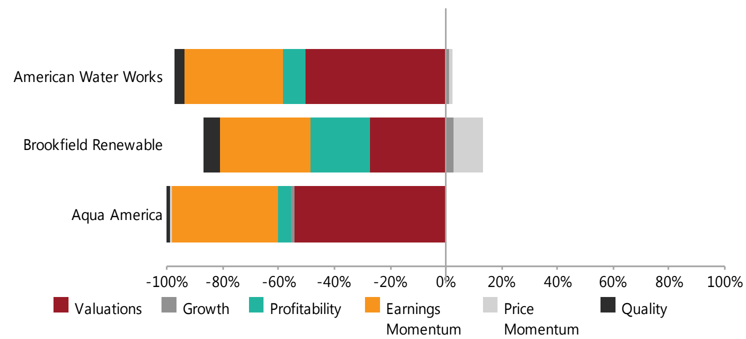
## Macquarie Alpha Model ranking

A list of comparable companies and their Macquarie Alpha model score (higher is better).



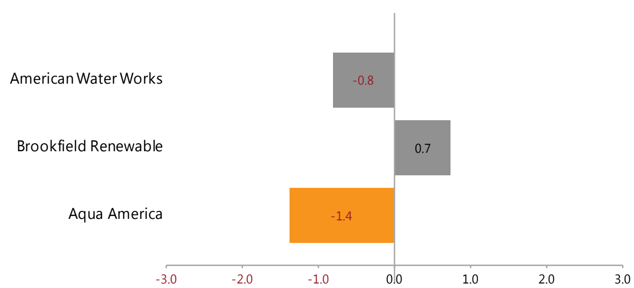
## Factors driving the Alpha Model

For the comparable firms this chart shows the key underlying styles and their contribution to the current overall Alpha score.



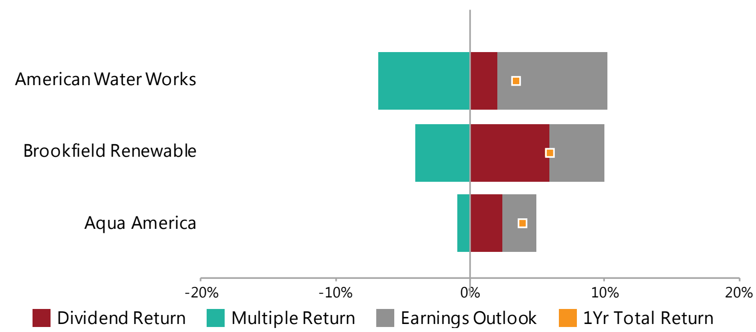
## Macquarie Earnings Sentiment Indicator

The Macquarie Sentiment Indicator is an enhanced earnings revisions signal that favours analysts who have more timely and higher conviction revisions. Current score shown below.



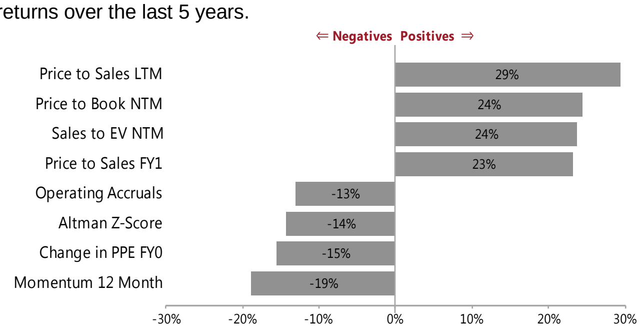
## Drivers of Stock Return

Breakdown of 1 year total return (local currency) into returns from dividends, changes in forward earnings estimates and the resulting change in earnings multiple.



## What drove this Company in the last 5 years

Which factor score has had the greatest correlation with the company's returns over the last 5 years.



## How it looks on the Alpha model

A more granular view of the underlying style scores that drive the alpha (higher is better) and the percentile rank relative to the sector and market.

## Important disclosures:

### Recommendation definitions

**Macquarie - Australia/New Zealand**
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

**Macquarie – Asia/Europe**
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

**Macquarie – South Africa**
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

**Macquarie - Canada**
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

**Macquarie - USA**
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

### Volatility index definition*

This is calculated from the volatility of historical price movements.

**Very high–highest risk** – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

**High** – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

**Medium** – stock should be expected to move up or down at least 30–40% in a year.

**Low–medium** – stock should be expected to move up or down at least 25–30% in a year.

**Low** – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

**Recommendations** – 12 months
**Note:** Quant recommendations may differ from Fundamental Analyst recommendations

### Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

**EPS** = adjusted net profit / efpowa*
**ROA** = adjusted ebit / average total assets
**ROA Banks/Insurance** = adjusted net profit /average total assets
**ROE** = adjusted net profit / average shareholders funds
**Gross cashflow** = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

### Recommendation proportions – For quarter ending 31 December 2017

# Water Utilities
## Corporate M&A dominates, but muni deals still scarce

### Key points

- Corporate M&A has been dominating the US water utilities sector recently.
- We think that the CWT-SJW merger of two water utilities with headquarters in the same CA city makes far more sense than the SJW-CWTS proposal.
- The appropriate size of the premium for large cap water utilities vs electric PEs remains hotly debated especially given the rise in interest rates.

### Event

- Between **AWK**'s heavily equitized Pivotal acquisition, an unprecedented proxy fight involving CWT, SJW (not covered), CWTS (not covered) and ES, and **WTR**'s renewing its interest in gas utilities, corporate M&A has been dominating the US water utilities sector recently. The valuation debate about the premium for water over electric utilities is raging, and sizable municipal water deals, like those announced by **AWK**, would be more helpful than corporate deals. Then again, we admit that it makes little economic sense to have multiple investor-owned water utilities per state, and overhead efficiencies achieved through such corporate mergers could allow for faster upgrades of underinvested water systems.
  AWK remains our top pick (and the only Outperform) among US water utilities.

### Impact

- We don't expect the companies to be successful at getting two-thirds of all of **CWTS**'s shareholders on board with the SJW-CWTS merger. We think that the CWT-SJW merger of two water utilities with headquarters in the same CA city and seemingly contiguous service territories makes far more sense than the SJW-CWTS proposal; SJW shareholders would benefit more from **CWT**'s US$68.25/sh cash offer price, and more cost synergies could be shared with customers from combining the two nearby CA utilities.
- **AWK**'s EPS CAGR to ~9% through 2022 now seems strongly supported by a combination of regulated utility growth, enhanced by muni M&A and growth in market-based operations, recently supported by the acquisition of Pivotal Home Services. While we expect that some were surprised by the Pivotal deal because until recently **AWK** has been strongly stating its commitment to water-only operations, given that the equity offering was heavily oversubscribed, the Pivotal deal must have been well received.
- We hope that the added collective banking experience resulting from **WTR**'s management changes will aid in municipal water M&A, and not corporate gas acquisitions, as we think the latter would dilute **WTR**'s PE multiple. Gas (and electric) utilities trade at a discount to water utilities (~34% on our 2020 estimates), and an acquisition of a gas distribution business could signal limited municipal water M&A opportunities.
- Despite tax reform, **AWR**'s A+ credit rating and stable outlook were affirmed by S&P in April, and **AWR** should escape equity issuances for the foreseeable future.

Source: Company data, Macquarie Capital (USA), May 2018

**Higher operating cash flows:** Some changes in the application of bonus depreciation coupled with more visibility into the application of the tax reform to AWK's rates and deferred tax balances by its state regulators and the recently announced Pivotal acquisition should result in stronger operating cash flows at AWK than management projected back in January. It's not yet clear if AWK can avoid a one-notch credit downgrade; we may need more updates from AWK's state regulators, but we are hopeful.

**Pivotal acquisition supports solid EPS CAGR:** AWK's EPS CAGR to ~9% through 2022 now seems strongly supported by a combination of regulated utility growth, enhanced by muni M&A and growth in market-based operations, recently supported by the acquisition of Pivotal Home Services, even if some jokingly compared the business to BestBuy's warranty offering. We expect that some were surprised by the Pivotal deal because until recently AWK has been strongly stating its commitment to water-only operations. For a company as large as AWK, investors typically expect nuances in strategy to be telegraphed in advance of any deal announcements. Additionally, the deal was heavily over equitized which may have been viewed as a way to shore up AWK's balance sheet while adhering to management's prior commitments not to issue equity on the back of the tax reform; Then again, we note that the equity offering was heavily oversubscribed so the Pivotal deal must have been well received after all. While the valuation debate vs. electrics is here to stay, to us AWK remains a core long-term holding in the US utilities industry.

**Catalysts:** More municipal water deals; more clarity on tax-related adjustments to AWK's regulated water rates.

**Estimate/TP changes:** Our estimates and TP remain unchanged, and we reiterate our Outperform rating. Few investors dispute AWK's premium growth prospects and their multi-decade longevity. Yet, the size of the PE premium for large cap water utilities vs. electric PEs remains hotly debated especially given the rise in interest rates. More sizeable (20,000 connections +) water and wastewater deals could support further PE premium expansion, we believe.

## California Water Service Group (CWT, US$39.15, N, TP US$38): SJW drama and upcoming GRC filing

**Fig 2 CWT: Abbreviated financials and trading multiples**

| | 2017 | 2018E | 2019E | 2020E | 2017-2020 CAGR |

Source: Company data, Macquarie Capital (USA), May 2018

**Closure of proposed SJW acquisition not guaranteed:** The first shareholder meeting pitching the SJW-CWTS merger should happen by late June, we believe, but we don't expect the companies to be successful at getting two thirds of all of CWTS's shareholders on board with this merger, if only because of large retail ownership of CWTS and ES likely sweetening its bid for CWTS, we believe. Still, SJW claims they are not for sale even if the CWTS merger falls through, and as such CWT may not be able to close an acquisition of SJW regardless of the SJW-CWTS outcome. We think that the CWT-SJW merger of two water utilities with headquarters in the same CA city and seemingly contiguous service territories makes far more sense than the SJW-CWTS proposal; SJW shareholders would benefit more from CWT's US$68.25/sh cash offer price, and more cost synergies could be shared with customers from combining the two nearby CA utilities, which would go further in improving bill affordability and thus capex opportunities in their underinvested water systems in CA.

**Equity likely after more clarity from GRC capex:** Our model assumes ~3 million shares will be issued on 9/1/18 (on a standalone basis), as CWT will need to replace its credit line by October 2018 with more permanent financing. While management has yet to decide if the credit line will be replaced entirely with new debt financing, for now we assume closer to ~53.4% will be replaced with equity, in line with the CPUC-authorized 53.4% capital structure from the 3/22/18 cost of capital decision. CWT should file its 2018 CA General Rate Case (GRC) in July, and CWT plans to forecast its capex and rate base growth for 2019-2022 in the 2Q18 earnings release. While we don't know how much CWT will request in terms of a capex step up, it could be as large as a 50% increase (on top of the previous GRC which was already a 50% step up), and that in turn could revive this stock, with or without the SJW deal. At this point, no one knows what CWT's earnings power will be starting in 2020.

**Catalysts:** GRC filing (expected July); outcome of proposed SJW acquisition.

**Estimate/TP changes:** CWT reported 1Q18 EPS of (US$0.05) below our/consensus US$0.04/0.05 due in part to a reduction in unrealized income from benefit plan investments resulting from market conditions together with an increase in uninsured losses due to water main breaks.

We've tweaked our '18 EPS estimate from US$1.41 to US$1.40 reflecting the weaker than expected 1Q18 results, while our '19/'20 EPS estimates remain unchanged. Our US$38 TP is unchanged, which is based on a 50% premium to our anchor '20 PE multiple for regulated electric utilities of 16x. We reiterate our Neutral rating.

## Aqua America (WTR, US$34.18, N, TP US$36): PA rate case and recurring gas M&A scare us

**Fig 3 WTR: Abbreviated financials and trading multiples**

| | 2017 | 2018E | 2019E | 2020E | 2017-2020 CAGR |
|---|---|---|---|---|---|
| Sales | 810 | 857 | 890 | 938 | |
| Operating expenses | 344 | 352 | 359 | 366 | |
| Operational EBITDA | 465 | 506 | 531 | 572 | |
| Depreciation | 136 | 141 | 151 | 161 | |
| Operational EBIT | 329 | 364 | 380 | 411 | |
| Net interest expense | 89 | 99 | 99 | 113 | |
| Ordinary Profit Before Tax | 257 | 282 | 297 | 314 | |
| Income tax | 17 | 34 | 37 | 37 | |
| Net profit | 240 | 248 | 259 | 278 | |
| S/O (m) | 178 | 178 | 178 | 178 | |
| **Diluted EPS** | **$1.35** | **$1.39** | **$1.46** | **$1.56** | **5.0%** |
| **DPS** | **$0.79** | **$0.85** | **$0.91** | **$0.97** | **7.0%** |
| **EV/Rate base** | **2.01x** | **1.84x** | **1.77x** | **1.66x** | |
| **P/E** | **25.40x** | **24.54x** | **23.47x** | **21.92x** | |

Source: Company data, Macquarie Capital (USA), May 2018

**PA rate case:** We're cautious ahead of the PA rate case, which WTR's PA subsidiary should file in 3Q18 with effective rates in mid-2019. This will be one of the only utilities asking for a rate increase following the tax reform. While it's true that the likely rate increase request has to do with a repair tax issue and the lack of rate increases since the conclusion of the 2011 rate case, it's just hard for us to get constructive on WTR before and through this rate case. Some ratepayers will undoubtedly be expecting reduced rates on the back of tax reform as in other states, and the relatively new set of commissioners may not be as quick to allow WTR to continue to substantially over earn its allowed ROE as it has since 2012.

**Management changes and M&A outlook:** WTR's CFO, Dave Smeltzer, is retiring. While it's a relief that he'll stay on board until October to aid with the PA rate case filing, this retirement has prompted material changes to the executive team. Matthew Rhodes has been named the EVP of Strategy and Corporate Development - he previously spent 11 years as an investment banker, most recently working on M&A transactions involving gas utilities. Dan Schuller will be the new CFO, and he also has previous banking experience. We hope that the collective banking experience will aid in municipal water M&A and not corporate gas acquisitions, as we think the latter would dilute WTR's PE multiple. Gas (and electric) utilities trade at a discount to water utilities (~34% on our 2020 estimates), and an acquisition of a gas distribution business could signal limited municipal water M&A opportunities, especially as WTR has not signed any municipal acquisitions for 2018 closure since the 2/28/18 analyst day. Management is "close", however, to announcing a few more municipal transactions with over 10,000 connections.

**Catalysts:** PA rate case filing (expected 3Q18); additional municipal water M&A.

**Estimate/TP changes:** WTR reported 1Q18 EPS of US$0.29 in line with our/consensus estimates. Management reiterated its'18 EPS guidance of US$1.37-1.42. Our annual EPS estimates are unchanged, and we maintain our US$36 TP, which is based on a 45% premium to our anchor '20 PE multiple for regulated electric utilities of 16x. We reiterate our Neutral rating.

## American States Water (AWR, US$54.82, N, TP US$49): No equity expected, but fully valued

**Fig 4 AWR: Abbreviated financials and trading multiples**

| | 2017 | 2018E | 2019E | 2020E | 2017-2020 CAGR |
|---|---|---|---|---|---|

| **P/E** | **28.89x** | **30.60x** | **29.14x** | **27.84x** | |

Source: Company data, Macquarie Capital (USA), May 2018

**Strong credit quality, but fully valued:** Despite tax reform, AWR's A+ credit rating and stable outlook were affirmed by S&P in April, and AWR should escape equity issuances for the foreseeable future. It seems AWR trades more with smid-cap stocks as opposed to water utilities, and at 27.8x our '20 EPS, we believe an accretive acquisition of AWR would be difficult, while we don't think AWR would be an acquirer with regards to corporate M&A.

**Water rate case hearing delay:** Hearings for the general rate case of AWR's GSW (to set rates for 2019-2021) have been postponed by a week to May 21st to allow more time for settlement discussions with the consumer advocate (ORA), and management is "not afraid" to take the entire capital budget to a hearing. Still, management expects a final decision by YE18.

**ASUS tax flowthrough and cost of capital decision:** While existing 50-year military contracts at ASUS do not specifically address changes in the tax rate, AWR assumes the government will request a pricing adjustment retroactive to 1/1/18. AWR reaffirmed its expectation of US$0.38-0.42 for 2018 ASUS EPS which never assumed a tax benefit. Separately, the ROE reduction from 9.43% to 8.90% due to the cost of capital decision should be a US$0.07 headwind in 2018, though our estimates already assumed a 9% ROE and we think the difference will be offset by potential cost efficiencies.

**Catalysts:** Settlement or a final decision in GSW's general rate case (expected by YE18); possible pricing changes at ASUS.

**Estimate/TP changes:** AWR reported 1Q18 EPS of US$0.29 below our/consensus US$0.35/0.34 due in part to losses incurred on the company's retirement benefit plan investments as a result of market conditions. Our annual EPS estimates are unchanged though we recognize some negative impact associated with the ROE reduction. We maintain our US$49 TP, which is based on a 55% premium to our anchor '20 PE multiple for regulated electric utilities of 16x. We reiterate our Neutral rating.

### Other stocks mentioned

### Recommendation definitions

**Macquarie - Australia/New Zealand**
Outperform – return >3% in excess of benchmark return
Neutral – return within 3% of benchmark return
Underperform – return >3% below benchmark return

Benchmark return is determined by long term nominal GDP growth plus 12 month forward market dividend yield

**Macquarie – Asia/Europe**
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

**Macquarie – South Africa**
Outperform – expected return >+10%
Neutral – expected return from -10% to +10%
Underperform – expected return <-10%

**Macquarie - Canada**
Outperform – return >5% in excess of benchmark return
Neutral – return within 5% of benchmark return
Underperform – return >5% below benchmark return

**Macquarie - USA**
Outperform (Buy) – return >5% in excess of Russell 3000 index return
Neutral (Hold) – return within 5% of Russell 3000 index return
Underperform (Sell)– return >5% below Russell 3000 index return

### Volatility index definition*

This is calculated from the volatility of historical price movements.

**Very high–highest risk** – Stock should be expected to move up or down 60–100% in a year – investors should be aware this stock is highly speculative.

**High** – stock should be expected to move up or down at least 40–60% in a year – investors should be aware this stock could be speculative.

**Medium** – stock should be expected to move up or down at least 30–40% in a year.

**Low–medium** – stock should be expected to move up or down at least 25–30% in a year.

**Low** – stock should be expected to move up or down at least 15–25% in a year.
* Applicable to Asia/Australian/NZ/Canada stocks only

**Recommendations** – 12 months
**Note:** Quant recommendations may differ from Fundamental Analyst recommendations

### Financial definitions

All "Adjusted" data items have had the following adjustments made:
Added back: goodwill amortisation, provision for catastrophe reserves, IFRS derivatives & hedging, IFRS impairments & IFRS interest expense
Excluded: non recurring items, asset revals, property revals, appraisal value uplift, preference dividends & minority interests

**EPS** = adjusted net profit / efpowa*
**ROA** = adjusted ebit / average total assets
**ROA Banks/Insurance** = adjusted net profit /average total assets
**ROE** = adjusted net profit / average shareholders funds
**Gross cashflow** = adjusted net profit + depreciation
*equivalent fully paid ordinary weighted average number of shares

All Reported numbers for Australian/NZ listed stocks are modelled under IFRS (International Financial Reporting Standards).

### Recommendation proportions – For quarter ending 31 March 2018

### 12-month target price methodology

AWK US: US$93.00 based on a PER methodology

CWT US: US$38.00 based on a PER methodology

WTR US: US$36.00 based on a PER methodology

AWR US: US$49.00 based on a PER methodology

ES US: US$62.00 based on a PER methodology

**Company-specific disclosures**:
**ES US:** Eversource Energy completed an acquisition of Aquarion Water Company from a consortium including Macquarie Infrastructure Partners on December 4, 2017.
Important disclosure information regarding the subject companies covered in this report is available at www.macquarie.com/research/disclosures.

**Target price risk disclosures**:
**AWK US:** Our US$93.50 TP is based on 23.6x our '20 EPS. Risks to the downside include: the slower pace of future municipal acquisitions, lower cost efficiencies, and slower growth in non-regulated operations.
**CWT US:** Our TP is based on a '20 P/E multiple of 23.8x, derived by affording a 40% premium to our 17x '20 P/E multiple for U.S. regulated electric utilities. Risks to the upside include higher regulated capex in CA. Risks to the downside include higher market interest rates.
**WTR US:** Our US$36.00 TP is based on 23x our 2020EPS estimate. Risks include: outcomes of pending and future rate cases, especialy in PA, cost controls, municipal M&A, and the level of market interest rates.
**AWR US:** Our TP is based on a '20 P/E multiple of 24.7x, derived by affording a 45% premium to our 17x '20P/E multiple for U.S. regulated electric utilities. Risks to the upside include additional water service contracts for military bases. Risks to the downside include the level of market interest rates.
**ES US:** Our TP is based on 17x our '20 EPS. Key risks include delays or cancellations in transmission/pipeline investments, realized synergies from the NSTAR merger, and economic weakness or energy efficiency/conservation efforts hurting revenues.

# Water utilities

## 1Q17: Few new data points vs rising rates

### Event

- The sharp selloff in US water stocks following their 1Q17 earning prints was likely driven by rising interest rates and the lack of any meaningful positive updates, especially on municipal water M&A. Muni deals are lumpy in nature and ongoing legislative changes (most recently in VA and NJ) should be supportive of the consolidation of the US water sector, we believe. Yet, the exact timing of muni water deals is tough to call. Stocks of US water utilities, especially the smid caps, already price in sharply improving growth prospects or large M&A premiums, neither of which seem justified to us.
- Our earnings expectations for US water utilities remain largely unchanged with minor reductions to '17 EPS estimates for **AWK** due to a tax law change in NY offset by a federal tax benefit associated with stock-based compensation, and **AWR** due to minor model adjustments. Please see Fig. 2 for updated earnings estimates for US water names. **AWK** remains our top pick for US water stocks.

### Impact

- **Muni M&A activity is lumpy:** The long-awaited privatization of the municipal water sector seems to have finally begun, although muni deals can take years to originate and complete. While sell-side EPS consensus expectations for water utilities never really included municipal M&A, the buy-side could have already embedded this driver in their projections, thus explaining (at least partly) a recent sharp correction in US water utility stocks given the absence of municipal M&A updates. **AWK** and **WTR** indicate that they have been working on numerous municipal water and wastewater system acquisitions but had nothing new to report during the 1Q17 earnings season besides ongoing regulatory improvements in support of such transactions in NJ and VA. We remain patient on the municipal water sector consolidation and still prefer muni deals to corporate M&A, even if in the water sector.
- **Water service contracts for military bases:** The end of the military sequester under Trump should allow for increased budgets of military bases and more auctions of water service contracts for military bases, although we may need to wait until October. **AWK** is seeing lower military water capex in '17 due to the sequester, while **AWR** is about to assume operations of water and waste water systems at the Eglin Air Force Base in FL, and management hopes for an increase in contract fees associated with a larger than expected scope of work.
- **Cost of capital proceeding and end of drought in CA:** In early April, **AWR, AWK** and **CWT** filed their cost of capital applications in CA. Procedural schedules have not been issued yet but the utilities seem to hope to be able to settle on the allowed ROEs and equity levels once the CA consumer advocate (ORA) files its position in the case. While all three utilities are asking for an increase in the allowed ROE and a higher equity layer, our estimates assume a reduction in allowed ROEs to ~9.2% (from 9.43% for **AWR** and **CWT**, and 9.99% for **AWK**) and a 50% equity ratio for all three starting in '18. We would still prefer a settlement over a fully litigated case, however. The end of drought conditions in CA should support earnings of water utilities in the state even if they don't expect a change in water consumption patterns of their customers.

**Fig 1 US water utilities: Valuations multiples**

| Ticker | AWK | AWR | CWT | WTR |

# Regulated water utilities

## Still thirsty for water?

### Event

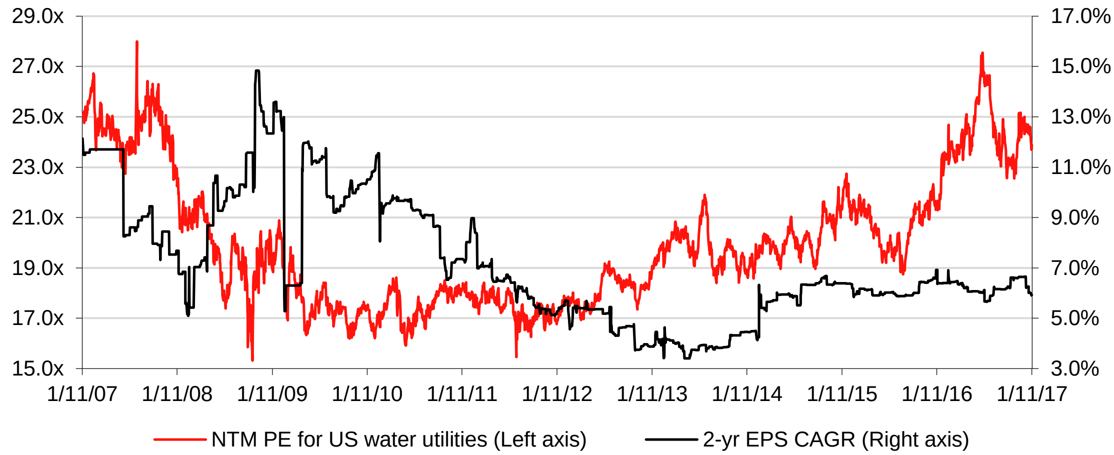
- We like US water utilities for their low operating and regulatory risk, good EPS/DPS growth, and strong balance sheets. However, following yet another strong year, water utilities are trading at close to historically high P/E multiples for the group on an absolute level and vs. electric utilities, despite seemingly similar EPS growth prospects for both groups. The low-risk profile of water utilities could be yet again in high demand later this year, we believe, but for now, it's hard for us to envision further expansion of P/E multiples for water stocks. Therefore, we are reducing our anchor P/E multiple for water utilities to 22.4x from 25x and we roll forward our valuations to '19 from '18.
- We are expanding our coverage of water utilities by adding California-concentrated **AWR** and **CWT**, but we are waiting for a better entry point for both of these stories, especially ahead of their cost-of-capital proceeding in CA and following a strong run-up in these smid cap stocks after the Trump election. **AWK** remains our top pick for the sector.

### Impact

- **Valuation debate is back:** How much should you pay for the non-cyclical and highly visible EPS growth of water utilities, even if it's only marginally higher (if at all) than the EPS growth of electric utilities? The P/E premium for water vs. electric utilities has sharply expanded since late 2015 despite little (if any) change in sell-side EPS growth expectations for water (or electric) utilities (Fig. 2 and 3). An average water utility should grow its EPS at a 5-6% CAGR between '16 and '19, with AWK ~8%, thanks to its market-based operations. Electric utilities should grow at 5-6% on average, with a couple at 7-8%. Water utility systems in the US remain underinvested, though the rate base per customer for investor-owned water utilities in the US seems similar to the US$3,600/customer average for UK water utilities (Fig. 6) and the affordability of water bills seems to be a limiting factor for higher water capex. To us, the P/E premium of water over electric utilities is primarily a function of the scarcity of sizeable public water utility stocks and their low risk profile, though those factors do not explain the spike in water P/E premia over the last 12-15 months.
- **Sector consolidation:** The long-awaited privatization of the municipal water sector has finally begun, though municipal deals can take years to complete, not to mention that federal funding support for water infrastructure could potentially decelerate the sector consolidation. While sell-side EPS consensus expectations for water utilities never included municipal M&A, buy-side could have already embedded this driver in their projections, thus explaining the P/E expansion for the water sector over the last year or so. Large investor-owned water utilities, **AWK** and **WTR**, indicate that they have been working on numerous municipal water and wastewater system acquisitions, and new deal announcements could result in positive sell-side earnings revisions. That in turn could rebuild support for water P/Es, but we may first have to wait for clarity behind Trump's water infrastructure spending plan.

**Please refer to page 23 for important disclosures and analyst certification, or on our website www.macquarie.com/research/disclosures.**

**Fig 2 Valuations of water utilities have continued to climb over the last three years despite largely unchanged earnings growth expectations for the group.**



Source: FactSet, Macquarie Capital (USA), January 2017

**Fig 3 The P/E premium for water vs. electric utilities has sharply expanded since bottoming in late 2016, again with no change in sell-side EPS growth expectations for either of the groups.**

| P/E @ $70.82 | | | 23.3x | 21.5x | 19.8x | |

Source: FactSet, Macquarie Capital (USA), January 2017

- **EPS growth**: We expect AWK to grow its EPS at a 7.9% CAGR between ’16 and ‘19 with visibility into growth through at least ’20. That’s down from a ~12% EPS CAGR for ’10-’15, but still faster than AWK’s water peers, even if the premium EPS growth comes from contract-based rather than regulated operations. AWK’s rate base is growing at a 5.6% between ’16 and ’19, which is just below the 6% average for the sector – the growth CAGR for AWK already reflects the growth associated with acquisitions of municipal water systems, but is same system for other water utilities.
- As the largest investor-owned water utility in the US, AWK has been most focused and most successful at acquisitions of municipal water and wastewater systems, adding ~55k customers in ‘16 (+1.7% YoY). Although the company is working on municipal deals which could add even 145k in customers, for now management seems reluctant to boost its long-term EPS growth CAGR on the back of the M&A. We are concerned that the pace of the privatization of municipal water systems could decelerate if the federal government were to provide low-cost funding to states (and thus municipalities) for water infrastructure upgrades.
- AWK’s military base earnings could see some pick up if the Trump administration ends the military sequester though the timing of new awards of military contracts is difficult to gauge.
- AWK’s ‘17 EPS guidance seemed a bit soft to us, but could be driven by the timing of the CA GRC (with new rates to come into effect in 2018) and the uncertainty over the closing of the Scranton wastewater acquisition (now closed). Then again, the 2018 could see another headwind from CA as a new, lower allowed ROE should be imposed on AWK’s California subsidiary – our estimates are a drop in the allowed ROE from the current 9.99% to 9.2% starting 1/1/18.
- **DPS growth:** AWK’s DPS growth should exceed the EPS growth, given the low dividend payout, but it’s tough for us to expect the company to commit to it at this point given the upcoming corporate tax reform and the issue of normalization of deferred tax liabilities which could determine future cash flow generation of regulated utilities in the US.
- **Changes in earnings/TPs:** Our earnings estimates for AWK remain unchanged, but we lower our TP to US$80 from US$82 as we roll forward our valuation to 2019 (from 2018) and we lower our anchor PE multiple for water utilities to 22.4x down from 25x.

## **American States Water (AWR, US$43.66, Neutral, TP US$43):** Lower impending allowed ROE partially offset by market-based operations

**Fig 9 AWR: Abbreviated financial projections and trading multiples**

| | 2015 | 2016 | 2017 | 2018 | 2019 | 2016-2019 CAGR |
|---|---|---|---|---|---|---|
| **EPS (US$)** | **1.56** | **1.62** | **1.73** | **1.84** | **1.94** | **6.2%** |
| **DPS (US$)** | **0.87** | **0.91** | **0.96** | **1.01** | **1.06** | **5.0%** |
| Dividend payout | 56% | 56% | 55% | 55% | 55% | |
| Rate base (US$bn) | | 745 | 792 | 840 | 888 | 6.1% |
| EV/Rate base @ $43.66 | | | 1.97x | 1.90x | 1.80x | |
| P/E @ $43.66 | | | 25.4x | 23.9x | 22.5x | |

Source: FactSet, Macquarie Capital (USA), January 2017

- **EPS growth:** We expect a 6.2% ’17-’19 EPS CAGR from CWT, with no equity funding needs in the medium term. The company anticipates using its revolver to cover upcoming spending needs, but then would be more likely to pay it down with an issuance of long-term debt.
- On the regulatory front, a potentially contentious cost of capital proceeding is likely to start soon in CA, with filings due in late March. Also, an electric GRC is scheduled to be filed with the CPUC by the end of January.
- AWR is interested in municipal water sector acquisitions outside of CA (perhaps even in the East), but also acquisition of privately-owned water systems. We do not expect any material acquisitions by AWR while valuations for these smaller water systems remain at currently elevated levels, but would expect more activity here in the future. Also, we note that while we don’t see CA concentrated water utilities as particularly likely targets of M&A, should that change, AWR’s ~75,000 acre-feet of water rights could represent substantial value depending on the structure of the transaction.
- **DPS growth:** We expect CWT to grow its DPS at 5%, in line with its long-term goal of at least a 5% DPS CAGR.

## **California Water Service Group (CWT, US$33.00, Neutral, TP US$32):** Capital investment opportunities abound, no need to look around

**Fig 10 CWR: Abbreviated financial projections and valuation multiples**

| | 2015 | 2016 | 2017 | 2018 | 2019 | 2016-2019 CAGR |

Source: FactSet, Macquarie Capital (USA), January 2017

- **EPS growth:** We expect CWT to grow its EPS/DPS at a 15.0%/3.0% CAGR between ’16 and ’19, although this due to a significant step-up in ’17 following the conclusion of its most recent rate case. From ’17-’19, we expect EPS growth to be closer to 5%, trailing potential rate base growth of 7-10%. We factor in anticipated equity needs, but acknowledge that a material reduction of the current allowed ROE would reduce our EPS estimates. The next cost of capital filing proceeding is likely to begin after the company’s required filing in March.
- Cal Water, CWT’s primary utility, has substantial capital spending opportunities ahead of it. The company was successful in reducing the replacement rate of its water mains from 300yrs down to 200yrs, but this still heavily lags its CA peers who are closer to 100yrs. Its wells are nearing the 50yr suggested life by the American Water Works Association (AWWA), and while this is not a hard and fast deadline, suggests another set of major capital spending (>US$2.5bn) which will be required over time.
- **DPS growth:** We expect CWT to grow its DPS at just a 3% CAGR between ’16 and ’19, as the company needs to fund its sharply increased capex using some external equity as well internally generated cash flows.

## **Aqua America (WTR, US$30.28, Neutral, TP US$32 down from US$35):** Rate case in PA, M&A overhang

Source: FactSet, Macquarie Capital (USA), January 2017

- **EPS growth:** We expect WTR to grow its EPS at a 4.1% CAGR between '16 and '19. The EPS CAGR should trail WTR's same-system rate base CAGR of 6.6%, we estimate, as WTR over-earns its allowed ROE in PA, where close to 70% of its rate base is located. We expect WTR to file for a DSIC mechanism in PA in late '17 and a general rate case in '18 – the rate case should coincide with a federal corporate tax reform and new rates are likely to reflect a real corporate tax expense. In preparation for the PA rate case, the company has sharply boosted its capital spending as updated on the 2017 earnings call held today (1/17/17).
- The current overearning of the allowed ROE by Aqua Pennsylvania is driven by a flow through tax accounting for repair cost deductions in the state. Qualified repair capex (as opposed to improvements) is expensed for tax purposes in the year it was incurred rather than capitalized and depreciated over the life of an asset. As a result, WTR's effective tax rate in PA is sharply below its statutory level which is reflected in the water rates Aqua Pennsylvania collects. And while WTR is not the only utility in our universe benefitting from this tax treatment (with California utilities also using the flow through tax accounting for repair costs), this is the only instance where the utility has been allowed to keep the benefit and is not required to file a rate case in a specified time frame to true up its rates. WTR points out that its rates in PA remained flat thanks to the tax change, but we argue that they should have dropped, otherwise Aqua PA would not be earning in excess of its allowed ROE. We are concerned about the treatment of this very large tax benefit during the upcoming rate case in PA, even if we recognize that a claw back of the benefit could be considered a retroactive ratemaking.
- On the M&A front, WTR remains excited on potential municipal water deals, and its appetite for gas/electric utility deals seems to have subsided, which could be just a function of the poor performance of WTR's stock relative to its water peers since the gas/electric M&A possibility was first disclosed.
- **DPS growth:** We expect WTR to grow its dividends ahead of its EPS growth rate – at a 7.8% CAGR through '19 – given WTR's strong balance sheet and cash flows even if by 2019 the dividend payout should exceed 61%, just above the 55-60% payout typically targeted by water utilities. Given WTR's sizeable NOL position, we do not expect its cash flows to benefit from changes in the corporate tax code, including expensing of capex at a 100% rate.
- **Earnings/TP changes:** We have lowered our earnings estimates for WTR to reflect the higher level of spending and an upcoming rate case in PA whose outcome is hard for us to determine. Our new '17/'18/'19 EPS estimates are US$1.37/1.42/1.49 down from US$1.38/1.45/1.52, respectively. We lower our TP to US$32 (from US$35) on the back of lower estimates and as we roll forward our valuation to 2019 (from 2018) and lower our anchor PE multiple for water utilities to 22.4x from 25x.

# American States Water

## A good water utility but fully valued

### Initiating with Neutral, US$43 target price

Rate base growth of ~5-6% is roughly in line with peers and a lower than average allowed ROE of 9.43% for its regulated water utility operations will likely see a decline following an imminent cost of capital proceeding. The utility currently has been enjoying a 55% equity layer vs. peers closer at 53.4%, and has both an electric utility with a higher allowed ROE and non-regulated 50yr military contracts, which should allow AWR to earn above the water ROE assigned to it by the CPUC. Having seen AWK's success with its market-based operations managing water and wastewater systems on 12 military bases around the U.S., we are optimistic about AWR's fundamentals given an earnings mix that has reached 20% non-regulated as of '16. Whether or not investors are fully recognizing the appeal of AWR's operations and growth potential relative to peers, sentiment for the group overall has pushed valuations to near 10yr highs. We initiate coverage at Neutral, with a US$43 TP.

### A clear stream of revenues but with ebbs and flows

California has suffered from significant droughts in the past and is expected to continue to. However, unlike most other states, CA has allowed for revenues and water sales volumes to be decoupled, which protected AWR's water utility when conservation orders resulted in a >25% decline in water usage. While the company's P&L is not impacted by volumes, cash recovery can stretch out over 12-18mo or potentially longer. An advantage of this system from a ratepayer perspective has been that the cash shortfall has typically been paid down more by heavy users, as rates are tiered and rise with consumption.

### Not too slow but steady in the long run

We expect AWR to grow its EPS/DPS both by ~5%-6% from '16-'19, roughly in line with its stated LT DPS CAGR and regulated peers overall. The downside risk comes mostly from a reduction to its current water allowed ROE of 9.43% and equity layer of 55%, while in the longer term it could outperform peers via its market-based operations. Looking ahead only to the next few years, we note that the current 55% payout ratio was highlighted by management as a potential way to augment DPS growth, a sign that significantly higher EPS growth is not to be expected, we believe. Our initial '16/'17/'18/'19 EPS estimates are US$1.62/1.72/1.82/1.94, vs. consensus of US$1.64/1.73/1.84/*N/A*.

### Valuation

High visibility into earnings, revenue decoupling and non-regulated operations with long-term government contracts are certainly appealing. A ~5-6% EPS/DPS CAGR is merely in line with peers, however. Based on scarcity of investable water utilities and excellent visibility into long-term growth, the historical 40% premium for water names over electrics still seems appropriate to us. Starting from our regulated electric FY3 P/E of 16.0x, we reach a FY3 water P/E of 22.4x. When combined with our '19 EPS estimate of US$1.94, we initiate coverage with a US$43 TP and a Neutral rating.

## Inside

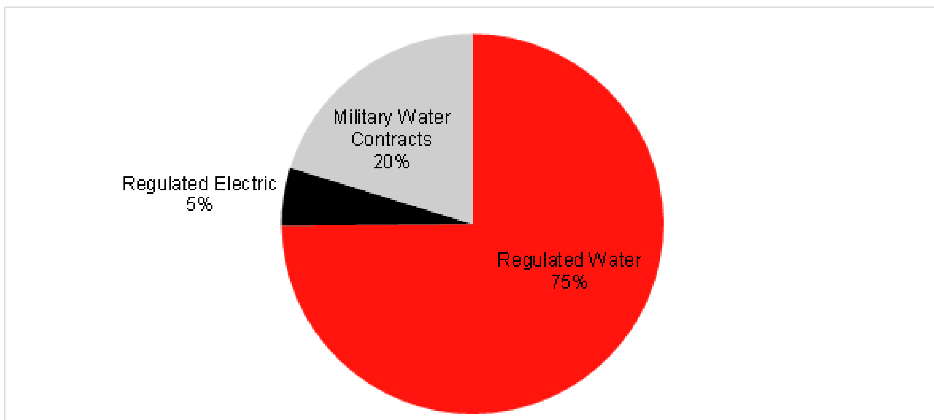
# American States Water Company

## Company profile

American States Water Company (AWR US) operates two primary subsidiaries:

- **Golden State Water Co. (GSWC)** operates 39 water systems, serving ~260k customers across 75 cities in 10 counties in CA, as well as providing electricity to ~24k customers in several San Bernardino County mountain communities in CA through its subsidiary, Bear Valley Electric Service.
- **American States Utility Services, Inc. (ASUS)**, headquartered in VA, operates and maintains water and wastewater systems under 50-year contracts at several U.S. government military bases in FL, MD, NC, NM, SC, TX and VA.

**Fig 1 AWR's non-regulated net income now makes up 20% of its total as of '16, and could offer the opportunity to exceed the ROEs of its regulated businesses**



Source: Company disclosures, Macquarie Capital (USA), January 2017

**Fig 2 AWR US vs S&P 500, & rec history**

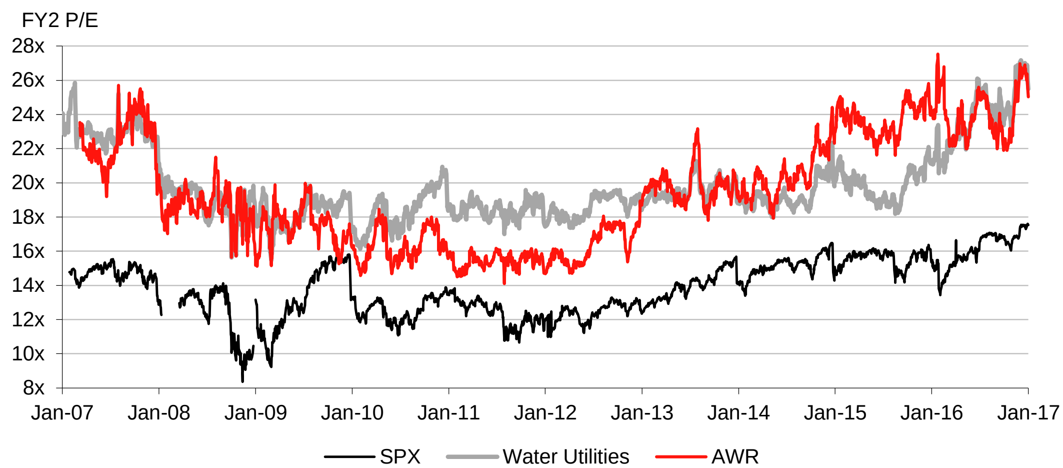
# A good water utility but fully valued

## Initiating with Neutral, US$43 target price

***We like AWR's fundamentals and business prospects, but would encourage investors to look for a more attractive entry point.***

AWR combines the attractive aspects, namely the transparency, LT visibility and revenue decoupling of its sole regulated jurisdiction of California, with a portfolio of 50-year contracts on U.S. military bases. Having seen AWK's success with its market-based operations managing water and wastewater systems on 12 military bases around the U.S., we are optimistic about AWR's fundamentals given an earnings mix that has reached 20% non-regulated as of '16. The result is a regulated water utility with reduced sensitivity to droughts/conservation, and an opportunity to exceed its authorized ROE via its non-regulated businesses. The drawbacks are vigilant and formidable adversaries in the form of the CPUC's Office of Ratepayer Advocates (ORA) and The Utility Reform Network (TURN), as well as the potential limitation or removal of decoupling during or immediately followed by another drought, and a cost of capital proceeding that could take place while equity valuations are stretched and bond yields have not yet reached their next plateau. We note that following post-election mentions of both water infrastructure investment and increased defense spending, AWR rose 2.5 turns on its FY3 P/E vs. an average of 1 turn for its water peers, and is within ~10% of its 10-year max P/E for both FY2/FY3.

**Fig 3 Even after the recent pullback, AWR is near its highest valuation in a decade**



Source: FactSet, Macquarie Capital (USA), January 2017

**Fig 4 AWR: Financial metrics (Note: CPUC has not decided the '18/'19 cost of capital and equity ratio yet)**

# Valuation, recommendation, risks

High visibility into earnings, revenue decoupling, and non-regulated operations with long-term government contracts are certainly appealing. A ~5%-6% EPS/DPS CAGR is merely in line with peers, however. AWR currently trades at FY2/FY3 P/E ratios which are >90% of its 10-year max valuations, although its peers do as well. Based on scarcity of investable water utilities, as well as excellent visibility into long-term growth, the historical 40% premium for water names over electrics still seems appropriate to us. We are wary of the upcoming cost of capital proceeding, which is due to commence after a filing due in March. Whether or not investors are fully recognizing the appeal of AWR's operations and growth potential relative to peers, sentiment for the group overall has pushed valuations to near 10yr highs.

***Wait for water utilities to re-price before buying.***

Starting from our regulated electric FY3 P/E of 16.0x, we reach a FY3 water P/E of 22.4x. Combined with our '19 EPS estimate of US$1.94, we initiate coverage with a US$43 TP and a Neutral rating.

# Enviable regulatory mechanisms

## A clear stream of revenues but with ebbs and flow

California has suffered from significant droughts in the past and is expected to continue to. However, unlike most other states, CA has allowed for revenues and water sales volumes to be decoupled, which protected AWR's water utility when conservation orders resulted in a >25% decline in water usage. While on the positive side, the company's P&L is not impacted by volumes, cash recovery can stretch out over 12-18mo or potentially longer. This has led to an interesting outcome for ratepayers however, where the heaviest consumers see their rates rise according to their level of usage and therefore ends up with those who choose to consume the most subsidizing what otherwise would have been essentially fixed cost increases on the lowest users.

## Not too slow but steady in the long run

***AWR's earnings are more likely to see plateaus and step-ups as opposed to the relatively smoothly increasing regulatory asset base.***

We expect AWR to grow its EPS/DPS both by ~5-6% from '16-'19, in line with its stated LT DPS CAGR and regulated peers overall. The company has been enjoying a higher than average equity layer, 55% vs. peers at 53.4%, which could potentially be reduced along with its current 9.43% allowed ROE. A cost of capital filing is due in March, with the proceedings likely to commence soon thereafter. We note that the current 55% payout ratio was highlighted by management as a potential way to augment DPS growth, a sign that significantly higher EPS growth is not to be expected in the near-term, we believe. We expect the company's market-based operations to continue to play a bigger role in the earnings mix over time, potentially affording the opportunity to consistently out earn its allowed water ROE overall.

While we would expect that the company's regulated earnings growth should track its rate base growth over the longer term, we are also pleased to see management's focus on a LT DPS CAGR, currently 'at least 5%'. Our initial '16/'17/'18/'19 EPS estimates are US$1.62/1.73/1.84/1.94, vs. consensus of US$1.64/1.73/1.84/N/A.

**Fig 7 Rate base: GSWC's most recent GRC approved a water rate base of ~US$700m 2016, as well as annual capex of ~US$90m. An electric GRC is due this month.**

# California Water Service Group

## Welcome to the Hotel California

### Initiating with Neutral, US$32 target price

Rate base growth of ~6% appears well supported by extensive capital investment needs within existing service territories, which should provide matching EPS/DPS growth over the longer term. An upcoming cost of capital proceeding is likely to result in a reduction to the 9.43% ROE which Cal Water has been earning since ’13, and so EPS growth should trail rate base growth in the near term, we believe. We like the pure play regulated water business in general and regard California as an average regulatory jurisdiction with some unique but offsetting features. Although allowed ROEs are lower than throughout most of the rest of the country, triennial rate cases and revenue decoupling provides some balance to the less favourable upfront economics. CWT has benefitted considerably from revenue decoupling in CA, allowing it to promote conservation and withstand significant volume declines while still eventually collecting its revenue requirements. CWT offers water utility investors ~5-6%/3% EPS/DPS CAGRs for ’17-’19, in line with its peer averages of ~5-6%, but isn’t reliant on acquisitions or non-regulated operations, affording it higher than average visibility in a space which already offers plenty to begin with. Using a Water sector FY3 P/E multiple of 22.4x (40% premium to regulated electrics), we initiate coverage of CWT with a US$32 TP and Neutral rating.

### Single jurisdiction concentration more a blessing than a curse

Despite operating in four states, CWT’s business is 98% regulated and 94% CA-focused, making the company for all intents and purposes a completely regulated California water utility. While this leads to high regulatory visibility, it also means that the operations in HI, NM, and WA are not sizable enough to cause the weighted authorized ROE to differ from the 9.43% adopted in CA. With Cal Water’s most recent rate case (covering ’17-’19) just completed in Dec ’16, ‘18/’19 earnings are heavily dependent on the outcome of what appears to be a likely fully litigated upcoming cost of capital proceeding for ’18-‘20, due to commence in late March.

### Like many of its customers, CWT prefers organic

Cal Water has just advanced from a 300yr water main replacement cycle down to 200 years (with a ~50% increase in annual capex), and yet it still lags other CA water utilities who are replacing mains at nearly double that rate. While we see an attractive opportunity for many water utilities to grow their rate base via acquisitions of municipal systems, Cal Water stands out as having a particularly significant level of capital investment needed, with the rate base per customer being significantly below average for investor-owned water utilities in the US. We agree with management’s assessment that focusing on its existing footprint is best.

### Valuation

Our US$32 TP is based on our ’19 EPS estimate of US$1.45 and a P/E multiple of 22.4x (a 40% premium to our FY3 regulated electric multiple of 16.0x). We like the fundamentals, but struggle with paying up for the stock when it is trading at ~90% of its highest P/E in 10 years, even after selling off somewhat in recent days. We encourage investors considering water utilities to wait for a more attractive entry point. We initiate coverage with a Neutral rating.

## Inside

# California Water Service Group

## Company profile

- California Water Service Group (CWT US) provides water and wastewater services on a regulated basis in CA, HI, NM, and WA, as well as non-regulated utility services businesses in CA and HI.
- Third-largest publicly traded water utility (after AWK and WTR).
- >2m customers, >6,000mi of mains, 1,130 wells, 662 storage tanks, 6 surface water treatment plants, 10 wastewater treatment plants.
- General corporate rating of A+ stable from S&P.

**Fig 1 CWT's business3yr trailing revenues are 98% regulated, and despite operating in four states, highly concentrated, with 94% in California**

# Welcome to the Hotel California

## Initiating with Neutral, US$32 target price

***CA is a somewhat favourable jurisdiction to be a water utility at the moment. We continue to prefer a healthy level of acquisition-driven growth to augment organic capex.***

We like the pure play regulated water business in general and regard California as currently one of the friendliest jurisdictions for water utilities, although an upcoming cost of capital proceeding may test that view. CWT benefits from revenue decoupling in CA, allowing it to promote conservation and withstand significant volume declines while still eventually collecting its revenue requirements. CWT offers water utility investors 15%/3% EPS/DPS CAGRs for ’16-’19, due to a large step-up in ’17 following the conclusion of its latest rate case. After accounting for that jump, EPS growth is more in line with peers’ average of ~5-6%. Following several years of drought, CWT has shown the effectiveness of its WRAM mechanism and stands to benefit from significant investment needs in the state in order to improve the existing infrastructure’s efficiency and to prevent water from being wasted. The trade-offs however, are a lack of interest in pursuing municipal acquisitions at a time when its peers are doing so, very capable and potentially aggressive consumer advocates, and pushback from Californians (although the CPUC is not subject to Prop 218) about tiered rates, particularly during the next drought.

CWT stands to benefit from significant investment needs in the state in order to improve the existing infrastructure’s efficiency and to prevent water from being wasted. So long as there continue to be ample opportunities to expand the existing footprint’s rate base, we understand management’s preference for internal growth instead of municipal acquisitions. We expect Cal Water’s 9.43% allowed ROE to fall as a result of the impending cost of capital proceeding, which is due to commence following the company’s required filing in March.

We note the significant run-up and then partial reversal in Water utilities since the Nov ’16 election, where investing in water infrastructure was mentioned in the President-elect’s speech. While we like CWT’s fundamentals, we believe sentiment is overly optimistic at the moment, and therefore encourage investors to wait for a more attractive entry point.

**Fig 3 CWT: Financial metrics (Note: the ‘18/’19 cost of capital and equity ratio are dependent on the CPUC review)**

# Valuation, recommendation, risks

***Wait for water utilities to re-price before buying.***

## Water utilities tend to be pricey, but its best to hold back right now

Our US$32 TP is based on a ’19 EPS estimate of US$1.45 and a P/E multiple of 22.4x (a 40% premium to our FY3 regulated electric multiple of 16.0x). We like the company’s fundamentals, but struggle with paying up for the stock when it is trading at ~90% of its highest P/E in 10 years, even after selling off somewhat in recent days. We encourage investors considering water utilities to wait for a more attractive entry point. We initiate coverage with a Neutral rating. We note the significant run up and then partial reversal in Water utilities following President-elect Trump’s acceptance speech during the Nov ’16 election. Specific mention was made of investing in water infrastructure, with a nod towards avoiding another Flint-like incident.

***We view CA as an average regulatory jurisdiction for water utilities at the moment***

# California dreaming for water utilities

## Single jurisdiction concentration more a blessing than a curse

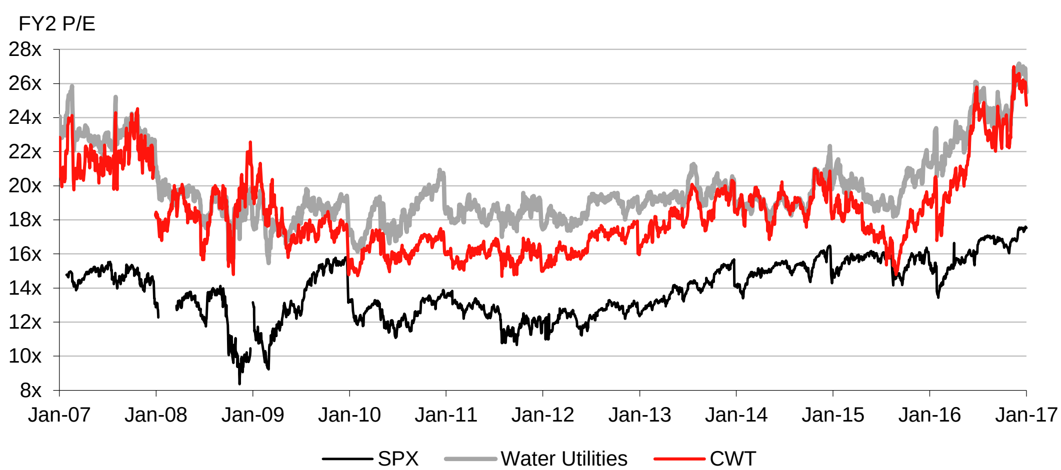
Despite operating in four states, CWT's business is 98% regulated and 94% CA-focused, making the company essentially a completely regulated California water utility. This results in a high level of regulatory visibility, and at least as far as decoupling and Tier 1 Advice Letters are concerned, an at least average regulatory backdrop when compared to other jurisdictions in the US, albeit with among the lowest authorized ROEs for water utilities. Pennsylvania still remains our favourite jurisdiction due to its pro-consolidation legislation.

The Water Revenue Adjustment Mechanism (WRAM) created a formal separation between sales volumes and revenues, and has proven its value during the most recent heavy drought. Revenue decoupling was authorized by the CPUC in 2008 to further promote water conservation. Forward-looking test years for highly transparent three-year general rate cases and a multitude of tracking mechanisms are slightly offset however, by active interveners and aggressive consumer advocates in the form of the CPUC's Office of Ratepayer Advocates (ORA), and The Utility Reform Network (TURN).

Although the company has operations in Hawaii, New Mexico, and Washington state, even when aggregated they are not sizable enough to cause CWT's consolidated, weighted authorized ROE to differ from the 9.43% assigned to Cal Water by the CPUC effective 2013. This is important because after three annual extensions, Cal Water is due for another Cost of Capital review by March 31, 2017. In Dec '16, Cal Water and three other large CA water utilities jointly filed a request with the CPUC for another extension. The Office of Ratepayer Advocates (ORA) was quite pointed in its reply, suggesting that the recently concluded triennial General Rate Case process already addressed the issues and proceedings which the joint parties cited as the reasons for requesting another extension.

We expect the 2017 cost of capital proceeding to occur as scheduled, and are hopeful that the decline in allowed the ROE will not be significant, although we a reduction of some sort is fairly certain, we believe. While the cost of debt is the most straightforward element in the cost of capital, we note that the ORA mentioned equity market returns and how they might tie in to an appropriate ROE. While we offer no comment on general market valuations, we note that water utilities have recently touched their highest valuations in the last 10 years.

**Fig 6 Water utilities have recently hit their highest valuation in a decade**



Source: FactSet, Macquarie Capital (USA), January 2017

# Like its customers, CWT prefers organic

## Investing in its existing footprint is the primary growth strategy

For most water utilities, we are most excited about the opportunities for industry consolidation, as <20% of water systems are investor owned vs. nearly ~70% of electric utilities, by customer base. However, Cal Water has just advanced from a 300yr water main replacement cycle down to 200 years, and yet it still lags other CA water utilities who are replacing mains at nearly double that rate. The company has significant capital spending opportunities available, and therefore is unlikely to participate in these municipal acquisitions or other M&A in a meaningful way, we believe.

We certainly do not disagree that Cal Water has plenty of investment opportunities available to it, but we hope that CWT remains open to expanding into higher earning jurisdictions, should the reduction to its allowed ROE put it at a disadvantage to peers in terms of EPS growth. If acquisitions were pursued, we would be more supportive of non-CA growth to help offset the current effectively single jurisdiction exposure. Triennial rate cases with forward test years are nice to have, but the appeal can quickly fade if a subsequent ROE review, like the imminent 2017 Cost of Capital proceeding, were to change the return profile of that hard sought rate base growth.

