411 7th Avenue
Pittsburgh, PA 15219

Attention Jaime A. Bachota
Assistant Controller

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to the electric plant of Duquesne Light Company. The results of our study as of December 31, 2022, are presented in the attached detailed report.

The results of our study as of December 31, 2021, as well as a discussion of the methods and procedures used in the calculations and the support for the service life estimates, are included in our report titled "2021 Depreciation Study - Calculated Annual Depreciation Accruals Related to Electric Plant as of December 31, 2021." The same methods, procedures and estimates were used in both studies.

The results of our study as of December 31, 2022, are summarized on pages I-3 through I-7 of the attached report.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

Cumulative Depreciated Original Cost	II-2
Utility Plant in Service.....	II-6
PART III. EXPERIENCED AND ESTIMATED NET SALVAGE	III-1

PART I. RESULTS OF STUDY

PART I. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

The tables on pages I-3 through I-7 summarize the results of the depreciation studies for electric plant as of December 31, 2022. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2022, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 2 presents the bringforward of the book reserve to December 31, 2022. Table 3 sets forth the calculations of the depreciation accruals for the twelve months ended December 31, 2022. Table 4 presents the amortization of experienced and estimated net salvage based on the period 2018 through 2022.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of survivor curves are presented in Exhibit JJS 2. Supporting data for the original cost depreciation calculations in account sequence are presented in this report beginning on page II-6. The tables of the calculated original cost depreciation indicate the estimated survivor curves used in the calculations and set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life, and calculated remaining life accrual. The amount of regular retirements, gross salvage and cost of removal are set forth by account for the years 2018 through 2022, beginning on pages III-2 through III-4.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 2-R**

Rebuttal Testimony of Jaime A. Bachota

Dated: July 26, 2021

TABLE OF CONTENTS

	<u>PAGE</u>
I. INTRODUCTION AND SUMMARY	3
II. OPERATING INCOME ELEMENTS.....	3
III. CLOUD BASED SOFTWARE IMPLEMENTATION, AFUDC, AND RATE BASE REPORTING.....	12
IV. COVID-19 RELATED REGULATORY ASSET.....	16
V. CAPITALIZED PENSION ADJUSTMENT.....	25
VI. CONCLUSION	36

1 **I. Introduction and Summary**

2
3 **Q. Please state your full name, business affiliation and address.**

4 A. My name is Jaime A. Bachota. I am the Assistant Controller of Duquesne Light
5 Company ("Duquesne Light" or the "Company"). My business address is 411
6 Seventh Avenue, Pittsburgh, PA 15219.

7
8 **Q. Did you previously submit testimony in this proceeding on behalf of
9 Duquesne Light Company?**

10 A. Yes I did. I submitted my direct testimony (Statement No. 2) on April 8, 2021.

11
12 **Q. What is the purpose of your rebuttal testimony?**

13 A. My rebuttal testimony responds to portions of the direct testimony of the
14 following witnesses:

- 15 • Office of Consumer Advocate ("OCA") witnesses Lafayette K.
16 Morgan as to operation and maintenance expense adjustments, Cloud-
17 Based Software Implementation Costs, Capitalized Pension
18 Adjustment and COVID-Related Regulatory Assets.
- 19 • Bureau of Investigation & Enforcement ("I&E") witnesses Christopher
20 Keller and Christine Wilson as to operation and maintenance expense
21 adjustments and COVID-19 related costs.
- 22 • Natural Resources Defense Council ("NRDC") witness Amanda Levin
23 as to COVID-19 related costs.

24 The order in which I will address the issues raised by these witnesses is outlined
25 in the table of contents to this testimony.

26
27 **II. Operating Income Elements**

28 **Operating and Maintenance Expenses**

29 **Q. Please describe the Company's claim for rate case expense.**

30 A. Included in the Company's proposed revenue requirement is a claim for prudent rate
31 case filing expenses to be normalized and recovered over a three-year period.

1 Q. **What was I&E Witness Keller’s recommendation related to rate case filing**
2 **expenses?**

3 A. On page 6 of Mr. Keller’s direct testimony he recommends a 43-month
4 normalization period.

5

6 Q. **Do you agree with I&E Witness Keller’s proposal to increase the**
7 **normalization period to 43 months?**

8 A. No. Please see rebuttal testimony of Mr. Robert O’Brien for further discussion as
9 to why we believe that the three-year normalization is appropriate.

10

11 Q. **Please describe the Company’s claim in the Fully Projected Future Test Year**
12 **(“FPFTY”) for salary and wage expense?**

13 A. Included in the Company’s direct claim in the FPFTY were salary and wage
14 expenses of \$93,662,000. This claim is based on budgeted salary and wages for
15 the FPFTY with adjustments for anticipated wage increases and for anticipated
16 vacancies.

17

18 Q. **What assertions did I&E Witness Keller and OCA Witness Morgan make in**
19 **their direct testimony about the Company’s salary and wage expense?**

20 A. Mr. Keller, on pages 10 and 11 of his direct testimony, and Mr. Morgan on page
21 20 asserted that the Company’s proposed claim does not accurately represent
22 what the Company will pay in the twelve months that make up the FPFTY. Mr.
23 Keller and Mr. Morgan propose to remove all annualization adjustments made by
24 the Company in the FPFTY in order to reflect the anticipated amount to be
25 incurred during that period. Mr. Keller and Mr. Morgan have also reduced the
26 staffing levels requested by the Company based upon historical vacancy records.
27 Mr. Keller recommends a reduction to FPFTY salary and wage expense of
28 \$2,490,000. Mr. Morgan recommends a reduction to FPFTY salary and wage
29 expense of \$4,878,000.

30

1 **Q. Do you agree with I&E Witness Keller's and OCA Witness Morgan's**
2 **proposal to remove the annualization of salary and wage expense in the**
3 **FPFTY?**

4 A. No, I do not. Please see the rebuttal testimony of Robert L. O'Brien for further
5 discussion of why we believe annualizing adjustments are appropriate.
6

7 **Q. What assertions about the Company's vacancy levels did I&E Witness Keller**
8 **make in his direct testimony?**

9 A. Mr. Keller asserted on page 13 of his direct testimony that the Company's
10 vacancy reserve of 100 that was included in the FPFTY claim is not adequate.
11 Mr. Keller calculated an average monthly vacancy rate of 132 positions for the
12 period from January 2018 to March 2021. Mr. Keller then multiplied the
13 additional 32 vacancies (132 vacancies less the 100 vacancies included in the
14 Company's FPFTY claim) by an average salary to arrive at a recommended
15 reduction to distribution salary and wage expense of \$1,489,000. Mr. Keller's
16 assertion would project 1,610 employees in FPFTY (I&E St. No. 2, pp. 13-14).
17

18 **Q. What assertions about the Company's vacancy levels did OCA Witness**
19 **Morgan make in his direct testimony?**

20 A. Mr. Morgan also questioned the Company's vacancy reserve of 100. He proposed
21 to instead use the Company's actual average vacancies during the HTY, 2020,
22 which produced a proposed reduction in payroll expense of \$2,689,000 (as well as
23 consequent adjustments to 401k expense and payroll tax expense, which I discuss
24 separately below). Mr. Morgan's calculation would project 1,594 employees in
25 the FPFTY (OCA St. 1, p. 21; Exhibit LKM-9).
26

27 **Q. Do you agree with I&E Witness Keller's or OCA Witness Morgan's**
28 **calculation of expected vacancies during the FPFTY?**

29 A. No, I do not. There are several reasons why their calculations are not appropriate
30 to use as a basis for the number of vacancies in the FPFTY. The COVID-19
31 pandemic substantially impacted the Company's operations starting in March of

1 2020. As a result of this unexpected event, the Company elected to defer the
2 hiring of personnel so as to generate cash flows to fund the Company's
3 infrastructure investment program. The Company's HTY vacancy levels were
4 therefore not representative of future levels.¹ Second, the Company has
5 demonstrated its projections are accurate or even slightly conservative. In the
6 Company's last filed base distribution rate case (Docket No. R-2018-3000124),
7 the Company's claim included a projected 1,582 employees as of the end of the
8 FPFTY. At the time the Company filed rebuttal testimony in that proceeding, the
9 Company had 1,504 employees. As of the end of the FPFTY used in that
10 proceeding, the Company's actual headcount was 1,584 employees, more than
11 projected.

12
13 **Q. Why do you expect the Company to add additional people to its employee**
14 **complement during the second half of the FTY and throughout the FPFTY?**

15 The Company's current headcount as of the end of June 2021 is 1,577 employees.
16 The Company projects to be at 1,642 employees by the end of the FTY. Of the 65
17 positions to be filled, 21 have been awarded as part of the Company's Electrical
18 Distribution Technology ("EDT") program. These students will commence
19 employment in August 2021. The remainder of the open positions are actively
20 being recruited. Taking into account the EDT hires, through June 2021 the
21 Company has increased its headcount by 14 employees since the end of the HTY.
22 By simply continuing to hire at the Company's historical pace as well as
23 implementing additional retention strategies, the Company's headcount will
24 approximate where we expected to be from a headcount perspective as of the end
25 of the FPFTY.

26
27 **Q. Did I&E Witness Keller propose any other adjustments in his direct**
28 **testimony related to his adjustment to salary and wages?**

¹ In addition, Mr. Morgan does not adequately explain his analysis. He states that he determined that the Company's "actual number of vacancies exceed the number of vacancies reflected in the vacancy factor in every month" for the period January 2018 through March 2021. However, he did not explain whether or how this analysis supports his decision to use the HTY as the basis for his recommendation.

1 A. Yes, he did. Mr. Keller has recommended a reduction in the Company's payroll
2 tax expense, health insurance expense and 401k expense claims based upon
3 recognition of the adjustments that he made to the Company's salary and wage
4 expense claim. Mr. Keller multiplied his adjustment to salary and wage expense
5 of \$2,490,000 by an implied payroll tax rate of 8.9%. This calculation produced a
6 reduction to FPFTY payroll taxes of \$222,000. Mr. Keller multiplied his
7 adjustment to headcount of 32 employees by an implied average health insurance
8 expense per employee of \$4,085. This calculation produced a reduction to
9 FPFTY health insurance expense of \$131,000. Mr. Keller has multiplied his
10 adjustment of \$5,243,000 by an implied 401k expense rate of 6.8%. This
11 calculation produced a reduction to FPFTY 401k expense of \$169,000.

12

13 **Q. Did OCA Witness Morgan propose any other adjustments in his direct**
14 **testimony related to his adjustment to salary and wages?**

15 A. Yes. Like Mr. Keller, Mr. Morgan utilized the same basic approach as Mr. Keller
16 but arrived at a different revised headcount number. Mr. Morgan recommends
17 reductions to the Company's payroll tax expense and 401k expense, which he
18 premised on his proposal to adjust the Company's vacancy factor to match the
19 Company's actual average vacancies during the HTY (2020). Mr. Morgan's
20 approach yielded proposed reductions in the Company's payroll tax expense of
21 \$373,000 and 401k expense of \$244,000 (OCA St. 1, p. 21, lines 9-23).

22

23 **Q. Do you agree with I&E Witness Keller's or OCA Witness Morgan's**
24 **proposed adjustments?**

25 A. No, I do not. I do not believe an adjustment is necessary in relation to Mr.
26 Keller's and Mr. Morgan's adjustments of FPFTY salary and wage amounts as
27 previously discussed in this testimony. Accordingly, their corresponding
28 adjustments to payroll tax expense, health insurance expense or 401k expense
29 have no merit.

30

31 **Q. What is the Company's claim regarding incentive compensation expense?**

1 A. Included in the Company's distribution claim in the FPFTY was incentive
2 compensation expense of \$10,607,000. The Company's claim is based on
3 budgeted incentive compensation levels calculated on an employee by employee
4 basis, taking into account each employee's expected salary, short term incentive
5 payout percentage and long-term incentive award target amount.

6

7 **Q. What assertions did I&E Witness Keller make in his direct testimony about**
8 **the Company's incentive compensation claim?**

9 A. Mr. Keller asserts that the Company's claim should be based upon a three-year
10 historical average of incentive compensation payouts (I&E St. No. 2, p. 17). Mr.
11 Keller proposes this adjustment based upon the premise that not all goals will be
12 met each and every year and that using a prior three year average for the years
13 2018, 2019 and 2020 provides a more supported and realistic incentive
14 compensation amount. Mr. Keller's adjustment results in a reduction of
15 \$2,967,000 to the Company's total incentive compensation expense claim (I&E
16 St. No. 2, p.18).

17

18 **Q. Do you agree with the adjustment that I&E Witness Keller has proposed?**

19 A. No, I do not. Mr. Keller's calculation is not an accurate estimate of incentive
20 compensation amounts to be paid to employees in the FPFTY. Incentive
21 compensation payments are based upon a variety of factors, most of which are
22 ignored in Mr. Keller's calculated adjustment.

23

24 **Q. Please explain why using a historical average of Short Term Incentive Plan**
25 **("STIP") expenses would not yield an appropriate estimate for the FPFTY?**

26 Our STIP is based upon a percentage of salary target as determined by each
27 eligible employees' job level. For instance, a supervisor with a salary of
28 \$100,000 would have a STIP target percentage of 10% or \$10,000. The STIP
29 payout is then determined by Company Key Performance Indicators ("KPI") and
30 earnings performance, as well as each individual employees' performance during
31 the year. In the historical period utilized by Mr. Keller in his estimate, several

1 factors impact payout amounts. The Company also adjusted its STIP plan to put
2 additional emphasis on individual employee performance. And lastly, between
3 the end of 2018 and the end of 2020, non-union employees have increased from
4 701 to 763. This increase in employees has increased the number of participants
5 in the STIP plans. These factors are not taken into account in Mr. Keller's
6 calculation and therefore his calculation should be rejected.

7
8 **Q. Please explain why using a historical average of Long Term Incentive Plan**
9 **("LTIP") expenses would not yield an appropriate estimate for the FPFTY?**

10 A. In conformity with generally accepted accounting principles in the United States
11 ("GAAP"), the Company is required to expense multiyear compensation plans
12 ratably over the plan period. The Company's LTIP program is based on annual
13 grants with an associated 3 years performance period; LTIP payouts are based on
14 cumulative calculations at the end of the 3-year performance period. In any given
15 year, there can be as many as three plans outstanding. While the structure of the
16 LTIP plan has not changed in the period Mr. Keller is using for his calculation,
17 the make-up of the LTIP has been inconsistent in the 3-years that Mr. Keller is
18 using. In each of the years, the Company's executive team was missing key
19 positions which understated incentive compensation.

20
21 **Q. Does the Company budget incentive compensation amounts assuming that all**
22 **targets are met?**

23 A. No, we do not. STIP amounts are budgeted at 90% of targeted amounts. LTIP
24 amounts are budgeted at 100% of targeted amounts. However, both incentive
25 plans allow a participant to earn above the targeted compensation amount.

26
27 **Q. What assertion does OCA Witness Morgan make regarding the Company's**
28 **incentive compensation claim?**

29 A. Mr. Morgan is recommending to remove the portion of incentive plan costs that
30 are associated with earnings goals or increasing earnings (OCA St. No. 1, pp 22-
31 23). He is asserting that these types of goals are targeted towards increasing

1 shareholder value and therefore not properly recoverable from ratepayers. Mr.
2 Morgan concludes that a reduction to FPPTY incentive compensation expenses of
3 \$6,695,000 is warranted.
4

5 **Q. Do you agree with the adjustment OCA Witness Morgan has proposed?**

6 A. No, I do not. As an initial matter, I note that Duquesne Light's incentive
7 compensation program as a whole includes both financial and operating metrics
8 and goals which benefit customers. The overall plan includes safety, reliability
9 and customer service metrics which improve the operational effectiveness of the
10 Company. Eligible employees are all responsible for customer service,
11 regulatory compliance and/or ensuring safe and reliable service to customers.
12 Moreover, the achievement of financial goals provides important and direct
13 benefits to customers. Consistent financial performance will allow the Company
14 to place debt in capital markets at reasonable rates. In addition, good financial
15 performance provides an internal source of capital which reduces the need to go
16 to the capital markets for financing. It also can defer the need to file for rate
17 increases and reduce the amount of any requested rate increase. The inclusion of
18 financial goals also helps to ensure there are sufficient funds to pay incentives.
19 Clearly, achievement of these financial goals is a direct benefit to customers, and
20 therefore should be fully reflected in rates. In addition, those employees eligible
21 to receive incentive compensation under these plans are key in the process of
22 establishing the operating and customer-focused goals for the Company, and are a
23 driving force behind ensuring that these goals are achieved.

24 The use of incentive compensation to drive results is standard business
25 practice. It helps to attract and retain talented personnel and to incent personnel
26 to make decisions that enhance operational and financial results. The focus on
27 financial results benefits the rate payer as it incentivizes management to manage
28 the business efficiently and effectively. To further emphasize the value of
29 incentive programs generally, it must be recognized that incentive compensation
30 is only one part of the Company's total compensation package, which is market
31 driven, reasonable, and appropriate. Compensation is an integral cost of doing

1 business and fundamental to attracting, hiring, motivating, and retaining talent at
2 the Company. Incentive compensation is a normal cost of doing business and,
3 therefore, should be fully reflected in rates.

4 If the Company did not have incentive compensation, it would have to
5 increase the level of its base salary compensation in order to remain competitive
6 with other employers to attract qualified candidates. This too would increase
7 costs to customers and would eliminate the benefits of incentive compensation
8 described above. If the Company were not to pay competitively, it would
9 increase its risk of not attracting, hiring, motivating, and retaining the Company's
10 talent. This would lead to reduced quality of service due to increased turnover
11 and higher costs of recruiting, hiring and training which could result in increased
12 cost to customers. Incentive compensation is an element of employee pay that is
13 contingent upon performance or the results achieved. This pay is considered "at
14 risk" for each performance period, requiring sustained performance to receive this
15 reward.

16 For these reasons, Mr. Morgan's adjustment should be rejected.

17
18 **Q. What recommendation did I&E Witness Wilson recommend regarding the**
19 **Company's claim for pension expense?**

20 A. Ms. Wilson recommends that the Company include disregarded language from
21 the Company's 2018 Commission order (Docket No. R-2018-3000124).

22
23 **Q. Do you agree with Witness Wilson's recommendation?**

24 A. Yes, I do. As I clarified in discovery and Witness Wilson acknowledges in her
25 direct testimony (I&E St. 1, p. 7, lines 7-10), this language was inadvertently left
26 out of my original testimony and should be included in the resolution of this case.

27
28 **Q. What recommendation did OCA Witness Morgan make for postretirement**
29 **benefits expense?**

30 A. Mr. Morgan asserts that the amount that the Company is utilizing for other
31 postretirement benefits expense ("OPEBs") is not derived from the 2-year average

1 OPEB expense as previously discussed in my direct testimony. Mr. Morgan
2 recommends an adjustment to reduce OPEB expense by \$318,000 which reflects
3 the average of the two most recent historical years (OCA St. No 1, p. 23).

4
5 **Q. Do you agree with OCA Witness Morgan’s recommendation?**

6 A. No, I do not. In my prior testimony, it is stated that the Company’s claim for
7 OPEB expenses is as follows: “The Company has incorporated a two year
8 average into its ratemaking calculations for the portion of actuarially determined
9 net periodic cost for postretirement benefits that will be recovered as an expense
10 for ratemaking purposes. Two years was selected to be consistent with the
11 treatment in its last distribution rate case settlement.” (DLC St. 2, p. 36, lines 16-
12 20.) In addition, “Any difference between the annual book accrual and the
13 ratemaking allowance will be deferred and amortized over a reasonable period as
14 an increase or decrease to the rate allowance for OPEBs in the next rate
15 proceeding. This procedure is consistent with the Commission’s requirement that
16 the rate allowance be placed in the trust without regard to the actual annual
17 accrual. As of December 31, 2020, the Company had recorded a regulatory
18 liability of approximately \$2.0 million related to OPEBs. The Company has
19 amortized this amount over a three year period in its ratemaking calculations.”
20 (DLC St. 2, p. 37, lines 4-13.) Mr. Morgan’s recommendation does not take into
21 account the regulatory liability portion which represents the difference between
22 actual book accruals and the ratemaking allowance. As part of preparation for
23 rebuttal, the Company performed a true up of its OPEB expense claim which
24 warranted a further credit of the distribution portion of the OPEB expense claim
25 of \$68,000. See rebuttal adjustments within Mr. Robert O’Brien’s rebuttal
26 testimony.

27
28 **II. Cloud Based Software Implementation Costs, AFUDC, and Rate Base**
29 **Reporting**
30

31 **Q. What concerns did OCA Witness Morgan have regarding the Company’s**
32 **inclusion of cloud-based implementation costs in the Company’s claim?**

1 A. Mr. Morgan cites 3 main concerns associated with the Company's claim (OCA St.
2 No. 1, pp 8-10). His allegations concern: 1. Cloud based implementation costs
3 are recorded as operating expenses and no adjustment was made to operating
4 expenses in the Company's claim, 2. The adoption of the FERC's accounting
5 directive and the impact on the Company's claim and 3. Rate base is overstated or
6 operating expenses are overstated.

7
8 **Q. Do you agree with the concerns that Mr. Morgan cites in his testimony?**

9 A. No, I do not. On the first concern regarding the recording of cloud-based
10 implementation costs, these costs are originally included within operating
11 expenses but then are adjusted to a regulatory asset account which is in
12 compliance with the Commission's Order in the 2018 rate case (R-2018-
13 3000124). As these amounts are already removed from the operating expenses
14 there is no need for an adjustment by Mr. O'Brien.

15 Secondly, the Company did adopt the FERC's accounting for FERC
16 reporting purposes, but not for GAAP purposes as the Company's previous
17 settlement agreement allows for regulatory asset treatment for cloud-based
18 implementation costs. The adjustment from the regulatory asset to rate base is
19 only performed as an adjustment for ratemaking purposes and the Company's
20 books and records show these amounts as a regulatory asset. As such, the
21 Company needed to make this ratemaking adjustment (as prescribed in the last
22 case's settlement) in order to get the cloud-based implementation costs and
23 related depreciation impacts into rate base. However, due to the issuance of
24 GAAP guidance (ASU 2018-15) subsequent to the Company's rate case
25 settlement agreement, cloud base costs would now be included in rate base
26 without regulatory asset treatment.

27 Last, based on the above discussion, the Company is not double counting
28 the cloud-based implementation costs in its operating expenses and is properly
29 recording them within rate base for ratemaking purposes.

30
31 **Q. Do you agree with OCA Witness Morgan's recommendation?**

1 A. No, I do not. The Company cannot elect to capitalize cloud-based information
2 system implementation costs under GAAP without the Company-proposed
3 language. The accounting rules do not allow it. However, the Company agrees
4 that the prudence of these costs should be reviewed at each rate proceeding. If the
5 costs are not deemed to be prudent, the Company will not be permitted to recover
6 them. However, if the Company is not permitted to capitalize these costs, it runs
7 the risk of not collecting them. The Company also believes deferring these costs
8 as a regulatory asset will reduce the volatility on earnings that may exist as
9 amounts are reclassified from expense to capital in conjunction with each base
10 rate case proceeding.

11

12 **Q. What recommendation does OCA Witness Morgan related to AFUDC on**
13 **Land Held for Future Use?**

14 A. Mr. Morgan requests that the Commission not allow the Company to accrue
15 AFUDC on land held for future use (OCA St. No. 1, p. 28).

16

17 **Q. Do you agree with OCA Witness Morgan's Recommendation?**

18 A. No, I do not. Per FERC Accounting Release No. 5, "Capitalization of Interest
19 During Construction" (AR-5 Revised).

20

21 The capitalization period for AFUDC begins when two conditions
22 are present: (1) capital expenditures for the project have been
23 incurred; and (2) activities that are necessary to get the
24 construction project ready for its intended use are in progress.
25 AFUDC capitalization shall continue as long as these two
26 conditions are present. The term "activities" is to be construed
27 broadly and includes all the actions required to prepare the
28 construction project for its intended use, including activities prior
29 to physical construction, such as the development of plans or the
30 process of obtaining permits from governmental authorities.

31

32 AFUDC on land and land rights is part of the cost of constructing a new
33 facility, and as such, these costs should be capitalized as part of the construction
34 cost of the facility to be recovered through depreciation rather than as part of the

1 cost of the land which is not depreciated. Accordingly, AFUDC accrued on the
2 cost of land and land rights is transferred to the related construction project as part
3 of the cost of the facility constructed. This transfer is made when the facility
4 being constructed is placed in-service. In some circumstances, the Company
5 needs to secure land in critical areas for future use which ultimately saves
6 customers money over the long-term. As the Company is able to justify the time
7 between the purchase of land and the construction as being reasonable based upon
8 the above discussion, AFUDC treatment on land is allowable under AR-5
9 (Revised).

10
11 **Q. What does I&E Witness Kubas recommend regarding plant additions that**
12 **the Company projects to be in service during the FTY and FPFTY?**

13 A. Mr. Kubas recommends that the Company provide the Commission's Bureaus of
14 Technical Utility Services and Investigation and Enforcement with an update to
15 DLC Exhibit No. 2, Book 6, Schedule C-2, pages 1-4 no later than April 1, 2022,
16 including an update to actual capital expenditures, plant additions and retirements
17 by month from January 1, 2021 through December 31, 2021 (DLC Exhibit No. 2,
18 Book 5, Schedule C-2, pages 1-4) and an additional update for actuals from
19 January 1, 2022 through December 31, 2022, no later than April 1, 2023 (I&E St.
20 No. 4, pp 7-8).

21
22 **Q. Do you agree with I&E Witness Kubas' recommendation?**

23 A. Mr. Kubas does not identify any authority that would obligate the Company to
24 provide the requested updates. Nevertheless, the Company agrees to provide the
25 Commission's Bureaus of Technical Utility Services and Investigation and
26 Enforcement with an update to DLC Exhibit No. 2, Schedule C-2, page 3, no later
27 than April 1, 2022, including actual plant additions and retirements by month
28 from January 1, 2021 through December 31, 2021 and an additional update for
29 actuals from January 1, 2022 through December 31, 2022, no later than April 1,
30 2023.

31

1 **Q. What assertion did I&E Witness Keller make in relation to the Company’s**
2 **advertising expense claim?**

3 A. Included in the Company’s direct claim in the FPFTY was a \$158,000 advertising
4 expense related to the Pittsburgh Home and Garden Show Sponsorship. Mr.
5 Keller asserts that the fee includes sponsorship expenses that are not necessary to
6 provide safe and reliable service to ratepayers. Mr. Keller’s proposes an
7 adjustment to reduce the Company’s membership claim by \$158,000 (I&E St. No.
8 2, p. 23).

9
10 **Q. Do you agree with the adjustment proposed by I&E Witness Keller?**

11 A. I disagree with Witness Keller’s averment that the Company’s sponsorship costs
12 should not be recovered from ratepayers. However, the Company will accept his
13 adjustment here. Please see the rebuttal testimony of Mr. Robert O’Brien for
14 rebuttal adjustments.

15
16 **Q. What assertion did I&E Witness Keller make in relation to the Company’s**
17 **eligible customer listing solicitations claim?**

18 A. Included in the Company’s claim was a deferral of \$339,000 to be normalized
19 over a three-year period (\$113,000 per year). Mr. Keller recommends that the
20 Company’s claimed three-year normalization of the eligible customer listing
21 solicitation be changed to use a 43-month normalization period in line with the
22 Company’s historic filing frequency. Mr. Keller proposes an adjustment to
23 reduce the Company’s claim by \$54,000 (\$18,000 per year) based on the revised
24 normalization period (I&E St. No 2, pp. 24-25).

25
26 **Q. Do you agree with the adjustment proposed by I&E Witness Keller?**

27 A. No. Please see rebuttal testimony of Mr. Robert O’Brien for further discussion as
28 to why we believe that the three-year normalization is appropriate.

29

30 **IV. COVID-19 Related Regulatory Asset**

31

1 Q. **What is the Company's claim for COVID-related uncollectible expenses?**

2 A. Through June 30, 2021, the Company maintains a regulatory asset totaling \$6.1
3 million on its books and records, which represents incremental uncollectible
4 expenses incurred above those embedded in rates in accordance with the
5 Pennsylvania Public Utility Commission's May 13, 2020 Secretarial Letter
6 directing the use of regulatory asset treatment for such incremental costs. The
7 Company is requesting a three-year recovery period or \$2.1 million per year. In
8 addition, the Company is also proposing to continue regulatory asset treatment to
9 be recovered in future rate proceedings.

10

11 Q. **What do I&E Witness Wilson, OCA Witness Morgan and NRDC Witness
12 Levin recommend regarding the Company's COVID-19 related uncollectible
13 regulatory asset?**

14 A. I&E Witness Wilson recommends a normalization period of 43 months vs. the
15 Company's proposed three years. OCA Witness Morgan recommends a
16 normalization period of five years and NRDC Witness Levin recommends a
17 normalization period such as 6 years (or over two expected rate case periods). In
18 addition, I&E Witness Wilson and OCA Witness Morgan recommend that the
19 Company discontinue recording a regulatory asset for COVID-19 related
20 incremental uncollectible costs after the conclusion of the rate case or the
21 effective date of new rates for this proceeding.

22 Q. **Do you agree with the Witness' recommendation for a longer normalization
23 period?**

24 A. No, I do not. Please see the rebuttal testimony of Robert O'Brien for additional
25 discussion regarding the Company's proposed three-year normalization.

26

27 Q. **Do you agree with I&E Witness Wilson and OCA Witness Morgan's
28 recommendation to discontinue recording a regulatory asset for COVID-19
29 related incremental uncollectible costs after the conclusion of the rate case or
30 the effective date of new rates for this proceeding?**

1 A. In part. With respect to COVID-19 related incremental uncollectible expense,
2 the premise of the parties' arguments to discontinue regulatory accounting
3 treatment is that the Company's new rates, including the uncollectible percentage
4 established in this case, should account for continued incremental uncollectible
5 expense. I do not believe that this is correct for several reasons. First, the
6 Company excluded the effects of COVID when it established its uncollectible
7 claim for the FPFTY by excluding 2020 from the historic calculation. Therefore,
8 the uncollectible expense amount in the FPFTY does not account for the future
9 effects of COVID on uncollectible expense. Second, as required under to
10 Commission's COVID-related Orders, the Company has entered into payment
11 arrangements with many customers that were delinquent due to COVID. It is too
12 early to determine how many of these payment arrangements will default and the
13 effect that this will have on uncollectible expense. It is also unknown whether the
14 PUC may issue another termination moratorium in the event of potential
15 subsequent COVID incidents. Fourth, after the effective date of new rates, the
16 continuing regulatory asset will be based upon the uncollectible expense
17 established in this case. For these reasons, I believe that it is appropriate to
18 continue tracking incremental uncollectible expense after the effective date of
19 new rates in this proceeding.

20 With respect to non-uncollectible incremental expenses related to COVID-
21 19: based on current conditions and the Commission's July 15, 2021 Order lifting
22 its March 26, 2020 Order effective September 30, 2021 (see Docket No. M-2020-
23 3019262), the Company agrees to discontinue recording a regulatory asset upon
24 the effective date of new rates set in this proceeding. However, the Company
25 reserves the right to seek regulatory asset treatment in the event of future
26 extraordinary, nonrecurring events outside the Company's control, which could
27 conceivably include re-imposition of government mandates associated with new
28 or resurgent public health emergencies.

29

1 **Q. Please respond to OCA’s argument that the Company does not need a higher**
2 **level of protection for incremental uncollectible expense because it filed for a**
3 **rate increase (OCA St. No. 1, p. 26).**

4 A. I disagree with this assertion. The Company is entitled to recover its reasonable
5 expenses, and the Commission has expressly authorized utilities to recover
6 incremental COVID related expenses, including incremental uncollectible
7 expenses associated with Commission-mandated termination moratoriums and
8 deferred payment arrangements.

9
10 **Q. What is the Company’s claim for other extraordinary, nonrecurring**
11 **incremental COVID-19 related expenses outside of incremental uncollectible**
12 **expenses?**

13 A. In the Company’s original claim, an estimated \$5.8 million was projected to be
14 related to the Company’s other extraordinary, nonrecurring incremental COVID-
15 19 related expenses net of savings outside of incremental uncollectible expenses.
16 This claim represented the time period of March 2020 through June 2021.

17
18 **Q. Does the Company recommend a change to the original claim of \$5.8 million**
19 **covering the period March 2020 through June 2021?**

20 A. Yes. The Company is proposing three updates to its original claim. First, upon
21 further review of the Company’s 2020 other extraordinary, nonrecurring
22 incremental COVID-19 related expenses outside of incremental uncollectible
23 expenses, it was noted that 2021 estimated outside services were included in the
24 2020 amounts. The Company proposes a \$0.5 million reduction in COVID-19
25 expenses associated with this double counted expense. Second, the Company
26 tried up its other extraordinary, nonrecurring incremental COVID-19 related
27 expenses outside of incremental uncollectible expenses for the period of January
28 1, 2021 through June 30, 2021. This resulted in an increase to the expenses of
29 approximately \$0.7 million. Lastly, the Company further scrutinized its claimed
30 COVID-19 savings amounts in 2020 and 2021. This resulted in an increase in
31 savings of approximately \$1.5 million related to additional employee expenses

1 associated with travel, training and parking as well as adjustments related to the
2 Company's utilities variances noted within the time period of March 2020
3 through June 2021. In total, the Company proposes to reduce its original claim by
4 \$1.3 million or \$0.4 million per year. Please see rebuttal adjustments maintained
5 within the rebuttal testimony of Robert O'Brien.

6
7 **Q. What does I&E Witness Wilson recommend regarding the Company's**
8 **COVID-19 related costs, net of savings (excluding the COVID-19**
9 **uncollectible expense deferral)?**

10 A. I&E Witness Wilson recommends that the claim should be disallowed, along with
11 the Company's proposal to continue to include incremental costs above what is
12 included in this proceeding as a regulatory asset to be recovered in a future rate
13 proceeding (I&E St. No. 1, p. 14).

14
15 **Q. What is I&E Witness Wilson's basis for disallowance?**

16 A. I&E Witness Wilson states that the Company did not seek nor receive special
17 permission to defer for accounting purposes any other incremental COVID-19
18 related costs, the Company has not specifically identified any amount(s) directly
19 attributable to additional call center staffing expenses in collecting aged
20 receivables, and the Commission has not provided the basis for recovery of
21 forgone late payments and reconnection fees (I&E St. No. 1, pp. 18-20).

22
23 **Q. Do you agree with I&E Witness Wilson's basis for disallowance?**

24 A. No, I do not. First, at the Pennsylvania Public Utility Commission Public
25 Meeting held on July 15, 2021, an Order regarding the Public Utility Service
26 Moratorium (M-2020-3019244) and COVID-19 Cost Tracking and Creation of a
27 Regulatory Asset (M-2020-3019775), the Commission confirmed "that utilities
28 shall continue tracking extraordinary, nonrecurring incremental COVID-19
29 related expenses and shall maintain detailed accounting records of such expenses.
30 Additionally, the Commission hereby confirms that electric, natural gas, water,
31 wastewater, steam, and all rate base/rate of return telecommunications utilities are

1 authorized to create a regulatory asset for any incremental expenses incurred
2 above those embedded in rates resulting from the directives contained in this
3 Order. To be eligible for inclusion in a utility's COVID-19 designated regulatory
4 asset, the utility must maintain detailed records of the incremental extraordinary,
5 nonrecurring expenses incurred as a result of compliance with the Commission's
6 March 13 Emergency Order, the October 13 Order, the March 18, 2021, Order
7 and this Order." The above order did not require the Company to seek special
8 permission for the deferral of its costs. Second, the Company maintains detailed
9 records via separate work orders which tracked all incremental costs incurred as
10 well as records of savings incurred by the Company. Finally, the Company
11 believes that foregone late payment fees and reconnection fees represent the
12 reimbursement of costs associated with collection and reconnect activities.
13

14 **Q. What did I&E Witness Wilson recommend regarding the deferral of other
15 incremental COVID-19 related costs, net of savings, via a regulatory asset?**

16 A. Witness Wilson believes that the Company should treat any allowed regulatory
17 asset as an amortizable vs. a normalized amount. In addition, Witness Wilson
18 recommends that the frequency of amortization should be 43 months as cited in
19 I&E Witness Keller in his direct testimony (I&E St. No 1, p. 21).
20

21 **Q. Do you agree with I&E Witness Wilson's recommendation regarding the
22 treatment of the proposed regulatory asset?**

23 A. Yes, I agree that the regulatory asset should be amortized.
24

25 **Q. Do you agree with I&E Witness Wilson's recommendation for a 43-month
26 amortization period?**

27 A. No, I do not. Please see further discussion maintained in the rebuttal testimony of
28 Robert O'Brien.
29

1 **Q. Ms. Wilson also argues that there should be a state wide proceeding to**
2 **address incremental COVID costs other than uncollectible expense. Do you**
3 **agree?**

4 A. No. I believe that the Commission has given statewide guidance in its recent
5 Order that I discussed above.

6
7 **Q. Ms. Wilson further states that the Company did not provide detail of**
8 **expenses incurred in complying with the Commission's Orders, such as**
9 **additional call center staffing in collecting uncollectible expense (I&E St. No.**
10 **1, p. 18). Do you agree with this statement?**

11 A. No. I think that Ms. Wilson is improperly narrowing the scope of the
12 Commission's directives with respect to other COVID related incremental
13 expenses.

14
15 **Q. What is OCA Witness Morgan's recommendation related to the Company's**
16 **claim for its extraordinary, nonrecurring incremental COVID-19 related**
17 **expenses, net of savings and outside of incremental uncollectible expenses?**

18 A. Witness Morgan's recommendation for the Company's claim for its net
19 incremental COVID-19 costs is to first reduce the Company's claim by
20 \$2,480,000 for additional savings in medical claims, employee related expenses
21 and utilities, and then remove the claim in its entirety based on alleged
22 immateriality and the assertion that the Commission did not guarantee recovery of
23 any of the costs that may have been deferred.

24
25 **Q. Do you agree with OCA Witness Morgan's recommendation for reducing the**
26 **Company's claim by \$2,480,000?**

27 A. Yes, in part. The Company has made adjustments of approximately \$1.4 million
28 which are the result of further review of additional savings incurred during the
29 pandemic. Specifically, the Company included additional savings amounts
30 related to employee expenses (approximately \$1.1 million) and utilities expense
31 (approximately \$0.5 million). It should be noted that these adjustments reflect

1 amounts within the timeframe of the pandemic and therefore do not represent the
2 full variances shown within the calculations provided by Mr. Morgan (OCA St.
3 No. 1, p. 27). Please see the Company's rebuttal adjustments described above
4 which account for a reduction of approximately \$1.4 million to its original claim.
5 Rebuttal adjustments are discussed further within the rebuttal testimony of Robert
6 O'Brien.

7
8 **Q. Do you agree with OCA Witness Morgan's recommendation for removing**
9 **the remainder of the claim based on immateriality and no guarantee by the**
10 **Commission to recover these costs?**

11 A. No, I do not. Based upon the Commission's stance on regulatory asset for these
12 costs and our records regarding the net costs, the Company should be permitted to
13 recover of the full amount of the net costs. In addition, there should be no
14 materiality assessed to prudent and reasonable extraordinary, nonrecurring
15 incremental COVID-19 related non uncollectible expenses, net of savings.

16
17 **Q. What is NRDC Witness Levin's recommendation as it relates to the**
18 **Company's claim for extraordinary, nonrecurring incremental COVID-19**
19 **related non-uncollectible expenses, net of savings?**

20 A. Witness Levin recommends that the Commission not approve the Company's
21 request for cost recovery without further review of actual versus expected 2020
22 expenses (NRDC St. 1, p. 4, lines 2-4). Witness Levin also recommends a longer
23 amortization period than the Company's proposed three years (NRDC St. 1, p. 4,
24 lines 11-14).

25
26 **Q. Do you agree with NRDC Witness Levin's recommendation regarding the**
27 **disallowance of cost recovery without further review of Company**
28 **documentation?**

29 A. I do not agree with this recommendation. As discussed above, the Company
30 maintains detailed records regarding the make-up of its claim for prudent and
31 reasonable extraordinary, nonrecurring incremental COVID-19 related expenses,

1 net of savings and outside of incremental uncollectible expenses. This rate
2 proceeding is appropriate venue for the Commission and the parties to conduct the
3 type of review Ms. Levin suggests – a fact confirmed by the robust discovery and
4 testimony that NRDC, as well as other parties, have been engaged in on this topic.
5 It would be unreasonable to further postpone the Company’s recovery of these
6 costs pending the vague “further review” Ms. Levin suggests, nor would such
7 proceeding be an efficient use of the parties (or the Commission’s) resources.
8

9 **Q. Ms. Levin questions the Company’s quantification of extraordinary,**
10 **nonrecurring incremental COVID-19 related savings (NRDC St. 1, pp. 18-**
11 **19). Please respond.**

12 A. Ms. Levin suggests that a portion of the Company’s estimated \$399,000 reduction
13 in utility expenses should be deemed attributable to COVID-19 and deducted
14 from the Company’s claim (NRDC St. 1, p. 18, line 12 – p. 19, line 4). She also
15 suggests that the Company may have realized additional COVID-19 related
16 savings as well that should be reflected in the Company’s claim, though she
17 declines to identify any specific line items or quantify the Company’s alleged
18 associated savings (NRDC St. 1, p. 19, lines 5-15).

19 In addition, the Company did revise its original claim as discussed above
20 to account for errors, additional savings, including utilities and employee
21 expenses, and 2021 actual costs incurred. The Company believes that this revised
22 claim is for prudent and reasonable incremental costs.
23

24 **Q. Do you agree with NRDC Witness Levin’s recommendation regarding the**
25 **imposition of a longer amortization period?**

26 A. No. Initially, I note that while Ms. Levin states that a six-year amortization period
27 “could be warranted,” (NRDC St. 1, p. 21, lines 12-13) (emphasis added), she
28 does not actually make a specific recommendation. She instead punts, stating in
29 discovery that “A period of six years . . . was mentioned as one possible length of
30 time for the Commission to consider as an alternative,” (Exhibit JAB-1-R (DLC-
31 NRDC I-5)). In any event, I do not agree with increasing the amortization beyond

1 three years. Please see rebuttal testimony of Robert O' Brien regarding the use of
2 the three-year period.

3
4 **V. Capitalized Pension Adjustment**

5
6 **Q. Describe the Company's historical and current claim as it relates to pension
7 treatment.**

8 A. The Company filed its first rate case in approximately 20 years in 2006. At this
9 time, the Company continued to budget its pension expense using the actuarially
10 determined net periodic pension cost. As part of the 2006 proceeding (R-
11 00061346) the Company requested to recover annual contributions that it planned
12 to make to the pension plans vs. the net periodic pension cost. The accounting
13 treatment proposed at this time requested that the Commission authorize the
14 Company to record annually the difference between the contribution to the
15 pension trust and the annual net periodic pension cost accrual as either a
16 regulatory asset or liability as it was noted that over extended periods of time, the
17 contributions must be essentially the same as the sum of the actuarially
18 determined net periodic pension cost. The Joint Petition for Settlement of All
19 Issues dated in September of 2006 (found at Exhibit JAB-2-R) reflected a level of
20 pension expense commensurate with the Company's expected Pension
21 contributions of \$20 million per year and committed the Company to fund \$20.0
22 million annually to its pension plans during the period rates set in that proceeding
23 remain effective. Should the Company's ERISA minimum contribution exceed
24 \$20.0 million, the Company was required to contribute the ERISA minimum
25 contribution requirement. As noted at paragraph 17 of the Company's 2006
26 settlement agreement:

27 ...rates reflects a level of pension expense based upon expected
28 Pension contributions of \$20 million per year. Duquesne Light
29 commits to fund \$20 million annually to its pension plans during the
30 period rates set in this proceeding remain effective, provided that
31 such funding does not exceed the amount that is deductible under
32 the Internal Revenue Code, in which case, Duquesne Light will fund
33 the amount that is deductible...

1
2 The capitalization of the pension contributions is inherent in the settlement
3 because recovery was limited to the expense component of the contribution and
4 the settlement distinguishes pension expense from pension contributions. The
5 capitalized portion of pension contributions is described further in the 2010 rate
6 case settlement in order to provide more clarity and to perform the adjustment as
7 of January 1, 2007. (See excerpt below).

8 In the Company's 2010 rate case (R-2010-2179522), the Company,
9 consistent with the 2006 rate case requested recovery of the annual contributions
10 that it planned to make to the pension plans. The expense claim for pensions in
11 this proceeding was based on projected pension plan contributions required under
12 the Pension Protection Act of 2006. It was noted in this proceeding that the
13 criteria used to determine these contributions was different from the criteria
14 required to be used to determine the net periodic pension costs under ASC 715.
15 The accounting treatment proposed at this time was consistent with the 2006
16 proceeding where the difference between the contribution and the net periodic
17 pension cost would be recorded as a regulatory asset or liability, with the amount
18 being reversed over time as pension contributions ultimately reflect the net
19 periodic pension cost. The Commission approved the Joint Petition for
20 Settlement of All Issues in December 2010 (provided as Exhibit JAB-3-R). As
21 part of this settlement, the Company agreed to deposit \$55.0 million of pension
22 contributions to its pension trust per year. The Settlement provided for recovery
23 of the expense component of \$27.5 million (50% of the average cash
24 contributions) and allowed the Company to include the other 50% of actual
25 pension contributions from January 1, 2007 forward in rate base for ratemaking
26 purposes. The Company also agreed to reporting requirements annually that
27 would attest to the actual contributions to the pension trust each calendar year. As
28 noted at paragraph 37 of the settlement agreement:

29 Duquesne Light will deposit into its pension trusts an amount equal
30 to \$55,000,000 per year... The Settlement provides for recovery of
31 the expense component of \$27,500,000 (50% of the average cash
32 contribution) of projected future pension contributions.
33 Additionally, Duquesne Light will be permitted to include the other

1 50% of actual pension contributions from January 1, 2007, forward,
2 net of related accumulated deferred income taxes, in rate base for
3 rate making purposes. The rate base adjustment for pensions shall
4 be the amount necessary to adjust the SFAS 87 capitalized pension
5 amounts to equal accumulated capitalized pension contributions, net
6 of applicable deferred income taxes from January 1, 2007 forward.
7 The depreciation expense for book and ratemaking purposes will be
8 based on the SFAS 87 capitalized amounts. The adjustment
9 amounts will be used for reporting rate base in reports to the
10 Commission.
11

12 In its 2013 rate case (R-2013-2372129) and its 2018 rate case (R-2018-3000124),
13 (see Exhibits JAB-4-R and JAB-5-R, respectively) the Company requested and
14 was permitted to use the same recovery mechanisms as described within the 2010
15 settlement agreement whereby the Company was required to deposit \$37.2
16 million into its pension trust per year for the 2013 proceeding and \$10.0 million
17 into its pension trust per year for the 2018 rate case. \$18.6 million and \$5.0
18 million (50% of contribution) represented the allowable expense recovery portion
19 in the 2013 and 2018 settlement agreements, respectively. These settlement
20 agreements also specifically continued to allow the same rate base treatment
21 noted in the prior 2010 settlement agreement and the same reporting
22 requirements.

23 Consistent with our 2006, 2010, 2013 and 2018 distribution rate cases, the
24 Company is requesting recovery in this case of the expense component of the
25 annual contributions that we plan to make to the pension plan. These
26 contributions totaling \$10.0 million per year reflect voluntary pension
27 contributions in order to offset service costs as to not degrade the pension plan's
28 funded status and to continue to foster the Company's de-risking strategies. The
29 Company is also requesting consistent, previously approved rate base treatment of
30 the non-expensed portion of the contribution reporting requirements.
31

32 **Q. Did the Company meet all of the requirements as laid out in the Settlement**
33 **agreements discussed above?**

1 A. Yes. The Company met all requirements as stipulated within the respective
2 settlement agreements. The most critical requirement was to make the projected
3 contributions to the pension trust.
4

5 **Q. What were the Company's pension contributions to its pension trust from
6 December 31, 2006 through June 30, 2021?**

7 A. The Company contributed \$488.3 million to its pension trust during this time
8 period.
9

10 **Q. Why does the Company utilize contributions for its basis for ratemaking
11 claims?**

12 A. The Company utilizes pension contributions for its basis in ratemaking as
13 contributions are determined to be less volatile than using the net periodic pension
14 cost accrual. It was the Company's understanding that the Commission favored
15 using contributions for ratemaking purposes. As stated previously, the
16 Company's annual net periodic pension cost accrual will likely differ from the
17 pension contributions on a year to year basis and use of net periodic pension cost
18 accruals could lead to the Company over or under recovering the costs of the
19 pension plan.
20

21 **Q. What are the primary drivers of contributions and the volatility associated
22 with those amounts?**

23 A. The primary drivers of cash contributions are legal requirements, plan design,
24 interest rates and asset returns.

- 25 1. Legal Requirements - The Company will make all legally required
26 contributions to the plan in accordance with ERISA and PPA.
- 27 2. Plan Design- The Company has closed the pension plan to new salaried
28 employees in an effort to slow the liability growth of the plan.
- 29 3. The Level of Interest Rates - specifically, the interest rates used under PPA to
30 discount future expected benefit payments to determine the present value of those
31 payments. These rates are reset each year as of the measurement date and can

1 have a significant impact on the level of pension obligations and pension expense.
2 Generally, if interest rates decrease by 1%, it can increase obligations by
3 approximately 10%.

4 4. Pension Trust Asset Returns - as market returns rise and fall, so do the assets
5 held in trust to meet pension obligations. Generally, if market values of pension
6 trust assets fall, the plan will experience an increase in required contributions.

7

8 **Q. What was the Company's net periodic pension cost for the years ended**
9 **December 31, 2006 through December 31, 2020?**

10 A. The Company's actuarially determined net periodic pension cost for the years
11 ended December 31, 2006 through December 31, 2020 are shown in the table as
12 follows:

13

Year Ended December 31,	Net Periodic Pension Cost/(Gain) (ASC 715)
2006	\$7.4 million
2007	\$10.1 million
2008	(\$1.6 million)
2009	\$1.2 million
2010	\$18.2 million
2011	\$32.1 million
2012	\$37.2 million
2013	\$35.4 million
2014	\$21.6 million
2015	\$24.0 million
2016	\$16.9 million
2017	\$20.9 million
2018	\$21.3 million
2019	\$15.4 million
2020	\$18.0 million

14

1 It should be noted that the Company's projected net periodic pension costs above
 2 are representative of the cash contribution amounts that the Company made. If
 3 the Company had not made cash contributions, the projected net periodic pension
 4 cost would have been increased in each year.

5

6 **Q. What was the funded status of the Company's pension plan for the time**
 7 **period December 31, 2006 through December 31, 2021?**

8 A. The Company's funded status of the Company's pension plan for the years ended
 9 December 31, 2006 through December 31, 2020 is shown in the table below. As
 10 noted below, the funded status of the plan significantly increased between 2010
 11 and 2021. This is a direct result of the continued contributions and earnings on
 12 the contributions including the amounts reflected in the Company's capitalized
 13 pension adjustment. The Company's expected funded status as of December 31,
 14 2021 is \$72.0 million of a deficit.

Year Ended:	(Underfunded)/Overfunded Status
2006	\$6.5 million
2007	\$19.1 million
2008	(\$218.0 million)
2009	(\$266.0) million
2010	(\$260.6) million
2011	(\$345.2) million
2012	(\$366.6) million
2013	(\$177.9) million
2014	(\$261.8) million
2015	(\$246.6) million
2016	(\$238.6) million
2017	(\$117.9) million
2018	(\$100.0) million
2019	(\$91.0) million
2020	(\$69.5) million

15

1 **Q. What is the Company’s capitalization adjustment claim to rate base in the**
2 **current proceeding and for each of the prior proceedings back to January 1,**
3 **2007?**

4 A. The Company’s current claim and historical claims are as follows:
5

Rate case proceeding:	Capitalized Pension Adjustment included in claim
2010 rate case R-2010-2179522	\$38.0 million
2013 rate case R-2013-2372129	\$59.4 million
2018 rate case R-2018-3000124	\$81.4 million
2021 rate case R-2021-3024750	\$74.4 million

6
7 Once the Company’s pension is fully funded, the Company will not be
8 required to make contributions to its plan and the cumulative rate base adjustment
9 reflecting the difference between the ASC 715 expense and pension contributions
10 will continue to decrease until they converge at the end of the pension.
11

12 **Q. How is the Company’s pension, both expense and capital, recorded in the**
13 **Company’s books and records?**

14 A. The Company’s books and records capitalize approximately 50% of the
15 Company’s pension cost as computed under ASC 715. The 50% capitalization
16 rate approximates the Company’s historic annual percentage of capitalized labor
17 costs. As provided in the Company’s last 4 rate case proceedings, the Company
18 records 50% of cash contributions as expense. Any differences between the cash
19 contribution and the pension cost as computed under ASC 715 is recorded as a
20 regulatory asset or liability.
21

22 **Q. How is the Company’s capitalized pension recorded for rate making**
23 **purposes?**

24 A. In accordance with the Company’s past settlement agreements discussed above,
25 for ratemaking purposes, the Company makes a pro forma adjustment to rate base

1 for the portion of 50% of the Company's cash contributions to pensions that has
2 not been capitalized under ASC 715 pension cost that is recorded in the
3 Company's books and records. The use of cash contributions for ratemaking
4 purposes to fund both pension expense and pension cost capitalized amounts
5 contributed to the pension trust is in accordance with the settlement agreements of
6 the Company's 2006, 2010, 2013 and 2018 rate cases.

7

8 **Q. What is OCA Witness Morgan's interpretation of the Company's accounting**
9 **for the expense and capital portions of the pension?**

10 A. As noted on page 12 of Mr. Morgan's direct testimony (OCA St. No. 1), he states
11 that once ASC 715, "costs are determined, the costs are broken down into the
12 expense and capital components and such amounts are actually recorded in the
13 Company's books and records for financial reporting purposes."

14

15 **Q. Do you agree with OCA Witness Morgan's interpretation?**

16 A. No, I do not. The Company's accounting treatment is discussed further above.

17

18 **Q. Why does the Company believe that the capitalized pension adjustment is an**
19 **appropriate adjustment to rate base in its claim?**

20 A. The Company moved to pension cash contributions in its 2006 settled rate case.
21 Therefore, consistent and reasonable ratemaking requires that cash contributions
22 be used for both expense and amounts capitalized and included in rate base. The
23 cash contributions in the pension trust that are reflected in the pension
24 capitalization adjustment are the amounts that were deposited by the Company in
25 the pension trust in excess of the ASC 715 capitalized amounts and continue to
26 benefit customers. If these amounts had not been put in the trust, the Company's
27 underfunded status would be higher and greater future contributions would be
28 required. In addition, the Company believes that it should be able to earn a
29 reasonable rate of return on all capital expenditures incurred through the end of
30 the fully projected future test year as it does for all plant items, including amounts
31 attributable to labor benefits charged to capital projects. Not including capitalized

1 pension costs in rate base would be inconsistent with all other capital charges, as
2 well as inconsistent with the prior approved rate treatment of such costs. As there
3 is volatility in both the pension cash contributions and the ASC 715 pension costs,
4 the Company believes that maintaining consistency with regard to pension
5 expense and capitalized pension costs for ratemaking purposes is appropriate.
6 The Company believes that capitalization of the excess pension contributions
7 provides fair treatment for the Company and its shareholders. In this regard, the
8 Company made \$30.0 million of contributions to the pension trust through 2021
9 pursuant to its commitment in the last case. Only \$15.0 million of the expense
10 component has been collected in rates with the remainder being capitalized for
11 ratemaking purposes. The Company has not been able to earn a return on the
12 \$15.0 million that is being capitalized for ratemaking purposes since the last rate
13 case. The Company will be denied the ability to earn a fair rate of return if this
14 amount is not included in rate base in this proceeding. The Company already
15 experiences regulatory lag in recovering a return on its investment in capitalized
16 pension costs. Given the significant variance between pension cash contributions
17 made by the Company and the Company's capitalized net periodic service cost,
18 directing the Company to use an accounting pension cost amount for capitalized
19 pension costs will result in an unreasonable amount of regulatory lag on its cash
20 investment because this amount likely will not catch up to the capitalized amount
21 on a contribution basis for years into the future. In addition, obtaining financing
22 for future pension contributions, or any other financing need, is always more
23 difficult if the application for the funds does not receive an appropriate regulatory
24 return.

25
26 **Q. What is the basis for your statement that the capitalized pension adjustment**
27 **is an investment by the Company?**

28 A. The settlements required contributions to the pension trust in excess of ASC 715
29 capitalized amounts. If the settlements had not done so the Company could have
30 contributed less to the pension trust and invested that amount, which is
31 significant, in additional plant replacements that would have provided and would

1 continue to provide a return to the Company. While the Company is not indicating
2 that would be the preferred option, it illustrates that the investment of these funds
3 in the pension trusts represents an investment of the Company's capital which
4 deserves a return.
5

6 **Q. What is OCA Witness Morgan's recommendation related to the Company's**
7 **capitalized pension claim?**

8 A. Mr. Morgan recommends an adjustment to remove the Company's Capitalized
9 Pension Adjustment from the Company's rate base claim (OCA St. No. 1, pp. 16-
10 17).
11

12 **Q. Do you agree with OCA Witness Morgan's recommendation?**

13 A. No, I do not. Mr. Morgan's recommendation should be rejected.
14

15 **Q. What is OCA Witness Morgan's basis for the disallowance of the Company's**
16 **capitalized pension adjustment?**

17 A. Mr. Morgan asserts two main items that result in his proposed disallowance of the
18 Company's capitalized pension adjustment. First, Mr. Morgan notes that
19 capitalized pension contributions should not be plant investments, but instead
20 considered a deferred debit or a regulatory asset. Second, Mr. Morgan cites the
21 most recent PECO Gas rate case whereby the Commission denied inclusion of the
22 Pension Asset in rate base (OCA St. No. 1, pp 15-16).
23

24 **Q. Do you agree with OCA Witness Morgan's arguments for disallowance?**

25 A. No, I do not. As it relates to Mr. Morgan's assertion that the capitalized pension
26 adjustment should not be a rate base item, the Company's settlement agreements
27 associated with 2006, 2010, 2013 and 2018 allow the Company to utilize this
28 treatment. As an example, if the capitalized component of pension contributions
29 exceeds the capitalized portion determined under ASC 715, and the Company is
30 restricted to including only the capitalized net periodic pension cost in rate base as
31 Mr. Morgan proposes, the Company will have lost and will continue to lose a

1 return on the greater capitalized pension contribution amount for all future years
2 until the net periodic pension costs catch up to the cash contributions. Secondly,
3 regarding the most recent PECO Gas rate case, this was the first time that PECO
4 Gas was proposing the ratemaking adjustment similar to the Company. Based on
5 discovery response DLC-OCA-I-4 maintained at Exhibit JAB-1-R, Mr. Morgan
6 notes that PECO did not have a series of prior settlements that required specific
7 contributions to the pension trust and that provided for inclusion of the capital
8 portion of contributions in excess of ASC 715 amounts to be included in rate
9 base. These were an exchange of commitments between the settling parties to
10 provide a rational basis to fund the pension trust and provide reasonable recovery
11 of the costs. In this regard, the Company continued to make voluntary
12 contributions to the trust as required between rate cases based on the express
13 commitment that the pension capitalization adjustment would be included in rate
14 base as agreed to by the parties and the Company in previous settlements (shown
15 above and within the exhibits). In addition, the Company's claim for
16 depreciation, unlike PECO's, does not include adjustments due to this ratemaking
17 mechanism. Mr. Morgan now proposes to change that commitment retroactively
18 by eliminating the adjustment accumulated over the 16 year period. Further, in
19 order to continue to provide consistent and reasonable ratemaking, the Company
20 should be permitted to continue follow the prior settlement agreements in its
21 2006, 2010, 2013 and 2018 rate cases in this case. These prior settlements, which
22 explicitly provide for inclusion of the capitalized pension adjustment in future
23 cases were reasonable, provided benefits to customers and employees and should
24 be reflected as I&E has done in the direct testimony of Ms. Wilson in this
25 proceeding (I&E St. No, 1, pp. 4-7).

26
27 **Q. Do you agree with OCA Witness Morgan's claim that the capitalized pension**
28 **adjustment should be recorded as a regulatory asset or a deferred debit?**

29 A. No, I do not. As stated above, the Company records benefits attributable to labor
30 within their capital accounts. Employees' time and hence their labor costs are
31 budgeted to be charged to either expense or capital depending on the work that

1 they performed. The cost of employee benefits, including pension costs, is
2 allocated to expense or capital in the same proportion as is the related labor costs
3 and therefore these costs should not be considered non-rate base assets.
4

5 **Q. Mr. Morgan also claims that including the capitalized pension adjustment**
6 **violates the policy that expenses should not be included in rate base. Please**
7 **respond.**

8 A. Mr. Morgan's claim is erroneous. None of the amounts that are included in the
9 capitalized pension adjustment have been recovered from customers as expenses.
10 Instead, as I have explained previously, these are Company provided funds that
11 have not been charged to customers and have been invested in the pension trusts
12 for the benefit of customers and employees but are not reflected in plant due to
13 the differences between ASC 715 based accruals and cash contributions. The
14 Company has managed its pension contributions prudently and avoided any over
15 recovery from customers due to the use of volatile ASC 715 amounts for
16 ratemaking purposes. The capitalized pension adjustment provides fair treatment
17 to the Company and should be continued.
18

19 VI. Conclusion

20 **Q. Does this complete your prepared rebuttal testimony at this time?**

21 A. Yes, it does.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 5-R**

**REBUTTAL TESTIMONY OF
KRYSLIA KUBIAK**

Subjects: New Business Stimulus Rider and Crisis Recovery Program

Dated: July 26, 2021

1 **I. INTRODUCTION**

2 **Q. Please state your name, title, and business address.**

3 A. My name is Krysia Kubiak. I am the Director of External Affairs for Duquesne Light
4 Company (“Duquesne Light” or the “Company”). My business address is 411 Seventh
5 Avenue, Pittsburgh, PA 15219.
6

7 **Q. Have you previously submitted testimony in this proceeding on behalf of Duquesne
8 Light?**

9 A. Yes. On April 16, 2021, I submitted direct testimony (“Duquesne Light Statement No. 5”),
10 which proposed the New Business Stimulus Rider (“NBSR”) and the Crisis Recovery
11 Program (“CRP”).
12

13 **Q. What is the purpose of your rebuttal testimony?**

14 A. The purpose of my rebuttal testimony is to respond to and evaluate the testimonies
15 submitted by non-Company parties in this proceeding that address the NBSR and/or CRP.
16 Parties other than Duquesne Light who submitted direct testimony related to the NBSR and
17 CRP include: the Pennsylvania Public Utility Commission’s (“PUC or the “Commission”)
18 Bureau of Investigation & Enforcement (“I&E”), the Office of Consumer Advocate
19 (“OCA”), and the Office of Small Business Advocate (“OSBA”).
20

21 **Q. How is your rebuttal testimony organized?**

22 A. Section I is this introductory section. Section II responds to I&E witness Ms. Christine
23 Wilson’s direct testimony (labeled “I&E Statement No. 1”), which recommended

1 disallowance of the NBSR and the CRP entirely. Section III responds to certain aspects of
2 OCA witness Mr. Noah D. Eastman’s direct testimony (labeled “OCA Statement No. 5”),
3 which discusses the current economic climate in the Commonwealth of Pennsylvania based
4 on employment data and the State Coincident Index. Section IV responds to OSBA Robert
5 D. Knecht’s direct testimony (labeled “OSBA Statement No. 1”), which broadly evaluates
6 the NBSR and CRP.

