

Thank you, Judge Barnes and Judge Calvelli, for taking the time to listen and take into account the opinions and concerns of the community regarding the proposed power line. Please consider rejecting Transource's application and please take my personal opinion, written below, into account when making your final decision.

I strongly disagree with the proposed project. While the proposed project does not go thru my property, it will be visible from my property. The proposed route takes it thru pristine & valuable farmland. It will decrease property values in the area. If the project is approved there should be a commensurate decrease in property taxes. The project appears to be marginally economically feasible, has no beneficial effect for area residents in fact it will be harmful & have a detrimental effect by destroying valuable farmland, destroying wildlife habitat, affecting which have reproductive value. A quality fishery & its fisheries. It appears to only benefit electrical suppliers by increasing their profit & only saving consumers a very small amount. There are existing towers near the proposed route that appear to be underutilized that could possibly be used. There is also the possibility of long term health effects, noise & electrical interference from proposed line. Who will compensate area residents if this occurs. In the late 1950's early 60's an AT&T cable was laid throughout farm which affected the land. The right of way was poorly

Thank you, Judge Barnes and Judge Calvelli, for taking the time to listen and take into account the opinions and concerns of the community regarding the proposed power line. Please consider rejecting Transource's application and please take my personal opinion, written below, into account when making your final decision.

My father was approached to sell a piece of his farm for the substation in York County. My brother and I were present at the meeting between Transource representatives and him. It was implied to us that Transource was going to follow the existing power line areas wherever possible and that it was also going to benefit the local power recipients price wise. We felt that it was a good decision for him to sign the paperwork to offer his property for the substation. The other property was chosen for the site, but we would be sorry now if my father's site had been picked.

I am now opposed to this power line because of what has transpired since then. The power line will NOT be following existing power lines. It will be cutting up prime farm land. It will be affecting people's incomes in this area. It will not be benefit enough to the price of electricity in this area to offset the loss of the beauty of the land and loss of the good will of the people. The benefits and good will are going down the road to Washington DC and Virginia.

I don't know how it will benefit the residents of PA

I don't understand why a new powerline needs to be built when other powerlines are not used to their fullest potential

I do not understand why our agriculture

I really do not feel that our family farms need to be used by a company that is only out to make money and ruin ~~the health~~ the livelihoods of others.

The building of those powerlines will lower property values if the line is constructed