**Fig 7 Cal Water's Rate Base could grow at a high single digit CAGR (7-9%) through 2019, depending on the outcome of its anticipated Advice Letter filings**

# Regulated water utilities

## Still thirsty for water?

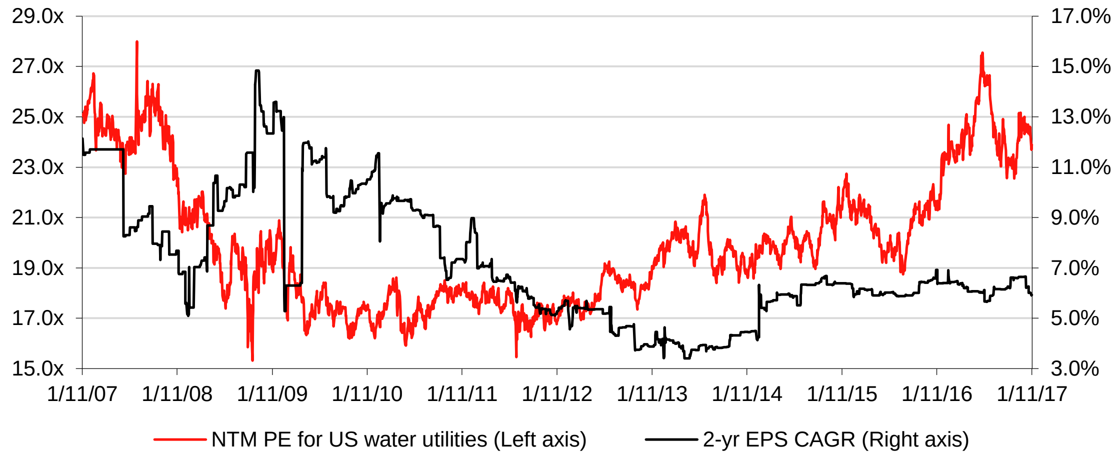
### Event

- We like US water utilities for their low operating and regulatory risk, good EPS/DPS growth, and strong balance sheets. However, following yet another strong year, water utilities are trading at close to historically high P/E multiples for the group on an absolute level and vs. electric utilities, despite seemingly similar EPS growth prospects for both groups. The low-risk profile of water utilities could be yet again in high demand later this year, we believe, but for now, it's hard for us to envision further expansion of P/E multiples for water stocks. Therefore, we are reducing our anchor P/E multiple for water utilities to 22.4x from 25x and we roll forward our valuations to '19 from '18.
- We are expanding our coverage of water utilities by adding California-concentrated **AWR** and **CWT**, but we are waiting for a better entry point for both of these stories, especially ahead of their cost-of-capital proceeding in CA and following a strong run-up in these smid cap stocks after the Trump election. **AWK** remains our top pick for the sector.

### Impact

- **Valuation debate is back:** How much should you pay for the non-cyclical and highly visible EPS growth of water utilities, even if it's only marginally higher (if at all) than the EPS growth of electric utilities? The P/E premium for water vs. electric utilities has sharply expanded since late 2015 despite little (if any) change in sell-side EPS growth expectations for water (or electric) utilities (Fig. 2 and 3). An average water utility should grow its EPS at a 5-6% CAGR between '16 and '19, with AWK ~8%, thanks to its market-based operations. Electric utilities should grow at 5-6% on average, with a couple at 7-8%. Water utility systems in the US remain underinvested, though the rate base per customer for investor-owned water utilities in the US seems similar to the US$3,600/customer average for UK water utilities (Fig. 6) and the affordability of water bills seems to be a limiting factor for higher water capex. To us, the P/E premium of water over electric utilities is primarily a function of the scarcity of sizeable public water utility stocks and their low risk profile, though those factors do not explain the spike in water P/E premia over the last 12-15 months.
- **Sector consolidation:** The long-awaited privatization of the municipal water sector has finally begun, though municipal deals can take years to complete, not to mention that federal funding support for water infrastructure could potentially decelerate the sector consolidation. While sell-side EPS consensus expectations for water utilities never included municipal M&A, buy-side could have already embedded this driver in their projections, thus explaining the P/E expansion for the water sector over the last year or so. Large investor-owned water utilities, **AWK** and **WTR**, indicate that they have been working on numerous municipal water and wastewater system acquisitions, and new deal announcements could result in positive sell-side earnings revisions. That in turn could rebuild support for water P/Es, but we may first have to wait for clarity behind Trump's water infrastructure spending plan.

**Fig 2 Valuations of water utilities have continued to climb over the last three years despite largely unchanged earnings growth expectations for the group.**



Source: FactSet, Macquarie Capital (USA), January 2017

**Fig 3 The P/E premium for water vs. electric utilities has sharply expanded since bottoming in late 2016, again with no change in sell-side EPS growth expectations for either of the groups.**

| P/E @ $70.82 | | | 23.3x | 21.5x | 19.8x | |

Source: FactSet, Macquarie Capital (USA), January 2017

- **EPS growth**: We expect AWK to grow its EPS at a 7.9% CAGR between '16 and '19 with visibility into growth through at least '20. That's down from a ~12% EPS CAGR for '10-'15, but still faster than AWK's water peers, even if the premium EPS growth comes from contract-based rather than regulated operations. AWK's rate base is growing at a 5.6% between '16 and '19, which is just below the 6% average for the sector – the growth CAGR for AWK already reflects the growth associated with acquisitions of municipal water systems, but is same system for other water utilities.
- As the largest investor-owned water utility in the US, AWK has been most focused and most successful at acquisitions of municipal water and wastewater systems, adding ~55k customers in '16 (+1.7% YoY). Although the company is working on municipal deals which could add even 145k in customers, for now management seems reluctant to boost its long-term EPS growth CAGR on the back of the M&A. We are concerned that the pace of the privatization of municipal water systems could decelerate if the federal government were to provide low-cost funding to states (and thus municipalities) for water infrastructure upgrades.
- AWK's military base earnings could see some pick up if the Trump administration ends the military sequester though the timing of new awards of military contracts is difficult to gauge.
- AWK's '17 EPS guidance seemed a bit soft to us, but could be driven by the timing of the CA GRC (with new rates to come into effect in 2018) and the uncertainty over the closing of the Scranton wastewater acquisition (now closed). Then again, the 2018 could see another headwind from CA as a new, lower allowed ROE should be imposed on AWK's California subsidiary – our estimates are a drop in the allowed ROE from the current 9.99% to 9.2% starting 1/1/18.
- **DPS growth:** AWK's DPS growth should exceed the EPS growth, given the low dividend payout, but it's tough for us to expect the company to commit to it at this point given the upcoming corporate tax reform and the issue of normalization of deferred tax liabilities which could determine future cash flow generation of regulated utilities in the US.
- **Changes in earnings/TPs:** Our earnings estimates for AWK remain unchanged, but we lower our TP to US$80 from US$82 as we roll forward our valuation to 2019 (from 2018) and we lower our anchor PE multiple for water utilities to 22.4x down from 25x.

## **American States Water (AWR, US$43.66, Neutral, TP US$43):** Lower impending allowed ROE partially offset by market-based operations

**Fig 9 AWR: Abbreviated financial projections and trading multiples**

| | 2015 | 2016 | 2017 | 2018 | 2019 | 2016-2019 CAGR |
|---|---|---|---|---|---|---|
| **EPS (US$)** | **1.56** | **1.62** | **1.73** | **1.84** | **1.94** | **6.2%** |
| **DPS (US$)** | **0.87** | **0.91** | **0.96** | **1.01** | **1.06** | **5.0%** |
| Dividend payout | 56% | 56% | 55% | 55% | 55% | |
| Rate base (US$bn) | | 745 | 792 | 840 | 888 | 6.1% |
| EV/Rate base @ $43.66 | | | 1.97x | 1.90x | 1.80x | |
| P/E @ $43.66 | | | 25.4x | 23.9x | 22.5x | |

Source: FactSet, Macquarie Capital (USA), January 2017

- **EPS growth:** We expect a 6.2% ’17-’19 EPS CAGR from CWT, with no equity funding needs in the medium term. The company anticipates using its revolver to cover upcoming spending needs, but then would be more likely to pay it down with an issuance of long-term debt.
- On the regulatory front, a potentially contentious cost of capital proceeding is likely to start soon in CA, with filings due in late March. Also, an electric GRC is scheduled to be filed with the CPUC by the end of January.
- AWR is interested in municipal water sector acquisitions outside of CA (perhaps even in the East), but also acquisition of privately-owned water systems. We do not expect any material acquisitions by AWR while valuations for these smaller water systems remain at currently elevated levels, but would expect more activity here in the future. Also, we note that while we don’t see CA concentrated water utilities as particularly likely targets of M&A, should that change, AWR’s ~75,000 acre-feet of water rights could represent substantial value depending on the structure of the transaction.
- **DPS growth:** We expect CWT to grow its DPS at 5%, in line with its long-term goal of at least a 5% DPS CAGR.

## California Water Service Group (CWT, US$33.00, Neutral, TP US$32):
Capital investment opportunities abound, no need to look around

### Fig 10 CWR: Abbreviated financial projections and valuation multiples

| | 2015 | 2016 | 2017 | 2018 | 2019 | 2016-2019 CAGR |
|---|---|---|---|---|---|---|
| **EPS (US$)** | **0.94** | **0.95** | **1.29** | **1.40** | **1.45** | **15.0%** |
| **DPS (US$)** | **0.67** | **0.69** | **0.71** | **0.73** | **0.75** | **3%** |
| Dividend payout | 71% | 72% | 55% | 52% | 52% | |
| Regulatory rate base (US$bn) | 1,004 | 1,067 | 1,140 | 1,249 | 1,399 | 9.5% |
| EV/Rate base @ $33.00 | | | 1.98x | 1.98x | 1.76x | |
| P/E @ $33.00 | | | 25.5x | 23.6x | 22.8x | |

Source: FactSet, Macquarie Capital (USA), January 2017

- **EPS growth:** We expect CWT to grow its EPS/DPS at a 15.0%/3.0% CAGR between ’16 and ’19, although this due to a significant step-up in ’17 following the conclusion of its most recent rate case. From ’17-’19, we expect EPS growth to be closer to 5%, trailing potential rate base growth of 7-10%. We factor in anticipated equity needs, but acknowledge that a material reduction of the current allowed ROE would reduce our EPS estimates. The next cost of capital filing proceeding is likely to begin after the company’s required filing in March.
- Cal Water, CWT’s primary utility, has substantial capital spending opportunities ahead of it. The company was successful in reducing the replacement rate of its water mains from 300yrs down to 200yrs, but this still heavily lags its CA peers who are closer to 100yrs. Its wells are nearing the 50yr suggested life by the American Water Works Association (AWWA), and while this is not a hard and fast deadline, suggests another set of major capital spending (>US$2.5bn) which will be required over time.
- **DPS growth:** We expect CWT to grow its DPS at just a 3% CAGR between ’16 and ’19, as the company needs to fund its sharply increased capex using some external equity as well internally generated cash flows.

## **Aqua America (WTR, US$30.28, Neutral, TP US$32 down from US$35):** Rate case in PA, M&A overhang

**Fig 11 WTR: Abbreviated financial projections and valuation multiples**

| Dividend payout | 54.1% | 55.7% | 57.6% | 60.1% | 61.4% | |
| Regulatory rate base (US$bn) | 3.5 | 3.7 | 4.0 | 4.2 | 4.5 | 6.6% |
| EV/Rate base @ $30.28 | | | 1.88x | 1.78x | 1.75x | |
| P/E @ $30.28 | | | 22.1x | 21.3x | 20.4x | |

Source: FactSet, Macquarie Capital (USA), January 2017

- **EPS growth:** We expect WTR to grow its EPS at a 4.1% CAGR between '16 and '19. The EPS CAGR should trail WTR's same-system rate base CAGR of 6.6%, we estimate, as WTR over-earns its allowed ROE in PA, where close to 70% of its rate base is located. We expect WTR to file for a DSIC mechanism in PA in late '17 and a general rate case in '18 – the rate case should coincide with a federal corporate tax reform and new rates are likely to reflect a real corporate tax expense. In preparation for the PA rate case, the company has sharply boosted its capital spending as updated on the 2017 earnings call held today (1/17/17).
- The current overearning of the allowed ROE by Aqua Pennsylvania is driven by a flow through tax accounting for repair cost deductions in the state. Qualified repair capex (as opposed to improvements) is expensed for tax purposes in the year it was incurred rather than capitalized and depreciated over the life of an asset. As a result, WTR's effective tax rate in PA is sharply below its statutory level which is reflected in the water rates Aqua Pennsylvania collects. And while WTR is not the only utility in our universe benefitting from this tax treatment (with California utilities also using the flow through tax accounting for repair costs), this is the only instance where the utility has been allowed to keep the benefit and is not required to file a rate case in a specified time frame to true up its rates. WTR points out that its rates in PA remained flat thanks to the tax change, but we argue that they should have dropped, otherwise Aqua PA would not be earning in excess of its allowed ROE. We are concerned about the treatment of this very large tax benefit during the upcoming rate case in PA, even if we recognize that a claw back of the benefit could be considered a retroactive ratemaking.
- On the M&A front, WTR remains excited on potential municipal water deals, and its appetite for gas/electric utility deals seems to have subsided, which could be just a function of the poor performance of WTR's stock relative to its water peers since the gas/electric M&A possibility was first disclosed.
- **DPS growth:** We expect WTR to grow its dividends ahead of its EPS growth rate – at a 7.8% CAGR through '19 – given WTR's strong balance sheet and cash flows even if by 2019 the dividend payout should exceed 61%, just above the 55-60% payout typically targeted by water utilities. Given WTR's sizeable NOL position, we do not expect its cash flows to benefit from changes in the corporate tax code, including expensing of capex at a 100% rate.
- **Earnings/TP changes:** We have lowered our earnings estimates for WTR to reflect the higher level of spending and an upcoming rate case in PA whose outcome is hard for us to determine. Our new '17/'18/'19 EPS estimates are US$1.37/1.42/1.49 down from US$1.38/1.45/1.52, respectively. We lower our TP to US$32 (from US$35) on the back of lower estimates and as we roll forward our valuation to 2019 (from 2018) and lower our anchor PE multiple for water utilities to 22.4x from 25x.

# American States Water

## A good water utility but fully valued

### Initiating with Neutral, US$43 target price

Rate base growth of ~5-6% is roughly in line with peers and a lower than average allowed ROE of 9.43% for its regulated water utility operations will likely see a decline following an imminent cost of capital proceeding. The utility currently has been enjoying a 55% equity layer vs. peers closer at 53.4%, and has both an electric utility with a higher allowed ROE and non-regulated 50yr military contracts, which should allow AWR to earn above the water ROE assigned to it by the CPUC. Having seen AWK's success with its market-based operations managing water and wastewater systems on 12 military bases around the U.S., we are optimistic about AWR's fundamentals given an earnings mix that has reached 20% non-regulated as of '16. Whether or not investors are fully recognizing the appeal of AWR's operations and growth potential relative to peers, sentiment for the group overall has pushed valuations to near 10yr highs. We initiate coverage at Neutral, with a US$43 TP.

### A clear stream of revenues but with ebbs and flows

California has suffered from significant droughts in the past and is expected to continue to. However, unlike most other states, CA has allowed for revenues and water sales volumes to be decoupled, which protected AWR's water utility when conservation orders resulted in a >25% decline in water usage. While the company's P&L is not impacted by volumes, cash recovery can stretch out over 12-18mo or potentially longer. An advantage of this system from a ratepayer perspective has been that the cash shortfall has typically been paid down more by heavy users, as rates are tiered and rise with consumption.

### Not too slow but steady in the long run

We expect AWR to grow its EPS/DPS both by ~5%-6% from '16-'19, roughly in line with its stated LT DPS CAGR and regulated peers overall. The downside risk comes mostly from a reduction to its current water allowed ROE of 9.43% and equity layer of 55%, while in the longer term it could outperform peers via its market-based operations. Looking ahead only to the next few years, we note that the current 55% payout ratio was highlighted by management as a potential way to augment DPS growth, a sign that significantly higher EPS growth is not to be expected, we believe. Our initial '16/'17/'18/'19 EPS estimates are US$1.62/1.72/1.82/1.94, vs. consensus of US$1.64/1.73/1.84/*N/A*.

### Valuation

High visibility into earnings, revenue decoupling and non-regulated operations with long-term government contracts are certainly appealing. A ~5-6% EPS/DPS CAGR is merely in line with peers, however. Based on scarcity of investable water utilities and excellent visibility into long-term growth, the historical 40% premium for water names over electrics still seems appropriate to us. Starting from our regulated electric FY3 P/E of 16.0x, we reach a FY3 water P/E of 22.4x. When combined with our '19 EPS estimate of US$1.94, we initiate coverage with a US$43 TP and a Neutral rating.

## Inside

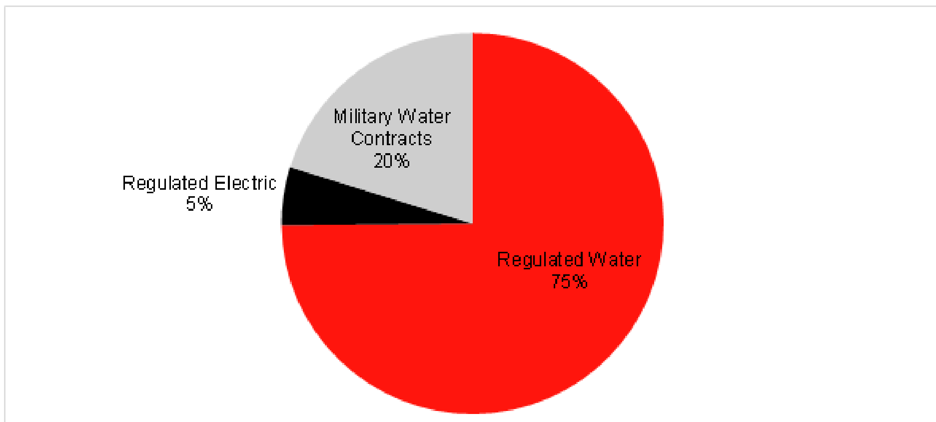
# American States Water Company

## Company profile

American States Water Company (AWR US) operates two primary subsidiaries:

- **Golden State Water Co. (GSWC)** operates 39 water systems, serving ~260k customers across 75 cities in 10 counties in CA, as well as providing electricity to ~24k customers in several San Bernardino County mountain communities in CA through its subsidiary, Bear Valley Electric Service.
- **American States Utility Services, Inc. (ASUS)**, headquartered in VA, operates and maintains water and wastewater systems under 50-year contracts at several U.S. government military bases in FL, MD, NC, NM, SC, TX and VA.

**Fig 1 AWR's non-regulated net income now makes up 20% of its total as of '16, and could offer the opportunity to exceed the ROEs of its regulated businesses**



Source: Company disclosures, Macquarie Capital (USA), January 2017

**Fig 2 AWR US vs S&P 500, & rec history**

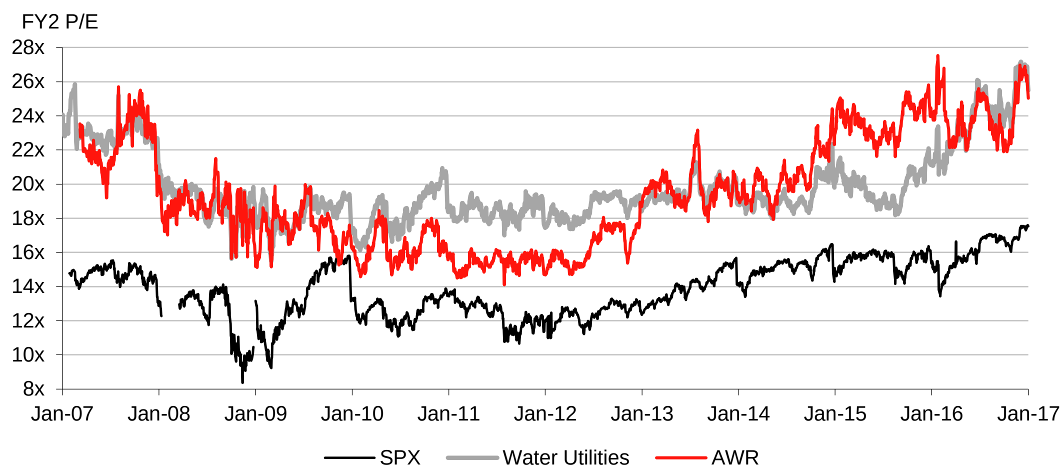
# A good water utility but fully valued

## Initiating with Neutral, US$43 target price

***We like AWR's fundamentals and business prospects, but would encourage investors to look for a more attractive entry point.***

AWR combines the attractive aspects, namely the transparency, LT visibility and revenue decoupling of its sole regulated jurisdiction of California, with a portfolio of 50-year contracts on U.S. military bases. Having seen AWK's success with its market-based operations managing water and wastewater systems on 12 military bases around the U.S., we are optimistic about AWR's fundamentals given an earnings mix that has reached 20% non-regulated as of '16. The result is a regulated water utility with reduced sensitivity to droughts/conservation, and an opportunity to exceed its authorized ROE via its non-regulated businesses. The drawbacks are vigilant and formidable adversaries in the form of the CPUC's Office of Ratepayer Advocates (ORA) and The Utility Reform Network (TURN), as well as the potential limitation or removal of decoupling during or immediately followed by another drought, and a cost of capital proceeding that could take place while equity valuations are stretched and bond yields have not yet reached their next plateau. We note that following post-election mentions of both water infrastructure investment and increased defense spending, AWR rose 2.5 turns on its FY3 P/E vs. an average of 1 turn for its water peers, and is within ~10% of its 10-year max P/E for both FY2/FY3.

**Fig 3 Even after the recent pullback, AWR is near its highest valuation in a decade**



Source: FactSet, Macquarie Capital (USA), January 2017

**Fig 4 AWR: Financial metrics (Note: CPUC has not decided the '18/'19 cost of capital and equity ratio yet)**

# Valuation, recommendation, risks

High visibility into earnings, revenue decoupling, and non-regulated operations with long-term government contracts are certainly appealing. A ~5%-6% EPS/DPS CAGR is merely in line with peers, however. AWR currently trades at FY2/FY3 P/E ratios which are >90% of its 10-year max valuations, although its peers do as well. Based on scarcity of investable water utilities, as well as excellent visibility into long-term growth, the historical 40% premium for water names over electrics still seems appropriate to us. We are wary of the upcoming cost of capital proceeding, which is due to commence after a filing due in March. Whether or not investors are fully recognizing the appeal of AWR's operations and growth potential relative to peers, sentiment for the group overall has pushed valuations to near 10yr highs.

***Wait for water utilities to re-price before buying.***

Starting from our regulated electric FY3 P/E of 16.0x, we reach a FY3 water P/E of 22.4x. Combined with our '19 EPS estimate of US$1.94, we initiate coverage with a US$43 TP and a Neutral rating.

# Enviable regulatory mechanisms

## A clear stream of revenues but with ebbs and flow

California has suffered from significant droughts in the past and is expected to continue to. However, unlike most other states, CA has allowed for revenues and water sales volumes to be decoupled, which protected AWR's water utility when conservation orders resulted in a >25% decline in water usage. While on the positive side, the company's P&L is not impacted by volumes, cash recovery can stretch out over 12-18mo or potentially longer. This has led to an interesting outcome for ratepayers however, where the heaviest consumers see their rates rise according to their level of usage and therefore ends up with those who choose to consume the most subsidizing what otherwise would have been essentially fixed cost increases on the lowest users.

## Not too slow but steady in the long run

***AWR's earnings are more likely to see plateaus and step-ups as opposed to the relatively smoothly increasing regulatory asset base.***

We expect AWR to grow its EPS/DPS both by ~5-6% from '16-'19, in line with its stated LT DPS CAGR and regulated peers overall. The company has been enjoying a higher than average equity layer, 55% vs. peers at 53.4%, which could potentially be reduced along with its current 9.43% allowed ROE. A cost of capital filing is due in March, with the proceedings likely to commence soon thereafter. We note that the current 55% payout ratio was highlighted by management as a potential way to augment DPS growth, a sign that significantly higher EPS growth is not to be expected in the near-term, we believe. We expect the company's market-based operations to continue to play a bigger role in the earnings mix over time, potentially affording the opportunity to consistently out earn its allowed water ROE overall.

While we would expect that the company's regulated earnings growth should track its rate base growth over the longer term, we are also pleased to see management's focus on a LT DPS CAGR, currently 'at least 5%'. Our initial '16/'17/'18/'19 EPS estimates are US$1.62/1.73/1.84/1.94, vs. consensus of US$1.64/1.73/1.84/N/A.

**Fig 7 Rate base: GSWC's most recent GRC approved a water rate base of ~US$700m 2016, as well as annual capex of ~US$90m. An electric GRC is due this month.**

# California Water Service Group

## Welcome to the Hotel California

### Initiating with Neutral, US$32 target price

Rate base growth of ~6% appears well supported by extensive capital investment needs within existing service territories, which should provide matching EPS/DPS growth over the longer term. An upcoming cost of capital proceeding is likely to result in a reduction to the 9.43% ROE which Cal Water has been earning since ’13, and so EPS growth should trail rate base growth in the near term, we believe. We like the pure play regulated water business in general and regard California as an average regulatory jurisdiction with some unique but offsetting features. Although allowed ROEs are lower than throughout most of the rest of the country, triennial rate cases and revenue decoupling provides some balance to the less favourable upfront economics. CWT has benefitted considerably from revenue decoupling in CA, allowing it to promote conservation and withstand significant volume declines while still eventually collecting its revenue requirements. CWT offers water utility investors ~5-6%/3% EPS/DPS CAGRs for ’17-’19, in line with its peer averages of ~5-6%, but isn’t reliant on acquisitions or non-regulated operations, affording it higher than average visibility in a space which already offers plenty to begin with. Using a Water sector FY3 P/E multiple of 22.4x (40% premium to regulated electrics), we initiate coverage of CWT with a US$32 TP and Neutral rating.

### Single jurisdiction concentration more a blessing than a curse

Despite operating in four states, CWT’s business is 98% regulated and 94% CA-focused, making the company for all intents and purposes a completely regulated California water utility. While this leads to high regulatory visibility, it also means that the operations in HI, NM, and WA are not sizable enough to cause the weighted authorized ROE to differ from the 9.43% adopted in CA. With Cal Water’s most recent rate case (covering ’17-’19) just completed in Dec ’16, ‘18/’19 earnings are heavily dependent on the outcome of what appears to be a likely fully litigated upcoming cost of capital proceeding for ’18-‘20, due to commence in late March.

### Like many of its customers, CWT prefers organic

Cal Water has just advanced from a 300yr water main replacement cycle down to 200 years (with a ~50% increase in annual capex), and yet it still lags other CA water utilities who are replacing mains at nearly double that rate. While we see an attractive opportunity for many water utilities to grow their rate base via acquisitions of municipal systems, Cal Water stands out as having a particularly significant level of capital investment needed, with the rate base per customer being significantly below average for investor-owned water utilities in the US. We agree with management’s assessment that focusing on its existing footprint is best.

### Valuation

Our US$32 TP is based on our ’19 EPS estimate of US$1.45 and a P/E multiple of 22.4x (a 40% premium to our FY3 regulated electric multiple of 16.0x). We like the fundamentals, but struggle with paying up for the stock when it is trading at ~90% of its highest P/E in 10 years, even after selling off somewhat in recent days. We encourage investors considering water utilities to wait for a more attractive entry point. We initiate coverage with a Neutral rating.

## Inside

# California Water Service Group

## Company profile

- California Water Service Group (CWT US) provides water and wastewater services on a regulated basis in CA, HI, NM, and WA, as well as non-regulated utility services businesses in CA and HI.
- Third-largest publicly traded water utility (after AWK and WTR).
- >2m customers, >6,000mi of mains, 1,130 wells, 662 storage tanks, 6 surface water treatment plants, 10 wastewater treatment plants.
- General corporate rating of A+ stable from S&P.

**Fig 1 CWT's business3yr trailing revenues are 98% regulated, and despite operating in four states, highly concentrated, with 94% in California**

# Welcome to the Hotel California

## Initiating with Neutral, US$32 target price

***CA is a somewhat favourable jurisdiction to be a water utility at the moment. We continue to prefer a healthy level of acquisition-driven growth to augment organic capex.***

We like the pure play regulated water business in general and regard California as currently one of the friendliest jurisdictions for water utilities, although an upcoming cost of capital proceeding may test that view. CWT benefits from revenue decoupling in CA, allowing it to promote conservation and withstand significant volume declines while still eventually collecting its revenue requirements. CWT offers water utility investors 15%/3% EPS/DPS CAGRs for ’16-’19, due to a large step-up in ’17 following the conclusion of its latest rate case. After accounting for that jump, EPS growth is more in line with peers’ average of ~5-6%. Following several years of drought, CWT has shown the effectiveness of its WRAM mechanism and stands to benefit from significant investment needs in the state in order to improve the existing infrastructure’s efficiency and to prevent water from being wasted. The trade-offs however, are a lack of interest in pursuing municipal acquisitions at a time when its peers are doing so, very capable and potentially aggressive consumer advocates, and pushback from Californians (although the CPUC is not subject to Prop 218) about tiered rates, particularly during the next drought.

CWT stands to benefit from significant investment needs in the state in order to improve the existing infrastructure’s efficiency and to prevent water from being wasted. So long as there continue to be ample opportunities to expand the existing footprint’s rate base, we understand management’s preference for internal growth instead of municipal acquisitions. We expect Cal Water’s 9.43% allowed ROE to fall as a result of the impending cost of capital proceeding, which is due to commence following the company’s required filing in March.

We note the significant run-up and then partial reversal in Water utilities since the Nov ’16 election, where investing in water infrastructure was mentioned in the President-elect’s speech. While we like CWT’s fundamentals, we believe sentiment is overly optimistic at the moment, and therefore encourage investors to wait for a more attractive entry point.

**Fig 3 CWT: Financial metrics (Note: the ‘18/’19 cost of capital and equity ratio are dependent on the CPUC review)**

| | 2015A | 2016 | 2017 | 2018 | 2019 | 3yr CAGR |

# Valuation, recommendation, risks

***Wait for water utilities to re-price before buying.***

## Water utilities tend to be pricey, but its best to hold back right now

Our US$32 TP is based on a ’19 EPS estimate of US$1.45 and a P/E multiple of 22.4x (a 40% premium to our FY3 regulated electric multiple of 16.0x). We like the company’s fundamentals, but struggle with paying up for the stock when it is trading at ~90% of its highest P/E in 10 years, even after selling off somewhat in recent days. We encourage investors considering water utilities to wait for a more attractive entry point. We initiate coverage with a Neutral rating. We note the significant run up and then partial reversal in Water utilities following President-elect Trump’s acceptance speech during the Nov ’16 election. Specific mention was made of investing in water infrastructure, with a nod towards avoiding another Flint-like incident.

***We view CA as an average regulatory jurisdiction for water utilities at the moment***

# California dreaming for water utilities

## Single jurisdiction concentration more a blessing than a curse

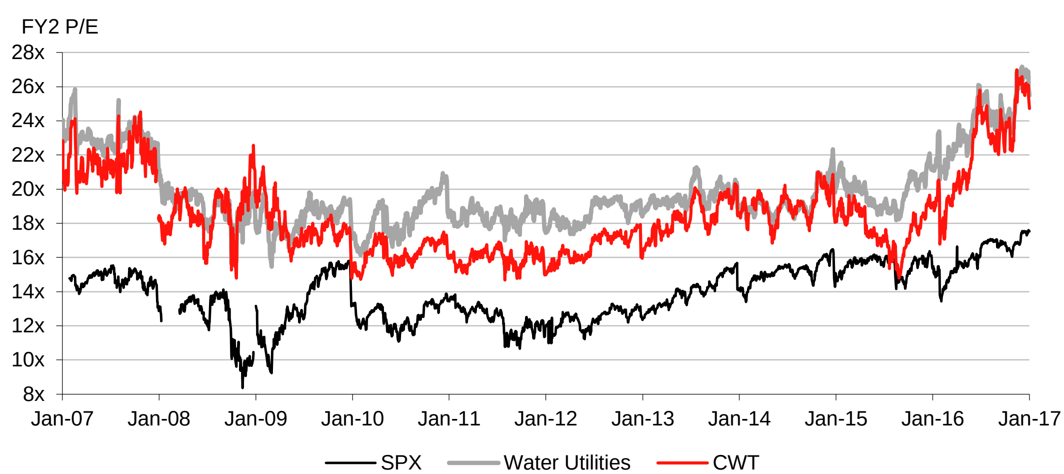
Despite operating in four states, CWT's business is 98% regulated and 94% CA-focused, making the company essentially a completely regulated California water utility. This results in a high level of regulatory visibility, and at least as far as decoupling and Tier 1 Advice Letters are concerned, an at least average regulatory backdrop when compared to other jurisdictions in the US, albeit with among the lowest authorized ROEs for water utilities. Pennsylvania still remains our favourite jurisdiction due to its pro-consolidation legislation.

The Water Revenue Adjustment Mechanism (WRAM) created a formal separation between sales volumes and revenues, and has proven its value during the most recent heavy drought. Revenue decoupling was authorized by the CPUC in 2008 to further promote water conservation. Forward-looking test years for highly transparent three-year general rate cases and a multitude of tracking mechanisms are slightly offset however, by active interveners and aggressive consumer advocates in the form of the CPUC's Office of Ratepayer Advocates (ORA), and The Utility Reform Network (TURN).

Although the company has operations in Hawaii, New Mexico, and Washington state, even when aggregated they are not sizable enough to cause CWT's consolidated, weighted authorized ROE to differ from the 9.43% assigned to Cal Water by the CPUC effective 2013. This is important because after three annual extensions, Cal Water is due for another Cost of Capital review by March 31, 2017. In Dec '16, Cal Water and three other large CA water utilities jointly filed a request with the CPUC for another extension. The Office of Ratepayer Advocates (ORA) was quite pointed in its reply, suggesting that the recently concluded triennial General Rate Case process already addressed the issues and proceedings which the joint parties cited as the reasons for requesting another extension.

We expect the 2017 cost of capital proceeding to occur as scheduled, and are hopeful that the decline in allowed the ROE will not be significant, although we a reduction of some sort is fairly certain, we believe. While the cost of debt is the most straightforward element in the cost of capital, we note that the ORA mentioned equity market returns and how they might tie in to an appropriate ROE. While we offer no comment on general market valuations, we note that water utilities have recently touched their highest valuations in the last 10 years.

**Fig 6 Water utilities have recently hit their highest valuation in a decade**



Source: FactSet, Macquarie Capital (USA), January 2017

# Like its customers, CWT prefers organic

## Investing in its existing footprint is the primary growth strategy

For most water utilities, we are most excited about the opportunities for industry consolidation, as <20% of water systems are investor owned vs. nearly ~70% of electric utilities, by customer base. However, Cal Water has just advanced from a 300yr water main replacement cycle down to 200 years, and yet it still lags other CA water utilities who are replacing mains at nearly double that rate. The company has significant capital spending opportunities available, and therefore is unlikely to participate in these municipal acquisitions or other M&A in a meaningful way, we believe.

We certainly do not disagree that Cal Water has plenty of investment opportunities available to it, but we hope that CWT remains open to expanding into higher earning jurisdictions, should the reduction to its allowed ROE put it at a disadvantage to peers in terms of EPS growth. If acquisitions were pursued, we would be more supportive of non-CA growth to help offset the current effectively single jurisdiction exposure. Triennial rate cases with forward test years are nice to have, but the appeal can quickly fade if a subsequent ROE review, like the imminent 2017 Cost of Capital proceeding, were to change the return profile of that hard sought rate base growth.

**Fig 7 Cal Water's Rate Base could grow at a high single digit CAGR (7-9%) through 2019, depending on the outcome of its anticipated Advice Letter filings**

In preparing this research, we did not take into account your investment objectives, financial situation or particular needs. Macquarie salespeople, traders and other professionals may provide oral or written market commentary or trading strategies to our clients that reflect opinions which are contrary to the opinions expressed in this research. Macquarie Research produces a variety of research products including, but not limited to, fundamental analysis, macro-economic analysis, quantitative analysis, and trade ideas. Recommendations contained in one type of research product may differ from recommendations contained in other types of research, whether as a result of differing time horizons, methodologies, or otherwise. Before making an investment decision on the basis of this research, you need to consider, with or without the assistance of an adviser, whether the advice is appropriate in light of your particular investment needs, objectives and financial circumstances. There are risks involved in securities trading. The price of securities can and does fluctuate, and an individual security may even become valueless. International investors are reminded of the additional risks inherent in international investments, such as currency fluctuations and international stock market or economic conditions, which may adversely affect the value of the investment. This research is based on information obtained from sources believed to be reliable but we do not make any representation or warranty that it is accurate, complete or up to date. We accept no obligation to correct or update the information or opinions in it. Opinions expressed are subject to change without notice. No member of the Macquarie Group accepts any liability whatsoever for any direct, indirect, consequential or other loss arising from any use of this research and/or further communication in relation to this research. Clients should contact analysts at, and execute transactions through, a Macquarie Group entity in their home jurisdiction unless governing law permits otherwise. The date and timestamp for above share price and market cap is the closed price of the price date. #CLOSE is the final price at which the security is traded in the relevant exchange on the date indicated.

# US Utilities

## Weekly snapshot

- 2016 on-peak spark spreads in New England and PJM have sharply compressed since the beginning of the year and scheduled major maintenance has capped run times of **DYN**'s combined cycle gas plants. That together with limited hedges and restructuring of coal contracts should weigh on **DYN**'s 2016 earnings. Without hedges, no power plant is protected from lower power prices, not even a gas plant. We have lowered our estimates for **DYN** to reflect lower spark spreads implied from forward power and gas curves, but we reiterate our Outperform rating driven by **DYN**'s strong FCF yields.
- **BEP** is in its element right now as a deep value buyer of renewable assets, with many potential acquisitions and the financial backing to execute. **TERP** offers **BEP** asset diversification via solar PV, but also improves **BEP**'s perceived riskiness by increasing the proportion of US domiciled assets. We reiterate our Outperform rating on **BEP** and have raised our TP to US$33 from US$30.
- We provide a monthly update to Macquarie's quant team's multi-factor stock selection model for US utilities (link to Feb 16 report for details/background). The current ranking of Alpha scores has slightly shifted from mid-sized electric utilities to larger-cap stocks, generally preferring those with cheap PE multiples, strong growth, improving analyst sentiment, and high quality scores. The lowest-ranked stocks have expensive valuations, negative momentum, low quality scores, and high risks. YTD, the model has shifted its tilt toward the capital and momentum factors, and away from valuation. Nevertheless, the model's combined weight of value and growth is still staggering at 41%. Fundamentally, we strongly prefer growth (of DPS in particular) over high current yields (link to fundamental report).
- **ABY**, **AES**, **AWK**, **BEP**, **CNP**, **D**, **DUK**, **DYN**, **ENOC**, **ETR**, **GPP**, **HE**, **HIFR**, **LNT**, **PEGI**, **POR**, **TLN**, **WTR**, and **XEL** reported earnings last week. Details and updated estimates starting on page 4.
- The S&P 500 rose 0.4% last week, while utilities underperformed. YieldCos slipped (-0.2%), followed by Regulateds (-2.6%), Diversifieds (-3.3%), Water names (-3.7%), and finally IPPs (-4.9%). The 10yrT yield finished the week at 1.59% (+13bps). Electricity demand rose 3.2% YoY last week (down 1.6% YTD).

**Performance for the week ended August 5, 2016**

*Companies mentioned:*

# The week in review: 1 Aug – 5 Aug 2016

***US utilities***

## US utilities – Graphing is where we draw the line

We provide a monthly update to Macquarie's quant team's multi-factor stock selection model for US utilities (link to Feb 16 report for details/background).

The current ranking of Alpha scores has slightly shifted from mid-sized electric utilities to larger-cap stocks, generally preferring those with cheap PE multiples, strong growth, improving analyst sentiment, and high quality scores. The lowest-ranked stocks have expensive valuations, negative momentum, low quality scores, and high risks. YTD, the model has shifted its tilt toward the capital and momentum factors, and away from valuation. Nevertheless, the model's combined weight of value and growth is still staggering at 41%. Fundamentally, we strongly prefer growth (of DPS in particular) over high current yields (link to our fundamental report).

Please see our flyer, Graphing is where we draw the line (5 Aug)

***ABY***

## Atlantica Yield (Neutral) – Dividend is (sort of) back, raising TP

ABY has reinstated a partial quarterly dividend of US$0.145, representing an unencumbered portion of CAFD, which its board of directors deems to be prudent in light of ongoing negotiations for waivers related to cross default and change of ownership provisions. While Mojave has been performing relatively in line with expectations, ongoing difficulties with Solana are not expected to be resolved until 2017, and even then we are not yet convinced. We lower our '16/'17/'18 adj EBITDA estimates to US$736m/691m/701m from US$780m/770m/774m, while leaving our '17/'18 DPS estimates steady at US$2.10. With the reinstatement of the dividend, we resume a terminal growth forecast for ABY and increase our TP to US$19 from US$16.

ABY reported 2Q16 EBITDA of US$217m, slightly ahead of the consensus estimate of US$214m, but below our estimate of US$226m.

Weekly snapshot only (8 Aug)

***AES***

## AES Corp (Outperform) – No surprises, for once

With the recent announcement of the Sul divestiture in Brazil. AES has already exceeded its 2016 annual goal to sell up to US$200-300m of assets. Management now expects more than US$540m in asset sale proceeds this year. AES prepaid US$300m in parent debt, ahead of its prior 2016 target of US$200m. The Maritza plant in Bulgaria continues to receive timely payments from its power offtaker. In OH, AES is encouraged by the PUCO support for the credit standing of the parent of other OH regulated utilities, FirstEnergy, and hopes its pending ESP results in a constructive resolution.

The recent improvement in FX and the economy in Brazil has not had a material effect on AES's businesses in the country. The recent weakening of the British pound has been mitigated by FX hedges.

AES reported 2Q16 adjusted EPS of US$1.17, beating consensus of US$1.16 and our estimate of US$1.14. Management reiterated the US$0.95-1.05 2016 EPS guidance and indicated that the EPS CAGR in '17 and '18 should be close to the high end of the 12-16% range thanks to new generation assets and cost cutting measures. Management also reaffirmed its expectations of a 10%+ CAGR in AES's FCF for 2017 and 2018.

We have increased our EPS expectations for AES to reflect additional cost efficiencies and a lower parent-level drag due to the debt paydown. Our new '17/'18/'19 EPS estimates are US$1.14/1.30/1.38 up from US$1.10/1.27/1.37, respectively. Our US$14 TP remains unchanged and we reiterate our Outperform rating.

Weekly snapshot only (8 Aug)

## *AWK* American Water Works (Outperform) – Expensive, but worth it

AWK's current regulated capex spend is at a 125 year asset replacement rate. While the capex could be accelerated (to reach at least a 100 year rate), the company does not want to see annual increases in its water bills in excess of ~2.5% unless specifically agreed to with state regulators. Unlike its peers, AWK sees no need to diversify away from water-driven businesses for growth. Management seems to understand that AWK's high market valuation is at least partly driven by a scarcity premium associated with few sizeable public water utilities in the US.

AWK reported 2Q16 EPS of US$0.77, ahead of our/consensus estimates of US$0.72/US$0.73, and reaffirmed '16 EPS guidance of US$2.75-2.85.

Weekly snapshot only (8 Aug)

## *BEP* Brookfield Renewable (Outperform) – Deals as far as the eye can see

BEP is in its element at the moment as a deep value buyer of renewable power assets looking out at a world of potential acquisitions at arguably dirt cheap prices, so long as power prices rebound from current levels. The company sees prices in some markets as being low enough that it can forgo the safety of a PPA and purchase merchant assets where power prices are already at or near a floor. We hesitate to get excited about chasing merchant assets given current power market conditions, however, we recognize BE P's successful track record of doing exactly that. We agree with management's views of short-term wholesale prices being too low, traditional power supply in developed markets being under policy pressure, and supply in developing markets being tight due to economic growth.

BEP reported adjusted EBITDA of US$377m, well below consensus/us at US$463m/491m, respectively.

Please see our flyer, *Deals as far as the eye can see* (8 Aug)

## *CNP* CenterPoint Energy (Neutral) – One review down, one to go

We've always been skeptical of CNP's ability to create value by converting some or all of its utilities to a REIT/up-REIT, and now that option is officially out of the picture. A potential sale or spinoff of CNP's stake in ENBL is increasingly in focus, with the company disclosing on Friday that it had sent OGE a 30-day ROFO in late July. CNP again promised to provide an update on its plans for ENBL by the end of '16. While a sale is certainly possible, cash proceeds would likely be modest given a cash tax liability that we estimate at ~US$1.5bn vs the US$3bn market value of CNP's 55% stake. Still, management (and many investors) would prefer to eliminate the commodity exposure and its impact on the volatility of earnings/cashflows. On valuation, CNP is beginning to look more attractive as we calculate that utilities + parent (75-80% of '16 EPS) trade at a ~7% PE discount vs peers on '18 EPS compared to a modest premium historically. We do see a modest discount as appropriate given that LT EPS/DPS growth guidance lags peers (4-6% vs ~6%).

CNP reported 2Q16 adjusted EPS of US$0.17, below both us/consensus at US$0.22/US$0.20, but reaffirmed '16 guidance of US$1.12-1.20.

Weekly snapshot only (8 Aug)

## *CPN* Calpine Corp (Outperform) – Disappointing power prices this summer

Every conventional power generator, regardless of the fuel source, generates most of its earnings during summer peak hours. Calpine is no different, even if its plants benefit from low natural gas prices. While CPN's updated 2016 EBITDA/FCF guidance is in line with our expectations, we are concerned about dismal cash power prices this summer in light of strong power demand in ERCOT and PJM. While wind is often blamed for weak power prices in TX, even during days when wind power accounted for less than 2% of total supply, spot power prices have been clearing at very low levels. In PJM, unplanned outages of power plants seem sharply down, likely thanks to capacity performance requirements, and even during very high loads, power prices have not been responding. We recognize CPN's strong and consistent FCFs even in this challenging power price environment, but we are struggling to see what could lift CPN's profitability in the near term, besides natural gas prices.

CPN reported 2Q16 adjusted EBITDA of US$452m vs. consensus of US$408m, however, its 2016 EBITDA guidance came down to US$1,800-1,900m down from US$1,800-1,950m.

Please see our flyer, *Disappointing power prices this summer* (1 Aug)

## *D* Dominion Resources (Outperform) – Weak power prices in New England vs. incremental solar investments

D's merchant nuclear plant in CT, Millstone, remains almost fully unhedged beyond 2017 as D awaits an improvement in regional gas prices and thus power prices. Any legislative support for the nuclear plant in CT could support its results, though only in 2018 or beyond as the latest legislative session in the state has recently concluded. Management expects a recovery in power prices in New England following this summer as the excess gas storage should get absorbed, which in turn could boost the New England gas basis. Then again, the basis is likely to recover only by the winter, we believe, and by then D will likely be hedged. Therefore our estimates reflect currently observable forward power prices in New England. That in turn means, however, no growth in EPS between 2016 and 2017 even if D is successful at adding an additional US$0.10-0.15 in EPS from investments in new solar farms.

The weakness in 2017 earnings for D seems well understood by investors at this point, even if sell-side consensus estimates still need to come down a bit. We were disappointed that management does not plan to provide its 2017 and 2018 EPS guidance at the same time (in 1Q17). Our bullish stance on the story is predicated on a sharp earnings and cash flow pick up 2018 and 2019 driven by the Cove Point expansion and the Atlantic Coast pipeline. We are willing to overlook the weakness in 2017 results, but would prefer to get some quantification of the upside 2018 and 2019 should offer.

D reported 2Q16 adjusted EPS of US$0.71, ahead of consensus of US$0.70 and our estimate of US$0.69, despite mild weather and higher storm restoration costs being partly offset by lower operating expenses. We have updated our earnings estimates to reflect lower forward power prices in New England and no power hedges, a higher share count, and earnings offset from more solar investments. Our new '16/'17/'18/'19 EPS estimates are US$3.77/3.73/4.35/4.65 down from US$3.78/3.75/4.39/4.69, respectively. Our TP and rating remain unchanged.

Weekly snapshot only (8 Aug)

## *DUK* Duke Energy (Neutral) – Awaiting sale of Latin American Generation and closing of Piedmont Gas acquisitions

DUK's sale of its merchant power plants in Latin America is progressing and the company expects the transaction to conclude by the end of the year. Thanks to DUK's NOL position, a likely taxable gain on the deal should not result in a tax leakage, at least not at this point. DUK's acquisition of Piedmont Gas is also advancing, and management hopes to close both transactions by the end of the year.

DUK reported 2Q16 adjusted EPS of US$1.07, easily beating consensus of US$1.02 and us at US$0.99. The beat came on cost cutting initiatives and higher than expected regulated rates and riders. Management reiterated its 2016 EPS guidance of US$4.50-4.70 and 4-6% EPS growth. Our estimates, TP and our Neutral rating on DUK remain unchanged.

Weekly snapshot only (8 Aug)

## *DYN* Dynegy (Outperform) - Gas plants are not immune from low power prices

2016 on-peak spark spreads in New England and PJM have sharply compressed since the beginning of the year and scheduled major maintenance has capped run times of DYN's combined cycle gas plants. That together with limited hedges and restructuring of coal contracts should weigh on DYN's 2016 earnings. Without hedges, no power plant is protected from lower power prices, not even a gas plant. We have lowered our estimates for DYN to reflect lower spark spreads implied from forward power and gas curves, but we reiterate our Outperform rating driven by DYN's strong FCF yields.

Please see our flyer, *Gas plants are not immune from low power prices* (8 Aug)

## *ENOC* EnerNOC (Neutral) – Careful what you wish for

Over the past few years, ENOC has been rebranding itself as a software company rather than one offering an alternative to power plants – a wise strategy given a major valuation disparity and uncertainty around the outlook for the demand response market. However, stocks of software companies are extremely volatile, and investors can be unforgiving of a challenging quarter, as ENOC saw last week after posting 2Q16 results that beat expectations but saw softness in the Software segment (ENOC fell 25% vs a flat S&P 500).

The next couple of years will be bumpy for DR, and while ENOC should do better than its competition and gain market share, it will be doing so in a market which is shrinking overall. The Software segment is now focused only on enterprise customers, a move which management hopes will increase software subscription ARR. All eyes are focused on 2H16 as investors look to see how the strategy shift is progressing and whether ENOC will need to tweak it by scaling back investment. With higher PJM revenues in ’16, followed by a drop in ’17, our revised ‘16/’17/’18 EPS estimates are US$-2.80/-2.44/-0.87 vs US$-3.03/-1.68/-0.90 previously. We reiterate Neutral.

ENOC reported 2Q16 of US$0.00, ahead of our/consensus estimates of US$-0.16/US$-0.28, and raised ’16 guidance at both the low and high end by $0.30, with a new midpoint of US$-2.78 vs. US$-3.08 previously.

Weekly snapshot only (8 Aug)

## *ETR* Entergy (Neutral) – Strong industrial sales, large 2Q16 tax benefit, pending negotitiations for Pilgrim nuke

ETR’s industrial electric sales were up 7.2% YoY, governmental up 1.8%, but residential and commercial volumes were down 0.6% on a weather-adjusted basis. Management does not expect the pace of the industrial sales growth to be sustainable in 2H16 due to seasonality of some industries, refining in particular. On the EWC side, by the end of August, management hopes to conclude the pending sale negotiations with Exelon for the Fitzpatrick nuclear plant in upstate NY.

ETR plans to provide an update on its nuclear sustainability plan focused on its rate based nuclear units and potential mitigation mechanisms. We’d expect the plan to initially weigh on ETR’s regulated utility results, though future regulatory recovery of the capex and/or expenses seems likely.

ETR reported 2Q16 operating EPS of US$3.11 which included $2.01 of tax benefits from past tax audits. Excluding the tax benefit, ETR’s operating EPS was US$1.10 vs. our/consensus estimates of US$1.20/1.35, respectively. Management raised its 2016 operating EPS guidance range to reflect YTD tax benefits, the weather, an extended outage at Indian Point and lower power prices in the Northeast. The new EPS guidance range is US$6.60-7.40 vs. US$4.95-5.75, previously. The guidance for utilities, parent and other remains unchanged at US$4.20-4.50, but the guidance for EWC has clearly come down, to US$0.39-0.89 from US$0.75-1.25, respectively.

We have updated our earnings estimates to reflect the high tax benefit for 2016, most recent forward power curves and power hedges for 2017-2019 plus some cost efficiencies at EWC. Our new ‘16/’17/’18/’19 EPS estimates are US$6.96/5.06/5.37/5.48 vs. US$5.04/5.07/5.16/5.36, respectively. Our US$85 TP remains unchanged and we reiterate our Neutral rating.

Weekly snapshot only (8 Aug)

## *GPP* Green Plains Partners (Neutral) – Improving story, but not a-maize-ing

We’re impressed with GPP’s strong coverage ratio and accelerated DPS growth, and management seems more upbeat about NT industry consolidation. We admit we missed the recent rally, and that GPP still looks attractively priced vs MLP peers with comparable growth rates. Still, with relatively low visibility into medium- or long-term growth, we remain on the sidelines.

GPP reported 2Q16 EBITDA of US$16m (Macq US$14m/Street US$15m).

Please see our flyer, Improving story, but not a-maize-ing (4 Aug)

## *FE* FirstEnergy (Outperform) – We share management's frustration

FE's story is all about regulatory and financial clarity, but those seem elusive as regulatory timelines keep getting extended. Management wants to provide an update on FE's T&D growth aspirations and funding needs during the EEI conference in early November. We hope our updated earnings projections adequately reflect the earnings downside while not accounting for potential upside from higher T&D capex or higher regulatory support from OH. We reiterate our Outperform rating on FE though this waiting game has been very frustrating.

FE reported 2Q16 adjusted EPS of US$0.56, just ahead of our estimate of US$0.55. Management initiated 2016 EPS guidance of US$2.40-2.60, in line with our expectations even though the company plans to infuse US$500m of equity into its pension fund during 2H16 and the parent level drag came ~US$0.08 higher than we had expected.

Please see our flyer, *We share management's frustration* (1 Aug)

## *HE* Hawaiian Electric (Neutral) – Where do we go from here?

We worry about HE's future as a standalone company, which we now see as a near certainty. As we strongly disagree with the PUC's questioning of NEE's financial and social commitments and bankruptcy risk, we don't expect another potential bidder to be gutsy enough to try given what we perceive to be a clear aversion to an outside/mainland owner of HECO. As a standalone, we believe HE has the least certain outlook in the industry. We see potential rate base growth of 10%+ to reach HI's aggressive goals for energy independence, but visibility is low as regulators may prefer third parties (possibly including munis/coops) to own/operate some or much of the infrastructure. As such, we assign a 10% PE discount to peers to reach our US$29 TP. We have lowered our '16 EPS estimate to US$1.65 from US$1.71 given higher O&Ms than we (or management) expected. For background, please see our flyer MahaNO! (July 18).

HE reported 2Q16 EPS of US$0.43, ahead of both us/consensus at US$0.40, and maintained '16 guidance of US$1.62-1.75.

Weekly snapshot only (8 Aug)

## *HIFR* InfraREIT (Neutral) – Visibility may not arrive until '17

We believe that it's time to move on from the once-promising REIT structure in light of a lack of opportunities to put it to use at scale (eg Oncor), not to mention the likelihood of a significant reduction of the originally anticipated tax benefits due to forced sharing after the pending rate case. Moreover, the organic growth outlook continues to worsen as a result of the oil and nat gas pullback impacting TX, as evidenced by HIFR's lowering of the bottom end of its capex guidance (again). We continue to value HIFR at US$16 based on a scenario analysis (US$13-18), but see an asymmetric risk/reward with the stock looking overvalued in its current form but only fairly valued if it were a plain vanilla regulated utility. Regardless, the company will be stuck in limbo until the rate case is resolved and tax sharing is ironed out, likely delaying any restructuring decision or DPS guidance beyond '18 until early '17. For background, please see our flyer *Hunt should give up on this failed experiment* (July 25).

HIFR widened its capex guidance for '17/'18 by lowering the bottom ends to US$235m/US$135m from US$250m/$170m previously. With slightly reduced midpoint capex assumptions, our '18/'19 adjusted EBITDA estimates dip to US$221m/268m from US$222m/270m. We reiterate our Neutral rating.

HIFR reported 2Q16 adjusted EBITDA of US$38m, ahead of our/consensus estimates of US$30m/US$32m, and reaffirmed '16 guidance.

Weekly snapshot only (8 Aug)

## *LNT* Alliant Energy (Outperform) – They know which way the wind blows

We continue to see LNT as a core utility holding and reiterate our Outperform rating. We see strong visibility into above-average EPS growth of ~6-7%, with DPS growth ~1% faster (we forecast). The company has many levers to pull within its robust capex backlog, giving us confidence that rate base and thus earnings growth is unlikely to disappoint. We recognize that the stock is far from cheap, trading at a ~7% PE premium vs peers in an extremely expensive sector. Still, we now focus on total shareholder returns for regulated utilities as a sum of their '16-'19 DPS CAGR and NTM dividend yields, in addition to the traditional PE valuations (link). On this dividend-linked TSR basis, LNT offers an attractive ~10% return with low risks.

LNT reported 2Q16 of US$0.37, shy of consensus at US$0.38 and our estimate of US$0.39, and reiterated '16 guidance of US$1.80-1.95 (Macq/Street US$1.90).

Please see our flyer, *They know which way the wind blows* (2 Aug)

***PEGI***

## Pattern Energy (Outperform) – Everything's bigger in Texas, except power revenues…

TX played a bigger role in PEGI's 2Q16 generation than we had expected, a disappointing result given that PEGI's wind projects in ERCOT receive energy prices which are "one third to one half" of the fleet's average price, according to the company. We are hopeful that PEGI will play a role in seeing Southern Cross get developed, providing much needed relief to both PEGI and other generators in the region.

With US ROFO updates expected in addition to ongoing international additions, we lower our assigned risk premium to 6.5% from 7.0%, subject to review if the pace of international growth outstrips domestic growth, and depending on the outcome of ongoing discussions of merging Pattern Development into Pattern Energy. We have lowered our '16 adjusted EBITDA estimate, and our new '16/'17/'18 adj EBITDA estimates are US$307m/380m/447m vs. US$325m/380m/447m previously. With unchanged DPS estimates but a lower risk premium, we raise our TP to US$26 from US$25.

PEGI reported 2Q16 adjusted EBITDA of US$79m, roughly in line with consensus of US$80m, but below our estimate of US$86m, which had underweighted TX in terms of percentage of overall generation and therefore overestimated revenue per MWh.

Weekly snapshot only (8 Aug)

***POR***

## Portland General Electric (Neutral) – Rolling with the punches

We see recent updates as mixed for POR. Though we credit management for completing Carty construction before the deadline and for finding incremental capital projects for the bridge years between IRP-driven capacity additions, they aren't getting any help from the outside. Courts may take years to resolve recovery of funds from sureties, driving a nickel drag on annual EPS until then. We're also disappointed with regulators' decision to not accelerate the renewable RFP to maximize PTCs; this hurts ratepayers and adds to our concern that the next round of IRP RFPs might be challenging, as was the last round a few years ago. Despite management's best efforts, POR can't seem to catch a break.

POR reported 2Q16 EPS of US$0.42 vs consensus of US$0.43. Management affirmed '16 EPS guidance of US$2.05-2.20 (Macq US$2.12/Street US$2.11).

Please see our flyer, *Rolling with the punches* (2 Aug)

***WTR***

## Aqua America (Neutral) – Management still open to non-water utility growth, despite strong water muni growth potential

We struggle to understand Aqua's interest in potentially adding electric transmission or gas distribution utilities, especially in light of a seemingly growing interest of municipalities in privatizing their water and waste water systems. We believe that a large portion of the ~40-50% PE premium for water vs. electric and gas utilities is driven by the scarcity of large public water utilities in the US, especially given a growing number of investment funds with strict sustainability requirements. We believe that an addition of a non-water utility would result in a significant erosion of WTR's PE multiple in exchange for likely a small pick up in the EPS growth rate for the combined company. Sum of the parts valuations are rarely fully reflected in market valuations of more complex businesses; instead they tend to trade at a conglomerate discount.