7
8 **Q. Do you have any changes, corrections, or clarifications to make to your direct**
9 **testimony?**

10 A. Yes, I do. My direct testimony inadvertently states that the Neighborhood Assistance
11 Program (“NAP”) is defined by the United States Department of Housing and Urban
12 Development. Instead, my direct testimony should reflect that NAP is a state-wide
13 government assistance program administered by the Commonwealth of Pennsylvania’s
14 Department of Community and Economic Development. More information about NAP
15 can be found online at dced.pa.gov. Duquesne Light will include the updated definition in
16 a subsequent compliance tariff filing.

17
18 **Q. Are you sponsoring any exhibits with your rebuttal testimony?**

19 A. No.

20
21 **II. RESPONSES TO I&E WITNESS**
22 **CHRISTINE WILSON’S DIRECT TESTIMONY**

1 **Q. Is Ms. Wilson’s characterization of the NBSR’s terms and enrollment eligibility**
2 **accurate?**

3 A. Ms. Wilson correctly indicates that the Company’s NBSR involves providing a temporary,
4 30 percent discount on the variable base distribution portion (distribution kilowatt hour and
5 demand) of the enrolled customers’ bills. By way of background, the discount associated
6 with the NBSR will end 2 years from the date on which the enrolled customer commences
7 service or until December 31, 2024, whichever occurs earlier. The eligibility criteria for
8 the NBSR are as follows: (1) only available to new customers who apply electric service
9 after June 1, 2021, and (2) are (or will be) billed in accordance with the General Service
10 Small (“GS”), General Service Medium Heating (“GMH”), General Service Medium < 25
11 kW or General Service Medium ≥ 25kW (collectively, “GM”) rate schedules, and (3)
12 seeking to establish electric service in a vacant storefront after June 1, 2021, and (4) the
13 storefront must be within a Local Neighborhood Commercial (“LNC”) District, as defined
14 by City of Pittsburgh Code of Ordinances, or Qualified Low-Income Census Tract
15 (“QCT”) as defined by the United States Department of Housing and Urban Development,
16 or Neighborhood Assistance Program (“NAP”) district, as defined by the Commonwealth
17 of Pennsylvania’s Department of Community and Economic Development. The terms and
18 conditions of the NBSR are more fully set forth in the Company’s proposed Rider No. 25.

19
20 **Q. Please summarize Ms. Wilson’s position and recommendation regarding the NBSR.**

21 A. Ms. Wilson indicates that she disagrees with the NBSR proposal and recommends
22 disallowance of the program in its entirety. She further explains that shareholder-funded
23 charitable contributions may still be made to the local community.

22

Q. Do you support Ms. Wilson’s recommendation for the Commission to disallow the NBSR?

A. No.

Q. Please explain why you disagree with Ms. Wilson’s recommendation.

A. Ms. Wilson places an unreasonable amount of emphasis on the increased vaccination rates and the rescission of many of the COVID-19 governmental orders that limited businesses’ occupancies or required temporary shutdowns. To elaborate, while vaccination rates are slowly increasing, major factors continue to contribute significant headwinds against the eventuality that vaccination will usher in an imminent return to previous levels of in-person consumer behavior. Vaccine hesitancy, COVID-19 variants, labor market shortages and resulting pay rate pressure, uncertainty around possible future governmental restrictions, and uncertainty around consumer behavior related to the exponential growth of online shopping are continuing issues which are both exacerbated by the pandemic and contribute significant risk to any business with in-person transactions in their business model.

In a time of unprecedented uncertainty, the Company has been mindful in designing the NBSR to plan conservatively for the likelihood of a slow or uneven economic recovery, rather than prognosticate with any certainty around the vagaries of consumer confidence in the neighborhood retail marketplace. The suggestion that vaccination will have a linear correlation to a return to business activity in neighborhood business districts is a hopeful suggestion, but not one that is borne out by any supporting research.

1 Notably, Ms. Wilson’s testimony fails to recognize that a portion of the
2 Commission’s mission, located on the Commission’s website at
3 <https://www.puc.pa.gov/about-the-puc/>, includes furthering economic development. The
4 purpose of the NBSR is to stimulate economic growth in areas that need it the most, which
5 is aligned with the PUC’s mission statement.
6

7 **Q. Please respond to Ms. Wilson’s comparison of the NBSR to charitable contributions.**

8 A. Ms. Wilson’s suggestion that the Company may make charitable contributions from
9 shareholder funds does not acknowledge the fact that substantial charitable dollars have
10 already been and continue to be directed toward customer and community assistance
11 through partnerships with the Pittsburgh Foundation Emergency Action Fund and the
12 Dollar Energy Fund, among others. The Company currently makes annual charitable giving
13 a high priority, with approximately \$2 million per year donated to the community.
14 Secondly, the suggestion that charitable funds should be directed toward private, for-profit
15 organizations, would both complicate the well-established non-profit mission for charitable
16 giving and is a highly unusual suggestion which is misaligned to the reality that many
17 community-based non-profit organizations themselves have undergone severe economic
18 consequences from the pandemic and are also in need of charitable support. Unlike the
19 NBSR proposal, which would establish qualification criteria for uniform evaluation and
20 allow an eligible business to have some continuing benefit and predictability around their
21 expense burden, the Company’s charitable programs typically award funds for a one-time
22 project or proposal that is evaluated on the basis of its merits for having a positive impact
23 on the community. For instance, in the recently completed first round of the Company’s

1 Community Impact Grant charitable program, 135 applications were received totaling
2 \$1,197,330. in requested funds. It is unclear if the suggestion to use charitable funds is
3 informed by this context, since it implies that the Company would have to choose “winner
4 and loser” businesses to receive one-off charitable support. This is not the case with the
5 Company’s proposed NBSR program and is not in keeping with how the Company
6 administers its charitable giving.

7 In summary, it is appropriate and reasonable to recover the costs of the NBSR from
8 the GS, GM, and GMH rate classes because it delivers direct value to the Company’s
9 business customers over the 2-year enrollment period, whereas charitable contributions
10 provide one-time value to a subset of organizations (non-profits).

11
12 **Q. How, if at all, does the NBSR generally differ from the list of non-Company assistance**
13 **programs listed in Ms. Wilson’s testimony?**

14 A. Ms. Wilson’s testimony regarding the availability of aid programs helpfully underscores
15 the severity of the need for these programs in one respect by the sheer proliferation of these
16 previously non-existent programs. However, it is a false equivalency to suggest that by
17 virtue of their existence these programs meet the needs of businesses impacted by the
18 pandemic. The Company recognizes that this pandemic has created widespread and
19 disproportionate economic impacts and its proposal aims to be one of many options for
20 assistance upon which businesses can rely. The NBSR is meant to offer a reasonable level
21 of assistance but in no way is meant to supplant other much needed sources of assistance.
22 Furthermore, Ms. Wilson acknowledges that the list of programs is not validated for

1 eligibility nor availability and a search for information on these programs¹ does indeed
2 indicate that certain programs have or will expire, undermining the assertion that other
3 programs are or will be available to support businesses at the same time that the Company's
4 NBSR would be available. Finally, many of these programs are either directed toward
5 businesses that were impacted during the pandemic or were in existence before the
6 pandemic created disproportionate and emergent need for assistance. NBSR is being
7 proposed to assist new businesses as they fill vacancies in business districts which, if left
8 unfilled, could threaten neighboring businesses. Vacancies in neighborhood business
9 districts can have a powerful effect on the perception and economic health of not just that
10 commercial district, but on the neighborhood overall.² A June 2021 report from the
11 National Bureau of Economic Research³ inspired hopeful, if misleading, headlines⁴ touting
12 the record number of new business applications. A closer read provides a clearer picture
13 that *Nonstore Retail* category businesses accounted for nearly 33% of these applications
14 and that "...In the pandemic, the surge in new business applications has been especially
15 large for likely *nonemployer* businesses with the surge four times larger than the increase
16 in the Great Recession." In other words, this wave of new business applications is
17 predominated by a shift toward self-employed, remote workers that authors referred to as
18 a "restructuring" of the economy toward more remote work, leaving risks and unanswered
19 questions for those looking to invest in and startup a business in a retail location that would
20 depend on in-person interactions. "The dramatic rise in sectors such as Nonstore Retail is

¹ <https://www.nytimes.com/2021/05/04/business/paycheck-protection-program-closes.html>

²

https://communityinnovation.berkeley.edu/sites/default/files/what_difference_can_a_few_stores_make_retail_and_neighborhood_revitalization.pdf?width=1200&height=800&iframe=true

³ https://www.nber.org/system/files/working_papers/w28912/w28912.pdf

⁴ <https://www.cbsnews.com/news/new-business-applications-surged-during-pandemic/>

1 consistent with the shift towards remote interactions between businesses and consumers.”
2 The report emphasizes the long road ahead of the Retail Trade and Food &
3 Accommodations sectors which together accounted for over 2.6 million job losses,
4 according to the report.

5 Inadequate funding in the critical early stage of new business startups is often cited
6 as a top reason for business failure and keeping expenses low is similarly a priority for new
7 businesses⁵ and the NBSR is designed to assist new businesses in our region succeed at a
8 time of unprecedented uncertainty and indeterminant risk.

9
10 **Q. Please summarize Ms. Wilson’s position and recommendation regarding the CRP.**

11 A. Ms. Wilson indicates that she disagrees with the CRP proposal and recommends
12 disallowance of the program in its entirety, while again suggesting that shareholder-funded
13 charitable contributions could be made.

14
15 **Q. Is Ms. Wilson’s characterization of the CRP’s terms and enrollment eligibility**
16 **accurate?**

17 A. Yes. Ms. Wilson correctly states that Duquesne Light’s CRP is a temporary program
18 designed to assist existing GS, GM, or GMH customers who did not have an overdue
19 account balance on February 29, 2020, but have since accumulated a balance because of
20 governmental restrictions related to the COVID-19 pandemic. By way of further
21 explanation, CRP customers will have their delinquent account balances “frozen” for 6
22 billing cycles, beginning with the first bill that renders 6 or more days after enrollment.

⁵ <https://www.lendingtree.com/business/small/failure-rate/>

1 After the due date for the sixth bill issued since the CRP customer enrolled has lapsed, the
2 Company will evaluate whether the customer paid their non-frozen electric charges in full.
3 If the enrolled customer paid all their non-frozen electric charges, then 25% of the
4 customer's frozen balance will be forgiven, and the customer will receive an 18-month
5 payment arrangement on any remaining balance, unless the customer agrees to a shorter
6 payment arrangement timeframe. If the enrolled customer did not make the appropriate
7 payment, then no portion of the customer's frozen balance will be forgiven, and the
8 customer will receive up to an 18-month payment arrangement on the entire delinquent
9 balance. Enrollment in the CRP will end on June 30, 2022. The terms and conditions of
10 the CRP are more fully set forth in the Company's proposed Rider No. 26.

11
12 **Q. Do you support Ms. Wilson's recommendation for the Commission to disallow the**
13 **CRP?**

14 A. No.

15
16 **Q. Please explain why you disagree with Ms. Wilson's recommendation.**

17 A. Ms. Wilson suggests that the proposed CRP program is similar to a charitable contribution,
18 but more substantially, the proposed CRP program is more analogous to existing residential
19 customer assistance programs ("CAP"), wherein a customer's arrearage serves a
20 reasonable indicator of the customer's need for assistance and bears on the amount of
21 benefit the customer can receive through the program. In the case of business customers in
22 the Company's service territory, current aggregate arrearage data indicates that 9046

1 customers who would be in the eligible rate classes currently owe a total of \$6,610,399.
2 This does not include any monies currently owed, but only reflects past due balances.

3 Ms. Wilson theorizes that some customers have taken drastic steps to remain
4 current, but does not provide evidence to substantiate this assertion. While it could be
5 reasonable to assume some customers have gone to greater lengths than others to remain
6 current, it is also reasonable to recognize that the pandemic has disproportionately
7 impacted certain businesses more than others, and the exceptional level of arrearages
8 experienced during the pandemic points to a severity of impact that we cannot assume
9 could be remedied by frugal “belt tightening.”

10
11 **Q. Do you agree with Ms. Wilson’s comparison of the CRP to a charitable contribution?**

12 A. No.

13
14 **Q. Why do you disagree with Ms. Wilson’s comparison of the CRP to a charitable
15 contribution?**

16 A. The analogy that the CRP is comparable to a charitable contribution is flawed for several
17 significant reasons described earlier in my testimony, but not least of which is that
18 charitable contributions are generally restricted to non-profit organizations. Directing
19 charitable giving toward for-profit businesses could dilute the Company’s charitable giving
20 program and negatively impact non-profits.

21
22 **Q. How, if at all, does the CRP generally differ from the list of non-Company assistance
23 programs listed in Ms. Wilson’s testimony?**

1 A. The CRP complies with the Commission’s recommendation that utilities provide
2 businesses with 18-month payment arrangements, but also goes a step further, allowing
3 businesses to manage their arrearage by giving them the opportunity to (1) return to good
4 standing by paying their bills regularly and (2) reduce their balance, which also reduces
5 their monthly payment arrangement installment. Besides being a program that is analogous
6 to the CAP, with Commission-approved precedent for arrearage forgiveness, and in
7 compliance with the current Commission recommendation regarding payment
8 arrangements, the CRP is distinguished from other non-Company assistance programs by
9 being oriented toward long-term recovery, rather than temporary mitigation. In designing
10 the CRP, the Company anticipated that businesses would seek relief from any and all
11 available sources, but that for the most severely impacted, such relief may prove
12 insufficient⁶. As programs created to abate the worst impacts of the pandemic run out of
13 funds or expire, businesses that experienced the deepest reductions to their revenue and
14 that are seeing a modest return toward economic health, but that are also still struggling
15 with unexpected workforce availability issues,⁷ risk being left at the edge of an assistance
16 cliff. The CRP is designed to meet seriously impacted businesses at that cliff’s edge and
17 provide them patient assistance for the arrearage they are still carrying with a reasonable
18 degree of forgiveness to reduce their burden moving forward.

19

⁶ <https://www.eater.com/2021/5/18/22442063/restaurant-revitalization-fund-sba-applications-exceed-funding>

⁷ <https://www.wsj.com/articles/millions-are-unemployed-why-cant-companies-find-workers-11620302440>

1 **Q. Please respond to Ms. Wilson’s allegation that the CRP forces new and existing**
2 **customers to fund a program for recipients without a “say” in the types of businesses**
3 **who are enrolled in the CRP.**

4 A. While it is straightforward to list Commission-approved Company programs where the
5 costs are socialized across the entire rate class, such as in the case of the residential
6 Customer Assistance Program (“CAP”), various Energy Efficiency/Act 129 programs, and
7 the Hardship Fund, where other customers do not have a direct “say” in who receives the
8 funds, it would be uncommon, if not unprecedented, to think of a customer assistance
9 program where members of the rate class were given a “say” or de facto veto over which
10 customers could participate.

11

12 **III. RESPONSES TO OCA WITNESS**

13 **NOAH D. EASTMAN’S DIRECT TESTIMONY**

14 **Q. How, if at all, does the Census Bureau Small Business Pulse Survey data provided in**
15 **Mr. Eastman’s testimony support the implementation of the NBSR?**

16 A. The Census Bureau Small Business Pulse Survey data provided in Mr. Eastman’s
17 testimony presents a well-researched picture of uncertainty. With highly disparate
18 responses to the question of how long do businesses expect to return to normal operation,
19 over 35% responded that operations had already or were nearly returned to normal. What
20 was most telling were the more than 40% of businesses which expected a prolonged return
21 to normal, ranging from more than 6 months to “never.” This level of widespread
22 pessimism is not surprising after a year of unprecedented global economic uncertainty, and
23 was exactly the economic environment that the Company was preparing for in developing

1 the NBSR. To the extent that new business entrepreneurs share this pessimistic outlook,
2 they may elect to sit on the sidelines until economic conditions improve. The NBSR is
3 focused acutely on addressing that new business hesitancy by creating an incentive to help
4 encourage new businesses to move forward with their venture, targeting vacant storefronts
5 for activation.

6
7 **Q. How, if at all, does the unemployment data provided in Mr. Eastman’s testimony**
8 **support the implementation of the NBSR?**

9 A. The unemployment data provided in Mr. Eastman’s testimony reiterates the uncertainty
10 evident in the Pulse Survey data using a different perspective. Mr. Eastman’s *Figure 6* data
11 point scatter plot illustrates the widely divergent expectations from economic forecasters
12 for GDP growth and resulting payroll gains. Again, this high level of uncertainty was a key
13 basis for developing the NBSR. New businesses opening in previously vacant storefronts
14 will send a strong signal to the business and broader community about the emerging
15 economic recovery, helping to restore confidence and temper the current atmosphere of
16 uncertainty.

17
18 **Q. How, if at all, does the State Coincident Index information outlined in Mr. Eastman’s**
19 **testimony support the implementation of the NBSR?**

20 A. I believe Mr. Eastman summarized the State Coincident Index information appropriately,
21 when he states, “The economy is beginning to recover, but there is still a large amount to
22 be done before we can declare normality.” (OCA St. 5, p. 14, lines 5-6.) The NBSR is one

1 substantive initiative the Company believes is warranted to assist in the economic recovery
2 of our region.

3
4 **Q. How, if at all, does the Census Bureau Small Business Pulse Survey data provided in
5 Mr. Eastman's testimony support the implementation of the CRP?**

6 A. As described above, the Census Bureau Small Business Pulse Survey data provided in Mr.
7 Eastman's testimony speaks to the pervasive uncertainty that lingers for many businesses.
8 With more than 40% of businesses expecting a prolonged return to normal, this data points
9 to the need for business assistance policies which take a long-term outlook on recovery and
10 provide patient terms to give businesses the room the get back on their feet and return to
11 good standing. The CRP is designed to be directly responsive to those needs.

12
13 **Q. How, if at all, does the unemployment data provided in Mr. Eastman's testimony
14 support the implementation of the CRP?**

15 A. With expert economists unable to provide consensus forecasts for GDP and job growth, as
16 illustrated by in Mr. Eastman's testimony, businesses are in need of programs such as the
17 proposed CRP that would assist with past arrearages and provide a long runway that
18 account for the uncertain timeline as our communities return to economic prosperity.

19
20 **Q. How, if at all, does the State Coincident Index information outlined in Mr. Eastman's
21 testimony support the implementation of the CRP?**

22 A. I believe Mr. Eastman summarized the State Coincident Index information appropriately,
23 when he states, "The economy is beginning to recover, but there is still a large amount to

1 be done before we can declare normality.” (OCA St. 5, p. 14, lines 5-6.) The CRP is
2 another substantive initiative the Company believes is warranted to assist in the economic
3 recovery of our region.
4

5
6 **IV. RESPONSES TO OSBA WITNESS**

7 **ROBERT D. KNECHT’S DIRECT TESTIMONY**
8

9 **Q. Are Mr. Knecht’s characterizations of the terms and eligibility for the NBSR and**
10 **CRP accurate?**

11 A. Broadly, yes. For general descriptions of the two programs, please refer to the portion of
12 my rebuttal that responds to Ms. Wilson’s direct testimony, above.
13

14 **Q. Do you agree with Mr. Knecht’s characterization that the NBSR is potentially in legal**
15 **conflict with Section 1304 of the Public Utility Code (“Section 1304”)?**

16 A. No. The assertion that the NBSR contradicts Section 1304 calls for a legal conclusion,
17 which I understand will be addressed by counsel in briefs.
18

19 **Q. Do you agree with Mr. Knecht’s assertion that the NBSR is inequitable and**
20 **discriminatory?**

21 A. No.
22

1 **Q. Why do you disagree with Mr. Knecht’s assertion that the NBSR is inequitable and**
2 **discriminatory?**

3 A. Central to the assertion that the Company’s proposal is inequitable and discriminatory is
4 the question of how the Company should best serve its customers, and whether a
5 community-serving entity such as the Company should take into account the economic
6 conditions of its communities when designing its rate structure. The question remains, in
7 the face of an unprecedented economic impact from a global pandemic, is the utility’s role
8 in its community to simply continue providing safe, reliable service as he asserts, or is it
9 reasonable to consider that additional assistance may be needed? Setting aside the
10 suggestion that the shareholder contribution is insufficient – when that contribution toward
11 charitable giving alone is annually approximately \$2 million – the scale of the economic
12 problem presented by the pandemic demands a more resourceful approach. With more than
13 9000 small and mid-sized business customers in arrears in excess of \$6.6 million, as
14 detailed previously in my testimony, the Company’s proposals attempt to leverage
15 economic development incentives for the equitable benefit of the entire rate class. As the
16 rate discount of the NBSR and the arrearage forgiveness of the CRP are socialized across
17 the rate class, the Company projects a modest and reasonable impact to the rates of non-
18 eligible ratepayers. While not *equal*, these impacts are indeed *equitable*. Neighboring
19 businesses that have not suffered an economic hardship and resultant arrearage from the
20 pandemic or that are not contemplating the risk to their capital of a new business venture
21 in the midst of unprecedented uncertainty will see economic development benefits that
22 inure real value to them as members of the business community. As businesses receive
23 assistance through these programs, and remain viable through the downturn caused by the

1 pandemic, neighboring businesses that do not receive assistance through these programs
2 nevertheless realize the benefits of a healthy, thriving local economy. But for these
3 assistance programs, incumbent businesses could continue to falter and vacant storefronts
4 could remain vacant, putting downward pressure on Company revenue representing a
5 material risk to drive increased rates for all customers. The assertion that the NBSR is
6 discriminatory⁸ does not hold water, as the program eligibility will be clearly defined and
7 open to all members of the rate class, without regard to business type. Eligibility criteria
8 are modeled after well-established governmental policies that best align with addressing
9 the disproportionate economic impacts of the pandemic.

10
11 **Q. Does this conclude your rebuttal testimony?**

12 A. Yes. I reserve the right to supplement my testimony over the course of this proceeding as
13 may be necessary.

⁸ As stated previously, the assertion that the NBSR contradicts Section 1304 calls for a legal conclusion, which I understand will be addressed by counsel in briefs.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 6-R

**Rebuttal Testimony of Yvonne Phillips
Subject: Master Metering Proposals**

Date: July 26, 2021

1 “operating together, unreasonably bar the use of master meters in circumstances
2 where their use would promote conservation and provide benefits to tenants that
3 would be unavailable to them if they were individually metered residential
4 customers of the utility.” (NEP St. No. 1, p. 4, lines 3-5). She acknowledges that
5 the Company has proposed a tariff rule 41.1 to allow master metering in limited
6 circumstances, which I described in my direct testimony, but alleges that the scope
7 of this proposed rule is “unreasonably narrow.” Ms. Ringenbach proposes a new
8 Rule 41.2 to the Company’s tariff that would accommodate NEP’s submetering
9 business model in the Company’s service territory.

10

11 **Q. Do you agree with Ms. Ringenbach’s position that the Company should allow**
12 **expanded tenant submetering?**

13 A. No.

14

15 **Q. Why do you disagree with Ms. Ringenbach’s position?**

16 A. I disagree with Ms. Ringenbach’s position for several reasons, which I will discuss
17 further below. As a threshold matter, it appears from Ms. Ringenbach’s testimony
18 that NEP seeks to step into the utility’s shoes with respect to submetered tenants. I
19 believe it would be inappropriate for an unregulated entity such as NEP to fill such
20 a role.

21

22 **Q. Why do you say that “NEP seeks to step into the utility’s shoes with respect to**
23 **submetered tenants”?**

1 A. NEP’s business model, as described in Ms. Ringenbach’s testimony, involves the
2 performance of several functions that would otherwise be performed by a utility.
3 Together with a submetered building’s landlord (or “Property Owner,”) NEP
4 performs metering, billing, payment processing, service termination, electric
5 supply acquisition, customer service, and limited customer service functions. For
6 buildings in its service territory, these functions (and others) would otherwise be
7 performed by Duquesne Light, subject to the oversight of the Pennsylvania Public
8 Utility Commission.

9

10 **Q. Why is it inappropriate for NEP to fill this role?**

11 A. It is inappropriate for at least two reasons.

12 First, NEP is not subject to the same governmental oversight as regulated
13 utilities such as Duquesne Light. In fact, in several respects, NEP acts as both utility
14 and regulator – it establishes its own rates (within some limitations, which I discuss
15 below), determines the types and quality of service it will offer, and adjudicates its
16 own tenant dispute procedures.¹ As a result, NEP-submetered tenants enjoy
17 substantially fewer due process and service-quality rights than they would as
18 individually-metered customers of Duquesne Light.

19 Second, despite charging tenants rates that approach (and, as discussed
20 below, often exceed) Duquesne Light’s corresponding rates for residential
21 customers, NEP delivers fewer products and services.

22

¹ Exhibit YP-1-R (DLC-NEP I-6.m).

1 **I. MS. RINGENBACH’S CRITIQUES OF DUQUESNE LIGHT’S**
2 **PROPOSAL**
3

4 **Q. Please summarize the purpose of this section of your testimony.**

5 A. In this section, I respond to Ms. Ringenbach’s critiques of the Company’s proposal
6 to allow master metering in certain instances, as well as her miscellaneous
7 criticisms of the Company as they pertain to master metering more generally.

8 Ms. Ringenbach also proposes a new tariff rule, Rule 41.2, that would
9 accommodate submetering (including but not limited to submetering by NEP) in
10 the Company’s service territory. I address this proposal in Section II of my
11 testimony.

12
13 **Q. Ms. Ringenbach critiques Duquesne Light for not performing studies in the**
14 **last five years analyzing potential impacts of master metering, such as inter-**
15 **or intra-class revenue allocation impacts that might result from allowing**
16 **existing customers to adopt master metering (NEP St. No 1, p. 6). Please**
17 **respond.**

18 A. Duquesne Light did not perform such studies because they concern a hypothetical
19 scenario that Duquesne Light is not proposing, and which – as I discuss further
20 below – I believe is inadvisable for several reasons.

21
22 **Q. Ms. Ringenbach states that NEP was “neither informed nor invited to” the**
23 **master metering collaborative conducted pursuant to the settlement in Docket**
24 **No. R-2018-3000124 (NEP St. No. 1, p. 8, lines 10-16). Please respond.**

1 A. The purpose of Ms. Ringenbach’s statement is not clear. As Ms. Ringenbach
2 acknowledges, NEP was not party to the proceeding at Docket No. R-2018-
3 3000124 that originated the collaborative (NEP St. No. 1, p. 8, line 12).
4 Nevertheless, the settlement in that proceeding is public record, and several entities
5 that were not party to that proceeding participated in the collaborative, including
6 Solar United Neighbors, Sierra Club, Retail Energy Suppliers Association, and
7 Housing Authority of the City of Pittsburgh. It seems somewhat surprising that NEP
8 would have been unaware of the collaborative if, as Ms. Ringenbach suggests, it
9 has been in contact with customers in Duquesne Light’s service territory that wish
10 to adopt master metering.

11 Finally, to the extent Ms. Ringenbach is attempting to suggest that
12 Duquesne Light has not been sufficiently transparent in its communications, such
13 implication should be rejected out of hand. As Ms. Ringenbach’s testimony
14 indicates, the Company engaged directly with NEP via email and videoconference
15 during the development of its master metering proposal. And as a party to this
16 proceeding, NEP has ample opportunity to conduct discovery regarding the
17 Company’s proposal, and to advocate for its own.

18

19 **Q. Ms. Ringenbach suggests that the Company’s existing tariff rules 18 and 41**
20 **are inconsistent with the Public Utility Regulatory Policies Act of 1978**
21 **(“PURPA”) (NEP St. No. 1, p. 4, lines 5-13). Please respond.**

22 A. The cited lines of Ms. Ringenbach’s testimony read:

23 While tariff Rules 18 and 41, were put in place more than 40 years
24 ago, they appear to have been implemented as a full ban on master

1 metering and in my opinion not consistent with the Public Utility
2 Regulatory Policies Act of 1978 (PURPA). The policy behind
3 PURPA was to incentivize residential customers (including tenants
4 in multifamily buildings) to conserve electric energy by metering
5 and paying based on their actual usage rather than being billed
6 without regard to their actual individual use. Tariff Rules 18 and 41
7 effectively and unnecessarily prohibit submetering arrangements
8 that could achieve the higher conservation benefits than individual
9 metering.
10

11 I am not an attorney, and neither is Ms. Ringenbach (Exhibit YP-1-R (DLC-NEP
12 I-14)). Therefore, I will not opine on whether Duquesne Light's existing tariff rules
13 are consistent with the requirements of PURPA; I understand that such issues will
14 be addressed in briefs. However, I will note that Rule 41, which requires all
15 residential dwelling units connected after January 1, 1981 to be individually
16 metered, was added to the tariff via Supplement No. 33 to Tariff No. 14 and became
17 effective July 15, 1979 - shortly *after* PURPA became law.
18

19 **Q. You indicated in your direct testimony that, despite tariff rules requiring**
20 **individual metering for buildings connected after 1981, the Company still has**
21 **master-metered residential buildings in its service territory. Does Ms.**
22 **Ringenbach critique the Company's energy efficiency offerings to these**
23 **customers?**

24 A. Yes. I note at the outset that these critiques of Ms. Ringenbach's apply only to a
25 master metering configuration that, per tariff rule 41, has not been allowed since
26 1981 and is therefore likely to become less common over time. That said, I
27 summarize and respond to Ms. Ringenbach's comments below.
28

1 **Q. With respect to owners of these buildings, Ms. Ringenbach avers, “Property**
2 **owners under the current DLC rules who invest in energy efficiency or**
3 **demand response for a tenant will likely not recover their investment and**
4 **therefore may not be incented to make such an investment” (NEP St. 1, p. 15,**
5 **lines 17-20). Please respond to Ms. Ringenbach’s assertion.**

6 A. Ms. Ringenbach attempts to describe, in-part, the “split incentives” barrier to
7 energy efficiency program participation by multifamily owner-operators and
8 occupying tenants. Split incentives exist when the property owner does not pay the
9 electric bill for a given unit, so is less motivated to spend capital on high efficiency
10 equipment to reduce energy use. Conversely, the tenant does not own the building,
11 so has less incentive to invest in the building to save energy.

12 The Company’s energy efficiency programs address split incentives
13 through a direct-install program design. Energy saving equipment is installed at no
14 cost to the tenant. In the cases where the owner-operator owns the equipment being
15 replaced a cost share is negotiated where the facility receives new equipment and
16 pays a negotiated amount for its cost-share. See the Company’s Phase IV Energy
17 Efficiency and Conservation Plan (“EE&CP”) at Docket No. M-2020-3015228.

18
19 **Q. With respect to tenants of these buildings, Ms. Ringenbach states, “a tenant**
20 **does not have the ability to install or use utility weatherization, efficiency or**
21 **technology programs despite paying toward EE&C programs. In other words,**
22 **tenants have the costs but not the benefits of these programs” (NEP St. 1, p.**
23 **19, lines 2-13). Please respond.**

1 A. Ms. Ringenbach is incorrect. Pursuant to the Company’s Phase IV EE&CP,
2 Duquesne Light multifamily facility treatments include LED lighting, advanced
3 power strips, ENERGY STAR dehumidifiers, refrigerators, freezers, room air
4 conditioners, connected (smart) thermostats, heat pump water heaters, ductless
5 mini-split heat pumps, central air conditioners, air source heat pumps, air sealing,
6 ceiling insulation, basement wall insulation, exterior wall insulations, floor
7 insulation, electric water heater insulation, pipe wrap, faucet aerators and low flow
8 showerheads on a direct-install basis.

9 Further, it is not reasonable to assume, as Ms. Ringenbach does, that
10 customers cannot install program-subsidized equipment. Consistent with the
11 Company’s EE&CP, independent sampling is performed to establish program
12 impacts and In Service Rates for technologies provided to participating tenants. The
13 “return” in these energy efficiency investments are independently verified.

14

15 **Q. Ms. Ringenbach alleges that “most energy efficiency programs require some**
16 **form of baseline reduction in kilowatt-hours (‘kWh’). To achieve this**
17 **objective, properties typically must show a 20% or more reduction in usage”**
18 **(NEP St. 1, p. 12, lines 12-13). Please respond.**

19 A. Ms. Ringenbach’s comments are not reflective of the Company’s energy efficiency
20 programs. Pursuant to the Company’s Phase IV EE&CP and relevant Commission
21 directive, Duquesne Light’s baseline assumptions with respect to energy efficiency
22 savings are established in the Technical Reference Manual, and apply on a measure-

1 specific basis. There is no such 20% minimum reduction in usage associated with
2 the Company's programs.

3

4 **Q. Ms. Ringenbach states, "DLC's proposed and existing tariff Rules 18 and 41**
5 **disconnect any tenant control, shift the costs into a likely 'non-energy' (i.e.,**
6 **rent) related recovery and provide no control over how or what costs tenants**
7 **pay for their usage" (NEP St. 1, p. 17, lines 19-21). Please respond.**

8 A. Ms. Ringenbach is simply wrong. The Company's "existing tariff Rules 18 and 41"
9 *require* individual residential metering, which obviously does not disconnect
10 tenants from their electric bills.

11 Ms. Ringenbach walked back her statement in discovery, stating that it "was
12 made in reference to the Duquesne proposal to allow master metering without
13 submetering of tenants." (Exhibit YP-1-R) DLC-NEP I-22)). However, even as so
14 modified, Ms. Ringenbach's statement remains incorrect, because the Company's
15 proposal is specifically targeted to buildings where tenants would be unlikely to be
16 responsible for utility bills even if they were individually metered. See my direct
17 testimony, DLC St. 6, p. 7 lines 14-17.

18

19 **Q. Before discussing NEP's proposal, do you have anything further to add**
20 **regarding the Company's position on its proposed Rule 41.1?**

21 A. Yes. I observe that NEP and the Company have each proposed changes to the
22 Company's master metering rules. The Company's proposal is entirely distinct
23 from NEP's. In the event the Commission opts to deny the Company's proposal,

1 such determination would not suggest that NEP's proposal should be approved. To
2 the contrary: NEP's proposal should be rejected regardless of the Commission's
3 decision on the Company's proposal.

4 In fact, the Company would prefer to see both proposals be denied, then for
5 both to be approved. The Company believes that the status quo, in which residential
6 master metering is prohibited, is preferable to a scenario in which NEP's proposal
7 is accepted. Therefore, although the Company believes that its master metering
8 proposal is reasonable, it is willing to withdraw its proposal to the extent needed to
9 protect its customers from NEP's proposal.

11 II. NEP'S PROPOSAL

12
13 **Q. Ms. Ringenbach alleges several energy efficiency benefits attributable to**
14 **NEP's proposed submetering model (NEP St. 1, pp. 15-20). Do you agree?**

15 A. No. I agree with Ms. Ringenbach that, compared to master metering, individual
16 tenant submetering can enable different energy efficiency offerings. However, such
17 observation is of little import here, because the Company already requires
18 individual metering for new residential buildings, by which the Company already
19 offers an array of energy efficiency services via its EE&CP.

20 To the extent Ms. Ringenbach's comments are intended to suggest that
21 NEP's energy efficiency offerings are superior to the Company's offerings to
22 individually-metered tenants, she does not provide supporting evidence. Ms.
23 Ringenbach does not, for example, quantify the alleged costs or benefits of NEP's

1 energy efficiency offerings,² or attempt to compare them to Duquesne Light’s
2 offerings (the costs and benefits of which are public record, and were vetted by
3 stakeholders as part of the recent Commission proceeding at Docket No. P-2020-
4 3015228). Instead, Ms. Ringenbach’s alleged energy efficiency benefits
5 attributable to submetering tend to be hypothetical, speculative, and/or vague.

6

7 **Q. Ms. Ringenbach avers that it is “economically beneficial” for all tenants to be**
8 **submetered by NEP, as compared to being an individually-metered customer**
9 **of Duquesne Light (NEP St. No. 1, p. 23, lines 7-9; Exhibit YP-1-R (DLC-NEP**
10 **I-36)). Do you agree?**

11 A. No. I disagree with Ms. Ringenbach’s assertion for three reasons. First, it appears
12 that the rates NEP charges frequently exceed what tenants would or could otherwise
13 pay as an individually-metered utility customer. Second, NEP-submetered tenants
14 do not have access to the utility’s assistance programs, such as CAP, which could
15 substantially reduce their bills. Finally, whether a given product is “economically
16 beneficial” – i.e., the product’s value – is a function of the product’s quality as well
17 as its price. Based on NEP’s descriptions of the services it provides, it appears that
18 its tenants do not receive a level of value commensurate with what they would
19 otherwise receive from Duquesne Light. I discuss each of these in further detail
20 below.

² For example, Ms. Ringenbach states that NEP’s submetering model facilitates tenant participation in PJM demand response programs, and “[t]he benefits of this participation are a sharing of the revenue between the Property Owner, NEP and the participating tenants who receive credits on their electricity bills” (NEP St. 1, p. 20, lines 6-8). However, in discovery, NEP failed to quantify the actual value of credits to participating tenants, stating instead that “[demand response] credits are determined by the agreement with the property owner.” Exhibit YP-1-R (DLC-NEP I-31).

1

2 **Q. Please summarize how NEP sets its rates for electric service.**

3 A. According to NEP's response to DLC-NEP I-6.a:

4 The rates charged to residential tenants by NEP are the approved
5 rates of the local electric utility. NEP employs a team of qualified
6 individuals to monitor the approved rates of the local electric
7 utilities in each service territory in which it operates, including all
8 riders and fees, and to incorporate those rates into NEP's billing
9 system on a monthly basis. In order to ensure that amounts billed by
10 NEP do not exceed those that would be billed by the local utility in
11 compliance with 66 Pa.C.S. Section 1313, Price upon resale of
12 public utility services, each component of the utility's rates are
13 rounded down to the nearest cent prior to being summed for a total
14 billing amount.

15
16 NEP states that it then subtracts \$2 from the tenant's monthly bill "to mimic the
17 benefits residents are likely to realize by successfully shopping for an electric
18 generation supplier" (NEP St. No. 1, p. 10, lines 22-23). NEP clarifies that this \$2
19 credit "is specific to the DLC tariff as a requirement of NEP's proposed master
20 option in the Duquesne service territory," (Exhibit YP-1-R (DLC-NEP III-3)); it
21 appears that NEP may not offer this credit in other Pennsylvania EDC service
22 territories. See Exhibit YP-1-R (DLC-NEP Attachment I-7.a).

23

24 **Q. Do you agree that NEP's bill-calculation method produces bills that are less**
25 **than what its tenants would otherwise be charged as individually-metered**
26 **customers of Duquesne Light?**

27 A. No. In fact, in several respects, it appears that NEP's tenants may be charged more
28 for electric service than they would otherwise be charged as individually-metered
29 customers of Duquesne Light.

Q. Please explain.

A. First, NEP appears to charge rates for electric service *other than basic electric delivery and supply* that are frequently higher than the corresponding utility rates. In each of the below examples, NEP’s rate is higher than Duquesne Light’s corresponding rate. I have also included comparisons to corresponding rates contained in PECO’s tariff because NEP’s example bills and customer notices concern service provided in PECO’s service territory:

- Service reconnection: NEP charges customers \$50 to reconnect service following termination for non-payment. See Exhibit YP-1-R (DLC-NEP Attachment I-7.a, “Disconnect Notice”). NEP avers in discovery that this fee is “analogous to the \$50.00 fee for reconnection of service in DLC tariff rule 40.A” (Exhibit YP-1-R (DLC-NEP III-5)). However, in fact, Duquesne Light’s applicable tariffed rate for service reconnection (i.e., for remote reconnects of customer premises equipped with a smart meter, which comprises nearly all of Duquesne Light’s residential customers) is \$20. See Exhibit YP-2-R (Tariff Rule 40). PECO’s corresponding tariffed rate for service reconnection is also \$20. See Exhibit YP-3-R (PECO Tariff Rule 18.7).
- Late payment charges: NEP charges a monthly fee of \$20 to customers with an arrearage of \$100 or more (Exhibit TR-9; Exhibit YP-1-R (DLC-NEP I-6.h)). This corresponds to an effective monthly late payment charge rate of *up to 20%* ($\$20/\$100 = 20\%$). By comparison, Duquesne Light’s late payment fee rate is 1.25% per month. See Exhibit YP-2-R (Tariff Rates RS, RH, and RA). PECO’s

1 tariffed rate for residential late fees is 1.5% per month. See Exhibit YP-3-R (PECO
2 Tariff Rule 17.5).

3 • Payment processing charges: NEP charges \$3.50 for payments made over the
4 phone (Exhibit YP-1-R (DLC-NEP I-51)). By comparison, Duquesne Light
5 charges no such fee, for a corresponding effective rate of \$0. I am not aware if
6 PECO charges a fee for payments made over the phone, but PECO's tariff does
7 not appear to include such a fee, so it is possible that PECO's corresponding
8 effective rate is also \$0.

9 • Returned payment charges: NEP charges a fee of \$30 for payments not honored by
10 the tenant's bank (returned payments) (Exhibit TR-9; Exhibit YP-1-R (DLC-NEP
11 Attachment I-7.a; DLC-NEP III-4)). By comparison, Duquesne Light's tariffed
12 rate for returned payment charge is \$20. See Exhibit YP-2-R (Tariff Rule 21.3).
13 PECO's corresponding tariffed rate for returned payment charge is also \$20. See
14 Exhibit YP-3-R (PECO Tariff Rule 17.10).

15 • Deferred payment arrangement charges: NEP charges a 1% monthly interest rate
16 on customer debt subject to a deferred payment plan (Exhibit YP-1-R (DLC-NEP
17 I-6.k; DLC-NEP III-1)). By comparison, Duquesne Light imposes no such charge,
18 for a corresponding effective rate of 0%. I am not aware if PECO imposes such a
19 charge, but PECO's tariff does not appear to include such a charge, so it is possible
20 that PECO's corresponding effective rate is also 0%.

21 This list may not be comprehensive; it does not include other charges billed
22 by NEP that may or may not be directly related to basic electric service. For
23 example, NEP's bills to its tenants may include additional charges associated with

1 “other community utility or service bills,” (Exhibit YP-1-R (DLC-NEP I-53)). NEP
2 asserts that such charges are “assessed under authority derived from the lease
3 agreement between the property owner and resident,” to which NEP is not a party
4 (Exhibit YP-1-R (DLC-NEP I-5)). As such, the nature of these “other community
5 utility or service bills,” and the extent to which they are associated with basic
6 electric service and/or correspond to utility rates, are not immediately clear.
7 However, it is clear that such charges are relevant here, inasmuch as a tenant’s
8 nonpayment of these charges is grounds for NEP to terminate their electric service
9 (Exhibit YP-1-R (DLC-NEP I-53)).

10 I am not an attorney, so I will not opine on whether NEP’s rates in excess
11 of the corresponding utility rates constitute violations of Section 1313 of the Public
12 Utility Code. I understand that such issues will be addressed in briefs.

13
14 **Q. Are there other ways in which NEP’s tenants would be charged less if they
15 were individually-metered customers of Duquesne Light?**

16 A. Yes. NEP’s rates for electric delivery and supply exceed, on a total bill basis, the
17 corresponding rates that a typical residential customer would pay by participating
18 in Duquesne Light’s Standard Offer Program. The Standard Offer Program, which
19 is available to all residential customers not enrolled in CAP, allows customers to
20 enroll with an electric generation supplier (EGS) at a supply rate (inclusive of
21 transmission charges) of 7% below Duquesne Light’s then-effective Price to
22 Compare for default electric supply. See Docket No. P-2020-3019522. At
23 Duquesne Light’s proposed distribution rates, the monthly bill for a typical default

1 service customer on Rate RS using 600 kWh per month will be \$107.85, of which
2 \$42.39 comprises charges for electric supply and transmission. Enrolling in the
3 Standard Offer Program would reduce the supply and transmission portion of the
4 customer's bill by 7%, yielding a total bill of about \$104.88. By comparison, NEP
5 would charge this customer about \$105.80, plus or minus a few cents depending on
6 rounding.

7
8 **Q. Ms. Ringenbach acknowledges that NEP's tenants cannot choose their own**
9 **electric supplier (Exhibit YP-1-R (DLC-NEP I-6.j)), but avers that other**
10 **services provided by NEP replace the benefits that tenants would otherwise**
11 **receive from shopping. Do you agree?**

12 A. No. Ms. Ringenbach avers that NEP's practice of choosing zero-carbon electric
13 supply, together with the \$2 monthly bill "credit" provided to tenants, "mimic[s]
14 the benefits residents are likely to realize by successfully shopping for an electric
15 generation supplier" (NEP St. No. 1, p. 10, line 20 – p. 11, line 3). This is not
16 accurate. First, NEP offers no evidence that its \$2 "credit" is comparable to the
17 savings a customer could realize by shopping for electric supply. And as I discussed
18 above, the typical residential Duquesne Light customer can save around \$3 per
19 month simply by participating in the Standard Offer Program. Second, while NEP's
20 practice of choosing zero-carbon electric supply is laudable, it is not necessarily
21 consistent with the preferences of all of its tenants. For example, some tenants may
22 prefer a time-of-use supply option, which can incent load-shifting to off-peak hours.
23 NEP does not offer such an option (Exhibit YP-1-R (DLC-NEP I-6.u)).

1

2 **Q. With respect to low-income customers or tenants, Ms. Ringenbach avers that**
3 **the \$2 monthly “credit” is comparable to CAP. Do you agree?**

4 A. No. In discovery, Ms. Ringenbach acknowledged that she did not compare NEP’s
5 charges to what a tenant would be charged by Duquesne Light if enrolled in CAP
6 (Exhibit YP-1-R (DLC-NEP I-45)). In fact, NEP’s \$2 monthly “credit” falls far
7 short of the bill savings that a low-income tenant could otherwise realize as an
8 individually-metered customer to Duquesne Light. DLC’s CAP, available to
9 residential customers whose total gross household income is at or below 150% of
10 the FPL, offers participating customers a Percent of Income Payment Plan (PIPP),
11 an opportunity for arrearage forgiveness over a 24-month period of time with each
12 full monthly payment, protections against loss of electric service, and referrals to
13 other Duquesne Light and community programs and services. Through CAP, the
14 Company annually provides (among other financial benefits) approximately \$24.5
15 million in bill credits to about 36,000 participating customers. See DLC St. 7, pp.
16 7-8; Docket No. M-2019-3008227. This translates to an average monthly bill
17 discount of about \$57 per customer.

18 Moreover, CAP is not the only payment-assistance program that is
19 unavailable to NEP’s tenants. Low-income tenants submetered by NEP will also
20 lose access to the Company’s Hardship Fund and Smart Comfort programs, as well
21 as LIHEAP. The Company partners with Dollar Energy to provide a Hardship Fund
22 which matches customer contributions up to \$375,000 annually. The Hardship
23 Fund provides additional bill-payment assistance to lower-income residential

1 customers at or below 300% of the FPL who are unable to pay their electric service.
2 The Company also offers LIURP, which targets residential customers whose gross
3 household income is less than 150% of FPL and senior citizens whose gross
4 household income is less than 200% of FPL with base load electric usage more than
5 500 kWh per month and have been residing at their current address for at least six
6 months. The objective of this program is to reduce the energy usage and electric
7 bills of low-income customers, provide safer living conditions for low-income
8 customers through the reduction of secondary heating devices, educate the
9 customer on current conservation practices, and make tailored referrals to other
10 assistance programs such as CAP, Dollar Energy Fund, LIHEAP, and other
11 weatherization programs.

12
13 **Q. Ms. Ringenbach states that “NEP does not typically service low income**
14 **properties” (Exhibit YP-1-R (DLC-NEP I-6.p)). Does this impact your critique**
15 **of NEP’s lack of comparable payment assistance programs for low-income**
16 **tenants?**

17 A. No. First, just because a given building is not a “low income property” does not
18 mean that its residents do not have low incomes. Even if it were the case the NEP’s
19 tenants are less likely to be low-income than Duquesne Light’s overall residential
20 customer population, this fact would not undermine the value of assistance
21 programs to those tenants who have low incomes, including those who experience
22 a loss of income while living in an NEP-submetered building. Recent experiences
23 with the COVID-19 pandemic demonstrate that someone’s economic security can

1 change quickly, and tenants who have experienced loss of income have fewer
2 options for support for their utility bills in a NEP building.

3

4 **Q. Why do you say that NEP's tenants do not receive a level of value**
5 **commensurate with what they would otherwise receive from Duquesne**
6 **Light?**

7 A. As discussed above, NEP charges rates that approach, and may frequently exceed,
8 the rates that a tenant would or could otherwise pay as an individually-metered
9 Duquesne Light customer. However, the scope of services that NEP provides in
10 return is markedly lower than what Duquesne Light would provide. Thus, an NEP
11 tenant realizes less "bang for their buck" than they would as an individually-
12 metered Duquesne Light customer.

13

14 **Q. Please explain the ways in which NEP appears to provide a reduced scope of**
15 **services compared to Duquesne Light.**

16 A. There are several respects in which NEP's services fall short of Duquesne Light's
17 standard. Some of these I have already discussed elsewhere in testimony: NEP does
18 not provide low-income assistance programs, and its energy efficiency programs
19 are not clearly superior to Duquesne Light's. Some of these I discussed already in
20 my direct testimony: individually-metered tenants can choose their own electric
21 supplier; are entitled to the smart meter functionalities described in Duquesne
22 Light's smart meter plan; and are not subject to potential misuse of landlord-owned
23 submeter. Additionally, NEP does not provide its tenants with other functionalities,

1 programs, services, or due process comparable to those Duquesne Light provides
2 its customers.

3 Additionally, it appears that tenants may not have control over how their
4 payments are applied. Since multiple services (electric, water, community charges,
5 etc.) are included on a single bill, the question is what happens when the tenant is
6 behind on their charges. For example, during the COVID-19 emergency, tenants
7 could not be evicted from their apartments for failure to pay their rent.
8 Pennsylvania electric distribution companies, including Duquesne Light, were also
9 restricted from terminating service for nonpayment during the emergency.
10 However, NEP terminated service to 27 residential tenants in 2020 (Exhibit YP-1-
11 R (DLC-NEP I-2)). Some of these tenants' service may have been terminated
12 multiple times. In other words, though NEP may not have formally evicted those
13 tenants, it may have effected constructive eviction by terminating their electric
14 service.

15
16 **Q. How do the functionalities of NEP's submetering systems fall short of those
17 provided by Duquesne Light?**

18 A. Duquesne Light has deployed smart meter technology as provided under Act 129
19 of 2008, the Commission's *Implementation Order* entered June 24, 2009 at
20 Docket No. M-2009-2092655, and the Company's Smart Meter Plan at Docket
21 No. P-2015-2497267. NEP states they use the ITRON Centron II and Sentinel
22 meters, which do not offer full functionalities required under Commission
23 directive for Duquesne Light's smart meters. For example, NEC's AMI Centron

1 II and Sentinel meters cannot be reprogrammed over the air, and do not have the
2 data protocols for network communication as specified in ANSI Standard C12.22.
3 See Exhibit YP-1-R (DLC-NEP I-10). The importance of this capability is to give
4 individual customers the flexibility to automatically switch between different
5 rates and rate structures, such as net metering or time-of-use metering (which
6 NEP also does not offer to tenants, see Exhibit YP-1-R (DLC-NEP I-6.u; I-10).
7 Duquesne Light's meters also support automatic load control, at customer request,
8 via a Zigbee interface with customers' smart devices.

9 Additionally, pursuant to Commission directive, the Company's smart
10 meters "provide customers with direct access to and use of price and consumption
11 information." It appears that NEP does not have (or does not employ) such
12 functionality, as its tenant bills do not include a per-kWh rate for electricity. See
13 Exhibit TR-9 and Exhibit YP-1-R (DLC-NEP Attachment I-7.a).

14
15 **Q. What other programs and services does Duquesne Light provide to residential**
16 **customers that are superior to NEP's corresponding offerings?**

17 A. Examples of such programs and services include:

- 18 • Budget billing: Duquesne Light allows customer to spread bills out over 12-
19 month periods. NEP does not offer budget billing. (Exhibit YP-1-R (DLC-NEP
20 I-6.s)).
- 21 • Deferred payment plans: Duquesne Light offers payment arrangements
22 pursuant to the Commission's regulations and other applicable Commission
23 Orders. Depending on the customer's income, this can include payment

1 arrangements as long as 5 years with zero up-front payment. In contrast, NEP
2 appears to only offer payment arrangements up to 9 months in duration and with
3 30% to 50% of the tenant's balance due up-front. (Exhibit YP-1-R (DLC-NEP
4 I-6.k)). Additionally, as I discussed earlier, NEP charges a fee for customers to
5 participate in a deferred payment plan, whereas Duquesne Light does not.

- 6 • Bill payment terms: Consistent with Commission requirements, Duquesne
7 Light's bills are due within a minimum of 20 days of issuance, and the balance
8 becomes subject to collections actions and late payment charges following an
9 additional 5-day grace period, for a minimum of 25 days. In contrast, NEP's
10 bills are due within 14 days of issuance, and the amount is deemed overdue (and
11 subject to NEP's late payment charges) following a 7-day grace period, for a
12 total of 21 days. (Exhibit YP-1-R (DLC-NEP I-6.h)).
- 13 • Post-termination notices: Duquesne Light posts a notice at a customer's
14 residence upon termination of electric service. NEP does not. (Exhibit YP-1-R
15 (DLC-NEP I-7.d)).
- 16 • Winter termination protections: Duquesne Light does not terminate service to
17 residential customers for nonpayment during the period December 1 through
18 March 31 (the "winter moratorium"). NEP, however, does. (Exhibit YP-1-R
19 (CAUSE-PA-NEP I-39.))

20 This list is likely not comprehensive. Because some responsibilities related
21 to utility functions and charges appear to be distributed between NEP and the
22 landlord (for example, when and how to proceed with service termination, see
23 Exhibit YP-1-R (DLC-NEP I-6.i)), it is difficult to fully assess the scope or level

1 of such services provided to tenants. In my view, this opacity further diminishes
2 the relative value of NEP's services.

3

4 **Q. Do NEP's tenants receive less due process than they would as individually-**
5 **metered customers of Duquesne Light?**

6 A. Yes. As an Electric Distribution Company, Duquesne Light is subject to extensive
7 governmental oversight and regulation, which provide for a high degree of
8 transparency, and entitle customers to a broad array of protections, that NEP's
9 tenants do not appear to enjoy. As I am not an attorney, I am not expert in the
10 relevant statutes and regulations governing EDCs, and I understand that such issues
11 will be addressed in briefs. But I would note for the record the following facts:

- 12 • NEP does not follow a public, transparent process (such as this rate proceeding)
13 to establish its rates (Exhibit YP-1-R (DLC-NEP I-6.c)). NEP determines
14 certain of its rates by referring to the corresponding EDC's delivery and default
15 supply rates, which may or may not bear any resemblance to NEP's cost
16 structure. Other rates of NEP – such as service reconnection, late payment,
17 interest rates, “community charges,” etc. – appear to be established either at
18 NEP's sole discretion, or through agreements between NEP and landlords to
19 which tenants are not privy (Exhibit YP-1-R (DLC-NEP I-6.v)).
- 20 • NEP does not maintain a public tariff articulating uniform standards, terms,
21 programs, and rules applicable to the electric service it provides to tenants.
22 Rather, such terms are contained within tenants' leases with their landlords,
23 and/or in landlords' contracts with NEP (Exhibit YP-1-R (DLC-NEP I-7.b)).

1 This raises the prospects that such terms might not be consistent, comparable to
2 Duquesne Light's programs or tariffs, or binding on NEP. Furthermore, it does
3 not appear that NEP's terms are subject to prior review or approval by an
4 independent regulatory body.

- 5 • NEP frequently does not provide tenants with information directly relevant to
6 their electric service, including (but not necessarily limited to) post-termination
7 notices (Exhibit YP-1-R (DLC-NEP I-7.d)); changes in upcoming rate or
8 service changes (Exhibit YP-1-R (DLC-NEP I-7.e-f)); or information on how
9 to file complaints concerning electric service (Exhibit YP-1-R (DLC-NEP I-
10 46).

11
12 **Q. Does Ms. Ringenbach respond to your concern in direct testimony that**
13 **allowing existing buildings to convert from individual to master metering may**
14 **produce shifts in revenue allocation?**

15 A. Yes. Ms. Ringenbach avers, "Based upon our experience in Pennsylvania and other
16 states, we have no reason to believe that implementing master metering in
17 Duquesne's service territory along the lines of NEP's business model would trigger
18 a significant shift in DLC's inter or intra class revenue allocations between now
19 and its next likely rate case" (NEP St. 1, p. 24, lines 3-6).

20
21 **Q. Do you agree?**

22 A. No. First, Ms. Ringenbach's definition of "significant shift" in this context borders
23 on the absurd. She states in discovery that a "[s]ignificant shift would be a change

1 that would lead to a **10% or** [sic] **reduction in total revenue** due to residential
2 customer load to commercial load switching due to master metering without any
3 other reductions in costs to serve” (Exhibit YP-1-R (DLC-NEP I-43)) (emphasis
4 added). The Company’s projected 2022 total revenues at proposed rates are
5 approximately \$1,045,000,000. See DLC Exhibit 1, DFR IV-A, p. 3 of 6. Thus, by
6 Ms. Ringenbach’s reckoning, an annual revenue reduction of \$100 million would
7 not be “significant.” I respectfully disagree.

8 Second, Ms. Ringenbach fails to present any evidence to disturb the fact
9 that customer migration from residential to commercial classes necessarily has
10 revenue allocation impacts. While I am admittedly not a rate design expert, I
11 understand that the number of customers in a given rate class, and those customers’
12 loads, are fundamental facts that inform the development of rates. Ms. Ringenbach
13 does not offer any such facts, nor does she estimate the number of buildings or
14 customers that might switch rate classes under NEP’s proposed rule.

15
16 **Q. Do you have any additional concerns regarding NEP’s proposed tariff rule**
17 **41.2?**

18 A. Yes. Setting aside my substantive concerns articulated above regarding NEP’s
19 submetering proposal, the NEP’s proposed tariff rule is also unreasonably vague,
20 and would likely be impractical in application.

21
22 **Q. Please explain.**

1 A. NEP’s proposed tariff rule, included as Exhibit TR-11, articulates eligibility criteria
2 for master metered buildings, and then proposes the following process by which
3 master metering would be implemented:

4 Customers or their authorized representative permitted to use Master
5 Metering under this Rule shall also comply with the following:

6
7 1. The Company may request and the Customer or its authorized
8 representative shall provide within 60 days of a request information
9 to certify ongoing compliance with the above criteria: and

10
11 The Company shall provide a Commission approved form for
12 Customer or Authorized Representative contact information and
13 required details to ensure proper delivery of such a request;
14 Customers or their authorized representative shall notify Duquesne
15 of their decision to Master Meter under this Rule and shall submit
16 the notice to the Company using a form previously reviewed and
17 approved by the Commission. The Company shall make the form
18 available on its website. The Company shall advise the Customer if
19 the form has any deficiencies within fourteen (14) days of its
20 submission. The Company shall participate in a Commission staff
21 mediation of any unresolved deficiencies should one be requested
22 by the Customer or its authorized representative.
23

24 NEP thus proposes a novel mediation process, to be administered by Commission
25 staff, to resolve potential deficiencies in customers’ master metering requests.

26 NEP does not provide evidence to indicate whether the Commission is
27 willing or equipped to assume this role; the Commission bureau(s) responsible to
28 administer the mediation process; how such mediation process should proceed; or
29 whether or how Commission staff review would differ from the Commission’s
30 existing complaint procedures. Moreover, NEP did not provide a copy of the master
31 metering request form that it proposes would be the subject of Commission staff’s
32 review (see Exhibit YP-1-R (DLC-NEP I-41)), which further obscures the nature
33 of the Commission staff’s task, and its associated workload.

1 Finally, I observe that for all the ways in which I believe NEP’s submetering
2 operations would harm customers, there is little in NEP’s proposed Rule 41.2 that
3 would prevent NEP (or any other submetering company) from implementing
4 something even more detrimental to customers in the future. The standards to which
5 Rule 41.2 would hold submetering companies are quite low, and include almost
6 nothing in the way of tenant protections. Even if the Commission determines that
7 NEP’s services as described in its presentation in this case are acceptable – which
8 the Commission should not do – it still should not approve Rule 41.2, which would
9 open the door to tenant abuses not described in NEP’s presentation.