We recognize that electric and gas distribution utilities are regulated by the same regulatory bodies as water utilities, and thus Aqua could stretch its operating expertise to these businesses. The same would not be true, however, for electric transmission which tends to be regulated on a federal level by FERC. Yet, water utilities tend to be most capital intensive and thus growthy among all types of utilities, with stable and not lumpy capex, as well as below average regulatory risks.

WTR reported 2Q16 adjusted EPS of US$0.33, in line with consensus expectations, but short of our US$0.34 estimate. Our 2016-2019 EPS estimates remain unchanged, but we have marginally trimmed our DPS growth expectations to reflect the latest DPS increase of 7.5%.

Weekly snapshot only (8 Aug)

***XEL***

## Xcel Energy (Neutral) – Weak sales weigh on 1H16 results, but progress on regulatory fronts, upside from rate basing of renewables

XEL has reached a settlement with several interveners in its pending multi-year electric rate case in MN. At this point it is unclear if the settlement would result in a three- or a five-year deal, though the latter seems unlikely. What seems clear, however, is that the ROE is coming down in MN and other jurisdictions. XEL could still manage to slightly boost its realized ROE, by ~25 bps from the current ~9%, even if the allowed ROE were to come down to ~9.5-9.6%, we estimate.

Faced with weak sales volumes, XEL has pushed for decoupling, first in MN and now in CO. Management sees meaningful incremental opportunities in all of its jurisdictions to boost its renewable growth capex, wind in particular. In MN and CO, XEL can recover its renewable investments through riders, though a certificate of need for such projects would still be required.

XEL reported 2Q16 adjusted EPS of US$0.39, just shy of our/consensus expectations of US$0.40. Management pointed out that 1H16 results came slightly below their expectations due to mild weather and weak weather-normalized sales volumes per customer, but the company should offset the negative impact on its 2016 EPS guidance range through cost efficiencies and strong weather in July. Our earnings estimates remain unchanged as we await an update on the MN electric rate case settlement.

## Macquarie's utility coverage universe (alphabetical)

*Neutral* **ABY:** ABY has a large and growing geographical exposure, backed by Abengoa S.A., an international E&C company turned owner of power projects. ABY's assets are backed by long-term contracts with an average life of ~26 years (vs. ~18 years for peers) and are primarily US dollar denominated, but the visibility into longer term growth is limited. ABY's sponsor offers plenty of growth opportunities through eventual drop downs of operating assets, however, the elevated risk profile of these assets due to their exposure to emerging markets limits the appeal. Hence our Neutral rating despite ABY's premium dividend yield and an impressive pipeline of Abengoa's projects eligible for drop downs.

*Neutral* **AEP:** Between ongoing cost controls, growing transmission capex, negotiating PPAs for some of its OH power plants and potentially spinning off the rest of the OH power plants, AEP has many balls in the air. Thanks to the relatively late start of AEP's cost-cutting initiatives, the lack of nuclear costs and some hard work of management consultants, the company should be able to keep its O&M expenses relatively flat between '12 and '17 (if not longer) net of costs recoverable through pass-throughs.

*Outperform* **AES:** AES' management continues to deliver on earnings expectations while executing its previously stated strategy. Since 2011, AES has shrunk its geographical spread from 28 to 20 counties with plans to shed up to eight more counties. Although most of the recent divestitures have been earnings-dilutive (prior to accounting for lower parent-level costs), they aim to simplify AES's business and reduce its risk profile. We believe the business complexity, earnings lumpiness and emerging market risks do warrant a valuation discount to US utilities.

*Outperform* **AGR:** We're impressed with the merger of Iberdrola USA and UIL, as the NewCo should offer 8-10% EPS growth with attractive dividend increases starting in '17. The mix of high-growth utilities and a large renewable portfolio reminds us of NEE, while the low leverage could support additional M&A or creation of a yieldco.

*Outperform* **AWK:** We expect AWK to grow its EPS (and dividends) at a 9–10% CAGR through '16 as management continues to bridge the gap between the allowed and realized ROEs through infrastructure riders and cost efficiencies while deploying water capex. AWK's new management has lately started to expand its focus to wastewater with additional latent acquisitions down the road. Other growth potential opportunities include its market-based operations' growing contribution to EPS, incremental water service contracts for military tenders, homeowners' warranty business, and shale-driven growth, which could be the biggest earnings booster. AWK is our top pick for regulated electric and water utilities.

*Outperform* **BEP:** BEP's growth comes from acquisitions, made easier by its ongoing support from its parent company. While BEP's asset growth is likely to be slower than that of yieldcos with large drop down portfolios provided by a sponsor/developer, much of BEP's appeal is instead derived from the combination of the growth and its current high dividend yield. While yieldcos tend to pay out 80-90% of their cash available for distribution, BEP pays out only 60-70%.

*Neutral* **BWEN:** Despite the expiration of the PTC for new orders, projects begun by the end of '14 will still qualify, boosting tower orders for '15/'16, though we are concerned about an order cliff in '16 from the wind sector and we are not convinced that industrial orders will be enough to offset the wind decline.

*Neutral* **CMS:** We see the stock's PE premium vs peers as fully justified by CMS's above-average EPS/DPS of 7-8% per year, unmatched track record of consistency, top-notch management team, and strong regulatory/political relationships in MI. However, following strong 2016 YTD outperformance for regulated utility stocks, we have become more selective. We prefer DTE, with the same favorable regulatory/political setup in MI and nearly as fast growth but a much more attractive valuation.

*Neutral* **CNP:** We remain bearish on CNP as we see downside risks to below-average utility EPS/DPS growth, due to shrinking capex needs in TX and weak (though improving) cashflows from Enable. We're skeptical about efforts to exit Enable in a tax-efficient manner and to convert some or all of the utilities into REITs given Hunt's struggles with Oncor.

| | |
|---|---|
| ***Outperform*** | **CPN:** We are positive on CPN despite its efficient gas-fired plants not being shielded from lower power prices in TX. We hope for more coal-to-gas switching and higher capacity payments in PJM, and in the meantime CPN's 15% '16 FCF yield is enough to keep us excited about the stock. |
| ***Neutral*** | **CVA:** Despite not increasing the dividend in Dec '15 when we initially anticipated the company to have sufficient cash to support at least a moderate increase, we are hopeful that CVA will use this period of weak commodity prices to reduce costs, operate existing facilities smoothly, and prove its ability to execute on growth projects. However, the cards seem stacked against them when it comes to weak commodity prices. |
| ***Outperform*** | **D:** We remain bullish on D, as it offers a 5–6% EPS CAGR through '17, and 7-9% from '17 through '20, supported by highly diversified and already-identified capex projects being developed in a supportive regulatory environment. We recognize that it may take a while for investors/us to assign full value to D's LP/GP MLP distributions, but in the meantime with D's management's strong track record and the company's 8% dividend CAGR, and we find it hard not to like the stock. |
| ***Outperform*** | **DTE:** We expect our favorite SMID cap regulated utility to be well positioned to deliver ~6%+ EPS/DPS growth for many years to come, with limited risk, thanks to diversified earnings drivers and a constructive Michigan regulatory setup. Management is extremely confident about '16/LT guidance, midstream progress, and the balance sheet. Utility spending is driven primarily by state mandates, most notably around replacing coal capacity with new nat gas and renewable generation. We see concerns around the potential for shrinking midstream earnings as overblown, and seem to be weighing too much on the stock's multiple. Midstream M&A could help assuage these concerns. |
| ***Neutral*** | **DUK:** DUK has evolved from a company with earnings growth being driven predominantly by merger-related cost efficiencies and wholesale power contracts, to a utility with an impressive capex program accelerating in 2017 and encompassing contracted renewables, gas pipelines and conventional generation assets. However, the decision to keep the international business means it will weigh on DUK's near-term earnings due to unfavorable FX, weak hydro conditions in Brazil, and low oil prices. |
| ***Outperform*** | **DYN:** We are not bullish on natural gas prices in the Midwest or capacity prices in MISO, and we remain skeptical about the value of DYN's coal plants in IL given the growth in wind power installations and gas deliveries into the state. We do however see plenty of upside for capacity prices in PJM, and believe that this is not yet priced into the stock. Following DYN's acquisition of DUK and Energy Capital Partners' non-regulated assets, we recognize aggressive cost cutting initiatives and large economies of scale DYN could extract from incremental M&A. |
| ***Outperform*** | **EIX:** We believe Southern California Edison's 7.0–7.5% EPS growth together with 10% dividend growth are more than enough for us to offset regulatory and headline risks surrounding the prematurely retired San Onofre nuclear plant and see a slight PE discount on '17 and '18 earnings as unjustified. |
| ***Neutral*** | **ENOC:** : We give ENOC credit for delivering in recent quarters, with the immature EIS business consistently growing at a fast clip and the DR business surprising to the upside in 1Q16. With regulatory/legal overhangs largely behind ENOC, we see a clear path for growth, though execution risks remain (particularly around cost management). We remain on the sidelines given negative EBITDA/FCF forecasts through '17/'18, and see ENOC as one of the relative losers in the recent 2019/2020 PJM capacity auction. |
| ***Neutral*** | **ERII:** We are significantly more positive on ERII's revenue prospects going forward, pending the successful completion of their VorTeq product's integration period with SLB in 2016. In the meantime, we await announcements of major desalination project wins and updates on oil & gas contracts. |
| ***Neutral*** | **ES:** We worry that 2016 will be a year of waiting for regulatory approvals for ES's two major projects. While we're optimistic about both Northern Pass (NP) and Access Northeast (AN), projects which both the buy and sell side see as unlikely, clarity on either won't come until at least 4Q16. |

***Neutral*** **ETR:** 90%+ of ETR's EPS comes from fully regulated operations. The profitability of ETR's merchant nuclear plants in NY and New England (Indian Point and Pilgrim) has risen along with rising capacity prices, even though the earnings uplift is tough to estimate. While ETR's regulatory relationships remain challenged, 3.5%+ annual load growth should make regulatory interactions much less frequent.

***Outperform*** **EXC:** EXC now projects that the POM merger will be marginally dilutive in '16 and should deliver US$0.15-0.20 EPS accretion only in '19, a year later than originally expected. We are not surprised by this update although we wonder if EXC's stock would not be better off if the company bought back shares using its balance sheet cash instead of pursuing the merger which should be marginally accretive only by '18.

***Outperform*** **FE:** The stock remains a cheap regulated utility with a turnaround on the distribution side and a ongoing growth on the transmission side. We await an update on FE's merchant power strategy now that OH regulators are close to approving above market PPAs. FE's new CEO has so far exceeded our expectations, but the bar was set low.

***Outperform*** **GLBL:** We believe GLBL is unlikely to suffer from a lack of growth projects (even in a sustainably low oil price environment) given the size of its target markets and their renewable mandates, although FX, country and regulatory risks, coupled with interest rate risks, will be of vital importance to its long-term value creation. None of these risks are likely to manifest themselves over the next 12 to 24 months, we believe, and GLBL can deliver on its 20% YoY DPS increase in '16 without tapping debt or equity markets, giving it time to wait for financial market conditions to normalize.

***Neutral*** **GPP:** Visibility into GPP's growth is very limited, with no backlog of dropdowns. Instead, mid- to long-term growth will be driven almost entirely by M&A. Management has a proven track record of being a consolidator, having completed eight acquisitions since '08, tripling production capacity. We forecast 100 mmgy from acquisitions annually, starting in '17, but see GPP's visibility as low compared to MLPs growing through organic capex and/or dropdowns.

***Neutral*** **HE:** With every passing day, we're increasingly concerned that the sale to NEE will fail as we approach the merger expiration in early June. We assume a 30% probability, suggesting downside vs the market-implied ~40%. Without NEE, capex needs and thus rate base growth could be huge given the state's goal to transition to 100% renewable. However, visibility is extremely low while regulators review HE's LT strategic plans (PSIPs) and evaluate the role of the utility vs third party developers.

***Neutral*** **HIFR:** We can no longer recommend HIFR, as we believe that downside risks might not be fully priced in, growth may continue to slow, LT visibility is limited, and while the high yield is attractive, it's hard to call it a floor for the stock.

***Neutral*** **ITRI:** We see Itron's stock as expensive given negative or flattish near-term trends and the shrinking backlog. We believe it's too soon to get excited about large-scale European smart meter deployments or a re-acceleration in the US, although credit the company for a few high profile contract wins recently.

***Outperform*** **LNT:** We expect LNT to deliver above-average EPS growth of ~6-7% pa, with DPS growth ~1% faster, driven mostly by a large and growing capex backlog. Visibility is strong and risks are low thanks to 10 years of capex guidance, strong regulatory relationships in two supportive states, and a history of settlements.

***Neutral*** **NEE:** While we see upside to our estimates for NEE's renewable power business, we worry that over time this faster growth would change NEE's earnings mix to less regulated, and that together with high parent leverage, could have negative credit implications. Therefore NEE may have little choice but to acquire a large regulated utility, we believe. We recognize NEE's strong M&A track record, but given FPL's large pending rate case and the exceptional performance of NEE's stock over the last five years, we have stepped to the sidelines.

***Outperform*** **NEP:** NEP is our favorite public yieldco in North America, despite its rich valuation, given the visibility and longevity of its growth. A wind and solar yieldco supported by its sponsor and majority shareholder (NEE), the largest renewable power developer in North America. NEP targets a 12-15% DPS CAGR through '20 driven solely by NEE's existing and current development of renewable power projects. NEP's growth trajectory is likely to be extended past '20, we believe, as NEE continues to develop new projects and renegotiate tax equity structures for some of its existing wind farms in the US.

***Outperform*** **NRG:** Though forward power/gas curves have pulled back, management reiterated its 2015 EBITDA guidance (close to the top of the range) as NRG has hedged at levels in excess of its projected generation volume. We appreciate that management attempts to get the company ready for the future with stricter emissions and more distributed generation though we hope for a more gradual transition from the current business model into the one focused on rooftop solar. NRG remains our favorite power company.

***Outperform*** **NYLD:** The pioneer among public US yieldcos, NYLD's 15-18% DPS CAGR is fully supported by asset drop downs from its sponsor (NRG) through 2020. This large pipeline of existing contracted power projects (renewable and conventional) together with NRG's gas-fired project developments allow NYLD to be nimble at third-party acquisitions to extend its growth past 2020. We recognize NYLD's strong performance since its IPO (July '13) and its low dividend yield, but the high pace, low risk and longevity of NYLD's growth seems exceptional, even if its gas-fired plants lessen the tax shield for distributions.

***Neutral*** **ORA:** We are impressed with the revenue breakdown goals and business plan that ORA has put in place for 2020, seeing it as a sign that the new management appears to be starting to deliver on promises of greater transparency. At the same time, we acknowledge that the company is positioning itself as one in a long and growing list of players chasing after contracted renewables in emerging markets. While investors seem to assign premium multiples to more of ORA's geothermal assets as if they were slated for private or public yieldcos, we are unconvinced.

***Outperform*** **PCG:** Investors now have clarity on the size and nature of the San Bruno penalty of US$1.6bn. However, with CPUC comments ranging from concerns over the company's size, eligibility for tax disallowances related to the penalty, its corporate governance, still spotty track record on gas pipeline safety, and OII related to the previously disclosed inappropriate communications with the CPUC, PCG seems to remain in the penalty box with its regulators.

***Neutral*** **PEG:** Growing capex and strong regulatory relationships should drive a low-teen rate base CAGR and ~9% utility EPS CAGR through '17, we estimate. We think PSEG Power's locational and operational advantages are undeniable even if constantly evolving. Add a 5%+ DPS growth and improving FCF allowing for opportunistic acquisitions, and it's tough to find a stronger power-heavy diversified utility. However, PEG's leverage to PJM's capacity performance product is lower than that for power producers in PJM West.

***Outperform*** **PEGI:** A primarily wind yieldco. PEGI's sponsor and largest shareholder, Pattern Development, has a strong track record in wind power project development in the Americas, and we struggle to reconcile PEGI's high dividend yield with its strong and growing project pipeline and conservative management. While the company has been expanding outside of the US, we find Japan, Chile and Mexico as attractive regimes for contracted renewable power projects.

***Neutral*** **POR:** We remain bearish on POR due to the lack of growth through ~'19. We see construction and regulatory risks as manageable for POR, although negative headlines may bring investor angst. Longer-term, we expect a meaningful slowdown in earnings growth after '16 as the company works through its next round of RFPs. We remind investors that POR traded at a 15% PE discount during the last round.

***Neutral*** **PPL:** Once PPL Supply, the merchant power business of PPL, is spun off, WPD, its UK electric distribution and transmission utilities, will account for ~60% of consolidated earnings. We believe that questions around the appropriate valuation of WPD could challenge PPL's valuation overall.

***Outperform*** **SCG:** We remain positive on SCG, though admit that after strong outperformance since the nuclear contract amendment and our upgrade in late October, relative upside seems limited. We're impressed with the 5.5% dividend increase for '16 and guidance for annual increases in line with EPS growth, ~5% pa. We like that SCG has exercised its option to fix the cost of its nuclear projects in order to shrink the risk of cost overruns, and expect regulatory approval later this year. In light of the recent de-risking, coupled with the SC BLRA, no NT rate cases in SC, and solid fundamentals, we see the mid-single digit PE discount as unjustified.

***Neutral*** **SO:** SO's earnings grow at a below average 3% CAGR through '18, its IGCC plant in Mississippi has experienced major cost overruns and its two new nuclear reactors in Georgia are getting delayed by ~18 months. However, the stock yields an impressive 4.3% (and the DPS keeps growing), the IGCC plant seems almost done, and SO's shareholders seem protected from nuclear cost overruns through a firm EPC contract guaranteed by Toshiba.

***Outperform*** **TERP:** A solar and wind yieldco, in need of new sponsorship given the bankruptcy of the renewable development company which launched it. With a compelling portfolio of operating assets, TERP should not have trouble finding interested bidders.

***Neutral*** **TLN:** We are underwhelmed by TLN's existing power plants, especially those contributed by Riverstone, given their low FCF generation. However, it's hard to deny TLN's high leverage to rising PJM capacity prices and natural gas prices, and economies of scale from incremental M&A supported by TLN's under-levered balance sheet. We are bullish on PJM capacity prices and natural gas prices (especially TET M3 and Dominion South), on-peak power prices in TX, as well as additional consolidation in the US power sector, but we think it's too early to get constructive on TLN.

***Neutral*** **WTR:** WTR's retail ownership and strong regulatory relationships are not enough for us to fully justify its large '17E PE premium over US water peers.

***Neutral*** **XEL:** XEL's regulatory rodeos are likely to continue, with a major multi-year rate case pending in MN and a new case to be filed soon in TX. We recognize XEL's strong earnings track record helped by aggressive cost controls, but we see it as fully priced into the stock at this point.

*Chart Data: Bloomberg*

- **Maintain Neutral Rating.** Aqua recently reported a solid Q2, broadly in line with our estimates. Despite a top-line miss, the company beat our total OpEx estimate as management continued to diligently focus on reducing O&M expense, which allowed WTR to meet our diluted EPS estimate of $0.33. On the call, management reiterated 2016 guidance of EPS in the range of $1.30 to $1.35 and continued concentration on the three-pronged growth strategy focused on municipal acquisitions, strategic M&A, and market-based activity growth avenues. While we continue to be optimistic about Aqua's growth potential, we refrain from reflecting this view in our rating since our estimates and price target remain unchanged. With the stock currently trading about 5.1% above our $30 PT, we maintain our Neutral rating.
- **OpEx beat fuels in-line diluted EPS.** WTR reported diluted EPS of $0.33, consistent with our estimate and consensus. Aqua reported operating income of $83.5mm compared to our estimate of $83mm, on lower-than-expected OpEx of $120.4mm that was below our estimate of $125.9mm. The lower OpEx offset the softer-than-expected revenue of $203.9mm compared to our estimate of $208.8mm. Sales fell short of our forecast primarily as a result of reduced consumption due to unfavorable weather conditions. With pending rate cases in New Jersey, Indiana and Ohio, WTR now has $10.5mm in outstanding rate cases, up from $4.5mm in 1Q16.
- **The stock remains fully valued, as we see it.** Under the leadership of CEO Chris Franklin, now supported by an even stronger organizational structure following various changes in management roles discussed on the call, the company (and its stock) continues to perform well, with the strength of management being fully recognized by the market, in our view. Year to date, WTR has added 5.4m connections from acquisitions and experienced growth of 0.6% in the customer base owing to acquisitions. We continue to see the decision to divest the market-base business as having upside to shareholder value as Mr. Franklin focuses on growing the regulated side of the company while also concentrating on fine-tuning the non-regulated division of Aqua. That said, while we remain bullish on Aqua's position as a high-quality water investment, we believe the share price reflects the strength of management's leadership and a strong fundamental business. Accordingly, we recommend investors wait for a more attractive entry point based on current valuation.

# Risks

In addition to normal economic and market risk factors that impact most all equities, Aqua America (WTR) is uniquely at risk to:

- The outcome of regulatory filings: We expect the company will be among the fastest growing in the water utility peer group in coming years, as WTR's subsidiaries continue to file requests with state Commissions for rate increases in order to achieve rates of return on water assets commensurate with peers. If state Commissions deny these rate requests in whole or in part, it would likely have a negative impact on earnings.

- Product safety: Water is the only utility that is ingested. Though the company has a strong track record with respect to water contaminants, a breakdown in safety procedures could have a markedly negative effect on the company.

- Financial Risk: Aqua America is a particularly capital intensive water utility. Though the company has traditionally accessed the credit markets at some of the lowest rates in this industry, this may not be the case going forward.

- Aqua requires significant capital expenditures that are dependent on the company's ability to secure appropriate funding. If Aqua is unable to obtain sufficient capital or if the cost of borrowing increases, it may materially and adversely affect the company's financial condition and results of operations.

- Federal and state environmental laws and regulations impose substantial compliance requirements on Aqua's operations. The company's operating costs could be significantly increased in order to comply with new or stricter regulatory standards imposed by federal and state environmental agencies.

- Aqua's business is impacted by weather conditions and is subject to seasonal fluctuations which could adversely affect demand for its water service and its revenues.

- Drought conditions and government imposed water use restrictions may impact Aqua's ability to serve current and future customers. This may adversely affect the company's financial condition and results of operations.

- An important element of Aqua's growth strategy is the acquisition of water and wastewater systems. Any future acquisitions may involve risks.

- Freshly appointed CEO: Mr. DeBenedictis' role as CEO was the prime driver of Aqua's strong growth performance over the past two and a half decades. Given his impending retirement, the newly appointed CEO may not be as successful as Mr. DeBenedictis in carrying out the Aqua growth story.

# APPENDIX A: IMPORTANT RESEARCH DISCLOSURES

## ANALYST CERTIFICATION

I, Richard A. Verdi, attest that the views expressed in this research report accurately reflect my personal views about the subject security and issuer. Furthermore, no part of my compensation was, is, or will be directly or indirectly related to the specific recommendation or views expressed in this research report, provided, however, that:

The research analyst primarily responsible for the preparation of this research report has or will receive compensation based upon various factors, including the volume of trading at the firm in the subject security, as well as the firm's total revenues, a portion of which is generated by investment banking activities.

Additional information regarding the contents of this publication will be furnished upon request. Please contact Ladenburg Thalmann, Compliance Department, 570 Lexington Avenue, 11th floor, New York, New York 10022 (or call 212-409-2000) for any information regarding current disclosures, and where applicable, relevant price charts, in regard to companies that are the subject of this research report.

## COMPANY BACKGROUND

Aqua America, through its subsidiaries, operates regulated utilities providing water or wastewater services in the U.S. It serves residential, commercial, fire protection, industrial, and other water and wastewater customers in Pennsylvania, Ohio, Texas, Illinois, North Carolina, as well as other states. As of December 31, 2012, the company served nearly three million customers.

## VALUATION METHODOLOGY

Our price target objective assumes the stock trades at 22.0x our 2017 diluted EPS estimate by the end of 2016. This target multiple is predicated on WTR's mean five-year forward P/E. We support this price target with DDM, EV/EBITDA and EV/R valuation analysis.

## RISKS

In addition to normal economic and market risk factors that impact most all equities, Aqua America (WTR) is uniquely at risk to: the outcome of regulatory filings, extreme weather conditions, product safety, and financial risk.

## STOCK RATING DEFINITIONS

Buy: The stock's return is expected to exceed 12.5% over the next twelve months.

Neutral: The stock's return is expected to be plus or minus 12.5% over the next twelve months.

Sell: The stock's return is expected to be negative 12.5% or more over the next twelve months.

Investment Ratings are determined by the ranges described above at the time of initiation of coverage, a change in risk, or a change in target price. At other times, the expected returns may fall outside of these ranges because of price movement and/or volatility. Such interim deviations from specified ranges will be permitted but will become subject to review.

## RATINGS DISPERSION AND BANKING RELATIONSHIPS AS OF (August 23, 2016)

### Why Invest in Water Utilities?

Three reasons: (1) total return potential of approximately 9% with roughly half the beta of the S&P; (2) visible long-term earnings growth supported by capital investment and industry consolidation; and (3) a business profile and asset mix that skews favourably for the growing ESG investment class.

### Investment Theme: Infrastructure

By all accounts, significant long-term investment in the U.S. water system is needed. Estimates range from approximately $385 billion to $1 trillion. Infrastructure needs range from replacement of aging pipes, to technological modernization, to cyber and physical security measures. Annual capital spending budgets are back at peak levels in 2018, after a brief respite in 2017. We see room for the investment trend to continue through 2022, helped by the headroom in customer rates created by tax reform.

### Investment Theme: Consolidation

We expect the investor-owned water utilities to continue to roll-up smaller municipal water systems. The U.S. water industry is highly fragmented, with 84% of water systems and 98% of wastewater systems owned by municipalities and cooperatives. Furthermore, roughly 85% of U.S. community water systems serve fewer than 3,300 people. Aging infrastructure, greater scrutiny post-Flint on drinking water health and safety concerns, and other calls on fixed municipal budgets, are contributing factors to consolidation in the industry. We are more likely to see consolidation in states that have enacted fair value legislation.

### Recommendations

We rate AWK as a Buy, AWR and CWT as Sells, and WTR and CTWS as Neutral. Market valuations are currently skewed to the small cap, single or limited jurisdiction water companies, a phenomenon we view as unsupported by fundamentals. We favour AWK for its earnings growth profiles, geographic diversity, and acquisition strategy. We see total return potential of approximately 13% for AWK. In contrast, we see the shares of AWR and CWT with downside of 16% and 3%, respectively, to our price targets. AWR and CWT are both highly concentrated in California, a jurisdiction where, in our view, the regulatory climate has declined over the past twelve months.

PIVOTAL QUESTIONS

**Q: What is the investment potential of the water sector and can that translate into favorable total return to shareholders?**

Industry sources put the investment opportunity between $385MM and more than $1 trillion over 20-25 years. Many states offer rate mechanisms that reduce regulatory lag and incentivize infrastructure investment. We forecast approximately 7% earnings growth for water utilities, supported primarily by the infrastructure investment.

**Q: Will consolidation remain a theme in the water sector?**

Yes. There are eight publicly traded water utilities, totaling approximately $26 billion in market capitalization. Meanwhile, approximately 85% of the water systems in the U.S. are municipally owned. As communities evaluate options to ensure safe drinking water while minimizing cost and risk to local budgets, we expect consolidation will be a solution that many communities choose.

**Q: Will we see horizontal integration of water utilities with electric or gas utilities?**

No. In our view, the Eversource Energy (ES) acquisition of Aquarion Water Company in 2017 reflected a unique opportunity in both timing and asset profile. We consider that transaction the exception, not the rule.

WHAT'S PRICED IN?

**Premiums skewed toward smaller cap stocks.** On average, water utilities are trading right in line with the historical average premium of 40% going back to 2008. Within the group, however, we see valuation discrepancies. Although infrastructure investment and consolidation are widely known sector themes, the market is pricing the companies best positioned to capitalize on those themes (AWK and WTR) at below average multiples, while it is pricing AWR and CWT, which have risk concentrated in California, at premium multiples. We view this discrepancy as unsustainable over the long-term.

UBS VIEW

**Bellwether water not getting the due it deserves.** We see opportunity for investment in AWK, which we view as the best positioned to capitalize on the infrastructure investment and consolidation themes in the sector. Furthermore, in our opinion, the market is underestimating the California Cost of Capital risk of AWR and CWT. We think future consolidation in the industry is far more likely to result in roll-ups of municipal systems by investor-owned utilities, rather than a reduction in the number of publicly-traded water stocks.

EVIDENCE

**On average, waters are fairly-valued to the S&P. Within the group, valuations are contrary to fundamentals.** On average, at current multiples water utilities are fairly valued relative to the S&P 500. Within the group, however, valuation discrepancies persist. AWK has a capital spending budget of $7.2–8.4 billion ear-marked for infrastructure investment and regulated acquisitions. AWK also operate in all six of the fair value legislation states. Meanwhile, AWR and CWT have risk concentrated in California. Over the past twelve months, the regulatory environment in CA has declined, beginning with procedural difficulties in the electric utilities' Cost of Capital case, followed by the Sempra Energy wildfire ruling, and capped off by the recent unfavorable Proposed Decision in the CA water utilities' Cost of Capital case.

## Stock Recommendations for Investors

We are initiating coverage on five water utilities today. We rate American Water Works at Buy; American States Water and California Water Service Group at Sell; and Aqua America and Connecticut Water Service at Neutral.

**American Water Works (AWK–Buy)** is the largest of the water utilities and generally considered the bellwether of the industry based on its earnings growth rate and the scale of its asset portfolio. The company has total rate base of approximately $11 billion and operates water systems in 16 states. AWK targets earnings growth of 7-10% with dividend growth at the high end of that range.

**American States Water (AWR–Sell)** operates water systems throughout California as well as a small electric service territory in the state. AWR's rate base is $700 million. We estimate AWR's five-year earnings and dividend growth to be approximately 4–5% per year.

**California Water Service Group (CWT–Sell)** also operates principally in California, although it has small water systems in Hawaii and New Mexico as well. CWT has rate base of $1.1 billion. We estimate CWT's five-year earnings growth to be approximately 6% per year, with dividend growth slightly lower at 5%.

**Aqua America (WTR–Neutral)** is the second largest of the water utilities and is also considered an industry leader. WTR is also geographically diversified, with water systems in eight states and approximately $4 billion rate base. We estimate WTR's five-year earnings and dividend growth to be approximately 6%. This summer, WTR intends to file a widely anticipated rate case in PA, its largest jurisdiction. We expect that upside in the shares of WTR will be limited leading up to the filing and the final outcome.

**Connecticut Water Service (CTWS–Neutral)** operates water systems in Connecticut and Maine. CTWS has rate base of approximately $500 million. We estimate CTWS's five-year earnings growth to be approximately 6% per year and dividend growth to be 5%.

In our view, AWK should garner the highest premium reflective of its geographic diversity, economies of scale, and industry leadership. Furthermore, we see risk increasing in California, as the regulatory environment becomes less favourable, putting AWR and CWT at greater risk due to their concentration in the state. Our valuation methodology is discussed in detail later in this report.

**Figure 2: Water Utilities Comparative Statistics**

| | Large Cap | | Mid Cap | | Small Cap |
|---|---|---|---|---|---|
| $ Millions | AWK | WTR | AWR | CWT | CTWS |
| Market Capitalization | $14,318 | $5,967 | $1,911 | $1,761 | $607 |
| # of customers | 3,353,000 | 982,849 | 258,949 | 514,300 | 135,000 |
| Total Rate Base | $11,600 | $4,000 | $700 | $1,120 | $500 |

## Thematic Opportunity, but Slim Pickin's

There are eight publicly-traded investor-owned water utilities in the U.S. Combined they total approximately $26 billion in market capitalization, with about 75% concentrated in AWK and WTR. Market cap drops off precipitously below those two stocks.

**Figure 3: Public Investor Owned Water Utilities**

| Company | Ticker | Market Capitalization $ Millions | # Customers |
|---|---|---|---|
| American Water Works | AWK | $14,318 | 3,353,000 |
| Aqua America | WTR | $5,967 | 982,849 |
| American States Water Company | AWR | $1,911 | 258,949 |
| California Water Service Group | CWT | $1,761 | 514,300 |
| SJW Corp | SJW | $1,085 | 246,600 |
| Connecticut Water Service | CTWS | $607 | 135,000 |
| Middlesex Water Company | MSEX | $569 | 116,700 |
| York Water Company | YORW | $363 | 66,000 |

Source: FactSet, company filings, UBS Equity Research

Approximately 85% of U.S. water systems are municipally-owned and only 1% of water systems in the U.S. have greater than 100,000 customers. As a result, the basket of publicly-traded water utilities is unlikely to have new entrants for some time. Furthermore, due to the fragmented nature of the industry, small tuck-in acquisitions are likely to continue contributing modest growth over time, while transformative combinations are less likely to occur. We consider the acquisition of Aquarion Water Company by Eversource Energy (ES) to be a transformative transaction, and we discuss this later in the report.

Importantly, water utilities satisfy the thematic profiles of the growing number of infrastructure and ESG (Environmental–Social–Governance) funds. The significant capital spending need has long-term visibility in an industry that meets many of the ESG thresholds.

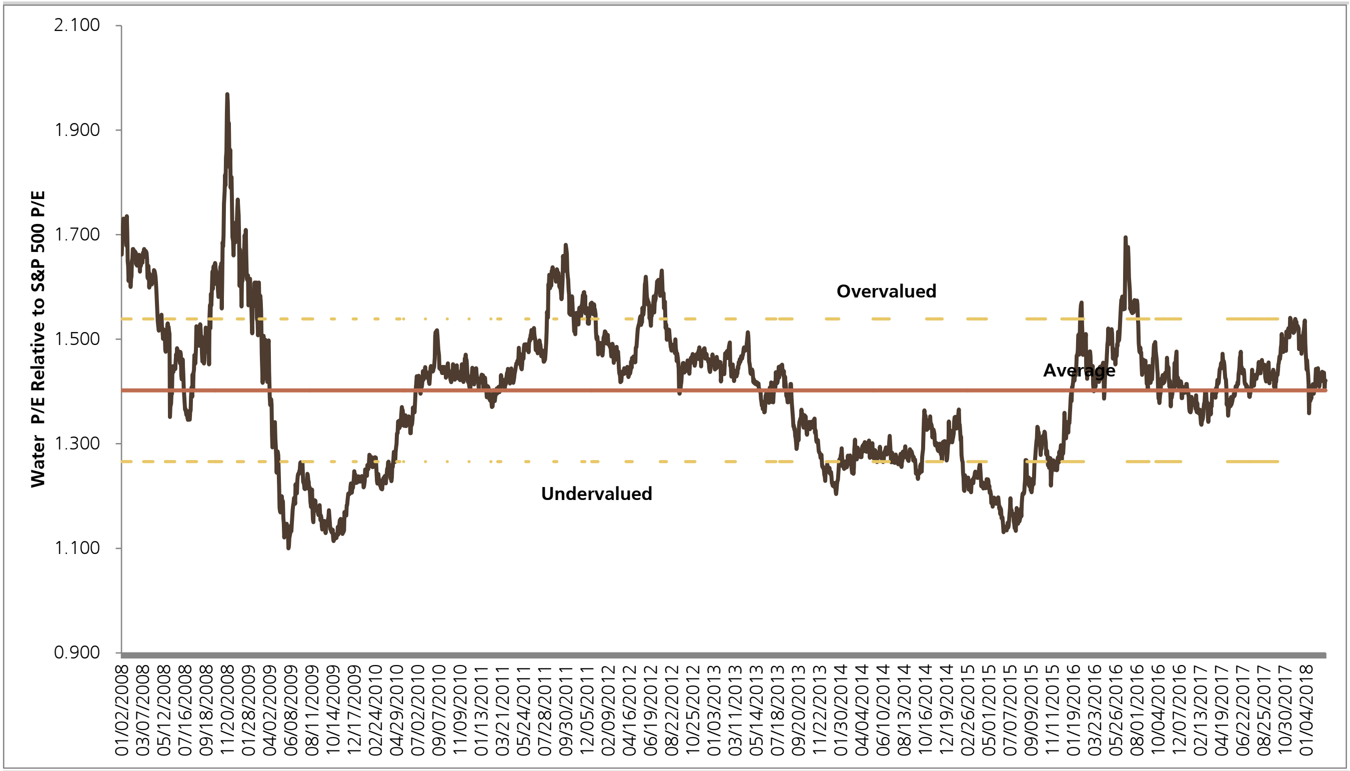
Source: S&P Global Market Intelligence, company filings, UBS Equity Research

## Relative Value in Neutral Territory

On average, from 2008 to present, water utilities have historically traded at a 40% premium to the S&P 500. The waters currently trade at a 40% premium to the S&P 500, suggesting the group is fairly valued.

**Figure 5: Waters Relative to S&P 500 P/E, 2008-Present, FY1**

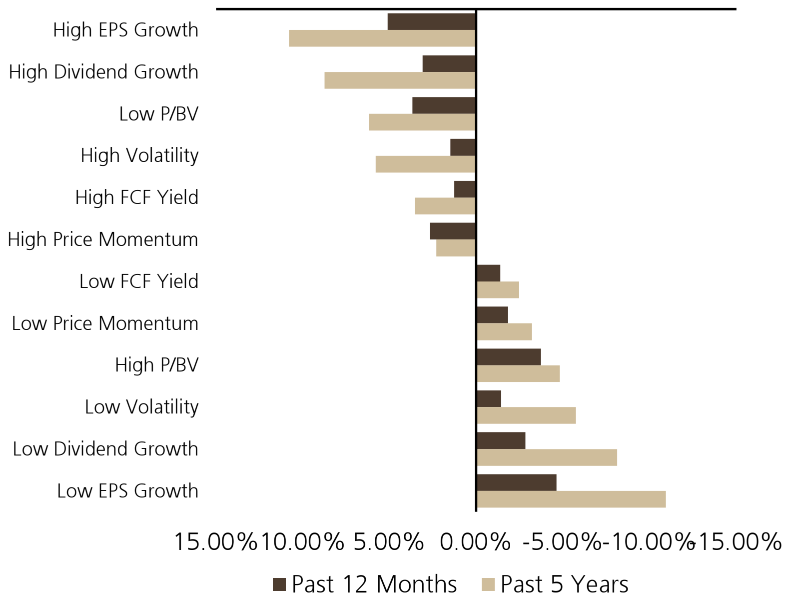


Source: FactSet, UBS Equity Research

Rising interest rates pose similar risk for water utilities as we see for electric utilities. In our electric utility initiation report, [Wait for It](#) (2/1/18), we discussed the performance of regulated utilities during Fed tightening cycles. Our analysis shows that on average, RUs underperformed the S&P 500 by 12.5% in the twelve months prior to action, performed in line (-0.33%) with the S&P 500 during the hikes, and outperformed by 6.7% for the twelve months following the last hike. Furthermore, over the period from 1980 until now, benchmark rates in general have declined. The result has been a significant lengthening of the equity duration of the RU group to almost 20 years from 7-8 years in 1980. All things equal, the shape of the Treasury curve should matter more to RU performance than short-term rates today.

As we discussed in Wait for It, the UBS Quantitative Research group determined that regulated utility price performance is most closely aligned with dividend and earnings growth over time. Therefore, our valuation methodology favours companies with high ranks on these measures.

**Figure 6: Performance by Style for RUs (electric and water), LTM and Last Five Years**



Source: UBS Quantitative Research, UBS Equity Research

## Capital Investment Opportunity

By all accounts, significant investment in water infrastructure is required over the next quarter century. Industry sources put the investment requirement between $385MM (U.S. Environmental Protection Agency) and more than $1 trillion (American Water Works Association). The 2015 AWWA State of Water Industry Report ranked (1) renewal and replacement of aging water and wastewater infrastructure, and (2) financing for capital improvements as the top two issues facing the water industry based on a survey of respondents. The American Society of Civil Engineers estimates it will take approximately 200 years to replace the main water pipe system in the U.S. at the current rate of 0.5% per year. This means that there is a long-term capital investment opportunity in the industry, with customer rates as the gating factor.

Reflecting the industry needs, the capital spending budgets of our five covered companies have been trending up over the past few years. UBS estimates that capital spending will remain at recent elevated levels for the next few years.

**Figure 7: Capital Spending Trend**

| | | 2015 | 2016 | 2017 | 2018E | 2018-2020E |
|---|---|---|---|---|---|---|
| American States Water Company | AWR | $86 | $121 | $110 - $120 | $110 - $120 | |
| American Water Works | AWK | $1,200 | $1,300 | $1,200 | $1,400 - $1,500 | $4,000 - $4,500 |
| Aqua America | WTR | $325 | $383 | $478 | $518 | $1,400 |
| California Water Services Group | CWT | $177 | $229 | $259 | $200-220 | |
| Connecticut Water Service, Inc. | CTWS | $48 | $66 | $55 | $66 | |

Source: Company filings, UBS Equity Research

**State Rate Mechanisms:** The significant upgrades to the system cause water utilities to be frequent rate case filers. However, many states have implemented mechanisms, such as infrastructure recovery riders, rate consolidation, decoupling, and CWIP, which reduce regulatory lag and incentivize infrastructure investment. These mechanisms allow the utilities to avoid filing general rate cases for longer periods of time.

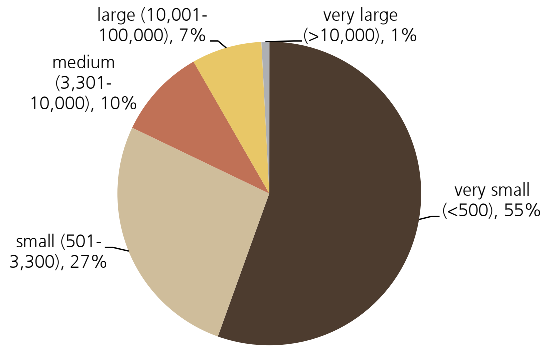
## The Case for Consolidation

IOUs operate on a regulated return on rate base model. New investment is incentivized, while customer rates act as the gating factor. The IOU model is contrary to the municipal model in which water systems must vie for funding from a fixed budget against other community resources such as police, fire, and education. Oftentimes, municipalities must postpone necessary capital investment in water systems based on other financial priorities of the community.

Historically, towns and cities have been reluctant to sell their water systems to outside owners, preferring to maintain local control over access to safe drinking water. However, as the risk-reward of providing safe drinking water has become more challenging, localities are seeing the value in monetizing water systems to external owners that have greater financial, technical, and managerial capabilities. Furthermore, municipalities don't have the attachment to wastewater systems that they've had with drinking water systems. As a result, we are also seeing sales of wastewater systems. We expect the trend of tuck-in acquisitions by the IOUs to continue.

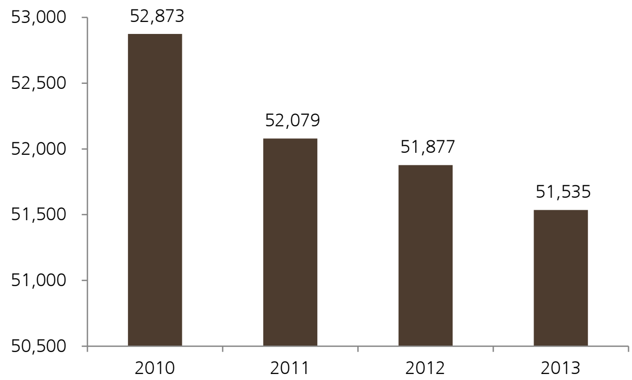
Consolidation should remain a theme in the water sector. The total number of water systems in the U.S. has been steadily declining from 52,873 in 2010 to 51,535 in 2013 (the most recent figures published in 2015 by the EPA). At the latest count, only 1% serve greater than 100,000 customers. We expect the pace of transactions to remain steady or even tick up over time as states implement more stringent water quality standards following the Flint, Michigan lead poisoning tragedy.

**Figure 9: Water Systems by Customer Count**



Source: American Water Works Association, Environmental Protection Agency, UBS Equity Research

**Figure 10: Number of Community Water Systems**



Source: American Water Works Association, Environmental Protection Agency, UBS Equity Research

Fair value legislation has been a material enabling factor toward consolidation. The legislation, which uniquely benefits water utilities, allows acquired rate base to be set at an appraised value rather than book value, thereby sidestepping the creation of goodwill, which isn't recoverable. This is critical as many older systems may have little book value. Six states currently have fair value legislation. The legislation facilitates sales of water systems by municipalities: a win–win for both sides. Municipalities benefit from a source of funds as well as off-load risk, while IOUs grow their rate base. Here again, AWK and WTR are the biggest beneficiaries due to their geographic diversity. AWK operates in all six of the states with fair value legislation and WTR operates in four of them.

**Figure 11: Fair Value Legislation by State and Company**

| State | IOUs Operating in the State |
|---|---|
| California | AWK, AWR, CWT |
| Illinois | AWK, WTR |
| Indiana | AWK, WR |
| Missouri | AWK |
| New Jersey | AWK, WTR |
| Pennsylvania | AWK, WTR |

Source: S&P Global Market Intelligence, company filings, UBS Equity Research

In our view, water quality requirements in the form of legislative mandates or other adoptions may provide the next catalyst for consolidation. The New Jersey Water Quality Accountability Act enacted in 2017 may become the standard that other states emulate. The legislation requires water providers to design an asset management plan to inspect, maintain, repair, and renew its infrastructure consistent with industry standards. It also requires a senior officer or official, such as a mayor of a municipality, to certify in writing annually that the water system complies with all federal and state drinking water regulations. The legislation also requires submission of a mitigation plan if the water system receives multiple EPA violations. The legislation applies to public water systems with more than 500 service connections, or approximately 300 water systems in the state. As such, the legislation holds the water systems to the same standards, regardless of whether they are municipal, private, or investor-owned. Pennsylvania may be the next state to pursue similar legislation. Notably, AWK and WTR are significant water system operators in NJ and PA and would be well-positioned to benefit from acquisition roll-ups in those states.

## Electric, Gas and Water: The Exception, Not the Rule

We don't foresee other electric utilities stepping into the water arena. The acquisition of Aquarion Water Company by Eversource Energy in 2017 reflected a unique opportunity created by the confluence of timing, geography, and asset profile. The sale of Aquarion by a consortium of private equity investors led by Macquarie, lined up almost perfectly with the timing and value of ES' sale of its fossil generation portfolio. The company anticipated receiving approximately $700MM cash proceeds that it needed to reinvest. ES purchased Aquarion for an enterprise value of $1.675 billion comprised of $880MM cash plus the assumption of $795MM debt. Aquarion's service territories in Connecticut, Massachusetts, and New Hampshire complement ES' electric and gas territories in those same states. Furthermore, the addition of water distribution assets to ES' electric and gas transmission and distribution portfolio rounds out the company's asset profile and enhances its marketability as an ESG-friendly investment vehicle.

The sale of Aquarion was widely anticipated and reflected an unusual opportunity for a sizable transaction in the water sector. Aquarion is the largest investor-owned water utility in New England and among the ten largest water utilities in the U.S. Given the fragmented nature of the water industry, roll-up acquisitions will likely continue to represent the norm, while larger transformative transactions, the exception. We think there is simply no motivation for electric utilities to embark on a water roll-up strategy, since it would take a material commitment of time to create meaningful scale in water assets. (Even Aquarion, already one of the largest water utilities in the U.S, represents only 4% of ES' forecast net income.) Furthermore, in our view, the combination of water with pure T&D assets creates greater value than if combined with a vertically integrated electric utility. This is because T&D assets are generally considered lower-risk than generation assets and therefore trade at a higher multiple. There are only a small handful of pure T&D electric utilities, including ES, Consolidated Edison (ED), and CenterPoint Energy (CNP).

## State Jurisdictional Rankings

State commissions are charged with regulating water utilities, but not all jurisdictions treat their utilities the same. The differences between jurisdictional regulatory practices are a primary factor in determining relative value between companies, their growth rates and allowed and earned returns. We rank each jurisdiction using six equally weighted criteria, as follows:

1) **Elected vs Appointed Commissions:** Elected commissioners tend to focus more closely on managing customer affordability which can dampen investment vs appointed commissions that tend to be more policy driven, all else equal.

2) **Allowed Return Spread:** We measure the return spread over 10-year Treasury note of the ordered rate cases since 2010 by jurisdiction. As rate of return setting policies and practices are grounded in decades of case law, jurisdictions that allow high and low return spreads tend to continue with that practice.

3) **Mechanisms that Reduce Regulatory Lag:** Regulatory lag is the difference between authorized returns on equity and earned returns resulting from time lag between dollars invested in rate base and authorized revenues reflecting that spending. With the advent of computing power, several techniques to reduce rate lag have been incorporated into regulation, including tracking mechanisms, forward test years, formula rate plans and performance based regulation. Adoption has been uneven, so it is in the interest of investors to favour places that minimize lag.

4) **Rate and Customer Bill Levels:** Utilities' prices are often a material factor in state economic development. States with high prices vs their surroundings tend to scrutinize utility investment more closely than states with low bills.

5) **Tendency to Settle vs Litigate Rate Cases:** Settlements have the advantage of being quicker, less risky and less prone to legal appeal than fully litigated rate proceedings. States that regularly settle are preferred by investors.

6) **UBS subjective Investor Friendliness Factor:** Based on our knowledge of current commission actions, we skew the results by up to 1/6$^{th}$.

The results of our rankings are presented as a bell curve in Figure 12. Overall, we find most regulation in the US to be fair. Outliers on the positive side present a lower cost of capital business environment and encourage investment in infrastructure. By contrast, higher cost of capital states discourage investment.

# Valuation Methodology

We value water utilities on a price-to-earnings basis on our 2020 estimates. Our valuation methodology is premised upon a group valuation bias, forecast 2018-2022 earnings growth, our proprietary analysis of regulatory jurisdictional rankings, exposure to states with fair value legislation, and in some cases a company-specific adjustment.

1. Group Valuation Bias: Derived from our relative P/E analysis, we incorporate a positive or negative adjustment to our group multiple representing the gap we calculate to the nearest 5%. At current valuations, we see the group as fairly valued relative to the S&P 500, therefore, there is currently no group valuation bias assigned.

2. Growth Adjustment: Five-year earnings growth rates are largely clustered in the 5–6% range. AWK is the distinction, with the highest growth rate of 7–10% and the greatest visibility in achieving it. Therefore, we assign a 2% premium for AWK and no premium or discount for the other waters.

3. Regulatory Adjustment: Our proprietary regulatory rankings correlate with price-to-book ratios over time. Price-to-book is the third most significant performance factor behind earnings and dividend growth (Figure 6). Here, WTR benefits the most (5% premium) for its asset concentration in PA, a constructive regulatory environment. AWK is awarded a 2% premium due to its geographic diversity and limited reliance on any particular state regulatory environment. AWR, CWT and CTWS are each assigned a 2% discount based on our regulatory rankings.

4. Fair Value State Adjustments: We assign one percentage point premium for each fair value state in which a company operates. The incremental premium reflects the favourable environment for consolidation.

5. Company-specific Risk Adjustment: We assign an incremental 3% discount to AWR and CWT for CA Cost of Capital risk exposure. Once a final decision for Cost of Capital is reached, we will update our earnings estimates and remove this discount. We also assign an incremental 3% discount to WTR for the overhang of the PA rate case. Similarly, when the rate case is resolved, this discount will be removed from our valuation.

**Figure 13: Valuation Methodology Matrix**

| Investment Opinion | Ticker | Water Relative Premium/ Discount | Regulatory Quartile Premium/ Discount | Fair Value State Adjustments | Regulated EPS Growth Premium/ Discount | Company Specific Adjustments | Net Premium/ Discount for Valuation |
|---|---|---|---|---|---|---|---|

### Sell at Current Valuation

We are initiating on AWR with a Sell rating as part of our sector launch on water utilities. Our $42 price target suggests 17% downside in the shares. AWR trades at a lofty 21% premium to the 2019 average UBS water P/E. For context, AWR trades at the highest multiple among our five water utilities under coverage, and nearly double the premium of the second highest multiple water utility (which happens to be CWT, also a Sell). The risk profile of AWR as a single-state (CA) water utility operating in a degrading regulatory landscape does not support a premium valuation. Also, to the extent the shares may incorporate a small cap takeout premium, we think this assumption is unfounded. Our analysis demonstrates a compelling 1:2 downside skew.

### California Water Utilities' Cost of Capital at Risk

The CPUC decision (on March 22 at the earliest) in the water utilities' Cost of Capital case may present a downward catalyst for the shares if the order adopts the ALJ Proposed Decision. The ALJ recommended that AWR be awarded an ROE of 8.23%, significantly lower than requested (11%), currently authorized (9.43%), and the 2017 national average authorized ROE for water utilities (9.56%). We estimate roughly $0.02 of earnings risk for every 20 basis point change in ROE. Our EPS estimates for AWR are predicated on the current 9.43% ROE.

### It Takes Two to Tango

In the interest of improving water quality, CA regulatory policies and fair value legislation are designed to encourage the state's large water utilities (of which, AWR is considered one) to be consolidators of smaller systems. On AWR's recent year-end conference call, management indicated that it would be interested in purchasing smaller systems, but they are not seeing many come up for sale.

### Valuation:

Our $42 price target is based on a 4% discount to the 2020 average P/E of our water universe. Our EPS estimates are $1.88 in 2018, $1.98 in 2019, and $2.03 in 2020. We assume that AWR retains $0.08 tax savings on its military contracts in 2018, and returns those savings to the government through price redetermination ratably over five years. Our estimates may turn out to be too high if AWR returns the tax benefit more quickly.

PIVOTAL QUESTIONS

**Q: Has the quality of California regulation changed?**

Yes. The California regulatory environment has declined materially over the past twelve months. If the California Public Utilities Commission (CPUC) adopts the ALJ Proposed Decision in the water utilities' Cost of Capital case, we will view that as the culmination of a trend of adverse orders by the CPUC.

more→

**Q: Does the industry consolidation theme support a premium valuation for AWR and CWT?**

Unlikely. To the contrary, California's long-term water quality planning objectives would prefer to utilize the state's large Class A utilities (e.g. AWR and CWT) to take over smaller systems.

more→

**Q: Will AWR's unregulated utility services business (ASUS) benefit from tax reform?**

We estimate that ASUS will Initially benefit from tax reform by up to $0.08 in 2018. Over time, however, we expect AWR to give up those gains through the price redetermination process or through renegotiation. Our model assumes that the benefit of the lower corporate tax rate erodes ratably over the five-year forecast period.

more→

UBS VIEW

AWR's premium to the 2019 average UBS water P/E is unsupported by fundamentals. AWR is operating in a challenging regulatory environment with near-term risk of a materially lower allowed ROE. Further, AWR appears to have less opportunity to participate in the industry consolidation theme. AWR's military services business is a material contributor to net income and growth, albeit with limited visibility into new contracts.

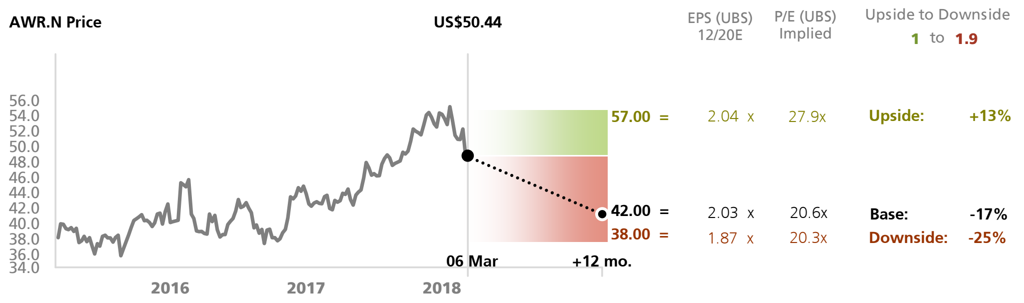
EVIDENCE

Recent regulatory processes and final orders by the CPUC have demonstrated a less constructive regulatory environment. Small water systems in CA are not demonstrating a willingness to sell, which limits AWR's ability to take advantage of growth through acquisition.

WHAT'S PRICED IN?

At a 21% premium to the 2019 average UBS water P/E, AWR is the highest valued water utility in our universe and trades at a premium nearly double the second highest valued stock in the universe. The shares appear to incorporate approximately 15% likelihood of AWR being acquired (based on our multiples derived from our work on electric utility mergers). If we assume that there is no merger or small cap premium in the shares, then the share price implies 2019 EPS of roughly $2.30-2.40 (depending on the multiple), well above consensus expectations.

UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | Avg peer P/E multiple | premium/ discount to avg peer multiple | Allowed CA ROE |
|---|---|---|---|
| $57 upside | 28.0x | 0.0% | 9.43% |
| $42 base | 21.3x | -4.0% | 9.43% |
| $38 downside | 21.3x | -4.0% | 8.23% |

PIVOTAL QUESTIONS

# Q: Has the quality of California regulation changed?

## UBS VIEW

Yes. Recent regulatory processes and final orders by the CPUC have demonstrated a less constructive regulatory environment. If the California Public Utilities Commission (CPUC) adopts the ALJ Proposed Decision in the water utilities' Cost of Capital case, we will view that as the culmination of a trend of adverse orders by the CPUC.

## EVIDENCE

A recent trend of adverse orders and commission processes has led to a degradation of the regulatory landscape in California. We rank California in the third quartile of regulatory jurisdictional rankings. (See **Figure X: State Jurisdictional Rankings** in our sector launch.) We update the rankings annually and as necessary throughout the year.

**Electric utilities' Cost of Capital proceeding: 2017**

The electric utilities Cost of Capital proceeding in 2017 was marred by an adverse Proposed Decision by the ALJ. The PD did not support the settlement the three CA electric utilities had reached with ORA (Office of Ratepayer Advocates) and TURN (The Utility Reform Network) for a two-year extension to the Cost of Capital with modest adjustments to ROE and debt cost true-up. The commission ultimately supported the settlement agreement, but not without grousing from the commissioners on the process. Although the outcome was constructive, the process created uncertainty for the stocks and adversely impacted investors' views of regulation in the state.

**Sempra Energy Wildfire recovery final order: November 30, 2017**

The CPUC ruled against SRE regarding recovery of expenses associated with past wildfires (A.15-09-010). SRE took a $351MM pre-tax write-off and is seeking reconsideration. The order has materially greater implications for PG&E Energy and Edison International, both of which experienced unprecedented wildfires in their service territories in late 2017 and early 2018. PCG suspended its dividend on December 20, 2017 due to the uncertainty of financial obligations related to wildfires. The CPUC has not made a decision on SRE's reconsideration request.

**Water utilities' Cost of Capital proceeding: final order expected March/April 2018**

The ALJ Proposed Order (PD) in the water utilities' Cost of Capital proceeding adopted ORA's recommendation in whole. ORA recommended ROEs of 8.22%-8.30% for the four CA water utilities – significantly lower than the 2017 national average ROE of 9.56% authorized for water utilities.

## WHAT'S PRICED IN?

So far, we have not seen a demonstrable reaction in the market to the ALJ recommendation; however, if the CPUC does not improve upon the PD, we would expect the share prices to adjust down ~$3 for AWR and ~$2 for CWT, to reflect the lower earnings potential at those companies. We do not anticipate a material impact to AWK's share price due to the comparatively lower earnings exposure. If the PD is adopted, we estimate earnings at risk of $0.16 at AWR, $0.12 at CWT, and $0.02 at AWK. The earnings sensitivity is $0.03 at AWR and $0.02 at CWT for every 20 basis points change in ROE.

PIVOTAL QUESTIONS

## Q: Does the industry consolidation theme support a premium valuation for AWR and CWT?

UBS VIEW

Unlikely. To the contrary, California's long-term water quality planning objectives would prefer to utilize the state's large Class A utilities (e.g. AWR and CWT) to take over smaller systems.

EVIDENCE

Taking the CPUC Water Action Plan into consideration alongside the CA Public Water System Investment and Consolidation Act of 1997 (CA's fair value legislation) leads us to conclude that state policies and legislative mandates are intended to encourage Class A utilities (e.g. AWR and CWT) to be acquirers, not targets. The CPUC categorizes the state's water utilities by size as Class A: 10,001+ customers; Class B: 2,001–10,000; Class C: 501–2,000; and Class D: 1–500. There are seven Class A utilities in CA including AWR, CWT and AWK. As part of the Plan, the CPUC would consider offering incentives to promote acquisitions by large utilities to take over smaller systems. The CPUC continues to encourage water system consolidation and as recently as November indicated that small systems are "ripe for acquisition." (CPUC, State Water Resources Control Board presentation, November 13, 2017)

WHAT'S PRICED IN?

There are no definitive valuation metrics that are particularly useful in water sector consolidations. This is because water roll-ups reflect varying numbers of customers, future capital investment, and geographic diversity even within acquired water systems. If we look to our work on electric utility merger premiums, we see trailing EBIDTA multiples of 10.2x–12.5x and price/book multiples of 2.1x–3.0x. Based on the high end of the electric utility merger multiples, we estimate AWR share price incorporates approximately 15% chance of acquisition and CWT incorporates 6% likelihood.

**Figure 2: Implied Merger Premiums**

| | AWR | CWT |
|---|---|---|
| Current Price | $50.44 | $35.40 |
| Price target @ 23.3x trailing P/E | $39.38 | $30.99 |
| Price target @ 12.5x trailing EBITDA | $57.34 | $52.86 |
| Price target @ 3.0x Price/Book | $40.56 | $41.25 |
| UBS price target | $42.00 | $32.00 |
| Implied likelihood of acquisition reflected in stock price | 15% | 6% |

Source: FactSet, UBS Equity Research, company filings

### Historical Perspective

In 1997, the CPUC regulated approximately 200 water utilities. By the end of 2006, that figures had declined to 135 and by year-end 2017 it was 101, with 3 additional acquisitions pending. The CPUC categorizes the state's water utilities by size as Class A: 10,001+ customers; Class B: 2,001–10,000; Class C: 501–2,000; and Class D: 1–500. Of the 34 water utilities acquired from 2007 to 2017, 33 were Class C and D (i.e. less than 2,000 connections); only one of the acquired companies was a Class A utility with 30,000 connections.

The California Public Water System Investment and Consolidation Act of 1997 intended to encourage consolidation of water utilities by providing incentives to large utilities to take over smaller systems. This type of legislation is generically referred to in the industry as fair value legislation. California was the first state to implement fair value legislation, but now there are six state that offer it: CA, IL, IN, MO, NJ, and PA. The enabling principle of fair value legislation is that it allows the rate base of acquired assets to be set at the lower of purchase price or fair market value. The fair market value is typically established through an appraisal process. This rate base valuation methodology is critical as many older systems may have little book value. The legislation benefits water utilities because valuation at appraisal value avoids goodwill, which isn't recoverable on acquisitions.

In 2005, the CPUC implemented a Water Action Plan in response to the ongoing concerns about water quality and supply and in recognition of the potential economies of scale in operating water systems. At the time there were approximately 140 companies under CPUC jurisdiction providing potable and irrigation water service to 20% of CA residents. As part of the Plan, the CPUC would consider offering incentives, such as surcharges for capital improvements and an adjustment to the allowed return on equity, to promote acquisitions by large utilities to take over smaller systems. The 2005 Water Action Plan actually went so far as to state: "The Department of Health Services requests Class A utilities to report on an annual basis which smaller utilities (i.e. Class B, C, & D) they might consider purchasing" although it doesn't seem as though that practice ever took hold.

SB 623 may be the next leg in the stool promoting water quality in CA. The bill would establish the Safe and Affordable Drinking Water Fund. The purpose of the fund would be to provide support for operation and maintenance costs to supply, treat, and distribute safe drinking water. We don't anticipate action on this bill in 2018 as there is considerable opposition from municipalities.

## PIVOTAL QUESTIONS

# Q: Will AWR's unregulated utility services business (ASUS) benefit from tax reform?

### UBS VIEW

We estimate that ASUS will Initially benefit from tax reform by approximately $0.08 in 2018. Over time, however, we expect AWR to give up those gains through contract renegotiation. Our model assumes that the benefit of the lower corporate tax rate erodes ratably over the five-year forecast period.

### EVIDENCE

AWR's unregulated utility services business, ASUS, provides water and wastewater services at eleven U.S. military bases. AWR indicated that its military contracts do not specifically address changes in tax law; however, management expects the U.S, government to request an adjustment to reflect the lower tax rate. The adjustments will have to be renegotiated at the request of the government contracting agent on a contract-by-contract basis; and therefore are not likely to re-set all at once or right away. American Water Works (AWK), which also operates a military services group, expects the lower tax rate to true-up over time as well. Interestingly, despite the likely lag in true-up, neither company has included the benefit of tax reform in their earnings guidance, presenting the opportunity for upside to near-term estimates.

### WHAT'S PRICED IN?

AWR earnings guidance for ASUS of $0.38–0.42 in 2018 excludes the benefit of tax reform. We calculate an $0.08 benefit from tax reform; however, we also calculate $0.16 adverse earnings impact if the CPUC adopts the 8.23% ROE as proposed by the ALJ in the Cost of Capital case. It is possible that the positive bottom-line impact of tax reform at the nonregulated business is offset by a negative bottom-line impact at the regulated business, thereby eliminating any upside earning potential, while providing a cushion in the event of an adverse Cost of Capital ruling. The consensus mean of $1.79 is relatively unchanged since AWR's year-end conference call and may not incorporate either of these potential earnings impacts. Our estimates include the benefit of the lower corporate tax rate, ratably declining over the five-year forecast period. We make no adjustment for Cost of Capital prior to the final ruling.

American States Utility Services (ASUS) operates, maintains and performs construction activities on water and wastewater systems at 11 U.S. military bases under 50-year firm, fixed price contracts. The contract prices are reviewed annually under an economic price adjustment. Contracts are also subject to equitable price adjustments for changes in laws and regulations.

**Figure 15: American States Utility Services Military Base Contracts**

| Military Base | Type of System | State |
|---|---|---|
| Fort Bliss | Water and Wastewater | Texas, New Mexico |
| Joint Base Andrews | Water and Wastewater | Maryland |
| Fort Lee | Water | Virginia |
| Joint-Base Langley Eustis | Water and Wastewater | Virginia |
| Joint Expeditionary Base Little Creek-Fort Story | Water and Wastewater | Virginia |
| Fort Jackson | Water and Wastewater | South Carolina |
| Fort Bragg | Water and Wastewater | North Carolina |
| Pope Army Airfield | Water and Wastewater | North Carolina |
| Camp Mackall | Water and Wastewater | North Carolina |
| Eglin Air Force Base | Water and Wastewater | Florida |
| Fort Riley | Water and Wastewater | Kansas |

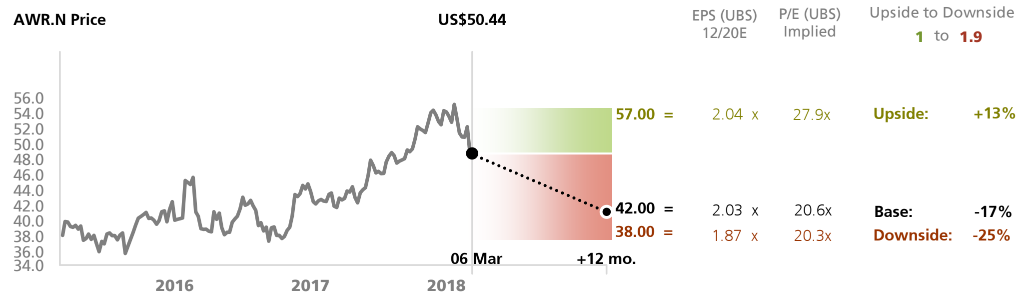
## UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | Avg peer P/E multiple | premium/ discount to avg peer multiple | Allowed CA ROE |
|---|---|---|---|
| $57 upside | 28.0x | 0.0% | 9.43% |
| $42 base | 21.3x | -4.0% | 9.43% |
| $38 downside | 21.3x | -4.0% | 8.23% |

Source: UBS

**Upside (US$57):** Our upside scenario is predicated upon the absolute high group average P/E experienced since 1/1/16 applied to our 2020e EPS.

**Base (US$42):** Our base case is predicated upon a 4% discount to the average water P/E multiple in 2020. The multiple reflects a 2% discount for AWR's regulatory jurisdiction profile, a 1% premium for operating in a state with fair value legislation, and a 3% discount for risk associated with the CA Cost of Capital proceeding.

**Downside (US$38):** Our downside scenario is predicated upon the CA ALJ Proposed Decision being adopted. If so, AWR's CA ROE would decline to 8.23% from 9.43%. We calculate the net effect of the reduction in ROE, slightly offset by a modest increase in equity ratio, would reduce EPS by approximately $0.16 to $1.87 in 2020e. We apply a 4% discount to the average water P/E multiple.

## COMPANY DESCRIPTION

American States Water Company is the parent of Golden State Water Company and American States Utility Services, Inc. (ASUS). AWR provides service to approximately 260,000 water customers and 24,000 electric customers in California. Through its non-regulated subsidiary, ASUS operates, maintains and performs construction activities on water and wastewater systems at U.S. military bases under 50-year firm, fixed-price contracts.

### Industry outlook

Infrastructure spending and consolidation will continue to be the underlying drivers of industry growth for the next 5-10 years. Capital spending should remain at or near peak levels for the next 12 months, and is forecast to remain elevated through at least 2020. We would expect water utilities to follow the pattern of electric utilities with a bias toward upward revision in the spending forecast. Factors that could increase the pace of consolidation include broader adoption of fair value legislation, enhanced focus on water quality and accountability standards, or macro trends that instigate budgetary pressures or risk-off strategies at the municipal level. We expect conservation and efficiency to continue to reduce the trend of water usage nationally, and drought could be a disruptive event regionally.

### The bellwether of the group

We are initiating on AWK with a Buy rating as part of our sector launch on water utilities. AWK offers investors exposure to a relative low-risk regulated business, above-average 7–10% earnings growth rate, and good visibility in capital spending. In our view, AWK is the best positioned water utility to capitalize on the industry themes of infrastructure investment and consolidation. We see total return potential of 13%.

### Industry leader through and through

AWK warrants the role of industry leader for a variety of reasons. With a broad geographic footprint, AWK is uniquely placed to provide feedback to regulators and to represent the industry in the political process. The company's exposure in 16 states also provides a springboard for growth through consolidation. AWK posts the highest earnings and dividend growth in our universe, forecasting earnings growth of 7–10% and dividend growth at the top of that range. Finally, AWK is the most liquid of the water utilities at approximately $14 billion market cap, over 2x larger than Aqua America.

### Opportunities outweigh the risks – positive upside skew

Our outlook for AWK skews 3:1 to the upside. Our upside case is predicated upon an earnings growth rate of 10% at the high end of AWK's target. AWK targets rate base growth of 5–7% and new regulated acquisitions are targeted to add another 1–2%. Additionally, AWK's Market-based Businesses are expected to contribute 1% growth. Increased rig activity in the Marcellus shale could benefit AWK's Keystone business. In the near-term, earnings may modestly benefit from the lower tax rate through its military base contracts. We assume the government will seek to renegotiate these contracts and the tax benefit will erode over time. We estimate approximately $0.02 of annualized earnings risk in California if the commission adopts the ALJ Proposed Decision.

### Valuation:

Our $89 price target is predicated upon a 10% premium to the 2020 average water utility P/E multiple. Our estimates are $3.26 in 2018, $3.52 in 2019, and $3.78 in 2020. The 10% premium reflects AWK's broad geographic footprint, consolidation potential, and above-average earnings and dividend growth.

**UBS Research THESIS MAP** a guide to our thinking and what's where in this report

PIVOTAL QUESTIONS

**Q: Will AWK continue to benefit from ongoing sector consolidation?**

Yes. Consolidation is a logical outgrowth of the increased spending required to replace aging infrastructure and ensure water quality. As the industry leader, we believe AWK is well placed to benefit from ongoing consolidation in the sector. Indeed, AWK already exemplifies what a successful roll-up strategy looks like.

more→

**Q: Is AWK's geographic diversity a competitive advantage?**

Yes. Geographic diversity provides AWK a broader footprint to pursue acquisitions, and also reduces reliance and exposure to any one state's regulations and policies.

more→

UBS VIEW

In our view, AWK warrants the highest premium among the regulated water utilities due to its above-average earnings and dividend growth, geographic diversity, economies of scale, and industry leadership.

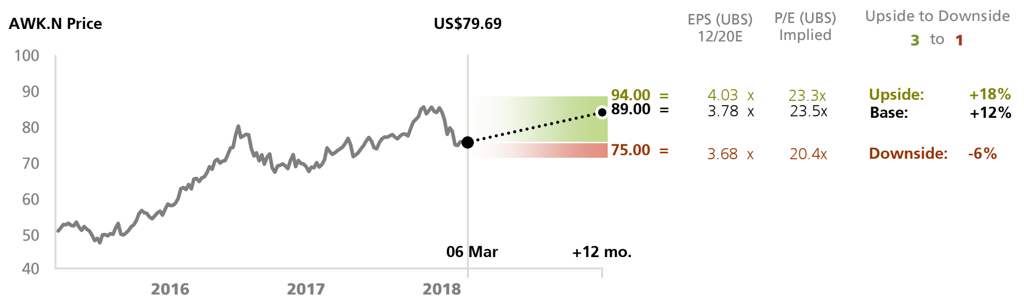
EVIDENCE

We model earnings growth of 7.7% for AWK, with upside potential to as high as 10% if AWK finds incremental infrastructure investment or consolidation opportunities. This is the highest earnings growth rate in our universe. We also expect AWK to continue raising the dividend at or near 10% per year for the five-year forecast, without compromising the company's 50–60% target payout ratio. AWK currently has 16 acquisitions pending in six states (five of which have implemented fair value legislation). We model a steady diet of tuck-in acquisitions in our forecast.

WHAT'S PRICED IN?

AWK's valuation does not reflect the above-average growth prospects of the company, in our view. The stock trades at a 1% discount to the 2020e average water utility P/E, compared to our view that the shares should trade at a 10% premium to the group average multiple.

UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | Avg P/E multiple | Premium/ discount | EPS growth rate |
|---|---|---|---|
| $94 upside | 21.3x | 10.0% | 10% |
| $89 base | 21.3x | 10.0% | 7.7% |
| $75 downside | 21.0x | -2.4% | 6.7% |

American Water Works  is the largest and most geographically diverse, publicly-traded water and wastewater utility in the U.S. AWK provides water and wastewater services to...

PIVOTAL QUESTIONS

# Q: Will AWK continue to benefit from ongoing sector consolidation?

## UBS VIEW

Yes. Consolidation is a logical outgrowth of the increased spending required to replace aging infrastructure and ensure water quality. As the industry leader, we believe AWK is well placed to benefit from ongoing consolidation in the sector. Indeed, AWK already exemplifies what a successful roll-up strategy looks like.

## EVIDENCE

As the industry leader, AWK has a voice to promote the benefits of fair value legislation in states that have not yet adopted it. California was the first state to adopt fair value legislation in 1997. Since that time, AWK has argued publicly for the adoption of similar legislation in other states. Only six states have enacted fair value legislation, so in our view there is improvement that can be made across the nation. AWK operates in all six states with fair value legislation and is likely to continue to argue for its adoption elsewhere.

In addition, the New Jersey Water Quality Accountability Act enacted in 2017 is another legislative template that may become a standard that other states seek to emulate. The legislation would help level the playing field between investor-owned water utilities and municipal water utilities by holding municipal officers or senior officials to the same accountability standards that IOU senior managers are held. We expect AWK and WTR to be involved in discussions with policymakers in other states that may consider implementing similar legislation.

## WHAT'S PRICED IN?

AWK's discount multiple does not appear properly suited to AWK's leadership role in the industry, consolidation potential or overall growth objectives, in our view. AWK expects regulated acquisitions to contribute 1–2% of AWK's 7–10% total earnings growth. AWK's geographic footprint, with water and wastewater operations in 16 states, gives the company a competitive advantage and a broad base on which to grow through consolidation.

PIVOTAL QUESTIONS

# Q: Is AWK's geographic diversity a competitive advantage?

UBS VIEW

Yes. Geographic diversity provides AWK a broader footprint to pursue acquisitions, and also reduces reliance and exposure to any one state's regulations and policies.

EVIDENCE

AWK operates in 16 states, with AWK's largest concentration of rate base (27%) in PA. As a result of the company's footprint, the earnings and growth trajectory aren't tied to one specific state. For example, in California, where the ALJ recommended an 8.23% Cost of Capital for the water utilities, if adopted, we estimate approximately $0.02 of earnings exposure for AWK, compared to $0.16 at AWR and $0.12 at CWT (which each have nearly 100% of their rate base in CA).

We typically see a discount imputed to stocks involved in significant rate cases. AWK often has rate cases pending in multiple states at any given time; however, because of its geographic diversity, AWK has limited exposure to any particular rate case thereby avoiding the rate case overhang discount.

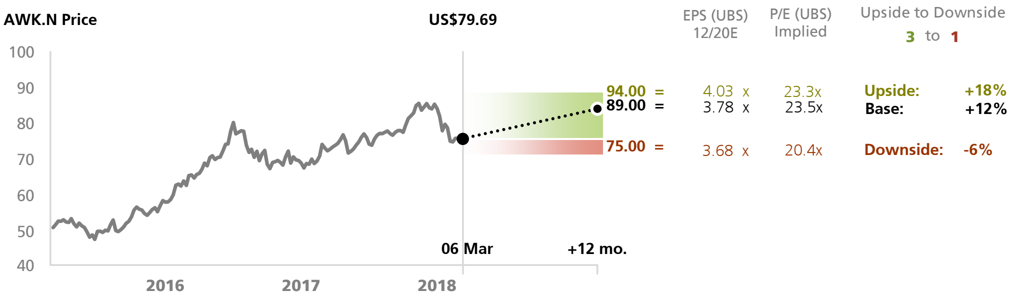
Through its exposure in 16 states, AWK is also able to take advantage of a number of mechanisms to reduce regulatory lag, such as infrastructure surcharges, consolidated tariffs, and revenue stabilization mechanisms (see Figure 8 of our sector launch). A narrower footprint would reduce AWK's opportunity for timely expense recovery, in our view.

Finally, six states currently have fair value legislation (see Figure 11 of our sector launch), which allows the rate base of acquired assets to be set at the lower of purchase price or fair market value. AWK operates in all six of the states. Fair value legislation has been a material enabling factor toward consolidation. In 2017, AWK closed 19 acquisitions totalling almost 40,000 customer connections in nine states. AWK currently has 16 acquisitions pending, totalling approximately 23,000 customer connections in six states.

WHAT'S PRICED IN?

We don't think AWK gets the credit it deserves for this important competitive advantage. AWK trades at a discount to the 2019 average water utility P/E. We think AWK's geographic footprint, combined with its size, scale, and industry leadership warrant the highest premium in the group.

## UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | Avg P/E multiple | Premium/ discount | EPS growth rate |
|---|---|---|---|
| $94 upside | 21.3x | 10.0% | 10% |
| $89 base | 21.3x | 10.0% | 7.7% |
| $75 downside | 21.0x | -2.4% | 6.7% |

Source: UBS

**Upside (US$94):** Our upside scenario assumes AWK achieves the high end of the targeted 7–10% earnings growth rate. We apply a 10% premium to a 21.3x P/E multiple.

**Base (US$89):** Our base case is predicated upon a 10% premium applied to the 2020 average water utility P/E multiple.

**Downside (US$75):** Our downside scenario is predicated upon the trough absolute average water utility P/E experienced since 1/1/16. We apply a 2% discount the multiple which reflects a historical low relative discount for AWK. We also assume the 2018–2020 earnings growth rate is 100 basis points lower than our base case estimates.

# COMPANY DESCRIPTION

American Water Works is the largest and most geographically diverse, publicly-traded water and wastewater utility in the U.S. AWK provides water and wastewater services to approximately 3.4MM customers in 16 states through its Regulated Businesses. Additionally, AWK provides complementary water and wastewater services through its nonregulated Market-based Businesses. The Regulated Businesses contribute approximately 88% of revenues and 95% of net income (allocating Parent & Other losses 50/50 to the Regulated and Market-based Businesses).

**Industry outlook**

Infrastructure spending and consolidation will continue to be the underlying drivers of industry growth for the next 5-10 years. Capital spending should remain at or near peak levels for the next 12 months, and is forecast to remain elevated through at least 2020. We would expect water utilities to follow the pattern of electric utilities with a bias toward upward revision in the spending forecast. Factors that could increase the pace of consolidation include broader adoption of fair value legislation, enhanced focus on water quality and accountability standards, or macro trends that instigate budgetary pressures or risk-off strategies at the municipal level. We expect conservation and efficiency to continue to reduce the trend of water usage nationally, and drought could be a disruptive event regionally.

# Aqua America Inc

## Initiating Neutral: PA Rate Case and M&A Limit Upside

### Rate Case and Strategic M&A Present Uncertainty

We are initiating on WTR with a Neutral rating as part of our sector launch on water utilities. The shares appear fairly valued here. We expect WTR earnings growth to increase to 7% once it completes a widely anticipated rate case in PA in 2019. Until that time, we expect upside in the shares to be limited by the rate case overhang. Additionally, management's willingness to consider strategic acquisitions of other utilities or infrastructure businesses, beyond just water and wastewater assets, may have given some investors pause.

### PA Rate Case Limits Upside

Pennsylvania is WTR's largest jurisdiction, accounting for approximately 69% of rate base. This summer, the company intends to file its first rate case in PA since 2011. In the intervening years, WTR has invested over $2B of capital and closed over 20 acquisitions. Also noteworthy, this rate case will be WTR's first filing using a fully projected future test year (2019).

### Growth Strategy

WTR's primary focus is growing the water/wastewater business through acquisitions of municipal systems. Last week, the company also expressed interest in opportunistic acquisitions of large, regulated utility or infrastructure assets, rekindling investors' previous fears that WTR could seek to add electric or gas utility assets. WTR also indicated that it would consider adding market-based assets that complement WTR's regulated business. We would not look for significant growth in market-based assets.

### Valuation:

Our $36 price target is predicated upon a 6% premium to the 2020 average P/E of our water universe. Our estimates are $1.40 in 2018, $1.48 in 2019, and $1.59 in 2020. The 6% premium that we assign to the shares reflects WTR's concentration in a quality regulatory jurisdiction, as well as geographic diversity in four fair value states, somewhat offset by the risk of the PA rate case.

**UBS Research THESIS MAP** a guide to our thinking and what's where in this report

## PIVOTAL QUESTIONS

**Q: What is WTR's earnings growth outlook 2018–2022?**

We model 6.2% earnings CAGR for WTR through 2022. The trajectory of earnings reflects lower growth in 2018 and 2019, ahead of and during the PA rate case filing. Post resolution of the rate case in mid-2019, we expect that WTR should be able to grow earnings in line with rate base growth of 7%.

more→

**Q: Would it be value-enhancing if WTR's strategic M&A strategy targeted gas or electric assets?**

Although the end result may be the same, we don't have the same optimism for water companies acquiring gas or electric assets that we would have for electric/gas companies acquiring water assets. This is due to the differences in risk profile and growth outlook for each asset class. Water companies tend to be lower risk and higher growth than either electric or gas utilities. Therefore, electric/gas utilities that purchase water assets may be viewed as incrementally lowering their asset risk and potentially increasing their growth. Alternatively, water companies purchasing electric/gas assets may be viewed as increasing their risk profile and potentially reducing growth.

more→

## UBS VIEW

There is much to like about WTR. The company is geographically diverse, with water and wastewater systems in eight states. Although the majority of rate base is concentrated in PA, we view that state as having constructive regulatory treatment. Four of the states in which WTR operates, have fair value legislation, enabling greater opportunities for growth through acquisition. WTR has a demonstrated track record of closing acquisitions, adding, on average, 8,600 new customers annually through tuck-ins.

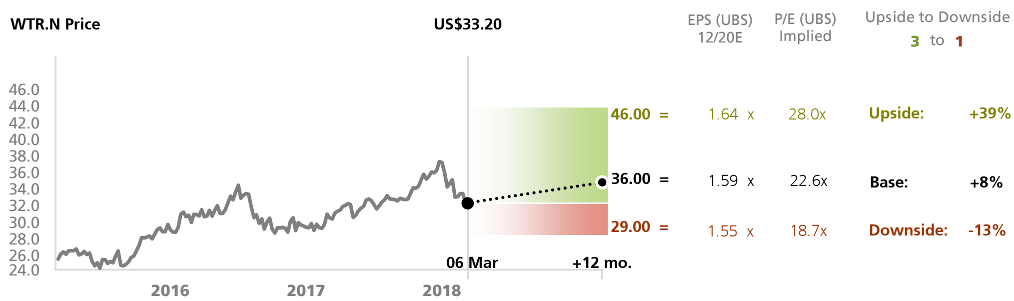
## EVIDENCE

WTR expects file a rate case in PA in summer 2018 for rates effective mid-2019. Resolution of that case should allow WTR's earnings growth rate to increase in 2020+ to approximate its 7% rate base growth. WTR has six pending acquisitions that are expected to close in 2018. WTR's operations are predominantly in states with fair value legislation, supporting the likelihood of a continuing stream of tuck-ins.

## WHAT'S PRICED IN?

We think WTR's stock price reflects the company's growth outlook, while also taking into consideration the normal risks associated with a rate case proceeding. It is possible that WTR's strategic acquisition aspirations may have heightened investors' concerns regarding WTR's potential to step outside the water/wastewater asset profile.

## UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | Peer Avg P/E mulitple | Premium/ discount | EPS growth rate |
|---|---|---|---|
| $46 upside | 28.0x | 0% | 6.8% |
| $36 base | 21.3x | 6% | 5.8% |
| $29 downside | 21.0x | -11% | 4.8% |

## PIVOTAL QUESTIONS

# Q: What is WTR's earnings growth outlook 2018–2022?

### UBS VIEW

We model 6.2% earnings CAGR for WTR through 2022. The trajectory of earnings reflects lower growth in 2018 and 2019, ahead of and during the PA rate case filing. Post resolution of the rate case in mid-2019, we expect that WTR should be able to grow earnings in line with rate base growth of 7%.

### EVIDENCE

Pennsylvania is WTR's largest jurisdiction, accounting for approximately 69% of total rate base; therefore, the growth outlook in PA tends to be indicative for the company overall. WTR has not filed a rate case in PA since 2011. Since that time, WTR will have invested over $2B of new capital in the state. The long delay in filing the rate base is attributed to flow through of the repair tax deduction which Aqua PA implemented in 4Q 2012. The company filed for a DSIC surcharge in PA in October 2017 and again in January 2018. The company expects to file for a third DSIC surcharge increase in April 2018 and then file the PA rate case in the summer (we estimate July). We view PA as a constructive regulatory jurisdiction and rank the state in Tier 2 of our Regulatory Jurisdiction Rankings (see Figure 12 of our sector launch). Additional sources of growth for WTR include organic customer growth and a steady diet of tuck-in acquisitions. In 2018, WTR estimates adding approximately 16,000 new customers from six signed acquisition agreements, the vast majority of which will be wastewater customers. WTR targets acquisitions of water and wastewater systems with 2,500–25,000 customers.

### WHAT'S PRICED IN?

The consensus mean growth rate is approximately 50 basis points higher than ours, suggesting somewhat higher expectations for the stock.

PIVOTAL QUESTIONS

# Q: Would it be value-enhancing if WTR's strategic M&A strategy targeted gas or electric assets?

## UBS VIEW

We don't have the same optimism for water companies acquiring gas or electric assets that we would have for electric/gas companies acquiring water assets. This is due to the differences in risk profile and growth outlook for each asset class. Water companies tend to be lower risk and higher growth than either electric or gas utilities. Therefore, electric/gas utilities that purchase water assets may be viewed as incrementally lowering their asset risk and potentially increasing their growth. Alternatively, water companies purchasing electric/gas assets may be viewed as increasing their risk profile and potentially reducing growth.

## EVIDENCE

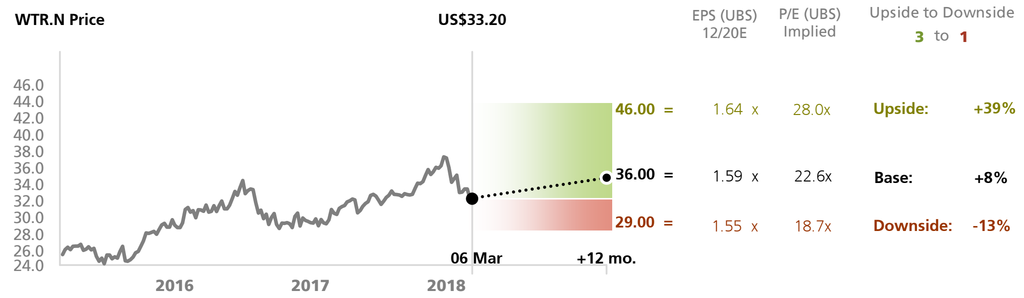
WTR's growth strategy includes strategic M&A, which the company defines as "opportunistic pursuit of large, regulated utility/infrastructure targets" (WTR analyst day presentation, 2/26/18). While the strategy does not explicitly target electric or gas assets, it appears to indicate a willingness to consider acquisitions of those assets.

Water utilities typically enjoy higher total returns than their electric and gas utility counterparts, while offering a comparably low beta. The average annual EPS growth of the group is approximately 7%, with a current average yield of 2%. This results in projected annual total shareholder return of 9%. Further, water utilities are generally attractive to ESG funds due in part to their high scores on Environmental metrics (i.e., no exposure to fossil fuels). Adding electric or gas exposure would reduce a water company's relative attractiveness from an ESG perspective.

## WHAT'S PRICED IN?

WTR discussed its growth strategy on February 28 at its annual analyst day. Historically, the market has been wary of WTR's potential interest in electric or gas assets. Investor scepticism toward the benefits of branching across the regulated assets classes could keep a lid on the stock's valuation relative to the group average.

## UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | Peer Avg P/E mulitple | Premium/ discount | EPS growth rate |
|---|---|---|---|
| $46 upside | 28.0x | 0% | 6.8% |
| $36 base | 21.3x | 6% | 5.8% |
| $29 downside | 21.0x | -11% | 4.8% |

Source: UBS

**Upside (US$46):** Our upside scenario is predicated upon a 0% premium applied to a 28.0x P/E multiple, which reflects the peak absolute average water utility P/E experienced since 1/1/16. We also assume the 2018–2020 earnings growth rate is 100 basis points higher than our base case estimates.

**Base (US$36):** Our base case is predicated upon a 6% premium applied to the 2020 average water utility P/E multiple.

**Downside (US$29):** Our downside scenario is predicated upon the trough absolute average water utility P/E experienced since 1/1/16. We apply an 11% discount to the multiple, reflecting WTR's historical low relative multiple discount. We also assume the 2018–2020 earnings growth rate is 100 basis points lower than our base case estimates.

## COMPANY DESCRIPTION

Aqua America, Inc. provides regulated utility water and wastewater services to approximately 972,000 customers in Pennsylvania, Ohio, Texas, Illinois, North Carolina, New Jersey, Indiana, and Virginia. Operations in Pennsylvania account for approximately 52% of revenues and 74% of net income. Aqua Resources provides unregulated services such as operating and maintenance contracts with municipal authorities and other parties, as well as water and wastewater line repair service, Aqua Infrastructure provides unregulated raw water supply services for firms in the natural gas drilling industry.

**Industry outlook**

Infrastructure spending and consolidation will continue to be the underlying drivers of industry growth for the next 5-10 years. Capital spending should remain at or near peak levels for the next 12 months, and is forecast to remain elevated through at least 2020. We would expect water utilities to follow the pattern of electric utilities with a bias toward upward revision in the spending forecast. Factors that could increase the pace of consolidation include broader adoption of fair value legislation, enhanced focus on water quality and accountability standards, or macro trends that instigate budgetary pressures or risk-off strategies at the municipal level. We expect conservation and efficiency to continue to reduce the trend of water usage nationally, and drought could be a disruptive event regionally.

### A Little Pricey for the Risk Profile

We are initiating on CWT with a Sell rating as part of our sector launch on water utilities. Our $34 price target suggests 4% downside in the shares. CWT shares are trading at a 1% premium to the 2020 average UBS water P/E, a valuation that in our opinion is modestly overvalued relative to the current risk profile of the company. We expect CWT to participate in and benefit from the infrastructure spending and consolidation themes in the industry; however, at current valuations we prefer CWT's lower cost and more geographically diverse peers.

### California Water Utilities' Cost of Capital at Risk

The CPUC decision (on March 22 at the earliest) in the water utilities' Cost of Capital case may present a downward catalyst for the shares if the order adopts the ALJ Proposed Decision. The ALJ recommended that CWT be awarded an ROE of 8.22%, significantly lower than requested (10.75%), currently authorized (9.43%), and the 2017 national average authorized ROE for water utilities (9.56%). We estimate roughly $0.02 of earnings risk for every 20 basis point change in ROE. Our EPS estimates for CWT are predicated on the current 9.43% ROE.

### Infrastructure Spending is the Bright Spot

CWT invested $259MM in capital projects in 2017, a record level of investment for the company: 13% higher than 2016 and 23% higher than budgeted. CWT forecasts spending $200–220MM in 2018. CWT expects to request higher capex spending in 2019–2021 when it files its general rate case in July.

### Valuation:

Our $34 price target is based on a 4% discount to the 2020 average P/E of our water universe. Our EPS estimates are $1.44 in 2018, $1.54 in 2019 and $1.64 in 2020. Our estimates are predicated on CWT retaining the current 9.43% ROE in CA.

**UBS Research THESIS MAP** a guide to our thinking and what's where in this report

## PIVOTAL QUESTIONS

**Q: Has the quality of California regulation changed?**

Yes. Recent regulatory processes and final orders by the CPUC have demonstrated a less constructive regulatory environment, in our view. If the California Public Utilities Commission (CPUC) adopts the ALJ Proposed Decision in the water utilities' Cost of Capital case, we will view that as the culmination of a trend of adverse orders by the CPUC.

more→

**Q: Does the industry consolidation theme support a premium valuation for AWR and CWT?**

Unlikely. To the contrary, California's long-term water quality planning objectives would prefer to utilize the state's large Class A utilities (e.g. AWR and CWT) to take over smaller systems.

more→

## UBS VIEW

We expect CWT to participate in the infrastructure spending theme in the industry and we forecast 5% earnings growth for the company. The outcome of CWT's next general rate case will inform our growth rate forecast in 2020–2022. Tax reform should create some headroom in customer bills, as well as contribute to higher rate base growth. However, CWT is operating in a challenging regulatory environment with near-term risk of a materially lower allowed ROE.

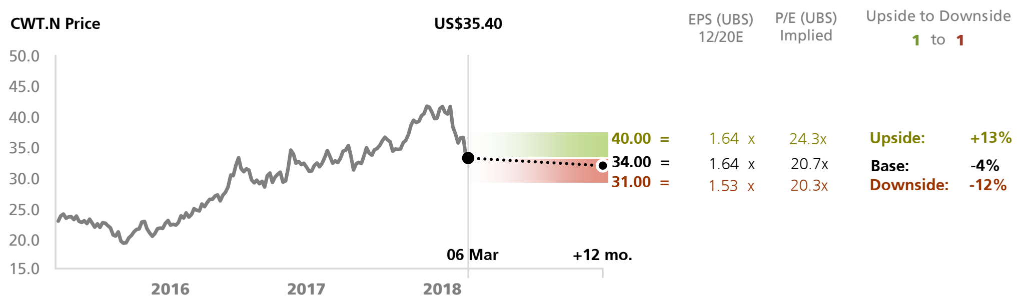
## EVIDENCE

Recent regulatory processes and final orders by the CPUC have demonstrated a less constructive regulatory environment. We estimate approximately $0.12 earnings risk if the Cost of Capital Proposed Decision is adopted. Separately, although CA policies and fair value legislation are intended to encourage CWT to purchase smaller water systems, small systems in CA are not demonstrating a willingness to sell. This limits CWT's ability to take advantage of one of the primary industry themes of growth through acquisition.

## WHAT'S PRICED IN?

CWT trades at a higher premium than AWK, which has higher earnings and dividend growth forecasts. Therefore, CWT's 1% premium to the average UBS water P/E in 2020 could be imputing a higher growth profile than we foresee.

## UPSIDE / DOWNSIDE SPECTRUM



| **Value drivers** | premium/ discount to avg peer multiple | Allowed ROE |
|---|---|---|
| $40 upside | 14.0% | 9.43% |
| $34 base | -4.0% | 9.43% |
| $31 downside | -4.0% | 8.22% |

## COMPANY DESCRIPTION

California Water Service Group operates four regulated public utilities: California Water Service Company, New Mexico Water Service Company, Washington Water Service Company, and...

## PIVOTAL QUESTIONS

# Q: Has the quality of California regulation changed?

### UBS VIEW

Yes. Recent regulatory processes and final orders by the CPUC have demonstrated a less constructive regulatory environment. If the California Public Utilities Commission (CPUC) adopts the ALJ Proposed Decision in the water utilities' Cost of Capital case, we will view that as the culmination of a trend of adverse orders by the CPUC.

### EVIDENCE

A recent trend of adverse orders and commission processes has led to a degradation of the regulatory landscape in California. We rank California in the third quartile of regulatory jurisdictional rankings. (See Figure 12: State Jurisdictional Rankings in our sector launch**.**) We update the rankings annually and as necessary throughout the year.

**Electric utilities' Cost of Capital proceeding: 2017**
The electric utilities Cost of Capital proceeding in 2017 was marred by a faulty process. The ALJ Proposed Decision did not support the settlement the three CA electric utilities had reached with ORA (Office of Ratepayer Advocates) and TURN (The Utility Reform Network) for a two-year extension to the Cost of Capital with modest adjustments to ROE and debt cost true-up. The commission ultimately supported the settlement agreement, but not without grousing from the commissioners on the process. Although the outcome was constructive, the process created uncertainty for the stocks and adversely impacted investors' views of regulation in the state.

**Sempra Energy Wildfire recovery final order: November 30, 2017**
The CPUC ruled against SRE regarding recovery of expenses associated with past wildfires (A.15-09-010). SRE took a $351MM pre-tax write-off and is seeking reconsideration. The order has materially greater implications for PG&E Energy (PCG) and Edison International (EIX), both of which experienced unprecedented wildfires in their service territories in late 2017 and early 2018. PCG suspended its dividend on December 20, 2017 due to the uncertainty of financial obligations related to wildfires. The CPUC has not made a decision on SRE's reconsideration request.

**Water utilities' Cost of Capital proceeding: final order expected March/April 2018**
The ALJ Proposed Order (PD) in the water utilities' Cost of Capital proceeding adopted ORA's recommendation in whole. ORA recommended ROEs of 8.22%-8.30% for the four CA water utilities – significantly lower than the 2017 national average ROE of 9.56% authorized for water utilities.

### WHAT'S PRICED IN?

So far, we have not seen a demonstrable reaction in the market to the ALJ recommendation; however, if the CPUC does not improve upon the PD, we would expect the share prices to adjust down ~$3 for AWR and ~$2 for CWT, to reflect the lower earnings potential at those companies. We do not anticipate a material impact to AWK's share price due to the comparatively lower earnings exposure. If the PD is adopted, we estimate earnings at risk of $0.16 at AWR, $0.12 at CWT, and $0.02 at AWK. The earnings sensitivity is $0.03 at AWR and $0.02 at CWT for every 20 basis points change in ROE.

PIVOTAL QUESTIONS

# Q: Does the industry consolidation theme support a premium valuation for AWR and CWT?

UBS VIEW

Unlikely. To the contrary, California's long-term water quality planning objectives would prefer to utilize the state's large Class A utilities (e.g. AWR and CWT) to take over smaller systems.

EVIDENCE

Taking the CPUC Water Action Plan into consideration alongside the CA Public Water System Investment and Consolidation Act of 1997 (CA's fair value legislation) leads us to conclude that state policies and legislative mandates are intended to encourage Class A utilities (e.g. AWR and CWT) to be acquirers, not targets. The CPUC categorizes the state's water utilities by size as Class A: 10,001+ customers; Class B: 2,001–10,000; Class C: 501–2,000; and Class D: 1–500. There are seven Class A utilities in CA including AWR, CWT and AWK. As part of the Plan, the CPUC would consider offering incentives to promote acquisitions by large utilities to take over smaller systems. The CPUC continues to encourage water system consolidation and as recently as November indicated that small systems are "ripe for acquisition." (CPUC, State Water Resources Control Board presentation, November 13, 2017)

WHAT'S PRICED IN?

There are no definitive valuation metrics that are particularly useful in water sector consolidations. This is because water roll-ups reflect varying numbers of customers, future capital investment, and geographic diversity even within acquired water systems. If we look to our work on electric utility merger premiums, we see trailing EBIDTA multiples of 10.2x–12.5x and price/book multiples of 2.1x–3.0x. Based on the high end of the electric utility merger multiples, we estimate AWR share price incorporates approximately 15% chance of acquisition and CWT incorporates 6% likelihood.

**Figure 17: Implied Merger Premium**

| | AWR | CWT |
|---|---|---|
| Current Price | $50.44 | $35.40 |
| Price target @ 23.3x trailing P/E | $39.38 | $30.99 |
| Price target @ 12.5x trailing EBITDA | $57.34 | $52.86 |
| Price target @ 3.0x Price/Book | $40.56 | $41.25 |
| UBS price target | $42.00 | $32.00 |
| Implied likelihood of acquisition reflected in stock price | 15% | 6% |

Source: FactSet, UBS Equity Research, company filings

### Historical Perspective

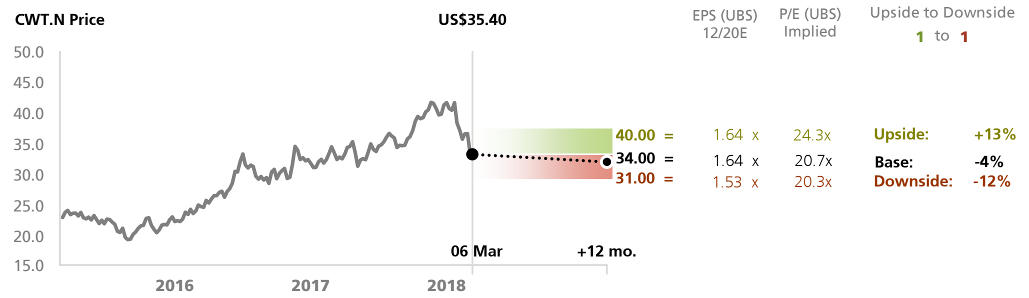
In 1997, the CPUC regulated approximately 200 water utilities. By the end of 2006, that figures had declined to 135 and by year-end 2017 it was 101, with 3 additional acquisitions pending. The CPUC categorizes the state's water utilities by size as Class A: 10,001+ customers; Class B: 2,001–10,000; Class C: 501–2,000; and Class D: 1–500. Of the 34 water utilities acquired from 2007 to 2017, 33 were Class C and D (i.e. less than 2,000 connections); only one of the acquired companies was a Class A utility with 30,000 connections.

The California Public Water System Investment and Consolidation Act of 1997 intended to encourage consolidation of water utilities by providing incentives to large utilities to take over smaller systems. This type of legislation is generically referred to in the industry as fair value legislation. California was the first state to implement fair value legislation, but now there are six state that offer it: CA, IL, IN, MO, NJ, and PA. The enabling principle of fair value legislation is that it allows the rate base of acquired assets to be set at the lower of purchase price or fair market value. The fair market value is typically established through an appraisal process. This rate base valuation methodology is critical as many older systems may have little book value. The legislation benefits water utilities because valuation at appraisal value avoids goodwill, which isn't recoverable on acquisitions.

In 2005, the CPUC implemented a Water Action Plan in response to the ongoing concerns about water quality and supply and in recognition of the potential economies of scale in operating water systems. At the time there were approximately 140 companies under CPUC jurisdiction providing potable and irrigation water service to 20% of CA residents. As part of the Plan, the CPUC would consider offering incentives, such as surcharges for capital improvements and an adjustment to the allowed return on equity, to promote acquisitions by large utilities to take over smaller systems. The 2005 Water Action Plan actually went so far as to state: "The Department of Health Services requests Class A utilities to report on an annual basis which smaller utilities (i.e. Class B, C, & D) they might consider purchasing" although it doesn't seem as though that practice ever took hold.

SB 623 may be the next leg in the stool promoting water quality in CA. The bill would establish the Safe and Affordable Drinking Water Fund. The purpose of the fund would be to provide support for operation and maintenance costs to supply, treat, and distribute safe drinking water. We don't anticipate action on this bill in 2018 as there is considerable opposition from municipalities.

# UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | premium/ discount to avg peer multiple | Allowed ROE |
|---|---|---|
| $40 upside | 14.0% | 9.43% |
| $34 base | -4.0% | 9.43% |
| $31 downside | -4.0% | 8.22% |

Source: UBS

**Upside (US$40):** Our upside scenario is predicated upon CWT's relative premium to the 2020 average water P/E multiple increasing to 14%. This is the historical high premium that CWT has traded since January 2016.

**Base (US$34):** Our base case is predicated upon a 4% discount to the average water P/E multiple in 2020. The multiple reflects a 2% discount for CWT's regulatory jurisdiction profile, a 1% premium for operating in a state with fair value legislation, and a 3% discount for risk associated with the CA Cost of Capital proceeding.

**Downside (US$31):** Our downside scenario is predicated upon the CA ALJ Proposed Decision being adopted. If so, CWT's CA ROE would decline to 8.22% from 9.43%. We calculate the net effect of the reduction in ROE, slightly offset by a modest increase in equity ratio, would reduce EPS by approximately $0.12 to $1.53 in 2020e. We apply a 4% discount to the average water P/E multiple.

# COMPANY DESCRIPTION

California Water Service Group operates four regulated public utilities: California Water Service Company, New Mexico Water Service Company, Washington Water Service Company, and Hawaii Water Service Company. Together, the regulated utilities provide service to approximately 512,000 customers. CWT also operates an unregulated business referred to as Utility Services, which provides water-related services, such as operations, billing and meter reading to municipalities and other private companies.

**Industry outlook**

Infrastructure spending and consolidation will continue to be the underlying drivers of industry growth for the next 5-10 years. Capital spending should remain at or near peak levels for the next 12 months, and is forecast to remain elevated through at least 2020. We would expect water utilities to follow the pattern of electric utilities with a bias toward upward revision in the spending forecast. Factors that could increase the pace of consolidation include broader adoption of fair value legislation, enhanced focus on water quality and accountability standards, or macro trends that instigate budgetary pressures or risk-off strategies at the municipal level. We expect conservation and efficiency to continue to reduce the trend of water usage nationally, and drought could be a disruptive event regionally.

### A Quality Small Cap Water Utility

We are initiating coverage on CTWS with a Neutral rating as part of our sector launch on water utilities. The shares appear fairly valued here, trading roughly in line with our $53 price target. CTWS's market capitalization of approximately $600MM makes it the smallest capitalization in our coverage universe. Management has expressed interest in growing the company and has been an active acquirer of tuck-in acquisitions, adding two to its system in 2017.

### Connecticut Rate Settlement Resets the Infrastructure Surcharge to Zero

CTWS owns water and wastewater systems in Connecticut (88% of rate base) and water systems in Maine (12% of rate base). CTWS has favorable investment surcharge mechanisms in both states, which allow for timely recovery of infrastructure spending in CT and virtually all capital investment is eligible in ME. In CT, CTWS recently filed a settlement that would roll the surcharge recovery into base rates and reset the mechanism to zero. The settlement would allow a $5.5MM rate increase and CTWS has agreed not to seek another increase for rates effective prior to 1/1/20.

### Growth Aspirations

We think CTWS will continue to seek a transaction that could move the company into the mid-cap space, but those opportunities are rare in the highly fragmented water industry. We also think CTWS is open to moving outside the two states in which it currently operates. The question is whether a decent-sized acquisition will come along to propel it forward (these types of transformational opportunities tend to be rare in the water industry), or whether its growth strategy will progress slowly through a series of smaller transactions.

### Valuation:

Our $53 price target reflects a 4% discount to the 2020E average P/E of our water universe. Our EPS estimates are $2.16 in 2017, $2.30 in 2018, $2.41 in 2019 and $2.55 in 2020. The 4% discount that we assign to the shares reflects CTWS's 5% earnings growth outlook and concentrated regulatory jurisdictional exposure.

**UBS Research THESIS MAP** a guide to our thinking and what's where in this report

PIVOTAL QUESTIONS

**Q: Is bigger better?**

Yes. Generally speaking, the larger water infrastructure companies benefit from economies of scale, cost of capital advantages, and geographic diversity relative to their smaller peers. In the highly fragmented water industry, with material capital investment requirements, size matters.

more→

**Q: What is CTWS's growth outlook without a transformative transaction?**

We estimate approximately 5% earnings CAGR 2018-2022 excluding the benefit of new acquisitions. Tuck-in acquisitions are consistent with CTWS's past business strategy and likely in the future; we think any tuck-ins would be modestly incremental to expectations.

more→

UBS VIEW

We view CTWS as a good quality small cap water utility. The company operates in CT and ME, which have constructive recovery mechanisms that reduce regulatory lag. We forecast approximately 5% organic growth for CTWS and anticipate that the company will continue to pursue tuck-in acquisitions as complementary water and wastewater systems become available. We think CTWS will continue to seek a larger scale transaction that moves the company into the mid-cap space, but those opportunities are rare in the highly fragmented water industry.

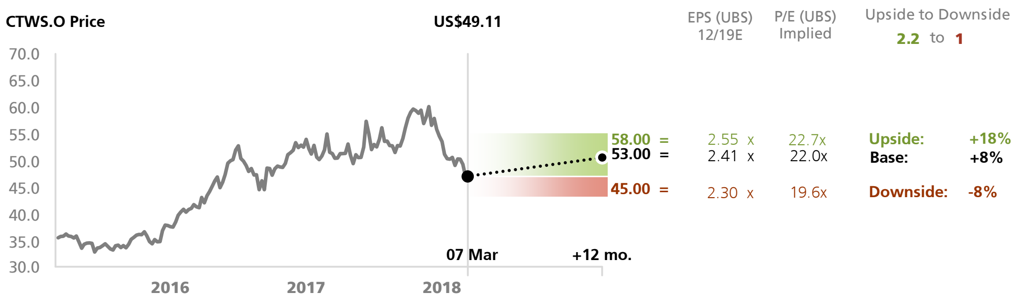
EVIDENCE

CTWS, like the other water companies, has visibility into a deep backlog of capital spending opportunities, supporting our 5% earnings growth outlook. As a result, we model capex at or near peak levels for the five-year forecast. CTWS has a strategy of pursuing tuck-in acquisitions, as demonstrated by the two transactions that closed in 2017.

WHAT'S PRICED IN?

CTWS is trading in-line with our $53 price target. The market appears to agree with our assessment of growth prospects and risk. The stock is relatively under-covered with just a few analysts comprising the consensus.

UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | Premium/ discount | EPS growth |
|---|---|---|
| $58 upside | 6.5% | 6% |
| $53 base | -2% | 6% |

COMPANY DESCRIPTION

Connecticut Water Service, Inc. provides water and wastewater services to customers in Connecticut and Maine. Its principal operating subsidiaries are Connecticut Water and The...

PIVOTAL QUESTIONS

# Q: Is bigger better?

## UBS VIEW

Yes. Generally speaking, the larger water infrastructure companies benefit from economies of scale, cost of capital advantages, and geographic diversity relative to their smaller peers. In the highly fragmented water industry, with material capital investment requirements, size matters. We think CTWS will continue to seek a larger scale transaction that moves the company into the mid-cap space, but those opportunities are rare in the highly fragmented water industry. We also think CTWS is open to moving outside the two states in which it currently operates. This may be beneficial, as it could introduce CTWS to new growth markets, but ultimately it would depend on the state's regulatory and policy agendas, as not all states are created equal.

## EVIDENCE

The geographic diversity of the large market cap water companies (AWK and WTR) provides a broader pool of acquisition opportunities for future growth, as well as reduces risk to any one regulatory jurisdiction. Alternatively, single-jurisdiction companies are beholden to one regulatory body. We see the risk of that now in California, as the quality of regulation in that state is trending down.

## WHAT'S PRICED IN?

Transformative acquisitions are rare opportunities in the highly fragmented water sector. Instead, investors look for smaller acquisitions to add modestly to organic growth. Investors expect CTWS to continue to add customers through tuck-ins acquisitions, but tuck-ins are unlikely to move CTWS to the mid-cap group of water stocks.

**Figure 18: Water Utilities Comparative Statistics**

| | Large Cap | | Mid Cap | | Small Cap |
|---|---|---|---|---|---|
| $ Millions | AWK | WTR | AWR | CWT | CTWS |
| Market Capitalization | $14,318 | $5,967 | $1,911 | $1,761 | $607 |
| # of customers | 3,353,000 | 982,849 | 258,949 | 514,300 | 135,000 |
| Total Rate Base | $11,600 | $4,000 | $700 | $1,120 | $500 |

PIVOTAL QUESTIONS

# Q: What is CTWS's growth outlook without a transformative transaction?

## UBS VIEW

We estimate approximately 5% earnings CAGR 2017-2022 excluding the benefit of new acquisitions. Tuck-in acquisitions are consistent with CTWS's past business strategy and likely to continue in the future as opportunities arise; we think any tuck-ins would be modestly incremental to expectations.

## EVIDENCE

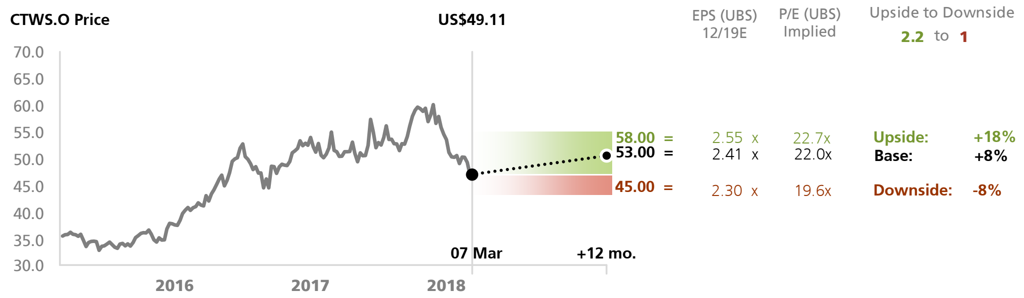
CTWS has visibility into a deep backlog of capital spending opportunities, supporting our 5% earnings growth outlook. As a result, we model capex at or near peak levels for the five-year forecast. CTWS invested approximately $66MM in 2016. Spending dropped down to $55MM in 2017, but is expected to return to $66MM in 2018. We model spending of approximately $60–65MM per year in 2019 through 2022.

In 2017, CTWS closed two acquisitions: Heritage Village Water Company (HVWC) and Avon Water Company. HVWC marked the company's entrance into serving wastewater customers, and opens the door to future wastewater acquisitions. Combined, the two transactions added approximately 12,500 customers to CTWS, or roughly 9% of the total customers the company now serves.

## WHAT'S PRICED IN?

CTWS's multiple appropriately reflects the organic growth rate of the company and in our view, does not impute value for incremental growth from roll-up acquisitions, nor does it assume a transformative transaction.

## UPSIDE / DOWNSIDE SPECTRUM



| Value drivers | Premium/ discount | EPS growth |
|---|---|---|
| $58 upside | 6.5% | 6% |
| $53 base | -2% | 6% |
| $45 downside | -9% | 0% |

Source: UBS

**Upside (US$58):** Our upside scenario is predicated on a 6.5% premium to the group average multiple in 2020E, which is the peak premium CTWS has traded since 1/1/16.

**Base (US$53):** Our base case scenario is predicated upon a 2% discount to the 2020E average water utility P/E multiple. The discount reflects CTWS's 6% EPS growth outlook, regulatory jurisdictional profile, and operations in none of the six fair value states.

**Downside (US$45):** Our downside scenario is predicated upon a 9% discount to the 2020E average water utility P/E multiple and assumes flat earnings growth in 2020 vs. 2018, hence the lower multiple.

# COMPANY DESCRIPTION

Connecticut Water Service, Inc. provides water and wastewater services to customers in Connecticut and Maine. Its principal operating subsidiaries are Connecticut Water and The Maine Water Company. Together, these companies serve approximately 125,000 customers. CTWS also operates two unregulated companies in the business of real estate and providing contract water and sewer operations and other water related services. The Regulated companies contribute approximately 95% of net income.

**Industry outlook**

Infrastructure spending and consolidation will continue to be the underlying drivers of industry growth for the next 5-10 years. Capital spending should remain at or near peak levels for the next 12 months, and is forecast to remain elevated through at least 2020. We would expect water utilities to follow the pattern of electric utilities with a bias toward upward revision in the spending forecast. Factors that could increase the pace of consolidation include broader adoption of fair value legislation, enhanced focus on water quality and accountability standards, or macro trends that instigate budgetary pressures or risk-off strategies at the municipal level. We expect conservation and efficiency to continue to reduce the trend of water usage nationally, and drought could be a disruptive event regionally.

Source: Company accounts, UBS estimates. (UBS) metrics use reported figures which have been adjusted by UBS analysts.

**American States Water Co Investment case**

AWR's premium to the 2019 average UBS water P/E is unsupported by fundamentals. AWR is operating in a challenging regulatory environment with near-term risk of a materially lower allowed ROE. Further, AWR appears to have less opportunity to participate in the industry consolidation theme. AWR's military services business is a material contributor to net income and growth, albeit with limited visibility into new contracts.

**American Water Works Co Investment case**

In our view, AWK warrants the highest premium among the regulated water utilities due to its above-average earnings and dividend growth, geographic diversity, economies of scale, and industry leadership.