10

11 **Q. Does this conclude your rebuttal testimony?**

12 A. Yes. I reserve the right to supplement my testimony through the course of this
13 proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 7-R**

**Rebuttal Testimony of Katherine M. Scholl
Subject: Residential COVID-19 Debt Relief, Universal Service, and Various
Customer Service Issues**

Dated: July 26, 2021

TABLE OF CONTENTS

VI. PENNSYLVANIA WEATHERIZATION PROVIDERS TASK FORCE.....	28
i. Universal Services (LIURP & Hardship Fund)	

1 **I. Introduction and Summary**

2
3 **Q. Please state your full name and business address.**

4 A. My name is Katherine Scholl. My business address is 411 Seventh Avenue, Mail
5 Drop 15-1, Pittsburgh PA 15219
6

7 **Q. What is your position at Duquesne Light Company (“Duquesne Light” or
8 “Company”)?**

9 A. I am the Director Billing and of Revenue Management.
10

11 **Q. Have you previously submitted testimony in this proceeding on behalf of
12 Duquesne Light?**

13 A. Yes. On April 16, 2021, I submitted direct testimony (Duquesne Light Statement
14 No. 7) which details the Company’s residential customer assistance programs and
15 proposals.
16

17 **Q. What is the purpose of your rebuttal testimony?**

18 A. The purpose of my rebuttal testimony is to respond to the direct testimonies
19 submitted by non-Company parties in this proceeding that address residential
20 customer assistance proposals. Specifically, this includes: the Pennsylvania
21 Public Utility Commission’s (“PUC” or the “Commission”) Bureau of
22 Investigation & Enforcement (“I&E”) Witness Wilson; the Office of Consumer
23 Advocate (“OCA”) Witness Colton; The Coalition for Affordable Utility Service
24 and Energy Efficiency of Pennsylvania (“CAUSE-PA”) Witness Geller; the
25 Natural Resources Defense Council (“NRDC”) Witness Levin, and The
26 Pennsylvania Weatherization Providers Task Force (“PWPTF”) Witness Brady.
27

28 **Q. How is your rebuttal testimony organized?**

29 A. Section II responds to I&E Witness Christine Wilson’s direct testimony (I&E
30 Statement No. 1), which recommended disallowance of the Residential Covid-19
31 Debt Relief Program. Section III responds to certain aspects of OCA Witness

1 Rodger Colton's (OCA Statement No. 4) which discusses the Residential
2 COVID-19 Debt Relief program, universal services and the current economic
3 conditions resulting from the pandemic. Section IV responds to CAUSE-PA's
4 Witness Harry Geller testimony (CAUSE-PA Statement No. 1) recommending
5 various changes to low income programs for residential customers. Section V
6 responds to the direct testimony of NRDC Witness Amanda Levin related to
7 residential COVID-19 Debt relief. Finally, Section VI responds to the direct
8 testimony (PWPTF Statement No. 1) of PWPTF Witness Eugene Brady related to
9 universal services. My rebuttal testimony is organized by witness for the
10 convenience of the parties. However, I make use of cross-references as necessary
11 and appropriate to avoid repetition.

12
13 **Q. Are you sponsoring any exhibits with your rebuttal testimony?**

14 A. Yes. I am sponsoring various responses to interrogatories, including Duquesne
15 Light's responses to OCA-II-22-26, CAUSE-PA-I-4, CAUSE-PA-I-5, CAUSE-
16 PA-I-31, CAUSE-PA-III-14, and NRDC responses to DLC-I-1 through I-3. These
17 responses are attached and marked as Exhibit KS-1-R.

18
19 **II. I&E Recommendation regarding Residential**
20 **Covid-19 Debt Relief Program**

21 **Q. Have you reviewed I&E Witness Wilson's testimony in this proceeding?**

22 A. Yes. I have read Witness Wilson's testimony.

23 **Q. Please summarize I&E Witness Wilson's testimony regarding the Company's**
24 **proposed Residential Covid-19 Debt Relief Program.**

25 A. Witness Wilson recommends that the Residential COVID-19 Debt Relief program
26 be disallowed in its entirety for two reasons. First, Witness Wilson suggests that
27 more people are becoming vaccinated, and the economy is reopening, although
28 unemployment remains substantially higher than the pre-pandemic levels.

1 Second, Witness Wilson notes that PUC Chairman Brown Dutrieuille believes
2 that it is time to return to normal collection practices in light of the extended
3 payment arrangements made available by the Commission on March 11, 2021.

4 Witness Wilson also states that if the Commission approves the Residential
5 COVID-19 Debt Relief Program it should be funded by shareholders, and that if
6 cost recovery is permitted, the \$3.5 million cost should be normalized over a 43
7 month period.

8 **Q. Do you agree with Witness Wilson's recommendations?**

9 A. No. As admitted by Witness Wilson, unemployment rates remain substantially
10 higher than pre-pandemic levels. Uncoincidentally, residential delinquency levels
11 in 2021 closely mirror those of 2020, and are notably higher than in 2019:

12 Average Residential Delinquency (\$) / Acct

	April	May	June
2019	\$371	\$354	\$339
2020	\$459	\$458	\$462
2021	\$459	\$483	\$460

13 What's more, the unemployment rate in Duquesne Light's service territory is a
14 single, incomplete indicator of customer need. While flexible and extended
15 payment arrangements have been given to customers, Duquesne Light specific
16 data suggests that its customers are struggling to maintain those payment
17 arrangements. The table below shows that Duquesne Light customers have higher
18 delinquent balances than in 2019 prior to the pandemic.

19

20

21

1 Total Delinquency (\$) on Residential Payment Arrangements

	April	May	June
2019	\$11,006,803	\$10,330,660	\$9,090,630
2020	\$15,631,452	\$15,656,454	\$15,932,650
2021	\$8,698,791	\$13,506,150	\$16,275,686

2 **Q. Do you agree that shareholders should be required to fund the Residential**
3 **COVID-19 Debt Relief program if approved by the Commission?**

4 A. No. The Company's proposed short-term matching fund program incentivizes
5 customers who may be struggling to pay household expenses to prioritize
6 payment to Duquesne Light, which is preferable to customers continuing to amass
7 large uncollectible balances, the cost of which would ultimately be borne by
8 customers.

9 There is a correlation between higher customer delinquencies and the mandatory
10 extended moratorium on collections. While well-intended, the mandatory
11 moratorium resulted in higher, unaffordable account delinquencies for some
12 customers. The costs associated with the Residential COVID-19 Debt Relief
13 program are analogous to uncollectible expenses, which are recoverable. For these
14 reasons, the Company believes that the Residential COVID-19 Debt Relief
15 program should be approved, including appropriate cost recovery.

16 It is also important to note that the Company is encouraging customers to apply
17 for available assistance programs as appropriate. The Company's Customer
18 Service Representatives are trained to screen customers who indicate they are
19 having trouble paying their bill for any available energy assistance programs,
20 including CAP, LIHEAP, hardship fund (Dollar Energy Fund), Renters
21 Assistance, etc. Energy assistance programs are also routinely featured in the
22 Company's email blasts to customers, television commercials, and social media
23 posts.

1 The Company is also fully utilizing traditional collection methods, such as
2 termination for nonpayment. However, as the provider of an essential service,
3 terminations for nonpayment should be deployed a last resort. This is particularly
4 true as customers and the community continue to endure the effects of a deadly
5 health pandemic. New and more contagious variants of the COVID-19 virus
6 continue to penetrate communities causing illness and hospitalizations,
7 particularly among unvaccinated populations. As reported by the Wall Street
8 Journal¹:

9 *The country has reported an average of 32,287 new coronavirus cases each*
10 *day over the past week, according to a Wall Street Journal analysis of Johns*
11 *Hopkins data, more than double what the seven-day average was 10 days ago.*
12 *The uptick in cases has touched every state and Washington, D.C., with the*
13 *seven-day average of newly reported cases exceeding the 14-day average in*
14 *each place for the past four days, according to the data.*

15 *Coronavirus-related hospitalizations have also jumped, rising 35.8% between*
16 *July 7 and July 13 compared with the previous seven days, according to the*
17 *Centers for Disease Control and Prevention.*

18 *Doctors and epidemiologists point to the Delta variant, also known as*
19 *B.1.617.2, as a main cause. [The variant](#), now dominant in the U.S., is estimated*
20 *to be 40%-80% more infectious than the Alpha variant. First detected in India*
21 *late last year, Delta played a significant role in a record-setting surge of*
22 *infections there and has since led to increases in cases around the world.*
23 *Existing Covid-19 vaccines are effective against the variant, though no vaccine*
24 *is 100% effective.*

25

¹ “Delta Variant Helps Push Covid-19 Cases Higher in Every State”, The Wall Street Journal, July 19, 2021. <https://www.wsj.com/articles/delta-variant-helps-push-covid-19-cases-higher-in-every-state-11626733436>.

1 Duquesne Light has extended considerable effort to address delinquencies above
2 and beyond what is required by the Commission. Nonetheless, data indicates that
3 some customers need additional assistance to address their delinquency and
4 maintain electric distribution service. The proposed Residential COVID-19 Debt
5 Relief program provides a balanced approach to helping those in need while
6 mitigating the burden on other customers.

7 Finally, Duquesne Light Witness Robert O'Brien (DLC Statement No.10-R)
8 addresses I&E's proposal related to the appropriate normalization period.

9 **III. OCA recommendations regarding Residential Covid-19 Debt Relief**
10 **Program, universal service and residential deposits**

11 **Q. Have you reviewed OCA Witness Colton's testimony in this proceeding?**

12 A. Yes. I have read Witness Colton's testimony.

13 **Q. Please summarize Witnesses Colton's position and recommendations related**
14 **to Residential COVID-19 Debt Relief.**

15 A. Witness Colton recommends that the Commission approve Duquesne Light's
16 Residential COVID-19 Debt Relief program with substantial modifications,
17 including:

- 18 • That the minimum income eligibility of 150% should be eliminated,
19 allowing customers to choose enrollment in the Customer Assistance
20 Program ("CAP") or the Residential COVID-19 Debt Relief program, but
21 not both.
- 22 • That the program remain open until December 2022.
- 23 • That eligibility be open to residential customers with an arrearage of \$100
24 and 60 days past due.
- 25 • That the \$3 million budget be reserved exclusively for debt forgiveness.

- 1 • That matching forgiveness is granted for each payment up to \$300
2 regardless of whether the payment is on-time or in full, and that there are
3 no limits on the resources that qualify for matching forgiveness.
- 4 • That the proposed budget restriction of \$3 million be eliminated and to the
5 extent that actual program expenditures exceed \$3 million, Duquesne be
6 allowed to reconcile those expenditures and collect the excess through the
7 Universal Service Rider.

8 **Q. Do you agree with Witness Colton’s proposed modifications to the Residential**
9 **COVID-19 Debt Relief program?**

10 A. In part. Duquesne Light generally refers payment-troubled customers to its
11 universal services programs, including CAP. Accordingly, customers requesting
12 the Residential COVID-19 Debt Relief program would be referred to universal
13 services as necessary and appropriate based on the information provided to the
14 Company. As the Company’s CAP is voluntary, non-CAP customers whose
15 income is at or below 150% of the federal poverty level may choose to enroll in
16 CAP, the Residential COVID-19 Debt Relief program, or no program at all.
17 Thus, Duquesne Light agrees to remove the 150% income threshold from the
18 Residential COVID-19 Debt Relief program guidelines. As a practical matter,
19 however, the Company will encourage customers to enroll in the assistance
20 program that is most advantageous to them based on their unique circumstances
21 and program eligibility criteria.

22 The Company also agrees that limiting eligibility to residential customers with
23 and arrearage of \$100 and 60 days past due would help to target customers most
24 in need. Accordingly, Duquesne Light accepts OCA’s proposed modification
25 regarding the age of the arrearage.

26 The Company does not agree with the remaining proposed modifications to the
27 Residential COVID-19 Debt Relief program described above.

1 **Q. Please explain why the Company does not support extending the program to**
2 **December 2022.**

3 A. The Company designed and proposed a short, three (3) month matching
4 forgiveness program for a several reasons.

5 First, the three-month timing – January through March -- aligns with the months
6 leading up to the end of the winter moratorium. The Company intends to
7 encourage customers to maximize the funds available to them by combining
8 energy assistance grants with the Residential Covid-19 Relief program such that a
9 typical grant of up to \$300 would be matched to achieve \$600 in debt reduction.

10 Second, the Company seeks to engage with customers more frequently during the
11 moratorium, encouraging them to seek assistance prior to the typical “rush” that
12 occurs on or around April 1. As proposed, the Residential Covid-19 Relief
13 program is timed to create a sense of urgency to maximize access to available
14 funds.

15 **Q. Does the Company support reserving the \$3 million budget exclusively for**
16 **debt forgiveness as proposed by OCA Witness Colton?**

17 A. The Company intends to reserve the \$3 million budget for matching debt
18 forgiveness. The administrative funds (\$500,000) will be used to support technical
19 development; customer communications; and any waived reconnection fees.

20 **Q. Please clarify how the Company’s Residential COVID-19 Debt Relief**
21 **matching forgiveness will be applied if approved by the Commission as**
22 **proposed.**

23 A. As proposed, customers would apply to participate in the program. Upon
24 successful verification of income, the customer will then be encouraged to apply
25 for any available assistance. A single, one-time payment – be it paid directly by
26 the customer or via an energy assistance grant – will be matched, up to \$300.

1 **Q. Do you agree that customers should receive matching forgiveness for each**
2 **payment up to \$300?**

3 A. No. This proposed modification is a fundamental deviation from the purpose,
4 intent and design of the program. As described above, the program is designed to
5 marry Residential Covid-19 program funds with available energy assistance
6 grants. With a maximum of \$300 per customer, we can serve a minimum of
7 10,000 and allow an optimal number of customers to participate. Allowing an
8 individual customer to participate more than once would ultimately lower the
9 number of customers who could receive assistance from the program.

10 **Q. OCA Witness Colton also proposes that the budget restriction of \$3 million**
11 **be eliminated and to the extent that actual program expenditures exceed \$3**
12 **million, Duquesne be allowed to reconcile those expenditures and collect the**
13 **excess through the Universal Service Rider. Do you agree with this**
14 **proposal?**

15 A. I do not. The Company seeks to strike a balance between serving customers
16 through this program and through traditional universal services programs. In both
17 types of programs, the costs are borne by residential customers. Setting an
18 appropriate limit on this expense is important for maintaining affordability and
19 ensuring that all residential customers are not unduly burdened by the on-going
20 impacts of COVID-19.

21 **Q. What, if anything, does OCA Witness Colton recommend related to**
22 **Duquesne Light's low-income and universal service program outreach?**

23 A. Witness Colton recommends that Duquesne Light be directed to submit a detailed
24 three (3) year outreach plan to the Commission's Bureau of Consumer Services
25 (BCS) with the goal of expanding the identification of confirmed low-income
26 customers, expanding CAP, and expanding the number of customers enrolled in
27 CAP particularly for customers at or below 50% of the federal poverty level.

1 **Q. Do you agree with these recommendations?**

2 A. No. At the outset, the appropriate proceeding to address Duquesne Light's
3 Universal Service and Energy Conservation Plan ("USECP") design elements is
4 in the Company's USECP docket.² Customer outreach, use of community-based
5 organizations, etc. are design elements of the Company's universal service
6 programs (CAP, Hardship Fund and LIURP) that are not directly related to
7 ratemaking impacts or rate consequences of the Company's proposals. Therefore
8 these issues are appropriately addressed in the Company's USECP docket.
9 Indeed, these issues have been raised in the Company's USECP proceedings.

10 Additionally, Witness Colton's suggestion to require a three-year customer
11 outreach plan places additional burden on the Bureau of Consumer Services
12 (BCS) to review the proposed plan. In 2019, the Commission moved to have
13 USECPs span five years rather than three. If Witness Colton's community
14 outreach plan proposal is required by the Commission, it should align with the
15 timing of the Company's five-year USECP. Otherwise, the proposal threatens to
16 undo efforts to mitigate and streamline the USECP review process. Additionally,
17 the Company's USECP provides information regarding community outreach and
18 the use of CBOs. Requiring a separate three-year Commission-approved plan
19 would reduce the Company's operational flexibility to develop and implement
20 customer communication and outreach strategies, and is unnecessary and
21 duplicative.

22 **Q. Does Duquesne Light proactively work to identify low-income customers**
23 **within its service territory?**

24 A. Absolutely. During the Discovery phase of this proceeding, Witness Colton asked
25 the Company to outline targeted (emphasis added) outreach efforts made to low
26 income customers. I responded by outlining various targeted initiatives undertaken
27 by the Company (see OCA-II-22-26). As I understand it, targeted outreach is

² Indeed, the OCA and CAUSE-PA are parties to the Company's current USECP proceeding.

1 outreach that is specifically addressed to an individual. As such, my response
2 included only those tactics that were directed to individual customers, including
3 targeted emails and targeted phone calls. In my response to CAUSE-PA-I-31, I
4 outlined the Company’s community and grass-roots efforts and referred Mr. Colton
5 to that response in response to his questions about community and grass-roots
6 efforts.

7 It appears that Witness Colton also views community and grass-roots efforts as
8 “targeted outreach.” In stating that “Duquesne has undertaken no identifiable
9 efforts to work with specifically identified community-based organizations to
10 provide low income outreach³” and “when asked to do so, it did not provide the
11 name of even one community organization with whom it worked to expand its low-
12 income outreach” Witness Colton failed to acknowledge the significant number of
13 activities undertaken with community partner from 2019 through the present time.
14 As explained in my response to CAUSE-PA-5 CAUSE-PA-I-31, which is attached
15 and marked Exhibit KS-1-R and incorporated by reference, Duquesne Light
16 proactively identifies confirmed low-income customers and participates in a
17 plethora of outreach events.

18
19 **Q. Do you agree with Witness Colton’s conclusion that Duquesne Light is**
20 **under-serving its low-income customers?**

21 A. I do not. Duquesne Light is mindful of the needs of low-income customers as well
22 as the non-CAP residential customers that fund low income programs. As my
23 response to the previous question indicates – and as outlined in CAUSE-PA-I-31,
24 the Company goes to great lengths to work with community partners to reach low-
25 income customers and to encourage participation in energy assistance programs. In
26 the past five-years, Duquesne Light has made great strides to enhance the services
27 provided to its most economically vulnerable customers. While enrollment in CAP
28 may be lower for some customer segments, the full extent of Duquesne Light’s
29 efforts must be recognized. This includes:

- Significant community and customer outreach as detailed above

³ OCA St. 4, p. 47 line 10.

- 1 • providing greater affordability through implementation of the percentage of
- 2 payment plan (PIPP)
- 3 • providing additional grant funding through the Hardship fund in 2020
- 4 • providing CAP customers an opportunity to earn forgiveness of their entire
- 5 delinquent balance in January 2021
- 6 • personal, targeted outreach to high use customers for LIURP
- 7 • waiving late payment fees
- 8 • waiving reconnection fees, and
- 9 • granting flexible payment arrangements.

10

11 Accordingly, I do not believe that Duquesne Light is underserving its low income

12 customers. To the contrary, I believe the Company has admirably worked to

13 balance the needs of its customers to ensure reasonable, affordable service for all

14 customer populations.

15

16 **Q. Witness Colton states that Duquesne Light's Universal Service costs should be**

17 **allocated to all customer classes. Do you agree with this recommendation?**

18 A. No. As explained in my direct testimony (Duquesne Light Statement No. 7, p.11

19 lines 6-14), Duquesne Light has not proposed changes to the existing costs

20 allocation of its universal service programs. Commercial and industrial customers

21 are not eligible for the universal service programs and therefore do not directly

22 contribute to the costs of the programs, or directly benefit from the programs. It

23 is my view that that costs and benefits identified in Witness Colton's testimony

24 are ancillary, at best. Duquesne Light continues to believe that the program costs

25 are appropriately borne by the residential customer class.

26

27 **Q. In your direct testimony you proposed to set the bad debt offset in Duquesne**

28 **Light's Universal Service Rider (Rider No. 5) at 35,853. Witness Colton**

29 **recommends that the bad debt trigger be set at 35,000. Do you agree with**

30 **this recommendation?**

1 A. No. The proposed trigger of 35,863 is reasonable and appropriate. It aligns with
2 the number of customers enrolled in CAP at the end of 2019, just before the
3 pandemic began. At present, the Company has 34,654 customers in CAP. Setting
4 the trigger at 35,863 allows for an increase of 1,199, or 3.5%. Further, if the
5 Commission accepts Witness Colton's proposal to increase outreach and
6 enrollment in CAP for customers at 0-50% of the FPL, enrollment may be higher.
7 Accordingly, the proposed bad debt trigger of 35,853 is appropriate.

8

9 **Q. Witness Colton also proposes that Duquesne Light Tariff Rule No. 5 be**
10 **modified to provide that security deposits be paid in no fewer than four (4)**
11 **twenty-five percent (25%) installments with the first installment billed no**
12 **less than 30 days after the reconnection of service. Do you agree with**
13 **Witness Colton's proposal?**

14 A. The Company currently allows customers to pay the security deposit in four (4)
15 25% installments, which is more generous than Commission regulations allow.
16 Historically, Duquesne Light has required payment of a portion of the balance as
17 a condition of service prior to reconnection, as permitted by Commission
18 regulations.

19

20 The proposed language states "[w]hen the Company determines a deposit is
21 required for new service or for reconnection of service as described in Rule No.
22 40, such deposit shall be payable within a reasonable time period after
23 commencing or reconnecting electric service."

24

25 The proposed language was intended to grant the Company the flexibility to allow
26 customers and applicants additional time to pay security deposits without being in
27 conflict with the tariff language. The Company does not believe that codifying
28 the current rule is the best way to achieve the desired goal. Accordingly, the
29 Company proposes the following amendment:

30

1 “When the Company determines a deposit is required for new service or
2 for reconnection of service as described in Rule No. 40, such deposit shall
3 be payable within a reasonable time period after commencing or
4 reconnecting service, but not a shorter time period than required by
5 applicable regulations in Chapter 56 of the Pennsylvania Code.”
6

7 **Q. Please respond to Witness Colton’s testimony regarding Duquesne Light’s**
8 **termination efforts.**

9 A. Witness Colton concludes that Duquesne Light’s performance on collection is not
10 exemplary because data demonstrates an increase in terminations for nonpayment
11 in 2017, 2018, and 2019. Notably, Duquesne Light implemented a moratorium on
12 terminations in 2015- 2016 due to the implementation of its new customer care and
13 billing system (“FOCUS”). As shown in the chart below, terminations were
14 uncharacteristically low in 2015 and 2016.
15

	Terminations	Termination Rate
2010	21,915	4.18%
2011	22,927	4.37%
2012	23,533	4.50%
2013	25,649	4.90%
2014	23,853	4.50%
2015	16,601	3.20%
2016	12,726	2.40%
2017	21,575	4.10%
2018	26,119	4.90%
2019	27,688	5.10%

16
17
18 An increase in termination for nonpayment following a moratorium is not
19 necessarily indicative of poor performance, rather it’s a return to historical trends.
20

21 Additionally, Duquesne Light adamantly disagrees that its lower delinquency is
22 indicative of poor performance. Quite the opposite. Duquesne Light strives to

1 maintain a low percentage of billings in arrears to avoid high uncollectibles, which
2 helps mitigate rate increases.

3
4 Witness Colton notes, “Duquesne had one of the highest termination rates in the
5 state despite having the second lowest percentage of residential customers in
6 arrears.” While terminations are always considered to be a last resort, the statistics
7 cited by Mr. Colton actually highlight how Duquesne has used all appropriate
8 means – including terminations – to most appropriately manage customers’ debt
9 levels.

10 **IV. CAUSE-PA recommendations regarding low-income residential customer**
11 **assistance programs**

12 **Q. Have you reviewed the testimony of CAUSE-PA witness Harry Geller?**

13 A. Yes. I have reviewed the testimony. In total, Witness Geller makes eighteen (18)
14 recommendations including, but not limited to, a recommendation that the
15 Company’s rate increase be denied because rates are “already unaffordable,” and
16 that the Company be required to provide additional services to low-income
17 customers at an incremental cost of *at least* \$4 million.

18
19 **Q. Please summarize the recommendations that you will address in your**
20 **rebuttal testimony.**

21 A. On pages 52 through 54 of CAUSE-PA Statement No 1, Witness Geller
22 recommends that the Commission:

- 23 • Require DLC to provide matching additional funding in the amount of
24 \$3 million (plus associated administrative costs) for DLC’s Hardship
25 Fund as a temporary COVID-19 debt relief measure.
- 26 • Require DLC to screen residential customers who apply for the
27 COVID-19 Debt Relief Program for eligibility for low income
28 assistance programs and other sources of assistance, such as LIHEAP,
29 ERAP, and the Homeowner Assistance Fund. DLC should also be
30 required to work with stakeholders through its Advisory Group in

1 order to better coordinate referrals to available sources of assistance,
2 such as through CBOs

- 3 • Require DLC to offer more flexible payment arrangements to
4 customers who enroll in the COVID-19 Debt Relief Program, in line
5 with the payment arrangement lengths set forth in the Commission
6 Order at M-2020-3019244, for the duration of the COVID-19 Debt
7 Relief Program
- 8 • Require DLC to actively monitor and investigate if CAP customers’
9 usage levels giving rise to reaching the CAP maximum level has been
10 caused by factors beyond the household’s control and CAP
11 participants would be eligible for adjustments to their maximum CAP
12 credits based on extenuating circumstances, including but not limited
13 to the list provided in DLC’s USECP. If this is the case, the household
14 should not be sanctioned by loss of CAP rate.
- 15 • Require DLC to actively notifying all customers when they reach 50,
16 75, and 90% of their CAP maximum levels and advise them of
17 possible exemptions.
- 18 • Require DLC to classify “de facto” heating customers as heating
19 customers, so that they receive the higher level of maximum CAP
20 credits.
- 21 • To the extent any increase in rates is approved, require DLC to
22 increase its maximum CAP credit thresholds by an amount equal to the
23 annual average increase in residential rates.
- 24 • Require DLC to closely track and report on the number CAP
25 customers who exceed their maximum CAP credit limit. If more than
26 5% of DLC’s CAP customers exceed 100% of their maximum CAP
27 credit threshold prior to the 11th month of a given program year, DLC
28 should be required to further increase the maximum CAP credit
29 thresholds such that no more than 5% of CAP customers exceed the
30 maximum CAP credit threshold in a given year.
- 31 • Require DLC to increase its annual LIURP budget by \$1 million.

- 1 • Require DLC to carryover any unspent LIURP funds from a previous
2 program year in order to ensure that low income customers are able to
3 sufficiently access LIURP services in order to improve their energy
4 efficiency and monthly bills.
- 5 • Require DLC to eliminate its requirement that applicants for
6 residential service provide a notarized application as a condition of
7 establishing service.
- 8 • Require DLC to accept alternative identification, including ITINs,
9 social security cards, birth certificates, health insurance cards, school
10 identification, work identification, or government benefit letters or
11 cards that do not list an address if they are presented in combination
12 with another utility bill or lease.

13 **Q. Do you agree with Witness Gellers' recommendations?**

14 A. As stated above (page 12), the Company believes that the appropriate proceeding
15 to address USECP design elements is in the Company's USECP docket.
16 Accordingly and perhaps unsurprisingly to CAUSE-PA, Duquesne Light is
17 opposed to the recommendations advanced by Witness Geller on behalf of
18 CAUSE-PA with limited exceptions as discussed below.

19
20 **Q. Do you agree that Duquesne Light should provide matching additional
21 funding in the amount of \$3 million for the Company's Hardship Fund as a
22 temporary COVID-19 debt relief measure?**

23 A. No. At the beginning of the COVID pandemic in 2020, the Company provided
24 additional funding to the Company's Hardship Fund. In the midst of the
25 pandemic, the Company launched a new CAP and provided the opportunity for
26 arrearage forgiveness totaling over \$10 million. The Company also proposed a \$3
27 million Residential COVID-19 Debt Relief program in this proceeding. I do not
28 believe it's necessary to add an additional \$3 million to the hardship fund.

29
30 **Q. Will Duquesne Light screen residential customers who apply for the COVID-
31 19 Debt Relief Program for eligibility for low income assistance programs**

1 **and other sources of assistance, such as LIHEAP, ERAP, and the**
2 **Homeowner Assistance Fund?**

3 A. Yes. In the normal course of business, customers who apply for any type of
4 income-qualified program are evaluated for participation in any and all relevant
5 programs that provide payment assistance.

6
7 **Q. Does Duquesne Light intend to work with stakeholders through its Advisory**
8 **Group in order to better coordinate referrals to available sources of**
9 **assistance, such as through CBOs?**

10 A. Yes. The Company intends to continue to work with stakeholders through the
11 Advisory group as it has for many years. We meet with this group a minimum of
12 three times per year, but also schedule interim meetings as necessary to support
13 collaborative initiatives. The Company is also in daily contact with the CBOs who
14 support the CAP program – Holy Family Institute and Catholic Charities, and we
15 are in frequent contact with various organizations throughout the service territory,
16 including Salvation Army, St. Vincent de Paul, North Hills Community Outreach,
17 South Hills Interfaith Movement (SHIM), etc. Further, the Company is partnering
18 with other local utilities – namely Peoples Natural Gas and Pittsburgh Water &
19 Sewer Authority – to coordinate referrals across utilities.

20
21 **Q. Will Duquesne Light offer payment arrangement lengths as set forth in the**
22 **Commission Order at M-2020-3019244, for the duration of the COVID-19**
23 **Debt Relief Program?**

24 A. Based on the Commission's most recent Order, the protections afforded to
25 customers through the noted emergency order noted will end on September 30,
26 2021. I maintain that 36 months is an appropriate length of time for payment
27 arrangements made through the COVID-19 Debt Relief Program. The Company
28 is committed to offering reasonable terms to customers and will continue to
29 follow applicable Commission regulations regarding restoration payment
30 arrangements granted for 60 months.

31

1 **Q. Please explain how Duquesne Light manages exceptions from its CAP**
2 **maximum credits?**

3 A. The Company has a two-fold approach to managing exceptions to the CAP
4 maximum credits.

5
6 First, the Company recently appointed a full-time employee of Holy Family
7 Institute – one of the CBOs who serve as administrators of the CAP program – to
8 be a Customer Success Associate. This person actively reviews a list of
9 customers who are near or who have reached their CAP maximum discount. She
10 engages in conversation with the customer and determines if an exception is
11 appropriate based on extraordinary circumstances, and also provides appropriate
12 referrals to grant monies, energy efficiency programs, etc.

13
14 Secondly, the internal team responsible for managing the CAP program routinely
15 reviews the list of customers who have been granted said exceptions and ensures
16 that they remain in place through program events such as recertification. This
17 extra step ensures that no customer is mistakenly denied the exceptions that have
18 been granted.

19
20 **Q. In your view, is Duquesne Light’s process for managing exceptions to the**
21 **CAP maximum credits appropriate considering relevant factors such as cost**
22 **containment, administrative costs and incentivizing conservation?**

23 A. Yes, very much so. The Company’s approach is both generous and fair. At the
24 present time, we have 182 customers who have been granted exceptions to the
25 CAP maximum discount. Most customers are granted a 10% - 50% increase,
26 though in extreme situations we have granted overages of 70% - 100% beyond the
27 stated maximum discount.

28
29 **Q. Does Duquesne Light notify all CAP customers when they reach 50, 75, and**
30 **90% of their CAP maximum levels?**

1 A. All CAP customers are provided with their CAP credit usage monthly. The
2 Company instituted a new bill design earlier this year. For CAP customers, the
3 amount of discount used year-to-date and the reset date are clearly noted and
4 presented in graphical form on each bill. Research conducted prior to launching
5 this bill design garnered positive feedback from CAP customers.

6

7 While the Company does not conduct targeted outreach to CAP customers at
8 these specific thresholds, the Customer Success Associate described above begins
9 targeted outreach when a customer is at 70% of the maximum discount.

10

11 **Q. Do you agree that “de facto” heating customers should be treated as heating
12 customers for purposes of determining the CAP max?**

13 A. No. Treating “de facto” heating customers as electric heating customers for
14 purposes of determining the CAP max could create a perverse incentive, or reduce
15 customer’s incentive to eliminate their reliance of space heaters. Of the utmost
16 importance is providing a safe source of heating. Therefore, the preferred
17 approach is to help customers gain access to an appropriate, safe heating source
18 for their home. Customers who are relying on space heaters rather than a gas-
19 powered unit should be referred to an appropriate energy efficiency program.
20 This approach emphasizes safety by avoiding reliance on dangerous space
21 heaters, and helps to maintain program affordability for both CAP customers as
22 well as other residential customers who bear the cost of such programs.

23

24 **Q. Do you support increasing Duquesne Light’s maximum CAP credit
25 thresholds by an amount equal to the annual average increase in residential
26 rates, to extent an increase is approved?**

27 A. No. The CAP maximum is as an important cost containment mechanism. A
28 blanket increase would needlessly inflate the overall program costs to non-CAP
29 residential customers because a significant percentage of CAP customers do not
30 hit their CAP max. Given that 90% of CAP customers do not exceed the CAP
31 maximum, the current CAP maximums remain appropriate. As explained in my

1 response to CAUSE-PA-III-14, there is no evidence that the proposed rate
2 increase, if granted, will result in a substantially higher number of customers
3 exceeding the CAP maximum. CAUSE-PA-III-14 is attached and incorporated
4 by reference as Exhibit KS-R-1.

5
6 Additionally, in his direct testimony Witness Geller (p. 36-37) outlined the
7 number of customers who reached the CAP maximum in prior years, under a
8 different program with different maximum discounts. Witness Geller then refers
9 to data I provided and states, "...309 CAP customers have already exceeded their
10 maximum CAP credits at current rates and an additional 641 CAP customers have
11 exceeded between 70-99% of their maximum CAP credits."

12
13 While true, it is worth noting that the 309 customers who reached their max
14 represent less than 1% of all CAP customers. In total, customers who have used at
15 least 70% of their discount equate to fewer than 3% of all CAP customers. Being
16 5 months into the new program, these figures track very closely with CAUSE-
17 PA's preference to maintain the percentage of customers hitting the maximum
18 discount at 5%. Given current data, making any changes to the maximum annual
19 discounts is premature.

20
21 Finally, the current USECP proceeding addresses how on-going analysis will be
22 conducted and resolutions will be reached should the number of customers hitting
23 the maximum annual discount grow.

24
25 **Q. Witness Geller also suggest that no more than 5% of CAP customers should**
26 **hit their CAP max. Do you agree?**

27 A. No. The maximum annual discounts were set such that 5 – 10% of customers
28 would be likely to hit the maximum. In the first 5 months of the program, the
29 actual experience appears to be on-target with this expectation.

1 Further, the maximum annual discount needs to serve as an incentive for
2 customers to conserve energy, and to balance the costs borne by other customers
3 to support the program.
4

5 **Q. Does the Company support increasing the LIURP budget by \$1 million?**

6 A. No. Upon information and belief, Duquesne Light has continuously served all
7 willing customers through its LIURP programs. At the current funding levels,
8 Duquesne Light has unused LIURP budget dollars, despite serving all willing
9 customers. In its pending USECP, Duquesne Light addresses program design
10 changes it intends to make, subject to Commission approval, to help ensure that
11 the funding currently available to customers is appropriately utilized.
12

13 Additionally, as noted several times in my testimony, the Company makes every
14 effort to balance the needs of all customers in its provision of universal service.
15 While seeking to protect low-income customers facing a proposed rate increase is
16 admirable, it should be noted that these proposed protections come at a cost to the
17 customers who fund the programs, including customers whose income is at 151-
18 250% of the federal poverty level. These low and moderate income customers
19 should have affordable electric distribution service too. I do not believe that a
20 rate increase borne by all customers should be unduly compounded with
21 additional universal services funding, as doing so would further raise rates for a
22 majority of the Company's residential customers. Rather, the Company's efforts
23 to better utilize available resources are the appropriate recourse at this time.
24

25 **Q. Does Duquesne Light support carrying over any unspent LIURP funds from
26 a previous program year?**

27 A. Duquesne Light strongly supports efforts to help customers conserve energy,
28 including low-income customers. This includes maintaining available LIURP
29 funding during the USECP five year plan.
30

31 **Q. Please explain Duquesne Light's service application requirements.**

1 A. A vast majority of Duquesne Light applications for service are paperless. As
2 described in CAUSE-PA-I-4, which is attached as marked as Exhibit KS-1-R, the
3 Company utilizes a web-based Applicant Service Tool (AST) to manage customer
4 applications for utility service. To apply for service, applicants must provide their
5 name, age, address to where they are applying, and an address where credit has
6 been established. The AST then sends applicant's information to TransUnion to
7 detect potential "Red Flags."

8

9 By way of background, the Fair Credit Reporting Act "Red Flags Rule" requires
10 companies, including Duquesne Light, to have policies in place to protect
11 customers from identity theft. Duquesne Light implemented a confidential
12 written Identity Theft Program Prevention (ITPP) Program designed to detect and
13 mitigate potential identity theft in its daily operations. Pursuant to Duquesne
14 Light's ITPP, applications are characterized as low, medium or high risks relative
15 to potential identity theft. The AST captures key data elements relevant to the
16 applicant which guides the user step by step through the validation process via a
17 series of questions. The AST functionality includes TransUnion validation which
18 determines if an application is low, medium or high risk. Under the Company's
19 ITPP, a low risk applicant may establish service, a medium risk applicant may be
20 required to provide knowledge-based authentication or over the phone code,
21 however a high risk applicant is required to provide a notarized application to
22 verify their identity. Examples of high risk applicants include applicants that
23 provide a SSN that may belong to a deceased person, or where there is an active
24 fraud alert on the applicants credit file. These procedures are designed to protect
25 consumers from identity theft by verifying the identity of the applicant.

26

27 The above-described process was implemented in January, 2021. Through the
28 end of May, 2021, the Company processed 15,581 applications through the AST.
29 Only 42 customers -- or 0.26% -- were asked to provide a notarized application.

30

1 Duquesne Light believes that it is appropriate to balance administrative burden
2 and ease with protecting customers and the Company from fraud. Duquesne
3 Light's application process is appropriately designed to balance those objectives.
4

5 **Q. Please explain which forms of identification Duquesne Light currently**
6 **accepts to establish service.**

7 A. With the implementation of the AST, which includes identity verification through
8 TransUnion, most customers are not required to provide further identification.
9 Applicants who do not have a current or former address in the United States are
10 required to submit a written or emailed application along with a non-expired,
11 government issued form of identification.
12

13 **V. NRDC recommendations regarding Residential Covid-19 debt relief**
14 **program.**

15 **Q. Have you reviewed the testimony of NRDC Witness Amanda Levin?**

16 A. Yes. I have reviewed the testimony. Witness Levin recommends three (3)
17 changes to the Company's Residential COVID-19 Debt Relief program. First,
18 Witness Levin recommends that the Commission defer cost recovery associated
19 with the administrative costs of the program. Second, Witness Levin
20 recommends that the Company be required to waive any and all late fees and
21 reconnections until at least December 2021 regardless of a customer's ability to
22 pay their balance. Finally, Witness Levin recommends that Duquesne Light be
23 required to track and reports quarterly to the Commission information including
24 geographical and income data.
25

26 **Q. Do you agree with NRDC's recommendations ?**

27 A. Duquesne Light is not opposed to tracking its administrative costs associated with
28 the Residential COVID-19 Debt Relief Program and creating a regulatory liability
29 for unused portions of the programs administrative costs to be refunded, if
30 applicable, in a future rate case.

1 However, I do not agree that late payment charges and reconnections fees should
2 continue to be waived. This issue has been decided by the Commission and the
3 Emergency Declaration has been lifted in its entirety. There is no basis upon
4 which to require the Company to waive these fees.

5
6 Finally, I also disagree with Witness Levin's recommendation that Duquesne
7 Light should be required to track and report certain geographic and income data to
8 the Commission for purposes of monitoring service equity. First, Duquesne Light
9 is not aware of any other Pennsylvania electric distribution company that reports
10 this data to the PUC. Accordingly, it is unclear how any data reported by
11 Duquesne Light would be measured by the Commission.

12
13 Additionally, if the Commission desires to amend certain reporting requirements,
14 it should do so in a generic rulemaking similar to the recent Diversity Rulemaking
15 at docket no. L-2020-3017284 to ensure consistency in the data being reported.
16 Individual rate cases are not the appropriate forum to establish reporting
17 requirements related to macro, non-utility specific socio-economic equity issues.

18
19 **Q. Is there anything else that you would like to address with respect to NRDC**
20 **Witness Levin's testimony?**

21 A. Yes. I want to emphasize that Duquesne Light's leadership team and employees
22 have demonstrated a tireless commitment to diversity, equity and inclusion within
23 our organization, and the communities we serve through actions, not just reports
24 and words. Because equity is critically important to Duquesne Light, I also want
25 to be abundantly clear that there is *no evidence* that the disparities discussed
26 throughout Witness Levin's testimony are occurring as a result of Duquesne Light
27 Company policies and action, nor are they specific to Duquesne Light's service
28 territory. In response to questions propounded on NRDC regarding its statements
29 about racial and ethnic inequity, which are attached, incorporated by reference
30 and marked as Exhibit KS-1-R, NRDC admits that these statements are not
31 specific to Duquesne Light or its service territory.

1 **VI. PWPTF recommendations regarding universal service programs.**

2 **Q. Have you reviewed the testimony of Pennsylvania Weatherization Providers**
3 **Taskforce (“PWPTF”) Witness Eugene M. Brady?**

4 A. Yes. I have review Witness Brady’s testimony. In summary, Witness Brady
5 states that if rate relief is granted, there should be an increase in universal service
6 funding, including increasing LIURP funding by \$689,500 and a minimum
7 Hardship contribution by Duquesne Light of \$500,000 to be distributed in
8 accordance with the percentage of low-income customers in the counties. Witness
9 Brady also suggests that Duquesne Light should partner with PWPTF member
10 agencies to implement LIURP.

11
12 **Q. Do you agree with Witness Brady’s recommendations?**

13 A. No. As mentioned above, the Company believes that the appropriate proceeding
14 to address its USECP design elements is in the Company’s USECP docket.

15
16 With respect to LIURP funding, Witness Brady’s suggestion that rate relief – if
17 granted – should require additional LIURP funding amounts to adding a further
18 rate increase to customers who fund LIURP and other universal services programs
19 today via Rider 5. As stated above, Duquesne Light does not believe that non-
20 CAP residential customers should continue to be pressed to pay an ever-
21 increasing amount in support of low-income programs.

22
23 As explained above, the Company already made an additional contribution to the
24 Hardship fund in 2020. We have also proposed additional COVID-19 Debt Relief
25 programs in this proceeding.

26
27 Finally, as explained above, the Company’s use of CBOs is, and has been
28 exemplary. Duquesne Light has partners with CBOs to administer its universal
29 service programs since the program’s inception. CBOs are chosen using the
30 Company’s competitive procurement process to ensure services are cost-

1 competitive and the selection process is fair and unbiased. The Company's
2 current use of CBOs and procurement process are appropriate.

3

4 **Q. Does this conclude your direct testimony?**

5 A. Yes.

6

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 8-R**

**Rebuttal Testimony of Sarah J. Oleksak
Subject: Transportation Electrification Programs**

Date: July 26, 2021

11	<i>E. Fleet Electrification Advisory Service</i>	55

1 **I. INTRODUCTION AND PURPOSE OF REBUTTAL TESTIMONY**

2

3 **Q. Please state your full name, business affiliation and address.**

4 A. My name is Sarah J. Olexsak. I am the Manager, Transportation Electrification for
5 Duquesne Light Company (“Duquesne Light” or “Company”). My business address is
6 Duquesne Light Company, 411 Seventh Avenue, Pittsburgh, PA 15219.

7

8 **Q. Did you previously submit testimony in this proceeding on behalf of Duquesne Light
9 Company?**

10 A. Yes, I did. I submitted my direct testimony (Duquesne Light Statement No. 8) on April
11 16, 2021.

12

13 **Q. What is the purpose of your rebuttal testimony?**

14 A. The purpose of my rebuttal testimony is to respond to Bureau of Investigation and
15 Enforcement (“I&E”) Witnesses Keller and Cline (I&E Statement Nos. 2 and 5,
16 respectively), Office of Consumer Advocate (“OCA”) witness Nelson (OCA Statement
17 No. 6), Office of Small Business Advocate (“OSBA”) witness Knecht (OSBA Statement
18 No. 1), Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
19 (“CAUSE-PA”) witness Geller (CAUSE-PA Statement No. 1), ChargePoint witness Deal
20 (ChargePoint Statement No. 1), and Natural Resources Defense Council (“NRDC”) witness
21 Harris (NRDC Statement No. 2) with respect to the Company’s proposed
22 Transportation Electrification Programs (“TE Programs”).

23

24 **Q. Are you sponsoring any Exhibits along with your rebuttal testimony?**

1 A. Yes, I am sponsoring Exhibits SO-1-R through SO-11-R.

2

3 **Q. Please summarize the positions of the other parties with respect to the Company's**
4 **proposed TE Programs.**

5 A. Parties took diverse positions on the Company's TE Programs proposal, which, taken
6 together, further evidence the reasonableness of the Company's balanced approach.

7 I&E witnesses Keller and Cline (I&E Statement Nos. 2 and 5, respectively) both
8 present testimony regarding the Company's proposed TE Programs. Witness Cline
9 recommends that the TE Programs be approved by the Commission. Mr. Keller indicates
10 that he accepts the premise of all three pilots within the Charging Infrastructure Portfolio
11 as well as the three components of the Customer Portfolio. Mr. Keller and Mr. Cline both
12 suggest TE Programs reporting requirements.

13 OCA witness Nelson (OCA Statement No. 6) expresses concern that the
14 Company's TE Program proposal lacks an adequate evaluation and assessment plan and
15 that the proposal's load management offerings are insufficient. Mr. Nelson recommends
16 rejection of the Home Charging Pilot and denial of the Company's request for make-ready
17 and charging station capital recovery for the proposed Charging Infrastructure Portfolio. In
18 the alternative, Mr. Nelson proposes that such funds could be provided to customers as a
19 rebate. Additionally, Mr. Nelson suggests that the Commission require the Company to
20 submit an evaluation and assessment plan, reduction of the Awareness, Education, and
21 Engagement (AEE) budget by 75%, rejection of the Fleet Advisory Service, and not permit
22 pilot activity through 2024. Lastly, Mr. Nelson encourages the Commission to require the
23 Company to file an electric vehicle (EV) load management proposal within 18 months of
24 a final order in the case.

1 CAUSE-PA witness Geller’s testimony (CAUSE-PA Statement No. 1) focuses on
2 how the proposed TE Programs will impact the Company’s low income customers. Mr.
3 Gellar avers that low-income customer lack ability to access EVs and EV charging
4 infrastructure, yet recognizes “that there are likely tangible emission benefits as a result of
5 transportation electrification that can help to lessen the historical burden of emissions in
6 low income communities and communities of color” (CAUSE-PA Statement No.1, p. 45,
7 lines 7-9). Mr. Geller recommends that the Company focus investment in infrastructure
8 that supports the electrification of accessible transportation options, specifically in or
9 serving Environmental Justice (EJ) Areas over infrastructure that supports personal vehicle
10 charging. He also recommends that the Company’s low income customers be exempted
11 from costs related to the Home Charging Pilot.

12 In his testimony, OSBA witness Knecht provides policy positions that describe
13 OSBA’s stance on electric utility EV charging infrastructure programs (OSBA Statement
14 No. 1, p. 32-34). Mr. Knecht argues that the Company’s proposed TE Programs are not
15 consistent with OSBA’s policy positions, and that the demand for charging infrastructure
16 can and should be met by unregulated entities. Mr. Knecht recommends the rejection of
17 the Public, Workplace, and Multi-Unit Dwelling Make-Ready Charging Pilot and the Fleet
18 and Transit Charging Pilot, and indicates that he refrains from taking a position on the
19 Home Charging Pilot.

20 NRDC witness Harris generally supports the Company’s TE proposals. She states
21 that the Company’s proposal takes “...a holistic, portfolio approach to support the growing
22 EV market...” and points out that the TE Programs, “...will only support a small
23 percentage of the charging infrastructure in its service territory that will be needed as EV
24 deployments increase.” (NRDC Statement No. 2, p. 4, lines 11-14). Ms. Harris provides a

1 number of recommended modifications and additions to the proposal including expansion
2 of utility ownership of charging stations for multi-unit dwelling customers, increased
3 funding for charging infrastructure to support medium- and heavy-duty fleets, and
4 increased prioritization of fleets servicing EJ Areas.

5 ChargePoint witness Deal (ChargePoint Statement No. 1) indicates support for the
6 Company's proposed Charging Infrastructure Portfolio and Fleet Electrification Advisory
7 Service. Mr. Deal provides a number of recommended modifications to these programs,
8 including the addition of charging station software and equipment eligibility requirements,
9 vendor neutral marketing communications, and permitting customer charging station
10 choice in the Home Charging Pilot.

11 Though not a party to this proceeding, Joshua Cohen also provided on-the-record
12 oral testimony on behalf of Greenlots, Inc., at the public input hearing held June 22, 2021.
13 Mr. Cohen expressed support for the Company's proposed TE programs. Tr. 36-40. Grant
14 Ervin also provided on-the-record testimony on behalf of the City of Pittsburgh, also not a
15 party to this proceeding, in support of the Company's proposed TE programs. Tr. 78-85.

16 Party comments in opposition to the Company's TE proposals can be sorted into
17 two categories: critiques of the Company's approach to TE generally, and critiques specific
18 to individual programs within the Company's proposed TE Programs. My rebuttal
19 testimony addresses parties' general objections first, then responds to program-specific
20 critiques.

21
22 **II. LOAD MANAGEMENT**

23
24 **Q. Please summarize intervenor comments about load management.**

1 A. OCA Witness Nelson and NRDC witness Harris each discuss load management. Mr.
2 Nelson recommends that the Company’s TE proposals be rejected, primarily due to alleged
3 lack of associated load management programs. He argues that frontloading utility EV
4 infrastructure without a load management plan will lead to overbuilding and that “[l]arge
5 transportation electrification efforts by a utility should not be authorized until a
6 comprehensive load management plan has been developed and implemented” (OCA
7 Statement 6, p. 27, lines 6-8), which he argues the Company’s existing and proposed load
8 management initiatives do not satisfy.

9 NRDC witness Harris urges the Company to encourage customers to charge off-
10 peak, stating that “shifting charging to off-peak hours when there is excess load on the grid
11 will help to maximize the benefits not only to EV drivers but put downward pressure on
12 rates for all customers” (see NRDC Statement 2, p. 25, lines 1-3). Witness Harris notes that
13 the Company obtained approval to offer an EV TOU rate as part of the Company’s Default
14 Service Plan.

15

16 **Q. Please expand on witness Nelson’s position with respect to load management and**
17 **utility EV programs.**

18 A. Mr. Nelson places load management at the center of his analysis of the Company’s
19 proposed TE Programs. He calls load management “the utility’s central responsibility”
20 with respect to transportation electrification, and argues, “[G]iven the significant ratepayer
21 impacts of unmanaged EV charging, it is incumbent on the utility to address load
22 management concerns” (OCA Statement 6, p. 27, lines 3-5). Witness Nelson alleges that
23 the Company’s current and future efforts with respect to EV load management do not meet
24 this standard, and the Company’s proposed TE Programs should therefore be rejected. He

1 also suggests that the Company develop a range of load management offerings including
2 passive, active, and automated load management (OCA Statement 6, p. 28, lines 4-5).

3
4 **Q. Do you agree with Mr. Nelson’s position as it relates to load management and the**
5 **Company’s TE proposals?**

6 A. No. First, Mr. Nelson’s singular focus on load management frequently comes at the
7 expense of other relevant factors that independently justify approval of the Company’s
8 proposals. The Company agrees with Mr. Nelson that load management (including but not
9 limited to with respect to EVs) is an important consideration. However, Mr. Nelson fails
10 to consider other factors – including, most significantly, the projected benefits of the
11 Company’s proposed programs – that warrant the programs’ approval.

12 Second, Mr. Nelson fails to produce quantitative evidence to support his
13 recommendations related to load management. For example, Mr. Nelson does not attempt
14 to estimate the implementation costs of any of his suggested load management initiatives,
15 see Exhibit SO-1-R (DLC-OCA-I-62-64), nor does he project the benefits they would
16 produce in Duquesne Light’s service territory. Rather, Mr. Nelson instead cites examples
17 from other states, and admits at one point that “these figures may not be directly applicable
18 to Pennsylvania” (OCA St. 6, p. 23, lines 9-13). There is no evidence that the benefits of
19 Mr. Nelson’s recommendations would outweigh the costs.

20 Third, even if one were to ignore these shortcomings and accept Mr. Nelson’s basic
21 premises regarding load management, Mr. Nelson is incorrect with respect to the
22 Company’s current and future load management initiatives. As I discuss further below, the
23 Company’s proposals in this proceeding clearly constitute load management offerings; and

1 as Company witness Harchick discusses in DLC St. 18-R, the Company is actively
2 developing additional load management capabilities for future implementation.

3 Finally, Mr. Nelson's recommendation is ultimately self-defeating, in that it would
4 deprive the Company of tools to develop the data, experience, and customer feedback that
5 can inform future EV load management offerings. He criticizes the Company for not
6 producing a chicken, while also urging the Commission to deny the Company's request for
7 an egg. Mr. Harchick addresses this further in his rebuttal testimony.

8
9 **Q. Does the Company offer load management programs?**

10 A. Yes. With respect to programs not specifically related to TE, pursuant to the Company's
11 smart meter plan (Docket No. P-2015-2497267), the Company supports customer load
12 control via its smart meter network. Further details regarding third party load control are
13 available on the Company's website.¹ The Company also offered demand response
14 programs through its Energy Efficiency and Conservation Plans until the Commission
15 excluded demand response from Phase IV, which commenced June 1, 2021. See the
16 Commission's Implementation Order entered June 18, 2020, at Docket No. M-2020-
17 3015228.

18 Specifically with respect to TE, as of June 1, 2021, the Company offers a time-
19 based supply rate as part of its default service plan.² Residential customers who drive EVs
20 and commercial and industrial customers (C&I) with demands less than 200kW that lease
21 or own at least one electric vehicle or have an electric vehicle charging station on their

¹ Exhibit SO-2-R (<https://www.duquesnelight.com/energy-money-savings/home-energy-center/third-party-load-control-program-info>).

² Exhibit SO-3-R WholeHome EV Rate. Duquesne Light Company. (<https://www.duquesnelight.com/energy-money-savings/electric-vehicles/wholehome-ev-rate>) Business EVRate. Duquesne Light Company. (<https://www.duquesnelight.com/energy-money-savings/electric-vehicles/business-ev-rate>).

1 premise are eligible to enroll. As Mr. Nelson acknowledges in DLC-OCA-I-65, the EV
2 time-of-use (TOU) rate is a passive load management program because it incents load-
3 shifting from on-peak to off-peak periods (Exhibit SO-1-R (DLC-OCA-I-65)).
4

5 **Q. Has the Company proposed additional load management offerings as part of this**
6 **proceeding?**

7 A. Yes. The Company has proposed a Residential Subscription Rate pilot (see DLC Everett
8 Statement No. 17). This rate is designed in part to encourage customers, including EV
9 drivers, to manage their peak demand.
10

11 **Q. Do the load management programs offered and proposed by the Company meet the**
12 **definition of load management as described by OCA Witness Nelson?**

13 A. Yes. Witness Nelson identifies passive load management as “altering customer behavior
14 to affect charging times. This can be accomplished through rate design or other financial
15 incentives for off-peak charging and for avoiding on-peak charging” (OCA St. 6, p. 28,
16 lines 8-10). As I discussed in my direct testimony, the Company’s EV TOU Rate and
17 proposed Residential Subscription Rate Pilot both incent efficient charging behavior.
18

19 **Q. Please summarize Mr. Nelson’s critique of the Company’s EV TOU Rate as a load**
20 **management offering.**

21 A. Mr. Nelson agrees that the Company’s EV TOU Rate is a passive load management
22 offering. In DLC-OCA I-65, he admits that “For customers that participate, the EV TOU
23 will undoubtedly result in customers charging more during off-peak hours. There are
24 numerous studies that support similar load shifting.”

1 His critique of the EV TOU Rate appears to be grounded in a concern that the
2 Company is not placing an adequate emphasis on it (Exhibit SO-1-R (DLC-OCA-I-65)):

3 The Company . . . was silent as to its plans to market or sign customers up
4 for its already approved EV TOU. The Company's lack of attention to the
5 EV TOU rate in this case, indicates the Company may not be committed to
6 increasing participation, which would lead to a lack of load shifting through
7 the rate.
8

9 **Q. Do you agree with this critique?**

10 A. No. First, witness Nelson fails to appreciate that since EV TOU Rate is a supply rate, it is
11 not subject to modification through this proceeding. The EV TOU Rate, including
12 estimated participation along with education and marketing initiatives, were only recently
13 resolved in the Company's DSP IX Proceeding, Docket No. P-2020-3019522. OCA signed
14 the stipulation resolving EV TOU Rate issues in that proceeding.

15 Even though it is not part of this proceeding, in the interest of allaying Mr. Nelson's
16 concern, I wish to be clear that the Company is not ignoring its EV TOU Rate. The
17 Company has begun and will continue to promote this rate option through email, social and
18 online marketing communicating with residential and business customers. Additionally,
19 the Company will soon launch a rate advisor tool to help residential customers determine
20 if the EV TOU Rate is the most cost-effective choice for them. The Company anticipates
21 that learnings from the EV TOU Rate will help to inform future load management
22 initiatives.
23

24 **Q. Please summarize Mr. Nelson's critique of the Company's proposed Residential**
25 **Subscription Rate Pilot as a load management offering.**

26 A. Mr. Nelson agrees that "a voluntary subscription rate could, under circumstances, provide
27 a beneficial price signal for the distribution system," but he "do[es] not find framing the

1 rate as a load management offering to be persuasive” because (i) it focuses on non-
2 coincident peak instead of system peak, and (ii) he believes it will be difficult for customers
3 to understand (OCA St. 6, pp. 38-39).
4

5 **Q. Do you agree with this critique?**

6 A. No. First, I note that Mr. Nelson does not appear to dispute the premise that a subscription
7 rate can incent customers to more efficiently manage their loads, which fits it within his
8 own definition of a load management offering. Rather, he takes issue with certain design
9 aspects of the Company’s proposal. For the reasons discussed in the rebuttal testimonies
10 of Company witnesses Neiswonger and Everett, his concerns are unfounded.
11

12 **Q. Does Witness Nelson provide evidence comparing the relative costs and benefits of**
13 **the load management initiatives he discusses, as applied to Duquesne Light?**

14 A. No. When asked in discovery, witness Nelson did not provide estimates of the costs and
15 benefits of such initiatives.³ In fact, Witness Nelson notes that the “costs and benefits of
16 managed EV will vary by service territory due to numerous differences in existing and
17 planned infrastructure and technologies, among other things such as market prices.”⁴ As I
18 mentioned above, Mr. Nelson presents no evidence to indicate that the benefits of his
19 preferred approaches would outweigh the costs.
20

21 **Q. Does Witness Nelson provide evidence indicating customer demand for additional**
22 **load management programs in the Company’s service territory?**

³ Exhibit SO-1-R (DLC-OCA-I-63; DLC-OCA-I-64).

⁴ Exhibit SO-1-R (DLC-OCA-I-60).

1 A. No. When asked to provide evidence of customer interest in passive managed charging,
2 Witness Nelson cites only a Company-conducted survey of EV drivers⁵ which shows
3 customer interest in an EV TOU Rate, like the rate the Company now offers.
4

5 **Q. Does OCA Witness Nelson provide any evidence that the Company’s proposed TE**
6 **Pilots will lead to “overbuilding” (OCA Statement 6, p. 27, lines 10)?**

7 A. No. Witness Nelson argues:

8 Large transportation electrification efforts by a utility should not be
9 authorized until a comprehensive load management plan has been
10 developed and implemented. Frontloading utility investment on EV
11 infrastructure, without a comprehensive load management plan, will lead to
12 overbuilding because the utility will not likely have an accurate
13 understanding of how load management options can reduce the need for
14 infrastructure, nor will the utility be capable of integrating the impacts of
15 load management into their distribution system plans.” (OCA Statement 6,
16 p.27, lines 6-13).
17

18 Witness Nelson’s statements are unfounded. The components of the proposed
19 Charging Infrastructure Portfolio are all designed to be relatively modest pilots that hardly
20 qualify as “large.” For example, the Company’s proposed Make-Ready Pilot would meet
21 only between 7-10% of the projected public and workplace Level 2 charging stations
22 needed in our region.⁶ Second, Mr. Nelson’s response to DLC-OCA I-55 demonstrates that
23 his concern regarding over-building is grounded in theory (namely, the alleged Averch
24 Johnson capital bias effect), and is not necessarily applicable to the Company’s proposals
25 in this case.⁷ Mr. Nelson presents no actual evidence that the Company’s proposals will
26 lead to over-building EV infrastructure.

⁵ Exhibit SO-1-R (OCA-XI-12 - Attachment 1).

⁶ Exhibit SO-1-R (OSBA-I-9 Attachment 2).

⁷ Exhibit SO-1-R (DLC-OCA-I-55) (“For clarity, the referenced testimony [OCA St. 6, p. 20, line 15] states, ‘Approving the Company’s request to rate base these costs would re-enforce the incentive to over-build EV infrastructure, which already appears to be negatively influencing the Company’s TE proposals.’ **It does not state**

Q. How does the Company respond to OCA Witness Nelson’s recommendation that the Company’s proposed charging infrastructure pilots be rejected or scaled back until the Company submits a comprehensive load management plan?

A. As I mention earlier, the Company currently offers a load management program and has proposed an additional program as part of this proceeding. DLC Witness Harchick outlines in his testimony (DLC Statement 18-R) that the Company is in the process of implementing an Outage Management System (OMS). He identifies that until an OMS system is completed, the Company has limited ability to efficiently implement active or automated load management.

The multi-year charging and load data gathered as part of the proposed charging infrastructure portfolio pilots, along with the completion of the OMS system, will position the Company to have a much more complete view of the effects of EV charging on the Company’s grid, as described in Witness Harchick’s rebuttal testimony (DLC St. 18-R). With that holistic view, the Company can evaluate the load management offerings that best meet the needs of our customers. Rejecting or scaling back the proposed TE charging infrastructure pilots will deprive the Company of valuable insights and lessen its ability to develop comprehensive load management proposals.

Q. What next steps does OCA witness Nelson recommend with respect to load management?

that the TE Programs will lead to an over-build of EV infrastructure. In fact, I recommended keeping a portion of the TE Programs using a different structure.”)(Emphasis added.)

1 A. Witness Nelson recommends that within 18 months of the rate case final order that the
2 Company “file a comprehensive EV load management proposal that includes a description
3 of the Company’s future offerings, investments required to offer each type of load
4 management offering, and estimated timeline to implement the offerings, to what customer
5 segments the offerings may be made available, and a proposed implementation plan for
6 ALM to mitigate customer and utility infrastructure requirements” (OCA St. 6, p. 34, line
7 15 – p. 35, line 2). Witness Nelson also calls for the Company to present an overview of
8 the load management proposal six months before the load management filing and a
9 stakeholder meeting after the 18-month filing with time for formal comments from
10 stakeholders and additional comments from the Company (OCA St. 6, p. 35, lines 6-16).

11
12 **Q. Does the Company agree with OCA witness Nelson’s load management**
13 **recommendations?**

14 A. No. As I described earlier, the Company currently offers a load management program and
15 has proposed another load management program as part of this proceeding. Mr. Nelson
16 presents no evidence that additional load management programs are needed or cost
17 effective at this time. Mr. Nelson’s proposal to reject or scale back the Company’s TE
18 proposals based on the lack of a “comprehensive load management proposal” would
19 restrict the Company’s ability to gather the necessary data and information to prepare such
20 a proposal. Regardless, the timeframe Mr. Nelson recommends for such a filing is
21 insufficient to collect useful data based on the implementation of the proposed charging
22 infrastructure pilots.

23
24 **Q. Summarize NRDC Witness Harris’ load management recommendations.**

1 A. Witness Harris recommends that “DLC should make taking service on this rate [EV TOU]
2 a default requirement for participation in the TE Charging Infrastructure programs,
3 utilizing an “opt-out” model to allow site-host flexibility if the TOU rate does not suit their
4 charging or energy needs. Further, it should be the default arrangement that price signals
5 are seen by end-users” (NRDC Statement 2, p. 25, lines 11-15). Additionally, Witness
6 Harris recommends that since “some fleets may be over the 200-kW load maximum
7 requirement, DLC should develop a rate that allows for larger customers to shift charging
8 to off-peak hours and maximizes the benefits to fleets and the grid” (NRDC Statement 2,
9 p. 25, lines 16-18).

10
11 **Q. Do you agree with NRDC Witness Harris’ recommendation to make the EV-TOU**
12 **Rate a “default requirement” for participation in the TE Charging Infrastructure**
13 **programs?**

14 A. No, I do not. Requiring participating customers to enroll in the EV TOU Rate and to pass
15 those price signals along to end-users could be detrimental to customer participation in
16 these programs. Many customers will be installing charging infrastructure for the first time.
17 Requiring them to simultaneously navigate a new rate, as well as end-user customer pricing
18 requirements, could lead some customers to decide not to participate and/or bias the sample
19 of customers who do participate. However, the Company will commit to including
20 information about the EV TOU Rate, as well as options for separate metering, in its
21 educational materials for the Company’s Charging Infrastructure Pilots.

22

1 **Q. Do you agree with NRDC Witness Harris’ recommendation to develop a rate “that**
2 **allows for larger customers [with demands of at least 200 kW] to shift charging to off-**
3 **peak hours” (NRDC St. 2, p. 25, lines 16-18)?**

4 A. The Company’s existing default service offerings already reflect this recommendation.
5 Under the Company’s Default Service Plan IX, default service customers with loads greater
6 than 200 kW take service under Rider 9 – Hourly Price Service.

7

8 **III. MARKET COMPETITIVENESS**

9

10 **Q. Do any witnesses argue that the TE Programs will interfere with the EV charging**
11 **competitive marketplace?**

12 A. Yes. Mr. Nelson argues, “Not only would utility ownership of Electric Vehicle Supply
13 Equipment (EVSE) stifle competition in this market, but also there is simply no need to
14 use ratepayer funds to address a need that can already be met by the market” (OCA St. 6,
15 p. 20, lines 2-5). Additionally, in testimony submitted on behalf of the Pennsylvania Office
16 of Small Business Advocate (“OSBA”), Mr. Knecht argues that the Fleet and Transit
17 Charging Pilot is “anti-competitive, in that it gives DLC a significant competitive
18 advantage vis-à-vis unregulated firms for providing this infrastructure;” and that it will
19 “discourage unregulated entities from pursuing this business, and therefore may serve to
20 actually delay the adoption of this technology for vehicle fleets,” including transit fleets
21 (OSBA Statement No. 1, p. 33, lines 36-37).

22

23 **Q. Do you agree with these witnesses’ suggestions that the Company’s TE Programs will**
24 **impede the competitive EV charging marketplace?**

1 A. No. The Company’s TE proposals will not stifle competition among unregulated entities;
2 they will encourage it. As I discussed in my direct testimony and discovery responses,⁸
3 the Company’s proposed infrastructure deployments represent a small fraction of the
4 charging infrastructure needed in the Company’s service territory in the coming years, and
5 market neutrality will be maintained by holding competitive solicitations for all charging
6 station products and services offered in the proposed programs (Duquesne Light St. 8, pp.
7 20-21). As described below, all marketing or other program materials distributed in support
8 of the TE Programs will be vendor neutral.

9

10 **Q. Do you agree with these witnesses’ suggestions that EV charging infrastructure**
11 **represents “a need that can already be met by the market” without the Company’s**
12 **TE Programs?**

13 A. No. As I discussed in my direct testimony, EV charging need in the Company’s service
14 territory is projected to significantly outpace supply over the next several years (Duquesne
15 Light Statement No. 8, pp. 22-23). This market gap is further supported by the testimony
16 of Greenlots witness Cohen, as I discuss below.

17 In contrast, Mr. Nelson failed to provide any evidence to support his suggestion to
18 the contrary. Mr. Nelson asserts in testimony that “the market for EV chargers is already
19 mature and highly competitive,” but in discovery he declined to provide any empirical
20 evidence for this assertion, which he admitted was not specific to the Company’s service
21 territory in any event.⁹ And when asked to provide evidence for his assertion “there is
22 simply no need to use ratepayer funds to address a need that can already be met by the

⁸ See Exhibit SO-1-R (OCA-IV-15 and OSBA-I-9d-h).

⁹ Exhibit SO-1-R (DLC-OCA-I-50).

1 market,” Mr. Nelson was unable to do so.¹⁰ He responded instead that “it is unclear what
2 needs or goals the Company is referencing” – in spite of the fact that the Company’s
3 reference was to Mr. Nelson’s own testimony.

4 Mr. Nelson also states, “The impacts that utility ownership has on competitive
5 markets” – which presumably refers to market-suppressing impacts – “is well documented
6 in the energy industry and through basic economic theory. The Company offered no
7 empirical evidence or supporting theory that suggests the EVSE market would differ.”¹¹
8 As support for this assertion, Mr. Nelson cites three papers: one by NARUC, and two
9 authored in part M.J. Bradley and Associates that were issued seven months apart and share
10 much of the same content. Each paper addresses regulatory considerations that attend
11 utility investment in transportation electrification, and includes high-level summaries of
12 arguments related to competitive considerations. However, these papers do not offer any
13 empirical evidence that utility ownership produces market-suppressing impacts. If
14 anything, these papers weigh *in favor of* the Company’s proposals. For example, “Utility
15 Investment in Electric Vehicle Charging Infrastructure: Key Regulatory Considerations”
16 provides at p. 10:

17 Critics of the utility owner-operator model argue that utility ownership of
18 charging infrastructure may limit market competition. While it may be
19 appropriate for utilities to directly develop PEV charging infrastructure in
20 some situations, utilities could also offer site hosts with a choice of vendors
21 and conduct competitive solicitations for charging equipment, software, and
22 network services to avoid limiting the private market.¹²
23

¹⁰ Exhibit SO-1-R (DLC-OCA-I-52).

¹¹ Exhibit SO-1-R (DLC-OCA-I-51).

¹² Exhibit SO-4-R.

1 As I discussed in my direct testimony and above, Duquesne Light's proposals include
2 precisely the types of competitive solicitations that this paper suggests could overcome
3 market-suppression concerns.

4
5 **Q. ChargePoint Witness Deal proposes that all communications with customers are**
6 **vendor neutral and that the Company file all marketing materials in an annual**
7 **informational filing. Does the Company agree with these proposals?**

8 A. Yes, in part. The proposal by Witness Deal for vendor neutral communications is consistent
9 with the Company's approach in the EV ChargeUp Pilot and the Company's proposed
10 approach for TE Programs. The Company has proposed to have a competitive solicitation
11 to qualify vendors. The vendor list will be shared with customers and customers will
12 conduct their own due diligence when selecting a vendor. Any marketing or other program
13 material and guidance provided to customers will be vendor neutral. The Company does
14 not agree with ChargePoint's recommendation to file all marketing materials in an annual
15 informational filing as the request is unnecessary and burdensome.

16
17 **Q. Do witnesses Nelson or Knecht find support for their assertions in the comments or**
18 **testimony of any competitive participants in the EV charging marketplace?**

19 A. No; in fact, the opposite is the case. Two competitive EV charging providers, ChargePoint,
20 Inc., and Greenlots, have submitted testimony in this proceeding. Both rebut Mr. Nelson's
21 and Mr. Knecht's concerns. Greenlots witness Mr. Cohen affirms that proposals like the
22 Company's TE Programs are needed to spur the competitive EV charging marketplace in
23 his oral testimony (TR. 37-38), "Unfortunately, a sustainable and competitive market in
24 the deployment of public charging infrastructure remains aspirational at this time, and it is

1 unlikely to arise prior to the adoption of a critical mass of electrical vehicles. The
2 economics simply don't support sufficient private investments to adequately grow the
3 infrastructure market to support current and future drivers.” Mr. Cohen and ChargePoint
4 witness Deal also both emphasize that by supporting the charging marketplace in a
5 competitively-neutral manner (including providing multiple options to participating
6 customers), the Company’s proposals can expand opportunities for unregulated entities.
7 (Greenlots TR. 39, lines 1-14; Chargepoint St. 1, p. 7, lines 8-18.) This alignment is
8 particularly notable given that Greenlots and ChargePoint are competitors of each other.
9 ChargePoint witness Mr. Deal supports the proposed Make-Ready and Fleet and Transit
10 Charging Pilots, and conditionally supports the proposed Home Charging Pilot.
11 ChargePoint and Greenlots’ testimony in support of the Pilot directly bely witness Nelson
12 and Knecht’s concerns regarding impacts of the Pilot on the competitive EV charging
13 marketplace.

14
15 **Q. Do you agree with OSBA witness Knecht’s assertion that the Company’s proposal**
16 **represents the provision of “utility subsidies” (OSBA Statement No.1, p. 32-34)?**

17 **A.** No. The Company demonstrates throughout its testimony that the benefits of the proposed
18 TE Programs outweigh the costs (DLC St. No. 8, p. 8-12). In fact, the Home Charging Pilot
19 and Fleet Charging Pilot both present a positive benefit cost ratio (DLC St. 17, p. 62, lines
20 12-19). Mr. Knecht does not dispute this fact.

21
22 **Q. Do you agree with OSBA witness Knecht’s claim that benefits of the TE Programs**
23 **flow to the Company’s shareholders and not the Company’s ratepayers (OSBA**
24 **Statement No. 1, p. 32, lines 5-7)?**

1 A. No. Mr. Knecht himself agrees that, where increased electric distribution loads attributable
2 to a program are reflected in the calculation of electric delivery rates, then the benefits of
3 the increased loads accrue to customers.¹³ As Company witness Mobley explained in his
4 direct testimony, DLC St. 3, the Company’s annual sales forecast includes an adjustment
5 for incremental EV loads. Mr. Knecht did not dispute the Company’s sales forecast.

6

7 **Q. Do you agree with OSBA witness Knecht’s assertion that the Company’s TE**
8 **Programs proposal “is an inequitable and regressive method for funding government**
9 **programs” (OSBA Statement No.1, p. 32, lines 24-25)?**

10 A. No. Witness Knecht presents a false comparison. First, as I discuss above, the Company’s
11 TE proposals are cost-effective, and will provide significant benefits to customers. My
12 testimony also clearly demonstrates that governmental taxing authorities are not adequately
13 filling the charging market gap. The Commonwealth of Pennsylvania and local
14 governments within the Company’s service territory have recognized the need for more
15 EV charging infrastructure (Duquesne Light, Statement No. 8, p. 12-13). In fact, the City
16 of Pittsburgh witness Grant Ervin provided on-the-record testimony at the public hearing
17 in support of the Company’s proposed TE Programs, stating, “DLC's specific efforts on
18 vehicle electrification are very important and laudable, and have had explicit focus on
19 environmental justice areas in our community. However, they also illustrate the need to
20 increase resources to help achieve Pittsburgh's goals.” (TR. 83).

21

22 **IV. BENEFIT TO LOW-INCOME CUSTOMERS**

23

¹³ Exhibit SO-1-R (DLC-OSBA-I-2)

1 **Q. Do any of the witnesses question the value of the proposed transportation**
2 **electrification programs to low income customers?**

3 A. Yes. CAUSE-PA witness Geller argues that it is difficult to determine the precise needs
4 for EVs and EV infrastructure amongst low income customers in the Company’s service
5 territory, citing that the majority of existing EV owners have high incomes. Mr. Geller
6 argues the average cost to purchase a new EV is too high for low income families. As such,
7 Mr. Geller concludes that adding EV charging infrastructure to low income communities
8 and communities of color is likely to lead to rising rents and tenant displacement (“green
9 gentrification”). While Mr. Geller acknowledges that transportation electrification has
10 associated benefits for disadvantaged communities, especially with respect to air quality,
11 he questions if the benefits would be meaningful for low income communities since
12 personal EVs are currently mostly owned by higher income households (CAUSE-PA
13 Statement No. 1, pp. 44-45).

14
15 **Q. Do you agree with Mr. Geller’s averment that low-income customers are not “able to**
16 **access EVs and infrastructure related to EVs” (CAUSE-PA St. 1, p. 44, lines 10-11)?**

17 A. No. The Company’s proposed transportation electrification programs will benefit low
18 income customers. As Mr. Geller notes in his testimony, there is currently a lack of EV
19 ownership amongst low income customers (CAUSE-PA Statement No. 1, page 44). As the
20 price of new EVs continue to drop and the used EV market expands, purchasing an EV
21 will become more attainable for all customers, especially with the state and federal
22 incentives available to those purchasing or leasing an electric vehicle. There are a variety
23 of new plug-in electric vehicle models with a cost lower than \$30,000 after potential

1 incentives with more models rapidly entering the market at lower prices points.¹⁴ This
2 figure is much lower than the average figure cited in Mr. Geller’s testimony, “estimated to
3 be approximately \$55,600 in 2019,” (CAUSE-PA Statement No. 1, page 44), which is
4 skewed upwards due to much of the early EV market being saturated with luxury vehicles.
5 In the past ten years, the cost of EV batteries, the most expensive part of an EV, has dropped
6 by more than 89% and it will continue to drop in the coming years indicating the upfront
7 cost of EVs will also continue dropping.¹⁵ All of this does not include the lifetime fuel and
8 maintenance savings offered by EVs. On average, EVs are less than half as expensive to
9 fuel and maintain as gas-powered vehicles. As such, typical EV owners save \$6,000 to
10 \$10,000 on total ownership costs over the life of the vehicle.¹⁶

11 However, I acknowledge many low income customers cannot afford a new vehicle
12 of any type, which is why it’s also important to note the used market for EVs is growing.
13 Used EVs that were originally priced greater than \$30,000, now start as low as \$6,000 for
14 a model that is less than four years old and has fewer than 40,000 miles.¹⁷ Again, this does
15 not include the fuel and maintenance savings and shows that in most cases, the total cost
16 of owning an EV is already less than owning a gas-powered vehicle. These are savings all
17 customers, especially low income customers, should be aware of and able to experience.
18 Data projections show that savings from EVs relative to income are significantly higher

¹⁶ Exhibit SO-7-R, Consumer Reports (2020, October). “EVs Offer Big Savings Over Traditional Gas-Powered
Cars,” Retrieved from: <https://www.consumerreports.org/hybrids-evs/evs-offer-big-savings-over-traditional-gas-powered-cars/>.

¹⁷ Exhibit SO-8-R, World Resources Institute (2019, August). “The \$6,000 Electric Vehicle: The Power of the Used
Car Market to Bring Electric Vehicles to Everyone,” Retrieved from: <https://www.wri.org/insights/6000-electric-vehicle-power-used-car-market-bring-electric-vehicles-everyone>.

1 for low-income households, non-White households, and households in areas with higher
2 levels of pollution. For car owners with an annual household income of less than \$25,000,
3 savings from switching to EVs amount to \$1,000 per household annually, or 7% of income,
4 by 2030.¹⁸

5
6 **Q. How will the Company's proposals benefit low income customers that don't own or**
7 **can't afford a vehicle today?**

8 A. While there are low income customers that do not own or cannot afford a vehicle today,
9 the Company's proposed TE Programs present a portfolio approach wherein these
10 individuals will still benefit significantly. As I discuss in my direct testimony, the Fleet and
11 Transit Charging Pilot will give customers clean public transportation options and reduce
12 ground-level air pollution, which disproportionately affects the health and wellness of low
13 income communities. Additionally, the Make Ready Pilot's proposed investments in
14 charging infrastructure for low income communities supports an equitable transition to
15 vehicle electrification as it reduces a major barrier to EV adoption and provides access to
16 more stable fuel prices when customers are able to purchase an EV. As I note in my direct
17 testimony, customers cite the lack of public charging stations nearby as their number one
18 barrier to purchasing an EV (Duquesne Light Company Statement No. 8, p. 22). If this
19 investment isn't made, low income customers will have fewer fueling options, which may
20 make them more likely to purchase a gas-powered vehicle with a higher total cost of
21 ownership and less stable fuel prices. Additionally, many low income consumers without

¹⁸ Exhibit SO-9-R, International Council on Clean Transportation (2021, February). "When might lower-income drivers benefit from electric vehicles? Quantifying the economic equity implications of electric vehicle adoption," Retrieved from: <https://theicct.org/sites/default/files/publications/EV-equity-feb2021.pdf>.

1 access to a personal vehicle or public transportation rely on ridesharing services for travel.
2 Last year, Lyft reported that more than 40% of its rides started or stopped in low income
3 communities.¹⁹ With ridesharing companies like Uber and Lyft committing to 100%
4 electric rides by 2030 in the U.S., it is essential that ridesharing drivers have access to
5 charging infrastructure in low income communities so low income consumers don't lose
6 access to electrified ridesharing as a mobility option.²⁰

7 Finally, as Ms. Everett explained in her direct testimony – and which Mr. Geller
8 does not dispute – the Company's Home Charging Pilot and Fleet Charging Pilot are cost-
9 effective according to a battery of benefit-cost analyses. As Ms. Everett explained in DLC
10 St. 17, many of these programs' net benefits flow to all customers, including low-income
11 customers.

12
13 **Q. Do you agree with Mr. Geller's position that the proposed programs will lead to green**
14 **gentrification?**

15 A. No. There is limited evidence suggesting that the development of charging infrastructure
16 leads to green gentrification. Mr. Geller's assertion is not premised on any specific study
17 or report, and the articles on the topic of gentrification shared by Mr. Geller do not mention
18 charging infrastructure.²¹ By not investing in charging infrastructure in low income
19 communities, low income customers will be left with even higher barriers to electric
20 vehicle adoption, which can create "charging deserts." Organizations such as the

1 Greenlining Institute recognize that electric utilities are well poised to fill charging deserts
2 and ensure the distribution of charging infrastructure is equitable and inclusive of low
3 income communities.²²
4

5 **V. REPORTING AND EVALUATION**
6

7 **Q. Describe NRDC witness Harris’s feedback concerning the Company’s EV ChargeUp**
8 **Pilot evaluation and reporting.**

9 A. NRDC witness Harris states that, “...transparent data collection has proven to be
10 successful: the data collected from the Company’s ChargeUp Pilot Program, was used to
11 consider lessons learned and design the TE Programs” (see NRDC Statement No. 2, p. 34).
12

13 **Q. Do you agree with NRDC witness Harris’s assessment of the Company’s EV**
14 **ChargeUp Pilot?**

15 A. Yes. NRDC witness Harris accurately describes the value of data collection and evaluation
16 of the EV ChargeUp Pilot.
17

18 **Q. Describe OCA witness Nelson’s testimony regarding the Company’s EV ChargeUp**
19 **Pilot evaluation and reporting.**

20 A. OCA witness Nelson asserts that the EV ChargeUp Pilot, “...lacked specificity and did not
21 answer unique or specific questions with measurable data,” (see OCA Statement No. 6, p.

²² Greenlining Institute (2021). “Electric Vehicles for All: An Equity Toolkit,” Retrieved from:
<https://greenlining.org/resources/electric-vehicles-for-all/>.

1 13) and that the pilot “...did not appear to have a strong pilot framework,” (see OCA
2 Statement No. 6, p. 15).

3
4 **Q. Do you agree with these assertions regarding the Company’s EV ChargeUp Pilot?**

5 A. No, I disagree with OCA witness Nelson’s assertions. The EV ChargeUp Pilot included
6 clear objectives, hypotheses, metrics, data collection and reporting, all which formed an
7 appropriate evaluation approach for a preliminary pilot activity concerning a nascent
8 technology.²³ Further, Mr. Nelson does not recognize the merit of the Company’s EV
9 ChargeUp Pilot reporting and analysis agreed to in the settlement of its 2018 base rate case,
10 which can be found as exhibits to my testimony (Duquesne Light Statement 8, Exhibit SO-
11 1, Exhibit SO-2, Exhibit SO-3). I note that OCA was a party to that settlement, so it is
12 unreasonable for Mr. Nelson to criticize the Company’s actions taken in compliance with
13 the settlement, or for not taking an action that was not provided for under the settlement.

14 In any event, Mr. Nelson indicates (see OCA Statement No. 6, p. 22) that the
15 “...Company’s annual reports [on the EV ChargeUp Pilot] indicate many positive results.
16 Some examples include (1) incremental revenue, (2) participation from customers in
17 environmental justice areas, (3) increase utility engagement with customers, (4) increase
18 EV awareness and, finally, (4) the Company’s conclusion that they are ‘encouraged by the
19 positive overall response to the pilot to date, particularly with respect to the high degree of
20 ‘buy-in’ demonstrated by participants.”

21
22 **Q. Please summarize witness Cline’s recommendation regarding additional reporting on**
23 **the Company’s EV ChargeUp Pilot.**

²³ Exhibit SO-1-R (OCA-IV-2).

1 A. I&E witness Cline recommends (see I&E Statement No. 5, p. 5) that the Company continue
2 to provide annual updates on the “EV Charge-Up Pilot as the Company agreed to in the
3 settlement of its 2018 base rate case.”
4

5 **Q. Do you agree with witness Cline’s recommendation?**

6 A. No. The Settlement provides for EV ChargeUp annual reporting to include: charging
7 stations deployed over time, by location & activation date; charging station installation
8 costs by site type (capital & rebate); charging station usage rate by site and charger type;
9 and estimated avoided emissions. Because the EV ChargeUp pilot has concluded, the only
10 one of these reporting metrics likely to change in the future change is avoided emissions.
11 All other reporting metrics are fixed, and will generally not change year to year. Continuing
12 to produce annual reports would therefore not create value for interested stakeholders and
13 would be burdensome for the Company.
14

15 **Q. Describe OCA witness Nelson’s assertions concerning evaluation and assessment plan
16 for the proposed TE Programs.**

17 A. OCA witness Nelson raises concern with the Company’s proposed metrics in that they
18 “primarily concern infrastructure construction, not load management,” and are “not
19 specific enough to allow for an effective evaluation of whether the objectives will be met.”
20 Witness Nelson further asserts that, “the Company does not seem to have a detailed
21 evaluation and assessment plan for the proposed pilots” (see OCA Statement No. 6, p. 18).
22

23 **Q. Do you agree with witness Nelson’s assertions?**

1 A. I disagree with OCA witness Nelson’s assertions. The Company’s proposed TE Programs
2 were designed with clear objectives, outcomes, metrics, data inputs, and targets.²⁴ Mr.
3 Nelson criticizes the Company’s evaluative criteria, but when asked to identify examples
4 of criteria that he believes the Company should use to evaluate the proposed TE Programs,
5 Mr. Nelson was unwilling or unable to do so.²⁵

6

7 **Q. Describe OCA witness Nelson’s recommendation concerning evaluation and**
8 **assessment plan for the proposed TE Programs.**

9 A. OCA witness Nelson recommends (see OCA Statement No. 6, p. 16), “...that the
10 Commission require Duquesne to file a comprehensive evaluation and assessment plan
11 within in 90 days of approval if the Commission approves any of the Company’s proposed
12 pilots.”

13

14 **Q. Do you agree with witness Nelson’s recommendation for reporting on the proposed**
15 **TE Programs?**

16 A. No. The Company’s evaluation plan, as described above, is appropriate for the evaluation
17 and assessment of the proposed TE Programs.

18

19 **Q. Please summarize witness Cline’s statements regarding evaluation and reporting on**
20 **the proposed TE Programs.**

21 A. I&E witness Cline recommends (see I&E Statement No. 5, p. 5) that the Company,
22 “provide, in its next base rate case, a summary showing the cost of the corresponding plant,

²⁴ See Exhibit SO-1-R (OCA-IV-4 and OCA-XI-8).

²⁵ See Exhibit SO-1-R (DLC-OCA-I-49).

1 operating expenses, revenues, and the progress that has made toward meeting the stated
2 goals. The update should include any other related information relevant to the TE Programs
3 including customer reaction and participation that is available.”
4

5 **Q. Do you accept witness Cline’s recommendation?**

6 A. Yes.
7

8 **Q. Please summarize witness Harris’ recommendations concerning reporting on the
9 Company’s proposed TE Programs.**

10 A. NRDC witness Harris recommends that the Company, “post non-sensitive data on a semi-
11 annually (or sooner) to a public facing and easily accessible website” (see NRDC Statement
12 No. 2, pp. 34-35). Harris goes on to provide minimal data that should be included in this
13 report: “...kWh utilized; Site host type (such as MUD, workplace, parking garage, etc.);
14 Load profiles by site; Number of charging sessions; Costs to drivers to utilize each station;
15 Charging station location; Cost for installation and equipment; and How EJ communities
16 are being served by the pilot.”
17

18 **Q. Do you agree with witness Harris’ recommendation for reporting on the proposed TE
19 Programs?**

20 A. In part. Reporting ensures transparency and can benefit other stakeholders working to
21 advance the electric mobility market in the Company’s service territory. However, it is
22 essential to maintain customer privacy, and to balance reporting burden against the
23 usefulness of the data to be provided. I agree that it is reasonable to report on TE Program
24 data in its next base rate case, including kWh utilized, site host type, number of charging

1 sessions, cost for installation and equipment, and how Environmental Justice Areas are
2 being served. Due to customer privacy concerns, I disagree with providing customer load
3 profiles by site, costs that site hosts are charging drivers to use their charging stations, and
4 charging station location. Customers may refrain from participating in TE Programs if such
5 information is required to be shared publically.

6
7 **Q. Please summarize witness Keller’s statements regarding reporting for the proposed**
8 **Make-Ready Pilot in the Company’s next base rate proceeding.**

9 A. I&E witness Keller recommends (see I&E Statement No. 2, pp. 28-29) that the Company
10 report upon, “the total number of L2 and DCFC stations installed as well as the number of
11 L2 charging stations in Environmental Justice (EJ) areas broken down by year under the
12 Make-Ready Pilot” as well as, “the number and dollar amount of charging station rebates
13 for charging stations in EJ areas and a breakdown of governmental grants received under
14 the Make-Ready Pilot by year,” and “an evaluation of customer participation and feedback,
15 public access to charging stations, charging station usage, and identification of charging
16 station revenues received by the Company from charging station owners.”

17
18 **Q. Do you agree with witness Keller’s recommendation concerning the Make-Ready**
19 **Pilot?**

20 A. The Company agrees with witness Keller’s recommendations with one exception. The
21 Company lacks the ability to provide accurate information about a customers’ receipt of
22 government grants. While a customer may voluntarily share this information with the
23 Company, it would not be practical to require such information.

1 **Q. Please summarize witness Keller’s statements regarding reporting for the proposed**
2 **Fleet and Transit Charging Pilot in the Company’s next base rate proceeding.**

3 A. Witness Keller recommends (see I&E Statement No. 2, p. 32) that the Company provide,
4 “documentation that the six DCFC stations have been installed at the Port Authority’s East
5 Liberty Garage, the total number of L2 and DCFC stations installed for all other customers
6 participating in the Fleet and Transit Charging Pilot, and the number of projects in EJ areas
7 by year” as well as, “an evaluation of customer participation and feedback, charging station
8 usage, and identification of charging station revenues received by the Company from
9 charging station owners.”

10

11 **Q. Do you agree with witness Keller’s recommendation concerning the Fleet and Transit**
12 **Charging Pilot?**

13 A. Yes, the Company agrees with witness Keller’s recommendation, with one clarification. In
14 the proposed Fleet and Transit Charging Pilot, the Company may own the charging
15 stations. Therefore, the Company will report upon charging station revenues received by
16 the Company from charging station hosts (which may or may not be the owner of the
17 charging station itself).

18

19 **Q. Please summarize witness Keller’s statements regarding reporting for the proposed**
20 **Home Charging Pilot in the Company’s next base rate proceeding.**

21 A. Witness Keller recommends (see I&E Statement No. 2, p. 35) that the Company report
22 upon, “the total number of L2 stations installed as well as the number of L2 charging
23 stations installed for low-income customers broken down by year,” as well as, “the amount
24 the Company paid for standard installation costs broken down by residential customers and

1 low-income customers,” and “an evaluation of customer participation, feedback, and
2 charging station usage, and identify the charging station revenues received by the Company
3 from charging station owners.”
4

5 **Q. Do you agree with witness Keller’s recommendation concerning the Home Charging**
6 **Pilot?**

7 A. Yes, the Company agrees with witness Keller’s recommendation, with one clarification. In
8 the proposed Home Charging Pilot, the Company will own the charging stations for the 5-
9 year customer participation term. Therefore, the Company will report upon charging station
10 revenues received by the Company from residential charging station hosts.
11

12 **Q. Please summarize witness Keller’s statements regarding reporting for the Awareness,**
13 **Education, and Engagement (AEE) proposal in the Company’s next base rate**
14 **proceeding.**

15 A. Witness Keller recommends (see I&E Statement No. 2, p. 37) that the Company, “provide
16 a breakdown of the programs undertaken by the Company, the specific channels used to
17 educate customers about EVs, charging stations, and the Company’s transportation
18 electrification program, as well as the programs geared specifically towards low-income
19 customers by year,” and, “include an evaluation of customer participation and feedback.”
20

21 **Q. Do you agree with witness Keller’s recommendation concerning the AEE proposal?**

22 A. Yes, the Company agrees with witness Keller’s recommendation.
23

1 **Q. Please summarize witness Keller’s statements regarding reporting for the Fleet**
2 **Electrification Advisory Service proposal in the Company’s next base rate**
3 **proceeding.**

4 A. Witness Keller recommends (see I&E Statement No. 2, p. 39) that the Company, “provide
5 the total number of customers that participated in the Fleet Electrification Advisory Service
6 program and the number of non-profit organizations that serve EJ Areas that participate in
7 the Fleet and Advisory Service program by year,” and “include an evaluation of customer
8 participation and feedback.”

9
10 **Q. Do you agree with witness Keller’s recommendation concerning the Fleet**
11 **Electrification Advisory Service proposal?**

12 A. Yes, the Company agrees with witness Keller’s recommendation.

13
14 **Q. Please summarize witness Keller’s statements regarding reporting for the proposed**
15 **EV Registration Incentive in the Company’s next base rate proceeding.**

16 A. Witness Keller recommends (see I&E Statement No. 2, p. 41) that the Company report
17 upon, “the number of customers that participated in the registration incentive by year as
18 well as an evaluation of customer participation and feedback.”

19
20 **Q. Do you agree with witness Keller’s recommendation concerning the proposed EV**
21 **Registration Incentive?**

22 A. Yes, the Company agrees with witness Keller’s recommendation.

23

1 **VI. TRANSPORTATION ELECTRIFICATION PROGRAMS**

2

3 **Q. ChargePoint Witness Deal proposes the charging stations installed for the Public,**
4 **Workplace, and Multi-Unit Dwelling Make-Ready, Fleet and Transit Charging and**
5 **Home Charging Pilots meet certain criteria. (ChargePoint St. 1, p.4, lines 13-20; p. 5,**
6 **lines 6-14 and p. 5, line 18 – p. 6, line 2.) Does the Company agree with this proposal?**

7 A. Yes, as mentioned in my testimony, the Company plans to identify qualified vendors
8 through a competitive solicitation. Charging stations will be required to have certain
9 capabilities including interoperability and managed charging. Witness Deal has proposed
10 more specific criteria to qualify charging stations. The Company accepts the following
11 charging station eligibility requirements proposed by Witness Deal:

- 12 • Smart and capable of connecting to a charging network
- 13 • Managed charging capabilities
- 14 • ENERGY STAR certified for Level 2 stations
- 15 • Safety certified by a third-party Nationally Recognized Testing Laboratory

16 The Company reserves the right to include additional technical requirements of
17 charging stations used in its TE programs.

18

19 A. *Public, Workplace, and Multi-Unit Dwelling Make-Ready Pilot*

20

21 **Q. In addition to parties' comments that apply to multiple TE Pilots, which you discuss**
22 **above, did parties have other comments pertaining specifically to the Company's**
23 **Public, Workplace, and Multi-Unit Dwelling (MUD) Make-Ready Pilot (Make-Ready**
24 **Pilot)?**

1 A. Yes. I address these comments below.

2

3 **Q. Please summarize intervenors' comments regarding the Company's Make-Ready**
4 **Pilot, to the extent you have not already addressed those comments.**

5 A. I&E witnesses Cline and Keller both support the Company's Make-Ready Pilot and
6 recommend specific reporting requirements for the pilot (I&E Statement No. 5, p. 4 and
7 Statement No. 2 pp. 28-29), which I discussed above.

8 NRDC witness Harris supports the Make-Ready Pilot noting such programs have
9 been authorized by regulatory commissions nationwide. Ms. Harris argues behind-the-
10 meter make-ready is a core utility function and therefore should be part of the Company's
11 standard utility distribution system planning and not a pilot activity (NRDC Statement No.
12 2, p. 19). Ms. Harris also recommends the MUD portion of the make-ready pilot be
13 expanded to include an option for utility ownership of the charging station in an effort to
14 reduce barriers faced by landlords and increase MUD deployments (NRDC Statement No.
15 2, p. 20). Additionally, Ms. Harris argues the Company should not reject proposals in
16 locations that may be underutilized and instead focus on filling charging station gaps in its
17 service territory (NRDC Statement No. 2, p. 22).

18 ChargePoint witness Deal recommends that the Make-Ready Pilot be approved
19 with modifications, including: specifying charging station eligibility requirements and
20 ensuring vendor neutral program materials (ChargePoint Statement No. 1, pp. 5-6), which
21 I address above. Additionally, Mr. Deal proposes to require that customers that wish to
22 install both DC Fast Charging stations (DCFCs) and Level 2 charging stations at a single
23 site to install two Level 2 ports and two DCFC ports and he proposes establishing 50kW
24 as the minimum DCFC per-port power level, instead of 150 kW.

1 OCA witness Nelson finds some aspects of the Make-Ready Pilot acceptable;
2 however, he argues the Company should not own behind-the-meter assets and instead
3 should provide rebates (OCA Statement No. 6, p. 21).

4 OSBA witness Knecht argues behind-the-meter investments are generally the
5 responsibility of the customer and that the conditions of the Make-Ready Pilot may not
6 apply to or be attractive to all interested parties, notably the requirement to subscribe to
7 charging networking services and to provide the Company with charging data from the
8 network vendor (OSBA Statement No. 1, pp. 35-36).

9 CAUSE-PA witness Geller argues the Make-Ready Pilot does not adequately target
10 low income consumers and may result in the displacement of low income communities and
11 communities of color, otherwise referred to as “green gentrification.” Mr. Geller
12 recommends that if the make-ready pilot is approved that confirmed low income and CAP
13 customers be exempt from paying for the costs (CAUSE-PA Statement No. 1, p. 47).

14
15 **Q. OSBA witness Knecht argues that demand for charging can be met by unregulated**
16 **entities and therefore the Make-Ready Pilot should be rejected. Do you agree with his**
17 **assertion?**

18 A. No. I do not agree with his assertion for the reasons discussed earlier in my testimony.

19
20 **Q. CAUSE-PA witness Geller recommends rejecting the Make-Ready Pilot. Does the**
21 **Company agree with this recommendation?**

22 A. No, for the reasons discussed earlier in my testimony.

23

1 **Q. CAUSE-PA witness Geller recommends that if the Make-Ready Pilot is approved as**
2 **proposed that the Company’s low income and Customer Assistance Program (CAP)**
3 **customers be exempt from paying the costs of the pilot. Does the Company agree with**
4 **this recommendation?**

5 A. No. First, as a practical matter, the costs of the Make-Ready Pilot are estimated to
6 contribute approximately \$0.06 to a typical residential customer’s monthly bill. Second,
7 most CAP customers will not ultimately pay this amount anyway, as CAP bills are based
8 primarily on participating customers’ income. Third, low-income customers not enrolled
9 in CAP are subject to the Company’s applicable residential rates. Mr. Geller appears to
10 contemplate establishing another set of rates for these customers that exclude the costs of
11 certain EV programs, which is not practical (and which Mr. Geller does not attempt to
12 calculate in any event). Finally, as I described earlier in my testimony, even without driving
13 an EV, low income customers can benefit from transportation electrification. Therefore
14 they should contribute to the program costs.

15
16 **Q. NRDC witness Harris recommends expanding the Company’s proposed utility**
17 **ownership of charging stations and make-ready infrastructure to multi-unit dwellings**
18 **(MUD). Do you agree with this proposal?**

19 A. Not at this time. Although I understand Ms. Harris’ position, the Company has purposefully
20 proposed a portfolio approach with different ownership structures for different market
21 segments. The Company believes Company ownership of make-ready and site host
22 ownership of charging stations is the appropriate approach for MUD sites. At this early
23 stage, many building owners and managers are experimenting with the best ways to install
24 and operate these stations and charging station ownership flexibility is important.

21
22

Q. NRDC witness Harris recommends that the Company support stations that may be “underutilized” (NRDC Harris Statement, p. 22, lines 5-11). Do you agree with this recommendation?

A. Partially. As stated in my testimony, the Company will evaluate a range of factors when reviewing applications for the Make-Ready Pilot. The Company will evaluate each site on a case-by-case basis. The existing availability of nearby charging infrastructure will be taken into consideration when selecting pilot sites while also weighing the effective use of customer funds. Additionally, the Company will consider how installing charging infrastructure in a particular location may influence and encourage adoption of EVs in that area over time.

Q. OCA Witness Nelson recommends rejecting Company ownership of the behind-the-meter infrastructure and proposes funds be provided as a rebate instead. Does the Company agree with this recommendation?

A. No. The Company does not expect that a rebate structure will lead to nearly the level of success as make-ready ownership.²⁶ As I discussed in my direct testimony, the upfront cost of charging infrastructure, together with the time and resources necessary to manage an installation, can deter customers from deploying charging stations. When asked to provide evidence that the recommended rebate structure would reduce a customer’s up-front costs of installing charging infrastructure or alleviate a customer’s project management and/or technical implementation barriers associated with installing charging infrastructure, Mr.

²⁶ Exhibit SO-1-R (OSBA-I-9b).

1 Nelson was unable to do so.²⁷ The Company's proposed Make-Ready Pilot will overcome
2 these obstacles by managing the construction and owning behind the meter equipment
3 instead of offering a rebate for project costs.

4
5 **Q. If the Commission rejects Company ownership of behind-the-meter infrastructure,**
6 **would the Company be willing to implement a rebate structure for the Make-Ready**
7 **Pilot instead?**

8 A. The Company would be willing to consider such a program. Under such a rebate structure,
9 the Company would cover up to one-hundred percent of make-ready project costs for
10 selected projects, up to a total program cost commensurate with that of the Company's
11 original proposal. The Company strongly believes that Company's original proposal is
12 superior to such a rebate program, and Mr. Nelson has offered no empirical evidence to the
13 contrary; however, having a rebate offering for our customers is likely to be better than
14 having no program at all. Implementing the Make-Ready Pilot under a rebate structure
15 would cost an annual program expense, including customer rebates, of \$1,046,875. The
16 Company's proposed revenue requirement does not reflect this structure.

17
18 **Q. OCA Witness Nelson recommends that "If the Company proposes a reasonable**
19 **rebate structure, for its Make-ready Pilot and Fleet and Transit Charging Pilot, I**
20 **recommend that the Commission deny the Company's request to extend the pilot**
21 **through 2024 but approve years 2022-2023 with my recommended modifications and**
22 **filing requirements." (OCA St. 6, p. 37, lines 1-4). Do you accept this**
23 **recommendation?**

²⁷ Exhibit SO-1-R (DLC-OCA-I-53, DLC OCA-I-54, and DLC-OCA-I-58).

1 A. No. The premise of this recommendation appears to be predicated on the submission of a
2 load management plan by the Company in 2023 and acceptance of a rebate program
3 structure. As I address above, the Company rejects those recommendations and so by
4 extension rejects the recommendation to allow funding for the Make-ready Pilot and the
5 Fleet and Transit Charging Pilot only for 2022 and 2023. Funding for all three years is
6 necessary to support the charging infrastructure needed in our region and to have a robust
7 data set to help inform future efforts.

8

9 **Q. ChargePoint witness Deal has proposed that at sites where customers plan to host**
10 **both DCFC and Level 2 stations, the Company require a minimum of two Level 2**
11 **ports and two DCFC ports. (ChargePoint St. 1, p. 4, lines 21-22.) Does the Company**
12 **accept this recommendation?**

13 A. Yes. The Company agrees that at locations where customers are interested in hosting both
14 DCFC and Level 2 stations that requiring a minimum of two DCFC ports and two Level 2
15 ports makes sense to encourage greater customer participation. At sites where DCFC is not
16 being installed, customers will be required to install a minimum of four Level 2 charging
17 ports or two Level 2 charging ports for customers in Environmental Justice Areas.

18

19 **Q. ChargePoint witness Deal proposes to establish 50kW as the minimum DCFC per-**
20 **port charging capacity instead of 150kW. He also proposes to allow site-hosts to**
21 **“future-proof” sites (ChargePoint St. 1, p.11, line 16 - p. 12, line 5).²⁸ Does the**
22 **Company accept these recommendations?**

²⁸ ChargePoint describes future-proofing as “the practice of sizing the power feed for charging stations to allow for 1) the addition of more ports at a site as demand for EV charging increases, or 2) higher voltage charging as the market evolves to permit the use of faster charging methods.” *Id.* FN8.

1 A. Yes. The Company agrees with the recommendation to lower the DCFC requirement for
2 per port charging capacity from 150kW to 50kW. As Witness Deal elucidates, this will
3 provide greater flexibility for customers in these still-early market stages and will create
4 more flexibility to meet the needs of a specific location and use case. The Company will
5 work with site hosts on a case-by-case basis to evaluate and determine if future-proofing
6 is warranted.

7

8 B. *Fleet and Transit Charging Pilot*

9

10 **Q. In addition to parties' comments that apply to multiple TE Pilots, which you discuss**
11 **above, did parties have other comments pertaining specifically to the Company's**
12 **Fleet and Transit Charging Pilot?**

13 A. Yes. I address these comments below.

14

15 **Q. Please summarize intervenors' comments regarding the Fleet and Transit Charging**
16 **Pilot, to the extent not already addressed elsewhere in your testimony.**

17 A. NRDC witness Harris supports the Fleet and Transit Charging Pilot and argues the
18 Company should increase program funds to support additional medium- and heavy-duty
19 fleets. Additionally, Ms. Harris recommends that the transit charging stations support buses
20 that mainly service EJ Areas and that at least 35% of the fleet charging investment be made
21 with fleets located in and/or serving EJ Areas (NRDC Statement No. 2, p. 5, lines 6-8).

22 CAUSE-PA witness Geller supports the Fleet and Transit Charging Pilot, subject
23 to the modification that 100% of the funds be devoted to EJ Areas, and the request that the
24 Company further explain "how it will prioritize mass transit and fleet electrification

1 initiatives serving the poorest communities in DLC’s service territory and/or which serve
2 other uniquely vulnerable populations” (CAUSE-PA Statement No. 1, p. 49, line 19 - p.
3 50, line 2).

4 I&E witnesses Keller and Cline also support the Fleet and Transit Charging Pilot
5 with specific reporting requirements in the next base rate proceeding (I&E Statement No.
6 2, p. 32 and Statement No. 5, p. 5), which I addressed earlier in my testimony.

7 ChargePoint witness Deal recommends that the Fleet and Transit Charging Pilot be
8 approved with modifications, including: issuing eligibility requirements for the charging
9 stations used in the pilot and ensuring all communications are vendor neutral, which I
10 addressed earlier in my testimony (ChargePoint Statement No. 1, p. 5).

11 OCA witness Nelson recommends the Fleet and Transit Charging Pilot be denied
12 as proposed for the reasons I discuss earlier in testimony, and that the Company instead
13 provide customers with a rebate (OCA Statement No. 6, pp. 20-21).

14 OSBA witness Knecht opposes the Fleet and Transit Charging Pilot. In addition to
15 the reasons I discuss earlier in my testimony, Mr. Knecht argues the transit portion of the
16 pilot is seemingly designed to get favor from local government (OSBA Statement No. 1,
17 pp. 36-37).

18
19 **Q. NRDC witness Harris and CAUSE-PA witness Geller propose to increase the number**
20 **of sites that are located and/or serve EJ Areas. Witness Harris proposes an increase**
21 **from 25% to 35%. Witness Geller proposes that all Pilot funds go towards projects**
22 **in EJ Areas. Does the Company accept these recommendations?**

23 A. Partially. The Company agrees with Witness Harris’ recommendation to dedicate at least
24 35% of investments toward projects in or that serve EJ Areas. The Company believes that

1 Witness Geller's proposal is too geographically restrictive for a pilot. Mr. Geller's proposal
2 would necessarily disqualify any customer located outside an EJ Area. In addition to being
3 unfair, this would also bias the sample of participating customers, and thereby impair the
4 quality of the information gathered through the pilot.

5
6 **Q. CAUSE-PA Witness Geller requests that the Company further explain how it will**
7 **prioritize mass transit and fleet electrification initiatives in or that serve EJ Areas.**
8 **How does the Company respond?**

9 A. I believe I have responded to Mr. Geller's request already through discovery. See Exhibit
10 SO-1-R (CAUSE-PA-II-5). The Company plans to work with community groups, non-
11 profits, government agencies, school districts, and local foundations, among others to
12 identify fleets that would be good candidates for electrification or that are in areas where
13 the local community would benefit from electrification. Customers will submit an
14 application which will be evaluated based on a number of factors, including if the fleet is
15 in an EJ Area or serves a low income or disadvantaged population.

16
17 **Q. NRDC Witness Harris recommends doubling the funds for the Fleet and Transit**
18 **Charging Pilot to serve up to 24 customers annually.²⁹ Does the Company agree with**
19 **this recommendation?**

20 A. Not at this time. The Company agrees with Witness Harris that electrifying medium and
21 heavy-duty fleets can bring important environmental and health benefits, particularly for
22 lower income communities. However, the Company asserts that since this is a pilot, it

²⁹ Exhibit SO-1-R (DLC-NRDC-I-11).

1 should be a relatively modest size so the Company can learn more about its customers'
2 needs then make decisions about how to best support them at scale moving forward.

3
4 **Q. NRDC witness Harris recommends that the Company should ensure that charging**
5 **stations installed as part of the Transit Charging Pilot support buses that mainly serve**
6 **EJ and low-income communities. Please respond.**

7 A. Ms. Harris's recommendation is effectively already built into the Company's proposal. The
8 Port Authority of Allegheny County ("Port Authority) will operate the six electric buses
9 that will be powered by the DCFC stations installed as part of the Transit Charging Pilot
10 on transit routes out of the organization's East Liberty Garage. The Port Authority indicates
11 that nearly all of the routes based out of this garage serve EJ Areas in Allegheny County's
12 eastern sector.

13
14 **Q. OCA Witness Nelson recommends rejecting Company ownership of the behind-the-**
15 **meter infrastructure for the Fleet and Transit Charging Pilot and proposes funds be**
16 **provided as a rebate instead. Does the Company agree with this recommendation?**

17 A. No, for the reasons discussed earlier in my testimony.

18
19 **Q. If the Commission rejects Company ownership of behind-the-meter infrastructure,**
20 **would the Company be willing to implement a rebate structure for the Fleet and**
21 **Transit Charging Pilot instead?**

22 A. Partially. The Company would be willing to consider such a structure for the Fleet portion
23 of the Pilot. Under such a program, the Company would cover up to one-hundred percent
24 of make-ready project costs for selected projects, up to a total program cost commensurate

1 with that of the Company's original proposal. The Company strongly believes, however,
2 that Company's original proposal is superior to such a rebate program, and Mr. Nelson has
3 offered no empirical evidence to the contrary. Implementing the Fleet Charging Pilot under
4 a rebate structure would cost an annual program expense, including customer rebates, of
5 \$1,098,520. The Company's proposed revenue requirement does not reflect this structure.

6 Under this scenario, the Company would recommend against implementing a
7 rebate structure for the Transit portion of this pilot. The Company believes there is strong
8 evidence from the Company's DCFC Evaluation Pilot for the benefits of Company
9 ownership of this infrastructure.

10
11 **Q. OCA Witness Nelson recommends that "If the Company proposes a reasonable**
12 **rebate structure, for its Make-ready Pilot and Fleet and Transit Charging Pilot, I**
13 **recommend that the Commission deny the Company's request to extend the pilot**
14 **through 2024 but approve years 2022-2023 with my recommended modifications and**
15 **filing requirements." (OCA St. 6, p. 37, lines 1-4). Do you accept this**
16 **recommendation?**

17 A. No, for the reasons I addressed earlier in my testimony.

18
19 **Q. OSBA witness Knecht recommends rejecting the Fleet and Transit Charging Pilot,**
20 **arguing in part that this infrastructure can be met by unregulated entities. Do you**
21 **agree with his assertion?**

22 A. No, for the reasons I addressed earlier in my testimony.

23

1 **Q. OSBA witness Knecht states, “this program has the appearances of an attempt to**
2 **curry favor with local government authorities at ratepayer expense, particularly since**
3 **the terms are more attractive to the Port Authority than they are to the other fleet**
4 **operators.” (OSBA St. 1, p. 37, lines 15-18.) Please respond.**

5 A. I acknowledge that the Company’s proposal would not require the Port Authority to pay
6 an additional fee to participate in the Fleet and Transit Charging Pilot, whereas other
7 participating customers would be required to pay a monthly fee to cover the costs of the
8 associated charging stations. However, I categorically deny that this is inappropriate in any
9 way, or represents “an attempt to curry favor with local government authorities at ratepayer
10 expense.” To the contrary: as I explained in my direct testimony, the Company’s proposal
11 to not require a separate payment from the Port Authority is consistent with the public
12 service that the Port Authority provides – including, as I explained above, with respect to
13 low-income customers. Duquesne Light’s service territory is small. The fact that the Fleet
14 and Transit Charging Pilot singles out the Port Authority reflects that the Company knows
15 of no other public transit agency in the Company’s service territory that is currently
16 electrifying its fleet.

17
18 **Q. OSBA witness Knecht states “the Company calculates that the revenues generated**
19 **from charges to the customer will cover the full cost. However, that may not be the**
20 **case for the FPFTY, as revenues appear to fall short of the claimed revenue**
21 **requirement for that year” (OSBA Statement 1, p. 36, lines 24-26). How do you**
22 **respond?**

23 A. I believe I have responded to Mr. Knecht’s concern in discovery. The cost of the charging
24 stations, if fleet customers select the Bundled or Pre-Pay Options, are borne by the

1 participants over the contract term (DLC Statement No. 8, p. 43, line 12- p. 44, line 10).
2 The remaining program costs are socialized among the C&I customer class. See Exhibit
3 SO-1-R (OSBA-I-9a) for further details on the cost allocation for this program.
4

5 **Q. Do you have any further response to witnesses for OCA, OSBA, and CAUSE-PA who**
6 **indicate opposition to the Fleet Charging Pilot?**

7 A. Yes. I observe that none of them questioned the Company's analysis, presented in Ms.
8 Everett's direct testimony (DLC St. 17), demonstrating that the Fleet Charging Pilot is cost-
9 effective and is projected to yield net benefits.
10

11 C. *Home Charging Pilot*
12

13 **Q. In addition to parties' comments that apply to multiple TE Pilots, which you discuss**
14 **above, did parties have other comments pertaining specifically to the Company's**
15 **Home Charging Pilot?**

16 A. Yes. I address these comments below.
17

18 **Q. Please summarize intervenors' comments regarding the Company's Home Charging**
19 **Pilot, to the extent not already addressed elsewhere in your testimony.**

20 A. ChargePoint witness Deal recommends that the Home Charging Pilot be approved with
21 modifications, including: issuing eligibility requirements for the charging stations used in
22 the pilot, which I address earlier; and allowing customers to purchase their own charger
23 that meets the eligibility requirements and receive up to \$500 to cover standard installation

1 costs, or up to \$2,000 for qualifying low-income customers (ChargePoint Statement No. 1,
2 pp. 5-6).

3 I&E witness Cline recommends that the Home Charging Pilot be approved with a
4 modification that all charging stations are transferred to owners at the end of the pilot
5 period with no further cost recovery from ratepayers (I&E Statement No. 5, pp. 4-5). I&E
6 witness Keller recommends that the Home Charging Pilot be approved with specific
7 reporting requirements in the next base rate proceeding, which I address above (I&E
8 Statement No. 2, pp. 35-36).

9 OSBA witness Knecht argues that, should the Home Charging Pilot be approved,
10 any associated risks absorbed by the Company should rest solely with the Company's
11 investors and not be passed on to ratepayers (OSBA Statement No. 1, p. 38).

12 In addition to comments I have addressed earlier, while OCA witness Nelson notes
13 the Company's efforts to invest in public EV infrastructure may be appropriate, Mr. Nelson
14 believes the Home Charging Pilot does not expand access to EV charging as much as
15 publicly accessible or shared sites. Mr. Nelson argues the Company's investment (if any)
16 should focus primarily on publicly accessible sites (OCA Statement No. 6, p. 19).

17 CAUSE-PA witness Geller argues the Home Charging Pilot will not benefit low
18 income customers and may lead to gentrification. If it is approved, Mr. Keller recommends
19 confirmed low income and CAP customers be exempt from the costs (CAUSE-PA
20 Statement No. 1, p. 51). I address these concerns earlier in my testimony.

21
22 **Q. Witness Deal has proposed a Bring-Your-Own-Charger (BYOC) \$500 installation**
23 **rebate as part of the Home Charging Pilot (ChargePoint St. 1, p. 6, lines 3-6). Does**
24 **the Company accept this recommendation?**

1 A. No, I disagree with this recommendation because it is inconsistent with the structure of the
2 Home Charging Pilot. Under Mr. Deal's recommendation, the BYOC customer would
3 outlay the full amount of charger and installation costs, then the Company would provide
4 them a rebate of up to \$500 (or up to \$2,000 for low income customers). This
5 recommendation would thus not mitigate the up-front costs of installing charging
6 equipment, or the customer's effort to arrange the installation. Moreover, whereas the
7 Home Charging Pilot as proposed would recover installation costs from participating
8 customers through a monthly fee, under Mr. Deal's proposal, BYOC customers "would
9 avoid the \$21.17 monthly fee that Duquesne Light has proposed for the program."
10 ChargePoint St. 1, p. 19, lines 20-21. Where a customer wishes to choose and install their
11 own charger, they will remain able to do so without participating in the Home Charging
12 Pilot.

13 Finally, the Company does not anticipate that the addition of a BYOC option would
14 meaningfully expand the charging station hardware options available through the Home
15 Charging Pilot. Under the Pilot as proposed, the Company already anticipates allowing
16 participating customers to choose their charging station hardware from a pre-qualified list,
17 as I discussed above and in my direct testimony.

18

19 **Q. Witness Cline recommends that for the Home Charging Pilot all installed charging**
20 **stations are transferred to the owners at the end of the pilot period with no further**
21 **cost recovery from ratepayers. Does the Company agree with this recommendation?**

22 A. Yes. Mr. Cline confirmed in discovery that his recommendation that charging stations be
23 transferred "at the end of the pilot period" refers to the conclusion of each customer's 5-

1 year contract term.³⁰ This recommendation is consistent with the Company’s proposal that
2 at the end of the 5-year contract term, ownership of the charging station and all associated
3 responsibilities will pass to the customer (DLC St. 8, p. 49, lines 10-14).

4
5 **Q. Witness Nelson critiques the Home Charging Pilot on the grounds that those charging**
6 **locations may not be publicly accessible. (OCA St. 6, p. 19, lines 8-14). Does the**
7 **Company agree with this critique?**

8 A. No. Witness Nelson asserts that “residential charging stations are not publicly accessible
9 or shared, and thus do not expand access to EV charging as much as publicly accessible or
10 shared sites such as multi-unit dwellings, workplaces, or other public locations.” Although
11 access to public and workplace charging is critically important, Witness Nelson ignores
12 that fact that on average 80% of charging happens at home. Giving customers access to
13 affordable and convenient charging at home is an important component to encouraging EV
14 adoption.

15 Witness Nelson also states that “[I]n order to ensure that ratepayer dollars facilitate
16 EV charging access for those who are the least likely to afford it, investments should focus
17 on publicly accessible charging sites, not private homes.” (OCA St. 6, p 19, lines 12-14.)
18 In the Pittsburgh metro region, for households at or below 150% of the Federal Poverty
19 Line, close to half own a detached home.³¹ The Home Charging Pilot is designed to provide
20 low-income customers, who otherwise may not be able to afford the upfront cost of a
21 charging station or the necessary electrical upgrades, with additional financial support up

³⁰ Exhibit SO-1-R (DLC-I&E-I-14).

³¹ U.S. Census Bureau, 2019 American Housing Survey. Accessed from: <https://www.census.gov/programs-surveys/ahs.html>.

1 to \$2,000. The Company's portfolio approach is thus designed to meet the needs of low-
2 income customers whether they live in MUDs or single-family homes.

3
4 **Q. Witness Knecht recommends that ratepayers be indemnified from any insurance,**
5 **damages, and legal costs associated with Home Charging Pilot charging stations.**
6 **(OSBA St. 1, p. 34, lines 25-28.) Do you agree with this recommendation?**

7 A. No. Witness Knecht's request is not reasonable. Mr. Knecht appears to seek certain
8 program costs to be deemed imprudent before they are incurred. The Company has
9 appropriately limited liability under this program to "repair or replacement of the Charging
10 Station at DLC's sole discretion and as may be required by this Agreement." The Company
11 has outlined the Customer responsibilities, including maintaining home insurance, and
12 proper use of the equipment under the Home Charging Pilot Customer Agreement (see
13 Exhibit SO-5).

14
15 **Q. CAUSE-PA witness Geller opposes the Home Charging Pilot, arguing, "the cost of**
16 **EV ownership and maintenance is simply out of reach of the average low income**
17 **customer. I am concerned that providing enhanced incentives for EV home chargers**
18 **in low income neighborhoods could lead to increased gentrification within EJ areas"**
19 **(CAUSE-PA Statement 1, p. 51, lines 2-4). Do you agree?**

20 A. No, for the reasons I described earlier in my testimony.

21
22 **Q. CAUSE-PA witness Geller recommends that if the Home Charging Pilot is approved**
23 **as proposed that confirmed low income and CAP customers be exempt from paying**
24 **for that rider. Does the Company agree with this recommendation?**

1 A. No, for the reasons I described earlier in my testimony.

2

3 **Q. Do you have any further response to witnesses for OCA, OSBA, and CAUSE-PA who**
4 **indicate opposition to the Home Charging Pilot?**

5 A. Yes. I observe that none of them questioned the Company's analysis, presented in Ms.
6 Everett's direct testimony, demonstrating that the Home Charging Pilot is cost-effective
7 and is projected to yield net benefits. In fact, Mr. Nelson confirmed in discovery that he
8 does not take the position that the Pilot will yield net costs to customers.³²

9

10 *D. Awareness, Education, and Engagement*

11

12 **Q. In addition to parties' comments that apply to multiple TE Pilots, which you discuss**
13 **above, did parties have other comments pertaining specifically to the Company's**
14 **Awareness, Education and Engagement (AEE) proposal?**

15 A. Yes. I address these comments below.

16

17 **Q. Please summarize parties' comments on the Company's AEE proposal.**

18 A. NRDC witness Harris recommends the Company's AEE proposal be approved, noting how
19 utilities have a critical role to play in increasing education and awareness surrounding
20 electric vehicles and are better positioned to do so than automakers seeking to promote
21 specific vehicles or charging providers seeking to promote specific business models
22 (NRDC Statement No. 2, p. 33).

³² Exhibit SO-1-R (DLC-OCA-I-47).

1 Similarly, I&E witnesses Keller and Cline accept the Company's AEE proposal
2 with specific reporting requirements in the Company's next base rate proceeding, which I
3 address earlier in my testimony (I&E Statement No. 2, p. 37 and Statement No. 5, p. 5).