**Aqua America Inc Investment case**

There is much to like about WTR. The company is geographically diverse, with water and wastewater systems in eight states. Although the majority of rate base is concentrated in PA, we view that state as having constructive regulatory treatment. Four of the states in which WTR operates, have fair value legislation, enabling greater opportunities for growth through acquisition. WTR has a demonstrated track record of closing acquisitions, adding, on average, 8,600 new customers annually through tuck-ins.

**California Water Service Group Investment case**

We expect CWT to participate in the infrastructure spending theme in the industry and we forecast 5% earnings growth for the company. The outcome of CWT's next general rate case will inform our growth rate forecast in 2020–2022. Tax reform should create some headroom in customer bills, as well as contribute to higher rate base growth. However, CWT is operating in a challenging regulatory environment with near-term risk of a materially lower allowed ROE.

**Connecticut Water Service Inc Investment case**

We view CTWS as a good quality small cap water utility. The company operates in CT and ME, which have constructive recovery mechanisms that reduce regulatory lag. We forecast approximately 5% organic growth for CTWS and anticipate that the company will continue to pursue tuck-in acquisitions as complementary water and wastewater systems become available. We think CTWS will continue to seek a larger scale transaction that moves the company into the mid-cap space, but those opportunities are rare in the highly fragmented water industry.

## Valuation Method and Risk Statement

AWR risks include, but are not limited to:  rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events. As a small market cap water stock in a consolidating industry, AWR shares appear to incorporate a merger premium in the valuation. We think this premium is unsupported by the fundamentals of the industry as we discuss in this report; however, persistence of that premium could prevent the shares from attaining our price target. Also, if AWR's contracted services business grows at a faster pace than forecast, the higher growth could support a higher valuation. Our price target is predicated upon a 4% discount to the average water P/E multiple in 2020. The multiple reflects a 2% discount for AWR's regulatory jurisdiction profile, a 1% premium for operating in a state with fair value legislation, and a 3% discount for risk associated with the CA Cost of Capital proceeding.  Our price target is premised upon a 4% discount to the 2020 average UBS water P/E multiple.

AWK Risks include, but are not limited to:  rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events. Our price target is premised upon a 10% premium to the 2020 average UBS water P/E multiple.

WTR risks include, but are not limited to:  rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events. Our price target is premised upon a 6% premium/discount to the 2020 average UBS water P/E multiple

CWT risks include, but are not limited to:  rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events. As a small market cap water stock in a consolidating industry, CWT shares appear to incorporate a merger premium in the valuation. We think this premium is unsupported by the fundamentals of the industry as we discuss in this report; however, persistence of that premium could prevent the shares from attaining our price target. Our price target is premised upon a 4% discount to the 2020 average UBS water P/E multiple. The multiple reflects a 2% discount for CWT's regulatory jurisdiction profile, a 1% premium for operating in a state with fair value legislation, and a 3% discount for risk associated with the CA Cost of Capital proceeding.

CTWS risks include, but are not limited to: rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events. Our price target is premised upon a 2% discount to the 2020E average UBS water P/E

Risks include, but are not limited to:  rising interest rate; regulatory and policy risks; operational risks; construction risks; water quality, safety and contamination risk; physical risk to the water sources, treatment or delivery systems; cybersecurity risk; drought and extreme weather events.
We value water utilities on a price-to-earnings basis on our 2020 estimates. Our valuation methodology is premised upon a group valuation bias, forecast 2018-2022 earnings growth, our proprietary analysis of regulatory jurisdictional rankings, exposure to states with fair value legislation, and in some cases a company-specific adjustment.

## Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; and certain additional disclosures concerning UBS research recommendations, please visit www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 07 March 2018 08:25 PM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations.

**Analyst Certification:**Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

**KEY DEFINITIONS:Forecast Stock Return (FSR)** is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

**EXCEPTIONS AND SPECIAL CASES:UK and European Investment Fund ratings and definitions are: Buy:** Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

**UBS Securities LLC:** Daniel Ford; Rose-Lynn Armstrong.

# Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

Global Research is provided to our clients through UBS Neo, in certain instances, UBS.com and any other system, or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com as an approved means for distributing Global Research (each a "System"). It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means. The level and types of services provided by Global Research to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo.

When you receive Global Research through a System, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (http://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (http://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (http://www.ubs.com/global/en/homepage/cookies/cookie-management.html).

**If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.**

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors. Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. **Taking a view of the 'other' utility vertical: Water**

We held our latest conference call with the National Association of Water Companies' (NAWC's) Michael Deane looking to delve into some of the opportunities across the Water utility sector alongside hosting a dinner with American Water (AWK) at our UBS Conference last week. While we would not expect any near term water M&A from electric utilities due to valuation, long term growth potential is substantive and worth watching, particularly with utility regulators keen to see consolidation to improve service quality and most importantly reducing the substantial regulatory filing burdens. While improving water quality new standards are an increasing reality, simply reinvesting to maintain the current level of service would appear a substantive opportunity with the current pace for AWK tracking closer to ~100-200 year replacement cycle relative to dramatically shorter replacement periods for gas of late. Our speaker noted to look for a wide variety of potential rules, including the Lead-Copper rules to drive these future investments along with new standards as well. We also note nascent interest in water and related infrastructure as electric utilities themselves evaluate future growth opportunities, particularly across the Western US given the substantial reliance on energy for pumping, etc. In particular, we highlight EIX as evaluating such opportunities via its nascent Edison Energy offerings. More broadly, we ask whether the definition of 'integrated' utilities could yet evolve as utilities continue to pursue novel angles of more regulated ratebase growth.

**Challenges to consolidation are real, but so is the opportunity to continue**

Our speaker noted continued fragmentation in the US water segment and synergies primarily in back office roles rather than actual system integration. With 52,000 community water system in the US as well as another 100K public (small, self-contained) waters systems, ~90% of US residents receive water from a utility, with only 16% of those from a privately owned utility. In fact, of the 52K community systems, 83% serve less than 3,300 people and >1% serve more than 100K people. Any M&A within these systems is further complicated by the 'emotional' factor of water ownership, particularly given recent Flint, Michigan issues (which was largely municipal based) highlighting the pitfalls of mismanagement. We see Flint as auguring well for true privatization rather than run by muni managers, less familiar with water systems.

**Though Regulatory Construct May Be Changing**

With tens of thousands of water systems in the US, discussions noted regulators and legislators are increasingly aware of the need for enabling factors to facilitate a shift – principally fair market value legislation to maintain asset value after significant depreciation vs a 100-200 year replacement cycle. Further, water companies are seeing increasing success advocating for specific riders/surcharges to help reduce regulatory lag as most rate cases are yet in a multi-year timeframe. Our speaker further noted the relative dearth of a 'true' consumer advocate to argue for both system improvements as well as bill stability – this could change as well given proper legislative backing.

### But Investment Potential is Significant

A number of states recently have targeted legislation favored by companies like American Water and others, underscoring the need for private investment. Our speaker noted that approximately $385B is required for the Safe Drinking Water Act alone, with $1T+ to fix the system's overall 'D' grade from the American Society of Civil Engineers. Yet just like any other utility, the pace of bill inflation is the primary gating factor, with anything above CPI inflation numbers garnering consternation among the utilities and regulators. On the other hand, the average household spent just over 1/3 (~$677/yr in 2014) on water versus electricity and gas (~$1,800/yr).

### Don't necessarily look for a big infrastructure push here either—

While there has been much discussed around the coming infra opportunities, we notice both electric utility and water utility infrastructure is not necessarily positioned to see an acceleration of capital under this wider push. Rather, while enabling public systems to invest potentially, the bulk of the drivers in investment will remain federal and regional environmental quality standards alongside wider consumer inflation considerations.

### What limits consolidation? It's just small sizes of each deal.

Discussions pointed to the simple blocking and tackling of pursuing municipal votes for privatization along with the precise valuation of assets established through this process as the key driver of consolidation, requiring years of requisite worth even if clear customer benefits (particularly if local upgrade costs will be socialized regionally under new regulatory mechanisms). Further, meetings noted this trend could persist at a reasonably consistent rate, with occasionally lumpy transactions (such as Scranton for AWK) driving disproportionate growth in certain years.

### Source of Funds Could Yet Expand the Private Role

Particularly in light of the new Administration's preference for spurring private investment, discussions noted continued opportunities to service local needs either through direct M&A or other options like public-private partnerships. Recent EPA appropriations (the Water Infrastructure Finance and Innovation Act) could allow for up to $1B of low-interest loans to large water projects which will provide some opportunity for investment, but this is a relatively small number in the wider water investment context. Further, meetings noted continued focus on water can help drive further investment and open up opportunities on the public-private side as well, given the magnitude of needs.

*We also hosted the largest publically traded water utility at our recent conference in Boston – some of the key takeaways are below*

## American Water Works Company (Unrated)

Among the infrastructure themes, water presents a relatively unique set of circumstances, with what appears to be a multi-decade runway on both the organic investment side and the M&A potential due to significant fragmentation. American Water invests $1-1.3B/yr, 2/3 of which is primarily geared towards the replacement cycle. On the other hand, mgmt. noted recent historic run rate of ~40K customer acquisitions per year suggest opportunity going forward for more M&A growth as well.

### Ratebase vs M&A; Legislation is key

Ratebase growth for AWK is about 6% per year, but organic growth is closer to 5%, with the balance made up of the previously acquired companies. Mgmt noted legislative shifts have driven much of the M&A opportunity, in particular the ability to pay fair market value (FMV) versus depreciated value, as the assets can in fact last much longer than the depreciation rate – the replacement cycle could be as high as 200 years in some cases. Six of the states AWK operates in (including the two largest, NJ and PA) have FMV legislation in place (~95% of finished deals), and a number of utilities in the 5-30K customer 'sweet spot' can still be found, though time to close deals could be well over a year, in the 12-18 month range typically.

### What About Rates?

Similar to the electric industry, AWK typically targets ~2.5% rate increases, though may have some latitude to hit the high end of a range given that water bills tend to be significantly smaller versus other bills in a household (~half or less). Part of what the company is achieving is also predicated on lowered O&M ratios, with the company targeting 32.5% over the next several years.

However, the notable exception to this would be California, where AWK is building a desalination plant ($300-400M capex) in Monterrey county

### Waste water the next opportunity?

AWK also noted a number of their jurisdictions do not share drinking water and wastewater ownership, leaving the door open to further opportunity. Only 2% of wastewater facilities are owned by investor owned utilities, and this represents an opportunity for the company to consolidate bills and leverage relationships already built in the community.

### Unregulated Business Still Growing

While AWK recognizes the potential risks of growing the regulated business, the company suggested it could be comfortable as high as 20% regulated if the risk profile was appropriately low. Currently, the homeowner services and military services groups in particular are the key areas, with the military services unit in particular positioned well if the government executes on any increase in defense spending.

## Conference call transcript with Michael Deane from the National Association of Water Companies

*We present below highlights from our recent call with Michael Deane from the National Association of Water Companies (NAWC). We look to understand the basic framework for water utilities as well as the challenges and opportunities in the sector going forward. We have edited the transcript below for clarity. Minor grammatical changes that do not impact the meaning of content have been applied. Changes to content to clarify meaning have been underlined. What we consider to be key points have been highlighted in bold. The opinions expressed herein do not necessarily reflect the views and opinions of UBS. UBS accepts no responsibility for the accuracy, reliability or completeness of the information and* *will not be liable either directly or indirectly for any loss or damage arising out of the use of this information or any part thereof.*

[Introductory sentences deleted]

**Julien Dumoulin-Smith:** Thank you, operator, and good afternoon, everyone. I appreciate you all joining us. So this afternoon we're going to change the topic away from our traditional electric utility focus, turning the focus back to water.

In conjunction with my colleague, Steve Fisher, our UBS E&C analyst, and we're joined this afternoon by Michael Deane, Executive Director of the National Association of Water Companies to go through sort of the backdrop of where the water industry stands today, prospects under the new administration and just in general prospects into 2017.

So he's going to go through a few initial remarks. For those of you who have questions, preferably send me an email. I can ask it on your behalf over the course of the next hour and hopefully that works.

With that, I'll turn it over to Michael to provide some opening comments before we engage in some Q&A. So good afternoon. Thank you for taking some time with us.

**Michael Deane:** Thank you very much, Julien, and thank you for all of you joining the call this afternoon. I trust no one was disappointed thinking they were calling about electric and gets to hear about the more exciting water sector here this afternoon. So I appreciate the opportunity.

I'm going to try to get through briefly a little about NAWC, our association, and framing the water sector, briefly about water as a utility service, a summary of the investment capital needs and the trajectory of those coming investments. A touch on EPA regulations because it is such an important part of the drinking water and the wastewater world and then opportunities for the investor on utility companies within that.

And then finally kind of the importance of the rate regulation environment in the ability and the opportunities for the private sector to help the nation address its very, very large water infrastructure and management challenges. And then we'll have some good Q&A.

So, just briefly, NAWC, not as well-known as most of you I'm sure as EEI or AGA, but we are the trade association for the private water industry and have been around for a long time. In 1895 we were established by a number of Pennsylvania investors on utilities in order to do work with their regulatory commission.

We represent the investor owned utilities as well as companies serving the municipal sector through various types of public-private partnerships. Across the country our members serve all the way from a few hundred customers to multi-state utilities that serve hundreds of communities and millions of customers.

Approximately 73 million people are touched by private operators every day. About 45, 50 million of those are through investor-owned private utilities and the balance through municipalities operating under public, private partnerships.

So the water sector, unlike much of the energy sector and certainly the telecommunications sector, it's highly fragmented. In the drinking water, we'll start the drinking water sector. **There's 52,000 community water systems in the**

**United States.** There's another 100 plus thousand what they call public water systems which include, perhaps, campuses, university campuses and others that have their own utilities.

But for those that probably serve a community, there are **52,000 systems. Eighty-three percent of those serve less than 3,300 people, the EPA definition of a small community. And less than 1 percent of those serve more than 100,000 people**. So, again, quite different than some of the other utility sectors.

A bit over 90 percent of the residents in the United States receive their drinking water from a utility with a balance of the population served by known private wells. **And of those that receive service from a utility, 84 percent receive them from a publicly owned utility and about 16 percent from a privately owned utility.**

So, again, we're the smaller part of the drinking water utility across the country. The important part is smaller than the municipal sector.

Wastewater, some of us fragmented, is about 16,000 wastewater systems. A lot more people are actually served by septic systems that are not on sewers. And of those, about 2 to 4 percent is an estimate. Although EPA doesn't actually track ownership of wastewater utilities as they do drinking water. The estimate is about 2 to 4 percent for the population served by wastewater utilities is served by a private utility.

So water as a utility, as I just mentioned, is highly fragmented. And therefore there's not much opportunity for economies of scale as it currently exists. But we always like to say because it is important. And not that other utilities aren't important, but water is the only utility that is ingested. And therefore, it must be safe for human consumption regardless of the cost. It doesn't mean cost isn't something we're very much focused on, but it has to be safe.

Also often lost to a lot of people is that **water utilities are critical for fire protection. As a matter of fact, most water utilities are sized for fire flows, not for the flows that would typically be needed for domestic and commercial consumption.** So all the way from pressure to pipe size and then therefore the infrastructure and operating costs are for those few times that we actually need to have fire flows.

There's no substitute in the short or long term in certainly the energy sector. And I guess one could argue in the communications sector you can certainly over the mid to long term change fuel sources and other forms of energy. But for water it's water. And we need to make sure that it continues to be delivered in communities.

We're seeing increasing threats to and variability of supply. And, again, the threats may be drought, as we saw in California, and the variability of supplies that we're seeing in California now, which is so much water that it cannot be held by impoundments and the reservoirs that we have.

So whether it be climate-induced or usage-induced or otherwise, utilities across the country are having to re-look at the resiliency of their supply to ensure they can continue to provide service to their customers.

There are strict public health and environmental regulation between water and wastewater utilities, which we will get into a little bit more. And yet there's no broad federal economic regulation like we see with FERC or the FCC. Economic regulation is limited to the states and for the most part is limited to the private utilities.

I mentioned that most utilities are municipal. And other than, I think, Wisconsin is the only state that entirely regulates municipal utilities. Some others do as well. They provide wholesale service outside of their political boundaries. **But for the most part, municipal utilities are governed by their own governing bodies or city councils unlike the investor in utilities that are under the jurisdiction of public service or public utility commissions.**

I want to get into capital needs a little bit that we're facing. EPA every four years for both drinking water and wastewater, alternating every two years, but every four years, does a what they call "needs" survey. **The most recent drinking water needs survey shows approximately $385 billion needed over the next 20 years to 2030 to comply with the Safe Drinking Water Act**. And that's only to comply with the State Drinking Water Act.

So the breakdown there is approximately 72.5 billion for drinking water treatment. About 40 billion for storage, 247.5 billion for transmission and distribution of drinking water and about 25 billion for source water protection and other needs.

On the wastewater side over the next 20 years from, I believe, it was about two years ago, 271 billion is needed, with EPA saying the bulk of that is loaded up front over the next five years.

In that case, for the treatment needs of secondary and advance treatment about 102 billion. New and repaired conveyance systems, wastewater collection systems, about 95 billion. And various what we call wet weather issues combined sewer overflows, storm water and some other needs are about $73 billion.

Beyond the trajectory of that, you look at drinking water. It's interesting. It's about pipes, right? For the most part, a large part, as I mentioned, about 250 billion is for pipes versus about 100 million for treatment and storage.

In addition the American Water Works Association, the professional group representing the water industry, broadly estimates it's really **a trillion dollars of investment is needed in underground infrastructure** of the pipes over the next 25 years. That's a larger number because it takes into account things that are not needed for compliance with the State Drinking Water Act, which EPA's numbers are limited to.

And then on the wastewater, of course, you see more parity, you think, between the treatment and conveyance, about a bit over 100 million - 100 billion per treatment and a bit under 100 billion for the pipes.

I think that reflects some of the aging infrastructure. You know, drinking water has been around for a long time. We have pipes that are 50, 100, 150 years old. And on the wastewater side a lot of the pipes are closer to 40, 50 years old. [Sentence deleted]

So the Clean Water Act was regulating wastewater. It was implemented for the first time in 1972. That's really when the country really started putting in place wastewater treatment and a lot more collection of treatment. So those are 40, 50 years old now.

And the Safe Drinking Water Act was put in place in 1974. And a lot of the treatment standards and therefore the treatment getting beyond very simple, you know, sand filtration, charcoal filtration, and things that were done for many, many years are reaching as well 40, 50 years. So we're seeing needs there in treatment, but again, the much longer life of pipes in drinking water is the reason that there's much more underground infrastructure needed for drinking water.

I want to focus on the EPA regulations briefly. There are **19 primary drinking water regulations that were established starting in 1975 and through 2013**. In all there are **91 contaminants regulated under those regulations** that have to be monitored and removed from drinking water before it is distributed to customers.

The national **compliance rate for these regulations is about 92 to 93 percent**. Although for large utilities, I mean, like **the large members like NAWC, it's closer to the higher 90s, 98, 99 percent generally**.

On the horizon we're seeing some things. Obviously lead is on everyone's mind following Flint a couple years ago. The lead and copper rule is being looked at, the long-term revisions to that. EPA is looking at that as we speak now. **Their goal is to publish a proposed regulation by the end of 2017 and to put in place final regulations for the lead and copper rule update in 2019 or perhaps 2020.**

These are very highly, you know, complex epidemiological studies, cost-benefit studies and they take quite a few years to establish.

Another big one that's on the horizon perhaps is pro chloride. EPA in 2011 made a positive regulatory determination, meaning they decided that it should be regulated under the terms of the Safe Drinking Water Act. And they are facing court deadlines of a proposed regulation in October 2018 and a final regulation in 2019.

Just in general to kind of wrap up the regulatory side, it's important to understand that [..] it's continuing. It's not just one and done and you're meeting drinking water standards. And you can go about your business. It's that EPA is constantly looking at the public health implications of various contaminants and regulations.

They currently publish what we call the six-year review, the third one since the Drinking Water Act. **Every six years the EPA is instructed to look back on its existing regulations to see whether they need to be strengthened**, updated or potentially removed.

Just at the end of 2016, EPA established its fourth unregulated contaminant monitoring rule. This is a requirement for utilities to monitor certain contaminants to find what their occurrence is, where they occur, how often they occur and in what concentrations.

And this is used going forward to inform the EPA whether they should consider establishing regulatory standards for any of those contaminants. So there's no treatment necessary at that time but there are significant monitoring costs to go along with that.

**Some of the things we're looking at now are things like algal toxins**. Many of you if you looked at water you saw what happened in Toledo a few years ago, algal toxins which can contaminate water supplies and then shut down water supplies.

And then brominated disinfection byproducts **–** I'm not going to get too complex there – but what's interesting is, yes, water is treated. You need to have disinfection in there because once it goes out of the treatment plant, it may go through hundreds or more miles of pipes. And those pipes have lots of opportunity to get to re-contaminate water. **So they need to be disinfected to ensure that the pathogens don't reestablish themselves in the water supply.**

**And then currently now, by January 2020, the EPA needs to determine the next regulatory determination looking at what they've discovered under monitoring and decide if they're going to establish regulations for certain new contaminants.** And potentially on that list are algal toxins, which we just mentioned, as well as things called PFOA and PFOS. I can never say these quite right. Sorry. So they're fluorinated organic compounds basically that are of major concern.

**So kind of to pull that together, there are major challenges for the broad water sector.** And top amongst those are aging infrastructure needing replacement, particularly pipes in the drinking water world, increasingly complex and caustic standards for treatment and with that fragmentation, far too many small and medium-sized utilities that likely are lacking the technical management and financial capacity to address the need to invest in infrastructure and to comply with these more complex treatments.

So that does provide major opportunities for the private regulated water utilities that are currently operating across the country. An opportunity to accelerate investment in communities' infrastructure replacement not only within our own service areas but in community areas where they're having a difficult time making those investments.

And then also consolidation of smaller systems. Again, we had 52,000 water systems. As I noted to you, many of them are very, very small. In order for these to be sustainable utilities going forward providing safe and reliable water and service to their customers, I believe there's going to have to be significant consolidation across the industry. And investor utilities are well positioned in many states to do that.

Obviously, the regulatory environment in states are critical as well. [..] I'm talking about the rate regulatory environment for our utilities. Again, as I mentioned, municipal utilities for the most part are not under public service regulation but other utilities are. So in order to encourage investment and to stop having a system of 150, 200, 300-year-old pipes around the country, **we've significant policy momentum across the states towards alternative regulation in the past few years**.

Various things, like the distribution system improvement charges. These are called various things across the states. But what they do is provide for between-rate cases, full-rate cases. They do provide an opportunity for surcharges to go in place because we all know that every year there are pipes that need to be replaced.

This is now waiting for the next EPA regulation and <u>part of upgrading your plant is that</u> every year there has to be pipes replaced. There's no mystery. And to wait for a **rate case for three or four years** to replace a pipe that you replaced yesterday does not make sense. So fortunately we've been working very productively with a lot of commissions to **put in place surcharges that provide the capital to make those investments along the way**.

We’ve seen these various charges increase from about 9 states in 2011 to 15 in 2014. And we continue to work across the country and other states as well.

Things like future tests help with that as well. And also in a time of declining consumption at the time of increasing need to invest in aging infrastructure various revenue adjustment mechanisms also are critical to a utility's ability to make the investments to provide the service that customers expect and demand.

The other rate regulatory issue is regarding consolidation. As I mentioned, that's another critical challenge that the nation faces. And the investors in utilities are in a good position to help address, particularly in those states where we have a significant presence already.

And what we've been **focusing on most recently is fair market value**. Unfortunately, a **lot of these small systems are fully depreciated**. They have not made a capital investment for many, many years. They face significant capital needs as well as operational challenges.

And for a company to acquire them at the, you know, **depreciated basis and take them on with no rate base does not make sense**. It does not provide an opportunity to provide the community with capital that it may need. And it certainly makes it a bit difficult for the acquiring utility to make investments on no rate base.

So across the country we're seeing significant movement towards establishing fair market value transactions with third-party assessment of what the fair market value of these systems are and that being able to be placed into rate base. Currently, we have five states, New Jersey, Pennsylvania, Illinois, Indiana and Missouri, which have this type of legislation in place.

And the other thing on consolidation that I see **–** that for the most part private utilities are in a unique position to offer – is some states are deciding that the single tariff pricing makes sense, which allows investors in utilities with multiple service areas in the state to spread investment costs for small systems with large capital needs across a broader customer base. So it's something we face. And some of the EPA **–** another struggle we have is a community serving 1,000 people that's facing a $5 million or $10 million investment need whether it be pipes or upgrades to their plant.

Spreading that across an existing customer base is just unsustainable. And so it's a policy decision that states can make and do make that where a utility is serving a broader geographic customer demographic, that those rates can be spread across the utilities with the understanding that all customers' utilities within that state are going to have needs going forward. And over time everyone will benefit from and they're going to contribute to their neighbor's needs as well.

So with that, it was kind of a quick overview. And I know that Julien had asked things about the potential administration policies, I think, and anything there. But I would imagine that we will have some of that in the question and answer period. So, Julien, I'm happy to take questions from you or any of the participants on the call.

**Julien Dumoulin-Smith:** Thank you very much, Michael. Fantastic. Really quite detailed. So with, [..] let's actually look at the white elephant in the room here real quickly. There is the subject of infrastructure spend. It clearly garnered a good amount of attention of late. Where does that stand vis-à-vis water spending across the various different niches that you're looking at?

**Michael Deane:** You mean the infrastructure spend generally? So if you look, and we were talking about this before, if you look at where the capital comes for all. And right now I'm not just talking about the investor in utilities, but the [..] community water systems, of which private utilities are the same as public utilities in community water systems.

Is it a book that has always come from the local utility through its customer rates, whether that be privately owned utilities or publicly owned utilities. There's always a lot of talk about the federal contribution or federal role in wastewater. It always had been larger.

Under the Clean Water Act in 1972, a very large grant program was established in order to stop rivers from burning basically, back then. Again, you've got to remember there was very little sewage treatment back then. There was a lot of collection and not treatment.

So as part of that, got a grant bargain to start treating sewage, as we called it at the time, not wastewater. The federal government had substantial grant money that phased out in the late 1980s and was replaced by a subsidized low-interest loan program run by the states.

But even that, it's still just a small fraction of the overall capital investment made every year. So it's really rates. Unfortunately, one of the reasons we've gotten into our deteriorating infrastructure and aging infrastructure and **American Society of Civil Engineers grade of D**, if you agree with it, for water and wastewater treatment across the country is that **too many utilities have not raised rates to continue to make the investments that they need, and particularly on the municipal side.**

So the federal government can play, I think, a leadership role in the types of investments that need to be made. But it's always been a very small percentage of annual investment, which shows that the customers are the source of revenue and the investment capital needed for these systems.

**Steve Fisher:** And Michael – it's Steve Fisher. When I look at the U.S. Census Bureau data for construction activity, they break out sewage and waste disposal as one category and water supply as the next. And it's really kind of a two-to-one ratio of sewage and waste disposal to water supply, with sewage and waste disposal running at about 22 billion a year and water supply running at around 11 to 12. And really, if you look back over the last 10 years, the numbers don't change that much on an annual basis.

**Julien Dumoulin-Smith:** Do you foresee…a couple things… Do you foresee [..] the pace of spending really kind of breaking out here at all over the next few years to address all those regulations that you mentioned? And do you think it would still run at that similar kind of ratio of much more sewage and waste disposal to just apply? And do those numbers sound, you know, reasonable to you in relatively the kind of things that you look at?

**Michael Deane:** [..] it's interesting. [..] unfortunately we don't have a water information administration like we have in energy. In data, anyone who is in this business, whether they be a utility or a journalist or an analyst, really struggles to find good data. The EPA has some but not much. On almost every page they have on data has a warning that the quality assurance, quality control is questionable. Census does a pretty good job. I think sometimes the categories are hard, what they put in places. I kind of wondered about it a little bit.

Obviously, sewage and waste is solid waste as well, is my understanding. There's some solid waste in there as well. So I think the split is probably about right. And I'll get into the reason for it in a second.

As far as constant, as a much younger person at EPA many years ago, I remember looking at that data on the Federal Reserve Bank data. I think it was Boston used to do a lot of looking at it. And on a, you know, constant dollar basis, back from the 70s into the 80s into the 90s, it was pretty constant, which leads one to believe that just **whatever the needs are, the utilities manage to make the investments they have to do in order to comply or be safe**.

I think that's changing a little bit for a couple of reasons. One of which, again, our pipes in particular are aging a lot more. I mean, 30, 40 years ago they were doing pretty well. Now a lot of them are not. They simply are falling apart and need to be replaced. So that's going to drive investments.

And, again, the aging of most, [..] a lot of the investment in drinking water and wastewater treatment started in the 70s and the 80s with the federal statutes. Whether there's new requirements or not, those are aging facilities that need to be rehabilitated.

And so while this country has benefited from pretty good compliance and safety over time, it's not going to continue if we don't up the investment to do that. So I do believe that there's, [..] a need for it, an opportunity for more investment.

If you look at a lot of these municipal systems, small, medium-sized systems that have not been making their investments, have been kind of, you know, feeding off of their assets, whether it be the investor in utilities acquiring them and making investments that have to be done. And then to be clear, there's some small private utilities as well. We talked to commissions.

They have some **very small systems that haven't changed their rates for 20 years**. They literally are charging the same nominal rate that they were 20 years ago. And obviously that can't be there.

So while we're not in a crisis mode right now, I think we all understand that we need to make a larger investment and that very much is going to be based on getting customers and governing bodies to understand that rates need to support the investment.

So I don't think it's going to be huge. [..] Turn the switch it is twice as much, but, I mean, that's $11 billion in drinking water. [..] The five largest NAWC members alone are putting in over $2 billion a year in their systems. And they are increasing their investment.

So, yes, I do see it increasing. At what rate, I really can't say. But if decision-makers – utilities know what they need to do. If those who establish the framework in which utilities make their investments do what they're supposed to do and are supportive, those investments will be made and increased.

**Julien Dumoulin-Smith:** Let's talk about customer bill increases. I mean, what's the palatable number that people talk about? I mean, I know in the electric utilities you know, you talk about [..] CPI-like numbers, 2, 3 percent at the outside. What are we talking about in terms of what is currently slated to be spent in terms of aggregate consumer inflation and what are we talking about in terms of reinvestment on the high side here?

**Michael Deane:** I'm sorry. What do you mean, reinvestment on the high side for what?

**Julien Dumoulin-Smith:** If you were to accelerate it, I mean, what does that acceleration look like in terms of a palatable pace?

**Michael Deane:** Oh, yes, if you look at, [..] there's always a big discussion of what's affordable for water. I mean, household incomes…

**Julien Dumoulin-Smith:** And I get that there's a dynamic between smaller systems versus larger systems. But, you know, across the board, how do you frame that conversation given the situation as you describe it?

**Michael Deane:** Well, I mean, personally, I believe that the law of averages don't mean much of anything really is that **people pay far too little for water and wastewater services in this country for the value they receive**, the economic public health value that they and the communities receive from it. It's changing in some places, **but it is by far the smallest utility bill**.

In 2014 it looks like, you know, the **average household spend on water and wastewater is about $677 a year versus up to, you know, $1,800 for electricity. Gas is about the same. Telecommunications is a lot more.**

So there certainly is capacity in total to up that investment. Whether it doubles, you know – I mean, just surmising here, if it were to double I think a lot of the investment needs would, you know, on an aggregate national basis would disappear. But, you know, that's not going to happen.

We are facing affordability issues in some communities. It's very important to look at those in context, which we haven't in the water sector. To that extent that there's been subsidy programs at the federal or state level, they often target subsidies at the utility level, so low-interest loan or the grants to the extent they exist.

**Subsidize the entire system rather than basically charging full cost of service for the utility and then identifying those households that have a difficulty with affordability and targeting subsidies towards them. I think we're going to see increasing emphasis and focus on that** in order to make the customer rate change increases that we need to going forward.

So percentage-wise, you know, I can't guess right now what the percentage increases would be. And again, because it's fragmented in nature, it's, you know, I'm here in District of Columbia. I forget what the numbers are, but, you know, D.C. water is increasing their rates. I think they're doubling over a number of years. A lot of the **large municipal wastewater utilities are seeing 5 to 8 percent year-over-year constant increases**. They're finally making the decisions they need to to make the investments.

Working with our public utility commissions, we're having those same discussions, which is again part of those distribution service improvement charges is that we know the pipes need to be replaced. There's no mystery.

So if you have a surcharge of 3 to 5 percent increase every year, or whatever the number is, to make those investments, you can address those challenges and help eliminate some of the rate shock which we've experienced in the past where you don't have the rate increase for three, four, five years and all of a sudden you're dealing with 25 percent rate increases rather than, you know, a series of smaller ones.

**Julien Dumoulin-Smith:** Well, can you talk a little bit about what the administration's plan and the transition team, etc., have been talking about in terms of kind of realizing reinvestment? And maybe also let's also hit, we come back to the core here, to what extent is this really being driven by local decisions about whether to reaccelerate or not? And to what extent can a federal decision, you know, call it an infrastructure plan at the federal level, actually impact the pace of investment?

**Michael Deane:** Sure. Well, I think there's two federal elements. One is what the federal potential investment is. And then also what the broader federal role is.

So one of the important things we didn't touch on too much is compliance. You know, we believe that our robust compliance program is an important part of running the utilities and ensuring the people are served safely and efficiently by utilities.

So certainly some of the smaller, mid-size utilities even the EPA will tell you that maybe we've been kicking the can down the road a little bit too long. Small systems not in compliance, kind of patching them up, giving them the opportunity, but not making the changes.

Kind of post-Flint in particular, I think that policymakers across the spectrum are realizing that certain segments of the population, whether they be small systems, perhaps – not all small systems are in a bad situation obviously, but some of the small poorer systems – or declining urban areas, perhaps, like a Flint, are **not going to benefit from the protections provided by the State Drinking Water Act or Clean Water Act if we don't really ensure that they meet compliance.**

That is going to help drive investment for those communities who can't make the investment. It provides opportunities for the investor owned utilities to come in and potentially acquire them, wrap them into a larger system to make those investments. So that kind of compliance enforcement is a critical part of it.

Again, on the capital investment side, the federal government has never – it's not like the transportation world where there's a huge, big federal cost share to a lot of transportation projects. It's always been pretty small, particularly in drinking water.

And whatever increases there may be – and the administration while it was in the **campaign had talked about tripling the size of the state revolving fund programs, which are the principal low interest loan programs now**. You know, we shall see. It sounds good but where's the money? How would it work?

There's a new WIFIA program, that Water Infrastructure Finance and Innovation Act, a model on the TIPIA, transportation program, which wasn't very successful, which is just starting up now. **The EPA just late last year got an appropriation to provide direct low-interest loans to large projects**.

That has potential. They have $17 million of appropriations which in their calculation supports $1 billion worth of assistance in loans. So that could provide significant money in the billions as well with more appropriations there.

So that can help drive it. But again to me it is going to be local investment, whether it be the private utility or public utility making the investment with some, you know, assistance in leadership from the federal sector.

As far as what the administration is talking about, and most people have seen the big proposal that was in a white paper, the policy paper, during the campaign on a tax credit that would lead to private investment. How that plays out for public utilities and certainly for private utilities is if it were to be implemented, which is, you know, far from certain could be the case. It was a proposal.

There's a lot of discussion going on of what can be done, how to promote more investment. But it would be private investment in public infrastructure, so under various steps of partnerships and concessions. Or how to help encourage more private investment in the private infrastructure as well. So early days in the administration.

As I think most of you know, the EPA just got its administrator Friday evening. EPA is critical to investment in drinking water. And there's a lot of discussions ongoing right now. So I think over the coming months we will see more policy proposals coming forward.

Again, always with an eye towards – it's not going to solve the problem, but can the federal government take a leadership in the types of investments that need to be made and the types of management of utilities that could be made, again, from an enforcement and consolidation standpoint?

**Julien Dumoulin-Smith:** Can you talk a little bit about some of the regional differences here? I suppose the American West has seen a lot of different shifts here. But speaking with some of the energy companies of late, they're obviously quite attuned to the water needs out West. But how differentiated regionally are you seeing the water reinvestment opportunities?

**Michael Deane:** That's a really good question. I think [..] there's a couple segments, right? If you look at the need in pipe which I articulated earlier, **the huge need in pipe, it's obviously, for the most part, older areas, often older urban areas** compared to say, new areas. If you're in some of the Sunbelt areas around, you know, just to make a – Arizona, I mean, Arizona has some older communities. But obviously a lot of communities have been put in place much more recently so their pipe isn't as old. It's not so <u>much a</u> matter of age to be honest with you.

We've got some really good 250-year-old wooden pipes in some places still. And we've got some really bad concrete pipes from 30 years ago because of material problems and materials changing over time. So the industry has really, you know, learned some lessons over time.

So it's based on age of the city to some extent. If you look in places like California, obviously drought resiliency is first and foremost in mind. But it's not just there. I mean, here we're in Washington, D.C. It was in the paper this week is that, I think, Virginia where I live is technically under a drought.

We had a mild winter, no snow, little rain and there's – the water supply is fine. So the regional differences are important. But again, this variability in supply is maybe more important than just, you know, places that are historically water-poor or water-rich is because you find because of weather induced or competition for water resources induced that it's not as big of an issue as elsewhere.

We've got water-rich areas where because of environmental regulations for ecological flows, you have to remember that there are requirements to ensure the sufficient flows in rivers and streams for environmental reasons. **We see competition within watersheds for agricultural flows and energy**. We have a lot of energy experts on the call. A lot of water is needed for various types of energy from extraction to production.

And so those challenges, I think, lead to supply investment needs for everybody combined with drinking water. I mean, under our infrastructure in aging areas, in particular upgrading old treatment plants, again, which sometimes are in large, older urban areas which may have declined in populations and declined in economics, and makes it difficult to increase investments with a smaller customer base. So again, there are some changes. But there's enough needs of various types to spread across the country.

**Steve Fisher:** It's Steve Fisher. I'm not sure if you mentioned this already, but who is it that, since rates are so important, who is it that's sort of the gating entity on the rate and who's looking out for the rate payer?

**Michael Deane:** Yes. Good question. Obviously, [..] if you're a regulated utility like our NAWC members are, investors in utilities, there's a very formal process in all states of, you know, utilities and commissions and commission staff and consumer advocates who have a, you know, legal, statutory or maybe constitutional in some cases responsibility to represent the customer.

In my mind, [..] obviously rates are part of that, a significant part of it. But also service in what you receive is that you can ensure the customers receive safe and reliable service as well so there's that balance that needs to be made.

You know, no one wants to pay more for anything, whether it be, [..]cell phone bill, loaf of bread or a gallon of water or a kilowatt of electricity. But you need to make those balances. So for the regulated water utility, that's a very formalized process.

For non-regulated, which are most municipal sectors, very few have…I mean, **some large cities have a similar kind of consumer advocate that can represent, you know, consumers to the city council** or if it's an independent, the water authority board, but most do not. And it's much more of a kind of a public relations political type of situation where a city council or board will have a public hearing and an opportunity for people to come and state their case.

But, again, the case typically is, you know, **we don't want to pay more as opposed to an official consumer advocate which needs to ensure that at the end of the day people are getting the service that they need.**

Assume if it's a city council, everyone wants the service. They just don't want to pay for it. When water was cheap, which it has been in many places over the course of this nation's history over the last 100 years, it hasn't been a big issue. **But it's an increasing cost environment.**

We are living off the investments that are our forefathers and foremothers made in the 70s in building treatment plants and this type of thing. And putting in place rates in many places where rates did not exist or they were just flat fees and not based on consumption [..] that they made investments. Those assets continue to deliver but it's now our turn to make those investments as well.

So there's a real education effort that we and our municipals partners are trying to make across the spectrum that yes, customer rates need to increase but you will be receiving something of value for those investments that you're making.

**Steve Fisher:** Got it. Thanks.

**Julien Dumoulin-Smith:** Awesome. All right. Just to keep it going here just real quickly. We're getting a couple different questions coming in here. So I just want to try to bang those out in the remaining minutes here.

Can you elaborate a little bit on where private equity investors versus publicly traded utilities might best be suited? I mean, I suppose this also goes back to the wider point of consolidation you were making before, but is there any specific niche that you might see today?

**Michael Deane:** Well, I mean if you look at – so if you look at the investor on the utility model, we call them investor one, sometimes shareholder one. As you know, there's **eight, nine really publicly traded companies**, which serve the bulk of the population served by private utilities. There's [..] literally tens of thousands of very small private systems. There would be mobile home parks that serve 30 mobile homes or these type of things as well.

But if you look at that [..] really utility side, we've got the publicly traded ones. We've got ones that are closely held. Some of the smaller mid-sized ones are closely held by families or a small group.

We have some that are owned by a private equity fund and some of our large utilities are as well. So if private equity can come in, it can acquire a utility or a portion of a utility. But also where we've seen an interest in private equity sort of globally and here is in what would be non-regulated utilities where various types of public, private partnerships **may be a concession where the underlying assets are still owned by a municipal or other public system**.

But they enter into a concession where there's, you know, private investment. **Private investment goes towards the capital needs**. They don't issue municipal bonds anymore. It may be a private equity pension fund or other mixed investment over long-term arrangement. They have to be long-term because these are investments that are being made in assets that are long-lived, and at the end of the day are owned by the underlying public/municipal utility as well, so…

**Those are just kind of two places where private equity can come in, which is investing in an investor one utility or investing in some long-term concession or other partnership**. And then for the investment of utilities, obviously, you know, that's the bulk of the business just from the private sector investment.

And really where, I think, the core – a good understanding, as I mentioned to many participants on this call – is investors. That's a world that they understand [..] really quite well, whether it be a publicly traded or a more closely held utility.

**Julien Dumoulin-Smith:** Got it. I mean, what do you actually do – let me just ask you this. I mean, we're getting a few different questions around this point. But to what extent are you seeing this consolidation thesis play out? I mean, I think there's been a lot of focus at the PUC level to see this consolidation happen simply from a paperwork perspective.

Obviously, you have this rate normalization spreading of costs that also lends itself to seize the argument that you bring private capital into play. In theory they're well-resourced to make it happen. But at the same time I suppose it comes down to municipal votes, just simply execution and on the ground work kind of stuff to make these consolidation-type deals work.

Where do you see us in terms of innings, if you will, in this consolidation theme? And what are the practical limitations? Why haven't we seen more of it thus far? Why is it so fragmented relative to, say, the electric industry?

**Michael Deane:** Well, I think, I mean, there's a couple questions in there. Why haven't we seen more of it so far? And you kind of answered it. **It's a fragmentation. We've got so many small systems spread out and geographically spread out that it's difficult to do**.

Water is also a very emotional issue. I mean, in the private consolidation of public utilities, there are cases where there's two communities in the middle of someplace that are 10 to 15 miles apart. And it makes sense for them to consolidate and run a pipe, you know, rather than build two new treatment plants and try to spread it across 1,000 people is run a pipe and serve 2,000 people.

And they just don't want to do it. They want control. Water controls their destiny. So there's a very emotional element of it as well.

But kind of getting back to why it hasn't happened. There hasn't been as much focus on it. And I think one of the reasons is kind of that kicking the can down the road again is that a lot of regulators in public health and environmental regulators have kind of gone along with what's happening.

**Maybe not quite in compliance, but [..] it's not a crisis yet**. That can't continue. And then so there's more pressure on getting in line, getting in compliance.

And if it's a utility that can't do it, they're going to be looking around for options. One of which is to be acquired. If it's a private system nearby, great. I mean, you know, I don't think a private system that doesn't have any operations in the middle of Wyoming or something is going to buy one small utility there. **But particularly in places where there's significant presence and economies of scale available, proximity where would it be physical interconnection with that or starting from a managerial investment standpoint, they'll make those**.

So I think the **issue is coming to a head**. And we are working with, as I mentioned, working with regulators, and that can not only be the public utility commissions but the public health environmental regulators in states who will work hand-in-hand with their PUC colleagues and say, okay, we've got to find a solution for this community. And whether require or encourage or facilitate its acquisition by a healthier professional water management company, we need to do that. So I do believe it's going to accelerate. We are seeing more of it and more interest in it as well.

**Julien Dumoulin-Smith:** [sentences deleted]

With the large profile in front of many utilities which is ultimately paid for by customers, well, actually, you know, you kind of addressed this question already. I mean, let me move on to the next one.

What is an acceptable water main break rate, i.e. the number of breaks per main mile per year as kind of a good framework to think about? This is a question coming in.

**Michael Deane:** Yes. Unfortunately, I don't know on the top of my head what I should have, but what kind of an NAWC standard would be for water loss rates. You know, and again, it really – I hate to say this but it really depends.

I mean, no one wants to see water loss because it's a significant amount of water and it costs a lot to, you know, energy and chemicals and labor to produce it. But, you know, **sometimes it does make sense to run to failure for a particular pipe that's if, you know, from a water supply standpoint the disruption of replacing it**.

But, you know, I hate to say it because it sounds so Washington-*ish*, it depends. And I'm sure I can follow up with you, you know, with an actual rate, you know, acceptable rate break number. And, of course, it's going to vary from what's acceptable to a professional engineer running a utility versus [..] a customer where that break happens to be as well.

But [..] it is a significant issue. We see far too many breaks. And many of them can be prevented if we make the investments ahead of time that we need. Sorry I don't have kind of a standard out there for you right now.

**Julien Dumoulin-Smith:** No worries. And then maybe just kind of following up. If main breaks are not problematic and customer service levels are high, what is an appropriate main replacement cycle to target? One hundred years, for instance?

**Michael Deane:** Yes. I mean, first of all, I wouldn't say that [..] breaks aren't a problem. I mean, obviously they are a problem generally. But again [..] sometimes it makes sense.

Yes, [..] if you look at – it depends on material science, right? Everything constantly changes but it is kind of a benchmark, a thumbnail of 100 years. I mean, it makes to folks on a 100-year replacement cycle. Certainly not a 300, 500 or 1,000-year, which we've seen in some of the utilities out there.

So I think it's a good target to go. I think most of us understand that whatever material it is, after 100 years there's a good chance that we should take a good look at changing it.

The other thing is inspection and looking at it. We're getting much smarter. It's very important to be efficient in running our utilities. That it is not efficient to replace a pipe that doesn't need to be replaced. So we need to get much better at our asset management as well as our investment in better materials. **But currently a 100-year replacement cycle is a good target**.

**Julien Dumoulin-Smith:** Perhaps just to [..] summarize, I know you've talked about a lot here. Well, actually, you know what? Let me ask you one other question coming in just to kind of hit it really quickly.

The lead and copper rules, I know that this is one that's come up a little bit. And you kind of alluded to it earlier, and actually let me just broaden it out as we kind of finalize the call, too. To what extent should we be paying attention to rules such as the lead and copper rule to drive further investment? Or are we simply targeting – let me rephrase this.

You've got the lead and copper rule out there. You've got other rules that you've alluded to in the last hour. Which of those are kind of the key driving rules that we should be paying attention to in terms of driving this investment level forward? I mean, you talk about need to reinvest. Presumably that is to reinvest to meet the tightening or even existing standards on the book.

**Michael Deane:** Yes, I think, so lead and copper rule [..] it's going to be interesting to see. Obviously, there's a lot to be discussed by EPA and everyone in that. There will be an investment element of that.

Obviously, there's [..] there's testing. There's monitoring. And everything as well. But this clearly will be, I think, post-Flint. You need to replace pipes, lead service lines. Again, it's not so much the distribution systems.

And so in these other regulations again, as I said, they're long term. There's nothing that's going to be hitting [..] any time before that other than perhaps pro chloride, which would be a treatment need driver as well.

But you will get kind of a cost of compliance – it's important. But [..] recently, I saw a presentation by the Water Research Foundation, which is a research foundation funded by utilities, public and private. And you kind of look at the cost of compliance with particular standards.

While it's significant, they estimate about $5.1 billion per year to meet those 19 regulations I mentioned. It's relatively small compared to the infrastructure needs that we have been talking about of rehabilitating, replacing a pipe, just upgrading the treatments, not necessarily upgrading to a new standard. It's simply: [..] you've had treatment in place for 30 or 40 years, it needs to be rehabilitated as well.

So they're important, but I do want to emphasize that just because you don't see a big-picture, headline-stealing new regulation requiring huge investments doesn't mean that a significant investment doesn't need to be made. Because while those will be coming in kind of a lumpy basis over time, as I've tried to emphasize there's an ongoing need every year to invest in rehabilitating existing infrastructure at the same time preparing for the new capital needs that will come in that more lumpy format when new treatment standards are in place

[Concluding sentences deleted]

**Valuation Method and Risk Statement**

Risks for Utilities and Independent Power Producers (IPPs) primarily relate to volatile commodity prices for power, natural gas, and coal. Risks to IPPs also stem from load variability, and operational risk in running these facilities. Rising coal and, to a certain extent, uranium prices could pressure margins as the fuel hedges roll off Competitive Integrateds. Further, IPPs face declining revenues as in the money power and gas hedges roll off. Other non-regulated risks include weather and for some, foreign currency risk, which again must be diligently accounted in the company's risk management operations. Major external factors, which affect our valuation, are environmental risks. Environmental capex could escalate if stricter emission standards are implemented. We believe a nuclear accident or a change in the Nuclear Regulatory Commission/Environment Protection Agency regulations could have a negative impact on our estimates. Risks for regulated utilities include the uncertainty around the composition of state regulatory Commissions, adverse regulatory changes, unfavorable weather conditions, variance from normal population growth, and changes in customer mix. Changes in macroeconomic factors will affect customer additions/subtractions and usage patterns.

Risks for water utilities relate to: 1) increasingly stringent laws and regulations that could impact operating costs; 2) unfavorable legislation and regulations that impact water and wastewater operations; 3) limitations on availability of water supplies or restrictions on the use of water supplies as a result of government regulation; 4) service disruptions caused by severe weather conditions or natural disasters; and 5) regulatory lag resulting from the rate setting process.

## Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; and certain additional disclosures concerning UBS research recommendations, please visit www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 06 March 2017 07:07 PM GMT.

**Analyst Certification:** Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

**UBS Investment Research: Global Equity Rating Definitions**

| 12-Month Rating | Definition | Coverage[1] | IB Services[2] |
|---|---|---|---|
| **Buy** | FSR is > 6% above the MRA. | 45% | 29% |
| **Neutral** | FSR is between -6% and 6% of the MRA. | 39% | 27% |
| **Sell** | FSR is > 6% below the MRA. | 15% | 16% |
| **Short-Term Rating** | **Definition** | **Coverage[3]** | **IB Services[4]** |
| **Buy** | Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event. | <1% | <1% |
| **Sell** | Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event. | <1% | <1% |

Source: UBS. Rating allocations are as of 31 December 2016.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.
3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

**KEY DEFINITIONS: Forecast Stock Return (FSR)** is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

**EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy:** Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

# Initiating Coverage of Aqua America with Hold Rating (WTR - $33 PT)

**April 19, 2016**

**Daniel M. Fidell**
Managing Director
Utilities & Infrastructure
636-812-2270
dfidell@uscallc.com

AQUA

*Please see important disclosures beginning on page 14.*

# Initiation Summary

**Overview**

- ***In conjunction with our broader launch of water utility research, we are initiating coverage of Aqua America (WTR) with a Hold rating and $33 price target.***
- **Top-Tier Growth.** WTR is the second largest investor-owned water utility in the United States (after AWK), serving ~1mm customers through management of water systems across eight states. We consider WTR an elite name in the water space, with above-average projected 6-8% EPS and dividend growth over the next five years. WTR's growth engine is highly visible and entirely focused on upgrades to its aging water distribution systems (5-6% of EPS growth target) and the acquisition of smaller systems within its geographic footprint (1-2%).
- **M&A Leader:** WTR is well positioned to capitalize on the growing trend towards the consolidation and privatization of the nation's water and wastewater systems. WTR has proven itself a successful aggregator of these assets over the past two decades with ~300 completed acquisitions, the highest total within the industry over the period. With >50k water systems in the U.S., a majority of which serve <10k customers and in need of costly repairs, WTR has ample opportunity to continue to build shareholder value through roll up of this fragmented market.

**Investment Thesis**

- We see the fair value of WTR at $33/sh, using an equal combination of relative (P/E, EV/EBITDA) and absolute metrics.
- We expect WTR to achieve 6-8% EPS growth over next five years, with dividend growth modestly outstripping EPS growth given a low payout ratio. Both growth rates compare favorably vs. a 5-6% peer average. Faster growth primarily reflects existing system upgrades and accelerated acquisition of smaller, troubled systems. Combined with experienced management with a solid record of execution, strong cash flow and A+ level credit ratings, we believe shares warrant a premium valuation relative to its peers.
- We value WTR at a 22x P/E multiple on FY'17 EPS and 12x EV/FY'17 EBITDA, vs. a peer group which currently trades at 21x P/E multiples and 11x EV/EBITDA, respectively. At the current price, we view shares as fairly valued.
- Among many risks to our valuation assumptions, we note regulatory uncertainty, execution risk on infrastructure enhancement, rising interest rates, and expected need to regularly access the capital markets. Uniquely, our growth target for WTR relies heavily on an ability to successfully execute aggressive acquisition strategy.

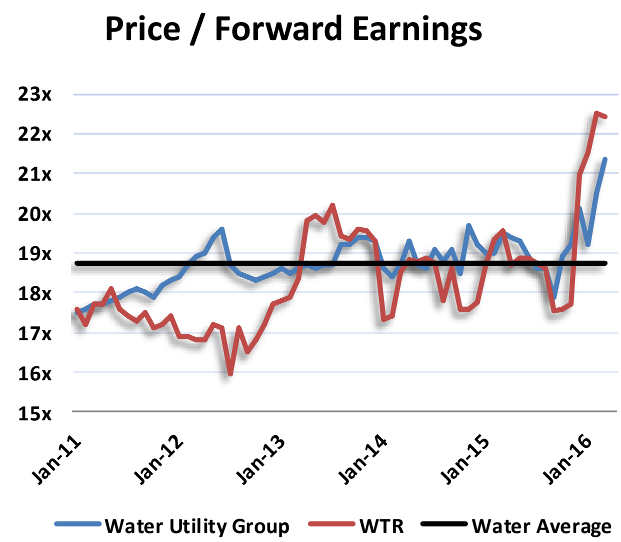
**Report Structure**

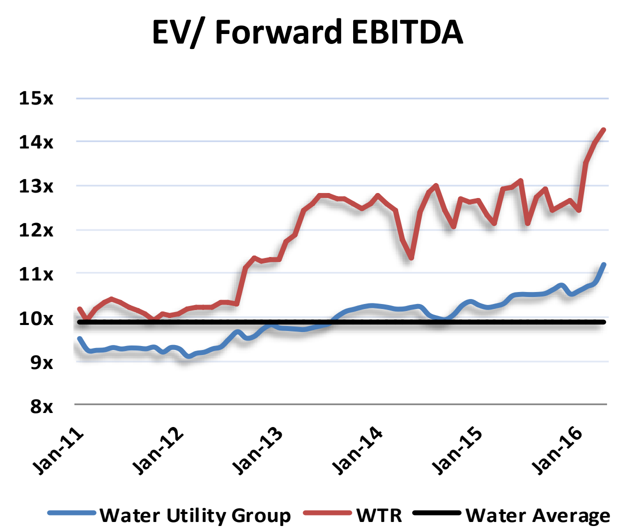
- What follows in this report is a detailed review of WTR peer comps and valuation, management team and growth strategy, core operations and near term growth drivers, and review of important financial metrics.

# Valuation

U.S. Capital Advisors

- Over the last five years, water utilities have traded at 17-21x forward P/E and 9-11x EV/forward EBITDA. More recently, water utilities have traded at the high end of the range given increased visibility of water infrastructure issues, an improved infrastructure investment outlook, expectations for acceleration in M&A, and broader takeover speculation among utilities.
- We see the industry moving from a historic EPS growth rate of 4-5%/yr to 5-6%/yr driven by accelerated infrastructure investment and M&A. With an improving growth outlook we see multiple expansion as likely, similar to the performance of the gas utility sector under an accelerating infrastructure replacement theme beginning in 2010. Accordingly, we see P/E range of 18-22x and EV/EBITDA of 10-12x as justified for the sector on average.
- Historically, the market has afforded higher multiples to utilities with greater percentages of regulated earnings given the perception of enhanced consistency in cash flows and earnings. We think high-end multiples are warranted for WTR given strong earnings and dividend growth of 6-8% over the next five years, an experienced management team with a solid track record of execution, strong cash flow and top-tier credit metrics.
- Our $33/sh fair value estimate is based on a methodology using an equal combination of relative metrics (P/E, EV/EBITDA - $34) and absolute metrics (Dividend Discount Model - $32).
- Our relative value of $33/share is based on a 22x P/E multiple on FY17 EPS of $1.42 ($32/sh) and a 12x multiple on EV/FY17 EBITDA of ~$0.5B ($37/sh). WTR shares have traded at an above-average 11-13x EBITDA multiple following positive tax legislation in PA in ’12. The tax provision benefits earnings-based measures but skews EBITDA-based measures. As a tax adjustment, we give lesser benefit to this relative measure, and normalize instead to the high end of our expected forward range at 12x in our valuation assumptions. Our absolute value of $32/share assumes a beta of 0.9, a risk-free rate of 3.0%, and an equity risk premium of 575 bps.





*Source: Bloomberg, USCA*

# Management & Strategy

U.S. Capital Advisors

WTR is led by an experienced management team with a solid record of past execution. We view them as capable of executing on an infrastructure-driven growth and acquisition strategy targeting long-term >6% earnings and dividend growth.

- **Regulated Ops:** Focus will be on continuing to drive rate base growth of 6-7%/yr (~5-6% projected EPS growth) through regulatory capex trackers which allow system replacements and upgrades. Rate base growth and timely recovery flows through to net income growth. Additionally, target 1-2% EPS growth through regulated customer acquisitions of municipalities and private systems. Combined, regulated ops should represent 6-8% EPS growth/yr.
- **Non-Regulated Ops:** WTR has a market-based segment which offers services such as contract maintenance and homeowner services. However, the segment is being re-evaluated as to its long-term fit by management, and we see the segment as net-income neutral over the near-term.

Senior management team:

- **Christopher Franklin, President & CEO:** Franklin was named CEO in '15 after having served as president & COO and various other senior executive positions over twenty years at WTR. Prior to joining WTR, Franklin was a senior office at PECO Energy, a sub of Exelon (EXC).
- Franklin assumed the helm from long-time CEO and current Chairman Nick DeBenedictis following his retirement after 23 years as CEO. Under Franklin, we expect an accelerated pace of water and wastewater acquisitions and continued rationalization (divestment) of small non-regulated businesses.
- **Rick Fox, COO, Regulated Operations:** Fox was named COO in '15 after having served in various other executive positions since 2002. Prior to joining WTR, Fox spent 17 years in the chemical manufacturing industry.
- **David Smeltzer, CFO:** Smeltzer was named CFO in 1999 after having served as head of regulatory affairs and other executive positions over 30 years at WTR. Prior to joining WTR, Smeltzer served as an audit manager at KPMG LLP.
- **Dan Schuller, EVP Strategy & Corporate Development:** Schuller was named to his current role in '15. Prior to joining WTR, he was an investment principal with JP Morgan Asset Management Infrastructure Investments Group.