4 ChargePoint witness Deal supports the Company's education and outreach efforts
5 so long as they remain vendor neutral. Further, Mr. Deal recommends for the Commission
6 to direct the Company to file all marketing materials with the Commission annually as an
7 informational filing, which I address earlier in my testimony (ChargePoint Statement No.
8 1, p. 12).

9 OCA witness Nelson argues any customer education efforts surrounding electric
10 vehicles should also address load management and, therefore, Mr. Nelson recommends
11 reducing the funding for the Company's AEE proposal by 75% until the Company more
12 comprehensively develops load management programs (OCA Statement No. 6, pp. 35-36).

13 OSBA witness Knecht and CAUSE-PA witness Geller did not directly address the
14 Company's AEE proposal in their respective testimonies.

15
16 **Q. Do you agree with OCA witness Nelson's recommendation to reduce the Company's**
17 **proposed AEE expenses by 75% (OCA Statement No. 6, p. 36)?**

18 A. No. AEE forms a critical component of the TE Programs for a variety of reasons. Lack of
19 consumer awareness is one of the most significant barriers to greater adoption of EVs.
20 Many aspects of EV education bear directly on Duquesne Light's systems and functions.
21 For example, current and prospective EV owners will require fundamental information
22 regarding different EV charging levels, electricity bill impacts, and how to connect EV
23 charging equipment to the Company's grid. This information can best be provided (and in

1 some instances, can *only* be provided) by the Company. The proposed AEE budget reflects
2 the resources necessary to provide this service.

3 Moreover, Mr. Nelson's recommendation has no factual basis. When asked to
4 provide justification and assumptions he used to determine that a 75% reduction was an
5 appropriate amount to reduce the proposed AEE expenses, OCA witness Nelson indicated
6 that the recommendation was subjective.³³

7
8 **Q. I&E witness Keller recommends reporting requirements for the Company's AEE**
9 **proposal (I&E Statement No. 2, p. 37). Do you agree with these recommendations?**

10 A. Yes, as I addressed above.

11
12 *E. Fleet Electrification Advisory Service*

13
14 **Q. In addition to parties' comments that apply to multiple TE Pilots, which you discuss**
15 **above, did parties have other comments pertaining specifically to the Company's**
16 **Fleet Electrification Advisory Service proposal?**

17 A. Yes. I address these comments below.

18
19 **Q. Please summarize parties' comments on the Company's Fleet Electrification**
20 **Advisory Service proposal.**

21 A. NRDC witness Harris recommends that the Company's proposed Fleet Electrification
22 Advisory Service be approved and the Company should commit that at least 10 fleets that
23 service EJ Areas participate in the fleet advisory service by 2024. Additionally, Ms. Harris

³³ See Exhibit SO-1-R (DLC-OCA-I-66).

1 argues that the Company should analyze potential fueling costs for fleets charging EVs on
2 current electric rates versus the time-of-use rate and provide information on the benefits
3 and challenges of installing a second meter for EV charging (NRDC Statement No. 2, pp.
4 33-34).

5 I&E witnesses Keller and Cline accept the Company's Fleet Electrification
6 Advisory Service proposal with specific reporting requirements in the Company's next
7 base rate proceeding, which I address earlier in my testimony (I&E Statement No. 2, p. 37
8 and Statement No. 5, p. 5).

9 ChargePoint witness Deal recommends that the Commission approve the
10 Company's Fleet Electrification Advisory Service proposal and direct the Company to
11 ensure all communications with fleet customers are vendor neutral (ChargePoint Statement
12 No. 1, p. 5).

13 CAUSE-PA witness Geller recommends the Company's Fleet Electrification
14 Advisory Service, if approved, be open to stakeholders and inclusive of local EJ groups
15 (CAUSE-PA Statement No. 1, p. 50).

16 OCA witness Nelson argues the Company's Fleet Electrification Advisory Service
17 as proposed would be inadequate until the Company has sufficiently developed its load
18 management offerings and, therefore, recommends the service is rejected (OCA Statement
19 No. 6, pp. 35-36).

20 OSBA witness Knecht did not directly address the Fleet Electrification Advisory
21 Service in his testimony.

22
23 **Q. Do you agree with OCA witness Nelson's recommendation to reject the Company's**
24 **proposed Fleet Electrification Advisory Service (OCA Statement No. 6, p. 36)?**

1 A. No. The Fleet Electrification Advisory Service is a core utility function which uses the
2 utility's expertise to help customers with vehicle fleets develop fleet electrification plans.
3 Not only will this help fill a resource gap for customers as they seek to transition to electric
4 fleets, but also it may help lead to a reduction in ground-level emissions, particularly in EJ
5 Areas, and inform the Company's distribution system planning, construction, and
6 operation decisions with insight gained from these emerging electric service needs. The
7 proposed Fleet Electrification Advisory Service budget reflects the resources necessary to
8 provide support to customers who seek to transition their fleet to electricity service.

9

10 **Q. ChargePoint witness Deal recommends that communications for the Fleet Advisory**
11 **Service remain vendor neutral (ChargePoint Statement No. 1, pp. 16-17.) Do you**
12 **agree?**

13 A. Yes, the proposal by witness Deal for vendor neutral communications is consistent with
14 the Company's approach in the EV ChargeUp Pilot and the Company's proposed approach
15 for TE Portfolio. Any marketing or other program materials will be vendor neutral, as will
16 any guidance provided to customers.

17

18 **Q. I&E witness Keller recommends reporting requirements for the Company's**
19 **proposed Fleet Electrification Advisory Service (I&E Statement No. 2, p. 39). Do you**
20 **agree with these recommendations?**

21 A. Yes, as I addressed above.

22

1 **Q. Mr. Geller requests the Fleet Electrification Advisory Service be open to stakeholders**
2 **and inclusive of local environmental justice groups. (CAUSE-PA Statement No. 1, p.**
3 **50.) Do you agree with these recommendations?**

4 A. Yes. Mr. Geller provided clarification that, “The information provided by the Fleet
5 Electrification Advisory Service should be developed inclusive of expertise of community
6 partners and local environmental justice groups, especially those that advocate on behalf
7 of low income customers to ensure that information and advice provided is rooted in the
8 needs of the communities that DLC serves.”³⁴ The Company agrees to engage such
9 organizations to provide input to fleet electrification support offered through the proposed
10 program in EJ Areas.

11
12 **Q. NRDC witness Harris recommends modifications to the Company’s proposed Fleet**
13 **Electrification Advisory Service (NRDC Statement No. 2, pp. 33-34). Please**
14 **summarize her recommendations and your responses to them.**

15 A. Ms. Harris recommends the Company target medium and heavy duty fleets through the
16 proposed service. The Company agrees, and plans to support customers with such fleets.
17 Witness Harris also recommends that the Fleet Electrification Advisory Service provide
18 customers with information about the benefits and challenges of installing a second meter
19 to serve charging infrastructure and fueling costs on their current rate, on the company’s
20 EV-TOU rate (whole-premise or separately metered), or on other applicable rates. The
21 Company agrees with these recommendations and plans to include them in the proposed
22 service. Witness Harris recommends modifying the Company’s target of providing Fleet
23 Electrification Advisory Service to two non-profit entities serving EJ Areas on an annual

³⁴ Exhibit SO-1-R (DLC-CAUSE-PA-I-5).

1 basis to instead committing to serve at least 10 fleets that service EJ communities through
2 the program from 2022-2024. The Company partially agrees with Ms. Harris's
3 recommendation and will target sites located in EJ Areas for at least 35% of program
4 participants annually.

5

6 **Q. Does this conclude your rebuttal testimony?**

7 A. Yes, it does.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 9-R

**DIRECT TESTIMONY OF
JENNIFER NEISWONGER**

**Subjects: Customer Service Performance and Enhancement, Customer Education
for Residential Subscription Rate Pilot**

Dated: July 26, 2021

1 **I. INTRODUCTION & BACKGROUND**

2 **Q. Please state your name, title, and business address.**

3 A. My name is Jennifer Neiswonger. I am the Director of Customer Experience for Duquesne
4 Light Company (“Duquesne Light” or the “Company”). My business address is 411
5 Seventh Avenue, Mail Drop 15-1, Pittsburgh, PA 15219.

6

7 **Q. Have you previously submitted testimony in this proceeding on behalf of Duquesne
8 Light?**

9 A. Yes. On April 16, 2021, I submitted direct testimony (“Duquesne Light Statement No. 9”)
10 regarding: (a) the Company’s customer service performance and enhancement, and (b)
11 customer education for Residential Subscription Rate Pilot.

12

13 **Q. What is the purpose of your rebuttal testimony?**

14 A. The purpose of my rebuttal testimony is to respond to certain aspects of the direct testimony
15 provided telephonically during the public input hearing for this matter and also to address
16 the issues raised in the written direct testimony of the parties in this proceeding.
17 Specifically, I will respond to the testimony provided by: (1) Duquesne Light customer
18 Jeaneen Zappa at the public input hearing that took place on Tuesday, June 22, 2021, (2)
19 the direct testimony submitted on behalf of the Office of Consumer Advocate (“OCA”)
20 and authored by Roger D. Colton (labeled “OCA Statement No. 4”), (3) the direct
21 testimony submitted on behalf of OCA and authored by Ron Nelson (labeled “OCA
22 Statement No. 6”), and (4) the direct testimony submitted on behalf of the Pennsylvania

1 Public Utility Commission’s (“PUC or the “Commission”) Bureau of Investigation and
2 Enforcement (“I&E”) and authored by Ethan H. Cline (labeled “I&E Statement No. 5”).

3

4 **Q. How is your rebuttal testimony organized?**

5 A. Section II responds to concerns related to customer education for the Residential
6 Subscription Rate Pilot, which is more fully described in Ms. Margot Everett’s direct
7 testimony (“Duquesne Light Statement No. 17”) and Ms. Everett’s rebuttal testimony
8 (“Duquesne Light Statement No. 17-R”). I will note that that my rebuttal addresses only
9 the customer education piece of the Residential Subscription Rate Pilot and the cost(s)
10 associated therewith. Other Duquesne Light witnesses, including Ms. Everett, will respond
11 to all other aspects of the Residential Subscription Rate Pilot in their corresponding rebuttal
12 testimonies, as necessary and appropriate. Section III of my testimony responds to Mr.
13 Colton’s characterizations of the Company’s customer satisfaction performance as
14 indicated in the report published by the Pennsylvania Public Utility Commission’s (“PUC”
15 or the “Commission”) Bureau of Consumer Services related to Universal Service Programs
16 and Collections Performance (referred to in Mr. Colton’s testimony and my rebuttal
17 testimony as the “BCS Report”), and the Consumer Activities Report & Evaluation
18 (referred to in Mr. Colton’s testimony and my rebuttal testimony as the “UCARE Report”).

19

20 **Q. Are you sponsoring any exhibits with your rebuttal testimony?**

21 A. Yes, I am sponsoring Exhibit JAN-1-R and Exhibit JAN-2-R, and will refer to Exhibit
22 JAN-4, which was attached to my direct testimony and includes the itemized marketing

1 and education costs associated with the Company's proposed Residential Subscription
2 Rate Pilot Program.

3
4 **II. CUSTOMER EDUCATION FOR THE RESIDENTIAL SUBSCRIPTION RATE**
5 **PILOT PROPOSED BY DUQUESNE LIGHT COMPANY**

6
7 **Q. Has the Company performed research related to how customers would react to the**
8 **Residential Subscription Rate Pilot?**

9 A. Yes. The Company recently received results of a study performed by a Duquesne Light
10 consultant to ascertain customers' potential interest in the Residential Subscription Rate
11 Pilot and gather customer feedback.

12
13 **Q. What were the results of the study?**

14 A. Broadly, the study revealed that one-third of respondents surveyed are likely to consider
15 enrolling and reacted in favor of paying a predictable, fixed amount for their monthly
16 electric distribution charges. Full survey results are provided in the Company's
17 supplemented response to OCA-I-14(a), and enclosed with my testimony as Exhibit JAN-
18 1-R.

19
20 **Q. Are you familiar with the concerns raised by Ms. Jeaneen Zappa related to the**
21 **Residential Subscription Rate Pilot?**

1 A. Yes. At the public input hearing for this proceeding, which commenced at 1 PM on June
2 22, 2021, Ms. Zappa expressed concerns about the Residential Subscription Rate Pilot,
3 suggesting that customers have not had an appropriate amount of education on how demand
4 pricing works.

5
6 **Q. Please respond to Ms. Zappa's concerns.**

7 A. Ms. Zappa expressed concern regarding customer understanding of the residential
8 subscription pilot. As with any new customer program, the Company anticipated this
9 concern and has several mitigating plans in place to overcome potential barriers. In the
10 research results included in the enclosed as Exhibit JAN-1-R, one-third of DLC
11 respondents found the program appealing and are likely to consider enrolling. They most
12 like the idea of paying a fixed monthly charge to help with budgeting monthly expenses.

13 Based on this research, the Company agrees with Ms. Zappa that there is some need
14 for customer education and further clarification of the program prior to the start of the pilot.
15 In addition, the Company agrees that customers will need additional assistance in
16 understanding the demand portion of their bill. The Company already includes some
17 educational content related to demand for its business customers on its website¹ and plans
18 to make similar information available for residential customers interested in the pilot, along
19 with creating an educational video to explain the details of the pilot as highlighted in the
20 budget in Exhibit JAN-4. Furthermore, as I indicated in my direct testimony (DLC St. 9,
21 p. 11, lines 10-12), “the Company will implement usage alerts via email, SMS and

¹ <https://www.duquesnelight.com/account-billing/understanding-your-bill/business-bill/demand-energy-usage>

1 outbound voice to notify customers when they are approaching or exceeding their
2 subscription level Exhibit JAN-4, the Company plans to provide usage alerts.” Ms.
3 Everett’s direct and rebuttal testimony include the customer protections that Duquesne
4 Light plans on implementing in connection with the Residential Subscription Rate Pilot.

5
6 **Q. In light of the foregoing, as well as Mr. Nelson’s and Mr. Cline’s opinions regarding**
7 **customer comprehension below, do you propose any changes to the Residential**
8 **Subscription Rate Pilot?**

9 A. Yes. The Company proposes to delay implementation of the pilot to June 1, 2022. This
10 delay will allow for further refinement of customer education and outreach based on the
11 initial findings in Exhibit JAN-1-R along with additional follow-up research, if needed.
12 This delay would still provide enough time for the Company to conclude the pilot and
13 analyze its results prior to its next anticipated base rates case.

14
15 **Q. Do you agree with Mr. Nelson’s and Mr. Cline’s opinions that customers will be**
16 **unable to understand the Residential Subscription Rate Pilot (OCA St. 6, p. 38; I&E**
17 **St. 5, p. 20)?**

18 A. No.

19
20 **Q. Why do you disagree with Mr. Nelson’s and Mr. Cline’s opinions that customers will**
21 **be unable to understand the Residential Subscription Rate Pilot?**

1 A. As stated above in response to Ms. Zappa’s concerns, I do agree that education is needed,
2 but given it’s an optional pilot, customers that have interest in the residential subscription
3 rate pilot will be provided informational materials to help them fully understand the
4 program details before signing up. The Company will support that with the education and
5 outreach outlined in my direct testimony and Exhibit JAN-4 and as stated above in response
6 to Ms. Zappa’s concerns. One of those items in Exhibit JAN-4 is an enrollment video and
7 targeted email which the Company recently used to introduce its new bill redesign. The
8 use of these channels allows for more explanation to help customers understand the
9 difference between usage and demand.

10 I disagree with Mr. Nelson’s assertion on page 38 of OCA Statement No. 6 that
11 “the rate is incredibly hard for customers to understand, especially because the Company
12 is not providing any enabling technology.” The Company does provide enabling
13 technology. For example, the Company already makes hourly kWh usage data available to
14 the customer on its website via an interactive graph and can be downloaded in CSV or
15 XML format for determining demand. See Exhibit JAN-2-R. And as noted in Exhibit JAN-
16 4, the Company plans to offer usage alerts to customers via email, text and voice to serve
17 as notification if they are approaching or exceeding their subscription level.

18

19 **Q. Please respond to Mr. Nelson’s assertion that the \$67,000 cost estimate for the**
20 **Residential Subscription Rate Program is unclear.**

21 A. Exhibit JAN-4, which was attached to my direct testimony, provides an itemization of the
22 \$67,000 estimate for the Residential Subscription Rate Pilot. A narrative response
23 regarding items that are included in the estimate is available in my direct testimony on page

1 11 of Duquesne Statement No. 9. By way of further explanation, the \$67,000 is expected
2 to be incurred over the course of three years, and it includes creating customer education
3 and outreach materials, and incremental costs to evaluate the program. As stated in my
4 direct testimony, only costs that are incremental to normal levels of staffing and operations
5 are included in this estimate.

6 In response to Mr. Nelson's request on OCA Statement No. 6, pages 39-40, for an
7 evaluation and assessment plan for the pilot, the Company does not have one at this time,
8 but in consideration of Mr. Nelson's comments, we will use the period of the
9 implementation delay to develop this plan.

10
11 **III. DUQUESNE LIGHT COMPANY'S CUSTOMER EXPERIENCE**
12 **PERFORMANCE AND ENHANCEMENT MEASURES**

13
14 **Q. Please respond to Mr. Colton's conclusion that Duquesne Light's customer**
15 **experience presentation is "incomplete." (OCA St. 5, p. 107, lines 12-14.)**

16 **A.** In the Customer Service Report mentioned in Mr. Colton's testimony (e.g., at page 103
17 line 20), the survey company defines the statistical significance associated with their
18 sampling:

19 Each year, the survey firm completes approximately 700 surveys for each
20 EDC or NGDC. With a sample of this size, there is a 95 percent
21 probability that the results have a statistical precision of plus or minus five
22 percentage points of what the results would be if all customers who had
23 contacted their EDC or NGDC had been surveyed, meeting the PUC
24 requirements.

25
26 This is important to note because the satisfaction results across all PA EDCs are extremely
27 close, and often times within that margin of error (+/- 5%). In addition, while

1 benchmarking is very important, I believe it is equally, if not more, important to be showing
2 continuous improvement against yourself. In looking at the 2018 and 2019 results of the
3 Customer Service Report, and only looking at the top box score as Mr. Colton did (I.e.,
4 “very satisfied”, “very knowledgeable”, “very courteous”), the Company has shown
5 improvement for nearly all questions.

- 6 • Satisfaction with ease of reaching the company increased from 61% in 2018 to 65%
7 in 2019; the top score in 2019 was 70% meaning DLC was within the margin of
8 error of the top performer;
- 9 • Satisfaction with the representative’s handling of the contact increased from 77%
10 in 2018 to 78% in 2019; the top score in 2019 was 80% and within the margin of
11 error of the top performer;
- 12 • Satisfaction with the representative’s courtesy increased from 83% in 2018 to 84%
13 in 2019; the top score in 2019 was 87% and within the margin of error of the top
14 performer;
- 15 • Satisfaction with the representative’s knowledge was 77% in 2018 and 79% in
16 2019; DLC and 3 other EDCs had the same top score with only a 2% point
17 difference between the best performing EDCs (79%) and the worst performing
18 EDCs (77%); and
- 19 • Overall satisfaction increased from 67% in 2018 to 72% in 2019. The top score in
20 2019 was 77%.

21 The Company realizes how important the customer experience is and is focused on
22 continuous improvement in this area. A few of these initiatives were outlined on pages 8-
23 9 in my direct testimony, but in addition to and specific to these customer satisfaction

1 results, the Company redesigned the menu options on its automated phone system in Q4
2 2017 to make the options more intuitive, we implemented a customer insight community
3 in 2018 and continue to survey this community several times per month to keep a pulse on
4 customer feedback, and lastly, we regularly conduct customer service / empathy training
5 with our customer service representatives to ensure we are providing excellent service.

6

7 **Q. Does this conclude your rebuttal testimony?**

8 A. Yes. I reserve the right to supplement my testimony as may be necessary through the
9 course of this proceeding.

10

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2021-3024750

Duquesne Light Company
Statement No. 10-R

Rebuttal Testimony of Robert L. O'Brien

Dated: July 26, 2021

TABLE OF CONTENTS

V. COVID-19 – NET EXPENSE RECOVERY	52
VI. CASH WORKING CAPITAL.....	60

1 **I. INTRODUCTION**

2 **Q. Please state your name.**

3 A. My name is Robert O'Brien.

4 **Q. Have you previously testified in this proceeding?**

5 A. Yes, I submitted Direct Testimony on behalf of Duquesne Light Company
6 ("DLC" or "Company") in this proceeding, dated April 16, 2021, before the
7 Pennsylvania Public Utility Commission ("Commission"). My Direct Testimony
8 included support for the overall revenue requirement, pro forma adjustments for
9 the fully projected future test year ended December 31, 2022 ("FPFTY"), the
10 future test year ended December 31, 2021 ("FTY") and the historic year ended
11 December 31, 2020 ("HTY"), portions of the measures of value (also referred to
12 as rate base) and the cash working capital ("CWC") calculation.

13 **Q. What is the purpose of your Rebuttal Testimony?**

14 A. My Rebuttal Testimony will present updates in the Company's total utility cost of
15 service and will respond to the Direct Testimony of the following witnesses in the
16 following areas:

- 17 • Office of Consumer Advocate ("OCA") witness Lafayette K. Morgan,
18 Jr. regarding certain of the proposed pro forma adjustments to rate base,
19 operating revenues and expenses;
- 20 • Bureau of Investigation and Enforcement ("I&E") witnesses
21 Christopher Keller, Christine Wilson, Eryan Sakaya and Joseph Kubas
22 regarding certain proposed pro forma adjustments to rate base, operating
23 revenues and expenses.

1 • National Resource Defense Council (“NRDC”) witness Amanda Levin
2 regarding the amortization period for COVID-19 Expense recovery.

3

4 **Q. Are you sponsoring any Exhibits along with your Rebuttal Testimony?**

5 A. Yes. I am sponsoring Exhibits RLO-1-R through RLO-8-R.

6

7 **Q. How is your Rebuttal Testimony organized?**

8 A. First, I will provide testimony regarding the changes the Company is proposing to
9 its initial filing that have been included in responses to data requests and describe
10 each adjustment. Next, I will present changes to the Company’s positions
11 resulting from reviewing the presentations of the other parties to this proceeding.

12 The changes in each of those categories are shown on DLC Exhibit RLO-1-R, are
13 described on DLC Exhibit RLO-2-R and will be identified and explained in
14 connection with those exhibits. Finally, I will present rebuttal testimony to
15 certain adjustments and positions of the OCA, I&E and NRDC witnesses
16 organized by topic and by witness within each topic. The first part of my rebuttal
17 will be corrections to the OCA and I&E adjustments, mostly to correct
18 adjustments that use total Company amounts for their adjustments but then apply
19 the adjustments to the lower claimed distribution amounts that resulted from the
20 Company’s Jurisdictional Separation Study (“JSS”). These errors overstate the
21 effect of their adjustments and understate the OCA or I&E proposed balances.

1 The second part will be rebuttal to positions taken by OCA, I&E and NRDC in
2 their pre-filed direct testimony,

3 **II. UPDATES TO THE COMPANY'S ORIGINAL FILING**

4 **Q. Please describe DLC Exhibit RLO-1-R.**

5 A. DLC Exhibit RLO-1-R presents a summary of the Company's adjustments to its
6 filed positions in this case. Column 1 shows the total Company as filed amounts
7 for major elements in rate base (line 1 to line 9), rate of return (lines 10 to 14), net
8 operating income ("NOI") requirement (line 15), results of operation (lines 16 to
9 37). Column 3 shows the as filed amounts for the Company's PA Jurisdictional
10 operations for the same categories through line 37. As I will discuss later, it is
11 important to note that both the OCA and I&E used this PA Jurisdictional data,
12 from line 1 to line 9 and lines 16 through line 37 as the starting point for the OCA
13 and I&E adjustments as shown on OCA Schedule LKM-1, page 1 of 2 in the first
14 column and on I&E Statement No. 1, page 4, table 1, the first column. Finally, the
15 NOI increase required and the related PA Jurisdictional revenue increase required
16 is shown on lines 38 and 41 respectively with additional details shown as item
17 "A" on DLC Exhibit RLO-2-R, page 1, lines 1 to 9.

18 **Q. Please continue.**

19 A. Columns 4 and 5 on DLC Exhibit RLO-1-R show the adjustments the Company is
20 proposing that have been described in responses to data requests with the adjusted
21 balances shown in column 6. Finally, adjustments in columns 7 and 8 reflect
22 changes to the Company's filing that result from the Company reviewing updated

1 information and providing an updated JSS and also an updated DLC Exhibit 2
2 converting the total Company update adjustments to PA Jurisdictional amounts.

3 **Q. Please describe the changes the Company is proposing based on its responses**
4 **to data requests.**

5 A. First, the Company is increasing the accumulated depreciation on its Cloud
6 investment from \$7.012 million to \$7.705 million for an increase of \$693,000 on
7 a total Company basis of which \$646,000 is applicable to the PA Jurisdictional
8 operations. This calculation, which is a decrease in rate base, is shown on DLC
9 Exhibit RLO-2-R, page 1 of 2 in item “B”, lines 9 to 13. Next, the Company is
10 increasing its FPFTY operating expenses in the amount of \$22,333 for its
11 proposed Residential Subscription Pilot program that was not included in its
12 original filing. As described by DLC Witness Neiswonger in DLC St. No. 9, the
13 \$22,333 is annual expense based on a total cost of \$67,000 over three years. The
14 calculation is shown as item “C” on DLC Exhibit RLO-2-R, page 1, lines 14 to
15 18.

16 **Q. What is adjustment “D” of \$113,000 as shown on DLC Exhibit RLO-1-R,**
17 **column 5, line 29?**

18 A. As described in response to I&E-RE-43-D, the \$113,000 represents one third of
19 the triennial costs of the Commission required Eligible Customer Listing
20 Solicitations (“ECLS”) for the 2018 and 2021 ECLS costs incurred by the
21 Company which were not included in the Company’s initial filing and therefore

1 not in the requested revenue requirement increase. As such, the Company is
2 increasing its FPFTY expense by the normalization of this \$339,000 over the
3 three-year period rates from this case are expected to be in effect. The calculation
4 is shown as item “D” on DLC Exhibit RLO-2-R, page 1, lines 19 to 23,

5 **Q. What is adjustment “E” of (\$167,000) as shown on DLC Exhibit RLO-1-R,**
6 **column 4, line 24?**

7 A. This adjustment reduces the \$1.415 million expense included on DLC Exhibit 2,
8 Schedule 12, column 3, line 8 for outside services by \$500,000 for a charge that
9 did not relate to COVID operational functions. Since these costs are amortized
10 over a three-year period, the reduction to the COVID cost recovery is reduced by
11 one-third or \$167,000. This was explained in response to OCA-X-4. The
12 calculation is shown on DLC Exhibit RLO-2-R, page 1 on lines 24 to 30.

13 **Q. Are you proposing any adjustments that were not included in responses to**
14 **data requests?**

15 A. Yes. Adjustment “F” on DLC Exhibit RLO-2-R, page 2 shows an adjustment in
16 mailing costs resulting from an increase in postage costs of \$0.04 per mailing. As
17 shown in column 7 on lines 31 to 35 the Company projects annual mailings of
18 5,928,000 in the FPFTY, which results in an increase in postage costs of
19 \$237,000. The \$237,000 is shown as item “F” on DLC Exhibit RLO-1-R, column
20 7, line 29.

21 **Q. What is the \$0.04 per mailing unit based upon?**

1 A. The United States Postal Service (“USPS”), on May 28, 2021 filed a request for
2 rate increases with the Postal Rate Commission to be effective on August 29,
3 2021. Part of the requested increase was an increase in the Commercial category
4 which includes mail classified as 5-digit, automated area distribution center
5 (“AADC”) and mixed automated area distribution center (“MAADC”). The
6 Company’s mailings are mostly in the 5-digit category, but also in the AADC and
7 MAADC classifications.

8 **Q. What are the postage rate increases that impact the Company?**

9 A. As shown on the USPS May 28, 2021 request, there are three rate classes where
10 the price increases will impact the Company:

11	Mail Sort	Current Rate	Proposed Rate	Increase
12	5-digit	\$0.389	\$0.426	\$0.037
13	AADC	\$0.419	\$0.461	\$0.042
14	MAADC	\$0.439	\$0.485	\$0.046

15 Based on these rate increases and an estimate of the number of mailings in
16 each rate category, the Company estimates that the average postal rate increase
17 will be \$0.040 per mail item.

18 **Q. What is contained in adjustment “G”?**

1 A. Adjustment “G” reflects a reduction in the annual expense for the Net COVID-19
2 Expenses of \$270,000 as the result of additional updates in the Company’s
3 amounts for savings and for the net costs through June 2021 to date. The detail
4 for this calculation is shown on DLC Exhibit RLO-2-R, page 2, lines 36 to 49.

5 **Q. Please describe adjustment “G”.**

6 A. Lines 36 to 38 show the adjustment made by DLC based on its response to a data
7 request as described in connection with adjustment “E” and is included here for
8 informational purposes to have the total change in the Net COVID-19 Expenses in
9 one place. Lines 39 through 41 show an update in the savings from the \$750,000
10 as filed on DLC Exhibit 2, Schedule D-12, line 15 to the updated amount of
11 \$1,755,000 for an increase of \$1,005,000. This update is described by DLC
12 Witness Bachota. DLC St. No. 2-R. pp. 19-20. Finally, lines 42 to 44 show the
13 Company’s as filed estimate for net expenses of \$600,000 for the first 6 months of
14 2021 is increased to \$794,000 for an increase of \$194,000 based on updated
15 information which will be provided by Witness Bachota. Finally, as shown on
16 lines 47 to 49, the total COVID-19 Net Expenses have decreased by \$811,000,
17 which is \$270,000 per year amortized over three years.

18 **Q. What is the revised total FPFTY annual amount for the recovery of COVID-**
19 **19 Net Expenses.**

1 A. As shown on DLC Exhibit RLO-1-R, column 9, line 24, the total FPFTY amount
2 is \$3.588 million, which is comprised of \$2.094 million for uncollectible expense
3 and \$1.494 million for other Net Expenses.

4 **Q. Please describe adjustment “H”.**

5 A. This adjustment, as shown on DLC Exhibit RLO-2-R, page 2, lines 50 to 54,
6 presents an update of the OPEB credit used in establishing the FPFTY expense
7 from \$299,000 to \$367,000 which is described by Witness Bachota. The
8 difference, as decrease in expense is shown on DLC Exhibit RLO-1-R, column 7,
9 line 20.

10 **Q. What is contained in adjustment “I”?**

11 A. Adjustment “I” as shown on lines 55 to 57 of DLC Exhibit RLO-2-R reflects the
12 removal of \$158,000 in advertising expense related to the Home and Garden
13 activity as described by Ms. Bachota, on DLC St. No. 2-R, p. 16.

14 **Q. Please describe adjustment “J”.**

15 A. Adjustment “J” reflects the change in the Cash Working Capital that results from
16 the changes in expenses presented in this rebuttal document.

17 **Q. What is your final rebuttal adjustment of \$75,000 shown as item “K” on**
18 **DLC Exhibit RLO-1-R, column 8, line 32?**

1 A. This adjustment is to correct my estimates of the distribution impact of the
2 changes made to conform with Mr. Gorman's JSS and the resulting revenue
3 requirement for the PA Jurisdictional operations.

4 **Q. What is the result of these adjustments to the Company's original filing**
5 **which requested an increase in PA Jurisdictional revenues of \$85.760**
6 **million?**

7 A. As shown on DLC Exhibit RLO-1-R, column 9, line 41, these adjustments result
8 in a decrease in the PA Jurisdictional revenue increase of \$232,000 (\$85.760
9 million - \$85.528 million = \$232,000).

10 **Q. Has the Company prepared a revised DLC Exhibit 2 for the FPFTY?**

11 A. Yes. DLC Exhibit RLO-5-R is an updated DLC Exhibit 2, reflecting all of the
12 adjustments shown on DLC Exhibit RLO-1-R and also the results of the JSS
13 prepared by Witness Gorman and included with his rebuttal presentation. The PA
14 Jurisdictional increase of \$85.528 million is shown on DLC Exhibit RLO-5-R,
15 Schedule D-1, column 2, line 2.

16 **Q. Please describe DLC Exhibit RLO-5-R.**

17 A. DLC Exhibit RLO-5-R is an update to the original FPFTY DLC Exhibit 2
18 showing the changes to rate base and expenses detailed on DLC Exhibit RLO-1-R
19 and DLC Exhibit RLO-2-R.

1 **III. CORRECTIONS TO OTHER PARTIES' ADJUSTMENTS**

2 **Q. Please describe why you believe there are necessary corrections to the**
3 **adjustments proposed by some of the other parties to this proceeding.**

4 A. Most of the corrections are the result of the parties, mainly the OCA through the
5 testimony of Witness Morgan, making adjustments using total Company amounts
6 instead of using the PA Jurisdictional amounts. There are a couple of corrections
7 related to other actions which I will describe.

8
9 **Q. Have you prepared an exhibit which shows these corrections?**

10 A. Yes, I have. DLC Exhibit RLO-3-R contains the corrections for the OCA
11 adjustments and DLC Exhibit RLO-4-R contains the corrections for the I&E
12 adjustments.

13
14 **Q. Please describe DLC Exhibit RLO-3-R.**

15 A. Page 1 of this exhibit and has seven columns. Column 1 shows DLC's PA
16 Jurisdictional amounts which are summarized on DLC Exhibit 2, Schedule D-1
17 showing an increase in Jurisdictional revenue of \$87.759 million. These same
18 data shown on DLC Exhibit RLO-1-R in column 3 are also shown on OCA
19 Statement No. 1, Schedule LKM-1, page 1 of 2, in the first column headed
20 Company Amounts at Present Rates. Each of these three sources show the same
21 PA Jurisdictional NOI of \$121.925 million allowing for a \$1,000 rounding

1 difference. This is clearly the starting point for the OCA and the I&E adjustments
2 is the Company's data at PA Jurisdictional operational levels.

3 Columns 2 and 3 show OCA adjustments that are summarized on
4 Statement No. 1, Schedule LKM-1, page 1 of 2 in column headed OCA
5 Adjustments and reflected in the column headed Amounts After OCA
6 Adjustments. Column 4 shows the OCA as-filed positions which result in a NOI
7 of \$142.195 million and a rate base of \$2.193 billion as shown on lines 18 and 20
8 respectively. Those are the same amounts shown on DLC Exhibit RLO-3-R,
9 column 4 line 37 for the NOI of \$142.195 million and on line 10 for the \$2.193
10 billion for the rate base. This shows that DLC Exhibit accurately presents the
11 OCA starting point and the related adjustments that result in the OCA "Amounts
12 After OCA Adjustments".

13 Finally, columns 5 and 6 present my corrections to certain adjustments
14 which are described on DLC Exhibit RLO-3-R, pages 3 to 5. Page 2 of DLC
15 Exhibit RLO-R-3 provides a brief description of each of the OCA proposed
16 adjustments.

17

18 **Q. Please provide an example of the mismatch you describe where the OCA has**
19 **reduced a PA Jurisdictional amount by a total Company amount.**

20 A. I think the most obvious one is the OCA adjustment to Payroll. Among other
21 adjustments, witness Morgan proposes to remove all annualization adjustments
22 proposed by the Company, which is the \$2.189 million shown on DLC Exhibit

1 RLO-3-R, page 1, column 2, line 19 and also shown on OCA Schedule LKM-9,
2 lines 1 to 4. Referring to DLC Exhibit 2, Schedule D-7, column 5, line 16 the
3 \$2.189 million is the *total Company* amount for payroll annualization, which
4 results in a total Company FPFTY payroll expense of \$93.662 million. This total
5 Company amount therefore includes PA Jurisdictional amounts as well as non-
6 jurisdictional amounts.

7 Referring now to DLC Exhibit RLO-1-R, column 1, line 19 shows the
8 same \$93.662 million for total Company payroll while column 3 shows the PA
9 Jurisdictional amount of \$77.397 million using Mr. Gorman's salary and wage
10 allocation factor of 0.82635. Finally, referring to DLC Exhibit RLO-3-R, page 1,
11 line 19 shows the PA Jurisdictional payroll amount of \$77.397 million while
12 column 3 shows the OCA reduction using the total Company amount of \$2.189
13 million. Witness Morgan has clearly used the total Company amount for the
14 payroll annualization of \$2.189 million as a reduction to the PA Jurisdictional
15 amount of \$77.397 million. Mr. Morgan is, therefore, removing annualization
16 amounts that include expenses related to the FERC jurisdictional activities that
17 are not in the PA Jurisdictional claim.

18

19 **Q. Does your proposed adjustment correct for this mismatch between the OCA**
20 **reducing PA Jurisdictional amounts by adjustments using total Company**
21 **amounts that have not been separated by jurisdiction?**

22 A. Yes, it does. With respect to the OCA removal of the Company's payroll
23 annualization adjustment, my adjustment "J-1" in DLC Exhibit RLO-3-R, page 1,

1 column 5 on line 19 corrects for that mismatch. The actual calculation of the
2 accurate adjustment amount is shown on DLC Exhibit RLO-3-page 3, lines 13 to
3 17, which results in a correction to the OCA adjustment of \$380,000 as shown on
4 line 17. In other words, the OCA proposed adjustment should be \$1.809 million
5 (\$2.189 million - \$380,000 = \$1.809 million).

6

7 **Q. Did the I&E make an adjustment to the Company's proposed annualization?**

8 A. Yes. I&E witness Keller on page 11 of I&E Exhibit No. 2, lines 15 to 19 made an
9 adjustment to remove part of the Company's proposed payroll annualization.

10

11 **Q. Did Witness Keller make the same mistake that OCA witness Morgan made
12 in using total Company amounts to reduce PA Jurisdictional balances?**

13 A. No, he did not. Witness Keller, as shown on lines 15 to 19, calculated the total
14 Company amount of \$1.211 million and reduced it by the S&W PA Jurisdictional
15 factor of 0.8263 and recommended an adjustment of \$1.001 million.

16

17 **Q. Do you agree with the process used by Witness Keller to remove a portion of
18 the payroll annualization proposed by the Company?**

19 A. Though I disagree that any portion of the payroll annualization should be
20 removed, I agree with the process used by Witness Keller. I will, later in my
21 rebuttal, rebut the removal of any portion of the Company's proposed payroll
22 annualizations.

1

2 **Q. Please describe the corrections to the OCA adjustments you present on DLC**
3 **Exhibit RLO-3-R page 1.**

4 A. Referring to adjustment A on page 1 in column 2 and also the A-1 calculation on
5 page 3, lines 1 to 5, the OCA adjustment reducing plant for DLC's Cloud
6 adjustment by the amount of \$12.553 million, which is the total Company amount
7 for the adjustment. Again, OCA used the total Company amount to reduce the
8 lower PA Jurisdictional balance and, by applying the total Company Cloud
9 adjustment to reduce the PA Jurisdictional plant balance, the OCA is overstating
10 the amount claimed by the Company and its adjustment to the claimed rate base.
11 As shown by the calculation on page 3, the OCA adjustment, if accepted, would
12 need to be reduced by \$2.913 million to an adjustment of \$9.640 million (\$12.553
13 million - \$2.913 million = \$9.640 million).

14

15 **Q. Are you agreeing that the corrected amount should be removed from rate**
16 **base?**

17 A. No, I am not. Witness Bachota, in her rebuttal testimony at DLC St. No. 2-R, pp.
18 13-14 shows that the proposed removal of the Cloud adjustment must be rejected.

19 **Q. Please describe your correction shown as adjustment B-1.**

20 A. This is to correct the OCA adjustment for the accumulated depreciation on the
21 Cloud plant adjustment. In addition to correcting the overstatement of this OCA
22 adjustment, it is necessary to include the correction made by DLC to the as-filed

1 accumulated depreciation amount as shown on DLC Exhibit RLO-2-R, page 1,
2 lines 9 to 15. The calculation of this correction is shown on DLC Exhibit RLO-3-
3 R, page 3 lines 6 to 12 with the correction of \$1.627 million shown on page 1,
4 column 5, line 2. This reduces the OCA adjustment from \$7.012 million to
5 \$5.385 million.

6

7 **Q. What is contained in your correction to payroll shown as J-1?**

8 A. Adjustment J-1 is for the correction of OCA's adjustment to remove the
9 Company's payroll annualization for the FPPTY. The adjustment corrects for
10 Witness Morgan's use of the total Company annualization amount of \$2.189
11 million to adjust the PA Jurisdictional payroll expense. The detail for this
12 correction is shown on DLC Exhibit RLO-3-R, page 3, lines 13 to 17.

13

14 **Q. Please describe your correction to payroll shown as K-1 in the amount of**
15 **\$467,000.**

16 A. This correction is to reduce the OCA adjustment for additional vacancy positions
17 as shown by Witness Morgan on Schedule LKM 9, lines 6 to 15. Witness
18 Morgan again uses the total Company base payroll of \$91.473 million (DLC
19 Exhibit 2, Schedule D-7, column 4, line 16) as the starting point for his
20 adjustment and then reduces the PA Jurisdictional payroll by the total Company
21 amount. As shown on DLC Exhibit RLO-3-R, page 3, lines 18 to 24, the
22 correction in the OCA adjustment for vacant positions is to reduce the OCA

1 adjustment of \$2.689 million by the \$467,000 shown on line 24 to a corrected
2 amount of \$2.222 million.

3

4 **Q. What is contained in your correction L-1 in the amount of \$1.163 million?**

5 A. This adjustment has two components. First, as shown on lines 25 to 29 of DLC
6 Exhibit RLO-3-R, page 3, the OCA adjustment, which is based on total
7 expenditures, must be reduced by the amount of the incentive compensation that
8 is capitalized. The second part of this adjustment is the correction to reduce the
9 OCA removal of the Company's incentive compensation FPFTY expense using
10 calculations based on total Company amounts when the OCA adjustment should
11 have been based on the PA Jurisdictional expense.

12

13 **Q. Please describe the correction to remove the capitalized portion of the**
14 **incentive compensation expenditure from Witness Morgan's adjustment for**
15 **incentive compensation expense.**

16 A. Since the source of Witness Morgan's adjustment to reduce DLC's incentive
17 compensation expense is the Company's response to I&E RE-8-D, part E (See
18 DLC Exhibit RLO-6-R (I&E-RE-8-D)), which shows total incentive
19 compensation, the adjustment must first be reduced by the amount projected to be
20 capitalized and not included in expense. This can be seen by referring to the same
21 response, I&E RE-8-D, part E. The two amounts on Witness Morgan's Schedule
22 LKM – 10, the \$2.505 million shown on line 1 is the amount on the first line of

1 the chart in part E of the I&E response and the \$4.190 million shown on line 3 of
2 Schedule LKM-10, is on the next to last line of the chart in part E of the I&E
3 response. These two amounts are included in the total incentive compensation for
4 2022 of \$13.677 million shown on the last line of the chart in part E of the
5 response to I&E RE-8-D.

6 When you look at the response to part D of that same response, the chart
7 shows that the total Company incentive compensation for 2022 is \$13,677 as
8 shown on the last line. That total has three components, STIP Expense of \$6.462
9 million; STIP Capital of \$3.025 million for a total STIP cost of \$9.487 million
10 (\$6.462 million + \$3.025 million = \$9.487 million); and LTIP Expense of \$4.190
11 million. Witness Morgan's use of the \$2.505 million (which is part of the STIP
12 total of \$9.487 million) without an adjustment for the capitalized portion
13 overstates that amount of his proposed adjustment.

14

15 **Q. Have you made a calculation to correct for this OCA oversight?**

16 A, Yes, I have. DLC Exhibit RLO-3-R, page 4, lines 25 to 29 show that only \$1.706
17 million of the \$2.505 million STIP portion of the total Company incentive
18 compensation should be included as an expense in Witness Morgan's proposed
19 adjustment.

20

1 **Q. What is the second correction that is needed to show Witness Morgan's**
2 **incentive compensation on a PA Jurisdictional basis as opposed to the total**
3 **Company basis?**

4 A. The calculation of the correction is shown on DLC Exhibit RLO-3-R, page 4,
5 lines 29 to 35. The corrected portion of the STIP incentive compensation charged
6 to expense of \$1.706 million (line 29) is added to the \$4.190 million (line 30)
7 equals the total Company expense of \$5.890 million to be reduced by the salaries
8 & wages PA Jurisdictional factor of 0.8263 for a corrected OCA adjustment
9 amount of \$4.872 million as shown on line 33. The difference between the
10 original OCA adjustment of \$6.695 million (line 34) and the corrected PA
11 Jurisdictional amount of \$4.872 million (Line 33) is \$1.823 million as shown on
12 line 35 and also on line 20 of column 5 of DLC Exhibit RLO-R-3, page 1.

13

14 **Q. Please describe the correction for \$55,000 shown as M-1 on column 6, line 20**
15 **of DLC Exhibit RLO-3-R, page 1.**

16 A. As shown DLC Exhibit RLO-R-3, page 4, lines 36 to 40, this correction of
17 \$55,000 reduces the OCA adjustment to Post-Retirement adjustment to remove
18 the mismatch between using total Company amounts for the OCA adjustment and
19 applying that total Company amount to the PA Jurisdictional expense level
20 claimed by the Company.

21

1 **Q. What is contained in correction Q-1 (regarding 401k expense) in the amount**
2 **of \$132,000 on DLC Exhibit RLO-3-R, page 1, column 6, line 29?**

3 A. As shown on DLC Exhibit RLO-3-R, page 4, lines 41 to 50, this correction has
4 two components. First, as shown on lines 41 to 45, the adjustment of \$244,000
5 (line 41) needs to be reduced by \$109,000 to reflect the fact that Witness
6 Morgan's ratio calculation cited on OCA Statement No. 1, page 21 lines 20 to 23
7 is incorrect in that it assumes that the payroll annualization adjustment proposed
8 by DLC had an impact on the amount of 401k expense. The fact is that the
9 Company's proposed FPFTY 401k expense was determined based on base payroll
10 and was not adjusted for the Company's proposed annualization adjustment.
11 Second, once the above correction is made, the remaining adjustment still needs
12 to be corrected for the mismatch of total Company and PA Jurisdictional amounts.

13

14 **Q. How did Witness Morgan calculate his proposed adjustment for 401k**
15 **expense?**

16 A. As stated on OCA Statement No. 1, page 21, lines 20 to 23, the \$244,000 is a
17 percent of the OCA proposed adjustment to payroll of \$4.878 million which
18 calculates to approximately 5.0% ($\$244,000 / \$4,878,000 = 5.002\%$).

19

20 **Q. Did you use the 5.0% to correct for the inclusion of the payroll annualization**
21 **in the OCA adjustment?**

1 A. Yes, I did. As shown on DLC Exhibit RLO-3-R, page 4, lines 41 to 46, I reduced
2 the OCA adjustment or \$244,000 by \$109,000 leaving a balance of \$135,000 as
3 shown on line 46. Following that correction, as shown on lines 46 to 49, I
4 reduced the \$135,000 by an additional \$23,000 to remove the mismatch between
5 total Company amounts used in the OCA adjustment and the PA Jurisdictional
6 amount. The total correction, shown on line 50 of \$132,000, is reflected in DLC
7 Exhibit RLO-3-R, page 1 in column 5, line 46 as correction Q-1.

8

9 **Q. How was your correction of \$65,000 shown as S-1 (related to Taxes Other**
10 **Than Income) calculated?**

11 A. As shown on DLC Exhibit RLO-3-R, Page 5, the OCA adjustment which was
12 based on total Company payroll of \$373,000 was reduced by the PA Jurisdictional
13 factor of 0.8263 and the result of \$308,000 was subtracted to produce the
14 correction of \$65,000 as shown on lines 51 to 55.

15

16 **Q. Please describe your correction for an additional expense of \$499,000 shown**
17 **on DLC Exhibit RLO-3-R, page 1, column 6, line 47.**

18 A. This reflects an increase in the gross receipts tax (“GRT”) related to the revenue
19 adjustment for the lost revenue that was made by the Company in its filing and is
20 being removed by the OCA in their presentation. Removing the lost revenue
21 adjustment made by DLC for \$8.451 million has an impact on the GRT which

1 was not included in the OCA's adjustments. The calculation of the \$499,000
2 GRT increase is shown on DLC Exhibit RLO-3-R, page 5, lines 56 to 58.

3

4 **Q. What is the final correction you are proposing to the OCA presentation?**

5 A. As shown on DLC Exhibit RLO-3-R, page 1, column 5, line 31, I am increasing
6 depreciation expense by \$583,000. This is to remove the mismatch between
7 Witness Morgan's use of the total Company Cloud depreciation expense for the
8 FPPTY of \$2.511 million as shown on DLC Exhibit 2, Schedule D-11, line 12 as
9 noted on OCA Schedule LKM – 4 and the PA Jurisdictional depreciation expense.

10

11 **Q. What is the result of your corrections to the overall OCA presentation?**

12 A. As shown in DLC Exhibit RLO-3-R, page 1, column 7, line 40, I calculate that
13 the correction of these errors takes the OCA original revenue decrease of (\$2.754)
14 million shown in column 4 and on OCA Statement No. 1, Schedule LKM-1, page
15 1 of 2 to an increase in revenue requirement of \$1.749 million.

16

17 **Q. If all of your proposed corrections are adopted, does that mean that you
18 accept the corrected OCA adjustments?**

19 A. No. It means that the amounts of the OCA adjustments have been corrected and
20 that the Company will address the corrected amounts in its rebuttal to each of the
21 OCA proposed adjustments.

1

2 **Q. Do you have any corrections to the I&E adjustments presented by Witnesses**
3 **Kubas and Keller?**

4 A. Yes, I have a correction to the adjustment presented by Witness Kubas, a
5 correction to one adjustment presented by Witness Keller, and a clarification to
6 another adjustment proposed by Witness Keller.

7

8 **Q. Please describe your correction to the adjustment presented by Witness**
9 **Kubas.**

10 A. On I&E Exhibit No. 4, page 6, lines 13 to 18 and also on I&E Exhibit No. 4,
11 Schedule 1, Witness Kubas presents an adjustment to accumulated depreciation
12 for the correction of accumulated depreciation on the Company's adjustment for
13 Cloud expenditures in the amount of \$693,000 which is based on the Company's
14 response to OCA-VI-9. As I explained earlier in my rebuttal, I have made an
15 adjustment to reflect the increase in the accumulated depreciation for the Cloud
16 investment from \$7.012 million to \$7.705 million on a total Company basis. The
17 correction is to apply the PA Jurisdictional factor to that \$693,000 adjustment and
18 that reduces the proposed I&E adjustment.

19

20 **Q. Have you prepared a schedule reflecting this correction and also a**
21 **calculation to provide the amount of the correction?**

1 A. Yes, I have. DLC Exhibit RLO-4-R, page 1 contains the corrections and page 3
2 contains the calculations.

3

4 Q. **Please describe page 1 of DLC Exhibit RLO-4-R.**

5 A. DLC Exhibit RLO-4-R, page 1 is in basically the same format as DLC Exhibit
6 RLO-3-R, page 1 presented for corrections to the OCA adjustments. Column 1
7 shows the Company's PA Jurisdictional presentation at present rates. This is also
8 shown on I&E Statement No. 1, page 4 in the first column of Table 1, which
9 shows the income available ("NOI") at present rates of \$121.926 million and the
10 measure of value ("Rate Base") of \$2.276 billion, which are the same amounts
11 shown on DLC Exhibit 2, Schedule D-1 column 1, line 15 for NOI of \$121.926
12 million and for rate base of \$2.276 billion. These are the same amounts used by
13 OCA. Columns 2 to 4 present the I&E adjustments that are totaled on I&E
14 Statement No. 4, Table 1 in the Adjustments column. Next, column 5 shows the
15 I&E results at present rates which is in the center column of Table 1 and the
16 income available of \$134.640 million agrees with the total in column 5 on line 37.
17 Finally, column 6 reflects the two corrections proposed for the I&E presentation
18 and column 7 shows the results after those corrections are included.

19

20 Q. **Please discuss your first correction as shown in column 6 on line 2 in the**
21 **amount of \$161,000.**

1 A. This reflects the reduction of the I&E adjustment to reflect only the PA
2 Jurisdictional portion of the Cloud accumulated depreciation adjustment proposed
3 by the Company. This is calculated on DLC Exhibit RLO-4-R, page 2, lines 1 to
4 5.

6 **Q. Please describe the correction you have to the adjustment for 401k expense**
7 **proposed by Witness Keller.**

8 A. While the first part of Mr. Keller's calculation shown on I&E Exhibit No. 2, page
9 21, lines 21 and 22 and page 22, line 1 reflects accurate data, the use of the total
10 proposed adjustment of \$2.490 million shown on page 22 line 2 is not correct.
11 The fact is that the Company's payroll annualization adjustment made by that Mr.
12 Keller proposes to reduce has no impact on the 401k expense that is included in
13 the Company's FPFTY expenses. The payroll annualization is a pro forma
14 adjustment and there was no pro forma adjustment made to the 401k expense
15 based on the payroll annualization. The correction of this calculation is shown on
16 DLC Exhibit RLO-4-R, page 2, lines 6 to 12 in adjustment H-1. The corrected
17 amount of 401k expense related to the vacancy issue is \$101,000 as shown on
18 DLC Exhibit RLO-4-R, page 3, line 10. Basically, the correction consists of
19 replacing the I&E total payroll adjustment on page 22, line 2 of \$2.490 million
20 with the I&E payroll adjustment for the vacancy component shown on page 14,
21 line 19 in the amount of \$1.489 million as shown on DLC Exhibit RLO-4-R, page
22 2 line 9.

23

1 **Q. What is your clarification to an adjustment proposed by Witness Keller?**

2 A. This relates to the adjustment proposed by Witness Keller regarding the Eligible
3 Customer Listing Solicitations (“ECLS”) shown pages 23 to 26 of I&E Exhibit
4 No. 2 and also on page 3 in the table on the line entitled Eligible Customer
5 Solicitation. Basically, Witness Keller accepted the Company’s expenditure
6 amounts and recommends that the recovery be classified as a normalization of the
7 expense over a 43-month period as opposed to the 36-month amortization period
8 proposed by the Company.

9
10 **Q. What is your clarification?**

11 A. As stated in the Company’s response to I&E RE-43-D part E, “Due to an
12 oversight, the amortization of the expenditures for the ECL was not included in
13 the Company’s as filed revenue requirement...”. The Company has not included
14 any amount in the as-filed revenue requirement to offset the \$18,000 I&E
15 recommended reduction in the Company’s expenses. This I&E adjustment
16 accepts the Company’s rebuttal adjustment adding the \$113,000 to its expenses
17 and, in effect, is reducing that rebuttal amount to the \$95,000 recommended by
18 Witness Keller. If the Company’s post filing addition to expense of \$113,000 is
19 not accepted, Witness Keller’s adjustment should be removed also because the
20 initial filing contains no amount for this expense.

21

1 **Q. If your proposed corrections are adopted, does that mean that you accept the**
2 **corrected I&E adjustments?**

3 A. No. It means that the amounts of the I&E adjustments have been corrected and
4 that the Company will address the corrected amounts in its rebuttal to each of the
5 I&E proposed adjustments.

6

7 **Q. Please describe how the remainder of your rebuttal testimony will be**
8 **organized.**

9 A. I will first address the OCA testimony presented by Witness Morgan. This will
10 include several areas where I disagree with the process, positions or adjustment
11 amounts sponsored by the witness on behalf of OCA. I will then address the I&E
12 testimony presented by Witnesses Keller, Wilson and Kubas. Finally, I will
13 provide rebuttal testimony to NRDC Witness Levin. Where more than one
14 witness addresses the same topic, such as the revenue loss adjustment, I will
15 address all witnesses within that topic area.

16 **IV. RESPONSE TO OTHER PARTIES' ADJUSTMENTS**

17

18 **Q. Please describe the specific elements of the OCA's testimony that your**
19 **rebuttal testimony will address.**

20 A. I will address Witness Morgan's positions and recommended FPFTY adjustments
21 for:

- 22
- Revenue Losses;

- 1 • Salary & Wage Annualization;
- 2 • Payroll Taxes;
- 3 • 401k Expense;
- 4 • COVID – 19 Uncollectible Expense Recovery Period;
- 5 • COVID – 19 Net Expense Recovery;
- 6 • Gross Receipts Tax on Revenue Loss; and
- 7 • Cash Working Capital

8

9 **Q. Please describe the specific elements of the I&E testimonies that your**
10 **rebuttal testimony will address.**

11 A. I will address Witness Keller’s positions and proposed FPPTY adjustments for:

- 12 • Rate Case Expense Normalization;
- 13 • Salary & Wage Annualization;
- 14 • Payroll Taxes Related to the S&W Annualization;
- 15 • 401k Expense Related to the S&W Annualization; and
- 16 • Changes to Cash Working Capital

17 I will address Witness Sakaya’s position and adjustment for:

- 18 • Revenue Losses.

19 Finally, I will address Witness Wilson’s positions and adjustments for:

- 1 • COVID – 19 Uncollectible Expense Recovery Period; and
- 2 • COVID – 19 Net Expense Recovery.

3

4 **Q. Please describe what portions of NRDC Witness Levin’s testimony you will**
5 **address.**

6 A. I will address the testimony recommending the COVID-19 cost recovery period.

7

8 **A. REVENUE LOSS ADJUSTMENTS**

9

10 **Q. What is your understanding of the OCA’s position regarding the Company’s**
11 **proposal to recover lost revenue from the years 2023 to 2025 in this rate**
12 **case?**

13 A. I understand that the OCA knows that the Company is proposing to recover lost
14 revenues from the years 2023-2025 through rates adopted in this proceeding,
15 which is consistent with the Company’s proposal in its last case in Docket No.
16 2018 R-3000124. I also understand that, in that case, the OCA accepted the
17 Company’s proposal to recover the lost revenue for 2020 to 2022 through the
18 rates established in that proceeding, but proposed a change in the calculation of
19 the annual impact. The Company accepted OCA’s proposed calculation change in
20 rebuttal in that case and followed the same procedure in this filing.

21 However, in this case, the OCA has proposed to disallow the entire
22 amount associated with lost revenues in this case based on the years 2023-2025.

1

2 **Q. Why does Witness Morgan argue that the adjustment for the same issue**
3 **should not be included in this setting rates in this proceeding?**

4 A. As stated on page 17, lines 14 to 17 of OCA Statement No. 1, “[T]his adjustment
5 is neither reasonable nor appropriate as it will violate the FPFTY concept. As I
6 understand it, the use of a fully projected future test year or rate year is intended
7 to allow rates to be set to reflect the costs and revenues that will be incurred
8 during the first year the rates will be in effect.”

9

10 **Q. Do you agree with Witness Morgan’s belief?**

11 A. I agree that his understanding is partially correct. A FPFTY will include costs
12 and revenues that will be incurred during the first year the rates will be in effect,
13 and will also include known and measurable changes that will impact on the
14 Company’s operations, particularly when those known and measurable changes
15 are result of governmental directives or orders that will impact the utility’s costs
16 and expenses.

17

18 **Q. Are the revenue loss calculations based on complying with governmental**
19 **orders that require the Company to take actions that result in the loss of**
20 **revenues in each year beginning in the FPFTY 2022?**

21 A. Yes, they are. As DLC Witness Mobley testified (DLC Statement No. 3), these
22 revenue losses, like those incurred in prior years and expected through 2025, are
23 the result of requirements of Act 129. The revenue lost during the entire period

1 until the Company files its next base rate case, if not included for recovery as an
2 adjustment in setting rates in this proceeding, will penalize the Company with a
3 known and measurable revenue loss.

4

5 **Q. Has the Company experienced revenue losses from the requirements of Act**
6 **129 over the last thirteen years since Act 129 was enacted?**

7 A. Yes, the Company has experienced declines in customer usage in the past which
8 has resulted in revenue losses that the Company has been given the opportunity to
9 recover in prior rate cases.

10

11 **Q. Please describe those customer usage declines.**

12 A. As shown on DLC Exhibit RLO-R-8 there have been substantial actual declines in
13 GWH usage for the years from 2012.

14

15 **Q. Should Witness Morgan's proposal to remove the DLC adjustment that**
16 **seeks recovery of revenue losses created by Act 129 during the period rates**
17 **from this proceeding are in effect be accepted?**

18 A. No, the OCA adjustment must be rejected, and the DLC revenue loss adjustment
19 should be included in the revenue requirement in this proceeding.

20

21 **Q. What is your understanding of the I&E's position regarding the Company's**
22 **proposal to recovery of lost revenue in the years 2023 to 2025 in this rate**
23 **case?**

1 A. I understand that the I&E, through Witness Sakaya's testimony in I&E Statement
2 No. 3, page 6, lines 3 and 4, recommends that the entire amount of the revenue
3 loss adjustment be rejected.

4

5 **Q. What is the basis for I&E Witness Sakaya's recommendation to reject the**
6 **revenue loss adjustment?**

7 A. Witness Sakaya appears to be concerned for a couple of reasons. First, on page 6,
8 lines 7 to 14 there appears to be a concern that if the Company's adjustment is
9 adopted, the overall revenue calculation by customer and usage would not be
10 accurate. Second, Witness Sakaya also presents the thought that, if the
11 Company's adjustment is allowed, the Company will be able to, "...include four
12 years of sales declines in the first month rates become effective and the Company
13 will over-collect revenue until the end of 2025 or for approximately four years."
14 I&E Statement No. 1, page 6, lines 19 to 22.

15

16 **Q. Is it your understanding that DLC Witness Mobley's calculations provided**
17 **the components of the data that I&E Witness Sakaya outlined on page 6,**
18 **lines 7 to 14?**

19 A. Yes, it is. Mr. Mobley's testimony and exhibits provide the detail of his
20 calculations, which have not been challenged by anyone in this proceeding. In
21 addition, Mr. Sakaya does not present any evidence that Mr. Mobley's calculated
22 lost revenue amounts have not been supported. As such, I think Mr. Sakaya's
23 first concern must be dismissed.