*Source: Company Reports, USCA*

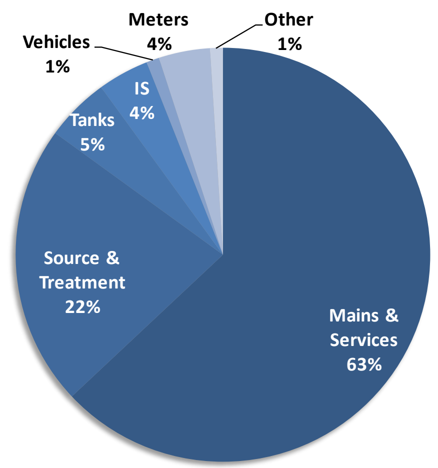
# Near Term Growth Drivers

Over the next several years, we expect WTR key growth drivers will focus on infrastructure replacement, organic customer growth additions and municipal water acquisitions.

We briefly discuss each of these drivers below:

- **Infrastructure Replacement:** Execution on $375mm annual spend on regulated system investments, with ~65% for water main replacement and upgrades, ~20% for upgrades to water and wastewater treatment facilities. Greater than 50% of spend will be in PA where a regulatory capex tracker allows for timely investment recovery driving earnings growth. Concentrating spend in PA allows for greater utilization of “Repair Tax deduction” implemented into PA rates in 2011. The provision greatly reduces WTR’s tax bill and enhances after-tax earnings available for shareholders.
- **Acquisitions:** WTR is targeting addition of 10-15k new customers in ‘16 and beyond (~1%/yr) primarily from a faster pace of municipal water acquisitions. Each additional 1% customer gain translates into ~1-2% net income growth. WTR plans to continue targeting fewer but larger municipal assets with ~5-25k new customers, and has identified multiple municipal wastewater targets within its eight-state footprint. Recent enabling legislation in PA, IL, IN and NJ we think offer the higher near-term opportunities.
- **Organic Customer Growth:** We expect ~8-10k new customers additions in ‘16 and beyond (~0.8%/yr ) driven by population and new construction growth. However this driver could be muted without regulatory revenue decoupling, and depending on weather conditions, this growth could be offset by conservation effects.

**2016 - 2018 Capex Breakdown**



**Total 3 Year Investment: $1.1B+**

*Source: Company reports, USCA*

# Core Operations – Growth Engine

U.S. Capital Advisors

- **EPS Targets:** WTR 6-8% long-term growth target is driven by a combination of water infrastructure replacement and enhancement (~5-6% contribution) and acquisitions (~1-2%).
- **Overview:** WTR regulated water distribution operations (~99% of '15 pretax income) serves ~1mm customers in eight states (see map upper right). WTR operates ~12k miles of distribution pipeline, as well as 20 surface treatment plants and 183 wastewater plants, with a total rate base of ~$3.4B.

  From '11-'14, WTR divested smaller assets in SC, MO, ME, NY and FL for modest gains and acquired bolt-on assets in OH and TX to tighten up its portfolio and build scale in existing markets.
- ***We view WTR's broad geographic footprint positively as it diversifies the company's exposure to state regulatory commissions, regional weather conditions and favorably positions WTR to make acquisitions in several states.***

  Nonregulated operations (~1% of '15 pretax income) largely engaged in sewer line inspection/repair and various home services are not expected to be a material contributor to near-term EPS.
- **Customers:** WTR customer mix is ~ 85% water and ~15% wastewater. PA operations represent ~50% of total customers and revenues. Customer mix is ~95% residential, ~4% commercial and ~1% industrial and other.

  Historically, water customer growth has averaged ~1.0%, roughly in line with peer average, with organic growth contributing ~0.8% and acquisitions ~0.2%. ***With an accelerated planned acquisition strategy, we expect ~1.5-2.0% annual customer growth through '18.***

***Rate Base Details***

| State | Rate Base ($mm) | Water Connections (000s) | Wastewater Connections (000s) |
|---|---|---|---|
| PA | $2,369 | 426.7 | 19.7 |
| OH | $251 | 143.5 | 6.6 |
| IL | $209 | 62.6 | 9.6 |
| TX | $192 | 60.3 | 15.7 |
| NJ | $132 | 52.1 | 5.9 |
| NC | $125 | 77.8 | 16.9 |
| IN | $69 | 0.9 | 24.6 |
| VA | $63 | 24.2 | 7.4 |
| **Total** | **$3,412** | **848.1** | **106.7** |

*Source: Company reports, USCA*

# Core Ops (Cont'd)

U.S. Capital Advisors

- **Regulation:** WTR blended, authorized ROE is ~10% and equity structure is ~50%, roughly in line with peer electric and gas utilities. Though they do not disclose earned returns by state, management has noted they are currently over-earning their authorized ROE in NJ and TX, earning their authorized ROE in OH, NJ and IL, and under-earning their authorized ROE in NC, IN and VA. ***WTR is planning to file a general rate cases in PA, its largest jurisdiction with >50% of revenues and rate base, in '17 to be effective in '18. No other rate case fillings are planned in its five other major jurisdictions in '16 or '17.***
- In recent years, WTR has successfully achieved important regulatory approved revenue and spending trackers across its multi-state jurisdictions. Chief among these are infrastructure trackers, which minimize regulatory lag and allow for accelerated infrastructure replacement and modernization. WTR has infrastructure trackers or surcharge authorizations in six of its eight state jurisdictions.
- **Rate Base Growth:** WTR has averaged ~5% rate base growth in recent years. They plan to spend ~$1.1B (~$375mm/yr) over the next three years at their water utilities primarily on upgrades to mains and treatment facilities. For utilities, spending = rate base growth = earnings. ***Assuming WTR spends ~$375mm annually over the next three years on a ~$3.4B current rate base, we see water rate base growing ~5-6%, in line with WTR's guidance.***

***Regulatory Overview***

| | Rate Base | | | Regulatory Trackers |
|---|---|---|---|---|
| **State** | **Customers** | **Rate Base ($mm)** | **Operating Revenue (%)** | **Infrastructure Tracker** |
| Pennsylvania | 446,000 | $2,369 | 51.7% | Yes |
| Ohio | 150,000 | $251 | 12.1% | Yes |
| Illinois | 71,000 | $209 | 7.1% | Yes |
| Texas | 75,000 | $192 | 8.5% | No |
| New Jersey | 58,000 | $132 | 4.1% | Yes |
| North Carolina | 94,000 | $125 | 6.4% | Yes |
| Indiana | 25,000 | $69 | 2.2% | Yes |
| Virginia | 31,000 | $63 | 3.2% | No |
| **Total** | **950,000** | **3,410** | **100%** | |

*Source: Company reports, USCA*

# Muni Acquisition Focus

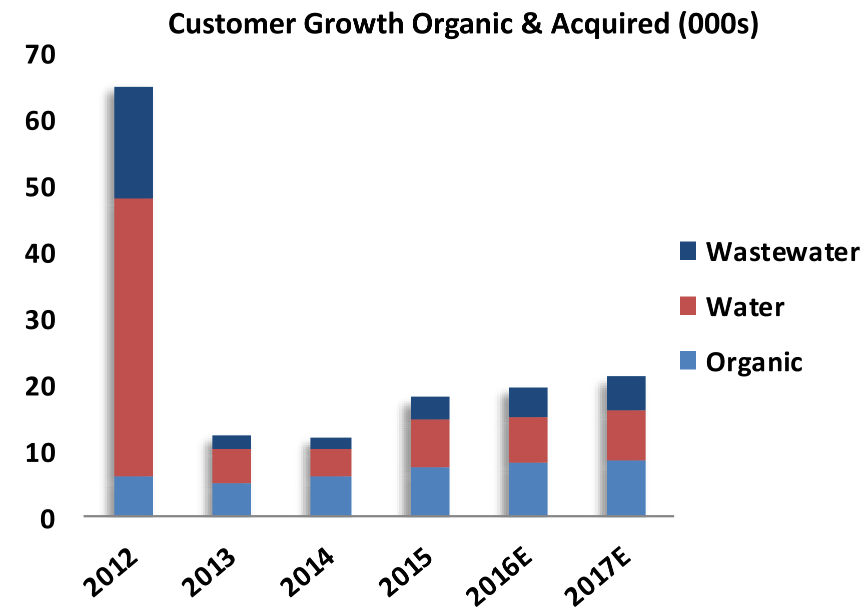
U.S. Capital Advisors

- **M&A Focus:** WTR has historically shown the ability to grow earnings through the acquisition of municipal water and wastewater systems. From 2000-2014, WTR completed 240 acquisitions of mostly smaller water systems, adding >400k new customers, effectively doubling their customer base.

  We believe WTR has substantial opportunity to continue to add shareholder value through a disciplined acquisition strategy. Incremental synergies may be captured via follow-on “tuck-in” transactions of systems near the acquirers service territory.

- **Recent Activity:** In ’15, WTR closed on 16 acquisitions totaling ~11k new customers, with an increasing mix toward larger municipal wastewater assets (~30% of adds vs. historic ~5%). The accelerating pace of acquisitions boosted WTR annual customer growth rate to 1.9% vs. historic ~1% level. In ’16 and beyond, WTR plans to continue targeting fewer but larger municipal assets with ~5-25k new customers.

- **Future Opportunity:** WTR has identified multiple municipal targets within its eight-state footprint. ***We think recent enabling legislation in PA, IL, IN and NJ should allow for improved near-term acquisition outlook.***



***Acquisition Details***

| | |

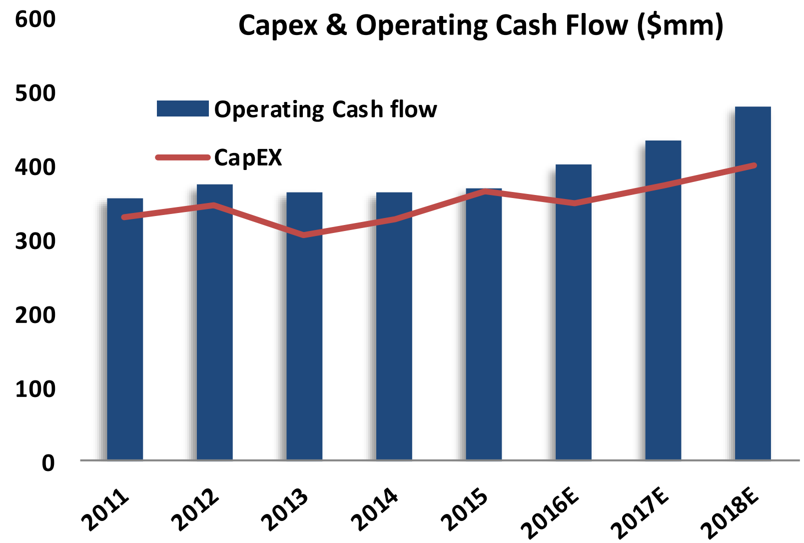
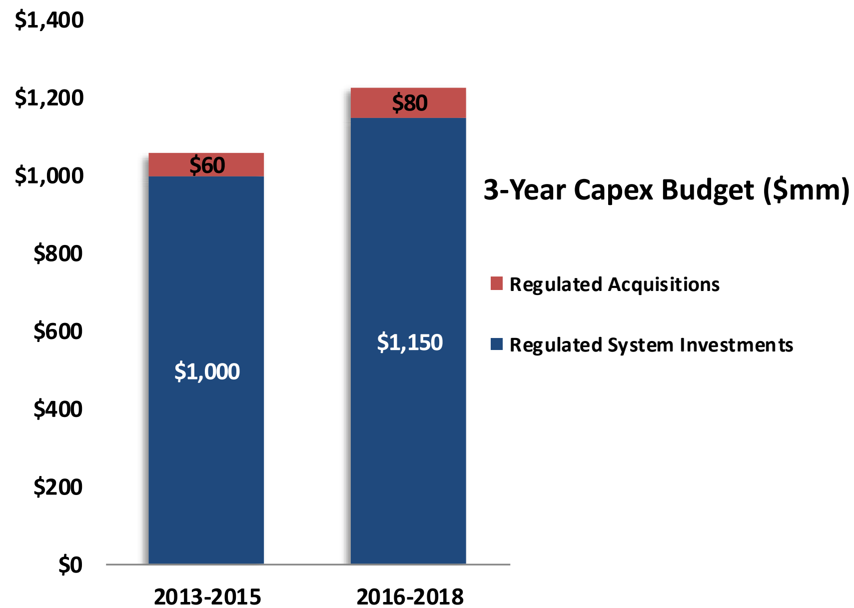
# Financial Review

# Capex and Cash Flow

U.S. Capital Advisors

- **Capex and Cash Flow:** WTR targeting ~$1.1B capex spend in '16-'18, or ~$375mm/yr for regulated system infrastructure upgrades. For '16, we project CFFO of ~$400mm, covering >100% of its requirements before dividends. Assuming ~$130mm in dividend payments, free CFFO covers ~85% of total requirements.
- **Financing:** In '16, we estimate the ~15% shortfall of ~$150mm will be funded with short-term debt. As with other utilities, we would expect short-term debt balances to be periodically rolled into long-term debt. ***With improving CFFO metrics driven by accelerated customer growth from acquisitions and expected cost efficiencies, we expect WTR will be free cash flow positive in '16 and beyond.***
- **Balance Sheet:** WTR has a stable but slightly below average balance sheet of ~50% equity at 12/31/15 vs. a peer average of ~54%. WTR has ~$0.4B of debt due over the next five years, or ~25% of total debt of ~$1.7B. We assume WTR issues new debt to replace the maturing debt. With improving cash flow metrics, we expect modest improvement in debt/capitalization metrics and continuation of strong A+ level investment grade credit ratings. Absent a sizable acquisition, we do not expect WTR will need to issue equity through '20.



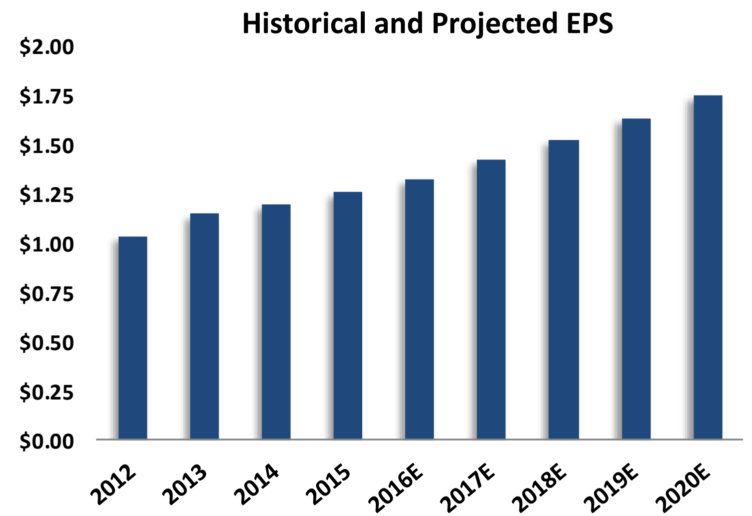


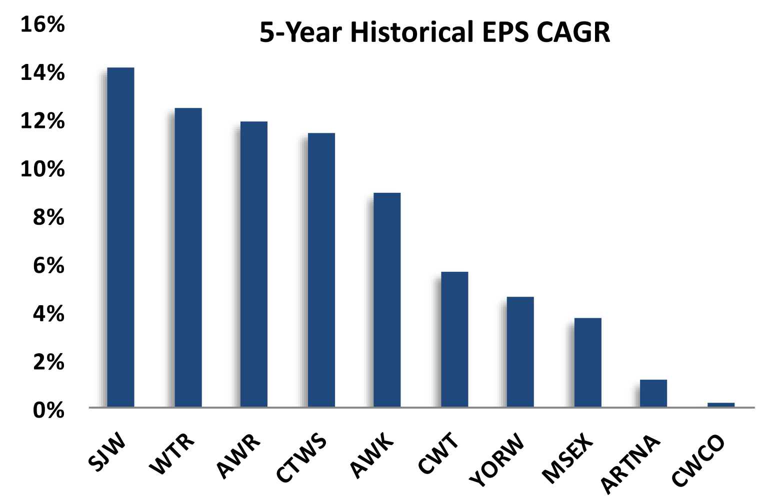
Source: Bloomberg, USCA

# Accelerating Earnings Growth

U.S. Capital Advisors

- We estimate the water industry's long-term earnings growth rate of ~4-5%, with potential to achieve higher growth through rate relief and successful acquisition strategies and partnerships.
- WTR grew EPS ~12% annually over the past five years, well above the water peer group average of ~5%, driven by a combination of organic customer growth, rate relief, cost efficiencies and acquisitions.
- For '16, WTR has guided to $1.30-$1.35/sh, up ~5% at the midpoint vs. '15 EPS of $1.26. Guidance assumes 1.5-2.0% customer growth (vs. 1.9% in '15) and 1-2% O&M expense growth (vs. 7% in '15).
- ***We view WTR '16 guidance as conservative at the outset. Rate base growth alone should get them to ~6% level given a $3.4B rate base, $375mm annual capex spend and ~$140mm in DD&A. Upside to >6% level will be largely dependent on the pace of acquisitions.***
- As previously noted, WTR is targeting 10-15k new customers annually primarily from municipal wastewater acquisitions. In this regard, WTR is off to a good start, closing on a 4k customer acquisition in PA in 1/16.
- Our initial EPS estimates for '16 and '17 of $1.33 and $1.42, respectively, assume ~6% annualized growth.



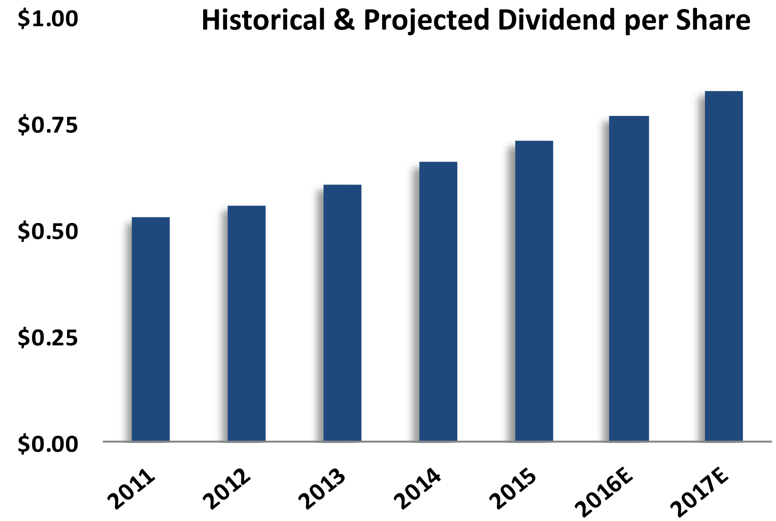


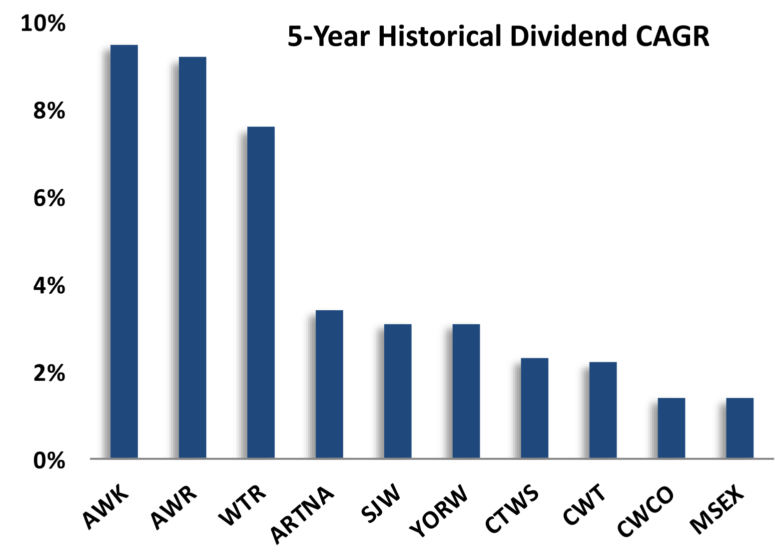
Source: Bloomberg, USCA

# Outsized Dividend Growth

U.S. Capital Advisors

- We estimate the water industry's long-term dividend growth rate of ~5-6%, in line with earnings growth, with potential to achieve higher growth through accelerating earnings growth tied to rate relief and/or successful acquisitions and partnerships.
- WTR grew EPS ~8% annually over the past five years, at the high end of growth over the period. WTR's strong results compare with a water peer group average of ~4%, which were restrained we think by high payout ratios and cash retention for projects.
- Our initial dividend estimates for '16 and '17 are 77c and 83c, respectively, reflecting 8% annual growth.
- WTR does not offer a long-term dividend growth rate guidance but targets a payout ratio of 60-70% of EPS. Our '16 and '17 dividend estimates represents 55-58% payout.
- ***Based on currently low payout, and recent history of ~8% annual hikes, we see clear room for dividend growth to modestly outstrip our ~6% EPS growth estimate in '16-'18.***





*Source: Bloomberg, USCA*

# WTR Comps

U.S. Capital Advisors

- There are ten, publicly-traded water utilities in the United States.
- Excluding the two largest names, AWK and WTR, average water market cap is small at ~$500mm to ~$1.5B, with minimal liquidity - average daily trading volume of ~83k shares.
- Water utility average yield is ~2.5%, compare with ~3.0-3.5% yields for gas and electric utilities.
- The geographic footprint for a majority of names is coastal, with approximately half the names serving franchised service territories on the East Coast and half on the West Coast.
- A majority of water sales and revenue is derived from residential customers (~65%) and to a lesser extent from commercial and industrial customers.

***Water Utilities***

| Company | Ticker | Price 4/18/16 | 2017 P/E | EV/EBITDA | Debt/EBITDA | EV ($mm) | Yield | Payout Ratio | Daily Trading Volume (000s) | 3-Yr Avg ROE |

# IMPORTANT DISCLOSURES

**Analyst Certification:**

I, Daniel Fidell, do hereby certify that the recommendations and opinions expressed in this research report accurately reflect my personal views about any and all of the subject securities or issues discussed herein. Furthermore, no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report. I do not own any shares directly or indirectly (or any derivative thereof) of the company that is subject to this research report. Neither I nor any member of my household serves as an officer, director or advisory board member of the company that is subject to this research report.

Employees of U.S. Capital Advisors LLC ("USCA" or "the Firm") not involved in the preparation of this report may have investments in securities or derivatives of securities of companies mentioned in this report, and may buy, sell, or trade them in ways different from, or in a manner inconsistent with, the recommendations and opinions expressed in this report.

**Analysts' Compensation:**

Analysts' compensation is not based on investment banking revenue and the analysts are not compensated by the subject companies. Additionally, within the next three months USCA may attempt to seek compensation for investment banking services from the companies mentioned within this report

# IMPORTANT DISCLOSURES

**Opinion Key:**
USCA uses a Buy, Overweight, Hold, Underweight and Sell rating system.

**BUY** - The stock has among the best combination of risk/reward and positive company specific catalysts within the sector. Stock is expected to trade higher on an absolute basis and be a top performer relative to peer stocks over the next 12 months.

**OVERWEIGHT** - The stock has above average risk/reward and is expected to outperform peer stocks over the next 12 months.

**HOLD** - The stock has average risk/reward and is expected to perform in line with peer stocks over the next 12 months.

**UNDERWEIGHT** - The stock has below average risk/reward and is expected to underperform peer stocks over the next 12 months.

**SELL** - The stock's risk/reward is skewed to the downside with possible negative company specific catalysts or excessive valuation. The stock is expected to trade lower on an absolute basis and be among the worst performers relative to peer stocks over the next 12 months.

U.S. Capital Advisors

# IMPORTANT DISCLOSURES

**Price Target Methodology:**
Our price targets for downstream utility stocks are developed through a combination of techniques, including relative and absolute measures. We believe it is important to look at both types of valuation methods in order to get a full understanding of a stock's trading dynamics. Our fair value estimate is based on a blended average of the two techniques.

**Relative Valuation:**
Downstream gas and electric utilities tend to trade on both projected earnings and cash flow. We believe investors should take both these considerations into account equally. Downstream utilities have traded between 12-17 times forward earnings and 7-9 times EV-to-forward EBITDA over the last decade. With many downstream utilities operating under fiscal years' ending September 30, we typically use "forward-year" projections for proper apples-to-apples comparisons. Accordingly, our fair value estimates currently use our FY16 projections.

**Absolute Valuation:**
Given their status as income-producing investments, we believe it is also important to value downstream utilities based on the value of the future dividend streams. Unlike comparative valuation techniques, this method ignores the current or historic trading multiple implied by the market. Our DDM assumes a midterm growth rate based on our FY14-FY16 estimates, a long-term growth rate based on our forward projections using an assumed ROE (typically between 10-12%) and payout ratio (typically 60%-70%) and an equity risk premium using risk-free rates (currently 4.5%) and company Betas (average 0.8).

**Risks:**
An increase in interest rates, a poor regulatory decision, a decrease in commodity price volatility, bypass threat from large industrial customers, a decline in the broad market or a decline in profits from non-regulated operations are among the many potential risks to achieving our price targets.

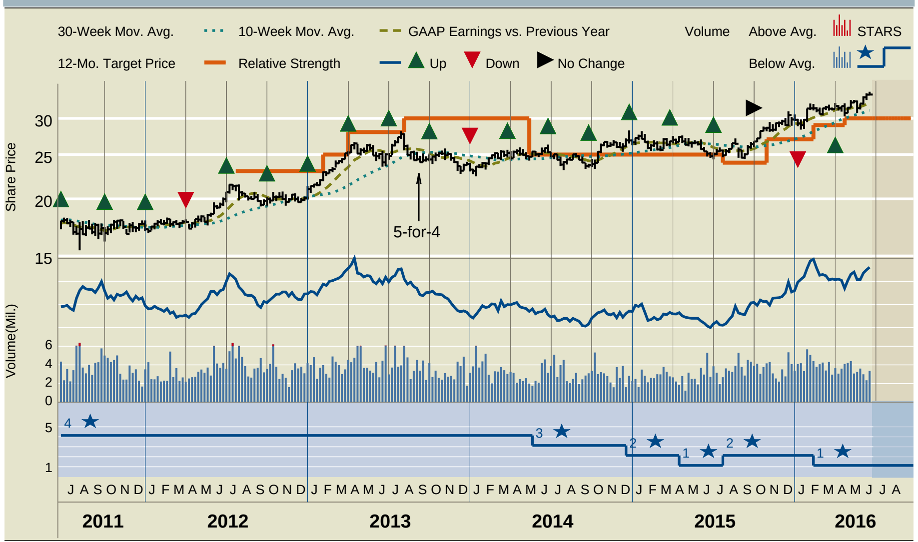
## Price Performance



**Past performance is not an indication of future performance and should not be relied upon as such.**

Analysis prepared by Equity Analyst **C. Muir** on Apr 20, 2016 04:06 PM, when the stock traded at **$31.98**.

## Highlights

- We project 4.8% revenue growth in 2016 and 5.4% in 2017 versus growth of 4.4% in 2015. We see growth driven by rate hikes and customer growth. We also see acquisitions of smaller water systems adding to revenue growth. Water and wastewater utility systems are among the most fragmented in the U.S., and WTR believes acquisitions are an important vehicle for customer growth. WTR is focusing on states with critical mass (Texas, Ohio and Pennsylvania), while divesting non-core assets.
- EBIT totaled $321 million in 2015, $314 million in 2014 and $305 million in 2013, with corresponding EBIT margins of 39.4%, 40.3% and 39.7%. We believe EBIT margins will rise in both 2016 and 2017, reaching over 41% in 2017. We believe WTR's focus on increasing efficiencies and rationalizing its portfolio will benefit EBIT margins in 2016. We see interest expense rising in both 2015 and 2016, driven by capital spending.
- Our 2016 recurring EPS estimate is $1.34, up 6.3% from 2015's $1.26, which excludes $0.12 of net nonrecurring charges. We forecast 2017 EPS of $1.40, up an additional 4.5%.

## Investment Rationale/Risk

- We have a favorable view of WTR's capital spending program, which WTR expects to total $1.0 billion from 2015 through 2017. We expect WTR to focus its spending on water quality and distribution line upgrades, and on system reliability projects. As WTR increases its rate base, we expect to see continued rate increases. We expect low-cost financing to continue to fund capital investment projects and small acquisitions. Nevertheless, we see the shares as overvalued compared to faster growing peers.
- Risks to our recommendation and target price include changes in long- or intermediate-term weather and rainfall patterns, regulatory outcomes and water production costs.
- WTR recently traded at 23.9X our 2016 EPS estimate, or a small discount to its water utility peers. Our target price of $30 is 22.4X our estimate, or a 5% discount to our peer target. This valuation is warranted by our projection of a three-year EPS growth rate and dividend yield that is lower than its peers. The shares recently yielded 2.2%.

## Analyst's Risk Assessment

| LOW | MEDIUM | HIGH |
|---|---|---|

Our risk assessment for Aqua America reflects the company's geographic diversity, which mitigates the risk of adverse weather and state regulatory commission rulings in rate case filings, and an S&P Quality Ranking of A, which indicates well above average long-term earnings and dividend growth.

# Aqua America Inc

## Business Summary April 20, 2016

CORPORATE OVERVIEW. Aqua America provides water and waste services in eight states: Pennsylvania, Ohio, Illinois, Texas, New Jersey, Indiana, North Carolina, Virginia and Georgia (unregulated). WTR is continuing to pursue a sale of its Georgia operations. In 2015, 51.6% of operating revenues were from Pennsylvania; with Ohio contributing 12.1%; Texas 8.5%; Illinois 7.1%; North Carolina 6.4%; other states (New Jersey, Indiana and Virginia) 10.0%; and other/eliminations 4.2%. The company notes that cool and wet weather between May and September could have a 5% to 10% negative impact on earnings, while a hot, dry summer could have an inverse effect.

As of late 2015, WTR was supplying water and wastewater services to 957,866 residential, commercial, industrial and public customers (nearly 3.0 million residents), with Aqua Pennsylvania accounting for about half of the total. Residential customers comprise 62.1% of the company's water and wastewater revenues.

In 2015, 88.4% of regulated operating revenues were derived from water supply, with 61.3% from residential water; 16.2% commercial water; 3.8% fire protection; 3.6% industrial water; and 3.5% other water. Regulated wastewater accounted for 10.2% of revenues, while 1.4% came from other utilities. Regulated revenues were 95.8% while non-regulated other/eliminations accounted for the rest.

LEGAL/REGULATORY ISSUES. In an effort to capture return on invested capital (ROIC) and maintain return on equity (ROE) between 10%-11%, the company continues to file for large rate increases. Rate cases added $8.50 million of revenues in 2015, $5.25 million in 2014 and $25.68 million in 2013. In 2013, the $25.7 million increase included $16.7 million in Pennsylvania. Rate cases generally take nine to 12 months to complete. With a rate base of more than $1.6 billion in Pennsylvania, the impact on ROE is significant, with every 25 basis point move translating into a $4 million impact on the company's revenue requirement.

CORPORATE STRATEGY. As part of a portfolio rationalization strategy to focus on operations in areas where the company has critical mass and economic growth potential WTR sold its Georgia operations in 2014, Florida in 2013, New York and Maine in 2012, Missouri in 2011 and South Carolina in 2010. The company decided that these areas had limited customer growth opportunities or were unable to achieve favorable operating results or a return on equity that WTR considered acceptable.

Otherwise, we expect the company to continue its strategy of expanding its customer base via acquisitions. During the five-year period through 2014, WTR completed 82 acquisitions or growth ventures, including 16 deals in 2014, 15 in 2013 and 17 in 2012. In May 2012, WTR completed the acquisition of American Water Works' (AWK) regulated operations in Ohio, while selling its New York regulated operations.

In September 2011, WTR announced a joint venture for the construction and operation of a $24 million, 18-mile private pipeline to provide fresh water to certain natural gas well drilling operations in the Marcellus Shale region in Pennsylvania. Phase 1 became operational in the second quarter of 2012, while Phase II started in December 2012, boosting the water supply by three million gallons per day, from nearly one million gallons as of May 2012. Phase III was completed in early 2013.

Water utilities in Pennsylvania are permitted to add a distribution system improvement charge (DSIC) to their bills, reflecting capital costs and depreciation related to certain distribution system improvement projects completed and put in service between rate filings. However, as a result of a repair tax accounting change, Aqua Pennsylvania's water rates were lowered by 2.8% as of January 2013 through the suspension of DSIC. Aqua Pennsylvania did not file a base rate case or for an infrastructure rehabilitation surcharge in 2013 or 2014.

FINANCIAL TRENDS. WTR's targeted debt to capital ratio was 50% at the end of 2015 and its net debt to total capitalization was 49.9%. WTR continues to target capital investments mainly at pipe replacement projects and plant upgrades with total expenditures of about $1.0 billion over the next three years. In 2016, it expects capital spending at levels similar to 2015. Capital expenditures totaled $365 million in 2015, $328 million in 2014 and $308 million in 2013.

# Aqua America Inc

## Sub-Industry Outlook

Our fundamental outlook for the water utilities sub-industry remains neutral, based on our view that population growth trends in the US are likely to continue yielding relatively low average customer growth rates. Yet, with housing starts continuing to recover, we see strengthening customer growth in some states. Longer term, we believe aging water systems will require repair, while demand for clean water in warm and dry regions where population is expanding drives capital investments.

We expect more budget-strapped municipalities to look to sell their water systems to private companies or establish public-private operating partnerships, despite some opposition by residential customers due to service and economic concerns. The water industry remains very fragmented and we see large water distribution utilities continuing to make acquisitions. Additional new revenue should come from water stations and pipelines set for refracking shale gas wells, which Aqua America has been installing in the Marcellus region in Pennsylvania.

We see modest global growth near term in desalination, a process by which salt is removed from seawater as a source for drinking water. However, as costs gradually decline, more desalination projects are likely in dry areas such as Nevada, Arizona, California and Texas, and developing regions of the world, especially in the Middle East. The American Water Works Association (AWWA) forecasts that the cost to replace deteriorating water pipes will total about $846 billion for water systems and $1.05 trillion for wastewater systems through 2039. In June 2013, an EPA survey projected total investments for U.S. drinking water system repairs and improvements of $384 billion through 2030, but the AWWA believes this figure is artificially low as it excludes several types of capital improvement projects and growth needs.

In 2015, the S&P Water Utilities Index rose 11.6%, versus a 1.0% decline for the S&P Composite 1500 Index and an 8.0% drop in the S&P Utilities Index. In 2014, the group rose 16.9%, versus a 10.9% gain for the broader market index and a 22.9% rise in the S&P Utilities Index. We believe long-term investors view this group as a safe haven during cyclical downturns. However, with economic indicators more favorable and signs of further interest rate hikes ahead, we believe investors will turn to sectors with lower debt-to-capital ratios, as utilities will likely incur higher interest expense when they roll over their long-term debt.

## S&P Capital IQ Analyst Research Notes and other Company News

**June 16, 2016**
Aqua America Inc. announced that Christopher S. Crockett has joined the company as its chief environmental officer. Crockett was previously deputy commissioner for planning and environmental services at the Philadelphia Water Department (PWD), where he has worked since 1995. In his new role, Crockett will be responsible for overseeing water quality and environmental compliance for all of Aqua's drinking water and wastewater systems in eight states. Crockett will also manage Aqua's in-house water and wastewater laboratory as well as the company's water quality services and water resources engineering departments.

**May 9, 2016**
Aqua America Inc. announced that its shareholders have elected Carolyn J. Burke, executive vice president, business operations and systems at Dynegy Inc., as a director. Burke has overall responsibility for supply chain, safety, environmental compliance, information technology, construction and engineering, and outage services at Dynegy. At Dynegy, Burke also serves as chief integration officer with responsibility for integration activities, most recently for Dynegy's $6 billion EquiPower Corp. and Duke merchant portfolio acquisitions. Burke also oversees the company's continuous margin and process improvement program.

**April 20, 2016**
02:14 pm ET ... S&P CAPITAL IQ MAINTAINS STRONG SELL OPINION ON SHARES OF AQUA AMERICA (WTR 32.15*): We lift our 12-month target by $1 to $30, a discount to peers 22.4X our '16 EPS estimate that we think is warranted by a below-peers three-year EPS growth rate. We keep our '16 EPS estimate of $1.34 and start '17's at $1.40. Despite strong capital spending, rate increases and acquisition-fueled customer growth, we think the shares are overvalued. We think Q4 results of $0.28, vs. $0.28 indicate continuing challenges in accelerating EPS growth. Capital IQ consensus estimates were $0.29. Higher revenues were offset by higher operating expenses and a higher effective tax rate. /C. Muir

**February 5, 2016**
11:19 am ET ... S&P CAPITAL IQ LOWERS VIEW ON SHARES OF AQUA AMERICA TO STRONG SELL FROM SELL (WTR 31.35*): We lift our 12-month target price by $2 to $29, due to higher peer valuations. We keep our '15 EPS estimate of $1.27, but trim '16's by $0.01 to $1.34. Our target price is 21.6X our '16 EPS estimate, or a small discount to our peer target that we think is warranted by our projection of a three-year EPS growth rate that is slower than its peers. While we have a favorable view of WTR's growth capital spending program and smaller bolt-on acquisitions, we think the shares are overvalued. We expect WTR to post Q4 EPS of $0.30, vs. $0.28, on Feb 23. The Capital IQ consensus is $0.29. /C. Muir

**October 26, 2015**
09:44 am ET ... S&P CAPITAL IQ MAINTAINS SELL OPINION ON SHARES OF AQUA AMERICA (WTR 28.52**): We raise our target price by $3 to $27, helped by higher peer valuations. We keep our '15 EPS estimate of $1.27, but trim '16's by $0.02 to $1.35. Our target price is 20.0X our '16 EPS estimate, or a 5% discount to our peer target that we think is warranted by a three-year EPS growth rate that is lower than its peers. We see capital spending on water quality upgrades, distribution line upgrades and system reliability projects helping to grow WTR's rate base and drive EPS growth. WTR posts Q2 EPS of $0.32, even with our estimate and the Capital IQ consensus forecast. /C. Muir

**July 17, 2015**
12:04 pm ET ... S&P CAPITAL IQ LIFTS VIEW ON SHARES OF AQUA AMERICA TO SELL FROM STRONG SELL (WTR 25.66**): We are keeping our '15 EPS estimate at $1.27 and lifting '16's by $0.03 to $1.37. We are trimming our 12-month target price by $1 to $24 on lower peer valuations. Our target price is 17.5X our '16 EPS estimate or a 14% discount to our peer target, which we think is warranted by our projection of a three-year EPS growth rate that is slower than peers. Despite a strong capital spending program, we think WTR's shares are overvalued versus faster growing water utility peers. Q1 recurring EPS of $0.27, vs. $0.25, beats our $0.25 estimate and the $0.26 Capital IQ consensus. /C. Muir

**June 4, 2015**
Aqua America Inc. appointed Christopher H. Franklin Chief Executive Officer. Franklin succeeded Nicholas DeBenedictis.

**April 14, 2015**
12:24 pm ET ... S&P CAPITAL IQ LOWERS OPINION ON SHARES OF AQUA AMERICA TO STRONG SELL FROM SELL (WTR 26.88*): Our opinion change is due to valuation. We are keeping our '15 EPS estimate at $1.27 and initiating '16's at $1.34. We are also leaving our 12-month target unchanged at $25, reflecting our stable fundamental outlook. Our target price is 19.7X our '15 EPS estimate, or a 10% discount to our peer target that we think is warranted by our projection of a three-year EPS growth rate that is lower than its peers. While we see capital spending leading to rate increases, we think WTR is overvalued. Q4 EPS of $0.28, vs. $0.26, beats our estimate and the Capital IQ consensus, both at $0.27. /C. Muir

**December 16, 2014**
09:01 am ET ... S&P CAPITAL IQ LOWERS OPINION ON SHARES OF AQUA AMERICA TO SELL FROM HOLD (WTR 25.68**): We are leaving our '14 EPS estimate at $1.21 and '15's at $1.27. We are also keeping our 12-month target price at $25. Our target price is 19.7X our '15 EPS estimate or a 3% discount to our peer target, which we think is warranted by our projection of a three-year EPS growth rate that is below peers. We believe that WTR will be active in acquiring smaller water systems and this combined with its $1.0 billion capital spending program will drive EPS growth. Q3 EPS of $0.38, vs. $0.36, matches our estimate and beats the $0.37 Capital IQ consensus. The shares yield 2.5%. /C. Muir

A company's earnings outlook plays a major part in any investment decision. S&P Capital IQ organizes the earnings estimates of over 2,300 Wall Street analysts, and provides their consensus of earnings over the next two years, as well as how those earnings estimates have changed over time. Note that the information provided in relation to consensus estimates is not intended to predict actual results and should not be taken as a reliable indicator of future performance.

## Wall Street Consensus vs. Performance

For fiscal year 2016, analysts estimate that WTR will earn US$ 1.33. For the 1st quarter of fiscal year 2016, WTR announced earnings per share of US$ 0.29, representing 22% of the total annual estimate. For fiscal year 2017, analysts estimate that WTR's earnings per share will grow by 6% to US$ 1.41.

## Glossary

### S&P Capital IQ STARS

Since January 1, 1987, S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs (American Depositary Receipts), and ADSs (American Depositary Shares) based on a given equity's potential for future performance. Similarly, S&P Capital IQ Equity Research has ranked Asian and European equities since June 30, 2002. Under proprietary STARS (STock Appreciation Ranking System), S&P Capital IQ equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350® Index or S&P 500® Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

### S&P Capital IQ Quality Ranking

(also known as **S&P Capital IQ Earnings & Dividend Rankings**) - Growth and stability of earnings and dividends are deemed key elements in establishing S&P Capital IQ's earnings and dividend rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

| | | | |
|---|---|---|---|
| A+ | Highest | B | Below Average |
| A | High | B- | Lower |
| A- | Above Average | C | Lowest |
| B+ | Average | D | In Reorganization |
| NR | Not Ranked | | |

### S&P Capital IQ EPS Estimates

S&P Capital IQ earnings per share (EPS) estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, S&P Capital IQ EPS estimates reflect either forecasts of S&P Capital IQ equity analysts; or, the consensus (average) EPS estimate, which are independently compiled by Capital IQ, a data provider to S&P Capital IQ Equity Research. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

### S&P Capital IQ Core Earnings

S&P Capital IQ Core Earnings is a uniform methodology for adjusting operating earnings by focusing on a company's after-tax earnings generated from its principal businesses. Included in the S&P Capital IQ definition are employee stock option grant expenses, pension costs, restructuring charges from ongoing operations, write-downs of depreciable or amortizable operating assets, purchased research and development, M&A related expenses and unrealized gains/losses from hedging activities. Excluded from the definition are pension gains, impairment of goodwill charges, gains or losses from asset sales, reversal of prior-year charges and provision from litigation or insurance settlements.

### S&P Capital IQ 12-Month Target Price

The S&P Capital IQ equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics, including S&P Capital IQ Fair Value.

### S&P Capital IQ Equity Research

S&P Capital IQ Equity Research U.S. includes Standard & Poor's Investment Advisory Services LLC; Standard & Poor's Equity Research Services Europe includes McGraw-Hill Financial Research Europe Limited trading as S&P Capital IQ; Standard & Poor's Equity Research Services Asia includes: McGraw-Hill Financial Singapore Pte. Limited, Standard & Poor's Investment Advisory Services (HK) Limited, Standard & Poor's Malaysia Sdn Bhd, and Standard & Poor's Information Services (Australia) Pty Ltd.

### Abbreviations Used in S&P Capital IQ Equity Research Reports

CAGR - Compound Annual Growth Rate
CAPEX - Capital Expenditures
CY - Calendar Year
DCF - Discounted Cash Flow
DDM - Dividend Discount Model
EBIT - Earnings Before Interest and Taxes
EBITDA - Earnings Before Interest, Taxes, Depreciation and Amortization
EPS - Earnings Per Share
EV - Enterprise Value
FCF - Free Cash Flow
FFO - Funds From Operations
FY - Fiscal Year
P/E - Price/Earnings
P/NAV - Price to Net Asset Value
PEG Ratio - P/E-to-Growth Ratio
PV - Present Value
R&D - Research & Development
ROCE - Return on Capital Employed
ROE - Return on Equity
ROI - Return on Investment
ROIC - Return on Invested Capital
ROA - Return on Assets
SG&A - Selling, General & Administrative Expenses
SOTP - Sum-of-The-Parts
WACC - Weighted Average Cost of Capital

### Dividends on American Depository Receipts (ADRs) and American Depository Shares (ADSs) are net of taxes (paid in the country of origin).

### S&P Capital IQ Qualitative Risk Assessment

Reflects an S&P Capital IQ equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The S&P Capital IQ Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

### STARS Ranking system and definition:

**★★★★★ 5-STARS (Strong Buy):**
Total return is expected to outperform the total return of a relevant benchmark, by a wide margin over the coming 12 months, with shares rising in price on an absolute basis.

**★★★★☆ 4-STARS (Buy):**
Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months, with shares rising in price on an absolute basis.

**★★★☆☆ 3-STARS (Hold):**
Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months, with shares generally rising in price on an absolute basis.

**★★☆☆☆ 2-STARS (Sell):**
Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months, and the share price not anticipated to show a gain.

**★☆☆☆☆ 1-STAR (Strong Sell):**
Total return is expected to underperform the total return of a relevant benchmark by a wide margin over the coming 12 months, with shares falling in price on an absolute basis.

### Relevant benchmarks:

In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the S&P Europe 350 Index and the S&P Asia 50 Index, respectively.

## Disclosures

S&P Capital IQ ranks stocks in accordance with the following ranking methodologies:

### STARS Stock Reports:

S&P Capital IQ's qualitative STARS recommendations are determined and assigned by S&P Capital IQ equity analysts. For reports containing STARS recommendations refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

### Quantitative Stock Reports:

S&P Capital IQ's quantitative recommendations quantitative recommendations are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five (six) model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative recommendations refer to the Glossary section of the report for detailed methodology and the definition of Quantitative rankings.

### STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports (collectively, the "S&P Capital IQ's Research Reports" or "Research Reports") reflect different criteria, assumptions and analytical methods and may have differing recommendations.S&P Capital IQ believes that the methodologies and data used to generate the different types of Research Reports are reasonable and appropriate. Generally, S&P Capital IQ does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views or recommendations on the issuer, which may at times result in contradicting assessments of an issuer. S&P Capital IQ reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.

### STARS Stock Reports:

While S&P Capital IQ has obtained information from sources it believes to be reliable, S&P Capital IQ does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives.

S&P keeps certain activities of its business units separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain business units of S&P may have information that is not available to other S&P business units. S&P has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

Research Reports are not intended to be investment advice and do not constitute any form of invitation or inducement by S&P Capital IQ to engage in investment activity. This material is not intended as an offer or solicitation for the purchase or sale of any security or other financial instrument. Securities, financial instruments or strategies mentioned herein may not be suitable for all investors and this material is not intended for any specific investor and does not take into account an investor's particular investment objectives, financial situations or needs. Any opinions expressed herein are given in good faith, are subject to change without notice, and are only current as of the stated date of their issue. Prices, values, or income from any securities or investments mentioned in this report may fluctuate, and an investor may, upon selling an investment, lose a portion of, or all of the principal amount invested. Where an investment is described as being likely to yield income, please note that the amount of income that the investor will receive from such an investment may fluctuate. Where an investment or security is denominated in a different currency to the investor's chosen currency, changes in rates of exchange may have an adverse effect on the value, price or income of or from that investment to the investor. The information contained in Research Reports does not constitute advice on the tax consequences of making any particular investment decision. Before acting on any recommendation in this material, you should consider whether it is suitable for your particular circumstances and, if necessary, seek professional advice.

Additional information on a subject company may be available upon request.

### Notice to all Non U.S. Residents:

S&P Capital IQ's Research Reports may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors (the "Intermediaries" or "Distributors"). Intermediaries are not acting as agents or representatives of S&P Capital IQ. In Territories where an Intermediary distributes S&P Capital IQ's Research Reports, the Intermediary, and not S&P Capital IQ, is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory authorities, including laws in connection with the distribution of third-party Research Reports, licensing requirements, supervisory and record keeping obligations that the Intermediary may have under the applicable laws and regulations of the territories where it distributes the Research Reports.

Each Research Report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject S&P Capital IQ or its affiliates to any registration or licensing requirements in such jurisdiction.

Each Research Report is not directed to, or intended for distribution to or use by, any person or entity who is not in a class qualified to receive Research Reports (e.g., a qualified person and/or investor), as defined by the local laws or regulations in the country or jurisdiction where the person is domiciled, a citizen or resident of, or the entity is legally registered or domiciled.

**S&P Capital IQ's Research Reports are not intended for distribution in or directed to entities, residents or investors in: Burma, Cuba, Crimea, Czech Republic, Iran, Kuwait, Lebanon, North Korea, Portugal, Romania, Sudan, Slovakia, Syria, Thailand and Turkey.**

**For residents of Australia:** Research Reports are distributed in Australia by SPIS. Any express or implied opinion contained in a Research Report is limited to "General Advice" and based solely on consideration of the investment merits of the financial product(s) alone. The information in a Research Report has not been prepared for use by retail investors and has been prepared without taking account of any particular investor's financial or investment objectives, financial situation or needs. Before acting on any advice, any investor using the advice should consider its appropriateness having regard to their own or their clients' objectives, financial situation and needs. Investors should obtain a Product Disclosure Statement relating to the product and consider the statement before making any decision or recommendation about whether to acquire the product. Each opinion must be weighed solely as one factor in any investment decision made by or on behalf of any adviser and any such adviser must accordingly make their own assessment taking into account an individual's particular circumstances.

SPIS holds an Australian Financial Services License Number 258896. Please refer to the SPIS Financial Services Guide for more information at:www.spcapitaliq.com/financialservicesguide

More information about the written criteria and methodologies for the generation of Research Reports and historical information for Research Reports for the past 12 months are available by contacting S&P Capital IQ Client Services Department at 61-1300-792-553 or via e-mail at clientsupport@standardandpoors.com or clientsupport@sandp.com.

**For residents of Bahamas:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with licensing requirements under the Securities Industry Act of 1999 and the Securities Industry Regulations of 2000 of The Bahamas, when distributing Research Reports to members of the public in The Bahamas. The Intermediary is also solely responsible for providing any required disclosures under applicable securities laws and regulations to its Bahamian clients, including but not limited to disclosing whether the Intermediary: (i) has a reasonable basis for specific investment recommendations, and the recommended security's price or price range at the time of the recommendation to the client; (ii) makes a market in the recommended security; (iii) its directors, officers or principal shareholders have a current or contingent financial interest in the recommended security, unless the interest is nominal; (iv) participated in a public offering of the recommended security in the last two (2) years; and (v) has disclosed any conflict of interest between it and the issuer of the recommended security.

**For residents of Bermuda:** The Bermuda Monetary Authority or the Registrar of Companies in Bermuda has not approved the Research Reports and any representation, explicit or implicit, is prohibited.

**For residents of Brazil:** Research reports are distributed by S&P Capital IQ and in compliance with Instruction 483 enacted by Comissão de Valores Mobiliários (the Brazilian Securities Commission) dated as of July 6, 2010, the analyst (where applicable) who prepares a Research Report or a report extract affirms: (i) that all the views expressed herein and/or in a Research Report accurately reflect his or her personal views about the securities and issuers; (ii) that all recommendations issued by him or her were independently produced, including from the opinion of the entity in which he or she is an employee. S&P Capital IQ is of the opinion its Research Reports have been prepared in accordance with section 17, II of Instruction 483. The Distributor of the Research Report is responsible for disclosing any circumstances that may impact the independence of S&P Capital IQ's Research Report, in accordance with section 17, II of Instruction 483.

**For residents of British Virgin Islands:** All products and services offered by S&P Capital IQ and its affiliates are provided or performed, outside of the British Virgin Islands. The intended recipients of the Research Reports are (i) persons who are not members of the public for the purposes of the Securities and Investment Business Act, 2010 ("SIBA"); (ii) persons who are professional services providers to the British Virgin Islands business companies for the purposes of SIBA; and (iii) any other person who is given the Research Reports by a person licensed as an investment advisor in the British Virgin Islands. If you are in any doubt as to whether you are the intended recipient of this document, please consult your licensed investment advisor.

**For residents of Canada:** Canadian investors should be aware that any specific securities discussed in a Research Report can only be purchased in Canada through a Canadian registered dealer and, if such securities are not available in the secondary market, they can only be purchased by eligible private placement purchasers on a basis that is exempt from the prospectus requirements of Canadian securities law and will be subject to resale restrictions. Information in Research Reports may not be suitable or appropriate for Canadian investors.

**For residents of Chile:** S&P Capital IQ shall not be acting as an Intermediary of any securities referred to in a Research Report. S&P Capital IQ (and its affiliates) is not registered with, and such securities may not be registered in the Securities Registry maintained by the Superintendencia de Valores y Seguros de Chile (Chilean Securities and Insurance Superintendence or "SVS") pursuant to the Chilean Securities Market Law 18045. Accordingly, investment research presented in a Research Report is not intended to constitute a public or private offer of securities in Chile within the meaning of Article 4 of the Chilean Securities Market Law 18045, as amended and restated, and supplemental rules enacted thereunder.

**For residents of Colombia:** This information and/or information contained in Research Reports is not intended or should not be construed as constituting information delivery to the Colombian Securities Market under Colombian Law.

**For residents of Czech Republic:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with licensing requirements under the Capital Markets Act (Act No. 256/2004 Coll., as amended), implementing Directive 2004/39/EC of the European Parliament and of the Council of 21 April, 2004 on markets in financial instruments amending Council Directives 85/611/EEC and 93/6/EEC and Directive 2000/12/EC of the European Parliament and of the Council and repealing Council Directive 93/22/EEC and its implementing directives, and Directive 2003/125/EC implementing Directive 2003/6/EC as regards the fair presentation of investment recommendations and the disclosure of conflicts of interest; and the Civil Code (Act No. 40/1964 Coll., as amended) as regards the distance financial contract regulation protecting the consumers.

**For residents of Dubai (DIFC):** The information contained in Research Reports distributed by S&P Capital IQ is intended for investors who are "professional clients", as defined in Rule 2.3.2(2) of the Conduct of Business Module (COB) of the DFSA Rulebook.

**For residents of the European Economic Area (EEA):** Research Reports have been approved for distribution in the EEA listed here: Austria; Belgium; Bulgaria; Cyprus; Czech Republic (see further disclosure above); Denmark; Estonia; Finland; France (see further disclosure below); Germany; Gibraltar; Greece ; Hungary (see further disclosure below); Iceland; Ireland; Italy; Latvia; Liechtenstein; Lithuania; Luxembourg; Malta (see further disclosure below); Netherlands; Norway; Poland; Portugal; Romania; Slovakia (see further disclosure below); Slovenia; Spain (see further disclosure below); Sweden and United Kingdom , as investment research by MHFRE, which is authorized and regulated by the Financial Conduct Authority in the UK. S&P Capital IQ's Stock Reports are to be read in conjunction with "Your Guide to S&P Capital IQ's Stock Reports" which can be found at: www.spcapitaliq.com/stockreportguide.

More information about the written criteria and methodologies for the generation of Research Reports and historical information for Research Reports for the past 12 months are available by contacting S&P Capital IQ Client Services Department at 800-523-4534 or via e-mail at: clientsupport@standardandpoors.com or clientsupport@sandp.com.

**For residents of Guernsey, Isle of Man and Jersey:** The Research Reports provide by S&P Capital IQ serve to assist the Intermediary in determining the advice it provides to its clients, but are not intended as advice to any of the Intermediary's clients, and the Intermediary, and not S&P Capital IQ, will be solely responsible for the provision of investment advice to the client. Independent investment advice should be sought by persons in their capacity as investors or potential investors and the Intermediary will be solely responsible for complying with any applicable regulatory obligations relating to the distribution of investment research.

**For residents of France:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with the rules related to the distribution of investment recommendations as specified in the Financial Code and the Autorité des Marchés Financiers rule book.

**For residents of Hong Kong:** Information in the Research Reports shall not be construed to imply any relationship, advisory or otherwise, between S&P and the recipient user of the research report unless expressly agreed by S&P Capital IQ. S&P Capital IQ is not acting nor should it be deemed to be acting, as a "fiduciary" or as an "investment manager" or "investment advisor" to any recipient of this information unless expressly agreed by S&P Capital IQ. The Distributor of the Research Reports will be solely responsible for describing its role to its clients with respect to the distribution of S&P Capital IQ's Research Reports.

Please contact via e-mail at clientsupport@standardandpoors.com or clientsupport@sandp.com if you have any queries on or any matters arising from or in connection with this document.

**For residents of Hungary:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with the rules related to data protection requirements as set out in Act CXII of 2011 on the Right of Informational Self-Determination and on Freedom of information; and with Act CLV. of 1997 on Consumer Protection and with Act CXXXVIII of 2007 on Investment services.

**For residents of India:** Residents of India should consult their financial and legal advisers regarding the suitability of any of S&P Capital IQ's services and products. S&P Capital IQ does not intend to utilize the Research Report service to invite or carry out any business activities with S&P Capital IQ. Research Reports provided by S&P Capital IQ serve to assist the Intermediary in determining the advice it provides to its clients, but are not intended as advice to the Intermediary and to any of the Intermediary's clients and the Intermediary will be solely responsible for the provision of investment advice to the client.

**For residents of Indonesia:** Research Reports do not constitute an offering document and it should not be construed as an offer of securities in Indonesia, and any such securities will only be offered or sold through a financial institution.

**For residents of Israel:** Research reports are intended only for distribution to "Qualified Investors", as defined in the Schedule to Israel's Regulation of Investment Advice, Investment Marketing and Portfolio Management Law of 1995. All other persons who are not Qualified Investors under Israeli law should seek additional investment advice from their financial advisers. The relevant analyst declares that the views expressed in a particular Research Report faithfully reflect the analyst's personal views regarding the securities under review and the issuer of the securities.

**For residents of Japan:** Research Reports are intended only for distribution to "Asset Management Firms".

**For residents of Kazakhstan:** The distribution to specific persons in Kazakhstan is the sole responsibility of the Distributor and the Distributor, and not S&P Capital IQ, is responsible for complying with all local regulations, including but not limited to advertising requirements related to public solicitation.

**For residents of Malta:** The Distributor of Research Reports in Malta, is solely responsible for ensuring that the investment research produced by S&P Capital IQ and proposed to be disseminated in or from within Malta is reviewed for compliance with the investment services rules issued by the Malta Financial Services Authority in terms of the Investment Services Act, Cap 370 of the laws of Malta.

**For residents of Mexico:** S&P Capital IQ is not regulated or supervised by the Mexican National Banking and Securities Commission ("CNBV"). S&P Capital IQ has a licensed rating agency affiliate in Mexico (Standard & Poor's, S.A. De C.V.), of which S&P maintains firewalls and seeks to avoid conflicts of interest, pursuant to approved policies. Research Reports on securities that are not registered with the National Securities Registry maintained by the Mexican National Securities Registry are intended only for distribution to qualified, institutional investors or to any other investors to whom distribution the S&P Research is permissible under Mexican law.