1

2 **Q. Is Witness Sakaya's allegation regarding potential overcollection correct?**

3 A. No, it is not. Under the Company's proposal, the revenue loss for 2022 is
4 included monthly beginning with the first month rates in this proceeding are
5 effective. Next, the Company uses an average of the revenue loss for the years
6 2023 to 2025 with that average being effective on that same first day over a three-
7 year period. I&E does not dispute the Company's projection that its base rates
8 will not be reset until 2025. The Company will not over-collect on the revenue
9 loss during the period rates from this proceeding are effective.

10

11 **Q. Has the Company experienced lost revenue from policies it is required to
12 adhere to in the past?**

13 A. Yes, it has.

14

15 **Q. Has the Company provided testimony and calculations supporting the lost
16 revenue it projects for 2023 through 2025?**

17 A. Yes, Mr. Mobley presented the lost revenue calculations through testimony and
18 supporting exhibits and discovery responses.

19

20 **Q. Have any of those calculations or supporting testimony been challenged or
21 questioned by the I&E or OCA?**

22 A. No.

23

1 **Q. Should the I&E's lost revenue adjustment be accepted?**

2 A. No, it should not be accepted, it should be rejected.

3

4 **Q. Did the I&E make an adjustment to gross receipts tax GRT expense to**
5 **recognize the revenue increase resulting from the removal of the Revenue**
6 **Loss Reduction?**

7 A. Yes. As shown on I&E Exhibit No. 1, Table 1 on page 4, the second table on the
8 Taxes Other line, the amount of \$492,000 provides for the GRT.

9

10 **Q. Did OCA Witness Morgan provide for the GRT increase related to his**
11 **proposal to remove the lost revenue adjustment?**

12 A. No, he did not. If his rejection of the revenue loss adjustment is accepted (which,
13 it should not be as I testified above), then the increased gross receipts tax on
14 higher revenue must be added. The adjustment has been added as a correction to
15 OCA's adjustment on my rebuttal Exhibit RLO-3-R, page 1, column 6, line 30.

16

17 **B. RATE CASE EXPENSE**

18 **Q. What was the Company position regarding rate case expense level and**
19 **normalization period in its as filed exhibits?**

20 A. As shown on DLC Exhibit 2, Schedule D-8, the Company included an estimate of
21 \$2,440,000 for total rate case expenses and used a normalization period of three
22 years to recover that amount at \$813,000 per year.

23

1 **Q. Is the Company changing its estimate for total rate case expenses or**
2 **normalization period?**

3 A. No. The Company is not changing its estimate for total rate case expenses or its
4 normalization period from three years.

5
6 **Q. Why does the Company believe it will file its next rate case application within**
7 **three years?**

8 A. The Company, based on its forecasted capital expenditures and other operating
9 elements with the use of the year-end rate base and annualization adjustments it
10 proposes, believes the three-year filing timetable for filing a future rate case is
11 required.

12
13 **Q. What was the Company's estimate for its next rate case filing in its last rate**
14 **case filed in Docket No. 2018-R-3000124?**

15 A. The Company, in Docket No. 2018-R-3000124 which used a FPFTY of 2019
16 stated that it planned to file its next rate case in three years with a FPFTY of 2022.
17 As shown in I&E Witness Keller's I&E Statement No. 2, page 7, line 3, the
18 Company filed its current case in 36 months, right on schedule.

19
20 **Q. What is I&E's proposed normalization period?**

21 A. Witness Keller proposes a 43-month normalization period using the filing
22 intervals between the Company's last four rate cases as shown on Statement No.
23 1, page 7 lines 3 to 7. Witness Keller bases this method on a 2012 electric utility

1 case, a 2015 water utility case and a City of Dubois case where the companies
2 each requested 60 months and the I&E recommended 64 months.

3

4 **Q. Do any of those cases have the same or even similar filing history as shown**
5 **for DLC?**

6 A. That is not known, since Witness Keller did not present the historic filing data or
7 any evidence that that historic data was relevant to the current DLC case.

8

9 **Q. What is the Company's history on filing rate cases?**

10 A. As shown on the chart in Witness Keller's testimony on page 7, the Company has
11 met its projected filing date in two of the last three cases. When the Company
12 filed its 2010 rate case it projected its next filing in 36 months and as shown filed
13 the new case in 38 months. The timing of filing the 2018 case was due to the
14 result of waiting for the completion of the ongoing smart meter recovery program
15 and the initiation of a revenue stream provided by the Distribution System
16 Improvement Charge ("DSIC"). Finally, the 2021 case was filed within the 36-
17 month projection made by the Company in the 2018 case.

18

19 **Q. Please describe how those two programs allowed the Company to delay the**
20 **filing of its 2018 rate case for almost two years.**

21 A. The Company was able to delay the filing of its 2018 rate case in large part
22 because it had access to a nonrecurring additional revenue stream – the smart
23 meter charge ("SMC") – that is no longer available. In the 2018 rate case, the

1 Company rolled \$26.278 million of smart meter surcharge revenue into base rates.
2 Thus, although the Company continues to incur smart meter costs, it now recovers
3 those costs through base rates, which necessarily accelerates the need for base rate
4 updates.

5
6 **Q. Was there another significant reason the Company was able to delay the filing**
7 **of its rate case after the 2013 rate case was completed?**

8 A. Yes. Effective in 2016, the Company was authorized to implement the DSIC,
9 which provides for the recovery of certain investments which otherwise would be
10 recovered in a general rate case. The DSIC was not in effect during the Company's
11 2013 rate case; thus, the base rates established through that case did not reflect the
12 receipt of revenues through the DSIC. Similar to the revenue provided by the SMC
13 surcharge, the DSIC surcharge revenue of \$25.700 million was rolled into base
14 rates in the 2018 rate case. Without these surcharge revenues, the Company would
15 have been required to file its rate case at least by the 36-month planning period
16 projected in the 2013 rate case, if not sooner.

17
18 **Q. Do the Company's historical and projected spending levels suggest any**
19 **change to this 36-month filing cadence?**

20 A. No. The Company's future expenses are projected to increase, not decrease.
21 Moreover, as Mr. Morris observes in his direct testimony (and which no party
22 disputes), the Company's levels of capital investment have actually exceeded its

1 historical projections, which supports the Company's forecasted rate case filing
2 cadence.

3

4 **Q. Did you compare I&E Witness Keller's use of a three case average as**
5 **proposed in this proceeding and shown on I&E Statement No. 2, page 7, line**
6 **3 with Mr. Keller's proposal in the Company's prior case in R-2018-**
7 **3000124?**

8 A. Yes, I did. In the last case, Witness Keller proposed to use the same methodology
9 to calculate a proposed normalization period, the simple average of the timing
10 between the prior three cases, as he is proposing in this case.

11

12 **Q. What was the data and result used and proposed by Mr. Keller in the 2018**
13 **case?**

14 A. Mr. Keller used the months between filings of 51 months, 38 months and 56
15 months from I&E Exhibit 1, Schedule 2 in that case, which averaged to 48 months
16 and proposed using the 48 month average for the normalization period as shown
17 on pages 9 and 10 of I&E Statement No.1 of that proceeding.

18

19 **Q. Do you have any comment regarding the methodology used by Mr. Keller**
20 **and the validity of the results?**

21 A. Yes, I do. First, I think the blind use of an average of historic data cannot be the
22 basis of a proposed future period. Second, I think the Company's plans must be

1 considered in establishing a proposed future period. Finally, comparing the
2 results of prior forecasts must also be considered.

3
4 **Q. Have you compared the results of Mr. Keller's and the Company's forecasts**
5 **in the 2018 case with the actual results?**

6 A. Yes, I have. In the 2018 case, Mr. Keller recommended use of a 48-month period
7 while the Company recommended use of a 36-month period for the normalization
8 of rate case expense based on when the next case would be filed. When compared
9 to the actual filing time, 36-months, it can be seen that Mr. Keller's
10 recommendation was significantly off while the Company's was right on. This
11 further supports the rejection of I&E's proposed 43-month normalization period
12 in this proceeding.

13
14 **Q. Based on this history, should Witness Keller's estimate be adopted?**

15 A. No, it should be rejected. As shown above, the main reasons for the almost 2-year
16 delay in filing its 2018 rate case are non-recurring events. First, the SMC
17 surcharge recovery program is now over and second, the initiation of the DSIC
18 program is again a one-time event. Once the outlier of 56-months has been
19 explained and removed, and the Company's 36-month estimate for normalization
20 of the rate case expense has been supported and should be adopted.

21
22 **C. SALARIES AND WAGES**

1 **Q. What portion of the I&E’s salaries and wages adjustments will you be**
2 **addressing?**

3 A. I will address the I&E’s proposal to remove the annualization adjustment that I
4 included in my presentation to match the use of the year-end rate base as shown
5 on DLC Exhibit 2, Schedule D-7, page 2, column 3, line 21 of \$1,211,000.
6 Company Witness Bachota will address the I&E’s proposed reduction related to
7 vacancy factor.

8

9 **Q. What pro forma adjustments did the Company make to its FPFTY salaries**
10 **and wages (“S&W”) expense?**

11 A. The Company made a pro forma adjustment to annualize S&W expense for the
12 FPFTY for its union and non-union wages. The union wages were annualized
13 using the wage increase that scheduled to be effective on October 1, 2022 and the
14 non-union wages were annualized using the wage increase scheduled to be
15 effective on January 1, 2023.

16

17 **Q. Why do you make these annualization adjustments?**

18 A. The S&W annualization adjustments are made to match the use of a year-end rate
19 base for the FPFTY and to set rates based on expenses that will be in effect for
20 some of the period until the next rate case planned to be filed in 2024 with a 2025
21 FPFTY. This procedure provides the Company a better opportunity to earn the
22 rate of return used to set rates in this proceeding.

23

1 **Q. Did Witness Keller propose to remove both S&W annualizations?**

2 A. No, Witness Keller only proposed to remove the wage increase that is planned for
3 January 1, 2023 but not the wage increase that is planned for October 1, 2022.

4

5 **Q. Do you know why Witness Keller proposes to remove only that annualization**
6 **adjustment for the S&W expense?**

7 A. Yes, Witness Keller proposes to remove the non-union wage increase planned for
8 January 1, 2023 and also to make an adjustment to the vacant position allowance
9 used by the Company in its budgeting for base S&W. As shown on I&E
10 Statement No. 2, page 11, lines 1 and 2, Witness Keller has removed the January
11 1, 2023 wage increase because it, "...is not effective until after the end of the
12 FPPTY." On the same page on lines 10 to 12, Witness Keller states that, "[M]y
13 recommendation more accurately represents the salaries and wages level that will
14 be in effect at the end of the FPPTY."

15

16 **Q. Has Witness Keller suggested that there would be or could be no S&W**
17 **increase for the non-union employees on January 1, 2023?**

18 A. No, he has not.

19

20 **Q. Does Witness Keller take the position that there should be no S&W**
21 **annualization in the FPPTY?**

22 A. No, he does not.

23

1 Q. **What do you infer from Witness Keller’s position to use a hard cut-off date**
2 **for the allowance of the Company’s inclusion of the non-union S&W increase**
3 **planned for January 1, 2023?**

4 A. Since Witness Keller utilizes a full annualization of the union S&W increase
5 effective October 1, 2022 and rejects the annualization for the non-union S&W
6 because it occurs on January 1, 2023, it appears that he would allow the
7 annualization of the non-union S&W increase if the planned increase were to be
8 effective on December 31, 2022.

9

10 Q. **In your opinion, does Witness Keller’s proposed disallowance of the January**
11 **1, 2023 S&W increase follow the intent of the use of year-end rate base and**
12 **other annualization adjustments?**

13 A. No, it does not. I believe that the purpose of the use of a FPFTY, year-end rate
14 base, reasonable pro forma adjustments and annualization adjustments which
15 reflect known and measurable changes are designed to give the utility an
16 opportunity to earn the rate of return used to set the rates proceeding during the
17 period those rates are in effect.

18

1 **Q. Should Mr. Keller's adjustment to remove the S&W wage increase planned**
2 **for January 1, 2023 be adopted?**

3 A. No, it should not.

4

5 **Q. Did the OCA propose any adjustments to the Company's FPFTY S&W (also**
6 **referred to as payroll) expense?**

7 A. Yes. Witness Morgan, on OCA Statement No. 1, Schedule LKM-9 proposes to
8 remove a total of \$4.878 million from the Company's PA Jurisdictional S&W
9 expenses. The proposed adjustment is to remove both S&W annualization
10 adjustments totaling \$2.189 million (Schedule LKM-9, lines 1 to 4) and also
11 remove \$2.689 million based on an increase in the number of vacant positions he
12 proposes for the FPFTY (Schedule LKM-9, lines 6 to 15). Company Witness
13 Bachota also addresses Witness Morgan's proposal related to vacancy factor in
14 her rebuttal testimony.

15

16 **Q. Did you have a correction in Witness Morgan's proposed \$4.878 million**
17 **adjustment?**

18 A. Yes, I do. As presented earlier in my rebuttal, because Witness Morgan's
19 adjustments are based on total Company amounts and he is applying the total
20 Company amounts to Company PA Jurisdictional amounts, most of his
21 adjustments, including the proposed adjustments to S&W expense, need to be
22 reduced to reflect only the PA Jurisdictional level. As shown on DLC Exhibit
23 RLO-3-R, page 1, columns 5 Witness Morgan's adjustment for the annualization

1 needs to be reduced by \$380,000 and his adjustment for the vacancy issue needs
2 to be reduced by \$467,000. As shown on DLC Exhibit RLO-3-R, page 3, line 15,
3 Witness Morgan's proposed annualization adjustment of \$2.189 million should be
4 reduced to \$1.809 million and his proposed vacancy adjustment of \$2.389 million
5 should be reduced to \$2.222 million as shown on line 22 of page 3 that exhibit.

6

7 **Q. After these corrections do you still believe that Witness Morgan's**
8 **annualization adjustment should be rejected?**

9 A. Yes, I do.

10

11 **Q. What is your understanding of the reasons presented by Witness Morgan for**
12 **proposing the removal of both of the Company's S&W annualization**
13 **adjustments?**

14 A. As I understand Witness Morgan's testimony, he is, with regard to the non-union
15 proposed payroll increase on January 1, 2023, recommending removal for
16 basically the same reason presented by I&E Witness Keller that it occurred on the
17 day after the end of the FPFTY. However, Witness Morgan is also proposing to
18 remove the annualization of the payroll for the union increase that is planned to be
19 effective on October 1, 2022. Apparently, Witness Morgan believes that only

1 costs incurred during the FPFTY should be included in setting rates for that test
2 year and that there should be no pro forma or other annualization adjustments.

3

4 **Q. Is Witness Morgan's position your understanding of the purpose of**
5 **establishing a FPFTY to set rates in this proceeding?**

6 A. No, it is not. I believe that the purpose of a test-year, such as the FPFTY, is to
7 establish a uniform measurement period to set rates that provide a utility with an
8 opportunity to earn the rate of return that is established during the test-year. The
9 establishment of reasonable levels for rate base, revenues, expenses and rates of
10 returns includes using a utility's test year budgeting data adjusted for reasonable
11 known and measurable events, as well as allowing certain normalization and
12 annualizations to provide a reasonable level of each component for when the rates
13 established in that test-year will be in effect.

14

15 **Q. What are some of the normalization and annualization adjustments that are**
16 **considered in establishing reasonable levels of rate base, revenue and**

1 **expenses during a test year, but are used to provide a utility with an**
2 **opportunity to earn the rate of return resulting from the rate case?**

3 A. There are a number of actions and procedures that are considered, such as

- 4 • The use of a projected test year,
- 5 • The use of a year-end rate base,
- 6 • Annualization of test year customer and usage levels for revenue,
- 7 • Annualization of test year expenses,
- 8 • Normalization of expenses that occurred outside of the test year, and
- 9 • Amortization of expenses that occurred outside of the test year.

10 In fact, Witness Morgan uses some of these actions himself, albeit only where
11 doing so would accrue to the Company's detriment. For example, Witness
12 Morgan recommends a five-year normalization of the Company's uncollectible
13 claim related to the COVID-related regulatory asset. This normalization period
14 would extend well beyond the FPFTY, despite the fact that the corresponding

1 costs have already been incurred, prior to the FPFTY. I address this proposal of
2 Witness Morgan's later in my rebuttal testimony.

3

4 **Q. Is Witness Morgan eliminating all of the planned October 1, 2022 S&W**
5 **increase?**

6 A. No, he is only removing the annualization portion.

7

8 **Q. Did Witness Morgan remove the revenue annualization adjustment that is**
9 **proposed by the Company for the increases in revenues as of the FPFTY?**

10 A. No, he did not.

11

12 **Q. Should the removal of the Company's annualization adjustments as**
13 **proposed by OCA Witness Morgan be adopted?**

14 A. No, they should not be adopted because they are inconsistent and do not reflect
15 the projection and historic experience that rates set in this proceeding will be in
16 effect for 3 years.

17

18 **D. PAYROLL TAXES**

19 **Q. What is I&E's payroll tax adjustment?**

20 A. Witness Keller proposes to remove payroll taxes in a ratio equal to the
21 recommended removal of S&W based on a calculation on I&E Exhibit No. 2, page
22 16, lines 1 to 5. With regard to Witness Keller's removal of the Company's
23 annualization adjustment of the January 1, 2023 non-union S&W raise, the
24 calculation correctly reflects the removal of the related payroll taxes. This is not to

1 say that the Company accepts Witness Keller's adjustment. Company Witness
2 Bachota will respond to the portion of the payroll tax adjustment as it relates to
3 Witness Keller's vacancy adjustment.

4

5 **Q. Should Mr. Keller's adjustment be adopted?**

6 A. No, it should not. Since I believe the S&W annualization associated with the
7 payroll tax reduction should be rejected, the I&E proposed reduction to payroll
8 taxes should also be rejected.

9

10 **Q. Did OCA Witness Morgan make a similar reduction to payroll taxes to
11 match the reduction he proposed to DLC's S&W expense?**

12 A. Yes, he did. However, as with other adjustments, his adjustment to payroll taxes
13 needs to be corrected as discussed earlier in my testimony related to DLC Exhibit
14 RLO-3-R, page 1, column 5, line 30 with the correction shown on page 5 lines 50
15 to 51 in the amount of \$65,000. This corrects OCA's total payroll tax adjustment
16 down from \$373,000 to \$308,000. Using the same ratioing procedure used by Mr.
17 Morgan, \$138,000 of the \$308,000 is associated with the payroll annualization
18 adjustment and \$170,000 with the vacancy adjustment.

19

20 **Q. With regard to the annualization portion of the OCA payroll tax adjustment,
21 should it be rejected or adopted?**

22 A. It should be rejected as should his corrected adjustment to remove the
23 annualization. Company Witness Bachota will address the portion of Witness

1 Morgan's payroll tax adjustment that is associated with his proposed vacancy
2 adjustment.

3

4 **E. 401k EXPENSE**

5 **Q. Did I&E Witness Keller propose an adjustment to the Company's FPFTY**
6 **401k expense to match the adjustment made to S&W?**

7 A. Yes. The adjustment, as shown on I&E Exhibit No. 2, pages 21 and 22 line 19 to
8 line 3, uses the total PA Jurisdictional payroll amount and 401k expense amount
9 to determine the proposed reduction of 401k expense in the amount of \$169,000.

10

11 **Q. Does the calculation correctly reflect the 401k expense that should be**
12 **reduced if Witness Keller's S&W adjustment were adopted?**

13 A. No, it does not. This is not correct, as I discussed earlier, the Company's payroll
14 annualization adjustment does not impact the Company's 401k expense. The
15 corrected amount of 401k expense related to the vacancy issue is \$101,000.

16

17 **Q. Who will address the Company's position regarding the corrected I&E**
18 **proposal to remove \$101,000 from the FPFTY 401k expense?**

19 A. Company Witness Bachota will address the I&E proposal to remove the \$101,000
20 401k expense associated with the vacancy issue.

21

22 **Q. Did OCA witness Morgan make a similar adjustment to the Company's 401k**
23 **expense to match the adjustment made to the S&W expense?**

24 A. Yes, he did.

1

2 **Q. Does Witness Morgan's adjustment contain errors?**

3 A. Yes. Similar to other adjustments, this OCA adjustment was based on using total
4 Company amounts, which must first be corrected. The calculation of the
5 corrections to the OCA proposed 401k adjustment of \$132,000 shown on DLC
6 Exhibit RLO-3-R, page 1, column 5, line 29 is calculated on page 4, lines 41 to
7 50. Lines 41 to 45 show the correction to remove the OCA payroll annualization
8 adjustment, as also presented for the I&E adjustment. Lines 46 to 50 show the
9 correction to convert the use of total Company balances to PA Jurisdictional
10 balances.

11

12 **Q. Will Company Witness Bachota also address the remaining OCA adjustment**
13 **that is related to the OCA vacancy adjustment?**

14 A. Yes, she will.

15

16 **F. COVID-19 UNCOLLECTIBLE EXPENSE**

17 **Q. What was the Company's proposed treatment of the COVID-19**
18 **Uncollectible Expense?**

19 A. As shown on DLC Exhibit 2, Schedule D-12, line 3 and line 20 the Company
20 proposed to recover the \$4.187 million over a three-year period.

21

22 **Q. What is the I&E's position regarding the recovery of the COVID-19**
23 **uncollectible expense?**

1 A. Witness Wilson proposes to allow recovery of the COVID-19 uncollectible
2 expense as amortization over the 43-month period proposed by I&E Witness
3 Keller for recovery of the normalized rate case expenses.

4

5 **Q. Should the 43-month period be used for the amortization of the COVID-19**
6 **uncollectible expense?**

7 A. No, it should not be used. First, the Company has shown that the 43-month
8 period proposed by Witness Keller should be rejected. Next, extending recovery
9 of these expenses, which were incurred mainly in 2020, for almost 20 percent
10 longer than proposed would be unfair to the Company. As it is, the Company will
11 not recover these amounts until the end of 2024 using its proposed 36-month
12 amortization period.

13

14 **Q. Do you agree that this expense should be amortized as recommended by Ms.**
15 **Wilson?**

16 A. Yes, I do.

17

18 **Q. What is the position regarding the recovery period proposed by OCA**
19 **Witness Morgan?**

20 A. Witness Morgan proposes to use a 5-year or 60-month recovery period because as
21 he states on OCA Statement 1, page 25 lines 18 to 20, "...the 3-year period,
22 proposed by the Company, defeats the spirit of fairness and compromise which he
23 believes was present in the Commission's directives." He also states on page 25

1 line 24 to page 26 line 3, "...the Company's attempt to seek a rapid recovery of
2 those costs by increasing rates, ignores the spirit of the fairness and the fact that
3 many of its customers have not recovered from the disruption caused by the
4 pandemic."

5
6 **Q. Do you agree with OCA Witness Morgan that the Company's actions defeat
7 the fairness or ignore the spirit of the Commission's directives?**

8 A. No, on the contrary. I believe that the Company's proposed 36-month recovery
9 period recognizes the current state of the recovery from the pandemic and the fact
10 that the Company's requested recovery period does not start until the beginning of
11 2022. Mr. Morgan does not present any "facts" that show how "many" of the
12 Company's customers will not have recovered from the disruption caused by the
13 pandemic by the beginning of 2022. In addition, for those customers who are still
14 recovering and need some additional assistance beginning in 2022, the Company
15 has programs in place and proposed others in this proceeding to provide continued
16 assistance to them.

17

18 **Q. Should OCA Witness Morgan's proposed 5-year period for the amortization
19 recovery of the COVID-19 uncollectible expense be considered by the
20 Commission?**

21 A. No, it should be rejected.

22

1 **Q. Please describe the position proposed by the National Resource Defense**
2 **Council (“NRDC”) Witness Levin.**

3 A. NRDC Witness Levin proposes to use a longer period to amortize the COVID-19
4 uncollectible expense, and suggests that a six-year period “could be warranted.”
5 See the Direct Testimony of Amanda Levin at page 21, lines 12-13; page 21, lines
6 10 to 14.

7
8 **Q. Does Witness Levin provide any detail to support an extended recovery**
9 **period?**

10 A. No, she merely states that, “...it may be best to amortize these amounts over a
11 longer period of time to further mitigate the rate impact to customers.” The fact is
12 that, under the Company’s 36-month amortization period, customers will not
13 begin to be charged until the beginning of 2022. Moreover, the Company has
14 other programs that are available for any customers who still need assistance at
15 that time. To delay full recovery of the COVID-19 uncollectible expense until the
16 end of 2027 is not fair or reasonable.

17 **V. COVID-19 – NET EXPENSE RECOVERY**

18 **Q. Do you have an update to the Company’s claim for recovery of its other Net**
19 **COVID-19 Expenses?**

20 A. Yes, I do. As shown in my rebuttal testimony and on Exhibit RLO-1-R, column
21 4, line 24 and also on Exhibit RLO-2-R, page 1, lines 24 to 30, the Company has
22 reduced its total costs by \$500,000 (lines 24 to 26) and its amortized costs by
23 \$167,000 (lines 28 to 30). In addition, as described by Company Witness

1 Bachota, the Company has also increased the savings of \$750,000 from the
2 original filing to a savings of \$1,755,000; and also increased its estimate of costs
3 through June 30,2021 net expenses from \$600,000 up to \$794,000. These updates
4 are shown on Exhibit RLO-2-R, page 2, lines 36 to 49. These reduce the total net
5 expenses from \$5.795 million (DLC Exhibit 2, Schedule 12, lines 17 and 18) to
6 \$4.484 million ($\$5.795 \text{ million} - \$500,000 - \$1,005,000 + \$194,000 = \$4.484$
7 million) and reduces the annual amortization from \$1.932 million ($\5.795 million
8 $/ 3 = \$1.932 \text{ million}$) to \$1.495 million ($\$4.484 \text{ million} / 3 = \1.495 million).

9

10 **Q. Does this update change the Company’s request to recover its net COVID-19**
11 **expenses in rates in this proceeding?**

12 A. No, it does not.

13

14 **Q. What is your understanding of the I&E’s position regarding recovery of the**
15 **COVID-19 Net Expenses?**

16 A. I&E Witness Wilson proposes to disallow recovery of the Company’s claim as
17 stated on page 14 lines 13 and 14 of I&E Exhibit No. 1 because as stated on lines
18 1 and 2 of page 15, the Commission “...has not issued guidance on whether or
19 how companies may recovery these other incremental costs.”

20

21 **Q. So, is it your understanding that Ms. Wilson is not objecting to the recovery**
22 **of these extraordinary expenses, but only that they should not be included in**
23 **a recovery until recovery is approved by the Commission?**

1 A. That is how I understand the position outlined above.

2

3 **Q. Does Ms. Wilson also claim that the Company has not provided detailed**
4 **records or specification of which claimed expenses relate to directly carrying**
5 **out the requirements of the Commission's Orders?**

6 A. Yes, she does make that claim. However, she does not provide any specifics and I
7 am not aware of the Company withholding any information requested. To my
8 knowledge, the Company has provided support for all of its claims for expenses in
9 this proceeding and has responded to all data requests without being told that its
10 responses lacked sufficient detail on the specific subject.

11

12 **Q. Do you have any other comments or concerns regarding the testimony of**
13 **I&E Witness Wilson regarding the COVID-19 Net Expense recovery?**

14 A. Yes, I have two areas. First, on page 19, lines 15 to 19, she states that utilities
15 should not be fully insulated from all costs associated with the pandemic
16 particularly since the total amount of \$5.795 million is less than 0.9% of DLC's
17 revenue. This is very concerning to me in that she appears to be suggesting that,
18 where an expense incurred by a utility reflects a relatively small percent of its
19 revenue, it does not have to be recovered. The expenses included in the COVID-
20 19 Net Expenses are real (and significant) costs, and should not be dismissed
21 simply because they are less than one percent of total revenue. In addition, they
22 are unusual and unpredictable costs that could not have been anticipated in a prior
23 rate allowance.

1 Second, on the bottom of page 19 and the top of page 20, Witness Wilson
2 states that the Company did not seek or receive special permission to defer for
3 accounting purposes any other incremental COVID-19 related costs. I believe
4 that no such request was necessary since the Commission, as shown in Ms.
5 Wilsons testimony on page 16, line 22 to page 17, line 7 authorized such actions.
6 Following submission of Ms. Wilson's testimony, the Commission reaffirmed the
7 Company's authority to defer COVID-19 related costs in its July 15, 2021 Order
8 at Docket No. M-2020-3019262. In addition, since the test years in this
9 proceeding included the HTY and the FTY, 2020 and 2021 respectively those
10 costs are currently being requested for deferral and recovery in the FPFTY.

11
12 **Q. Should Ms. Wilson's proposal to reject the Company's COVID-19 recovery**
13 **request be adopted by the Commission?**

14 A. No, it should not.

15
16 **Q. What is your understanding of OCA Witness Morgan's proposal for the**
17 **COVID-19 Net Expense recovery requested by the Company?**

18 A. Mr. Morgan proposes that the entire amount be rejected for two basic reasons.
19 First, he believes the savings identified by the Company are understated, and
20 second, he states that the Commission did not guarantee recovery of any costs that
21 may have been deferred.

22

1 **Q. Do you agree that there are some additional savings above the \$750,000**
2 **identified on DLC Exhibit 2, Schedule D-12, line 15; and that the**
3 **Commission did not guarantee recovery of the costs deferred in connection**
4 **with the COVID-19 activities?**

5 A. Yes, I agree that there were additional savings beyond the \$750,000 shown on
6 Schedule D-12, but nothing like the \$2.460 million suggested by OCA Witness
7 Morgan. I also agree that the Commission has not guaranteed recovery of the
8 deferred COVID-19 Net Expenses, but that is what is being requested by DLC in
9 this proceeding and it is not a reason for denying recovery.

10

11 **Q. What are the additional savings related to the COVID-19 activities?**

12 A. The detail is provided in the rebuttal testimony of Company Witness Bachota. The
13 amounts of those savings and an update of 2021 actual COVID-19 Net Expense
14 amounts are provided on DLC Exhibit RLO-2-R, column 3, lines 41 and 44.

15

16 **Q. Have you reviewed the additional savings claimed by OCA Witness Morgan**
17 **in his \$2.460 amount?**

18 A. Yes, I have, and Witness Morgan makes some serious overstatements in his claimed
19 additional savings. First, in the chart on page 27 of OCA Statement No. 1, Mr.
20 Morgan uses the amount of \$979,000 for reduced medical expenses. As support, he
21 references the Company's response to I&E-RE-70, which states in relevant part that
22 the \$979,000 decrease was due primarily due to three factors: [1] reduced claim
23 activity related to COVID-19; [2] receipt of a pharmacy credit; and [3] a lower

1 percentage of benefits cost allocated to expense than in 2019. In spite of the
2 COVID-19 expense reduction being only part of the three primary reasons for the
3 decrease of \$979,000, Mr. Morgan used the total amount. Second, in the chart on
4 page 27 the additional employee related expense amount of \$1.102 million is
5 referenced to the Company's response to I&E-RE-63(D), which discusses the
6 decrease in relation to employee training. Again, Witness Morgan assumes that the
7 entire amount of \$1.36 million is above and in addition to the savings in employee
8 training included in the Company's \$694,000 and also was entirely due to COVID-
9 19 reductions. Finally, the last item, a reduction of \$399,000 from the Company's
10 response to I&E-RE-61, identifies the reduction as "primarily" due to COVID-19
11 activities. The Company's responses to the three referenced I&E data requests, RE-
12 70, RE-63(D) and RE-61 are included in Exhibit RLO-7-R.

13

14 **Q. In your opinion, should Witness Morgan's additional savings be accepted as**
15 **realistic?**

16 A. No. In each instance, Mr. Morgan has used total amounts shown as differences
17 between 2019 and 2020 levels of expenses when the Company's responses clearly
18 identified the amounts used by him as partially due to COVID-19 activity. Mr.
19 Morgan's overstatement of the COVID-19 related savings must be rejected.

20

21 **Q. Has the Company updated its savings number from the \$750,000 included in**
22 **its original filing as shown on DLC Exhibit 2, Schedule D-12, line 15?**

1 A. Yes, it has. As shown on Exhibit RLO-5-R, Schedule D-12, line 15, the
2 Company shows the savings amount to be \$1.755 million, which has been
3 reflected in the Company's revised revenue requirement as shown on Exhibit
4 RLO-5-R, Schedule D-1, column 2, line 2 of \$85.528 million.

5
6 **Q. Do you have another comment on Mr. Morgan's statements, "Based on these**
7 **savings, the net incremental cost is \$1,965,000. In my opinion, the magnitude**
8 **of the dollar value of these costs appears not to be large enough to qualify as**
9 **extraordinary to the point where they impact the financial viability of the**
10 **Company" (OCA St. 1, p. 27, lines 2-5)?**

11 A. Yes, I have several comments. First, Mr. Morgan does not present the details of
12 his calculation of "these savings" of \$1,965,000, which clearly double count the
13 \$750,000 savings originally included by the Company. The \$1,965,000 is the
14 result of the Company's net expense shown on Mr. Morgan's chart on page 24,
15 line 15 of \$5,195,000 which includes the \$750,000 savings shown on the line
16 above the total. Mr. Morgan reduces that \$5,195,000 by his summary of the
17 savings which is shown on page 27, line 1 of \$3,230,000 which also includes the
18 \$750,000 Company savings on the third line of Mr. Morgan's chart. Including the
19 \$750,000 savings in the total cost number of \$5,195,000 ($\$5,945,000 - \$750,000$
20 $= \$5,195,000$) and in the savings of \$3,230,000 ($\$750,000 + \$2,480,000 =$
21 $\$3,230,000$) used to reduce that number is a clear error and should have been
22 discovered by Mr. Morgan.

23

1 **Q. What does removing this double count of the \$750,000 do to OCA Witness**
2 **Morgan's magnitude level?**

3 A. Correction of the double count error increases the amount of the difference from
4 \$1,965,000 to \$2,715,000 which is almost 40 percent higher than Mr. Morgan's
5 erroneous \$1.965 million.

6

7 **Q. Do you think that either of those amounts, if not recoverable in rates, is**
8 **material to the Company?**

9 A. Yes, I think either amount is material. For example, if the expenses are
10 reasonable and incurred in providing service to customers in accord with
11 Commission policy or orders then they should be recoverable whether they are
12 normal or incurred in extraordinary circumstances and also whether they are small
13 or large. If a commission routinely denies recovery of these expenses the utilities
14 would not have an opportunity to earn a fair rate of return and that could cause
15 negative activity in the finance markets and be detrimental to both the utilities and
16 their customers.

17

18 **Q. Should Mr. Morgan's first reason for rejecting the recovery of the COVID-**
19 **19 Net Expenses, that the amount is allegedly too small and, its nonrecovery**
20 **allegedly would not impact the viability of the Company, be considered by**
21 **the Commission?**

22 A. No, it should not.

23

1 **Q. Do you agree with Witness Morgan’s second reason for denying recovery of**
2 **the COVID-19 Net Expenses, that the Commission did not guarantee**
3 **recovery of the net other expenses related to the COVID-19 pandemic and**
4 **recovery?**

5 A. No, I do not. While I agree that the Commission did not guarantee recovery, as
6 Mr. Morgan should know, recovery will come once the expenses of this
7 extraordinary event, the COVID pandemic, are presented to the Commission and
8 reviewed, which is where we are now. The Commission has directed utilities to
9 record the COVID-19 Net Expenses and maintain records. This action allows the
10 utilities, including the Company, to request recovery in a rate case, which is what
11 the Company is doing.

12
13 **Q. Has Mr. Morgan challenged any expense or presented any specific evidence**
14 **that shows the expenses included in the Company’s requested recovery are**
15 **unreasonable?**

16 A. No, I believe, once Company Witness Bachota’s updated amounts as shown in
17 Exhibit RLO-2-R, page 2 lines 36 to 49 are included and Mr. Morgan’s double
18 counting error removed, there are no viable reasons to exclude recovery as
19 requested by the Company.

20 **VI. CASH WORKING CAPITAL**

21 **Q. Have you reviewed the adjustments to Cash Working Capital (“CWC”)?**
22

1 A. Yes, I have. Mr. Morgan made two basic adjustments, one for the change in the
2 debt / equity ratio and debt level proposed by the OCA and the second for the
3 changes in expenses proposed by the OCA.
4

5 **Q. Do you have any issues with these adjustments to CWC proposed by the**
6 **OCA?**

7 A. Yes, I do. The calculations shown on Schedule LKM-6 are based on total
8 Company balances, which result in a total adjustment reducing CWC by an
9 amount of \$430,000, as shown on Schedule LKM-2, page 1 on line 5 in the
10 adjustment column. This reduces the Amount Per Company in the first column of
11 \$46.132 million by the \$430,000. However, when the amounts on Schedule
12 LKM-6, page 1, lines 7 and 8 that determine the \$430,000 are reviewed, they are
13 \$68.330 million for the Company and \$67.900 million for the OCA's revised
14 balance. To use the total Company difference of \$430,000 to reduce the PA
15 Jurisdiction CWC amount of \$46.132 million is another mismatch and should be
16 rejected.
17

18 **Q. Have you reviewed the CWC adjustment proposed by I&E Witness Keller?**

19 A. Yes, I have.
20

21 **Q. Do you have any concerns with any of Mr. Keller's adjustments or**
22 **procedures?**

1 A, Yes, I do. I have two concerns regarding the adjustment he made to remove the
2 \$18.260 million in average prepaid expenses from the other expense calculation in
3 the CWC determination. First, Mr. Keller did not perform any studies to
4 determine if some or any of the prepaid expenses should be removed. Second,
5 even if some of the prepaid expenses should be reduced from the other
6 disbursements, he used a distribution allocator of 1.000 (I&E Exhibit No. 2
7 Schedule 15, page 2 of 2, line 15, column 2) even though some of the prepaid
8 expenses are not totally distribution or are not operating expenses at all.

9

10 **Q. Do you have some examples of those expenses?**

11 A. Yes. Referring to DLC Exhibit 2, Schedule C-4, page 10, lines 1 to 5, these
12 expenses are for various insurance coverages which are not solely distribution. In
13 addition, lines 16 and 17 are for IT hardware and software maintenance which are
14 not solely distribution. Finally, lines 12 is for a Pennsylvania PUC Assessment
15 which is a tax amount and is charged on total revenue not just distribution
16 revenue, line 21 is for IT Transmission Software, and many of the other
17 maintenance prepaid amounts are not solely distribution.

18

19 **Q. Should the Commission adopt Mr. Keller's removal of 100 percent of the**
20 **prepaid expenses as proposed by him?**

21 A. No. As shown above, Mr. Keller does not provide any support for his proposed
22 removal of prepaid expenses and he has incorrectly assumed that 100 percent of
23 the prepayments are related to the distribution operations.

1

2 **Q. Should any amount of the prepaid expenses be removed from the other**
3 **disbursements?**

4 A. Not without some support other than that the Company's response that it did not
5 remove them.

6

7 **Q. Do you have any concern with the remainder of Mr. Keller's adjustments to**
8 **the Company's CWC calculation?**

9 A. No. The remaining calculations seem to reflect the impact of changes in the I&E
10 expenses.

11

12 **Q. Does this complete your prepared rebuttal testimony at this time?**

13 A. Yes, it does.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 12-R**

Direct Testimony of Matthew L. Simpson

23

Q. Briefly explain the proposed FTAC.

A. The FTAC is a proposed automatic adjustment clause that would adjust the Company’s base rates for the effects on revenue requirement of an increase or decrease in federal income taxes that is not reflected in current base rates. As I illustrated in my direct testimony, the increases in the corporate income tax rate currently being proposed by the Biden administration would create a very substantial increase in the Company’s revenue requirement (DLC St. No. 12, p. 18).

Q. Why does I&E witness Wilson oppose the adoption of the FTAC in this proceeding?

A. Ms. Wilson contends that an increase in the corporate federal income tax is speculative at this time. She also contends that the Commission has recently dealt with the substantial decrease in federal income taxes under the Tax Cuts and Jobs Act of 2018 on a statewide basis and that she believes that the Commission would provide adequate and timely guidance on a future federal corporate tax rate increase (I&E St. No. 1, pp. 38-39).

Q. Do you agree with Ms. Wilson’s conclusions?

A. No, I do not. With regard to Ms. Wilson’s first conclusion that a federal corporate rate tax is speculative, the President and his administration has repeatedly referenced an increase in the rate as a critical part of his Build Back America plan. While the timing of the tax rate increase is uncertain, it would appear that a tax rate increase is probable while there are currently majorities of his party in Congress. As explained by Mr. Ogden in his rebuttal, recoverable utility expenses that are significant, subject to change, and difficult to predict,

1 are often recovered through automatic adjustment clauses (DLC St. No. 12-R, pp. 16-17).
2 In this regard, the Company's State Tax Adjustment Clause, which is contained in the
3 Company's Tariff at page no. 94, provides for adjustments of base rates for changes in the
4 PA Corporate Net Income Tax, even though there is far less certainty of a change in the
5 state income tax rate. Finally, in the event that federal income tax rates do not change, the
6 FTAC will have no impact on customers. Therefore, even if a change in federal income tax
7 rates were highly unlikely (which is not the case here), this would not be a reason to reject
8 the FTAC.

9
10 **Q. Please respond to Ms. Wilson's contention that the Commission can be expected to**
11 **respond in a timely manner on a state-wide basis if there is a significant increase in**
12 **the federal corporate income tax rate.**

13 A. Ms. Wilson cites the Commission's response to the 2018 decrease in the federal corporate
14 income tax rate under the TCJA. Ms. Wilson provides no example where the Commission
15 has so responded to an increase in the federal corporate tax rate. The situations may be
16 construed differently by the Commission in the face of significant increases in tax rates
17 and increases in customers' rates. The Commission could take the position that the effects
18 of any federal tax rate increase must be recovered in a base rate case and only prospectively.
19 As I have illustrated in my direct testimony, the proposed tax rate changes would have
20 significant impact on the Company's revenue requirement (DLC St. No. 12, p. 16).
21 Further, I note that Duquesne Light was not included in the process used to reflect the
22 TCJA tax reductions because it already had filed a base rate increase by the time of
23 adoption of the Commission's process.

Q. Ms. Wilson also contends that the effect of a change in the federal income tax rate on excess deferred income taxes should not be reflected in the FTAC if it is adopted. Do you agree?

A. No, I do not. Excess deferred taxes are taxes recorded at a tax rate higher than the current rate and are returned to customers in this proceeding over the periods explained in my direct testimony (DLC St. No. 12, p. 13). If the federal corporate tax rate increases, the excess deferred taxes automatically decreases, but the term for returning them does not change. The calculation of the change would be provided with the FTAC filing and subject to reconciliation and subsequent audit under the FTAC. Continuing to amortize excess deferred taxes based on a revised and substantially reduced balance would be inappropriate and potentially violate federal tax requirements that require the return of deferred taxes using average rate assumption. Any further change can be addressed in the next base rate proceeding. Additionally, the Company notes that I&E supported including the necessary and appropriate excess deferred tax adjustments in a tax adjustment rider in the comments it filed as to how to the Commission should address the federal tax rate decrease under the TCJA. See Exhibit MLS-1-R, pp. 7-8.

Q. OCA witness Morgan also opposes the FTAC. Please respond.

A. Mr. Morgan characterizes the Company’s testimony as a criticism of the time period for the Commission’s reaction to the TCJA (OCA St. No 1, pp. 30-31). The Company is not criticizing the Commission. Instead, the Company is demonstrating that the FTAC is a better and more timely way to address federal income tax rate changes because adjustments

1 can be made to reflect in customer rates the tax rate changes contemporaneously to when
2 they are experienced. As I noted earlier in response to Ms. Wilson, it may be more difficult
3 for customers to retroactively pay the effect of increases in federal corporate tax rates than
4 it was to refund to customers the effects of the decrease in the tax rate under the TCJA.
5 Although the Company did not participate in the process used by the Commission because
6 it had already filed a base rate proceeding, as indicated in the settlement of that case, the
7 Company refunded the current and excess deferred tax effects of the TCJA for 2018 on a
8 retroactive basis to customers (Exhibit JAB-5-R, Paragraph No. 31, which is provided with
9 Ms. Bachota's rebuttal testimony).

10
11 **Q. Please respond to Mr. Morgan's concern that a new tax act could have other**
12 **provisions that could affect the Company.**

13 A. While Mr. Morgan lists a few such changes in the TCJA, he does not demonstrate that any
14 of them affected utility rates or that the Commission considered any of them in its rate
15 change process. Nevertheless, if such a change occurred and it was not reflected in the
16 FTAC filing, the Commission would be able to adjust for that in the subsequent audit
17 process provided in the FTAC, if deemed material.

18
19 **Q. Do you have any further comments on OCA's opposition to the Company's proposed**
20 **FTAC?**

21 A. The Company notes that OCA supported the use of an automatic adjustment clause in the
22 comments it filed as to how to the Commission should address the federal tax rate decrease
23 under the TCJA. While I am not suggesting that this is any commitment on behalf of OCA,

1 it does give credence to the reasonableness of the Company's proposal in this case. See
2 attached Exhibit MLS-2-R, pp. 8-14, in which OCA discusses the appropriateness of
3 utilizing an automatic tax adjustment clause, similar to the Commission approved Section
4 1307 STAS surcharge mechanism for federal tax rate changes.

5

6 **Q. Does this conclude your rebuttal testimony?**

7 A. Yes, it does.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Duquesne Light Company

)

Docket No. R- R-2021-3024750

REBUTTAL TESTIMONY OF PAUL R. MOUL

Dated: July 26, 2021

REBUTTAL TESTIMONY OF PAUL R. MOUL

INTRODUCTION

1

2 **Q. Please state your name, occupation and business address.**

3 A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road, Haddonfield,
4 New Jersey 08033-3062. I am Managing Consultant at the firm P. Moul & Associates, an
5 independent financial and regulatory consulting firm.

6

7 **Q. Did you previously submit testimony in this proceeding on behalf of Duquesne Light
8 Company (“Duquesne Light” or the “Company”)?**

9 A. Yes. I submitted my direct testimony, Duquesne Light Statement 9, on April 16, 2021.

10

11 **Q. What is the purpose of your rebuttal testimony?**

12 A. My rebuttal testimony responds to the direct testimony submitted by David J. Garrett, a
13 witness appearing on behalf of the Office of Consumer Advocate (“OCA”), and
14 Christopher Keller, a witness appearing on behalf of the Bureau of Investigation and
15 Enforcement (“I&E”). If I fail to address each and every issue in the testimonies of Mr.
16 Garrett and Mr. Keller, it does not imply agreement with those issues.

17

18 **Q. Are you sponsoring any Exhibits with your rebuttal testimony?**

19 A. Yes. I am sponsoring Exhibit PRM-1-R, comprising Schedules 1 and 2.

20

21 **Q. What are the key aspects of the rate of return issue that the Pennsylvania Public
22 Utility Commission (“Commission”) should consider when deciding this issue in
23 this case?**

24 A. The primary issue involves the Company’s cost of equity. Mr. Keller has accepted the

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 Company's proposed capital structure ratios. Mr. Garrett has opposed the actual
2 Duquesne Light capital structure, and instead proposed a hypothetical capital structure.
3 The cost of debt is not an issue in this case. In each instance, the equity returns proposed
4 by the opposing witnesses are entirely too low to reflect the risks of Duquesne Light and
5 the prospective cost of equity. Aside from technical issues that I will discuss later in my
6 rebuttal testimony, the Commission should take into consideration a rate of return that will
7 reflect and be supportive of the Company's financial and risk profile. As I explain below,
8 the opposing party recommendations fail to adequately consider this point and thereby
9 significantly understate the required cost of common equity in this proceeding.

10
11 **Q. Please summarize the key points of your rebuttal testimony.**

12 **A.** My key points are:

- 13 ○ Comparable Companies – Mr. Keller makes erroneous exclusions and
14 proposes a barometer group that is inappropriate in this case.
- 15 ○ Discounted Cash Flow (“DCF”) – A variety of DCF results are clearly too low
16 to provide a reliable measure of the cost of equity. As such, alternative
17 measures should be considered as has been Commission practice in other
18 proceedings.
- 19 ○ The DCF growth rate proposed by Mr. Garrett is not specific to a barometer
20 group or any of the companies included in his proxy group, thus not reflective
21 of the type of growth expected by investors in these companies.
- 22 ○ Leverage Adjustment – The I&E and OCA witnesses have not refuted the
23 accuracy of the Company's leverage adjustments to the DCF and beta
24 component of the Capital Asset Pricing Model (“CAPM”).

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 ○ CAPM – A reasonable application of the CAPM mandates using 30-year
2 Treasury bond yields, leverage adjusted betas, and size adjustment and
3 indicates an equity cost rate that is above 11% in this case. Even Mr. Keller’s
4 somewhat deficient CAPM result of 10.37 % demonstrates that the DCF results
5 of Mr. Keller and Mr. Garrett are inadequate, particularly in light of the
6 Commission’s very recent determination of the equity cost rate of 10.24% for
7 PECO Gas at Docket No. R-2020-3018929.

8 ○ Additional methods should also be considered when establishing the cost of
9 equity for Duquesne Light.

10
11 **Q. How should the rate of return set by the Commission support the Company’s**
12 **financial profile?**

13 A. The Commission should set the Company’s return on equity at a level that will attract
14 investment in the Company to support the Company’s financial ability to render safe and
15 reliable service. Applying this principle, the Commission should reject the proposals by
16 Messrs. Garrett and Keller to cut the Company’s return on common equity to 8.50% and
17 9.24%, respectively, from the levels set by the Commission in recent rate cases. These
18 proposed returns are unreasonable because they are much too low to allow Duquesne Light
19 to achieve the level of returns that meet investor expectations. Equity return allowances
20 of this magnitude would be viewed by investors as unsupportive of the Company’s
21 financial condition. Rather, based on the factors listed below, and for technical reasons
22 set forth later in my rebuttal testimony, the Commission should adopt a substantially
23 higher equity return for Duquesne Light.

24

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 **Q. Are there additional issues that the Commission should consider when setting the**
2 **Company's return?**

3 A. Yes. The investment community would be very concerned if the Commission were to
4 adopt either of the positions of the I&E or OCA. If it were to do so, investors would see
5 Pennsylvania regulation as less supportive of the Company at a time of high levels of
6 capital investment. At present, Pennsylvania regulation is currently ranked Above
7 Average/3 by Regulatory Research Associates ("RRA"), which reflects an upgrade that
8 occurred on May 10, 2017. The rating system used by RRA includes three principal
9 categories (*i.e.*, Above Average, Average and Below Average with more refined positions
10 within the categories designated by the numbers 1, 2 and 3). If the Commission were to
11 follow the proposals of I&E or the OCA, the regulatory ranking of Pennsylvania would
12 certainly be jeopardized. The return on equity used by the Commission to set rates
13 embodies in a single numerical value a clear signal of regulatory support for the financial
14 strength of the utilities that it regulates. Although cost allocations, rate design issues, and
15 regulatory policies relative to the cost of service are important considerations, the
16 opportunity to achieve a reasonable return on equity represents a direct signal to the
17 investment community of regulatory support (or lack thereof) for the utility's financial
18 strength. In a single figure, the return on equity utilized to set rates provides a common
19 and widely understood benchmark that can be compared from one company to another
20 and is the basis by which returns on all financial assets (stocks – both utility and non-
21 regulated, bonds, money market instruments, and so forth) can be measured. So, while
22 varying degrees of sophistication are required to interpret the meaning of specific
23 Commission policies on technical matters, the return on equity figure is universally
24 understood and communicates to investors the types of returns that they can reasonably

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 expect from an investment in utilities operating in Pennsylvania.

2
3 **Q. How do the cost of equity proposals by Mr. Garrett and Mr. Keller compare to the**
4 **utility returns recently authorized by the Commission?**

5 A. Technical disputes about methodology and data aside, the proposed costs of equity
6 proposed by Mr. Garrett and Mr. Keller are simply not representative of the return
7 investors can earn on other investments of comparable risk, including investments in other
8 electric utilities like Duquesne Light. Indeed, the Commission established a 9.85% equity
9 return for the UGI Utilities Electric Division rate case at Docket No. R-2017-2640058.
10 With rising capital cost rates, a higher, not lower, equity return is required in this case.
11 The Commission also granted equity returns of 9.54% for Citizens' Electric Company at
12 Docket No. R-2019-3008212, 9.31% for Wellsboro Electric Company at Docket No. R-
13 2019-3008208, 9.73% for Valley Energy at Docket No. R-2019-3008209, 9.86% for
14 Columbia Gas of Pennsylvania at Docket No. R-2020-3018835, 10.8% for Pennsylvania-
15 American Water Company at Docket Nos. R-2020-3019369, R-2020-3019371¹, and most
16 recently 10.24% for PECO Energy Company – Gas Division at Docket No. R-2020-
17 3018929. With respect to the Columbia, PAWC, and PECO Energy cases, these equity
18 returns were established when the conditions of the COVID-19 pandemic were heightened
19 in comparison to where the Duquesne Light case stands now. Moreover, for purposes of
20 setting the Distribution System Improvement Charge (“DSIC”), the Commission has set a

¹ The Commission's Opinion and Order in this case held that “We agree with the ALJ's rationale and recommendation on this issue, approving, as contained within the Joint Settlement, the Company's application of traditional ROE models and its analysis of current market conditions.” *Pa. PUC, et al. v. Pennsylvania-American Water Company*, Docket Nos. R-2020-3019369 (Water), R-2020-3019371 (Wastewater), at p. 62 (Opinion and Order entered Feb. 25, 2021).

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 9.45% equity return for electric utilities. In the DSIC proceedings, DSIC recoveries are
2 reconciled and therefore the 9.45% is guaranteed. In contrast, the equity return set in a
3 base rate case is an opportunity to earn an allowed equity return and should be higher than
4 the DSIC equity allowance.

5 The rates of return on common equity of 8.50% proposed by Mr. Garrett and 9.24%
6 proposed by Mr. Keller are seriously deficient and will not provide Duquesne Light with
7 the opportunity to earn its investor required cost of capital for the fully projected future
8 test year ending December 31, 2022 (“FPFTY”). As explained below, this is not the time
9 for the Commission to be reducing the Company’s authorized return when there is a
10 compelling need for capital investment to rehabilitate aging infrastructures and increasing
11 capital costs.

12
13 **Q. You just mentioned the equity returns that the Commission set in recent rate cases.**
14 **How does this compare to the proposals submitted by Messrs. Garrett and Keller in**
15 **that proceeding?**

16 A. The recent returns are substantially higher than their recommendations. The Commission
17 should reject the proposals of Messrs. Garrett and Keller and set the Company’s return in
18 this case at a much higher level. This would be the prudent course given the trend toward
19 higher capital costs today that have developed since February 2021. The yield on 30-year
20 Treasury bonds moved above the 2% level beginning in February 2021. In comparison,
21 those yields closed out 2020 at 1.67% for December. By June 2021, the yield on 30-year
22 Treasury bonds had moved to 2.16%, or an increase of 0.49% (or 29%). Likewise, the
23 yield on A-rated public utility bonds has increased to 3.16% in June 2021 from 2.77% in
24 December 2020 -- a 39 basis point (or 14%) increase. One reason that explains the higher

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 long-term interest rates can be traced to investor expectations of higher inflation. Indeed,
2 there has been an upward burst in inflation recently following very low inflation that
3 existed during the pandemic. Higher interest rates clearly point to higher capital costs
4 prospectively. I will describe the Blue Chip forecast of interest rates and the continuation
5 of this trend later in my rebuttal. Indeed, the trend is now toward higher, not lower capital
6 costs. In this regard, I note that Mr. Keller determines his equity return recommendation
7 of 9.24% using his DCF. Putting aside the deficiencies of his DCF analysis, he places
8 absolutely no weight on the results of his CAPM analysis which produces a result of
9 10.37%. He characterizes his CAPM analysis as a check, but does not move his
10 recommendation at all to account for his CAPM results. In contrast, the Commission has
11 repeatedly in its Quarterly Earnings reports increased the electric DSIC return on equity
12 above the estimated DCF return by significant amounts based on its CAPM analysis.. See
13 Quarterly Earnings Report issued July 15 2021, at Docket No, M-2021-3026753. This
14 indicates that the Commission recognizes that the electric DCF model cannot be relied on
15 solely to determine the cost of equity. Mr. Keller's simplified CAPM result of 10.37% and
16 the very recent award of 10.24 % in PECO Gas, and the recent rises in inflation and debt
17 capital costs indicate the cost of equity determination for Duquesne Light should be above
18 10%.

19

20 **Q. Is there other evidence that shows the return on equity recommendations of the**
21 **opposing parties are deficient?**

22 A. Yes. One measure of market risk is provided by the OBOE Global Markets (formerly
23 Chicago Board Options Exchange) Volatility Index ("VIX"). This index is a gauge of
24 volatility in the equity market and, hence, provides a measure of risk. It is well-established

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 that greater volatility indicates higher risk, which, all else equal, translates into a higher
2 cost of equity. It is widely accepted that high readings for the VIX are often accompanied
3 by bearish sentiment and a low VIX is associated with bullish sentiment. The trading
4 pattern of the VIX is typically inverse to the level of stock prices. That is to say, the VIX
5 increases when stock prices are falling and the VIX declines when stock prices rise. This
6 situation is sometimes associated with increases in the cost of equity when the VIX
7 increases and vis-a-versa. The overall range of the index since 1990 has been 8.56 to
8 89.53. The peak in the index occurred on October 1, 2008 during the Financial Crisis.
9 The lowest VIX occurred on November 1, 2017 during the previous bull market. The
10 recent VIX history has been:

<u>Year</u>	<u>Average VIX</u>
2017	12.12
2018	18.46
2019	16.33
2020	32.21
2021 YTD	24.37

11 We can see that the VIX has spiked upward with the COVID-19 pandemic and the
12 onset of the recession. While volatility in the stock market has subsided since the very
13 beginning of the pandemic and recession, it continues to significantly exceed levels prior
14 thereto as measured by the VIX. The current level of risk associated with common stocks,
15 as revealed by the higher VIX in 2021, warrants a higher equity return at this time because
16 the higher stock market volatility signifies higher risk that requires higher returns in
17 compensation for the higher risk. Hence, the risk for common equity, which translates
18 into the cost of equity, does not support a low equity return suggested by Messrs. Keller
19 and Garrett.

REBUTTAL TESTIMONY OF PAUL R. MOUL

1

2 **Q. How should the Commission view the return that it sets for the Company in order to**
3 **continue to promote and encourage further accelerated replacement of aging**
4 **infrastructure?**

5 A. Supportive rate regulation encourages public utilities such as Duquesne Light to accelerate
6 replacement of aging infrastructure. The markets look to supportive rate regulation in
7 assessing investment decisions. Lowering the authorized rate of return on equity to the
8 levels proposed by Mr. Keller and Mr. Garrett will signal to investors that Pennsylvania
9 is pulling away from its prior support for accelerated infrastructure replacement.

10

11 **Q. How is the remainder of your testimony organized?**

12 A. I will cover the issues of (i) the composition of the proxy (*i.e.*, barometer) group, (ii) the
13 appropriate capital structure to be used, (iii) the weight to be given to the DCF method,
14 (iv) the DCF growth rate, (v) the leverage adjustment to the DCF and CAPM methods,
15 (vi) the CAPM method, (vii) the Risk Premium analysis, and (viii) Comparable
16 Earnings.

17

18

Capital Structure

19 **Q. Is there a difference in the proposed capital structure ratios utilized by the rate of**
20 **return witnesses in this case?**

21 A. Yes. Mr. Garrett is alone in advocating an erroneous capital structure for Duquesne Light.
22 Mr. Keller has accepted the Company's proposed capital structure, as it falls within the
23 range of capital structures of the proxy group. Mr. Garrett's position is clearly contrary
24 to long-standing Commission policy concerning capital structure ratios, most recently

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 confirmed in the PECO Energy Company – Gas Division rate case at Docket No. R-2020-
2 3018929 (Order entered July 15, 2021).

3
4 **Q. What capital structure does Mr. Garrett propose?**

5 A. Mr. Garrett has proposed a hypothetical capital structure for Duquesne Light without ever
6 demonstrating that the Company's proposed capital structure is unreasonable. Rather, his
7 proposed capital structure is simply designed to lower the Company's revenue
8 requirement. In reaching his conclusion on capital structure ratios, Mr. Garrett performed
9 three analyses. These are: (i) a calculation of the cost of capital at various debt ratios, (ii)
10 the debt ratios of the companies in his proxy group, and (iii) the debt ratios of thousands
11 of other companies. He seems to favor option (ii), but does not propose a debt ratio as
12 high as he reports for his proxy group. This approach essentially involves the use of a
13 hypothetical capital structure that violates Commission precedent on the use of the actual
14 capital structure. If he had referred to other rate cases decided by the Commission as
15 guides for the selection of capital structure ratios, then he should have relied upon
16 Duquesne Light's actual capital structure ratios.

17
18 **Q. Is there any basis to deviate from the Company's actual capital structure to set the
19 rate of return in this case?**

20 A. No. First, as Mr. Keller explained (see page 60 of I&E Statement No. 2), the Company's
21 actual capital structure ratio (including the 53.35% common equity ratio) falls within the
22 range of the proxy group. This is sufficient to meet the Commission standard that the use
23 of actual Duquesne Light capital structure is appropriate in this case. Second, an issue not
24 addressed by Mr. Garrett is the fact that the proxy group capital structure ratios are from

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 consolidated operations of the parent holding companies. Focusing solely on the public
2 utility subsidiaries of these companies, the common equity ratios are quite different from
3 the holding companies, as revealed below:

<u>Company</u>	<u>Average Public Utility subsidiary Common Equity Ratio</u>
AVANGRID, Inc.	55.98%
Consolidated Edison, Inc.	64.86%
Duke Energy Corporation	53.56%
Eversource Energy	53.61%
Exelon Corporation	51.94%
FirstEnergy Corp.	50.20%
MGE Energy	62.28%
NextEra Energy, Inc.	62.06%
Otter Tail Corp.	54.26%
PPL Corporation	55.03%
Public Service Enterprise Group	54.54%
Average	<u>56.21%</u>

4 Supporting detail for these data are revealed on my Duquesne Light Rebuttal Schedule 1.
5 The average common equity is 56.21%, with a range of 51.94% to 64.86%. Hence, the
6 common equity ratio for Duquesne Light is clearly within the range of reasonableness.
7 That alone is sufficient to support the use of the Company's actual capital structure in this
8 case.

9 Third, Mr. Garrett might also have been led to a different conclusion if he had
10 considered the common equity ratios utilized by this Commission in recent rate case
11 decisions. Indeed, in its Order Entered on October 25, 2018 in Docket No. R-2017-
12 2640058, the Commission adopted a 54.02% common equity ratio for the Electric
13 Division of UGI Utilities. Furthermore, the Commission accepted a 54.19% common

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 equity ratio in the Columbia Gas of Pennsylvania rate case at Docket No. R-2020-3018835
2 (Order Entered February 19, 2021) and 53.38% common equity ratio for PECO Energy
3 Company – Gas Division at Docket No. R-2020-3018929 (Order Entered June 22, 2021).
4 Indeed, the Company’s proposed common equity ratio of 53.35% is entirely reasonable
5 based on prior Commission action. Hence, the Company’s actual common equity ratio
6 conforms to Commission policy that the actual, not hypothetical, common equity ratio
7 should be employed.

8
9 **Q. Does Mr. Garrett provide clear justification for rejecting the Company’s actual**
10 **capital structure and substituting a different capital structure?**

11 A. No. In addition to his proxy group comparisons, Mr. Garrett also performs a “quantitative
12 analysis” that he says supports a 55% debt ratio utilizing his 8.50% cost of equity proposal
13 (see Figure 18 on page 82 of OCA Statement No. 2). There are a variety of deficiencies
14 with his analysis. First, he never establishes that his analysis is applicable for Duquesne
15 Light in the FPFTY. Second, his assumptions regarding the “After-tax Debt Cost” are
16 irrelevant to the ratesetting process here, because the nominal embedded cost of long-term
17 debt is used to calculate the overall rate of return in this case. Third, the coverage ratios
18 he employs are incompatible with the existing credit quality of Duquesne Light.
19 Historically, Duquesne Light actually realized pre-tax interest coverage of 4.92 times on
20 average over the period 2015-2019 (see Schedule 2 of Duquesne Light Exhibit PRM-1).
21 His analysis shown on Figure 18 of OCA Statement No. 2 would provide only 3.88 times
22 coverage with the 55% debt ratio that he prefers. This would not maintain Duquesne
23 Light’s existing credit quality, which is a fundamental requirement of a fair return. In his
24 example, a 40% to 45% debt ratio provides the level of coverage that equates to the

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 historical experience of Duquesne Light. But this too is unreasonable, because his model
2 suggests a 6.66% to 7.01% equity return, which by any standard is unreasonable.
3 Moreover, as Company witness Milligan explains in his rebuttal testimony, DLC St. No.
4 14-R, Mr. Garrett failed to acknowledge the impacts of his recommendation the
5 Company's cost of debt.

6
7 **Q. Mr. Garrett also provides capital structure ratios for other industries. Is this**
8 **information useful?**

9 A. No. There is nothing useful that can be obtained from the tabulation of debt ratios shown
10 on Figures 19 and 20 of OCA Statement No. 2. Mr. Garrett has never established a nexus
11 between the debt ratios he provides and the cost of equity. It is not appropriate to compare
12 the debt ratios for thousands of diverse companies to Duquesne Light, without first
13 establishing some level of comparability of these companies to the Company or the utility
14 barometer group.

PROXY GROUP

15
16 **Q. Are there differences in the proxy groups utilized by the rate of return witnesses in**
17 **this case?**

18 A. Yes. Mr. Keller makes additions and deletions to my proxy group, while Mr. Garrett
19 accepts my proxy group. Mr. Keller describes his criteria on page 55 of his direct
20 testimony (I&E St. No. 2). He includes six of the same companies that I included and,
21 excludes five of my original companies. He makes nine other additions based on his
22 criteria.

23

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 **Q. How do the revenue percentages compare for the members of your Electric Group**
2 **in this case?**

3

4 A. I have provided the Percentage of Regulated Revenues, Income and Assets for my Electric
5 Group in Duquesne Light Rebuttal Schedule 2. There, I have shown that regulated
6 revenues for each of the members of my Electric Group were 51% and above. The average
7 for the Electric Group is 84%. The earnings and assets for my Electric Group were also
8 all above 50%. Hence, there is no basis to alter my Electric Group in this case because all
9 companies fit the 50% revenue criteria recently adopted by the Commission in its PECO
10 Energy - Gas Division order (see Docket No. R-2020-3018929, Order entered July 15,
11 2021, pp. 137-138).

12

13 **Q. But Mr. Keller excludes five of your companies because they fail a variety of his**
14 **selection criteria. Please respond.**

15 A. Mr. Keller excludes Exelon because he says it fails his 50% criteria of utility revenues.
16 My rebuttal Schedule 2 shows that Exelon does not fail that criteria. The reason for the
17 discrepancy rests with differences in the source data used for analyzing the business
18 segments of Exelon. Mr. Keller utilized S&P Global Market Intelligence segment
19 analysis, while I employed the SEC Form 10-K in my analysis. Unfortunately, the S&P
20 source shows a total revenue percentage that equals 110.06% of consolidated revenues for
21 Exelon. The total of the percentage cannot exceed 100%. The discrepancy can be traced
22 to intersegment elimination, which have been ignored in the S&P analysis. Making that
23 correction leads to the conclusion that Exelon is a valid member of the proxy group, as
24 shown by my data. As to Avangrid, there is no reason to exclude it because it is the

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 acquiring company in the PNM Resources transaction. In the situation of most merger
2 and acquisition (“M&A”) transactions, only the target company should be excluded from
3 the barometer group. It is the target company in a takeover whose stock price usually does
4 not reflect its underlying fundamentals. For example, this is revealed by the premium
5 offered by Avangrid to acquire the stock of PNM in the M&A transaction. That premium
6 was 10% over the share price of PNM on the day prior to the announced acquisition and
7 19.3% premium over the 30-day average price. In this situation, the acquiring company,
8 i.e., Avangrid, is not so affected and it continues to be an appropriate member of the
9 Electric Group. Moreover, Mr. Keller did not exclude PPL Corporation from his
10 barometer group even though it is disposing of its United Kingdom utility investment.
11 Finally, a significant number of Mr. Keller’s companies operate predominately in fully
12 regulated integrated utility markets (*e.g.* American Electric Power, Dominion Energy,
13 Duke, Entergy, Portland General Electric, and Xcel), which would disqualify them for
14 membership in the barometer group under his criterion #6.

15

16 COST OF COMMON EQUITY - DISCOUNTED CASH FLOW (DCF)

17 **Q. The DCF model has been used by Mr. Keller, Mr. Garrett and you as one method to**
18 **measure the cost of equity. What is your position concerning the usefulness of the**
19 **DCF method?**

20 A. While the results of a DCF analysis should certainly be given weight, the use of more than
21 one method provides a superior foundation for the cost of equity determination. Since all
22 cost of equity methods contain certain unrealistic and overly restrictive assumptions, the
23 use of more than one method will better capture the multiplicity of factors that motivate
24 investors to commit capital to an enterprise (*i.e.*, current income, capital appreciation,

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 preservation of capital, level of risk bearing). The simplified DCF model makes the
2 assumption that there is a single constant growth rate, there is a constant dividend payout
3 ratio, that price – earnings multiples do not change, and that the price of stock, earnings
4 per share, dividends per share and book value per share all have the same growth rate. We
5 know from experience that those assumptions are not realistic, because the stock market
6 reveals performance that is very different from the assumptions of the DCF.² Therefore,
7 the use of multiple methods provides a more comprehensive and reliable basis to establish
8 a reasonable equity return for Duquesne Light than does sole reliance on the DCF. The
9 Commission has acknowledged the usefulness of other methods, such as CAPM and Risk
10 Premium, as a check on the reasonableness of the DCF return. As I noted earlier in this
11 testimony, the influence of other methods must have an impact on the Commission's
12 attitude toward the DCF model as applied to electric utilities because the Commission's
13 selection of the rate of return on equity for use in the DSIC is usually set well above the
14 cost of equity indicated by the DCF model alone. For example, in the Quarterly Earnings
15 Report at Docket No. M-2021-3025288, the Commission set the DSIC return at 9.45% for
16 the Electric Distribution Companies, while the DCF returns were just 8.47% using current
17 stock prices and 8.72% using 52-week average stock prices. It is clear that the
18 Commission has been guided by the results of other models and other factors aside from
19 DCF when setting the DSIC return. As an apparent check on the reasonableness of the
20 DCF result, the CAPM result of 10.67% for the Electric Company Barometer Group was
21 calculated in the Commission's Quarterly Earnings Report dated May 6, 2021 (Docket
22 Number M-2021-3025288).

² The growth rate variables shown on Schedules 8 and 9 of Duquesne Light Exhibit PRM-1 shows that the assumption associated with the simplified DCF model are not reasonable.

REBUTTAL TESTIMONY OF PAUL R. MOUL

1

2 **Q. What form of the DCF model has been employed in this case?**

3 A. The constant growth form of the DCF model has been used by Mr. Keller, Mr. Garrett,
4 and me.

5

6 **Q. Do the DCF results proposed by Mr. Keller provide a reasonable representation of**
7 **the cost of equity?**

8 A. Not in my opinion. The principal purpose of assembling a barometer group is to avoid
9 relying on data for a single company that may not be representative and to thereby smooth
10 out any abnormalities. That said, when some of the DCF results for companies in the
11 barometer group are unreasonable on their face, the reliability of the method being used,
12 or the witness' application of that method, must be questioned. Mr. Keller himself realizes
13 that some of his results are unreasonable on their face. For example, he removes from his
14 barometer group the negative growth rates for FirstEnergy Corp. and PPL Corporation.
15 Yet, he leaves in the results for a variety of companies that clearly fail the reasonableness
16 test. As indicated below, DCF results fall into that category using data contained in I&E
17 Exhibit No.2:

<u>Company</u>	<u>Average:</u> <u>52 wk &</u> <u>Spot Yield</u>	<u>+</u>	<u>Growth</u>	<u>=</u>	<u>Total</u>
Consolidated Edison, Inc.	4.21%	+	2.96%	=	7.17%
IDACORP, Inc.,	3.25%	+	3.70%	=	6.95%
Public Service Enterprise	3.65%	+	3.34%	=	6.99%

18 It is a fundamental tenet of finance that the cost of equity must be higher than the cost of
19 debt by a meaningful margin to compensate for the higher risk associated with a common

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 equity investment. Yet, each of the companies listed above have DCF returns calculated
2 by Mr. Keller that fail to provide a sufficient spread over the six-month average yield of
3 3.21% on A-rated public utility bonds, or the June 2021 yield that was 3.16%. As I have
4 demonstrated in my direct testimony (Duquesne Light St. No. 9 at pages 39-40), the spread
5 between the cost of debt and cost of equity should be 6.75% in this market environment.
6 As such, none of the returns listed for the three companies above comes close to meeting
7 this standard, which indicates a cost of equity of at least 9.96% (3.21% + 6.75%).

DCF GROWTH RATE

8
9
10 **Q. As to the DCF growth component, what financial variables should be given greatest**
11 **weight when assessing investor expectations?**

12 A. The theory of the DCF holds that (1) the value of a firm's equity (*i.e.*, share price) will
13 grow at the same rate as earnings per share with a constant P-E ratio and (2) dividend
14 growth will equal earnings growth with a constant payout ratio. Therefore, to properly
15 reflect investor expectations within the limitations of the DCF model, earnings per share
16 growth, which is the basis for the capital gains yield and the source of dividend payments,
17 must be given greatest weight. The reason that earnings per share growth is the primary
18 determinant of investor expectations rests with the fact that the capital gains yield (*i.e.*,
19 price appreciation) will track earnings growth with a constant price earnings multiple (a
20 key assumption of the DCF model). It is also important to recognize that analysts' earnings
21 growth rate forecasts significantly influence investor growth expectations. Moreover, it
22 is instructive to note that Professor Myron Gordon, the foremost proponent of the DCF
23 model in public utility rate cases, has established that the best measure of growth for use

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 in the DCF model are forecasts of earnings per share growth.³ These growth rates relate
2 specifically to each company whose cost of equity is being analyzed.

3

4 **Q. Please summarize the DCF growth rate analysis performed by Mr. Keller.**

5 A. As shown on pages 70-71 of I&E Statement No. 2, Mr. Keller proposes a growth rate of
6 5.46%, based on his review of analysts' projected earnings growth rates. To reach this
7 growth rate, Mr. Keller removed the anomalous (*i.e.*, negative) growth rates, otherwise his
8 growth rate would have been just 4.83%. But he should have gone farther by analyzing
9 the resulting DCF returns for each company to see if the results are reasonable. My
10 tabulation shown above indicates that many results are not reasonable.

11

12 **Q. In his direct testimony, Mr. Garrett ignores any growth rates that are specific to his**
13 **proxy group of companies. Does this follow the traditional approach for applying**
14 **the DCF model?**

15 A. No. While Mr. Garrett acknowledges that various sources exist for company-specific
16 growth rates, *i.e.*, Zacks, Value Line, and Bloomberg, he does not look at them, nor does
17 he incorporate them into his DCF analysis. His approach is certainly alien to all DCF
18 analysis that is familiar to the Commission. On this basis alone, the Commission should
19 dismiss the DCF analysis submitted by Mr. Garrett in this case. I say this because, as I

³ "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management, Spring 1989 by Gordon, Gordon & Gould. "We have compared the accuracy of four methods for estimating the growth component of the discounted cash flow yield on a share: past growth rate in earnings (KEGR), past growth rate in dividends (KDGR), past retention growth rate (KBRG), and forecasts of growth by security analysts (KFRG)...we have three observations to make. First, the superior performance by KFRG should come as no surprise. All four estimates of growth rely upon past data, but in the case of KFRG a larger body of past data is used, filtered through a group of security analysts who adjust for abnormalities that are not considered relevant for future growth."

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 previously explained, Myron Gordon established that analysts' forecast of earnings
2 growth are the correct input for the DCF for each member of the proxy group.

3

4 **Q. Do the DCF growth rates proposed by Mr. Garrett provide a reasonable input in the**
5 **cost of equity analysis using the DCF model?**

6 A. No. Mr. Garrett indicates that his method for selecting the growth rate component of the
7 constant growth DCF rests on: (i) nominal GDP, (ii) real GDP, (iii) inflation, and (iv) the
8 risk-free rate. There are many problems with his approach. First, the combination of the
9 real GDP growth and inflation equals nominal GDP, i.e. $(1.018) * (1.020) = (1.0380 - 1 =$
10 3.8% . Hence, two of his input variables are double counted when he separately considers
11 economical GDP growth. Second, the risk-free rate provides no guide of the growth that
12 a company can realize in its earnings. Earnings growth occurs through revenue growth,
13 net of: O&M, depreciation, taxes, interest, and dividend payments. None of these factors
14 are addressed with the risk-free rate of return. Third, Mr. Garrett is essentially developing
15 a generic growth rate that would apply to any, or all companies, whether they are regulated
16 or non-regulated companies. We all know that each company has a unique company-
17 specific growth rate. His approach is simply incompatible with the basic concept of the
18 DCF, where future cash flows for each company are systematically related to one another
19 by a constant growth rate. It is also incompatible with the use of the growth rates of a
20 comparable barometer group of companies to meet the requirement that a utility is to be
21 permitted the opportunity to earn a return equal to comparable companies. Remember,
22 the DCF equation is $P = D / (k-g)$. Mr. Garrett's growth rate does not fit within this
23 equation because it is not establishing a growth rate for comparable companies.

24

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 **Q. What DCF results would be useful from the evidence submitted by Messrs. Keller**
2 **and Garrett?**

3 A. The only DCF results that are useful here are the results supplied by Mr. Keller consisting
4 of: Ameren, AEP, CMS, Dominion, Duke, Entergy, Eversource, First Energy,
5 Northwestern, Portland, PPL Corporation, and Xcel Energy. The average results for these
6 companies are 9.79%, e.g., 10.10% + 9.82% + 10.11% + 10.57% + 9.38% + 8.35% +
7 10.06% +12.13% + 8.30% + 11.02% + 8.68% + 8.96% = 117.48% ÷ 12.

8

9

LEVERAGE ADJUSTMENT

10 **Q. Please respond to Mr. Keller's criticism of your leverage adjustment.**

11 A. In his discussion of my leverage adjustment, Mr. Keller mentions M/B ratio at page 84 of
12 I&E Statement No. 2. I need to be clear that my leverage adjustment is not designed to
13 produce any particular M/B ratio. Mr. Keller offers three reasons for not making a
14 leverage adjustment. First, Mr. Keller notes that the credit rating agencies assess financial
15 risk in terms of a company's income statement in their analysis of the creditworthiness of
16 a company. I agree. But this has nothing to do with my leverage adjustment. The credit
17 rating agencies do not measure the market required cost of equity for a company. The
18 credit rating agencies are only concerned with the interests of lenders. They are judging
19 risk associated with a company's ability to make timely payments of principal and interest.
20 Hence, they are not concerned with the cost of equity or how it is applied in the rate-setting
21 context. While Mr. Keller's observation is correct, it has no relevance to my leverage
22 adjustment.

23

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 **Q. Second, Mr. Keller also questions your leverage adjustment by reference to prior**
2 **Commission orders. Please comment.**

3 A. Mr. Keller points to several decisions where the Commission declined to make a leverage
4 adjustment – *i.e.*, rate cases including Aqua Pennsylvania, the City of Lancaster Water
5 Department, UGI Utilities – Electric Division, and Columbia Gas of Pennsylvania. The
6 fact that the Commission declined to use the leverage adjustment in the Aqua
7 Pennsylvania case cited by Mr. Keller does not invalidate its use. Notably, the
8 Commission did not repudiate the leverage adjustment in the Aqua case, but instead
9 arrived at an 11.00% return on equity for Aqua by including a separate return increment
10 for management performance. Just like an increment for management performance is not
11 recognized in all rate cases, so too the Commission seems to be taking a similar approach
12 to the leverage adjustment. As to the City of Lancaster decision, the situation there was
13 quite different than the leverage adjustment that I propose in this case. Lancaster proposed
14 a leverage adjustment to the cost of equity measured with the Hamada formula and applied
15 it to the DCF result, the Risk Premium result, and the CAPM. While the Hamada formula
16 plays a role in the CAPM, it is not applicable to the DCF or the Risk Premium measures
17 of the cost of equity. Hence, this distinguishes the City of Lancaster approach to the
18 leverage adjustment from mine in this case. As to the UGI – Electric Division case, there
19 the Commission granted a management performance increment rather than a leverage
20 adjustment when arriving at a 9.85% equity return. Finally, in the Columbia case, the
21 Company accepted the ALJs determination of the allowed return, which was 9.86%,
22 without regard to the leverage adjustment. And in the PECO Energy – Gas Division rate
23 case, the Commission observed that the level of return granted was sufficient, so that no
24 additional increment was necessary for management effectiveness.

REBUTTAL TESTIMONY OF PAUL R. MOUL

1

2 **Q. Third, Mr. Keller argues that investors base their decisions on the book value debt**
3 **and equity ratios for regulated utilities. Please respond.**

4 A. Mr. Keller contends that information presented to investors, such as that included in the
5 Value Line reports (see page 89 of I&E Statement No. 2), argues against my leverage
6 adjustment because investors base their investment decisions on book value. However,
7 the Value Line reports clearly show the market capitalization of each company in his
8 barometer group. This means that investors are well aware of the market capitalization of
9 the electric utility stocks that Mr. Keller relies upon for his analysis of the cost of equity.
10 More importantly, I fundamentally disagree that investors base their decisions on book
11 values. To the contrary, it is the future cash flows that investors expect to realize that
12 determines the price they are willing to pay for a share of common equity. Stated
13 differently, investors are concerned with the return that will be earned on the dollars they
14 invest (*i.e.*, their market price) and not some accounting value of little relevance to them.
15 The financial risk associated with the book value capital structure is different from the
16 market value of the capitalization. I clearly demonstrate this point on Schedule 10 of
17 Duquesne Light Exhibit PRM-1. Hence, the observation of Mr. Keller is misplaced
18 because I have clearly shown the difference in financial risk and that risk difference must
19 be taken into account when arriving at an equity return that is applicable to the weighted
20 average cost of capital using book value weights.

21

22 **Q. At page 89 of I&E Statement No. 2, Mr. Keller claims that “true financial risk is a**
23 **function of the amount of interest expense...” Is he correct on this point?**

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 A. No. Capital structure provides the correct measure of the financial risk of a firm. As Morin
2 explained, “Financial risk stems from the method used by the company to finance its
3 investments and is reflected in its capital structure.”⁴ Hence, the method I used for the
4 financial risk adjustment is entirely proper.

5
6 **Q. Mr. Garrett criticized the leverage adjustment that you propose to account for the
7 divergence of market capitalization and book value capitalization. Please comment.**

8 A. At pages 47-49 of OCA Statement No. 2, Mr. Garrett never really refutes my leverage
9 adjustment. Indeed, he employs my leverage adjustment approach through the use of the
10 Hamada formula to unlever and relever betas as part of his capital structure analysis,
11 thereby validating my approach.

12

13 **COST OF COMMON EQUITY - CAPITAL ASSET PRICING MODEL**

14 **Q. Do you have concerns regarding Mr. Keller’s and Mr. Garrett’s applications of the
15 CAPM?**

16 A. Yes. Mr. Keller’s CAPM analysis understates the cost of equity for a number of reasons:
17 (i) his use of the yield on 10-year Treasury notes, (ii) his failure to use leveraged adjusted
18 betas, and (iii) his failure to make a size adjustment. The results of Mr. Garrett’s CAPM
19 approach are simply not credible.

20

21 **Q. How does the use of the yield on 10-year Treasury notes compare with yields on
22 longer-term Treasury bonds?**

⁴ Morin, Roger A., New Regulatory Finance, Public Utilities Reports, Inc., 2006, p. 45.

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 A. The Blue Chip reports dated June 1, 2021, show this comparison. For the first quarter of
2 2021, the gap was 0.75% (2.07% - 1.32%) between the yields on 30-year and 10-year
3 Treasury obligations. For the period 2023-2027, that gap is projected at 0.60% (3.5% -
4 2.9%). This shows a systematic understatement of Mr. Keller's CAPM returns. This
5 understatement can be traced to extraordinary monetary policy actions taken by the FOMC
6 to deal with the recession that followed the onset of the COVID pandemic. Shorter-term
7 rates, such as 10-year notes, respond more to the policy initiatives of monetary officials,
8 while long-term rates, such as 30-year bonds, are more a reflection of investor sentiment
9 of their required returns. For this reason, long-term rates, such as those revealed by 30-
10 year Treasury bonds, should be used to measure the risk-free rate of return. Use of shorter-
11 term rates, such as Mr. Keller's 10-year Treasury Notes yields, are more susceptible to
12 Fed policy actions.

13

14 **Q. How has Mr. Keller understated the risk-free rate of return?**

15 A. The support for his risk-free rate of return is shown on his Schedule 24 of I&E Exhibit
16 No. 2. There, he incorrectly gives the same weight to the yield on 10-year Treasury notes
17 for the third and fourth quarters of 2021, and first, second, and third quarters of 2022, as
18 he does for the entire five-year period 2023 through 2027. This approach leads to a
19 seriously understated risk-free rate of return. Even if 10-year rates are used, it is necessary
20 to correct the weights assigned to the forecast data presented by Mr. Keller. I have revised
21 his forecast below, based upon the Blue Chip publication dated June 1, 2021. Moreover,
22 Blue Chip provides higher yields on Treasury obligations as the forecasts are extended
23 into the future.

REBUTTAL TESTIMONY OF PAUL R. MOUL

<u>Year</u>	<u>10-Year Treasury Yield</u>	<u>10-Year Treasury Yield</u>
2021	1.7%	2.4%
2022	2.0%	2.6%
2023	2.4%	2.9%
2024	2.7%	3.3%
2025	3.0%	3.6%
2026	<u>3.2%</u>	<u>3.8%</u>
Average	<u>2.5%</u>	<u>3.1%</u>

The resulting risk-free rate of return is 2.5% using the yield on 10-year Treasury Notes and 3.1% using the yield on 30-year Treasury Bonds.

1 **Q. How should these results be used in the CAPM?**

2 A. The risk-free rate of return should be calculated with the data that I present above. The
 3 size adjustment of 1.02% must also be incorporated into the CAPM. I have corrected Mr.
 4 Keller’s CAPM as indicated below using those inputs and the forecast yield on 10-year
 5 Treasury bonds:

$$R_f + \beta (R_m - R_f) + size = K$$

Electric Group 2.50% + 0.86 (11.68% - 2.50%) + 1.02% = 11.41%

6

7 **Q. Mr. Keller questions the need to adjust the CAPM results for size differences. Please**
 8 **comment.**

9 A. As a preliminary matter, it is noteworthy that CAPM provides compensation solely for
 10 systematic risk, and that the size of the Electric Group must be considered separately.

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 Indeed, recent Federal Energy Regulatory Commission (“FERC”) orders specifically
2 prescribe an adjustment to the CAPM due to the size of an enterprise.⁵ Mr. Keller’s
3 arguments revolve around the purported distinction between regulated utilities and
4 unregulated industrial companies (see page 92 of I&E Statement No. 2). However, the
5 Wong article that he relies upon was authored twenty (20) years ago, and employed data
6 going back into the 1960s. Enormous changes have occurred in the industry since the
7 1960s that have fundamentally changed the utility business. The Wong article also noted
8 that betas for the non-regulated companies were larger than the betas of the utilities. This,
9 however, is not a revelation, because utilities continue to have lower betas than many other
10 companies. This fact does not invalidate the additional risk associated with small size.

11 The Wong article further concludes that size cannot be explained in terms of beta.
12 Again, this should not be a surprise. Beta is not the tool that should be employed to make
13 that determination. Indeed, beta is a measure of systematic risk and it does not provide
14 the means to identify the return necessary to compensate for the additional risk of small
15 size. In contrast, the famous Fama/French study (see “The Cross-Section of Expected
16 Stock Returns,” The Journal of Finance, June 1992) identified size as a separate factor that
17 helps explain returns.

18
19 **Q. In recent rate case decisions, the Commission declined to make a size adjustment to**
20 **the CAPM. Should the size adjustment be considered here?**

21 A. Yes. In several cases, the Commission concluded the adjustment for size was not
22 necessary in utility rate regulation. In this case, it is worthy to note that the beta measure

⁵ See, e.g., Association of Businesses Advocating Tariff Equity, 171 FERC ¶61,154 (May 21, 2020).

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 of systematic risk does not account for the additional risk associated with small size, either
2 for a non-regulated firm or a public utility. In addition, the studies that I have relied upon
3 for the size adjustment utilized market-wide evidence that included public utilities. And
4 since the last case, the FERC has incorporated the size adjustment into its CAPM analysis.
5 For these reasons, the Commission should revisit the propriety of including a size
6 adjustment here.

7
8 **Q. How does size affect the financial performance of a small company?**

9 A. Examples of the financial consequences of external factors that can influence the financial
10 performance of a small company include loss of a large customer and the effect of
11 unexpected changes in expense.

12
13 **Q. Mr. Garrett has also performed a CAPM calculation in addition to his DCF analysis.
14 Are the results of his CAPM useful in setting the Company's equity return in this
15 case?**

16 A. No. There are a variety of problems with Mr. Garrett's CAPM approach which makes it
17 not useful in this case. He makes CAPM calculations that produce results of 7.2%, which
18 on its face is simply not credible. This is shown by the Commission's Quarterly Earnings
19 Report that produces a CAPM return of 10.67% for the Electric Company Barometer
20 Group that exceeded substantially the DCF return. First, Mr. Garrett uses a backward
21 looking yield on 30-year Treasury bonds. A 30-day historical average period is not
22 compatible with the Commission's use of forecast Treasury yields (see UGI Utilities –
23 Electric Division at Docket No. R-2017-2640058, Order Entered October 25, 2018).
24 Second, the 5.6% equity risk premium ("ERP") selected by Mr. Garrett is well off the

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 mark. Mr. Keller leads data to an ERP of 9.56% (11.68% - 2.12%), and I determined an
2 8.72% ERP. Furthermore, the implied total market return using Mr. Garrett's inputs is
3 just 7.88% (2.28% + 5.6%), which is clearly incompatible with actual stock market returns
4 of 18.40% in 2020, 15.25% YTD in 2021, and 12.16% on average for the past 95 years
5 (1926-2020).

6

7

COST OF COMMON EQUITY - RISK PREMIUM ANALYSIS

8 **Q. Do you believe the Risk Premium method provides significant evidence of the cost**
9 **of equity?**

10 A. Yes. In my opinion, the Risk Premium results should be given serious consideration. The
11 Risk Premium method is straight-forward, understandable and has intuitive appeal
12 because it is based on a company's own borrowing rate. The utility's borrowing rate
13 provides the foundation for its cost of equity which must be higher than the cost of debt
14 in recognition of the higher risk of equity (see Duquesne Light Statement 13 page 36). So,
15 while Mr. Keller and Mr. Garrett decline to use the Risk Premium approach to measure
16 the Company's cost of equity, it is an approach that provides a direct and complete
17 reflection of a utility's risk and return because it considers additional factors not reflected
18 in the beta measure of systematic risk. It is particularly useful when investors expect
19 changes in the cost of debt prospectively, which is currently the expectation of investors,
20 as I have explained in Duquesne Light Statement 13, pages 37-39. Indeed, the Risk
21 Premium approach provides for direct reflection of prospective interest rates in the model
22 and therefore should be given weight in determining the equity cost rate in this case.

23

24 **Q. Please respond to Mr. Garrett's criticisms of your Risk Premium approach.**

REBUTTAL TESTIMONY OF PAUL R. MOUL

1 A. While Mr. Garrett declines to use the Risk Premium approach to measure the Company's
2 cost of equity, it is an approach that provides a direct and complete reflection of a utility's
3 risk and return because it considers additional factors not reflected in the beta measure of
4 systematic risk. In fact, it is precisely because investors consider the results of other
5 methods that they too should be used in addition to the DCF in the development of the
6 cost of equity in this proceeding. As I explained in my direct testimony, we are facing the
7 prospect of increasing interest rates for the future and the market has increased yields on
8 debt instruments. I incorporated the trend toward higher interest rates when I developed
9 my Risk Premium cost of equity of 10.10% (3.35% interest rate on A-rated public utility
10 bonds + 6.75% equity risk premium).

11

12 **Q. What does Mr. Keller say about your Risk Premium analysis?**

13 A. Mr. Keller makes the unfounded assertion that the Risk Premium and CAPM methods
14 should only be used as a comparison to the results of the DCF method because they do not
15 carry over from the investment decision-making process to the utility rate setting process
16 (see page 19 of I&E Statement No. 2). In fact, it is precisely because investors consider
17 the results of other methods that they too should be used in addition to the DCF in the
18 development of the cost of equity in this proceeding. Mr. Keller's assertion that the Risk
19 Premium method does not measure the current cost of equity as directly as the DCF is
20 similarly without foundation. As I explained in my direct testimony and earlier in this
21 rebuttal testimony, we are facing the prospect of increasing interest rates for the future. I
22 incorporated the trend toward higher interest rates when I developed my Risk Premium
23 cost of equity of 10.10%. Hence, my Risk Premium cost rate is fully responsive to
24 changing market fundamentals and the credit quality of the Electric Group.

REBUTTAL TESTIMONY OF PAUL R. MOUL

1

2 COST OF COMMON EQUITY - COMPARABLE EARNINGS APPROACH

3 **Q. Please respond to the criticism of the Comparable Earnings approach.**

4 A. The underlying premise of the Comparable Earnings method is that regulation should
5 emulate results obtained by firms operating in competitive markets and that a utility must
6 be given an opportunity cost of capital equal to that which could be earned if one invested
7 in firms of comparable risk. For non-regulated firms, the cost of capital concept is used
8 to determine whether the expected marginal returns on new projects will be greater than
9 the cost of capital, *i.e.*, the cost of capital provides the hurdle rate at which new projects
10 can be justified, and therefore undertaken. Further, given the 10-year time frame (*i.e.*, five
11 years historical and five years projected) considered by my study, it is unlikely that the
12 earned returns of non-regulated firms would diverge significantly from their cost of
13 capital.

14 The Comparable Earnings approach satisfies the comparability standard
15 established in the *Hope* case. In addition, the financial community has expressed the view
16 that the regulatory process must consider the returns that are being achieved in the non-
17 regulated sector to ensure that regulated companies can compete effectively in the capital
18 markets. Moreover, in a 1994 study that addressed the ROE issue, John Olson (then with
19 Merrill Lynch) established that ROEs from non-regulated companies provide better
20 assessment of investor requirements than those available for regulated utilities.⁶

21

⁶ “Natural Gas: The Case for ROE Reform,” John E. Olson First Vice President, Merrill Lynch & Co., October 11, 1994.

Q. Both Mr. Keller and Mr. Garrett have not recognized the performance of Duquesne Light’s management in their rate of return testimony. How do you respond?

A. As I stated in my direct testimony, I believe Duquesne Light has performed in an exemplary manner and that performance should be recognized in this case. Mr. Garrett’s lack of knowledge regarding management performance in the cost of equity merely reveals his lack of experience in Pennsylvania regulation by the Commission.

SUMMARY

Q. Please summarize your rebuttal testimony.

A. It is my opinion that the equity allowances proposed by Mr. Keller and Mr. Garrett significantly understate the cost of common equity for Duquesne Light. In an environment of prospectively higher interest rates and Company-specific risk factors, an opportunity to earn a cost of equity of 10.95%, including recognition of management performance, is reasonable for Duquesne Light. Furthermore, Mr. Garrett’s capital structure proposal should be rejected for all the reasons previously stated. Indeed, Duquesne Light capital structure proposed by the Company is entirely reasonable for this case. Finally, recognition of the exemplary performance of the Company’s management should be recognized by the Commission.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 14-R**

Rebuttal Testimony of James Milligan

Date: July 26, 2021

1 **I. CAPITAL STRUCTURE PROPOSAL**

2
3 **Q. Please summarize the OCA’s position regarding the Company’s proposed capital**
4 **structure.**

5 A. David J. Garrett on page 3 of Statement No. 2 argues that the Company should receive an
6 imputed capital structure of 50% equity and 50% debt. Mr. Garrett argues that this is
7 necessary because Duquesne Light’s actual equity capitalization is- allegedly above the
8 average of the proxy group, which is 52% debt and would lower costs charged to customers
9 (OCA St. No 2, p. 3, lines 21-25). However, as Mr. Moul explains in his rebuttal testimony
10 on page 9 (DLC St. No. 13-R), Mr. Garrett’s analysis of the proxy group is flawed, and he
11 does not demonstrate that the Company’s proposed capital structure is unreasonable.

12
13 **Q. Do the rating agencies consider the amount of debt capitalization when assigning a**
14 **credit rating?**

15 A. Yes. Higher amounts of debt increase the amount of financial risk of a company. The
16 amount of debt is one of the primary quantitative criteria when assessing financial strength
17 and developing a credit rating for a company and its debt. In its June 23, 2021 Credit
18 Opinion (Exhibit JHM-1-R), Moody’s indicated it expects Duquesne Light’s debt
19 capitalization to remain within its historical range to maintain its A2 rating. However, this
20 is one of many criteria considered. The rating agencies also consider qualitative criteria,
21 such as market position and the supportiveness of the regulatory environment in which it
22 is located.

23
24 **Q. Does Mr. Garrett consider these other criteria in assessing the Company’s ability to**
25 **increase its debt capitalization and maintain its current credit ratings?**

26 A. No, there is no discussion regarding these other attributes and the impact of increasing the
27 debt capitalization on the Company’s credit ratings.

28
29 **Q. Could an increase in the amount of debt for the Company negatively impact its credit**
30 **ratings?**

1 Yes, as noted, higher debt increases financial risk and could result in a downgrade of the
2 Company's ratings. In addition, the agencies may view the change from the Commission's
3 practice of using the actual capital structure to an imputed capital structure, even though
4 the Company has demonstrated a reasonable capital structure both in comparison to its
5 peers and also to historical levels, to be less supportive. A perception of a less supportive
6 regulatory environment by the rating agencies could further exacerbate the risk of a
7 downgrade for the Company.

8
9 **Q. Would increasing the amount of debt in Duquesne Light Company's capital structure
10 increase the cost of debt?**

11 A. Yes. As noted, higher amounts of debt increase the amount of financial risk of a company.
12 As a result, a debt investor would require a higher interest rate to compensate for the risk.
13 This is exactly the risk that is being reflected in a credit rating. Mr. Garrett agrees on page
14 79 of his testimony that "increasing the debt ratio will increase the cost of debt". In fact,
15 Mr. Garrett illustrates that a downgrade of just one notch from the Company's current A3
16 and BBB+ ratings would increase the cost of debt by 0.38%.

17
18 **Q. Does Mr. Garrett adjust the Company's actual cost of debt to reflect this higher cost
19 related to the risk inherent in a capital structure with greater risk?**

20 A. No. Mr. Garrett does not make an adjustment for the increased cost of debt in his rate of
21 return calculation.

22
23 **I. REVENUE REDUCTION PROPOSAL**

24
25 **Q. Please summarize the OCA's position regarding the Company's proposed revenue
26 requirement.**

27 A. In contrast to the Company's \$85.8 million net revenue increase request, OCA
28 recommended a revenue decrease of \$2.8 million, based on both the imputed capital
29 structure recommended by Mr. Garrett as well as several other adjustments.

1 **Q. How would the rating agencies view a revenue requirement reduction for Duquesne**
2 **Light?**

3 A. As noted, the rating agencies consider qualitative criteria, such as the supportiveness of the
4 regulatory environment, in its credit ratings evaluation. As an example, Moody's applies
5 25% of its total scoring criteria to regulatory framework and 25% of its total scoring criteria
6 to a utility's ability to recover costs and earn returns. So, in total, 50% of Moody's credit
7 ratings criteria for a regulated utility is influenced by the regulatory environment.

8 I noted in my initial testimony that currently both Moody's and Standard & Poor's
9 view Pennsylvania as supportive and constructive. The Company's ability to earn a fair
10 and reasonable return and reduce regulatory lag is supportive to the Company's existing
11 investment grade credit ratings.

12 A reduction in revenue requirement for Duquesne Light following several years of
13 investment would be viewed negatively. This is especially true given that financial metrics
14 have already been negatively impacted by the COVID-19 pandemic, as described in my
15 original testimony. In its June 23, 2021 Credit Opinion, Moody's noted that a factor that
16 could lead to a downgrade of the Company is if the Company's "Regulatory jurisdiction
17 becomes less credit supportive such that regulatory lag increases or cost recovery is
18 negatively affected" (Exhibit JHM-1-R).

19 Considering the above, a reduction in revenue requirement would be viewed
20 negatively by the rating agencies, which could negatively impact the ratings of Duquesne
21 Light Company and ultimately increase the cost debt and equity for the Company.

22

23 **Q. Does this conclude your rebuttal testimony?**

24 A. Yes, it does.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 15-R

Rebuttal Testimony of Howard S. Gorman

Dated: July 26, 2021

1 **SECTION I- INTRODUCTION AND PURPOSE OF TESTIMONY**

2 **Q. Please state your name and occupation.**

3 A. My name is Howard Gorman.

4 **Q. Have you previously submitted testimony in this proceeding?**

5 A. Yes, I submitted Direct Testimony on April 16, 2021, on behalf of Duquesne Light
6 Company ("DLC" or "Company") in this proceeding before the Pennsylvania
7 Public Utility Commission ("Commission"). My testimony described the
8 jurisdictional separation studies (each a "JSS") and the unbundled, allocated cost of
9 service study ("ACOS") that I prepared for DLC to comply with the Commission's
10 Data Filing Requirements ("DFR"), specifically DFR IV-E-1. The purpose of the
11 JSS was to separate DLC's total annual revenue requirement, after eliminating
12 revenues and costs attributed to providing supply service, between the portion
13 subject to the jurisdiction of the Federal Energy Regulatory Commission ("FERC"),
14 i.e., the transmission revenue requirement, on the one hand, and the portion subject
15 to the jurisdiction of the Commission, i.e., the distribution revenue requirement, on
16 the other hand. The purpose of the ACOS was to assign, on a cost-causation basis,
17 DLC's distribution revenue requirement among the rate classes in its Tariff.
18 Abbreviations used in this Rebuttal Testimony have the same meaning as in my
19 Direct Testimony.

20 **Q. What is the purpose of your Rebuttal Testimony?**

21 A. My Rebuttal Testimony will respond to the Direct Testimony of the following
22 witnesses in the following areas:

1 • Pennsylvania Office of Small Business Advocate ("OSBA") Witness
2 Knecht regarding the Company's ACOS study, including classification of
3 Primary Distribution plant and alleged double-counting of non-residential
4 loads. I will also address the cost allocation study submitted by OSBA.

5 • Pennsylvania Office of Consumer Advocate ("OCA") Witness Watkins
6 regarding allocation of Secondary Distribution plant. I will also address the
7 two alternative cost allocation studies that Mr. Watkins presented.

8 **Q. Was the methodology used to prepare the ACOS the same as in the past?**

9 A. Yes. The methodology used in the Company's ACOS in the present rate case is the
10 same as in last four rate cases (R-2006-00061346; R-2010-2179522; R-2013-
11 2372129; R-2018-30000124), and the development of the allocators in those rate
12 cases was also the same.

13 **Q. Other than the OSBA and the OCA objections stated above, did any other**
14 **party object to the Company's ACOS?**

15 A. No. The Company's ACOS was accepted explicitly or implicitly by all other
16 parties. In fact, no party objected to the Company's ACOS in the cases referred to
17 above, except for OCA, which has consistently opposed any customer component
18 of the distribution system (another party in 2018 shared OCA's concerns but did
19 not object to the ACOS); and Wal-Mart in 2010, which asked the Commission to
20 order the Company to classify a portion of primary as demand, however the
21 Commission did not do so.

22 In this case, I&E did not raise any objections to the Company's ACOS, and
23 I&E and other parties relied on it for their rate design testimony.

1 **Q. Are you presenting any exhibits with your testimony?**

2 A. Yes, I am presenting the following exhibits:

3	Exhibit 6-1 (R)	JSS for the FPPTY
4	Exhibit 6-2 (R)	Summary of revenue requirement for each rate class
5	Exhibit 6-4 (R)	Customer charge costs- Summary
6	Exhibit 6-10 (R)	Proposed Revenue Allocation

7

8 **Q. What changes are reflected in the exhibits listed above?**

9 A. Each exhibit presents the same information as the corresponding exhibit in the
10 original filing. The following changes are reflected in these exhibits:

- 11 • The total revenue requirement was updated to \$1,035.9 million, as
12 presented by Mr. O'Brien in Duquesne Light Statement No. 4-R. The line
13 item components of the revenue requirement were also updated. As a result
14 of these changes, the Distribution revenue requirement is \$653.9 million.
- 15 • Exhibit 6-10 (R) presents the revenue allocation sponsored by Company
16 witness Mr. Ogden, Statement No. 16-R, as well as the measures of revenue
17 allocation that Mr. Ogden discusses in his rebuttal testimony.

18

19 **OSBA**

20 **Q. What comments did OSBA witness Mr. Knecht have on the Company's ACOS**
21 **(DLC Exhibit 6)?**

22 A. Mr. Knecht provided a lengthy and scholarly review of the purpose of cost
23 allocation studies. He raised two objections to the Company's ACOS:

- 24 • The claim that Primary Distribution Plant should not be classified 100%
25 Demand, but should have a Customer component (OSBA St. 1, p. 11).
- 26 • The claim that in the Company's ACOS "non-residential loads are assigned
27 a full share of all overhead and underground plant, while residential

1 customers are assigned a disproportionately small share of underground
2 plant”, and the further claim that this “appears to inequitably double-count
3 non-residential loads” (OSBA St. 1, p. 14).

4 Classification of Primary Distribution

5 **Q. What is the basis for OSBA’s claim that Primary Distribution has a customer**
6 **component?**

7 A. OSBA states that “...traditional industry practice and relatively recent Commission
8 decisions imply that primary system costs should also include a customer
9 component and a demand component” (OSBA St. 1, p. 11).

10 **Q. In the DLC cases cited above, since 2006, did the Company consistently classify**
11 **Primary Distribution as 100% Demand, as it has in this proceeding?**

12 A. Yes.

13 **Q. In those cases, did OSBA object to the Company’s classification of Primary**
14 **Distribution?**

15 A. No.

16 **Q. What were the issues in the “relatively recent Commission decisions” to which**
17 **Mr. Knecht referred?**

18 A. Mr. Knecht’s testimony cites Docket No. R-2012-2290597 (PPL Electric) and
19 Docket No. R-2017-2640058 (UGI Electric). In both those cases, the only
20 challenge to the ACOS submitted by the respective utilities was brought by OCA,
21 and the Commission rejected OCA’s requests to deny any customer component to
22 the distribution system.

23 **Q. Has the Commission issued any relevant orders since the two cases cited by**
24 **OSBA?**

25 A. Yes. In the Company’s filing at Docket R-2018-30000124, the Company’s ACOS
26 used the same classifications as in this case. The Commission’s order approving
27 the Company’s settlement was issued after the PPL and UGI cases cited by OSBA.

1 **Q. Is the Company's ACOS consistent with the NARUC Manual?**

2 A. Yes. I agree that the NARUC Manual ("Manual") provides guidance in this area,
3 and the Company's ACOS is consistent with that guidance.

4 **Q. What guidance does the Manual provide in this area?**

5 A. The Manual explains that demand costs "are incurred to serve area load, rather than
6 a specific number of customers" and "The customer component of distribution
7 facilities is that portion of costs which varies with the number of customers"
8 (Manual, p. 90).

9 The Manual also states that, regarding classification of distribution plant
10 between demand and customer, "supporting data may be more important than
11 theoretical considerations" (Manual, p. 89).

12 **Q. How is the Company's ACOS consistent with the Manual?**

13 A. The Company's secondary distribution system connects customers to the system
14 and its cost is therefore related to the number of customers; accordingly the
15 Company's ACOS recognizes a customer component for secondary.

16 As for the primary distribution system, it carries electricity from the
17 transmission system to a general area; after that the secondary system branches to
18 connect to individual customers. The primary distribution system is designed and
19 built to serve area loads, and the number of customers served is a minor
20 consideration.

21 **Q. Is it possible to compute a 'minimum size' primary conductor and to call that
22 the customer component?**

23 A. Yes, one could make that computation with the relevant data. For example, one
24 could compute a 'minimum size' for transmission assets, using the smallest

1 capacity conductor on that system. However, just because a customer component
2 can be computed, does not make it sound to do. For example, the transmission
3 system serves very large area loads and the cost is not affected by the number of
4 customers. Similarly, with few exceptions, the primary distribution system does
5 not connect to customers, and its cost is not related to the number of customers,
6 therefore computing a ‘minimum size’ is mathematically possible, but meaningless.

7 **Q. Do you have further information on this topic?**

8 A. Yes. The Company has converted most of its primary system from 4kV to 23kV.
9 The 23kV capacity is more than is needed to meet the loads of residential
10 customers, but is cost-effective and allows for growth. To classify this cost as
11 customer-related would place an improper burden on residential and other low-load
12 customers.

13 **Q. Is the same true for the secondary system?**

14 A. No. The primary system serves “area load, rather than a specific number of
15 customers”, as the Manual states. However the secondary system serves local loads
16 and secondary conductors can be sized to meet the local loads. In addition, the end
17 points of the secondary system branches are customers. Therefore the number of
18 customers is a significant factor affecting the cost of the secondary system.

19 **Q. Please summarize your support for the Company’s classification of primary
20 distribution as 100% demand-related.**

21 A. That the Company’s primary system is 100% demand related is supported by:
22 • Its recent rate cases, in which no party objected to this classification, and
23 which post-date the cases cited by OSBA.

- 1 • The NARUC Manual, because the primary system serves area load and not
2 a specific number of customers.
- 3 • The Company’s practice is to install primary conductors to meet area load,
4 and the costs are not driven by number of customers. This practical
5 consideration outweighs any theoretical considerations.

6 The Commission should accept the Company’s classification of primary as 100%
7 demand-related, as it has done in the past.

8 *Allocator development- Residential vs. Non-residential Loads*

9 **Q. What is the basis for OSBA’s claim that the Company’s ACOS “appears to**
10 **inequitably double-count non-residential loads”?**

11 A. Mr. Knecht claims that “underground assets reduce the need for poles and overhead
12 conductors”, and therefore “allocation factors for poles and overhead conductors
13 should be adjusted to reflect the fact that some load is served through underground
14 assets”. (OSBA St. 1, p. 15).

15 **Q. Is OSBA correct in this claim?**

16 A. No. For the most part, the overhead system supplies all customer classes except
17 the customers served by the Downtown network. The allocators for the overhead
18 system do, in fact, remove the Downtown network loads and customer counts
19 (Exhibit 6-9E, line 72 for the allocator ‘NCP-Prim-NonNet’ and line 91 for ‘NCP-
20 Sec-NonNet; and Exhibit 6-9A, line 20 for ‘Avg-Cust-NonNet’). And while some
21 underground circuits other than the Downtown network do not use the overhead
22 system, this is insignificant in terms of load or customers, and would be very
23 difficult to quantify.

1 In fact, the allocators reflect the design of the Company's overhead and
2 underground systems to the extent information is reasonably available and
3 significant. First, the underground radial system is fed from the overhead system,
4 but only a small portion of residential load, and none of the Downtown network
5 load, is served directly by the underground radial system; therefore allocators were
6 developed which remove this load and customers ('NCP-Prim-Radial', 'Sec-
7 Radial' and 'Avg-Cust-Radial'). Second, the Underground Residential
8 Development ("URD") conductors are allocated only among the residential classes.

9 **Q. Please summarize your support for the Company's allocation of overhead and**
10 **underground distribution being reasonably representative of the design of**
11 **those systems.**

12 A. The Company's overhead and underground system can and do feed each other,
13 however this is not always the case. Where this is not the case (i.e., Downtown
14 network does not use overhead assets; underground radial supplies very little of
15 residential and none of the downtown network; and URD supplies only residential),
16 separate allocators were developed and applied to the appropriate accounts.

17 Cost Allocation Studies Submitted by OSBA

18 **Q. Should the Commission accept the cost allocation studies submitted by OSBA**
19 **(RDK WP2) and the results shown in Table IEC-2 of Mr. Knecht's testimony?**

20 A. No. Mr. Knecht states that his cost allocation study has the following changes to
21 the Company's ACOS. For each item, I will discuss the error this creates in Mr.
22 Knecht's cost allocation study.

- 23 • The OSBA study classifies a portion of Primary as customer-related and
24 allocates based on customer counts. As noted above, there is no customer
25 component of the Company's primary system.

- 1 • In addition, the customer component of primary assumed in the OSBA
2 study is likely too high, if one were to make that computation. (As noted
3 above, a minimum system study can be performed mechanically even if the
4 results are meaningless.) The OSBA study reflects a customer portion of
5 primary equal to 50% of the customer portion of secondary. However,
6 because most of the Company's primary system has been converted to
7 23kV, a minimum system study for primary would likely produce a much
8 smaller customer component.
- 9 • OSBA's study uses the same demand allocators for all parts of the system,
10 except for the Downtown network. That is, rather than fixing what he has
11 identified as an issue, OSBA makes it worse by simply ignoring the fact that
12 portions of the overhead and underground networks have different usage
13 characteristics (as noted above, Downtown network does not use overhead
14 assets; underground radial supplies very little of residential and none of the
15 Downtown network; and URD supplies only residential). OSBA supports
16 this treatment by claiming that other utilities in the Commonwealth use the
17 same allocators for all parts of their systems, however this is not a reason to
18 ignore the care that the Company has taken in its ACOS by developing
19 specific allocators for different portions of its system. Most notably, OSBA
20 does not adjust the underground radial to reflect that it serves only a very
21 small portion of residential and none of the downtown network. This
22 allocates a very large portion of underground radial to residential, which is
23 not correct.

1 proportionately throughout the service area, then no portion of costs are customer-
2 related and the secondary system is 100% demand -related.

3 **Q. Is Mr. Watkins correct?**

4 A. No. The Company classifies a portion of Secondary Distribution plant as customer-
5 related because that reflects cost causation - the cost to design and install the system
6 is affected by the number of customers.

7 First, the Commission has long-recognized this cost-causation relationship,
8 for the Company and other utilities, and has denied prior attempts by OCA to
9 classify secondary as 100% demand related; to my knowledge, OCA's claim has
10 never been affirmed by this Commission.

11 Second, Mr. Watkins did not provide any empirical data to support his claim
12 that the only justification for a customer-related portion of the distribution system
13 is to recognize differences in customer density. In addition, he did not present any
14 evidence that the minimum system approach used by the Company in this
15 proceeding and widely accepted, is flawed.

16 Third, contrary to Mr. Watkins' assertion, the Company's cost allocation
17 studies (summarized on Exhibits 6-9B and 6-9C) do reflect differences in customer
18 densities among rate classes. The portion of the system that supplies Underground
19 Residential Developments ("URD") was allocated only to residential rate classes.
20 The portion of the system that supplies the Downtown Network, which serves
21 almost exclusively non-residential load, was allocated only to non-residential rate
22 classes.

1 Fourth, Mr. Watkins' assertion that the classification of a portion of the
2 Secondary Distribution system as customer-related is an '*a priori assumption*' is
3 wrong. The number of customers that are connected to the Secondary Distribution
4 system is an important consideration in the design and installation, and has a
5 significant effect on cost. The fact that the end points of the secondary system are
6 in fact customer installations illustrates this point.

7 Finally, Mr. Watkins claims to rely on Professor Bonbright's authoritative
8 book, Principles of Public Utility Rates. However, Professor Bonbright *clearly*
9 *rejected* Mr. Watkins' proposal to classify the minimum system component on a
10 demand basis, when he wrote, "While...inclusion of the costs of the minimum-
11 sized distribution system among the customer-related costs seems to us clearly
12 indefensible, *its exclusion from the demand-related costs stands on much firmer*
13 *ground*' (italics added) (*Principles of Public Utility Rates*, Bonbright et al., pp. 491-
14 492). In other words, Professor Bonbright is saying that the cost of the minimum
15 system should not be allocated on a demand basis. In his testimony, Mr. Watkins
16 advocates for *inclusion* of the minimum system in demand-related costs, exactly
17 what Professor Bonbright argued against. Mr. Watkins cannot simultaneously both
18 rely upon and contradict the same authoritative source.

19 **Q. Does Mr. Watkins offer any evidence contrary to the long-standing regulatory**
20 **support for use of a minimum system study to classify distribution plant?**

21 A. No. DLC's approach is consistent with recent cases decided by the Commission.
22 In the following cases, the utility used a minimum system or zero intercept study to
23 determine the customer-related component of secondary distribution, and the
24 Commission accepted the utility's classification on this basis: PPLElectric Utilities

1 Corporation at Docket R-2012-2290597; UGI Utilities at Docket R-2017-2640058;
2 Citizens' Electric Company of Lewisburg, PA at Docket R-2019-3008212 and
3 Wellsboro Electric Company at Docket R-2019-3008208. In each case, the utility
4 classified a portion of secondary distribution as customer-related, the OCA
5 objected, and the Commission sustained the position of the utility.

6 **Q. Does Mr. Watkins offer any evidence contrary to the long-standing theoretical**
7 **support for use of a minimum system study to classify distribution plant?**

8 A. No. DLC's approach is consistent with the NARUC Manual, which states:

9 Distribution Plant Accounts 364 through 370 involve demand and
10 customer costs. The customer component of distribution facilities is
11 that portion of costs which varies with the number of customers.
12 Thus, the number of poles, conductors, transformers, services and
13 meters are directly related to the number of customers on the utility's
14 system (NARUC Manual, p. 90).

15
16 Mr. Watkins identifies several factors which he claims are weaknesses of the
17 minimum system approach (OCA St. 3, pp. 27-28); namely, that distribution
18 equipment is sized to provide redundancy, safety and reliability, and that
19 purchasing alternatives are present and purchases by the utility reflect economies
20 of scale. These are not weaknesses, they are practical considerations that exist
21 precisely because the minimum system study must be carefully designed to reflect
22 the design and installation practices of the utility. As noted in the NARUC Manual,
23 pp. 91-92, the minimum size for each component is that "currently being installed".
24 This permits the analyst to customize the study for the design of each utility's
25 distribution system.

1 **Q. What comment did Mr. Watkins's have regarding the Peak Load Carrying**
2 **Capacity of the minimum system?**

3 A. Mr. Watkins states that the Company's minimum system study did not recognize
4 the load carrying capability of the minimum system except for Line Transformers
5 (Ibid, p. 27-28).

6 **Q. What is the purpose of the Peak Load Carrying Capacity adjustment?**

7 A. As discussed in my direct testimony, the minimum size components developed for
8 the Secondary Distribution system have the ability to carry a portion of peak load
9 (the Peak Load Carrying Capacity, or "PLCC"). Therefore, the PLCC of OH
10 Transformers and Radial Transformers was removed in computing the allocator for
11 the Secondary-Demand classified portion of those assets.

12 **Q. Please respond to Mr. Watkins' comments on the PLCC adjustment?**

13 A. First, I note that Mr. Watkins did not find any fault with the calculation or
14 application of the PLCC to Line Transformers.

15 The PLCC adjustment was made for OH Transformers and Radial
16 Transformers, comprising more than 60% of Secondary Demand plant; the effect
17 on the results of the ACOS was small.

18 The PLCC adjustment was not made for other Secondary Demand plant
19 (accounts 364-367) because the detailed information needed was not readily
20 available, and because the net book value of the demand-classified portion of
21 secondary is less 20% of the net book value of total secondary for those accounts,
22 therefor the effect on ACOS results would be small.

23 Mr. Watkins' criticism is unfounded.

1 **Q. Does Mr. Watkins' view reflect how Duquesne Light designs and installs**
2 **secondary distribution plant?**

3 A. No. Duquesne Light installs secondary distribution plant primarily to serve
4 residential customers. The secondary system is supplied by the primary system and
5 in turn, connects to customers or to very localized areas (e.g., a street). The end-
6 points of the secondary system attach to customers or to very localized areas, and
7 the cost of the system is largely driven by the number of customers connected.
8 Once connected, the capacity of the conductor is sufficient to meet the peak load in
9 most cases. This makes intuitive sense - even if the Company were to install a
10 string with no load capacity, most of the costs (design and labor) would remain,
11 and the number of endpoints would be a significant factor in determining the total
12 the cost. Upgrading to a conductor that has the capacity to meet peak loads would
13 add only a small amount to costs.

14 Duquesne Light installation standards allow loads up to 50 kVa to be served
15 by an overhead conductor and up to 150 kVa by an underground conductor, with a
16 higher limit in the Downtown Network. Duquesne Light views the cost as fixed up
17 to 50 kVa / 150 kVa of capacity. Most customers can be served by 50 kVa / 150
18 kVa minimum size. It is only beyond those limits that costs are variable with
19 demand. Mr. Watkins' view does not reflect how Duquesne Light designs and
20 installs secondary distribution plant.

21 **Q. Please summarize the types of information provided to you by DLC.**

22 A. DLC made available field engineers, and provided detailed records of purchases of
23 conductors, cost information on every line transformer on its system and detailed

1 information on meter costs and service drops. DLC also provided hourly load data
2 for 2005-2019.

3 **Q. Did Mr. Watkins identify any errors in the computation of the customer**
4 **component of secondary distribution plant reflected in DLC Exhibit 6-9?**

5 A. No. In discovery, Mr. Watkins requested, and DLC provided, all the workpapers
6 that support the customer component computed for DLC. Mr. Watkins did not
7 identify any errors in the computations.

8 **Q. Please comment on Mr. Watkins' citation of the December 2000 NARUC**
9 **report, Charging for Distribution Services: Issues in Rate Design.**

10 A. Mr. Watkins's conclusion from this report is that the facts specific to each utility
11 should drive the determination of whether there is a customer component of
12 distribution plant. He then claims there should be no customer component because
13 that is what most states do. These statements are contradictory - in the same
14 paragraph he advises us to follow the needs of the specific utility, and also to follow
15 the crowd.

16 As discussed above, the classification of a portion of the Company's
17 Secondary Distribution system as customer-related does reflect the facts as to how
18 the system is designed and installed, and the costs of doing so.

19 **Q. Please summarize your rebuttal to Mr. Watkins' criticism of the Company's**
20 **ACOS.**

21 A. Mr. Watkin's criticism is based on his belief that there is no customer component
22 to secondary distribution. The Company's ACOS has a customer component of
23 secondary distribution. This treatment reflects cost causation because the cost is
24 affected in large part by the number of customers connected. The Company's
25 position reflects design considerations and is consistent with Commission

1 precedent for the Company and for other utilities. The Commission should reject
2 Mr. Watkins' position and should accept the Company's ACOS.

3

4 Cost Allocation Study Submitted by OCA

5 **Q. Please describe the allocated cost of service study submitted by Mr. Watkins.**

6 A. Mr. Watkins presented the results of an alternative allocated cost of service study,
7 where he classified both primary and secondary distribution plant as 100% demand-
8 related. The class rates of return produced by his study are presented in his Table
9 7 (OCA St. 3, p. 32). He also presents Table 8, which shows the average of class
10 returns using the Company's ACOS and his ACOS.

11 **Q. Should the Commission accept the allocated cost of service study submitted by**
12 **Mr. Watkins, classifying all distribution plant as 100% demand-related?**

13 A. No. As I explain above, the methodology used in that study, which classified both
14 primary and secondary distribution plant as 100% demand-related, is not supported
15 by cost causation, Commission precedent or regulatory history. The Commission
16 should reject the study presented by Mr. Watkins in Table 7.