**For residents of Monaco:** The Intermediary, and not S&P Capital IQ, will be solely responsible for providing copies of S&P Capital IQ Research Reports to the appropriate Monegasque regulator prior to distributing to its clients.

**For residents of Morocco:** Research Reports are intended for distribution only to professional investors.

**For residents of Peru:** S&P Capital IQ's Research Reports shall not, under any circumstances, be considered an invitation to take deposits or funds from the public, under any mechanism, or to carry on any activities that may be prohibited by Peruvian law. The Intermediary also agrees that the use of S&P Capital IQ's Research Reports shall not be used by Intermediary to solicit an investment in the securities that are the subject of the Research Report in any way that may be prohibited by Peruvian law.

**For residents of Qatar:** The Distributor, and not S&P Capital IQ, is responsible for complying with all relevant licensing requirements as set forth by the Qatar Financial Markets Authority or the Qatar Central Bank, and with all relevant rules and regulations set out in the Qatar Financial Markets Authority's rule book, including third party branded investment research distribution of securities that are admitted for trading on a Qatari securities exchange (Admitted Securities).

**For residents of Russia:** Research Reports on financial instruments are intended for "qualified investors", as defined in the Securities market law of the Russian Federation dated 22 April 1996, as amended, only.

**For residents of The Kingdom of Saudi Arabia:** S&P Capital IQ and its affiliates do not distribute Research Reports in the Kingdom of Saudi Arabia. Residents of Saudi Arabia should be aware that the Distributor of S&P Capital IQ's Research Reports may not be permitted to distribute investment research either: (i) from a permanent place of business in or otherwise within the territory of the Kingdom of Saudi Arabia; or (ii) to an investor in the Kingdom of Saudi Arabia unless that investor is a Capital Market Authority authorized investor or the Saudi Arabian Monetary Agency.

When a Distributor disseminates S&P Capital IQ's Research Reports in the Kingdom of Saudi Arabia, the Distributor, and not S&P Capital IQ, is solely responsible for approving the contents of Research Reports and complying with licensing requirements and authorizations of the Saudi Arabian Capital Market Authority's ("CMA"), including CMA's Authorized Persons Regulations concerning securities advertisements.

S&P does not conduct a securities business in the Kingdom of Saudi Arabia and the Distributor, and not S&P Capital IQ, assumes all responsibilities and liabilities for distributing Research Reports in the Kingdom of Saudi Arabia. **Research Reports are not intended to be investment advice and do not constitute any form of invitation or inducement by S&P Capital IQ to engage in an investment activity in the Kingdom of Saudi Arabia.** S&P Capital IQ does not communicate directly with a Distributor's customers and a Distributor's customers should not contact S&P Capital IQ directly regarding any information or data provided in Research Reports.

**For residents of Singapore:** Recipients of the Research reports in Singapore should contact the Distributor of the Research Reports in respect to any matters arising from, or in connection with, the analysis of the report.The Distributor accepts all legal responsibility for the contents of the Research Reports. When reports are distributed by Intermediaries in Singapore, the Intermediary, and not S&P Capital IQ, is solely responsible for ensuring that the recipients of the Research Reports understand the information contained in the Research Reports and that such information is suitable based on the customer's profile and investment objectives.

**For residents of Slovak Republic:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with the rules related to the Slovak Securities Act (Act No. 566/2001 Coll., as amended), implementing Directive 2004/39/EC of the European Parliament and of the Council of 21 April 2004 on markets in financial instruments amending Council Directives 85/611/EEC and 93/6/EEC and Directive 2000/12/EC of the European Parliament and of the Council and repealing Council Directive 93/22/EEC and its implementing directives, and Directive 2003/125/EC implementing Directive 2003/6/EC as regards the fair presentation of investment recommendations and the disclosure of conflicts of interest; and with the Slovak Act on Consumer Protection in Distance Financial Services Contracts (Act No. 266/2005 Coll., as amended).

**For residents of Spain:** Certain of S&P Capital IQ's equity Research Reports may be considered to be marketing communications for purposes of Spanish law.

**For residents of the United Arab Emirates (UAE):** S&P Capital IQ and its affiliates neither undertake banking, financial, or investment consultations business in or into the UAE within the meaning of the Central Bank Board of Directors' Resolution No. 164/8/94 regarding the regulations for investment companies nor provides financial analysis or consultation services in or into the UAE within the meaning of UAE SECURITIES AND COMMODITIES AUTHORITY DECISION NO. 48/R OF 2008 concerning financial consultation and financial analysis.

Investment research distributed by S&P Capital IQ and its affiliates is not intended to amount to an offer of securities within the meaning of DIFC Law NO. 12 OF 2004 (the DIFC Markets Law) or the equivalent laws, rules and regulations made by the Central Bank of the UAE and their Emirates Securities and Commodities Authority. Neither the Dubai Financial Services Authority, the UAE Securities nor Commodities Authority of the Central Bank of the UAE has reviewed or verified any of the information provided in a Research Report or through any service provided by S&P Capital IQ or its affiliates, or has any responsibility for it.

If a recipient of Research Report does not understand any of the contents of the Research Report, the recipient should contact a financial advisor. Users of extracts of investment Research Reports should be aware that if they are distributed in the UAE by an Intermediary, the Intermediary is solely responsible for the distribution and contents of the investment research in the UAE.

**For residents of Uruguay:** S&P Capital IQ or its affiliates are not, individually a risk assessment entity registered with the Central Bank of Uruguay, and S&P Capital IQ's Research Reports do not constitute a risk assessment. Investment research presented in a Research Report is not intended to constitute a public or private offer of securities in Uruguay. S&P Capital IQ's Research Reports are not intended for worldwide distribution, as such, and are not published to Uruguayan clients in Spanish.

**For residents of Venezuela:** Research Reports can only be distributed in Venezuela by an investment advisor, duly licensed under Venezuelan law. The Distributor of the Research Reports, and not S&P Capital IQ, is solely responsible for complying with licensing requirements.

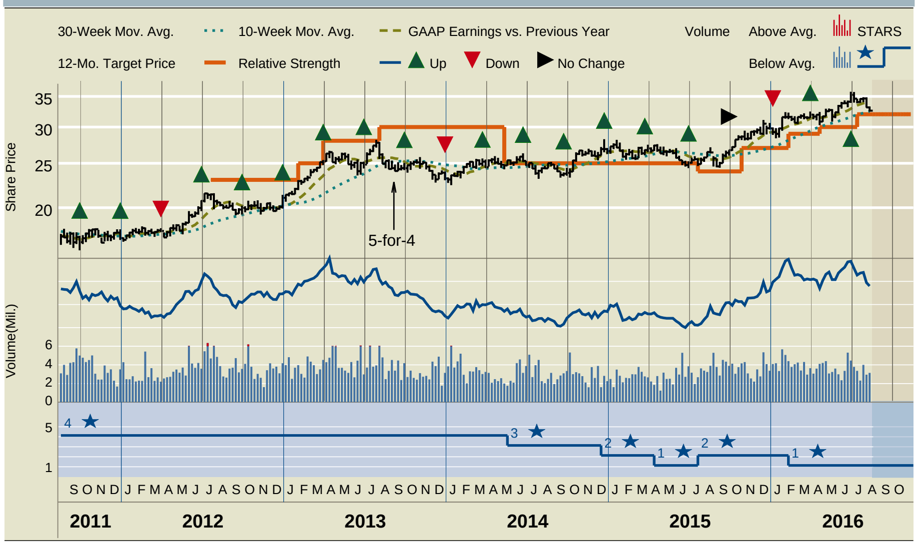
## Price Performance



**Past performance is not an indication of future performance and should not be relied upon as such.**

Analysis prepared by Equity Analyst **C. Muir** on Jul 08, 2016 01:20 PM, when the stock traded at **$34.39**.

## Highlights

- We project 2.2% revenue growth in 2016 and 3.6% in 2017 versus growth of 4.4% in 2015. We see growth driven by rate hikes and customer growth. We also see acquisitions of smaller water systems adding to revenue growth. Water and wastewater utility systems are among the most fragmented in the U.S., and WTR believes acquisitions are an important vehicle for customer growth. WTR is focusing on states with critical mass (Texas, Ohio and Pennsylvania), while divesting non-core assets.
- EBIT totaled $321 million in 2015, $314 million in 2014 and $305 million in 2013, with corresponding EBIT margins of 39.4%, 40.3% and 39.7%. We believe EBIT margins will rise in both 2016 and 2017, reaching over 41% in 2017. We believe WTR's focus on increasing efficiencies and rationalizing its portfolio will benefit EBIT margins in 2016 and 2017. We see interest expense rising in both 2016 and 2017, driven by capital spending.
- Our 2016 recurring EPS estimate is $1.34, up 6.3% from 2015's $1.26, which excludes $0.12 of net nonrecurring charges. We forecast 2017 EPS of $1.40, up an additional 4.5%.

## Investment Rationale/Risk

- We have a favorable view of WTR's capital spending program, which WTR expects to total $1.1 billion from 2016 through 2018. We expect WTR to focus its spending on water quality and distribution line upgrades, and on system reliability projects. As WTR increases its rate base, we expect to see continued rate increases. We expect low-cost financing to continue to fund capital investment projects and small acquisitions. Nevertheless, we see the shares as overvalued.
- Risks to our recommendation and target price include changes in long- or intermediate-term weather and rainfall patterns, regulatory outcomes and water production costs.
- WTR recently traded at 24.6X our 2016 EPS estimate, or a small premium to its water utility peers. Our target price of $32 is 22.9X our estimate, or a 3% premium to our peer target. This valuation is warranted by our projection of a three-year EPS growth rate and dividend yield that is slightly higher than its peers. The shares recently yielded 2.1%.

## Analyst's Risk Assessment

| LOW | MEDIUM | HIGH |
|---|---|---|

Our risk assessment for Aqua America reflects the company's geographic diversity, which mitigates the risk of adverse weather and state regulatory commission rulings in rate case filings, and an S&P Quality Ranking of A, which indicates well above average long-term earnings and dividend growth.

# Aqua America Inc

## Business Summary July 08, 2016

CORPORATE OVERVIEW. Aqua America provides water and waste services in eight states: Pennsylvania, Ohio, Illinois, Texas, New Jersey, Indiana, North Carolina, Virginia and Georgia (unregulated). WTR is continuing to pursue a sale of its Georgia operations. In 2015, 51.6% of operating revenues were from Pennsylvania; with Ohio contributing 12.1%; Texas 8.5%; Illinois 7.1%; North Carolina 6.4%; other states (New Jersey, Indiana and Virginia) 10.0%; and other/eliminations 4.2%. The company notes that cool and wet weather between May and September could have a 5% to 10% negative impact on earnings, while a hot, dry summer could have an inverse effect.

As of late 2015, WTR was supplying water and wastewater services to 957,866 residential, commercial, industrial and public customers (nearly 3.0 million residents), with Aqua Pennsylvania accounting for about half of the total. Residential customers comprise 62.1% of the company's water and wastewater revenues.

In 2015, 88.4% of regulated operating revenues were derived from water supply, with 61.3% from residential water; 16.2% commercial water; 3.8% fire protection; 3.6% industrial water; and 3.5% other water. Regulated wastewater accounted for 10.2% of revenues, while 1.4% came from other utilities. Regulated revenues were 95.8% while non-regulated other/eliminations accounted for the rest.

LEGAL/REGULATORY ISSUES. In an effort to capture return on invested capital (ROIC) and maintain return on equity (ROE) between 10%-11%, the company continues to file for large rate increases. Rate cases added $8.50 million of revenues in 2015, $5.25 million in 2014 and $25.68 million in 2013. In 2013, the $25.7 million increase included $16.7 million in Pennsylvania. Rate cases generally take nine to 12 months to complete. With a rate base of more than $1.6 billion in Pennsylvania, the impact on ROE is significant, with every 25 basis point move translating into a $4 million impact on the company's revenue requirement.

CORPORATE STRATEGY. As part of a portfolio rationalization strategy to focus on operations in areas where the company has critical mass and economic growth potential WTR sold its Georgia operations in 2014, Florida in 2013, New York and Maine in 2012, Missouri in 2011 and South Carolina in 2010. The company decided that these areas had limited customer growth opportunities or were unable to achieve favorable operating results or a return on equity that WTR considered acceptable.

Otherwise, we expect the company to continue its strategy of expanding its customer base via acquisitions. During the five-year period through 2014, WTR completed 82 acquisitions or growth ventures, including 16 deals in 2014, 15 in 2013 and 17 in 2012. In May 2012, WTR completed the acquisition of American Water Works' (AWK) regulated operations in Ohio, while selling its New York regulated operations.

In September 2011, WTR announced a joint venture for the construction and operation of a $24 million, 18-mile private pipeline to provide fresh water to certain natural gas well drilling operations in the Marcellus Shale region in Pennsylvania. Phase 1 became operational in the second quarter of 2012, while Phase II started in December 2012, boosting the water supply by three million gallons per day, from nearly one million gallons as of May 2012. Phase III was completed in early 2013.

Water utilities in Pennsylvania are permitted to add a distribution system improvement charge (DSIC) to their bills, reflecting capital costs and depreciation related to certain distribution system improvement projects completed and put in service between rate filings. However, as a result of a repair tax accounting change, Aqua Pennsylvania's water rates were lowered by 2.8% as of January 2013 through the suspension of DSIC. Aqua Pennsylvania did not file a base rate case or for an infrastructure rehabilitation surcharge in 2013 or 2014.

FINANCIAL TRENDS. WTR's targeted debt to capital ratio was 50% at the end of 2015 and its net debt to total capitalization was 49.9%. WTR continues to target capital investments mainly at pipe replacement projects and plant upgrades with total expenditures of about $1.0 billion over the next three years. In 2016, it expects capital spending at levels similar to 2015. Capital expenditures totaled $365 million in 2015, $328 million in 2014 and $308 million in 2013.

## Sub-Industry Outlook

Our fundamental outlook for the water utilities sub-industry remains neutral, based on our view that population growth trends in the US are likely to continue yielding relatively low average customer growth rates. Yet, with housing starts continuing to recover, we see strengthening customer growth in some states. Longer term, we believe aging water systems will require repair, while demand for clean water in warm and dry regions where population is expanding drives capital investments.

We expect more budget-strapped municipalities to look to sell their water systems to private companies or establish public-private operating partnerships, despite some opposition by residential customers due to service and economic concerns. The water industry remains very fragmented and we see large water distribution utilities continuing to make acquisitions. Additional new revenue should come from water stations and pipelines set for refracking shale gas wells, which Aqua America has been installing in the Marcellus region in Pennsylvania.

We see modest global growth near term in desalination, a process by which salt is removed from seawater as a source for drinking water. However, as costs gradually decline, more desalination projects are likely in dry areas such as Nevada, Arizona, California and Texas. The American Water Works Association (AWWA) forecasts that the cost to replace deteriorating water pipes will total about $846 billion for water systems and $1.05 trillion for wastewater systems through 2039. In June 2013, an EPA survey projected total investments for U.S. drinking water system repairs and improvements of $384 billion through 2030, but the AWWA believes this figure is artificially low as it excludes several types of capital improvement projects and growth needs.

Through July 1, 2016, the S&P 1500 Water Utilities Index rose 24.5%, versus a 3.3% rise for the S&P Composite 1500 Index and an 21.7% increase in the S&P 1500 Utilities Sector Index. In 2015, the group rose 11.6%, versus a 1.0% decline for the broader market index and a 8.0% drop in the S&P Utilities Index. We believe long-term investors view this group as a safe haven during cyclical downturns. However, with economic indicators growing slowly and signs of further interest rate hikes ahead, we believe investors will turn to sectors with lower debt-to-capital ratios, as utilities will likely incur higher interest expense when they roll over their debt.

## S&P Capital IQ Analyst Research Notes and other Company News

**August 8, 2016**
Aqua America Inc. CFO David P. Smeltzer announced the promotion Stan Szczygiel to vice president, finance and treasurer. Stan Szczygiel is vice president, finance and treasurer for Aqua America. In addition to his previous responsibilities as vice president of finance, Szczygiel will assume oversight of the company's accounts payable, payroll and treasury operations all areas in which he has prior experience. Szczygiel began his career with Aqua in 2006 as the controller for its southern operations and was later promoted to director of planning before becoming vice president, finance.

**July 15, 2016**
Aqua America Inc. announced that Patricia Tuso has been hired as director, human resources. Tuso brings more than 17 years of progressive human resources experience in the healthcare, telecommunications, business process outsourcing, utilities and consulting industries. As director, human resources, Tuso will be responsible for the strategic direction of talent acquisition, training and organizational development, succession planning, and the information systems functions within the human resources department. Additionally, Tuso will partner and collaborate with the management team to assist with and support the attainment of short- and long-term business goals.

**July 8, 2016**
09:59 am ET ... S&P GLOBAL MAINTAINS STRONG SELL OPINION ON SHARES OF AQUA AMERICA (WTR 34.40*): We lift our 12-month target by $2 to $32 due to higher peer valuations. Our target is a peer-premium 22.9X our '17 EPS estimate that we think is warranted by our projection of an above-peers three-year EPS growth rate. We keep our '16 and '17 EPS estimates of $1.34 and $1.40. Despite its strong capital spending program that we see leading to rate increases, we think the shares are overvalued. WTR posted Q1 EPS of $0.29, vs. $0.27, over our estimate and the Capital IQ consensus, both at $0.28. Q1 results were helped by customer growth, partly offset by lower usage per customer. /C. Muir

**June 16, 2016**
Aqua America Inc. announced that Christopher S. Crockett has joined the company as its chief environmental officer. Crockett was previously deputy commissioner for planning and environmental services at the Philadelphia Water Department (PWD), where he has worked since 1995. In his new role, Crockett will be responsible for overseeing water quality and environmental compliance for all of Aqua's drinking water and wastewater systems in eight states. Crockett will also manage Aqua's in-house water and wastewater laboratory as well as the company's water quality services and water resources engineering departments.

**May 9, 2016**
Aqua America Inc. announced that its shareholders have elected Carolyn J. Burke, executive vice president, business operations and systems at Dynegy Inc., as a director. Burke has overall responsibility for supply chain, safety, environmental compliance, information technology, construction and engineering, and outage services at Dynegy. At Dynegy, Burke also serves as chief integration officer with responsibility for integration activities, most recently for Dynegy's $6 billion EquiPower Corp. and Duke merchant portfolio acquisitions. Burke also oversees the company's continuous margin and process improvement program.

**April 20, 2016**
02:14 pm ET ... S&P CAPITAL IQ MAINTAINS STRONG SELL OPINION ON SHARES OF AQUA AMERICA (WTR 32.15*): We lift our 12-month target by $1 to $30, a discount to peers 22.4X our '16 EPS estimate that we think is warranted by a below-peers three-year EPS growth rate. We keep our '16 EPS estimate of $1.34 and start '17's at $1.40. Despite strong capital spending, rate increases and acquisition-fueled customer growth, we think the shares are overvalued. We think Q4 results of $0.28, vs. $0.28 indicate continuing challenges in accelerating EPS growth. Capital IQ consensus estimates were $0.29. Higher revenues were offset by higher operating expenses and a higher effective tax rate. /C. Muir

**February 5, 2016**
11:19 am ET ... S&P CAPITAL IQ LOWERS VIEW ON SHARES OF AQUA AMERICA TO STRONG SELL FROM SELL (WTR 31.35*): We lift our 12-month target price by $2 to $29, due to higher peer valuations. We keep our '15 EPS estimate of $1.27, but trim '16's by $0.01 to $1.34. Our target price is 21.6X our '16 EPS estimate, or a small discount to our peer target that we think is warranted by our projection of a three-year EPS growth rate that is slower than its peers. While we have a favorable view of WTR's growth capital spending program and smaller bolt-on acquisitions, we think the shares are overvalued. We expect WTR to post Q4 EPS of $0.30, vs. $0.28, on Feb 23. The Capital IQ consensus is $0.29. /C. Muir

**October 26, 2015**
09:44 am ET ... S&P CAPITAL IQ MAINTAINS SELL OPINION ON SHARES OF AQUA AMERICA (WTR 28.52**): We raise our target price by $3 to $27, helped by higher peer valuations. We keep our '15 EPS estimate of $1.27, but trim '16's by $0.02 to $1.35. Our target price is 20.0X our '16 EPS estimate, or a 5% discount to our peer target that we think is warranted by a three-year EPS growth rate that is lower than its peers. We see capital spending on water quality upgrades, distribution line upgrades and system reliability projects helping to grow WTR's rate base and drive EPS growth. WTR posts Q2 EPS of $0.32, even with our estimate and the Capital IQ consensus forecast. /C. Muir

**July 17, 2015**
12:04 pm ET ... S&P CAPITAL IQ LIFTS VIEW ON SHARES OF AQUA AMERICA TO SELL FROM STRONG SELL (WTR 25.66**): We are keeping our '15 EPS estimate at $1.27 and lifting '16's by $0.03 to $1.37. We are trimming our 12-month target price by $1 to $24 on lower peer valuations. Our target price is 17.5X our '16 EPS estimate or a 14% discount to our peer target, which we think is warranted by our projection of a three-year EPS growth rate that is slower than peers. Despite a strong capital spending program, we think WTR's shares are overvalued versus faster growing water utility peers. Q1 recurring EPS of $0.27, vs. $0.25, beats our $0.25 estimate and the $0.26 Capital IQ consensus. /C. Muir

**June 4, 2015**
Aqua America Inc. appointed Christopher H. Franklin Chief Executive Officer. Franklin succeeded Nicholas DeBenedictis.

**April 14, 2015**
12:24 pm ET ... S&P CAPITAL IQ LOWERS OPINION ON SHARES OF AQUA AMERICA TO STRONG SELL FROM SELL (WTR 26.88*): Our opinion change is due to valuation. We are keeping our '15 EPS estimate at $1.27 and initiating '16's at $1.34. We are also leaving our 12-month target unchanged at $25, reflecting our stable fundamental outlook. Our target price is 19.7X our '15 EPS estimate, or a 10% discount to our peer target that we think is warranted by our projection of a three-year EPS growth rate that is lower than its peers. While we see capital spending leading to rate increases, we think WTR is overvalued. Q4 EPS of $0.28, vs. $0.26, beats our estimate and the Capital IQ consensus, both at $0.27. /C. Muir

A company's earnings outlook plays a major part in any investment decision. S&P Capital IQ organizes the earnings estimates of over 2,300 Wall Street analysts, and provides their consensus of earnings over the next two years, as well as how those earnings estimates have changed over time. Note that the information provided in relation to consensus estimates is not intended to predict actual results and should not be taken as a reliable indicator of future performance.

## Wall Street Consensus vs. Performance

For fiscal year 2016, analysts estimate that WTR will earn US$ 1.33. For the 2nd quarter of fiscal year 2016, WTR announced earnings per share of US$ 0.33, representing 25% of the total annual estimate. For fiscal year 2017, analysts estimate that WTR's earnings per share will grow by 5% to US$ 1.40.

## Glossary

### S&P Capital IQ STARS
Since January 1, 1987, S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs (American Depositary Receipts), and ADSs (American Depositary Shares) based on a given equity's potential for future performance. Similarly, S&P Capital IQ Equity Research has ranked Asian and European equities since June 30, 2002. Under proprietary STARS (STock Appreciation Ranking System), S&P Capital IQ equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark (e.g., a regional index (S&P Asia 50 Index, S&P Europe 350® Index or S&P 500® Index)), based on a 12-month time horizon. STARS was designed to meet the needs of investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

### S&P Capital IQ Quality Ranking
(also known as **S&P Capital IQ Earnings & Dividend Rankings**) - Growth and stability of earnings and dividends are deemed key elements in establishing S&P Capital IQ's earnings and dividend rankings for common stocks, which are designed to capsulize the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

| | | | |
|---|---|---|---|
| A+ | Highest | B | Below Average |
| A | High | B- | Lower |
| A- | Above Average | C | Lowest |
| B+ | Average | D | In Reorganization |
| NR | Not Ranked | | |

### S&P Capital IQ EPS Estimates
S&P Capital IQ earnings per share (EPS) estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, S&P Capital IQ EPS estimates reflect either forecasts of S&P Capital IQ equity analysts; or, the consensus (average) EPS estimate, which are independently compiled by Capital IQ, a data provider to S&P Capital IQ Equity Research. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

### S&P Capital IQ Core Earnings
S&P Capital IQ Core Earnings is a uniform methodology for adjusting operating earnings by focusing on a company's after-tax earnings generated from its principal businesses. Included in the S&P Capital IQ definition are employee stock option grant expenses, pension costs, restructuring charges from ongoing operations, write-downs of depreciable or amortizable operating assets, purchased research and development, M&A related expenses and unrealized gains/losses from hedging activities. Excluded from the definition are pension gains, impairment of goodwill charges, gains or losses from asset sales, reversal of prior-year charges and provision from litigation or insurance settlements.

### S&P Capital IQ 12-Month Target Price
The S&P Capital IQ equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics, including S&P Capital IQ Fair Value.

### S&P Capital IQ Equity Research
S&P Capital IQ Equity Research U.S. includes Standard & Poor's Investment Advisory Services LLC; Standard & Poor's Equity Research Services Europe includes McGraw-Hill Financial Research Europe Limited trading as S&P Capital IQ; Standard & Poor's Equity Research Services Asia includes: McGraw-Hill Financial Singapore Pte. Limited, Standard & Poor's Investment Advisory Services (HK) Limited, Standard & Poor's Malaysia Sdn Bhd, and Standard & Poor's Information Services (Australia) Pty Ltd.

### Abbreviations Used in S&P Capital IQ Equity Research Reports
CAGR - Compound Annual Growth Rate

ROA - Return on Assets
SG&A - Selling, General & Administrative Expenses
SOTP - Sum-of-The-Parts
WACC - Weighted Average Cost of Capital

### Dividends on American Depository Receipts (ADRs) and American Depository Shares (ADSs) are net of taxes (paid in the country of origin).

### S&P Capital IQ Qualitative Risk Assessment
Reflects an S&P Capital IQ equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The S&P Capital IQ Qualitative Risk Assessment is a relative ranking to the S&P U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

### STARS Ranking system and definition:
★★★★★ **5-STARS (Strong Buy):**
Total return is expected to outperform the total return of a relevant benchmark, by a wide margin over the coming 12 months, with shares rising in price on an absolute basis.
★★★★☆ **4-STARS (Buy):**
Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months, with shares rising in price on an absolute basis.
★★★☆☆ **3-STARS (Hold):**
Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months, with shares generally rising in price on an absolute basis.
★★☆☆☆ **2-STARS (Sell):**
Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months, and the share price not anticipated to show a gain.
★☆☆☆☆ **1-STAR (Strong Sell):**
Total return is expected to underperform the total return of a relevant benchmark by a wide margin over the coming 12 months, with shares falling in price on an absolute basis.

### Relevant benchmarks:
In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the S&P Europe 350 Index and the S&P Asia 50 Index, respectively.

## Disclosures

S&P Capital IQ ranks stocks in accordance with the following ranking methodologies:

### STARS Stock Reports:

S&P Capital IQ's qualitative STARS recommendations are determined and assigned by S&P Capital IQ equity analysts. For reports containing STARS recommendations refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

### Quantitative Stock Reports:

S&P Capital IQ's quantitative recommendations quantitative recommendations are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five (six) model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative recommendations refer to the Glossary section of the report for detailed methodology and the definition of Quantitative rankings.

### STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports (collectively, the "S&P Capital IQ's Research Reports" or "Research Reports") reflect different criteria, assumptions and analytical methods and may have differing recommendations.S&P Capital IQ believes that the methodologies and data used to generate the different types of Research Reports are reasonable and appropriate. Generally, S&P Capital IQ does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views or recommendations on the issuer, which may at times result in contradicting assessments of an issuer. S&P Capital IQ reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.

### STARS Stock Reports:

### S&P Capital IQ Global STARS Distribution as of June 30, 2016

| Ranking | North America | Europe | Asia | Global |
|---|---|---|---|---|
| Buy | 24.6% | 17.8% | 30.0% | 23.7% |
| Hold | 48.0% | 57.8% | 45.0% | 49.6% |
| Sell | 27.4% | 24.4% | 25.0% | 26.7% |
| Total | 100% | 100% | 100% | 100% |

### Quantitative Stock Reports:

**The rankings for Quantitative reports have a fixed distribution based on relative weightings as described in the Glossary section of the report.**

### Analyst Certification

**STARS Stock Reports are prepared by the equity research analysts of Standard & Poor's Investment Advisory Services LLC ("SPIAS"), McGraw-Hill Financial Research Europe Limited ("MHFRE"), and Standard & Poor's Malaysia Sdn Bhd ("S&P Malaysia"), each a division of S&P Capital IQ. All of the views expressed in STARS Stock Reports accurately reflect the research analyst's personal views regarding any and all of the subject securities or issuers. Analysts generally update stock reports at least four times each year. No part of analyst compensation and SPIAS', MHFRE's or S&P Malaysia's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in a STARS Stock Report.**

**About S&P Capital IQ's Distributors:**
S&P Capital IQ's Research Reports have been prepared by Global Markets Intelligence ("GMI"), a business unit of S&P Capital IQ. In the United States, Research Reports are prepared and issued by SPIAS. In the European Economic Area ("EEA") States, Research Reports are distributed by MHFRE, which is authorized and regulated by the Financial Conduct Authority in the United Kingdom. Under and subject to the Markets in Financial Instruments Directive ("MiFID"), MHFRE is entitled to exercise a passport right to provide cross border investment advice into EEA States. MHFRE exercises its MiFID right to passport investment advice including the Research Reports into EEA States. In Hong Kong, Research Reports are issued by Standard & Poor's Investment Advisory Services (HK) Limited ("SPIAS HK"), which is regulated by the Hong Kong Securities Futures Commission; in Singapore, by McGraw-Hill Financial Singapore Pte. Limited ("MHFSPL"), which is regulated by the Monetary Authority of Singapore; Research Reports are distributed in Malaysia, by S&P Malaysia, which is regulated by the Securities Commission of Malaysia; in Australia, by Standard & Poor's Information Services (Australia) Pty Ltd ("SPIS"), which is regulated by the Australian Securities & Investments Commission; and in Japan, by McGraw-Hill Financial Japan KK ("MHF Japan"), which is registered by Kanto Financial Bureau. SPIAS, MHFRE, SPIAS HK, MHFSPL, S&P Malaysia, SPIS and MHF Japan, each a wholly owned subsidiary of McGraw Hill Financial, Inc. operate under the GMI brand.

S&P Capital IQ and its affiliates provide a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate or otherwise address.

While S&P Capital IQ has obtained information from sources it believes to be reliable, S&P Capital IQ does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives.

S&P keeps certain activities of its business units separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain business units of S&P may have information that is not available to other S&P business units. S&P has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

Research Reports are not intended to be investment advice and do not constitute any form of invitation or inducement by S&P Capital IQ to engage in investment activity. This material is not intended as an offer or solicitation for the purchase or sale of any security or other financial instrument. Securities, financial instruments or strategies mentioned herein may not be suitable for all investors and this material is not intended for any specific investor and does not take into account an investor's particular investment objectives, financial situations or needs. Any opinions expressed herein are given in good faith, are subject to change without notice, and are only current as of the stated date of their issue. Prices, values, or income from any securities or investments mentioned in this report may fluctuate, and an investor may, upon selling an investment, lose a portion of, or all of the principal amount invested. Where an investment is described as being likely to yield income, please note that the amount of income that the investor will receive from such an investment may fluctuate. Where an investment or security is denominated in a different currency to the investor's chosen currency, changes in rates of exchange may have an adverse effect on the value, price or income of or from that investment to the investor. The information contained in Research Reports does not constitute advice on the tax consequences of making any particular investment decision. Before acting on any recommendation in this material, you should consider whether it is suitable for your particular circumstances and, if necessary, seek professional advice.

Additional information on a subject company may be available upon request.

### Notice to all Non U.S. Residents:

S&P Capital IQ's Research Reports may be distributed in certain localities, countries and/or jurisdictions ("Territories") by independent third parties or independent intermediaries and/or distributors (the "Intermediaries" or "Distributors"). Intermediaries are not acting as agents or representatives of S&P Capital IQ. In Territories where an Intermediary distributes S&P Capital IQ's Research Reports, the Intermediary, and not S&P Capital IQ, is solely responsible for complying with all applicable regulations, laws, rules, circulars, codes and guidelines established by local and/or regional regulatory authorities, including laws in connection with the distribution of third-party Research Reports, licensing requirements, supervisory and record keeping obligations that the Intermediary may have under the applicable laws and regulations of the territories where it distributes the Research Reports.

Each Research Report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject S&P Capital IQ or its affiliates to any registration or licensing requirements in such jurisdiction.

Each Research Report is not directed to, or intended for distribution to or use by, any person or entity who is not in a class qualified to receive Research Reports (e.g., a qualified person and/or investor), as defined by the local laws or regulations in the country or jurisdiction where the person is domiciled, a citizen or resident of, or the entity is legally registered or domiciled.

**S&P Capital IQ's Research Reports are not intended for distribution in or directed to entities, residents or investors in: Burma, Cuba, Crimea, Czech Republic, Iran, Kuwait, Lebanon, North Korea, Portugal, Romania, Sudan, Slovakia, Syria, Thailand and Turkey.**

**For residents of Australia:** Research Reports are distributed in Australia by SPIS. Any express or implied opinion contained in a Research Report is limited to "General Advice" and based solely on consideration of the investment merits of the financial product(s) alone. The information in a Research Report has not been prepared for use by retail investors and has been prepared without taking account of any particular investor's financial or investment objectives, financial situation or needs. Before acting on any advice, any investor using the advice should consider its appropriateness having regard to their own or their clients' objectives, financial situation and needs. Investors should obtain a Product Disclosure Statement relating to the product and consider the statement before making any decision or recommendation about whether to acquire the product. Each opinion must be weighed solely as one factor in any investment decision made by or on behalf of any adviser and any such adviser must accordingly make their own assessment taking into account an individual's particular circumstances.

SPIS holds an Australian Financial Services License Number 258896. Please refer to the SPIS Financial Services Guide for more information at:www.spcapitaliq.com/financialservicesguide

More information about the written criteria and methodologies for the generation of Research Reports and historical information for Research Reports for the past 12 months are available by contacting S&P Capital IQ Client Services Department at 61-1300-792-553 or via e-mail at clientsupport@standardandpoors.com or clientsupport@sandp.com.

**For residents of Bahamas:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with licensing requirements under the Securities Industry Act of 1999 and the Securities Industry Regulations of 2000 of The Bahamas, when distributing Research Reports to members of the public in The Bahamas. The Intermediary is also solely responsible for providing any required disclosures under applicable securities laws and regulations to its Bahamian clients, including but not limited to disclosing whether the Intermediary: (i) has a reasonable basis for specific investment recommendations, and the recommended security's price or price range at the time of the recommendation to the client; (ii) makes a market in the recommended security; (iii) its directors, officers or principal shareholders have a current or contingent financial interest in the recommended security, unless the interest is nominal; (iv) participated in a public offering of the recommended security in the last two (2) years; and (v) has disclosed any conflict of interest between it and the issuer of the recommended security.

**For residents of Bermuda:** The Bermuda Monetary Authority or the Registrar of Companies in Bermuda has not approved the Research Reports and any representation, explicit or implicit, is prohibited.

**For residents of Brazil:** Research reports are distributed by S&P Capital IQ and in compliance with Instruction 483 enacted by Comissão de Valores Mobiliários (the Brazilian Securities Commission) dated as of July 6, 2010, the analyst (where applicable) who prepares a Research Report or a report extract affirms: (i) that all the views expressed herein and/or in a Research Report accurately reflect his or her personal views about the securities and issuers; (ii) that all recommendations issued by him or her were independently produced, including from the opinion of the entity in which he or she is an employee. S&P Capital IQ is of the opinion its Research Reports have been prepared in accordance with section 17, II of Instruction 483. The Distributor of the Research Report is responsible for disclosing any circumstances that may impact the independence of S&P Capital IQ's Research Report, in accordance with section 17, II of Instruction 483.

**For residents of British Virgin Islands:** All products and services offered by S&P Capital IQ and its affiliates are provided or performed, outside of the British Virgin Islands. The intended recipients of the Research Reports are (i) persons who are not members of the public for the purposes of the Securities and Investment Business Act, 2010 ("SIBA"); (ii) persons who are professional services providers to the British Virgin Islands business companies for the purposes of SIBA; and (iii) any other person who is given the Research Reports by a person licensed as an investment advisor in the British Virgin Islands. If you are in any doubt as to whether you are the intended recipient of this document, please consult your licensed investment advisor.

**For residents of Canada:** Canadian investors should be aware that any specific securities discussed in a Research Report can only be purchased in Canada through a Canadian registered dealer and, if such securities are not available in the secondary market, they can only be purchased by eligible private placement purchasers on a basis that is exempt from the prospectus requirements of Canadian securities law and will be subject to resale restrictions. Information in Research Reports may not be suitable or appropriate for Canadian investors.

**For residents of Chile:** S&P Capital IQ shall not be acting as an Intermediary of any securities referred to in a Research Report. S&P Capital IQ (and its affiliates) is not registered with, and such securities may not be registered in the Securities Registry maintained by the Superintendencia de Valores y Seguros de Chile (Chilean Securities and Insurance Superintendence or "SVS") pursuant to the Chilean Securities Market Law 18045. Accordingly, investment research presented in a Research Report is not intended to constitute a public or private offer of securities in Chile within the meaning of Article 4 of the Chilean Securities Market Law 18045, as amended and restated, and supplemental rules enacted thereunder.

**For residents of Colombia:** This information and/or information contained in Research Reports is not intended or should not be construed as constituting information delivery to the Colombian Securities Market under Colombian Law.

**For residents of Czech Republic:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with licensing requirements under the Capital Markets Act (Act No. 256/2004 Coll., as amended), implementing Directive 2004/39/EC of the European Parliament and of the Council of 21 April, 2004 on markets in financial instruments amending Council Directives 85/611/EEC and 93/6/EEC and Directive 2000/12/EC of the European Parliament and of the Council and repealing Council Directive 93/22/EEC and its implementing directives, and Directive 2003/125/EC implementing Directive 2003/6/EC as regards the fair presentation of investment recommendations and the disclosure of conflicts of interest; and the Civil Code (Act No. 40/1964 Coll., as amended) as regards the distance financial contract regulation protecting the consumers.

**For residents of Dubai (DIFC):** The information contained in Research Reports distributed by S&P Capital IQ is intended for investors who are "professional clients", as defined in Rule 2.3.2(2) of the Conduct of Business Module (COB) of the DFSA Rulebook.

**For residents of the European Economic Area (EEA):** Research Reports have been approved for distribution in the EEA listed here: Austria; Belgium; Bulgaria; Cyprus; Czech Republic (see further disclosure above); Denmark; Estonia; Finland; France (see further disclosure below); Germany; Gibraltar; Greece ; Hungary (see further disclosure below); Iceland; Ireland; Italy; Latvia; Liechtenstein; Lithuania; Luxembourg; Malta (see further disclosure below); Netherlands; Norway; Poland; Portugal; Romania; Slovakia (see further disclosure below); Slovenia; Spain (see further disclosure below); Sweden and United Kingdom , as investment research by MHFRE, which is authorized and regulated by the Financial Conduct Authority in the UK. S&P Capital IQ's Stock Reports are to be read in conjunction with "Your Guide to S&P Capital IQ's Stock Reports" which can be found at: www.spcapitaliq.com/stockreportguide.

More information about the written criteria and methodologies for the generation of Research Reports and historical information for Research Reports for the past 12 months are available by contacting S&P Capital IQ Client Services Department at 800-523-4534 or via e-mail at: clientsupport@standardandpoors.com or clientsupport@sandp.com.

**For residents of Guernsey, Isle of Man and Jersey:** The Research Reports provide by S&P Capital IQ serve to assist the Intermediary in determining the advice it provides to its clients, but are not intended as advice to any of the Intermediary's clients, and the Intermediary, and not S&P Capital IQ, will be solely responsible for the provision of investment advice to the client. Independent investment advice should be sought by persons in their capacity as investors or potential investors and the Intermediary will be solely responsible for complying with any applicable regulatory obligations relating to the distribution of investment research.

**For residents of France:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with the rules related to the distribution of investment recommendations as specified in the Financial Code and the Autorité des Marchés Financiers rule book.

**For residents of Hong Kong:** Information in the Research Reports shall not be construed to imply any relationship, advisory or otherwise, between S&P and the recipient user of the research report unless expressly agreed by S&P Capital IQ. S&P Capital IQ is not acting nor should it be deemed to be acting, as a "fiduciary" or as an "investment manager" or "investment advisor" to any recipient of this information unless expressly agreed by S&P Capital IQ. The Distributor of the Research Reports will be solely responsible for describing its role to its clients with respect to the distribution of S&P Capital IQ's Research Reports.

Please contact via e-mail at clientsupport@standardandpoors.com or clientsupport@sandp.com if you have any queries on or any matters arising from or in connection with this document.

**For residents of Hungary:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with the rules related to data protection requirements as set out in Act CXII of 2011 on the Right of Informational Self-Determination and on Freedom of information; and with Act CLV. of 1997 on Consumer Protection and with Act CXXXVIII of 2007 on Investment services.

**For residents of India:** Residents of India should consult their financial and legal advisers regarding the suitability of any of S&P Capital IQ's services and products. S&P Capital IQ does not intend to utilize the Research Report service to invite or carry out any business activities with S&P Capital IQ. Research Reports provided by S&P Capital IQ serve to assist the Intermediary in determining the advice it provides to its clients, but are not intended as advice to the Intermediary and to any of the Intermediary's clients and the Intermediary will be solely responsible for the provision of investment advice to the client.

**For residents of Indonesia:** Research Reports do not constitute an offering document and it should not be construed as an offer of securities in Indonesia, and any such securities will only be offered or sold through a financial institution.

**For residents of Israel:** Research reports are intended only for distribution to "Qualified Investors", as defined in the Schedule to Israel's Regulation of Investment Advice, Investment Marketing and Portfolio Management Law of 1995. All other persons who are not Qualified Investors under Israeli law should seek additional investment advice from their financial advisers. The relevant analyst declares that the views expressed in a particular Research Report faithfully reflect the analyst's personal views regarding the securities under review and the issuer of the securities.

**For residents of Japan:** Research Reports are intended only for distribution to "Asset Management Firms".

**For residents of Kazakhstan:** The distribution to specific persons in Kazakhstan is the sole responsibility of the Distributor and the Distributor, and not S&P Capital IQ, is responsible for complying with all local regulations, including but not limited to advertising requirements related to public solicitation.

**For residents of Malta:** The Distributor of Research Reports in Malta, is solely responsible for ensuring that the investment research produced by S&P Capital IQ and proposed to be disseminated in or from within Malta is reviewed for compliance with the investment services rules issued by the Malta Financial Services Authority in terms of the Investment Services Act, Cap 370 of the laws of Malta.

**For residents of Mexico:** S&P Capital IQ is not regulated or supervised by the Mexican National Banking and Securities Commission ("CNBV"). S&P Capital IQ has a licensed rating agency affiliate in Mexico (Standard & Poor's, S.A. De C.V.), of which S&P maintains firewalls and seeks to avoid conflicts of interest, pursuant to approved policies. Research Reports on securities that are not registered with the National Securities Registry maintained by the Mexican National Securities Registry are intended only for distribution to qualified, institutional investors or to any other investors to whom distribution the S&P Research is permissible under Mexican law.

**For residents of Monaco:** The Intermediary, and not S&P Capital IQ, will be solely responsible for providing copies of S&P Capital IQ Research Reports to the appropriate Monegasque regulator prior to distributing to its clients.

**For residents of Morocco:** Research Reports are intended for distribution only to professional investors.

**For residents of Peru:** S&P Capital IQ's Research Reports shall not, under any circumstances, be considered an invitation to take deposits or funds from the public, under any mechanism, or to carry on any activities that may be prohibited by Peruvian law. The Intermediary also agrees that the use of S&P Capital IQ's Research Reports shall not be used by Intermediary to solicit an investment in the securities that are the subject of the Research Report in any way that may be prohibited by Peruvian law.

**For residents of Qatar:** The Distributor, and not S&P Capital IQ, is responsible for complying with all relevant licensing requirements as set forth by the Qatar Financial Markets Authority or the Qatar Central Bank, and with all relevant rules and regulations set out in the Qatar Financial Markets Authority's rule book, including third party branded investment research distribution of securities that are admitted for trading on a Qatari securities exchange (Admitted Securities).

**For residents of Russia:** Research Reports on financial instruments are intended for "qualified investors", as defined in the Securities market law of the Russian Federation dated 22 April 1996, as amended, only.

**For residents of The Kingdom of Saudi Arabia:** S&P Capital IQ and its affiliates do not distribute Research Reports in the Kingdom of Saudi Arabia. Residents of Saudi Arabia should be aware that the Distributor of S&P Capital IQ's Research Reports may not be permitted to distribute investment research either: (i) from a permanent place of business in or otherwise within the territory of the Kingdom of Saudi Arabia; or (ii) to an investor in the Kingdom of Saudi Arabia unless that investor is a Capital Market Authority authorized investor or the Saudi Arabian Monetary Agency.

When a Distributor disseminates S&P Capital IQ's Research Reports in the Kingdom of Saudi Arabia, the Distributor, and not S&P Capital IQ, is solely responsible for approving the contents of Research Reports and complying with licensing requirements and authorizations of the Saudi Arabian Capital Market Authority's ("CMA"), including CMA's Authorized Persons Regulations concerning securities advertisements.

S&P does not conduct a securities business in the Kingdom of Saudi Arabia and the Distributor, and not S&P Capital IQ, assumes all responsibilities and liabilities for distributing Research Reports in the Kingdom of Saudi Arabia. **Research Reports are not intended to be investment advice and do not constitute any form of invitation or inducement by S&P Capital IQ to engage in an investment activity in the Kingdom of Saudi Arabia.** S&P Capital IQ does not communicate directly with a Distributor's customers and a Distributor's customers should not contact S&P Capital IQ directly regarding any information or data provided in Research Reports.

**For residents of Singapore:** Recipients of the Research reports in Singapore should contact the Distributor of the Research Reports in respect to any matters arising from, or in connection with, the analysis of the report.The Distributor accepts all legal responsibility for the contents of the Research Reports. When reports are distributed by Intermediaries in Singapore, the Intermediary, and not S&P Capital IQ, is solely responsible for ensuring that the recipients of the Research Reports understand the information contained in the Research Reports and that such information is suitable based on the customer's profile and investment objectives.

**For residents of Slovak Republic:** The Intermediary, and not S&P Capital IQ, is solely responsible for complying with the rules related to the Slovak Securities Act (Act No. 566/2001 Coll., as amended), implementing Directive 2004/39/EC of the European Parliament and of the Council of 21 April 2004 on markets in financial instruments amending Council Directives 85/611/EEC and 93/6/EEC and Directive 2000/12/EC of the European Parliament and of the Council and repealing Council Directive 93/22/EEC and its implementing directives, and Directive 2003/125/EC implementing Directive 2003/6/EC as regards the fair presentation of investment recommendations and the disclosure of conflicts of interest; and with the Slovak Act on Consumer Protection in Distance Financial Services Contracts (Act No. 266/2005 Coll., as amended).

**For residents of Spain:** Certain of S&P Capital IQ's equity Research Reports may be considered to be marketing communications for purposes of Spanish law.

**For residents of the United Arab Emirates (UAE):** S&P Capital IQ and its affiliates neither undertake banking, financial, or investment consultations business in or into the UAE within the meaning of the Central Bank Board of Directors' Resolution No. 164/8/94 regarding the regulations for investment companies nor provides financial analysis or consultation services in or into the UAE within the meaning of UAE SECURITIES AND COMMODITIES AUTHORITY DECISION NO. 48/R OF 2008 concerning financial consultation and financial analysis.

Investment research distributed by S&P Capital IQ and its affiliates is not intended to amount to an offer of securities within the meaning of DIFC Law NO. 12 OF 2004 (the DIFC Markets Law) or the equivalent laws, rules and regulations made by the Central Bank of the UAE and their Emirates Securities and Commodities Authority. Neither the Dubai Financial Services Authority, the UAE Securities nor Commodities Authority of the Central Bank of the UAE has reviewed or verified any of the information provided in a Research Report or through any service provided by S&P Capital IQ or its affiliates, or has any responsibility for it.

If a recipient of Research Report does not understand any of the contents of the Research Report, the recipient should contact a financial advisor. Users of extracts of investment Research Reports should be aware that if they are distributed in the UAE by an Intermediary, the Intermediary is solely responsible for the distribution and contents of the investment research in the UAE.

**For residents of Uruguay:** S&P Capital IQ or its affiliates are not, individually a risk assessment entity registered with the Central Bank of Uruguay, and S&P Capital IQ's Research Reports do not constitute a risk assessment. Investment research presented in a Research Report is not intended to constitute a public or private offer of securities in Uruguay. S&P Capital IQ's Research Reports are not intended for worldwide distribution, as such, and are not published to Uruguayan clients in Spanish.

**For residents of Venezuela:** Research Reports can only be distributed in Venezuela by an investment advisor, duly licensed under Venezuelan law. The Distributor of the Research Reports, and not S&P Capital IQ, is solely responsible for complying with licensing requirements.

- **Summary.** Mgmt affirmed '17 EPS guidance of $1.34-1.39 on the YE'16 call. In addition, WTR reiterated that Aqua PA expects to file for a distribution system improvement charge (DSIC) later in '17 with a full rate case filing likely in '18. The disclosures were consistent with WTR's 1/17 guidance call. No change to our EPS outlook or Market Perform rating. On a P/E basis, WTR shares trade at 5% discounts on our 18E & 19E to water utility peers which we believe largely reflects the potential for WTR to pursue an M&A deal outside of the water sector as well as, to a lesser extent, below average near-term EPS growth and rate case risk. However, relative to electrics, the P/E premium is 20% which we consider more than adequate given forecasted EPS (5%), rate base (6-7%) and dividend (7%) growth rates that are not all that dissimilar to the median electric utility.

- **Industry Valuation Thoughts.** On an absolute performance basis, water utilities are up only 4% over the last three months vs. +10% for both the regulated electrics and gas utilities. However, water utilities still trade at 25-30% (electrics) and 7-9% (gas) premiums. This is inclusive of the fact that gas utilities as well as SMID cap electrics seem to enjoy an acquisition premium due to recent utility M&A activity. While we continue to believe that the water utility sector should be ascribed a premium valuation to other utility-sub-sectors (lower risk, long-term elevated capex needs, consolidation opportunities, scarcity premium, etc.), we think the relative premiums are more than adequate – especially given our view that the likelihood is low that a publicly traded water utility agrees to be acquired.

- **EPS Outlook.** Our 17-20E EPS are $1.37, $1.42, $1.50 & $1.59. Rate recovery of infrastructure capex, cost efficiencies and M&A activity are the primary drivers of our forecasted 5% EPS CAGR. This is below WTR's expected 6-7% rate base growth due to over-earning situations in some states, including PA. However, forecasted capex is expected to grow rate base and lower the realized returns over the next few years. By '19, we expect EPS growth to approximate rate base growth.

- **PA Rate Relief.** Aqua PA has not been able to make a DSIC filing since the infrastructure surcharge mechanism was suspended 1/1/2013 as a condition in the 2012 rate case settlement regarding the adoption of the repairs tax deduction. Essentially, Aqua PA has been precluded from seeking rate relief for DSIC qualifying infrastructure investments until the utility's underlying rate base grows large enough such that the revenue requirement set in the 2012 order is insufficient to earn a fair return. (In other words, WTR pulled forward future rate base and EPS growth in 2012/13). That tipping point is approaching. For the 12-months ended 9/30/16, Aqua PA's earned ROE was 10.32% per quarterly regulatory filings which compares to PA's current DSIC allowed ROE of 9.65%. WTR expects to implement a DSIC increase by Q4'17. As for the next full blown Aqua PA rate case, a 2H'18 filing with new rates effective in '19 is still mgmt's expectation. However, potential corporate tax reform could accelerate the timing – a lower corporate rate would reduce the repairs tax deduction benefit amount.

### Valuation Range: $31.00 to $33.00

Our VR is based on a P/E multiple (apply a 5-10% discount to the 17E water utility median of 24.5-25X to our 18E) and DDM analyses. Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

### Investment Thesis:

We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Market Perform rating primarily reflects valuation considerations.

## Company Description:

Headquartered in Bryn Mawr, PA, Aqua America (WTR) is one of the largest U.S.-based investor-owned regulated water and wastewater utilities. The company serves approximately 3 million residents (1 million customer connections) in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana and Virginia. WTR's largest subsidiary, Aqua Pennsylvania, accounts for approximately half of the company's total customer base and nearly 70% of consolidated rate base. Management has been active optimizing its portfolio of states, including the recent divestitures of operations in Florida, Maine, Missouri, New York and South Carolina while adding to customer counts in Ohio and Texas (through utility swaps with American Water Works). Going forward, the company has expressed a desire to accelerate customer growth through a more active and focused acquisition strategy across its entire portfolio. Regulated operations account for more than 95% of consolidated revenues.

# Additional Information Available Upon Request

I certify that:
1) All views expressed in this research report accurately reflect my personal views about any and all of the subject securities or issuers discussed; and
2) No part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by me in this research report.

- Wells Fargo Securities, LLC maintains a market in the common stock of Aqua America.

- Wells Fargo Securities, LLC or its affiliates intends to seek or expects to receive compensation for investment banking services in the next three months from Aqua America.
- Wells Fargo Securities, LLC or its affiliates has a significant financial interest in Aqua America.

**WTR:** Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

## STOCK RATING

**1=Outperform:** The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
**2=Market Perform:** The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
**3=Underperform:** The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

## SECTOR RATING

**O=Overweight:** Industry expected to outperform the relevant broad market benchmark over the next 12 months.
**M=Market Weight:** Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
**U=Underweight:** Industry expected to underperform the relevant broad market benchmark over the next 12 months.

## VOLATILITY RATING

**V** = A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

1= Outperform, 2 = Market Perform, 3 = Underperform, V = Volatile, = Company is on the Priority Stock List
NA = Not Available, NC = No Change, NE = No Estimate, NM = Not Meaningful

- **Summary.** We met with water utility executives around the 2017 NAWC Water Summit. In general, we believe the underlying industry fundamentals are strong: (1) elevated infrastructure capex needs for the foreseeable future, (2) relatively constructive regulatory treatment, (3) consolidation potential including the recent uptick in municipal deals, (4) solid financial profiles and (5) secure and growing dividends. However, valuations continue to temper our overall enthusiasm for the group. Waters screen expensive on an absolute P/E basis and closer to fair value (but still somewhat expensive) on relative P/E and interest rates bases – similar to how electric utilities screen on these metrics. In addition, we question the longer-term sustainability of the relative P/E premiums that waters enjoy over SMID cap electric (35%) and gas (20%) utilities, particularly in a rising interest rate environment. That said, ***we elect to upgrade WTR to Outperform*** and increase price targets on all names due to a higher peer group multiple.

- **Upgrading WTR to Outperform.** Following our meeting with WTR, we are increasingly convinced that potentially pursuing growth outside of the regulated water/wastewater space (i.e. gas LDC purchase or non-reg venture) is on the back burner. Instead, WTR is focused on capitalizing on the budding opportunities in the "tuck-in" M&A arena. In addition, we believe a constructive outcome will be achieved in the upcoming PA rate case ('18 filing). We believe these two concerns have caused investors to ascribe a discount multiple to WTR – currently shares trade at 7-9% P/E discounts to water peers (3-5% discount to AWK) on our below consensus 18E/19E EPS of $1.42/$1.50. We believe a more in line multiple is deserved and should materialize as WTR's growth rate normalizes to 5-7% with the help of PA rate relief (implemented 2.5% DSIC increase on 10/1) and tuck-in M&A activity (our forecast is predicated on $50M/year of deals in '18 & beyond vs. the more than $120M pending, thus there could be upside potential).

- **3 Quick Takeaways.** (1) Optimism towards consolidation potential, particularly from AWK and WTR, is very high. (2) A CA Cost of Capital settlement appears unlikely and a CPUC decision may slip into 2018. (3) Military base privatization is expected to offer continued regulated-like growth opportunities for AWK and AWR (perhaps CWT and others?). See p. 2 for a complete discussion of industry observations as well as individual takeaways on each of our covered companies.

.

## Water Industry Thoughts – Takeaways from the Pacific Northwest

We recently met with the senior water utility executives, including from the five names that we cover (AWK, AWR, CTWS, CWT & WTR), around the 2017 NAWC Water Summit held October 15-17 in Seattle. Below we offer both industry observations as well as some individual takeaways on each of the covered companies.

In general, we believe the water utility sector's underlying fundamentals remain very strong. Features include (1) elevated infrastructure investment needs for the foreseeable future, (2) relatively constructive regulatory treatment, (3) consolidation potential including the recent uptick in municipal deal flow, (4) solid financial profiles and (5) secure and growing dividends.

However, valuation considerations continue to temper our overall enthusiasm for the group. Year-to-date, water utilities have provided investors a 20.6% total return versus 12.8% for U.S. regulated electrics and 16.2% for the S&P 500. Waters screen expensive on an absolute P/E basis and closer to fair value (but still somewhat expensive) on relative P/E and interest rates bases – similar to how electric utilities screen on these metrics. In addition, we question the longer-term sustainability of the relative P/E premiums that waters enjoy over SMID cap electric (35%) and gas (20%) utilities, particularly in a rising interest rate environment. Please see the appendix on p. 6 for supporting valuation figures.

With that said, we have elected to upgrade WTR to Outperform (from Market Perform) and continue to rate CWT Underperform – both are primarily valuation calls relative to water utility peers. In addition, we have increased 12-18 month price targets on all covered water utilities due to a materially higher peer group multiple since our last refresh.

## Upgrading WTR to Outperform.

We are upgrading shares of WTR to Outperform from Market Perform with a 12-18 month price target of $40/share. Combined with WTR's industry leading dividend yield (2.3% vs. 1.9% water utility median), we see attractive total return potential of 15+% based on the 10/18 closing price of $35.30. Our forward looking price target is based on a relative P/E (apply an in-line to modest discount to the 18E water utility median P/E of 27.0-27.5X to our 19E EPS of $1.50) and two-stage dividend discount model (key assumptions include a 7% discount rate, a 7% near-term dividend growth rate and 4.5% long-term growth) analyses.

Following our meeting with WTR management, we are increasingly convinced that potentially pursuing growth outside of the regulated water/wastewater space (i.e. gas LDC purchase or a non-regulated venture) is squarely on the back burner for now. Instead, WTR management is focused on capitalizing on the budding opportunities in the "tuck-in" M&A arena. In addition, we believe a constructive outcome will be achieved in the upcoming PA rate case ('18 filing).

We believe these two concerns have caused investors to ascribe a discount multiple to WTR – currently shares trade at 7-9% P/E discounts to water peers (3-5% discount to AWK) on our below consensus 18E & 19E EPS of $1.42 & $1.50. (See Figures 1 & 2.) We believe a more in line multiple to water utility peers is deserved and should materialize as WTR's annual growth rate starts to normalize to an estimated 5-7% pace (roughly in line with the 6% peer group average) with the help of PA rate relief (see WTR bullets later in the report for details on DSIC and rate case filings) and tuck-in M&A activity (our EPS forecast is predicated on only $50M of deals annually in '18 & beyond versus the more than $120M pending, thus we believe there could be upside potential to our outlook if the accelerated pace continues).

## Industry Observation #1: Consolidation

AWK and WTR remain as optimistic as ever about tuck-in M&A opportunities across the multi-state footprints, particularly on the municipal and/or wastewater side. Enabling legislation/regulatory principles (fair market value legislation, statewide/regional rates allowing socialization of costs, NJ's Water Quality Accountability Act, etc.) as well as persisting local forces (pension problems, EPA non-compliance, budget constraints, lack of expertise particularly when operational challenges arise, etc.) have translated into a considerable spike in potentially willing sellers.

The various management teams and NAWC are focused on getting more states to adopt these enabling principles and view IOUs as the solution to solving the water and wastewater industry's problems. While the size/volume of deals in the last 12-24 months has been encouraging, we remain curious to see whether the accelerated pace can be sustained going forward.

Lastly – and interestingly for the first time in many years – we did have some executives speculate that an IOU could get bought or perhaps we see a merger of equals over the next 5 years. With that said, it has been some time since there has been a willing IOU seller and we have no indication there is one today.

## Industry Observation #2: California Cost of Capital

A settlement agreement in the pending Cost of Capital (CoC) proceeding appears unlikely as parties' post-hearing briefs have all been filed and the case is now in the ALJ's hands. Though a settlement would have been preferred from a risk perspective, the multi-facets of the proceeding seemingly presented too great of a challenge – while ROE was likely the most controversial aspect, ORA's and the four IOU's filed positions also differed on equity ratios and cost of debt calculations.

Although the procedural schedule lays out a 11/14 ALJ proposed decision and 12/14 CPUC final decision, the general consensus was that the case is likely to take a little longer to resolve (not a huge surprise given the CPUC's poor track record for issuing timely decisions and the fact that other high profile matters, such as the northern CA wildfires, could also divert attention). With that said, the executives expressed optimism that the downside ROE risk remains limited while acknowledging that individual commissioner positons on the matters are very much unknown, in particular the two newest commissioners.

We continue to believe that an up to 25 bps reduction from the prevailing 9.43% allowed ROE is possible. And given the ORA's stated position, we expect authorized equity ratios north of 52% and continuation of the Water Cost of Capital Mechanism (WCCM).

## Industry Observation #3: Military Base Privatization

AWK and AWR remain focused on expanding the number of bases within the portfolios given regulated-like risk profiles and attractive earnings growth possibilities. And new entrant CWT – won Travis AFB in 2016 – expressed a desire to compete for certain new bases west of the Mississippi River under the regulated rate base approach.

The recent awards of Wright-Patterson AFB in OH to AWK and Fort Riley in KS to AWR continue the Department of Defense's recent streak of concluding a couple of the pending RFPs each year and that sort of pace is expected to persist into the future. The opportunity set remains robust – AWK remains active in

6 pending RFPs and believes there are still 30-35 bases yet to be privatized that would be of interest while AWR indicated both the Air Force and the Army still have roughly 25 bases each that need to go through the process and the Navy has yet to even get started.

We continue to believe that AWK and AWR will win their fair share of new bases going forward and are curious to see whether CWT (or someone else?) emerges as a significant third competitor in the segment.

## Individual Company Takeaways/Thoughts:

### ***AWR***

- While AWR has yet to comment on the potential full year accretion from the Fort Riley base addition or expectations for ASUS's 2018 EPS contribution, we got the sense that our current assumptions of $0.03-0.05 and roughly $0.40, respectively, are within reason.

- Depending on the success of AWR's efforts to increase capex deployment rate at Golden State Water via the pending general rate cases, the company may find itself with excess cash. If so and absent the opportunity to acquire something of size within CA or even a new state, share buybacks could be initiated. Potentially accelerating the dividend growth rate beyond the current target of "at least 5%" may also be considered (while keeping the payout ratio within reason – less than 65%).

- The threat of unwarranted system condemnations could be diminished as GSWC recently successfully defended Claremont's attempt and the judge ordered the city to compensate the utility for the nearly $8M in legal defense fees.

### ***AWK***

- Announced a $62M black box settlement in the pending PA rate case – represents roughly 60% of the $108M request. AWK hopes for PA commission approval in December with new rates effective January 2018.

- Management is optimistic similarly constructive outcomes can be achieved in the pending NJ and MO cases. Specific to MO, it sounds like the current case should result in a single, statewide rate (currently AWK has 3 regional rates) and AWK believes there is some traction with respect to the forward test year request but noted it might take one or two more rate cycles before adoption.

- The planned December guidance call is to include a refresh of the long-term EPS growth target likely anchored off the 2016 base (currently 7-10% off the 2015 base with 4-6% from regulated utility capex, 1-2% from regulated M&A and 2% from Market-Based Businesses). We did not get the sense the 7-10% target is likely to change. Despite early successes and an optimistic outlook with regard to M&A, it could be premature to increase the 1-2% regulated M&A target without another year or two of results under the belt. As for the Market-Based Businesses delivering 2% growth, management indicated the 2H'17 pick-up in activity for Keystone (communicated on the Q2 EPS call) is transpiring and the award of new military bases is according to plan.

### ***CTWS***

- A strategy change is unlikely following the departure of CEO Eric Thornburg and appointment of then-current CFO Dave Benoit to the interim CEO position. In particular, the company expects to continue the aggressive (but accretive) pursuit of systems (water and wastewater) in CT (despite the likely entrance of Eversource Energy into the CT water segment via the pending Aquarion deal) – specifically, the Board has not expressed an interest in anything other than growing. In addition, the company is prepping for a likely 2018 CT rate filing.

- The new water treatment plant in Maine continues to move forward through the development stages. CTWS targets breaking ground in 2019 with a 2020 in-service date. The total cost of the plant could be in the $35-45M range and thus far potential regional partners have only expressed interested in signing long-term take-or-pay contracts with CTWS (as opposed to taking an equity position).

### ***CWT***

- Management expressed a relatively high degree of confidence in the ability to earn near the 9.43% allowed ROE in 2017. The gross margin increase approved in the 2017-19 general rate case (GRC) is the primary driver however the trackers for uncontrollable expenses like healthcare and pension also help. In addition, booking allowance for funds used during construction (AFUDC) at the full rate of return (equity and debt rather than only booking a debt AFUDC return like before) will also help. And should inflation stay rather benign, the potential ’18 and ’19 step increases outlined in the 2017-19 GRC order should help minimize regulatory lag in years 2 and 3 of the GRC cycle.

- Execution on the 2017-19 GRC capex budget is progressing. Management believes that the roughly $200M of Advice Letter Recovery projects approved will get completed however it is still too early to tell if they all can be placed in-service by 2019 or if some will slip into 2020. Recall, CWT’s 2017-19 GRC authorized a meaningful step up in the rate of capex – however, even after the step up CWT’s main replacement cycle of roughly 200 years lags other CA water utilities.

- Given the elevated capex with no signs of a slow down on the horizon as well as the ORA’s recommendation for a 54.44% equity ratio (above Cal Water’s currently authorized 53.4%), it sounds like equity financing could be needed in the not too distant future. This is consistent with our model which projects roughly $100M of new equity over the next five years.

***WTR***

- Preparations for the 2018 PA rate case filing continue. On 10/1, a 2.5% DSIC increase went into effect and the plan is to institute two additional 2.5% increases on 1/1/18 and 4/1/18 such that the 7.5% DSIC cap is reached. The exact timing of the PA filing is still being finalized – will impact what can or cannot be included in PA’s new fully projected future test year. Management believes (1) the request will be reasonable, (2) will by no means catch the PaPUC off guard and (3) that a settled outcome is very achievable (consistent with most recent PA rate cases). With that said, the commission and staff has largely turned over in the 6+ years since WTR’s last PA rate case and management will be mindful of that when presenting/supporting the request.

- Kinks are still being worked out in the implementation of PA’s Act 12 – fair market value legislation. The PaPUC approved the New Garden Township wastewater acquisition in June however the ALJ changed the rate base value such that it is below where the third party appraisals came in. The commission has yet to approve the ALJ’s recommended value and WTR may challenge given it is not consistent with the letter of the law.

- Growth through M&A is still very much on WTR’s mind. However, the likelihood of regulated M&A outside of the water/wastewater sector has seemingly diminished – in part because gas LDC utility valuations have become too rich for WTR’s blood but also because management believes the growth opportunities from municipal acquisitions is quite robust (and confidence in this outlook has strengthened over the last 12-18 months). Management likes the states it currently operates in but would not hesitate to enter a new state if the regulatory environment was reasonable and WTR could go in with size (roughly 30k customers) so as to be able to wield regulatory clout.

- While WTR does not have a long-term growth target, the goal is to get to an industry leading growth rate via timely recovery of regulated infrastructure investments (PA getting back to normal rate relief – quarterly DSIC filings and rate case filings every few years – should allow EPS to track rate base growth) and tuck-in water/wastewater M&A deals.

## Glossary of terms:

AFB – Air Force Base
ALJ – Administrative Law Judge
CPUC – California Public Utilities Commission
DSIC – Distribution System Investment Charge
IOU – Investor Owned Utility
LDC – Local Distribution Company
NAWC – National Association of Water Companies
ORA – Office of Ratepayer Advocates
PaPUC – Pennsylvania Public Utility Commission
RFP – Request for Proposals

## Rating Basis Information:

AWK Thesis: We believe AWK is well positioned to capitalize on favorable industry dynamics which should lead to above average rate base, EPS and DPS growth. Our rating reflects valuation considerations.

AWR Thesis: We regard AWR as a low risk water utility with a growing dividend. We consider CA regulation to be constructive. In addition, we believe ASUS could contribute 20-25% to consolidated EPS with upside potential if new military contracts are awarded. Our rating reflects valuation considerations.

CTWS Thesis: We regard CTWS as a high quality, low risk water utility that offers investors 7-10% total return potential. Our Market Perform rating reflects valuation considerations.

CWT Thesis: We regard CWT as a high-quality, low-risk water utility with a secure and growing dividend. EPS growth is highly dependent upon CA regulation which we consider constructive. Our Underperform rating solely reflects valuation considerations.

WTR Thesis: We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Outperform rating is premised on the fact that shares trade at 7-9% P/E discounts to water peers on our below consensus 18E & 19E EPS of $1.42 & $1.50. We believe a more in-line multiple to water utility peers is deserved and should materialize as WTR's annual growth rate starts to normalize to an estimated 5-7% pace with the help of PA rate relief and tuck-in M&A activity.

## Price Target Information:

AWR Basis and Risks: Our $51/sh price target is based on a P/E multiple (apply a modest premium to the 18E water utility median of 27.0-27.5X to our 19E of $1.83) and DDM analyses. Regulatory and ASUS construction levels are key risks.

AWK Basis and Risks: Our $89/sh price target is based on a P/E multiple (apply a roughly 25X multiple to our 19E of $3.55) and DDM analyses. Risks include regulatory and profitably executing the non-regulated growth strategy.

WTR Basis and Risks: Our $40/sh price target is based on a P/E multiple (apply an in-line to modest discount to the 18E water utility median P/E of 27.0-27.5X to our 19E EPS of $1.50) and DDM analyses. Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

CWT Basis and Risks: Our $37/sh price target is based on a P/E multiple (apply the 18E water utility median of 27.0-27.5X to our 19E of $1.40) and DDM analyses. Risks are regulatory, execution and lack of geographical diversity.

CTWS Basis and Risks: Our $64/sh price target is based on a P/E multiple (apply the 18E water utility median of 27.0-27.5X to our 19E of $2.50) and DDM analyses. Chief risks include regulatory risk and potential to pursue undisciplined M&A growth.

## WTR: Reiterate Outperform--Most Reasonably Priced Water Utility

**Outperform/$40**

Water Utilities
Market Weight

**Earnings Reported**

- **Summary.** We viewed WTR's Q3'17 report and call to be consistent with our expectations and supportive of our Outperform thesis. No change to our EPS outlook as a result. With the resumption of regular PA rate relief (implemented a 2.5% infrastructure surcharge [DSIC] on 10/1), we believe EPS growth should more closely track rate base growth going forward. Combined with the recent surge in municipal tuck-in M&A activity (WTR added a 4k customer, $25M wastewater deal to the backlog in Q3'17), we believe WTR's EPS growth rate should normalize to a 5-7% pace – which would be at least consistent (if not above) peers. As such, we believe a more in-line multiple is deserved as opposed to the roughly 5% P/E discounts that shares currently trade at relative to water peers (and AWK) on our below consensus 18E & 19E EPS of $1.42 & $1.50. Reiterate Outperform as we believe WTR remains the most reasonably priced water utility within our coverage.

- **Outlook.** Management affirmed all aspects of 2017 guidance with the Q3'17 report. Our 2017-20E EPS remain $1.37, $1.42, $1.50 & $1.58. Importantly, we do not consider our outlook to be overly aggressive and highlight that our 2018-20E EPS are 1-4% below consensus. Key items for WTR going forward include (1) successfully navigating the upcoming PA rate case and (2) closing on the five pending municipal deals while finding additional M&A opportunities in the market – our forecast is predicated on only $50M/year of deals in '18 & beyond versus the nearly $150M pending, thus there could be upside. We consider WTR's management team capable of meeting these challenges but acknowledge that they do present some level of execution risk.

- **PA Rate Relief.** On 10/1, a 2.5% DSIC increase went into effect and WTR's plan is to institute two additional 2.5% increases on 1/1/18 and 4/1/18 such that the 7.5% DSIC cap is reached. The exact timing of the 2018 PA filing is still being finalized – will impact what can or cannot be included in PA's new fully projected future test year. Management believes (1) the request will be reasonable, (2) will by no means catch the Pennsylvania Public Utility Commission off guard and (3) that a settled outcome is achievable (consistent with most recent PA rate cases). With that said, the commission and staff has largely turned over in the 6+ years since WTR's last PA rate case and management will be mindful of that when presenting/supporting the request.

## Price Target

Price Target: $40 from NC

Our $40/sh price target is based on a P/E multiple (apply the 18E water utility median P/E of 26.5-27.0X to our 19E EPS of $1.50) and DDM analyses. Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

## Investment Thesis

We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Outperform rating is premised on the fact that shares trade at roughly 5% P/E discounts to water peers on our below consensus 18E & 19E EPS of $1.42 & $1.50. We believe a more in-line multiple to water utility peers is deserved and should materialize as WTR's annual growth rate starts to normalize to an estimated 5-7% pace with the help of PA rate relief and tuck-in M&A activity.

## Company Description

Headquartered in Bryn Mawr, PA, Aqua America (WTR) is one of the largest U.S.-based investor-owned regulated water and wastewater utilities. The company serves approximately 3 million residents (1 million customer connections) in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana and Virginia. WTR's largest subsidiary, Aqua Pennsylvania, accounts for approximately half of the company's total customer base and nearly 70% of consolidated rate base. In recent years management optimized the portfolio of states, including the divestitures of operations in Florida, Maine, Missouri, New York and South Carolina while adding to customer counts in Ohio and Texas (through utility swaps with American Water Works). Going forward, the company has expressed a desire to accelerate customer growth through a more active and focused acquisition strategy across its entire portfolio. Regulated operations account for more than 95% of consolidated revenues.

**WTR: '17 Guidance Issued--EPS Outlook Lowered**

## Market Performance

- **Summary.** We have lowered our EPS outlook following WTR's 2017 guidance conference call. Our new/old 2016-19E EPS are $1.32/$1.33, $1.37/$1.40, $1.42/$1.47 & $1.50/$1.55. On a P/E basis, WTR shares trade at 2-9% discounts on our 2017-19E to water utility peers which we believe largely reflects the potential for WTR to pursue an M&A deal outside of the water sector as well as, to a lesser extent, a below average near-term EPS growth rate. However, relative to regulated electrics, WTR trades at roughly 20% P/E premiums, which we consider more than adequate given forecasted EPS (5%), rate base (6-7%) and dividend (7%) growth rates that are not all that dissimilar to the median electric utility. We remain comfortable with our Market Perform rating.
- **Guidance.** Management indicated 2016 EPS is expected to be at or just below the midpoint of the $1.30-1.35 range and 2017 EPS of $1.32-1.37 is anticipated. Key 2017 assumptions include (1) 1.5-2% customer growth, (2) same-system O&M expense up 1-2%, (3) more than $450M of capex with more than $1.2B over the 2017-19 period and (4) limited rate relief. Specifically on PA rate relief, WTR expects to make an infrastructure surcharge mechanism filing in 2017 followed by a full general rate case filing in 2018 (with new rates effective in 2019). However, potential corporate tax reform could accelerate the rate case filing – a lower corporate rate would reduce the amount of the repairs tax deduction benefit.
- **EPS Outlook.** Our 2016-20E EPS are $1.32, $1.37, $1.42, $1.50 & $1.58. Rate recovery of infrastructure capex, cost efficiencies and M&A activity are the primary drivers of our forecasted 5% EPS CAGR. This is below WTR's expected 6-7% rate base growth due to over-earning situations at some of WTR's regulated states, including PA. However, forecasted capex is expected to grow rate base and lower the realized returns over the next few years. By 2019, we anticipate EPS growth to approximate rate base growth.
- **M&A Activity.** Management remains optimistic that the revised approach to cultivating water/wastewater M&A will bear fruit shortly. After a 2016 that saw the backlog of small pending deals close (19 deals; 6.5k customers; $22M price paid), WTR anticipates closing at least four muni deals in 2017 for $114M (roughly 12k customer equivalents). CEO Chris Franklin noted that the heightened M&A activity is unlike anything he has seen in the past but is mostly concentrated in states with fair market value legislation. Assuming a muni decides to pursue a sale, WTR's main competitors are other strategic buyers (AWK, other munis, etc.) as the 2,500-25,000 customer systems are typically too small to garner financial buyer's interest. Last but not least, management affirmed interest in the regulated gas distribution (LDC) sector while acknowledging various factors (including WTR's relative P/E to gas LDCs – only a roughly 5% premium) make finding the right deal a challenge.

**Valuation Range: $31.00 to $33.00**

Our $31-33/sh valuation range is based on a P/E multiple (apply a 5-10% discount to the 17E water utility median of 24.0-24.5X to our 18E of $1.42) and DDM analyses. Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

**Investment Thesis:**

We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Market Perform rating primarily reflects valuation considerations.

**Please see page 5 for rating definitions, important disclosures and required analyst certifications. All estimates/forecasts are as of 01/17/17 unless otherwise stated. 01/17/17 14:29:04 ET**

**Wells Fargo Securities, LLC does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of the report and investors should consider this report as only a single factor in making their investment decision.**

## Company Description:

Headquartered in Bryn Mawr, PA, Aqua America (WTR) is one of the largest U.S.-based investor-owned regulated water and wastewater utilities. The company serves approximately 3 million residents (1 million customer connections) in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana and Virginia. WTR's largest subsidiary, Aqua Pennsylvania, accounts for approximately half of the company's total customer base and nearly 70% of consolidated rate base. Management has been active optimizing its portfolio of states, including the recent divestitures of operations in Florida, Maine, Missouri, New York and South Carolina while adding to customer counts in Ohio and Texas (through utility swaps with American Water Works). Going forward, the company has expressed a desire to accelerate customer growth through a more active and focused acquisition strategy across its entire portfolio. Regulated operations account for more than 95% of consolidated revenues.

*Source: Company Data, Wells Fargo Securities, LLC estimates, and Reuters*

- **Summary.** No changes to our EPS outlook or thesis following WTR's Q3 report. We remain attracted to WTR's strategy of (1) timely recovery of infrastructure investments and (2) consolidating the fragmented water and wastewater industry. We believe WTR's revised approach to municipal M&A will start bearing fruit in 2017 aided by enabling legislation in IL, IN, NJ and PA as well as the potential for NC and OH to follow suit. We reiterate our Market Perform rating despite the fact that WTR shares have underperformed year-to-date (+2% vs. +17% for our water utility index and +13% for the S&P Utilities) and trade at 8-10% P/E discounts to water utility peers on our 2017-19E EPS. We believe the discount valuation reflects investor concerns that the water industry premium P/E will be eroded if WTR announces a M&A deal outside of the regulated water space. Should WTR announce a strategic deal, it could create an attractive entry point in our opinion.

- **Relative Valuation Thoughts.** Currently, the water utility sub-sector enjoys premiums of roughly 35% to the electric and 20-25% to the gas utility sub-sectors. We don't disagree that a non-water transaction could trigger further near-term underperformance in WTR shares – particularly if the relative size of the hypothetical target is similar to WTR. However, we do question the sustainability of the waters' current relative premium. We believe current water utility share prices imply a roughly 75 bps lower equity risk premium (ERP) than electrics in our dividend discount models. We agree a lower ERP is warranted for the lower risk water business model (might 75 bps be too steep though?) but point out that if interest rates eventually rise from historic lows, the implied premium P/E multiples represented by a 75 bps lower ERP naturally diminish as the risk-free rate rises. In other words, the 35% relative premium the waters currently command over the electrics should contract as interest rates rise.

- **Implications to Our Thesis.** If WTR's hypothetical deal makes strategic sense (increases WTR's EPS growth rate, offers capex and rate base growth at least commensurate with the water utility industry, possesses a similar business risk profile, etc.) and allows WTR to take advantage of today's premium currency (WTR trades at P/E premiums of 22-24% to electric and 8-15% to gas utilities), a further pullback in shares could create an attractive entry point versus water utility peers as the erosion of the relative water premium may be inevitable if/when rates rise. So while we find WTR's current 8-10% P/E discount to water peers tempting, we elect to remain on the sidelines until (1) the details of a potential deal materializes and (2) there is a potential further pullback in shares.

- **Outlook.** Our 2016-19E EPS remain $1.33, $1.40, $1.47 & $1.55. We do not assume any strategic M&A despite the fact that WTR has financial flexibility and WTR has articulated a clear desire to explore such opportunities. Barring a very sizeable deal, we do not foresee the need for new equity and, in fact, WTR has previously indicated that roughly $750MM of additional debt capacity exists. As such, we believe share buybacks and/or accelerated dividend increases (greater than 8%) may be considered to achieve a consolidated equity ratio closer to 45%.

**Valuation Range: $31.00 to $33.00**

Our VR is based on a P/E multiple (5-10% discount to 17E water median of 23.6X to our 18E of $1.47) and DDM analyses. Primary risks are regulatory and M&A.

**Investment Thesis:**

We are attracted to WTR's strong fundamentals. Our Market Perform rating primarily reflects valuation considerations.

## Company Description:

Headquartered in Bryn Mawr, PA, Aqua America (WTR) is one of the largest U.S.-based investor-owned regulated water and wastewater utilities. The company serves approximately 3 million residents (1 million customer connections) in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana and Virginia. WTR's largest subsidiary, Aqua Pennsylvania, accounts for approximately half of the company's total customer base and nearly 70% of consolidated rate base. Management has been active optimizing its portfolio of states, including the recent divestitures of operations in Florida, Maine, Missouri, New York and South Carolina while adding to customer counts in Ohio and Texas (through utility swaps with American Water Works). Going forward, the company has expressed a desire to accelerate customer growth through a more active and focused acquisition strategy across its entire portfolio. Regulated operations account for more than 95% of consolidated revenues.

## WTR: Analyst Day Takeaways--Strategic M&A Is Still On The Table

**Market Perform/$36.00**

Water Utilities
Market Weight

**Earnings Estimate Revised Down**

- **Summary.** Management utilized the NYC analyst event to highlight WTR's attractive 6-7%+ longer-term growth profile (post conclusion of the PA rate case) driven primarily by continued elevated infrastructure investment needs across the company's existing water and wastewater footprint and supplemented by tuck-in acquisition opportunities. Specifically, the 2018-20 capex budget of $1.4B and resulting rate base growth (7%) was modestly above our previous forecast. That said, near-term EPS growth is expected to be modestly lower – due in part to unique federal tax reform impacts, delays in closing two sizeable municipal deals and the over-earning situations in a few states, including PA. We refine our 2018-20E EPS to/from $1.40/$1.42, $1.47/$1.50 & $1.58/$1.58. We reiterate our Market Perform rating but nudge down our price target to $36/share from $37/share due to our revised 19E and a slightly lower peer group multiple. Shares of WTR trade in-line with water industry peers on our 20E (the first full year after the PA rate case) which we consider appropriate given attractive EPS and dividend growth prospects partially offset by near-term heightened regulatory risk and the potential to pursue non-water/wastewater regulated M&A – at the analyst event, management reiterated that strategic M&A is still part of WTR's overall growth strategy which will believe will cause investors some degree of apprehension.

- **Tax Reform Implications.** In general, we believe WTR is well positioned to benefit from tax reform over the longer-term. First, rate base growth should be higher as bonus depreciation is eliminated, certain deferred tax liabilities are flowed back to customers and more capital can be invested with less impact on customer rates. Second, the strong balance sheet (in our view) should allow the 2018-20 capex budget to be funded without external equity while still supporting the A credit rating--that said, should annual capex run at roughly $450M/year in '21 and '22, we believe the excess debt capacity on WTR's balance sheet could become largely utilized and eventually put WTR in a position where it periodically needs equity to fund long-term growth (the pre-bonus depreciation water utility model!). And last, the lower customer rates could help make WTR's rates more competitive with municipal systems that it seeks to acquire. On the flip side, there is a temporary headwind until the PA rate case is resolved in 1H'19 as the repair tax deduction is expected to be greater than taxable income. This puts the PA sub in a net operating loss position and the lower tax rate reduces the NOL benefit.

- **Core Growth Strategy**. WTR's basic strategy of seeking timely recovery of the significant capex needs is expected to result in 6-7% rate base and EPS growth longer-term. We consider this rate of growth to be attractive and consistent with WTR's closest peer, AWK. Positively, more than 50% of the $1.4B capex budget qualifies for infrastructure surcharge mechanism recovery.

  Beyond investing in existing systems, WTR will continue to look towards municipal/tuck-in M&A opportunities to further accelerate growth. Recent efforts across the water and wastewater industry, such as fair market value legislation or policies promoting the acquisition of troubled system, seek to encourage consolidation of the municipally dominated industry and has provided an uptick in recent deal activity. WTR outlined the more proactive, targeted approach to cultivating deals that was established a few years ago and reiterated a belief that the municipal growth opportunity is as robust as it has ever been in the industry. The company's focus is on acquiring systems that serve between 2,500 and 25,000 customers and management noted that the 10 largest municipal deals at various stages of the "development" pipeline would represent nearly 300,000 customer additions. However, if history is any indicator, materialization of two or three of these deals would be considered a success. As things currently stand, WTR has six deals pending representing more than 16,000 customers, $150M in deal value and an estimated $0.04 of incremental EPS power.

- **Strategic M&A and Market-Based Activities.** To be honest, we were somewhat surprised to hear management continue to highlight strategic M&A and market-based activities as potential growth avenues given the robust level of municipal deal activity/interest that WTR (and AWK) tout exist in the industry today. That said, with water utilities once again trading at meaningful 30-35% premiums to electric utilities and 20-25% premiums to gas utilities, we can only conclude that management is currently giving (or has recently given) serious consideration to potential utility/infrastructure acquisition opportunities as a way to potentially take advantage of WTR's balance sheet capacity and valuable currency.

  While we believe a regulated deal of size outside of the water/wastewater industry would likely cause an immediate erosion of a portion of WTR's "water" premium P/E multiple, we do think that longer-term the right deal could perhaps make some strategic sense (provide regulatory diversity, open up additional growth/investment opportunities, etc.) given our belief that the current degree of the water utility premium relative to the other utility sub-sectors is unsustainable over time (perhaps contract if/when we see a material rise in interest rates?). Based on previous discussions with management, we believe this sort of view is also shared by WTR's Board of Directors. As for market-based activities, having recently exited substantially all of WTR's non-regulated businesses, we struggle to see what sort of meaningful non-regulated deal would make sense for the company at the moment, especially given the sizeable regulated growth profile, unless of course it came along in a strategic M&A transaction.

- **EPS Outlook.** Our 2018-20E EPS are $1.40, $1.47 & $1.58 and we forecast a 5.5% EPS CAGR through '22 off of the '17 ongoing base of $1.36. We expect annual EPS growth to accelerate in '20 & beyond once the PA rate case is resolved as EPS growth should track rate base growth of 6-7%. We assume WTR's annual capex over the next 5-years stays around $450M ('18 is expected to be $500M) and the utility is afforded timely and constructive regulatory recovery of the investments. As for municipal/tuck-in deals, while the potential is significant and activity has picked up, we continue to believe the pace of industry consolidation will remain somewhat measured (i.e. the floodgates are not going to open up). That said, we do expect somewhat elevated activity relative to a few years ago to persist as the recent legislation/policy efforts do remove some of the often cited barriers to getting deals done. WTR expects the six pending deals to close during 2018 and, when combined with some organic customer growth, should lead to 2-3% customer growth this year. Beyond the pending deals, our outlook assumes $50 of deals annually. We do not foresee the need for WTR to issue any external equity over the 2018-22 period to fund the growth, support the high quality credit metrics or continue growing the dividend at least in-line with EPS growth.

- **PA Rate Case.** WTR plans to file the long-awaited PA rate case this summer with resolution expected by spring '19. It has been 7 years since PA last filed a rate case and the utility will be seeking formal rate recognition of more than $2B of investment as this will be the first time that WTR takes advantage of PA's fully projected test year. That said, the trade-off of flowing through the repairs deduction and tax reform benefits to ratepayers is expected to result in a reasonable request. We expect a constructive outcome in the case and note the longstanding ability of PA utilities to reach rate case settlement agreements that are based on competitive ROEs (including AWK in 2H'17). Nonetheless, we consider WTR's regulatory risk to be heightened over the next 12-15 months given PA represents more than 70% of consolidated rate base and the length of time since the utility's last rate case in the state.

## Price Target

Price Target: $36.00 from $37.00

Our $37/sh price target is based on a P/E multiple (apply the 18E water utility median P/E of 23X to our 19E EPS of $1.47) and DDM analyses. We believe at least an in-line multiple to water utility peers is deserved as we believe WTR's EPS will grow at at least a 5-7% annual rate with the help of PA rate relief and tuck-in M&A activity. Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

## Investment Thesis

We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Market Perform rating reflects valuation considerations.

## Company Description

Headquartered in Bryn Mawr, PA, Aqua America (WTR) is one of the largest U.S.-based investor-owned regulated water and wastewater utilities. The company serves approximately 3 million residents (1 million customer connections) in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana and Virginia. WTR's largest subsidiary, Aqua Pennsylvania, accounts for approximately half of the company's total customer base and nearly 70% of consolidated rate base. In recent years management optimized the portfolio of states, including the divestitures of operations in Florida, Maine, Missouri, New York and South Carolina while adding to customer counts in Ohio and Texas (through utility swaps with American Water Works). Going forward, the company has expressed a desire to accelerate customer growth through a more active and focused acquisition strategy across its entire portfolio. Regulated operations account for more than 99% of consolidated revenues.

# Aqua America, Inc.

## WTR: Quiet Q1; PA Rate Case And New Municipal Deals On The Horizon

**Market Perform/$36**

Water Utilities
Market Weight

**Earnings Reported**

- **Summary.** WTR was able to overcome higher operating expenses due to a spike in water main breaks as a result of severe winter temperatures and reported Q1'18 EPS in-line with expectations. In addition, management affirmed previously articulated guidance including 2018 EPS in the $1.37-1.42 range, plans to invest $1.4B over the '18-20 period and the filing of a PA rate case later this year. No change to our EPS outlook. We reiterate our Market Perform rating and 12-18 month price target of $36/sh.
- **Valuation Thoughts.** Shares of WTR trade at 8-10% discounts to water utility peers on our 18-20E EPS. We believe a discount valuation is appropriate as (1) we project a consolidated EPS growth rate of 5% over the next 5 years which falls at the lower end of the 5-7% water utility median, (2) elevated regulatory risk given the upcoming PA rate case and (3) our belief that WTR is an unlikely takeout candidate – water utilities as a whole trade at sizeable P/E premiums of 45% and 25% to regulated electric and gas utilities which seemingly reflects a heightened degree of takeover premium given recent utility M&A events. In fact, management continues to remark that strategic M&A (potentially outside the core water/wastewater utility space) remains under consideration though the company intends to remain a disciplined buyer (believes recent investor-owned deals have been at multiples that are hard to justify). Taken together, we apply a 5-10% P/E multiple discount in our relative valuation analysis.
- **Outlook.** Our 2018-20E EPS are $1.40, $1.47 & $1.58 and we forecast a 5.5% EPS CAGR through '22 off of the '17 ongoing base of $1.36. We expect annual EPS growth to accelerate in '20 & beyond once the PA rate case is resolved as EPS growth should track close to rate base growth of 6-7%. Key assumptions include (1) WTR's annual capex over the next 5-years stays around $450M ('18 is expected to be $500M) and the utility is afforded timely and constructive regulatory recovery of the investments and (2) beyond the pending deals, we model roughly $50M of deals annually. Under these assumptions, we do not foresee the need for WTR to issue any external equity over the 2018-22 period to fund the growth, support the high quality credit metrics or continue growing the dividend at least in-line with EPS growth.
- ***M&A Update and PA Rate Case comments continue on p. 2.***

- **M&A Commentary.** While the potential is significant and activity has picked up, we continue to believe the pace of industry consolidation will remain somewhat measured (i.e. the floodgates are not going to open up). That said, we do expect the elevated municipal activity relative to a few years ago to persist as the recent legislation/policy efforts do remove some of the often cited barriers to getting deals done. WTR expects the six pending deals to close during 2018 (represents more than 16,000 customers, $150M in deal value and an estimated $0.04 of incremental EPS power) and, when combined with some organic customer growth, should lead to 2-3% customer growth this year. In addition, management indicated on the Q1 call that there were additional municipal deals that the company expects to be able to announce shortly representing another 10,000 customers.

- **PA Rate Case.** No real changes with regards to the long-awaited PA rate case as WTR plans to make the filing during Q3 with a mid-'19 effective date. It has been 7 years since PA last filed a rate case and the utility will be seeking formal rate recognition of more than $2B of investment as this will be the first time that WTR takes advantage of PA's fully projected test year. That said, the trade-off of flowing through the repairs deduction and tax reform benefits to ratepayers is expected to result in a reasonable request. We expect a constructive outcome in the case and note the longstanding ability of PA utilities to reach rate case settlement agreements that are based on competitive ROEs (including AWK in 2H'17). Nonetheless, we consider WTR's regulatory risk to be heightened over the next 12-15 months given PA represents more than 70% of consolidated rate base, there has been turnover in the commissioners and staff since Aqua's last case and just the length of time since that last PA rate case.

## Price Target

Price Target: $36 from NC

Our $36/sh price target is based on a P/E multiple (apply a 5-10% discount to the 18E water utility median P/E of 26.5-27.0X to our 19E EPS of $1.47) and DDM analyses. We believe a discount multiple is currently warranted as (1) the water median reflects a heightened degree of takeover premium given recent utility M&A events and we consider WTR an unlikely takeout candidate, (2) WTR's 5-year EPS growth rate may fall at the lower end of the industry's 5-7% average and (3) elevated regulatory risk given the upcoming PA rate case. Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

## Investment Thesis

We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Market Perform rating reflects valuation considerations.

## Company Description

Headquartered in Bryn Mawr, PA, Aqua America (WTR) is one of the largest U.S.-based investor-owned regulated water and wastewater utilities. The company serves approximately 3 million residents (1 million customer connections) in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana and Virginia. WTR's largest subsidiary, Aqua Pennsylvania, accounts for approximately half of the company's total customer base and nearly 70% of consolidated rate base. In recent years management optimized the portfolio of states, including the divestitures of operations in Florida, Maine, Missouri, New York and South Carolina while adding to customer counts in Ohio and Texas (through utility swaps with American Water Works). Going forward, the company has expressed a desire to accelerate customer growth through a more active and focused acquisition strategy across its entire portfolio. Regulated operations account for more than 99% of consolidated revenues.

1= Outperform, 2 = Market Perform, 3 = Underperform, V = Volatile, = Company is on the Priority Stock List
NA = Not Available, NC = No Change, NE = No Estimate, NM = Not Meaningful

- **Summary.** Three of our water utilities – AWK, AWR & WTR – reported results after the market close on 8/2 and hosted conference calls on 8/3. Company-specific takeaways are discussed below. In terms of group valuation, we continue to believe that the P/E premium of the water utilities relative to the other utility sub-sectors, in particular electrics, will dissipate over time when/if long-term rates rise. However, with long-term rates hovering near historically low levels and perhaps no near-term catalyst in sight that might change that fact, we do believe the current relative valuations are supported by our generic DDM models as the lower risk premium we ascribe to the waters has an outsized impact on valuations in a low risk-free rate environment.

- **AWK Update.** Management affirmed 2017 ongoing diluted EPS guidance of $2.98-3.08 despite Q2'17 EPS that optically looked weak vs. Q2'16 ($0.73 vs. $0.77). Results were largely in-line with internal expectations as Q2'16 had +$0.03 of abnormal benefits whereas Q2'17 faced -$0.04 of anticipated headwinds. Importantly, the 7-10% EPS CAGR target through '21 off the '15 weather-normalized base of $2.64 is intact. Achieving constructive outcomes in the pending Pennsylvania ($108M request) and Missouri ($84M request) rate cases will be key to hitting the target. The PA case reflects the recent Scranton wastewater system acquisition and the need to socialize the system's revenue shortfall across AWK's larger customer base. This could prove as somewhat of a litmus test for the next PA rate case when AWK will seek recovery of the pending $156M McKeesport wastewater deal (regulatory hearings are underway, management did not seem concerned with the 3rd party fair market value analysis procedure under PA's Act 12 and the deal is expected to close late '17/early '18). We have a high degree of confidence that the regulated segment can deliver on its growth goals – both organic and M&A. As for the unregulated segments, lower capital upgrades at military continues to be a headwind however AWK indicated it was active in 8 new base RFPs (requests for proposals) with the potential for two to be decided later this year by the Department of Defense. Historically, when AWK has had a reasonable line of site on the timing of RFP decisions, it has resulted in a win for the company. In addition, management expects Keystone's results to improve in 2H'17 due to the backlog of work in the Appalachian shale. **(Comments continued on p. 2)**

- **AWK Update. (Continued…)** So while our 17E EPS could prove somewhat optimistic given the tax law changes in NY (Q2 impact of -$0.02) and IL (Q3 impact of -$0.02), we have elected to leave our estimate unchanged ahead of the weather-sensitive third quarter (management indicated favorable July weather was likely a +$0.01 benefit). Our 2017-19E EPS remain $3.05, $3.30 & $3.55 and our 5-year EPS CAGR falls at the lower end of AWK's 7-10% target. We reiterate our Market Perform rating and $84/sh forward price target.

- **AWR Update.** AWR reported a solid Q2'17 with ongoing EPS increasing to $0.47 (excludes $0.15 of one-time gains) vs. Q2'16 of $0.42. After reevaluating some assumptions in our model, we increase our 2017-19E EPS to/from $1.70/$1.65, $1.73/$1.72 & $1.80/$1.78. Of note, our forecast assumes Golden State Water (GSWC) continues its recent trend of earning in excess of the allowed ROE, mainly driven by successful cost controls. With that said, we do believe there could be downward pressure on the earned ROE in '18 & beyond from the Cost of Capital (CoC) proceeding as well as the recently filed 2019-21 water General Rate Case (GRC). The Office of Ratepayer Advocates (ORA) filed CoC testimony on 8/1 recommending ROEs for the four large California water utilities (subs of AWK, AWR, CWT & SJW) in the 8.22-8.30% range. Specific to GSWC, the ORA recommends a 54.1% equity ratio, below GSWC's 57.0% request and currently authorized 55.0%, as well as a lower cost of debt (6.4% vs. 6.6% request and current 7.0%). Management indicated that ORA's testimony was not particularly surprising and remains optimistic that a constructive CoC outcome can be achieved, which could include a settlement. As outlined in our 8/2 note, we believe downside risk to the current 9.43% water ROE is limited (maybe up to 25bp?). However, an adopted equity ratio and cost of debt similar to ORA's recommendation would present incremental headwinds for AWR's '18 EPS growth. As for the water GRC, GSWC filed an application in July which requests average annual capex of roughly $125M – this represents a meaningful increase from the roughly $85M/year approved in the 2016-18 GRC. Like past years, we expect the appropriate level of capex will be one of the primary points of contention with ORA and other intervenors. If approved as filed, AWR indicated it would support 2019 average water rate base of $876M, a 22% increase over 2017's adopted average water rate base of $717M. Decisions in the CoC and water GRC are anticipated by year-end '17 and '18, respectively. Last, the Board approved a 5.4% increase in the quarterly dividend (annual rate goes to $1.02) and we forecast dividend growth at least commensurate with that pace. We reiterate our Market Perform rating and $46/sh forward price target.

- **WTR Update.** Q2 results were in-line with expectations. Management affirmed '17 diluted EPS guidance of $1.34-1.39 and all other aspects of the 3-year plan including capex of $1.2B+ over the 2017-19 period with $450M+ in '17. More clarity was given regarding the expected timing of Pennsylvania rate relief – file for a Q4'17 DSIC (Distribution System Improvement Charge) increase with plans to ramp up the total DSIC increase to the 7.5% cap by mid-2018, at which point a general rate case filing would be made (resolution in 1H'19). As for M&A, WTR added a nice-sized muni deal (3,000 customers; $12.3M) to the backlog which brings the total to five that the company expects to close in 2017 or 2018 (combined represent 12,000 customers and a $126M purchase price) and management believes the deal pipeline is promising. M&A combined with organic customer growth is expected to drive 1.5-2% customer growth in '17. In addition, the Board approved a 7% increase in the quarterly dividend (annual rate goes to roughly $0.82). We nudge our 17E EPS down to $1.37 from $1.38. No change to our 2018-20E EPS of $1.42, $1.50 & $1.58. Key items for WTR going forward include (1) successfully navigating the upcoming PA rate filings and (2) closing on the four pending municipal deals while finding additional M&A opportunities in the market. We consider WTR's management team capable of meeting these challenges but acknowledge that they do present some level of execution risk. We reiterate our Market Perform and $35/sh forward price target.

## Rating Basis Information:

AWK Thesis: We believe AWK is well positioned to capitalize on favorable industry dynamics which should lead to above average rate base, EPS and DPS growth. Our rating reflects valuation considerations.

AWR Thesis: We regard AWR as a low risk water utility with a growing dividend. We consider CA regulation to be constructive. We believe ASUS could contribute 20% to consolidated EPS with upside potential if new military contracts are awarded. Our rating reflects valuation considerations.

WTR Thesis: We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Market Perform rating primarily reflects valuation considerations.

## Price Target Information:

AWR Basis and Risks: Our $46/sh price target is based on a P/E multiple (apply the 18E water utility median of ~24.5X to our 19E of $1.80) and DDM analyses. Regulatory and ASUS construction levels are key risks.

AWK Basis and Risks: Our $84/sh price target is based on a P/E multiple (apply a 23.5-24.0X multiple to our 19E of $3.55) and DDM analyses. Risks include regulatory and profitably executing the non-regulated growth strategy.

WTR Basis and Risks: Our $35/sh price target is based on a P/E multiple (apply a modest discount to the 18E water utility median of ~24.5X to our 19E of $1.50) and DDM analyses. Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

- Wells Fargo Securities, LLC maintains a market in the common stock of American States Water, Aqua America, American Water Works Company, Inc.
- Wells Fargo Securities, LLC or its affiliates intends to seek or expects to receive compensation for investment banking services in the next three months from American Water Works Company, Inc., Aqua America.
- Wells Fargo Securities, LLC and/or its affiliates, have beneficial ownership of 1% or more of any class of the common stock of American Water Works Company, Inc.
- Wells Fargo Securities, LLC or its affiliates has a significant financial interest in American Water Works Company, Inc., Aqua America, American States Water.
- Wells Fargo Securities, LLC or its affiliates intends to seek or expects to receive compensation for investment banking services in the next three months from an affiliate of American Water Works Company, Inc.
- Wells Fargo Securities, LLC and/or its affiliates, have beneficial ownership of 0.5% or more of any class of the common stock of American Water Works Company, Inc.

**AWK:** Risks include regulatory and profitably executing the non-regulated growth strategy.
**AWR:** Regulatory and ASUS construction levels are key risks.
**WTR:** Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

**STOCK RATING**
**1=Outperform**: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
**2=Market Perform**: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
**3=Underperform**: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

**SECTOR RATING**
**O=Overweight**: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
**M=Market Weight**: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
**U=Underweight**: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

**VOLATILITY RATING**
**V=**A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: August 3, 2017

# *Equity Research*

## Aqua America

**WTR: YTD Outperformance Has Us Squarely On The Sidelines**

**Market Perform**

Sector: Water Utilities
Market Weight

- **Summary.** WTR's Q1 call affirmed '17 guidance ($1.34-$1.39) and the 3-year plan. As a result, no change to our EPS outlook or investment thesis. Key items for WTR going forward include (1) successfully navigating the upcoming PA rate filings and (2) closing on the four pending municipal deals while finding additional M&A opportunities in the market. We consider WTR's management team capable of meeting these challenges but acknowledge that they do present execution risk. We reiterate our Market Perform rating due to valuation considerations and nudge up our 12-18 month valuation range to $32-34/share from $31-33. WTR shares trade in-line with Water peers on our 18E & 19E EPS but at 20% premiums to Regulated Electric and 2-4% premiums to Regulated Gas utilities. We consider these relative valuations more than adequate given forecasted EPS (5%), rate base (6-7%) and dividend (7%) growth rates that are not all that dissimilar to the aforementioned utility subgroup medians.

- **Recent Performance.** WTR shares have outperformed our water utility index by 300 bps year-to-date. This has enabled shares to close the P/E multiple gap with water peers – traded at roughly 5% discounts at the beginning of the year. We believe the outperformance is primarily attributable to the following two factors: (1) waning investor concern that WTR may announce a deal to acquire a non-water/wastewater utility (due to compressed multiples between the water and gas utility sub-sectors) and (2) the fact that global money continues to find the U.S. market (and utilities' stable yields) relatively attractive and WTR & AWK are the only water names with reasonable liquidity.

- **EPS Outlook.** Our 17-20E EPS are $1.38, $1.42, $1.50 & $1.58. Rate recovery of infrastructure capex, cost efficiencies and M&A activity are the primary drivers of our forecasted 5% EPS CAGR. This is below WTR's expected 6-7% rate base growth due to over-earning situations in some states, including PA. However, forecasted capex is expected to grow rate base and lower the realized returns over the next few years. By '19, we expect EPS growth to approximate rate base growth.

- **What To Watch For?** Management reiterated expectations of implementing a distribution system improvement charge (DSIC) increase by Q4'17, filing a full blown Aqua PA rate case in 2H'18 and having new rates effective in '19. Should corporate tax reform materialize, a lower corporate rate would reduce the repairs tax deduction benefit amount and perhaps accelerate the timing of the rate case filing. On the M&A front, WTR's four municipal deals – $113M purchase price for 12K customer equivalents – are expected to close in '17 pending necessary approvals, including from state regulators. Getting recovery (muni deal-enabling legislation is designed to allow the full purchase price to be recovered in rate base) and keeping the M&A momentum moving forward by signing more deals are key to WTR's growth strategy.

**Valuation Range: $32.00 to $34.00** from $31.00 to $33.00

Our $32-34/sh valuation range is based on a P/E multiple (apply a modest discount to the 17E water utility median of 24.0-24.5X to our 18E) and DDM analyses. Primary risks are regulatory and M&A (particularly if acquisitive outside of the regulated water space) related.

**Investment Thesis:**

We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Market Perform rating primarily reflects valuation considerations.

## Company Description:

Headquartered in Bryn Mawr, PA, Aqua America (WTR) is one of the largest U.S.-based investor-owned regulated water and wastewater utilities. The company serves approximately 3 million residents (1 million customer connections) in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana and Virginia. WTR's largest subsidiary, Aqua Pennsylvania, accounts for approximately half of the company's total customer base and nearly 70% of consolidated rate base. Management has been active optimizing its portfolio of states, including the recent divestitures of operations in Florida, Maine, Missouri, New York and South Carolina while adding to customer counts in Ohio and Texas (through utility swaps with American Water Works). Going forward, the company has expressed a desire to accelerate customer growth through a more active and focused acquisition strategy across its entire portfolio. Regulated operations account for more than 95% of consolidated revenues.

# *Equity Research*

## Aqua America

**WTR: Quiet Q2 But What Does The M&A Future Hold?**

**Market Perform**

Sector: Water Utilities
Market Weight

- **Summary.** No change to our EPS outlook following WTR's Q2 report. The base business continues to execute – invest capital, grow rate base and seek recovery – but WTR's new mgmt team has ratcheted up the desire to grow through M&A. Investor focus/angst reflects concerns around what the M&A future holds in store for WTR. The more proactive, methodical approach to municipal deals is likely to start bearing fruit in 2017 (good!) but pursuit of a strategic acquisition outside of the water space has caused valuation concerns (bad!). Reiterate Market Perform rating and \$35-36/sh valuation range. Shares trade at modest P/E discounts to water utility peers on our 2016-19E EPS which we consider appropriate given potential P/E multiple degradation from M&A outside the regulated water sector. In addition, water utilities as a whole seem to be fully valued as the group trades at P/E premiums of 35-40% to electric and 12-18% to gas utilities.

- **Results.** Q2'16 EPS were \$0.33 vs \$0.32 in Q2'15. Adverse weather impacted consumption causing \$4.2M of lower revenues. However, the impact was muted by \$4.2M of non-recurring favorable expense comparison items, including \$3.5M of charges taken in Q2'15. With weather in mind, mgmt indicated comfortability with the middle of the \$1.30-1.35 2016 EPS guidance range.

- **Outlook.** We continue to believe that a 5-yr EPS CAGR of 6% is achievable driven by timely rate recognition of investment, cost controls and modest M&A activity. Our 2016-19E EPS of \$1.33, \$1.40, \$1.47 & \$1.55 are predicated on \$1.2B of regulated investments over the 2016-18 period, including \$75M of M&A activity. Thus, we do not assume any transformational M&A despite the fact that WTR has financial flexibility and mgmt has articulated a clear desire to explore such opportunities. Barring a very sizeable deal, we do not foresee the need for new equity and, in fact, mgmt has previously indicated that roughly \$750M of additional debt capacity exists. As such, we believe share buybacks and/or accelerated dividend increases (greater than 8%) may be considered to achieve a consolidated equity ratio closer to 45% and a 60-70% dividend payout ratio.

- **Strategy Update.** WTR is focused on (1) efficiently deploying capital across the regulated platform, (2) aggressively pursuing muni system deals and (3) scouring the broader utility landscape for strategic M&A as well as potential market-based opportunities. Mgmt indicated muni acquisition enabling legislation in IL, IN, NJ and PA is creating an uptick in interest and the pipeline is strong, including with deals of size. WTR's Board has set a goal of \$50M/year worth of deals. Given the longer lead times for muni deals, look for efforts to bear fruit in 2017. As for strategic deals, mgmt affirmed interest and continues to believe core competencies are transferable across utility platforms. While stepping outside of water could lead to a merging of multiples (which would have to be taken into consideration), mgmt believes there could be long-term value creation if it opens up a path to attractive growth and allows fixed costs to be further spread out.

**Valuation Range: \$35.00 to \$36.00**

Our \$35-36/sh valuation range is based on a P/E multiple (apply a modest discount to the 17E water utility median of 24.5-25.0X to our 18E of \$1.47) and DDM analyses. Primary risks are regulatory and M&A related.

**Investment Thesis:**

We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Market Perform rating primarily reflects valuation considerations.

**Please see page 3 for rating definitions, important disclosures and required analyst certifications**

**WTR: Takeaways From Midwest Investor Meetings**

**Market Perform**

Sector: Water Utilities
Market Weight

- **Summary.** We hosted investor meetings with WTR mgmt, including CFO Dave Smeltzer, on 6/23. WTR is focused on a three-pronged strategy of (1) efficiently deploying capital across the regulated platform, (2) aggressively pursuing municipal system acquisitions and (3) scouring the broader utility landscape for strategic M&A. The meetings reinforced our belief that a 5-yr EPS CAGR of 6% is achievable – we did tweak our 17E & 18E to/from $1.40/$1.42 & $1.47/$1.48 – driven by timely rate recognition of investment and modest M&A activity. Importantly, we do not assume any transformational M&A despite the fact that WTR has financial flexibility and mgmt has articulated a clear desire to explore such opportunities. Reiterate Market Perform rating. Shares trade at modest P/E discounts to water utility peers on our 17-19E EPS. We consider this appropriate given potential P/E multiple degradation from M&A outside the regulated water sector. In addition, water utilities as a whole seem to be fully valued as the group trades at P/E premiums of 35-40% to electric and 15-20% to gas utilities.

- **Base Business.** WTR's existing water and wastewater utility platform continues to perform well. Rate base is expected to grow at a 6-7% CAGR over the 2016-18 period given infrastructure investment of $350M/yr. However earnings growth is likely to lag somewhat in the near term as most states are earning near the allowed ROEs and thus rate relief is minimal. On that front, Pennsylvania (WTR's largest sub) remains in an overearning situation due to the repairs tax deduction benefit and the next base rate case is not likely to be filed until 2H'18.

- **Muni Acquisitions.** The company is taking a more proactive, methodical approach towards cultivating "tuck-in" acquisition opportunities that focuses on larger systems (2,000-20,000 connections) that mgmt believes have a greater likelihood of selling. Enabling legislation has been passed in IL, IN, NJ and most recently PA, to encourage consolidation of the fragmented, municipally dominated sector. WTR's Board has set a goal of $50M/yr worth of deals which compares to recent averages of only $15-20M. While it remains early in the process, WTR has announced a handful of muni deals recently and has noticed an uptick in interested sellers. Thus we are optimistic that this trend may have legs.

- **Strategic M&A.** Mgmt was not shy about the desire to utilize the strong balance sheet (excess debt capacity without impacting A credit rating) and currency (stock valuation). Unlike the muni strategy, strategic M&A could extend beyond water and wastewater to regulated electric and gas utilities. WTR's logic is that core competencies of effectively deploying capital, fostering constructive regulatory relationships and operational excellence are transferable across utility platforms. While acknowledging that stepping outside of water could lead to a merging of multiples (which would have to be taken into consideration), mgmt believes there could be long-term value creation if it opens up a path to attractive growth and allows fixed costs to be further spread out.

**Valuation Range: $33.00 to $34.00**
Our $33-34/sh valuation range is based on a P/E multiple (apply a modest discount to the 17E water utility median of 24.5-25.0X to our 18E of $1.47) and DDM analyses. Primary risks are regulatory and M&A related.

**Investment Thesis:**
We are attracted to WTR's strong fundamentals - a proven EPS growth strategy, a growing rate base, constructive regulation, efficient operations, and financial flexibility. Our Market Perform rating primarily reflects valuation considerations.

**Please see page 5 for rating definitions, important disclosures and required analyst certifications**

## Company Description:

Headquartered in Bryn Mawr, PA, Aqua America (WTR) is one of the largest U.S.-based investor-owned regulated water and wastewater utilities. The company serves approximately 3 million residents (1 million customer connections) in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana and Virginia. WTR's largest subsidiary, Aqua Pennsylvania, accounts for approximately half of the company's total customer base and nearly 70% of consolidated rate base. Management has been active optimizing its portfolio of states, including the recent divestitures of operations in Florida, Maine, Missouri, New York and South Carolina while adding to customer counts in Ohio and Texas (through utility swaps with American Water Works). Going forward, the company has expressed a desire to accelerate customer growth through a more active and focused acquisition strategy across its entire portfolio. Regulated operations account for more than 95% of consolidated revenues.

55% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Market Perform.

Wells Fargo Securities, LLC has provided investment banking services for 29% of its Equity Research Market Perform-rated companies.

3% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underperform.

Wells Fargo Securities, LLC has provided investment banking services for 14% of its Equity Research Underperform-rated companies.

### Important Disclosure for International Clients

**EEA** – The securities and related financial instruments described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. For recipients in the EEA, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority. For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 ("the Act"), the content of this report has been approved by WFSIL a regulated person under the Act. WFSIL does not deal with retail clients as defined in the Markets in Financial Instruments Directive 2007. The FCA rules made under the Financial Services and Markets Act 2000 for the protection of retail clients will therefore not apply, nor will the Financial Services Compensation Scheme be available. This report is not intended for, and should not be relied upon by, retail clients.

**Australia** – Wells Fargo Securities, LLC is exempt from the requirements to hold an Australian financial services license in respect of the financial services it provides to wholesale clients in Australia. Wells Fargo Securities, LLC is regulated under U.S. laws which differ from Australian laws. Any offer or documentation provided to Australian recipients by Wells Fargo Securities, LLC in the course of providing the financial services will be prepared in accordance with the laws of the United States and not Australian laws.

**Canada** – This report is distributed in Canada by Wells Fargo Securities Canada, Ltd., a registered investment dealer in Canada and member of the Investment Industry Regulatory Organization of Canada (IIROC) and Canadian Investor Protection Fund (CIPF). Wells Fargo Securities, LLC's research analysts may participate in company events such as site visits but are generally prohibited from accepting payment or reimbursement by the subject companies for associated expenses unless pre-authorized by members of Research Management.

**Hong Kong** – This report is issued and distributed in Hong Kong by Wells Fargo Securities Asia Limited ("WFSAL"), a Hong Kong incorporated investment firm licensed and regulated by the Securities and Futures Commission of Hong Kong ("the SFC") to carry on types 1, 4, 6 and 9 regulated activities (as defined in the Securities and Futures Ordinance (Cap. 571 of The Laws of Hong Kong), "the SFO"). This report is not intended for, and should not be relied on by, any person other than professional investors (as defined in the SFO). Any securities and related financial instruments described herein are not intended for sale, nor will be sold, to any person other than professional investors (as defined in the SFO). The author or authors of this report is or are not licensed by the SFC. Professional investors who receive this report should direct any queries regarding its contents to Mark Jones at WFSAL (email: wfsalresearch@wellsfargo.com ).

**Japan** – This report is distributed in Japan by Wells Fargo Securities (Japan) Co., Ltd, registered with the Kanto Local Finance Bureau to conduct broking and dealing of type 1 and type 2 financial instruments and agency or intermediary service for entry into investment advisory or discretionary investment contracts. This report is intended for distribution only to professional investors (Tokutei Toushika) and is not intended for, and should not be relied upon by, ordinary customers (Ippan Toushika).

The ratings stated on the document are not provided by rating agencies registered with the Financial Services Agency of Japan (JFSA) but by group companies of JFSA-registered rating agencies. These group companies may include Moody's Investors Services Inc., Standard & Poor's Rating Services and/or Fitch Ratings. Any decisions to invest in securities or transactions should be made after reviewing policies and methodologies used for assigning credit ratings and assumptions, significance and limitations of the credit ratings stated on the respective rating agencies' websites.