17 **Q. For purposes of revenue allocation, should the Commission consider the**
18 **results of Mr. Watkins' study presented in his Table 7, or the average of his**
19 **results and the Company's presented in his Table 8?**

20 A. No. Both sets of returns are materially affected by Mr. Watkins' cost allocation
21 study, which is incorrect and should be rejected by the Commission. Therefore, the
22 Commission should also reject Mr. Watkins' proposed revenue allocation (OCA
23 St. 3, Table 10, p. 35) because it relies on his class cost of service results.
24 Commission should use the Company's ACOS as the basis for revenue allocation.

25

26 Customer Charges for Residential Classes

1 **Q. What comments did Mr. Watkins have on the proposed customer charge for**
2 **residential customers?**

3 A. Mr. Watkins computes a residential customer charge of \$8.56 to \$8.82 per month
4 and recommends no change to the current \$12.50 charge. (OCA St. 3, p. 41).

5 **Q. Is Mr. Watkins's residential customer charge analysis correct?**

6 A. No. Mr. Watkins's analysis, presented at GAW-5, excludes several items that are
7 appropriately included in the customer charge. The Commission stated in the Aqua
8 Pennsylvania base rate case at Docket No. R-0038805 ("Aqua") that certain indirect
9 costs may be included in the customer charge. The customer charge analysis
10 presented in Exhibits 6-4A through 6-4F and summarized on Exhibit 6-4 follows
11 the Commission's Order in the PPL 2012 case which was based on the Aqua Order.

12 **Q. What costs did Mr. Watkins propose to remove from the customer charge?**

13 A. The items Mr. Watkins removed were:

- 14 • Amortization of deferred costs for FOCUS, metering and billing, \$28.1
15 million or \$4.73 per residential customer-month (Company included on
16 Exhibit 6-9A, line 24), and
- 17 • Costs related to direct labor - A&G account 921 costs, \$15.2 million,
18 Depreciation of general plant, \$5.5 million, and Maintenance of general
19 plant, \$2.5 million, totaling \$23.2 million or \$3.89 per residential customer-
20 month (included on Company Exhibit 6-9A, line 25).
- 21 • Other items aggregating \$2.0 million, or \$0.33 per residential customer-
22 month
- 23 • Gross receipt tax on the above, \$3.3 million or \$0.55 per residential
24 customer-month.

1 **Q. Is it appropriate and consistent with Commission policy to include FOCUS,**
2 **metering billing, and costs related to direct labor, in the customer charge?**

3 A. Yes, these costs are necessary to perform the clearly customer-related activities of
4 metering and billing. FOCUS program (related to billing) and other metering and
5 billing costs are attributable to customers on a per-customer basis, whether
6 recovered currently or on a deferred basis. The Company incurred these costs to
7 automate and to improve meter reading and billing, activities that are and clearly
8 customer-related, and allocated and recovered on a per-customer basis. Other costs
9 (A&G, and depreciation / maintenance of general plant) are necessary to support
10 the direct labor costs associated with connecting customers and with metering and
11 billing; for example, it would not be reasonable or equitable to include meter repair
12 direct labor without also including the necessary support costs.

13 **Q. Did other witnesses discuss the residential customer charge?**

14 A. Yes. OCA witness Colton, CAUSE-PA witness Geller and PWPTF witness Brady
15 each objected to some aspect of the proposed residential customer charges.
16 I&E witness Sakaya found that customer cost components claimed by the Company
17 are materially correct, and proposed a scale back if needed.
18 Mr. Ogden addresses these witnesses' claims in his rebuttal testimony.

19
20 **Q. Does this conclude your rebuttal testimony at this time?**

21 A. Yes.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 16-R**

Rebuttal Testimony of David B. Ogden

Date: July 26, 2021

1 **REBUTTAL TESTIMONY OF DAVID B. OGDEN**

2

3 **Q. Please state your full name and business address.**

4 A. My name is David B. Ogden. My business address is Duquesne Light Company, 411
5 Seventh Avenue, Pittsburgh, PA 15219.

6

7 **Q. What is your position at Duquesne Light Company?**

8 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”) as the
9 Manager, Rates and Tariff Services.

10

11 **Q. Did you previously submit direct testimony in this proceeding on behalf of the**
12 **Company?**

13 A. Yes. I submitted my direct testimony, Exhibit 5, Statement No. 16, on April 16, 2021.

14

15 **Q. What is the purpose of your rebuttal testimony regarding Duquesne’s proposed**
16 **general base rate increase?**

17 A. My rebuttal testimony will respond to the following issues raised in the direct testimony of
18 intervening parties in this proceeding:

19

20 1. The rate class revenue allocation proposals presented by the Office of Consumer
21 Advocate (“OCA”) witness Glenn A. Watkins, Statement No. 3, the Office of Small
22 Business Advocate (“OSBA”) witness Robert Knecht, Statement No. 1, and by the

1 Bureau of Investigation and Enforcement (“I&E”) witness Eryan Sakaya, Statement
2 No. 3.

3 2. Rate design issues regarding the residential fixed customer charge raised by OCA
4 witness Watkins.

5 3. Rate design issues regarding the residential fixed customer charge as it relates to bill
6 impacts for low income customers raised by OCA witness Roger Colton, Statement
7 No. 4, Pennsylvania Weatherization Providers Task Force (“PWPTF”) witness Eugene
8 Brady, Statement No. 1, and the Coalition for Affordable Utility Services and Energy
9 Efficiency in Pennsylvania (“CAUSE-PA”) witnesses Harry Geller, Statement No. 1.

10 4. Rate design issues regarding non-residential fixed customer charges raised by I&E
11 witness Sakaya.

12 5. Rate design questions raised by OSBA witness Knecht.

13 6. Certain issues related to the Company’s proposed Federal Tax Adjustment Charge
14 (“FTAC”) raised by I&E witness Wilson and OCA witness Morgan.

15 7. Updated Default Service cost recovery Schedule.

16
17 **Q. Are you sponsoring any exhibits, parts of exhibits or responses to the Commission’s**
18 **filing requirements as part of your rebuttal testimony?**

19 A. Yes. I am sponsoring the following exhibit: Exhibit DBO-1-R, which contains an updated
20 unbundling schedule.

21
22 **I. REVENUE ALLOCATION**

23
24 **Q. Is the Company presenting an updated revenue allocation in this proceeding?**

1 A. Yes. Company witness Gorman presented an updated Distribution revenue requirement of
 2 \$653,910,000, indicating a Distribution increase of \$85,528,000 (Exhibit 6-1(R)). Table
 3 DBO-1(R) below presents the Company’s updated revenue allocation, as well as the
 4 measures used by the Company and proposed by the parties.
 5

Table DBO-1(R)											
Class	Revenue increase-Proposed	Relative increase-Proposed	Relative return-Present	Relative return-Proposed	Closer to unity?	Subsidy (receive) pay-Present	Subsidy (receive) pay-Proposed	Improved?	Susbdy % revenue-Present	Susbdy % revenue-Proposed	Improved?

6
 7 **Q. Does the updated proposed revenue allocation meet the objectives that the Company**
 8 **presented in your direct testimony, Statement 16, and discussed by other parties?**

9 A. Yes. The revenue allocation objectives are:
 10
 11
 12
 13
 14
 15
 16

- The proposed revenue allocation produces the required Distribution increase.
- Each class is moved closer to cost of service on a relative return basis, except for Rate RS, which is currently very close to cost of service and remains close to cost of service at the proposed revenue allocation.
- Increases are limited to 1.5X times the average increase of 15.54%.
- Overall, with the exception of RS and GLH, the Company was also able to meet the OSBA’s “dollar value of subsidies” and OSBA’s “R-C ratio” measure. Rate

1 GLH is receiving a slightly larger subsidy due to limiting increases to 1.5X
2 average. Rate RS is discussed below.
3

4 **Q. Please summarize the parties' positions regarding the Company's proposed revenue
5 allocation.**

6 A. OCA and OSBA oppose the Company's proposed revenue allocation in favor of allocation
7 methods that preference the respective customer classes they each represent. I&E did not
8 oppose the Company's revenue allocation methodology. In addition, OCA and I&E
9 propose scale-back revenue allocations if the Commission authorizes an overall increase
10 less than the amount originally requested by the Company. Regarding scale back, OSBA
11 recommended only that if the Company's overall increase is reduced, the reduction for
12 Rate Class GS should be applied primarily to the energy charge, thereby retaining the
13 Company's customer charge proposal.
14

15 **Q. What is your general response to the revenue allocations proposed by OCA and
16 OSBA?**

17 A. The Company's proposed revenue allocation is impartial and does not favor any rate class
18 or customer group, whereas the revenue allocations proposed by OCA and OSBA each
19 favor their respective customer groups, at the expense of other customer groups. The
20 Company's proposed revenue allocation carefully balances the primary objectives of
21 moving each rate class closer to the full cost of service on a relative return basis, and
22 mitigating rate shock (i.e., the concept of gradualism) by limiting the distribution revenue
23 increase to each rate class at 1.5 times the overall system average increase.

OCA Proposed Revenue Allocation

Q. Do you agree with OCA witness Watkins’s proposed revenue allocation?

A. No. Critically, for revenue allocation (OCA St. 3, Table 10, p. 35), OCA relies on the average results of its own class cost of service study (OCA St. 3, Table 7, p. 32) along with Mr. Gorman’s study in evaluating class revenue responsibility. Company witness Mr. Gorman testified that the OCA study is fatally flawed, in large part because there is no customer component for secondary distribution (DLC St. 15-R, pp. 11-13), which for residential customers under-allocates costs and overstates returns at present rates. Therefore it would be highly inappropriate and incorrect to use OCA’s class cost of service study for revenue allocation. The Commission should reject the OCA’s proposed revenue allocation.

OSBA Proposed Revenue Allocation

Q. Do you agree with the OSBA’s proposed revenue allocation?

A. No. Critically, for revenue allocation (OSBA St. 1, p. 18, lines 22-24), OSBA relies on the results of its own class cost of service study (RDK WP-2, Table IEc-2). Company witness Mr. Gorman testified that this study is fatally flawed, in large part because it significantly over-allocates costs and understates returns at present rates to residential customers due to its incorrect treatment of the underground radial system (DLC St. 15-R, p. 8, lines 1-17). Therefore, it would be highly inappropriate and incorrect to use OSBA’s class cost of service study for revenue allocation. The Commission should reject the OSBA’s proposed revenue allocation.

22
23

Q. What measures does OSBA recommend to evaluate a proposed revenue allocation?

A. OSBA would eliminate the Commission’s use of relative returns as a measure of how well a particular revenue allocation moves classes toward cost of service. Instead, OSBA supports measuring revenue allocation using the “dollar value of subsidies” measure. However, OSBA opines that the “dollar value of subsidies” measure can also produce misleading results, and adds its “R-C ratio” as another measure. (OSBA St. 1, p. 19, lines 23-25 and p. 20, lines 7-10).

Q. Is there a single measure of the results of revenue allocation that should be used?

A. The Company and the Commission have historically used the ‘relative return’ method, which is a reasonable approach to revenue allocation. However, I agree that other measures may also be useful in informing revenue allocation. Mr. Knecht believes the “relative return’ measure is flawed, and he proposed the “dollar value of subsidies” measure. However, he noted that this measure can produce misleading results, so he added a new measure, the “R-C” measure. (OSBA St. 1, p. 19, lines 23-25 and p. 20, lines 7-10). The Company used all three measurements in Table DBO-1(R) above.

Q. Please summarize your discussion of the OSBA revenue allocation proposal.

A. OSBA relies on a fatally flawed cost allocation study; therefore its revenue allocation must be rejected *ab initio*.

Mr. Knecht acknowledges that “the Company’s revenue allocation proposal is reasonably consistent with its ACOS results” and the changes he believes are needed to

1 address the Company's revenue allocation are "relatively modest" (OSBA St. 1, p. 20, lines
2 18-20). Therefore the Company's revenue allocation proposal should be accepted by the
3 Commission if the full increase requested is authorized by the Commission, and the
4 Company's proposal should be the basis for any scale back if the Commission authorizes
5 a lower increase.

6
7 Scale Back Proposals

8 I&E Scale Back

9 **Q. How did I&E approach revenue allocation?**

10 A. I&E witness Mr. Sakaya implicitly accepts the Company's ACOS for revenue allocation
11 purposes. He did not propose an alternative revenue allocation for the Company's full
12 requested increase.

13 Mr. Sakaya did propose a revenue allocation scale back approach for two scenarios.
14 His first proposal (I&E Exhibit No. 3, Schedule 2) would apply if the Commission reduces
15 the Company's request by \$16 million. Mr. Sakaya also proposed a scale back (I&E
16 Exhibit No. 3, Schedule 3) if the Commission reduces the Company's request by \$45
17 million.

18 Mr. Sakaya further suggests that the proposed Residential customer charge should
19 be included in any scale back allocated to the Residential class. His justification is to
20 reduce the impact of the overall increase on low usage customers by scaling back the
21 Residential customer charge proportionally to the percentage increase granted to the
22 Residential class. (I&E Statement No. 3, p. 17, lines 8-9).

1 **Q. Please discuss I&E’s revenue allocation scale back proposals.**

2 A. Because cost of service is the “lodestar” of revenue allocation, revenue allocation proposals
3 can be evaluated only when an underlying class cost of service analysis has been
4 completed, reflective of the final revenue requirement. The Company believes that I&E’s
5 scale back proposals should be evaluated using the measures shown in Table DBO-1(R)
6 (relative return, dollar subsidy, and R-C), when the final revenue requirement is known
7 and cost of service analysis is completed.

8

9 OCA Scale Back

10 **Q. Please summarize OCA witness Watkins’ recommended scale-back.**

11 A. OCA witness Watkins recommends that his proposed class revenue allocation be scaled-
12 back proportionately across all classes such that those classes with no change in revenues
13 (HVPS) will sustain no change in rates and each class with a recommended increase will
14 be scaled-back proportionately (OCA St. No. 3, p. 37, lines 20-26).

15

16 OSBA Scale Back

17 **Q. Please summarize OSBA witness Knecht’s recommended scale-back.**

18 A. OSBA witness Knecht only provides a recommendation for Rate GS, and states that if the
19 Company’s overall increase is scaled back, the scale back should be applied primarily to
20 the energy-based volumetric charge, thereby retaining the Company’s customer charge
21 proposal. This recommendation is addressed below in section IV. Rate Design.

22

23 Company Position on Scale Back

1 **Q. What is the Company’s proposed position on Scale Back?**

2 A. If the Commission authorizes an overall increase less than the amount requested, the
3 Company would first prepare a fully allocated cost of service study. Then the Company
4 would scale back the revenue allocation for each rate class using a combination of
5 proportional reductions and judgmental adjustments. The Company would limit the
6 distribution revenue increase for each rate class to 1.5 times the overall system average
7 increase, and would use the measures shown in Table DBO-1(R) to evaluate the revenue
8 allocation-relative returns, dollar values of subsidies and R-C.

9 Regarding the scale back specific to the customer charge, the Company would
10 continue to request the proposed customer charge, so long as it continues to be supported
11 within the Company’s ACOS (e.g. Exhibit 6-3 and Exhibit 6-4).

12

13 **II. RESIDENTIAL CUSTOMER CHARGE**

14

15 **Q. Please summarize the party’s issues regarding the proposed residential customer**
16 **charge.**

17 A. I&E witness Sakaya has testified that the Company’s proposed customer charge is
18 supported by a customer cost analysis that includes direct customer costs as well as some
19 indirect customer costs. Witness Sakaya did not submit a proposed customer cost analysis
20 in this case, and acknowledged that any changes he would have proposed would not have
21 resulted in customer costs that differed materially to those proposed by the Company (I&E
22 St. No. 3, pp 7-8).

1 OCA witness Watkins proposes an alternative residential customer cost analysis to
2 develop the monthly customer charge. Mr. Watkins recommends the Company maintain
3 the current customer charge of \$12.50 (OCA St. No. 3, p. 41, lines 35-38 and p. 42, lines
4 1-7).

5 OCA witness Colton objects to the Company proposing to increase the residential
6 customer charge from \$12.50 per month to \$16.25 per month. His concerns center mostly
7 on his beliefs regarding the effects of a higher customer charge on low income customers,
8 including CAP and non-CAP customers. (OCA St. 4, p. 24, lines 28-35 and p. 25, lines 1-
9 2). Witness Colton recommends Mr. Watkins's customer charge proposal be adopted
10 (OCA St. No. 4, p. 41, lines 13-16).

11 PWPTF witness Brady opposes any increase to the monthly customer charge.
12 Witness Brady believes that the Company's proposal to increase the fixed cost could
13 discourage conservation and impact a customer's ability to save money through
14 conservation (PWPTF St. No. 1, p. 4, lines 4-13).

15 CAUSE-PA witness Geller recommends that the Company's proposal to increase
16 the residential customer charge from \$12.50 per month to \$16.25 per month be rejected.
17 Mr. Geller avers that the increase in a fixed charge will undermine the ability of consumers
18 to control costs through energy efficiency, conservation, and consumption reduction
19 (CAUSE-PA St. No. 1, p. 25, lines 14-16).

20
21 **Q. Are the monthly customer charge computations developed by Mr. Watkins consistent**
22 **with Commission policy and precedent?**

1 A. No. Mr. Gorman shows that the alternative computations of customer charge put forth by
2 Mr. Watkins is not consistent with Commission policy and precedent because they fail to
3 include cost items that are directly related to and necessary for metering and billing. Mr.
4 Watkins's computations should therefore be rejected by the Commission. (DLC Statement
5 15R, p. 19, lines 9-15).

6

7 **Q. Do you agree with the positions of OCA, PWPTF, and CAUSE, that the increase in**
8 **the residential monthly customer charge is inappropriate for low income customers?**

9 A. No. First, as discussed above, Mr. Gorman shows that the alternative computations of
10 customer charges put forth by Mr. Watkins are not consistent with Commission policy and
11 precedent and should be rejected by the Commission.

12 Second, the Company incurs the costs that are included in the monthly customer
13 charge regardless of whether the customer uses electricity or not, and regardless of the level
14 of usage. It is important that all customers pay their share of the costs they cause. While
15 it is true that customers cannot reduce the monthly customer charge by reducing
16 consumption, residential customers can still continue to reduce their variable (kWh)
17 portion of their total bill by reducing consumption. The variable portion of an average
18 residential non-heating customer at both current and proposed rates are within the range of
19 85-87% of the total bill. The variable portion of an average residential heating customer
20 at both current and proposed rates are within the range of 89-90% of the total bill.

21

22 **Q. What are the consumption levels for residential customers in the Company's service**
23 **area?**

1 A. Average monthly residential non-heating customer and residential electric heating
2 customer consumption is summarized below that evidences the average monthly
3 consumption for the past two years, for the 12-month period ending April 2021 and April
4 2020.

5
6 Table No. 1 Average Residential Monthly Consumption (kWh)
7 12 Months Ended April 2021
8

	CAP	Confirmed Low- Income, Non- CAP	Non-Low Income
Non-Heating	718	709	628
Heating	1,021	983	856

9
10 Table No. 2 Average Residential Monthly Consumption (kWh)
11 12 Months Ended April 2020
12

	CAP	Confirmed Low- Income, Non- CAP	Non-Low Income
Non-Heating	667	626	584
Heating	960	884	802

13
14 **Q. What do you conclude from the data in Table No. 1 and Table No. 2?**

15 A. The data in Table No. 1 and Table No. 2 are consistent with Company experience that its
16 CAP customers, and its low-income customers in general, tend to have above-average
17 consumption compared to its non-low income residential customers. Accordingly, Mr.
18 Colton is incorrect in his statement that low-income customers, on average, are likely to
19 live in homes that consume lower levels of electricity and to be low-use customers (OCA
20 St. 4, p. 41, lines 7-11).

1 **Q. Would low income customers be better off at the current customer charge versus the**
2 **customer charge and rate design proposed by the Company?**

3 A. No. On average, the Company's low-income customers would pay more if the current
4 customer charge remained at \$12.50 and the increase was applied solely to the volumetric
5 charge. This is particularly true for low-income customers not enrolled in CAP, but applies
6 also to CAP customers inasmuch as it may cause CAP customers to exhaust their maximum
7 annual discount sooner, and would increase those customers' total bills for the remainder
8 of the year.

9
10 **Q. Please explain why CAP and confirmed low-income customers are better off under**
11 **the Company's proposed residential rate design.**

12 A. The Company has proposed a residential rate design of \$16.25 per month customer charge
13 and a usage charge of 7.0564 cents per kWh at the proposed revenue increase. If the current
14 monthly customer charge of \$12.50 per month were to remain unchanged, the variable
15 charge would need to be 7.7060 cents per kWh to achieve the target revenue at the
16 Company's proposed revenue allocation. Table No. 3 sets forth the distribution bill
17 impacts for non-heating residential customers at the average usage levels shown in Table
18 No. 1. And Table No. 2.¹

19
20
21
22
23

¹ The monthly CAP bill impacts are exclusive of the CAP discount, and are meant to reflect the full tariff rates once a CAP customer were to exceed their annual maximum discount.

1
2
3

Table No. 3 Customer Charge Comparison and Monthly Bill Impacts for the period 12 Months Ended April 2021

		<u>CAP</u>	<u>Confirmed Low-Income, Non-CAP</u>	<u>Non Low-Income</u>
Average kWh/month (1)		718	709	628
<u>OCA Proposal</u>				
Fixed/month	\$12.50	\$67.83	\$67.14	\$60.89
Variable/kWh (2)	\$0.077060

(1) May-19 through Apr-20				
(2) Calculated by Company to achieve target revenue at Company's proposed revenue allocation.				

9
10
11

Table No. 3 and Table No. 4 both demonstrate that over the course of the past two years, the Company's rate design will result, on average, in lower costs for CAP and confirmed

1 low-income customers relative to non-low income customers as compared to the OCA's
2 proposal. The Company's proposed rate design will benefit CAP customers because it will
3 lower their budget bill amount and lower their deficiency. A lower deficiency will benefit
4 all non-CAP ratepayers because it will reduce the amount for the Company to recover
5 through its Universal Service Charge. Further, the Company's proposed customer charge
6 does not eliminate the benefits of conserving. As shown by the Non-Low Income average
7 charges, both CAP and Confirmed Low-Income customers can achieve savings by
8 reducing usage. For these reasons, the rate design proposed by the Company should be
9 accepted.

11 **II. NON-RESIDENTIAL CUSTOMER CHARGE**

13 **Q. Please summarize the party's issues regarding the proposed non-residential customer**
14 **charge.**

15 A. I&E witness Sakaya has testified that the Company's current and proposed non-residential
16 customer charge for rate class GM>25 kW and rate class GMH exceeds the monthly
17 customer cost determined by the company. (I&E St. No. 3, page 11, lines 3-4). It should
18 be pointed out that witness Sakaya has appeared to have mistakenly misconstrued GM<25
19 and GM>25 when making his recommendations. Witness Sakaya states "GM<25kW
20 customer charge is not supported by the Company's customer costs analysis." (I&E St. 3,
21 page 9, lines 14-15). He continues to state "GM>25kW customer charge is supported by
22 the Company's customer cost analysis." (I&E St. 3, page 10, lines 1-2). He then
23 recommends that the GM>25kW monthly customer charge (the same charge whose

1 increase he stated is supported by the Company's customer cost analysis) not be increased.
2 (I&E St. 3, page 10, lines 21-22). Therefore, the Company believes that witness Sakaya
3 meant to reference rate class GM<25 kW and not GM>25kW when making his
4 recommendation.

5
6 **Q. Do you agree with I&E witness Sakaya's recommendation that rate class GM<25**
7 **monthly customer charge not be increased?**

8 A. No. The Company's proposals reflect cost as supported within Duquesne Light's ACOS.
9 As described in my direct testimony, the Company first used the customer-charge costs
10 identified in Exhibits 6-4C and 6-4D and the demand-related costs identified in Exhibit 6-
11 3, to establish the fixed monthly charges. The charges include the first 5 kW of demand.
12 (DLC St. No. 16, page 14, lines 15-17). The Company's proposed fixed charge of \$63.00
13 per month is less than the demand cost per kW for Rate GM<25 of \$11.68 (Exhibit 6-3),
14 times 5 kW (\$58.40), plus the customer-related costs of \$37.46 (Exhibit 6-4C), for a total
15 fixed charge of \$95.86. As such, witness Sakaya's recommendation, as the Company
16 understands it, should not be accepted.

17
18 **Q. Do you agree with I&E witness Sakaya's recommendation that rate class GMH**
19 **monthly customer charge not be increased?**

20 A. No. Similar to the answer given above, the Company's proposals reflect cost as supported
21 within Duquesne Light's ACOS. As described in my direct testimony, the Company first
22 used the customer-charge costs identified in Exhibit 6-4E and the demand-related costs
23 identified in Exhibit 6-3, to establish the fixed monthly charges. The charges include the

1 first 5 kW of demand. (DLC St. No. 16, page 15, lines 9-11). The Company's proposed
2 fixed charge of \$63.00 per month is less than the weighted average demand cost per kW
3 for Rate GMH of \$11.84 (Exhibit 6-3), times 5 kW (\$59.20), plus the customer-related
4 costs of \$51.36 (Exhibit 6-4E), for a total fixed charge of \$110.56. As such, witness
5 Sakaya's recommendation should not be accepted.

7 **IV. RATE DESIGN**

9 GMH and GLH

10 **Q. Did Mr. Knecht's testimony pose questions on rate design for GMH and GLH?**

11 A. Yes. The Company's GMH and GLH rate classes are heating classes. Customers on these
12 rates are customers that would otherwise be in the GM<25, GM≥25 or GL classes
13 respectively, but whose sole method of heating is electricity. Mr. Knecht posed several
14 questions, which I address immediately below.

16 **Q. Please respond to Mr. Knecht's question as to why the Company should retain
17 separate heating classes. (OSBA St. 3, p. 4)**

18 A. The Company has had electric space heating rates for over 40 years, to serve customers
19 whose load profiles differ from the non-heating classes. Rates GMH has had class NCP's
20 in the winter each year 2005-2019, and rate GLH has had a class NCP in the winter in 13
21 of the past 15 years, and each year since 2013. The Company believes that having separate
22 heating classes allows rate design to be tailored to these customers' load profiles. The
23 Company would recommend that any future change to tariff structure or rate design be

1 revenue neutral to the Company, and be carefully evaluated as to bill impacts on individual
2 customers.

3
4 **Q. Please respond to Mr. Knecht's question as to why the heating classes have no winter
5 demand charges, although they are generally winter-peaking. (OSBA St. 3, pp. 4, 26)**

6 A. For the heating classes, the winter charges are based on energy (kWh) and not on demand
7 kW). This stabilizes revenue for the Company and costs for customers, because winter
8 demand for heating customers can fluctuate significantly based on weather. As noted
9 above, the non-coincident peak used to allocate demand-related distribution costs occurs
10 predominantly in the winter months. The winter kWh rates reflect the higher load factor
11 for the heating classes as compared to the general service classes. The Company would be
12 amenable to undertaking an internal review process to evaluate all or some of the following
13 for potential consideration in a future rate case: 1) winter demand charge for heating
14 classes, 2) phase out and merge the heating classes into non-heating classes, 3) closing the
15 heating classes to new customers. The Company would take into consideration customer
16 bill impacts along with customer satisfaction.

17
18 GS Class

19 **Q. What is Mr. Knecht's position on rate design for GS (OSBA St. 3, p. 24)?**

20 A. Mr. Knecht testified that the Company's proposed GS customer charges, although they
21 would be increases over the present rates, would still be well below direct customer-related
22 costs. He also testified that the Company's proposed customer charges are lower than those
23 of nearby utilities, and its kWh charges are higher. He recommends that any scale back of

1 the revenue allocated to GS be enacted by reducing the proposed kWh charge and keeping
2 the Company's proposed customer charge.

3
4 **Q. Do you agree with Mr. Knecht?**

5 A. For the reasons that Mr. Knecht stated, the Company agrees that any scale back of the
6 revenue allocated to GS be enacted by reducing the proposed kWh charge and keeping the
7 Company's proposed customer charge.

8
9 *GM<25 and GM≥25 Classes*

10 **Q. What were Knecht's comments on the rate design for GM<25 and GM≥25 (OSBA St.
11 3, pp. 24-25)?**

12 A. Mr. Knecht observed and testified that the Company's proposed GM customer charges
13 would be below allocated cost, which would include the cost of the first 5kW of demand,
14 and he did not raise any objections to the proposed customer charges. Although he did not
15 object either to the demand charge or the kWh charge, he recommended that the Company
16 explain its rate design approach for GM, and to explain whether less should be recovered
17 in the kWh charge and more in the customer charge, demand charge or both.

18
19 **Q. Please respond to Mr. Knecht's comments on rate design for GM.**

20 A. Including an energy component in GM rate design has several benefits to customers and to
21 the Company. First, it stabilizes revenue (for the Company) and costs (for customers); for
22 such a diverse customer class, a higher demand charge could make revenue and costs more
23 volatile, which could lead to the Company asking to place more in the customer charge, as

1 justified by Mr. Gorman's customer-charge costs identified in Exhibit 6-4. Secondly, as
2 Mr. Knecht surmised, collecting revenue in the kWh rate helps low-load customers. Rate
3 design involves careful balancing, and care must be taken to avoid large bill impacts and
4 adverse / undesirable effects on customer groups.

5
6 **IV. Federal Tax Adjustment Charge**
7

8 **Q. Please summarize I&E witness Wilson and OCA witness Morgan's concerns**
9 **regarding the Company's proposed Rider No. 4, Federal Tax Adjustment Charge**
10 **("FTAC").**

11 A. Ms. Wilson contends that an increase in the corporate federal income tax is speculative at
12 this time. She also contends that the Commission has recently dealt with the substantial
13 decrease in federal income taxes under the Tax Cuts and Jobs Act of 2018 on a statewide
14 basis and that she believes that the Commission would provide adequate and timely
15 guidance on a future federal corporate tax rate increase (I&E St No. 1, pp. 38-39).

16 Mr. Morgan characterizes the Company's testimony as a criticism of the time period for
17 the Commission's reaction to the TCJA (OCA St. No 1, pp. 30-31). Mr. Morgan is also
18 concerned that a new tax act could have other provisions that could affect the Company.

19 Company witness Matthew Simpson responds to these concerns in greater detail in his
20 rebuttal testimony, DLC St. No. 12-R. I address the FTAC briefly as well to explain why
21 a surcharge is an appropriate mechanism for the recovery or refund of costs/credits related
22 to federal tax rate changes.

23

1 **Q. Is the Company’s proposed FTAC a good candidate for surcharge recovery through**
2 **an automatic adjustment clause?**

3 A. Yes. According to “A guide to Utility Ratemaking,”² page 89, various forms of
4 automatic adjustment clauses have been included in fixed utility tariffs in Pennsylvania
5 for over 50 years. A prime example noted is the State Tax Adjustment Surcharge
6 (“STAS”). The STAS permits jurisdictional utilities to recover increases (and refund)
7 decreases in the following tax rate each year for changes in Corporate Net Income Tax;
8 Gross Receipt Tax; and Public Utility Realty Tax. This surcharge is rolled into base rates
9 during a rate case. As described in direct testimony (DLC St. 16, page 29, lines 17-18),
10 the FTAC will function similar to the Company’s existing STAS that already provides for
11 adjustments to base rates for changes in state taxes.

12 The Company considers the FTAC a good candidate for surcharge recovery based
13 on the following factors:

- 14 1. The estimated annual impact as reflected within Exhibit DBO-6 is significant and
15 outside the control of the utility.
- 16 2. Fairly shares the risk of tax rate changes between the utility and its customers since
17 the FTAC is proposed to allow for the recovery of an increased and also refund a
18 decrease associated with a change in the federal tax rate.
- 19 3. Reduces, to the extent possible, the Company’s need to apply for frequent general
20 rate increases to account for the change in a tax rate.
- 21 4. The FTAC is proposed to be reconcilable, and subject to PUC audit.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 17-R**

Rebuttal Testimony of Margot C. Everett

Date: July 26, 2021

1 No. 5; OCA witness Ron Nelson, Statement No. 6; and the OSBA witness Knecht,
2 Statement No. 1.

3
4 **Q. Are you sponsoring any exhibits, parts of exhibits or responses to the Commission's**
5 **filing requirements as part of your rebuttal testimony?**

6 A. No.

7
8 **I. COMMUNITY DEVELOPMENT RIDER**

9
10 **Q. Do you agree with Witness Cline's assertion that the CD Rider is discriminatory**
11 **because "two similar customers under the same rate class will be charged different**
12 **rates"?**

13 A. No, for several reasons. First, a rate is discriminatory if it is unreasonable. The creation
14 of a discount that leads to the addition of customer load that benefits all customers, because
15 the rate covers incremental costs and creates more sales to recover the balance of revenues,
16 is not unreasonable.

17 Second, other gas and electric utilities in Pennsylvania offer discounts to customers
18 through similarly designed Economic Development rates. For example, PECO has a
19 similar offering, termed Economic Development Rider, which provides customers a 15%
20 discount for five years for qualifying customers. The qualifications for the Company's
21 Community Development Rider were designed after the PECO qualifications, including
22 the requirements for qualification. PECO's discounted program has no sunset, meaning

1 any customer that meets the criteria in the future can still sign up for the full discount for
2 the full year.

3 The Company’s offer goes a step farther, however, by limiting the discount to non-
4 summer months, ensuring customers continue to receive the same price signals as existing
5 customers during those higher load months. Further, the Company’s offering limits the
6 discount by calendar year and therefore sunsets at the end of 2026.

7 By way of illustration: Assume a customer has a winter bill of \$1,000 a year and
8 signs up for the program in January 2021. Table 1 below shows the savings profile for that
9 customer.

10 **Table 1: Community Development Discount Schedule**

Col	A	B	C	D	E	F
Row	Calendar Year	Discount	Winter Bill	Bill Savings	Cumulative Bill Savings	Percent of Savings
1	Jan 2022 - Dec 2022	25%	\$1,000	\$250	\$250	33%
2	Jan 2023 – Dec 2023	20%	\$1,000	\$200	\$450	60%
3	Jan 2024 – Dec 2024	15%	\$1,000	\$150	\$600	80%
4	Jan 2025 – Dec 2025	10%	\$1,000	\$100	\$700	93%
5	Jan 2026 – Dec 2026	5%	\$1,000	\$50	\$750	100%

11
12 This structure rewards customers who to sign up earlier. Specifically, if the
13 hypothetical customer with \$1,000 winter bill noted above a customer signs up in January
14 2022, the customer saves \$750 over the course of the program (or 15% of their winter bill
15 costs over five years).

16 Now assume that customer signs up in January 2024. The customer now saves only
17 \$300, or 10% of their costs over the three year period. Table 2 demonstrates the savings
18 profile for that customer.

Table 2: Demonstration of Savings from Hypothetical Customer

Col	A	B	D	E=B*D	F	G
Row	Calendar Year	Discount	Winter Bill	Bill Savings	Cumulative Bill Savings	Percent of Savings
1	Jan 2022 - Dec 2022	25%	\$0	\$0	\$0	0%
2	Jan 2023 – Dec 2023	20%	\$0	\$0	\$0	0%
3	Jan 2024 – Dec 2024	15%	\$1,000	\$150	\$150	50%
4	Jan 2025 – Dec 2025	10%	\$1,000	\$100	\$250	83%
5	Jan 2026 – Dec 2026	5%	\$1,000	\$50	\$300	100%

Third, there are several instances where similar customers pay different rates for different reasons. For example, customers with electric space heating conforming to the Company’s tariffed electric heat rates (e.g., RH and RA) are given a rate break over customers without electric space heating.

Q. Please respond to Witness Cline’s statement, “expecting other businesses to provide aid to new or returning businesses simply because they were on time with their electric bills and managed to keep their businesses open through the pandemic is not fair, just, or reasonable.” (I&E St. No. 5, p. 8, lines 7-9).

A. The Community Development Rider is not resulting in customers paying for the discount because the rate recovers marginal costs related to the additional customer load and only provides a discount to costs that would exist without the customer’s additional load. That is, but for the customer bringing additional load to the Company’s service territory, the revenue needed to recover existing costs would be collected exclusively from existing

1 customers. Economic Development Rates are designed to create additional sales to reduce
2 the average rate all customers pay toward those fixed existing costs.

3
4 **Q. Do you agree with Witness Cline that the community development rate creates an**
5 **unfair competitive advantage against peak load businesses (I&E St. No. 5, p. 9, lines**
6 **10-11)?**

7 A. No. The discount applies to a customer's peak load in non-summer months, not all months.
8 Therefore, the community development rate customer pays the same amount for summer
9 peak as a non-participating customer. Only participating customers with peak winter loads
10 benefit over similar customers with winter peaks for a short period of time. This is
11 balanced by both the added benefits to customers for their contribution to revenue, but also
12 the addition of jobs in the same region, that could create benefits for existing businesses.

13
14 **Q. Do agree with Witness Cline that the addition of customer load creates increased long-**
15 **term costs as the Company will add plant as it adds customers (I&E St. No. 5, p. 11,**
16 **lines 8-10)?**

17 A. Yes, however this is not a reason to reject the Community Development Rate. Further, let
18 me clarify that the type of 'plant' to be added would only be additional distribution capacity
19 to serve this customer's load, as generation is competitive and market based in
20 Pennsylvania, and this rate is a delivery rate. That is, the discount proposed is limited,
21 front end loaded and designed to recover marginal capacity costs that may result from the
22 addition of the customer's load. Witness Cline states "While I agree that, in the short term,
23 adding one customer at incremental cost does not generally add to the fixed costs of the

1 system.” For this reason, the discount applies only in the short run. That is, all Community
2 Development customers convert to the full retail rate in January 2027. Further, the
3 additional costs to ‘added plant’ (assumed to be distribution plant) are still covered despite
4 the discount.

5
6 **Q. Do you agree with Witness Cline’s claim that “charging a discounted rate to certain
7 customers leaves a portion of costs unrecovered that must then be recovered from
8 the rest of the customer base and, thus, does not align revenues with cost causation
9 principles as to both fixed and variable costs” (I&E St. No. 5, p. 11, lines 19-21)?**

10 A. No. Looking at Table 1 above, if a customer signs up for the program when initiated in
11 2021, 80% of the discount occurs in the first three years. Second, there are no ‘lost
12 revenues’ because the revenues would not exist except for the fact that the customer brings
13 additional revenues from their added load.

14
15 **Q. Witness Cline states that “the revenue shortfall from granting certain customer
16 discounts will be recovered from other customers in the next base rate case. Even if
17 the program ends in that case, there will be up to five years of discounts remaining
18 where the other customers will be asked to pay for the fixed costs not recovered by
19 discount customers.” Is this accurate?**

20 A. No. Witness Cline appears to slightly misconstrue the program structure. As noted above,
21 the program discount applies by calendar year, starting in January 2022 and ending in
22 December 2026. Therefore, the program ends in 2026 unless extended in the next rate
23 case. If the next rate case occurs in 2024, going into effect in 2025, then the discount is

1 only 10% in 2025 and 5% in 2026. Specifically, the discount is applied by calendar year,
2 and the customer only receives the percent discount in each calendar year if they are signed
3 up for the program in that calendar year.

4
5 **Q. Witness Cline claims “small and medium businesses already have access to various**
6 **sources of aid” (I&E St. 5, p. 8, lines 10-11), thus the proposed CD Rider is not needed.**
7 **Do you agree?**

8 A. Potential aid from other sources is not a reason to reject this option. That is, these new
9 customers are, as noted above, taking on responsibility for paying for costs that are fixed,
10 reducing the overall average rate for existing and fixed costs in the long run. This program
11 has the benefit of supporting relief efforts, but has the added benefit of creating long term
12 benefits to the Company’s customers.

13
14 **Q. How do you respond to Witness Cline’s claim that “providing a tariff rate discount**
15 **would eventually require other customers to make up lost revenues to pay for fixed**
16 **costs these customers are not paying” (I&E St. 5, p. 8, lines 12-14)?**

17 A. First, as noted above in Table 1, 80% of the discount occurs in the first three years, and
18 93% in the first four years, because the rate starts at 25% in the first year and is reduced to
19 5% in the fifth year (i.e., 2026). Second, there are no lost revenues because the revenues
20 from these customers would not exist if the customer did not bring load to the Company’s
21 service territory.

1 **Q. How do you respond to Witness Knecht’s contention that “any incremental revenues**
2 **associated with attracting new (non-free-riding) loads appear to accrue entirely to**
3 **DLC shareholders” (OSBA St. No. 1, p.28, lines 20-22)?**

4 A. While it is true that in the short run there is the potential for revenues to increase and, given
5 current rate recovery mechanisms, these benefits would not directly flow back to
6 customers. However, in the longer term, these benefits will flow exclusively to customer.
7 That is, the program is designed to provide a discount in the front years, decreasing any
8 revenue benefit that flows to the Company between rate cases, and then decreases the
9 discount in the later years, mostly after the next rate case, creating the maximum benefit to
10 customers. Specifically, this program is designed to maximize the benefits to customers
11 by creating long lasting increased energy sales that contribute to the fixed costs noted
12 above, reducing rates for all customers.

13 It should be noted that the benefit of sales in excess of forecast benefit the
14 Company, and conversely, the recovery of fixed costs attributed to sales that don’t
15 materialize are also covered by the Company. Further, even if the Company were to benefit
16 from these increases sales in the short run, customers are not harmed and all the benefits
17 from increased sales contributing to fixed costs in the long run accrue to all customers, not
18 the Company.

19
20 **Q. Do you agree with Witness Knecht that this program creates opportunities for “free-**
21 **riders”?**

22 A. Yes, but it should not be the basis for rejecting the rate. There is always a risk of creating
23 customer programs that create unintended benefits to customers who would have had the

1 same behavior if they were not given an incentive. However, as Witness Knecht notes,
2 there are several mitigating factors. Specifically, Witness Knecht states: “The mitigating
3 factors are (a) any (non-free-riding) new loads will eventually benefit ratepayers in general,
4 (b) the discounts decline and disappear over time, and (c) it does not appear that DLC is
5 requiring any explicit contribution from existing ratepayers to fund this effort.” (OSBA St.
6 No 1, p. 29, lines 1-4). The last is the most important for the following reasons. First, the
7 discount only applies to non-summer months, minimizing risk of excessive marginal costs
8 to serve.

9 Second, as shown in Table 1 above, the discount is front end loaded, resulting in the
10 discount occurring mostly between rate cases.

11 Third, as Table 1 shows, the discount is specific by calendar year, creating an
12 incentive for customers to enroll as early as possible. These provisions insulate existing
13 customers from any significant harm while providing them with long-term benefits that I
14 have described.

15
16 **Q. Do you support Witness Knecht’s recommendation that the Commission require the**
17 **Company to absorb the discount that remains in effect for the next base rate case?**

18 A. No. This requirement is contrary to other customer programs designed to provide benefits
19 to all customers. That is, if the discount is reasonable, which it is because it creates a long
20 term benefit of additional load in the region, which reduces rates for all customers, then
21 discount should be recovered from benefiting customers.

22 This request would require the Company to incur additional costs to create
23 opportunities for their customers to reduce rates. Again, the Company wants to emphasize

1 that these types of programs are common in the industry and provide a unique opportunity
2 to align the goals of, and create benefits for, new customers, existing customers and the
3 utility.

4 5 **II. RESIDENTIAL SUBSCRIPTION RATE PILOT RATE**

6 **Q. Do you agree with Witness Cline’s assertion that the lack of a reconciliation for**
7 **customers whose demand is below their subscription level removes any incentive for**
8 **reducing demand (I&E St. No. 5, p. 16, lines 8-18)?**

9 A. No. The program is designed to accomplish three things. First, provide an incentive for a
10 customer to reduce their peak use to meet a targeted subscription level. Second, create an
11 option for customers to even out their bills over the year. Lastly, to create a more cost-
12 reflective rate that links customer use to the distribution costs to serve a customer. Creating
13 a reconciliation in months where they used less than peak would under-collect costs and
14 create cost shifting to non-participants.

15 It is also important to note that a customer can chose a lower subscription level than
16 their previous year’s consumption would indicate. That is, they can choose a subscription
17 level that creates an incentive for them to reduce their peak energy use, whenever that may
18 be, and save on their energy bill by shifting energy from one period to another. A customer
19 on volumetric rates like those currently offered to residential customers sees no incentive
20 to shift energy use during peak times to off-peak times.

21
22 **Q. Does the proposed subscription rate pilot exclude low-income customers as claimed**
23 **by Witness Cline (I&E St. No. 5, p. 17, lines 15-19)?**

1 A. No. The program only excludes customers enrolled in CAP, not all low-income
2 customers.

3
4 **Q. Witness Cline claims that the subscription only favors the Company if the customer
5 consumes less than their subscription level in any month. Do you agree?**

6 A. No. The customer benefits from rate that creates bill stability, with only some variability
7 if the customer exceeds their subscription level. The analysis of most customers on RS
8 shows the average subscription would be approximately 3 kW. For a customer to
9 experience a distribution bill increase, their non-coincident peak load would have to
10 increase 17% over the previous year's peak.

11
12 **Q. Please respond to Witness Cline's arguments regarding the difference between
13 budget billing and the subscription rate, claiming that the subscription rate is far
14 inferior to the budget billing option (I&E St. No. 5, pp. 17-18).**

15 A. Witness Cline claims the subscription plan would increase bills for low-income customers
16 because they may not be able to afford options to reduce load. This is not a reason to reject
17 the subscription rate. First, the rate is optional, and if a customer deems they cannot reduce
18 energy use to save money, then they do not have to enroll in the program. Second, these
19 customers have this same issue today, but these customers could experience even higher
20 bills on volumetric rates because the inefficiency of a customer's home could increase costs
21 in all months, not just the month during which the NCP occurs.

22 Lastly, Witness Cline claims the budget billing option is a better overall choice for
23 customers. This may be true for some customers, but not all of them. Company witness

1 Neiswonger discusses customers' interest in this program further in her rebuttal testimony,
2 DLC St. 9-R. It is important to note that this rate option is being offered because the
3 Company wants to understand the benefits of this rate option. Simply rejecting the pilot
4 because there may be some customers who don't benefit is not a reason to reject exploration
5 of potentially viable alternative rate options.
6

7 **Q. Do you agree with Witness Cline's claim that the subscription rate would have a**
8 **negative impact on customers during an extreme weather event (I&E St. No. 5, p.**
9 **21, lines 5-6)?**

10 A. Potentially, yes. Extreme weather events have a negative impact on customers regardless
11 of their rate option. No rate option, other than an exclusively fixed monthly charge or a
12 weather normalization program, can remove the risk that customers experience additional
13 costs from extreme weather.

14 Further, the pilot includes bill protection and thus offers an option for a customer
15 that experiences a higher bill on the subscription rate than what they would have faced on
16 the standard rate to revert back to the general rate and be reimbursed for the cost difference.
17

18 **Q. How do you respond to Witness Cline's claim that the subscription rate is not easy**
19 **to understand, particularly since customers are familiar with energy charges but not**
20 **demand charges (I&E St. No. 5, p. 22, lines 10-12)?**

21 A. While the Company believes the subscription rate will be easy for participating customers
22 to understand and be well accepted by customers, the purpose of the pilot is to test the
23 acceptance of this rate and understand the implications of changes in customer behavior on

1 the rate (as well as operational issues). Therefore, the Company supports the
2 implementation of a pilot to answer these questions rather than rely on speculation.

3
4 **Q. Witness Cline explains that the subscription rate provides the company a**
5 **guaranteed a revenue stream with no risk of lost revenue from decreased usage.**
6 **(I&E St. No. 5, p. 23, lines 18-19). Why is creating revenue stability for the**
7 **Company bad for customers?**

8 A. It is not bad for customers. Creating revenue stability for the Company means bill
9 stability for customers as well.

10
11 **Q. Please respond to Witness Nelson's testimony that this is not a load management**
12 **program.**

13 A. The residential subscription rate pilot is a rate design option that the Company wants to
14 explore to gain an understanding of whether such a rate option is beneficial for both
15 participating and non-participating customers. The program is designed to more closely
16 link a customer's bill with cost of serving that customer and create price signals for the
17 customer that results in them modifying their behavior to save money. That is, this pilot
18 acts as a load management program because it encourages the customer to reduce their
19 peak usage by modifying their behavior and smoothing their energy consumption, thus
20 reducing their non-coincident peak and saving money. This peak shifting behavior change
21 is not encouraged by the Company's current rate structure.
22 Further, the Company does envision that demand side management measures could,
23 eventually, be also included in the subscription to encourage customers to install such

1 measures and, in turn, receive a discount in rates as an alternative structure to traditional
2 demand side management incentive programs.

3
4 **Q. Do you agree with Witness Nelson’s statement that “the rate is incredibly hard for
5 customers to understand” (OCA St. No. 6, p. 40, lines 10-11)?**

6 A. Not at all. There are many services that use subscription pricing structures for their
7 services, to include, but not limited to, Amazon, cell phone plans and cable or internet
8 plans. Therefore, a rate option that mimics these types of pricing options would be easy
9 for customers to understand and accept.

10
11 **Q. Please respond to Witness Nelson’s assertion that the program is challenging for
12 customers because the program does not offer enabling technology (OCA St. No. 6,
13 p. 38, lines 10-11).**

14 A. Mr. Nelson is mistaken. As Company witness Neiswonger explains in her rebuttal
15 testimony, DLC St. No. 9-R, the Company already provides options for customers to
16 monitor their usage during the month – including their hourly usage, which corresponds to
17 the Company’s proposal to use hourly usage intervals to calculate the demands of
18 customers who participate in the Residential Subscription Rate Pilot – and predict their
19 current bills.

20 Furthermore, to some degree, the subscription rate eliminates the risk of customers
21 being surprised by a bill during a high use month by normalizing the customer’s costs to
22 serve over the course of the year. Customers only experience additional costs if the

1 customer exceeds their subscription level plus the overage bandwidth. The overage fee
2 applies only to the month during which the overage occurs.

3 The Company recognizes that customers will need to be educated on the behavior
4 changes that will allow them to manage their bills and also realizes that customers may
5 have additional charges. It is for this reason that the Company is offering a form of bill
6 protection to allow customers on the pilot to revert to the RS rate option without penalty.
7 The pilot is designed to address many of these issues and identify what assistance, from
8 education to other tools, a customer would benefit from to make this rate option more
9 broadly offered to customers.

10
11 **Q. Do you agree with Witness Nelson’s assertion that “TOU rates can be designed to**
12 **better reflect most of the costs caused (i.e., transmission and generation) with a**
13 **simpler pricing” (OCA St. No. 6, p. 38, lines 8-9)?**

14 A. No. First, Witness Nelson does not provide any support for the assertion that TOU rates
15 are easier to understand than subscription rates. In fact, subscription rates are less
16 complicated than TOU rates, particularly for customers that don’t have the tools to better
17 manage their use during certain hours (e.g., smart thermostats) and requires the customer
18 to personally manage their use every hour, while a subscription rate is actually designed to
19 create bill stability without behavior changes (because it is intended to be set based on
20 previous year’s use) but an option for the customer to save energy by committing to a lower
21 demand level and them meeting that level.

22 Second, this is a distribution-only rate, not a transmission or generation rate,
23 therefore does not need to reflect costs caused by transmission and generation, only

1 distribution. Distribution planning is based on the loads on the local systems near the
2 customer's load, not the total system load. That is, setting a TOU rate would reflect the
3 generic system peaks while the costs are more localized and based on energy use on
4 individual feeders. As a result, Non-coincident peak (NCP) based rates are more closely
5 reflective of costs.

6
7 **Q. Please respond to Witness Nelson's assertion that "the Company is essentially**
8 **requiring customers to know the NCP demand requirement of each piece of**
9 **electrical equipment in their homes and guess at what their hourly demand**
10 **requirement are over the upcoming year" (OCA St. No. 6, p. 38, lines 11-13).**

11 A. While there is always uncertainty regarding what a customer's use will be in a given year,
12 the pilot is designed to allow the Company to work with each customer to determine the
13 level of subscription appropriate for that customer by reviewing the customer's NCP for
14 the previous year. Thus, customers will not be required to make any blind "guesses," nor
15 will they need to know "the NCP demand requirement of each piece of electrical equipment
16 in their homes," in order to make an informed prediction of their likely future demands.
17 Further, the pilot allows for a form of bill protection if the customer is unhappy and the
18 customer may drop from the pilot without penalty at any time.

19 Ultimately the proposal for a pilot is to determine the best means for identifying
20 customer subscription levels and thus address the concerns of Witness Nelson.

21

1 **Q. Do you agree with Witness Nelson’s assertion that “the subscription rate could act**
2 **as a barrier to EV adoptions”, as well as the claim that the customer will likely face**
3 **a penalty because of increased demand (OCA St. No. 6, p. 38, lines 16-17)?**

4 A. Not at all. First, subscription rates have been introduced (e.g., California) for EV charging
5 specifically to create additional benefits to EV customers. Second, EV customers may find
6 this rate very beneficial because the customer now has a fixed charge for more of the costs
7 to operate their car. Third, the customer can change their subscription levels if they buy
8 an EV after enrolling. Fourth, the subscription rate works well with TOU rate options put
9 in place for electric supply for EV charging because the customer is incented to charge
10 during times when the customer’s load is already low. Finally, the rate is an option with a
11 bill protection offering. Because it is an option, it is not relevant to claim this rate is a
12 barrier to EV, as customers continue to have the standard rate option. Also, because there
13 is bill protection, a customer can elect to leave the pilot with no penalty and retroactively
14 revert to a bill as if they were on the standard residential rate.

15
16 **Q. Is Witness Nelson’s statement that “none of these requirements that the Company is**
17 **committing to is in Rider No. 7, so the customer may not know about any of the**
18 **commitments” (OCA St. No. 6, p. 39, line 5) true?**

19 A. No. Rider 7 explicitly notes many of the Company’s commitments to this pilot. First,
20 Rider 7 addresses the determination of the subscription levels:

21
22 Upon enrollment in the Pilot, customers shall select the number of
23 Subscription Units the customer will purchase every month to cover their
24 electric distribution needs. The Company will provide the customer with
25 information regarding their previous peak energy use in the past year to aid
26 the customer in selecting the appropriate Subscription Service Level.

23
24
25
26
27

Further, Rider 7 states the following regarding the customer’s ability to exit the program:

A customer may exit the Pilot and this Rider at any time for any reason. A customer who exits the Pilot will be removed from this Rider effective with the billing cycle that commences 3 business days after the date the customer notified the Company of their election to leave the Pilot.

Finally, Rider 7 outlines the bill protection:

A customer who exits the Pilot may request a refund for the positive difference between their billed distribution charges under this Rider and the amount of such charges if billed under Rate RS for up to three months prior to exiting, but no longer than the customer’s actual enrollment in the program. The Company will provide such refund within 60 days of customer request.

Q. Please address Witness Nelson’s question regarding the need for a subscription rate when there is already an approved EV TOU rate (I&E St. No. 1, p. 39, lines 4-7).

A. The offering of a subscription rate for distribution services and an EV TOU rate for electric supply are quite different. While the subscription rate can be offered to EV customers, it is not the only option for these customers. In fact, as Witness Cline noted, a recent study by the Commission showed “39% of the customers were interested in a similar subscription rate plan.” (OCA St. No. 6, p. 40, lines 8-9). Because over a third of customers interested in this option warrants exploration, particularly since a subscription option would be available to all customers, not just those with an EV.

Q. Please address Witness Nelson’s question regarding the need for a subscription rate would “embed a perverse incentive for the utility to advise larger than needed

1 **subscription levels to its customers, especially if the offering were ever scaled to an**
2 **optional tariff” (OCA St. No. 6, p. 40, lines 12-14).**

3 A. A subscription rate does not create any incentive, perverse or otherwise, for the Company.
4 Rather it demonstrates the Company’s commitment to offering customers meaningful
5 options to managing their energy bills. First, the pilot is limited in size and would provide
6 minimal financial benefits even if the Company were to purposefully oversize the
7 subscription, yet such behavior would result in the failure of the program as customers will
8 be dissatisfied with the offering and, potentially, with the Company. Second, once scaled,
9 customers will not elect to participate if the Company maliciously encourages customers
10 to oversize their subscription level as the customers would experience higher than normal
11 bills and be dissatisfied with the service and revert back to standard tariff. The Company
12 envisions offering this as a pricing option in the near term and allows for customers to
13 choose to not be on the subscription level. If the Company and the Commission elect to
14 extend and expand the program after the pilot, reporting requirements and other controls
15 can be contemplated to ensure such abuse does not occur. However, the threat of such an
16 abuse is unfounded given the scope and intent of the program and thus should not be a
17 reason to reject the pilot.

18
19 **Q. Do you support Witness Wilson’s recommendations to either disallow \$67,000 in**
20 **marketing and education costs associated with the Company’s proposed subscription**
21 **rate pilot or, if costs were allowed, recover the costs over a 43-month period in line**
22 **with I&E witness Keller’s recommended rate case expense normalization period**
23 **(I&E St. No. 1, p. 39, lines 4-7)?**

1 A. No. First, the market costs should be subject to cost recovery because they are associated
2 with testing a rate option that is a critical to the evolution of rate design to support customer
3 needs. This rate design pilot is necessary to explore the feasibility of a subscription rate,
4 to include identifying operation and delivery issues, exploring customer acceptance and
5 understanding how the participating customers' behavior changes as a result of being on
6 the tariff.

7 Second, the extension of the cost recovery is not aligned with the expected costs
8 being incurred. Specifically, the pilot is for a specific duration and the marketing costs will
9 be incurred during the three-year period for which the Company requests recovery of the
10 costs. Company witness O'Brien addresses I&E witness Keller's proposed normalization
11 period in further detail in his rebuttal testimony, DLC St. 10-R.

12
13 **Q. Do you support delaying the pilot to June 1, 2022 to allow for further refine the**
14 **customer education and outreach as part of this rate pilot?**

15 A. Yes, a delay of five months will allow for further refinement of the roll out of the program
16 offering as well as ensuring a smooth implementation from an internal systems and
17 processes perspective.

18
19 **Q. Does this conclude your rebuttal testimony?**

20 A. Yes, it does.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 18-R**

Rebuttal Testimony of Jason Harchick

Date: July 26, 2021

1 includes the development and maintenance of design standards, training, testing, operating
2 manuals, and procedures related to energy delivery system construction and maintenance.

3
4 **Q. What are your qualifications, work experience and educational background?**

5 A. I received a B.S. degree in Electrical Engineering, with a concentration in power, from the
6 University of Pittsburgh in April 2008 and a M.S. degree in Electrical Engineering from
7 the University of Pittsburgh in April 2013. I have been a registered professional engineer
8 in the Commonwealth of Pennsylvania since January 2014.

9 I began working as a Transmission Planning Engineer at Duquesne Light in 2008
10 and was promoted to Manager, Transmission Planning in November 2013. I was promoted
11 to the Senior Manager, System Planning and Protection in October 2015 and General
12 Manager of System Planning, Protection and Compliance in August 2018. I assumed my
13 current role as Director, Grid Optimization and Strategy in July 2021.

14
15 **Q. Have you previously testified before the Pennsylvania Utility Commission?**

16 A. Yes. I have provided direct testimony on behalf of Duquesne Light in the Siting and
17 Construction of the 138 kV Transmission Lines Associated with the Brunot Island-
18 Crescent Project (Docket No. A-2019-3008589 and A-2019-3008652) and the Siting and
19 Construction of the 138 kV Transmission Lines Associated with the Universal-Plum
20 Project (Docket No. A-2018-3000708). I have also testified on behalf of Duquesne Light
21 in the Peoples Natural Gas Company, LLC Rate Increase Filing (Docket No. R-2018-
22 3006818).

1 **Q. What is the purpose of your rebuttal testimony regarding Duquesne’s proposed**
2 **general base rate increase?**

3 A. My rebuttal testimony will respond to the testimony of Ron Nelson, Office of Consumer
4 Advocate (“OCA”) St. No. 6, with respect to load management programs.

5
6 **Q. Are you sponsoring any Exhibits along with your rebuttal testimony?**

7 A. Yes. I am sponsoring Exhibit JMH-1-R, comprising discovery responses.

8
9 **Q. Please summarize Mr. Nelson’s comments and recommendations with respect to load**
10 **management and proposed Transportation Electrification (TE) Programs.**

11 A. Mr. Nelson indicates opposition to the Company’s TE Programs primarily because they do
12 not include more EV load management programs. As described in the Recommendations
13 and Conclusions section of Mr. Nelson’s testimony (OCA St. No. 6, pp. 41-44), Mr. Nelson
14 recommends the Commission reject the Home Charging Pilot, deny the Company’s request
15 to rate base behind-the meter make-ready infrastructure and EV Charging stations, and
16 require Duquesne to file a comprehensive EV load management proposal within 18 months
17 of the final order. Mr. Nelson’s other comments regarding the Company’s TE Programs
18 are addressed by Company witness Olexsak in her rebuttal testimony, DLC St. 8-R.

19
20 **Q. Do you agree with Mr. Nelson’s comments?**

21 A. No. First, as Ms. Olexsak discusses in her direct and rebuttal testimony, the Company
22 already provides EV load management offerings, which it is proposing to expand in this
23 proceeding. Second, as I discuss further in my testimony, the Company is actively

1 developing technologies that will enable additional load management offerings in the
2 future. The Company's TE Programs directly support these efforts, as they will help the
3 Company collect and analyze data to inform how the Company and its customers plan for,
4 accommodate, and manage electric vehicle (EV) loads such as consideration of additional
5 load management programs. To deny the Company's TE proposals would undermine its
6 ability to develop the types of load management programs that Mr. Nelson purports to
7 desire.

8
9 **Q. Before discussing the Company's proposals in this case, please summarize and**
10 **respond to Mr. Nelson's discussion of the Company's existing EV ChargeUp Pilot,**
11 **with respect to distribution system impacts and planning.**

12 A. Mr. Nelson avers that the Company's EV ChargeUp Pilot lacked "a well-developed pilot
13 framework," and that its objectives related to distribution system impacts and planning
14 lacked specificity. (OCA St. No. 6, pp. 13-15). As a threshold matter, I note that the OCA
15 was a party to the 2018 settlement that established the EV ChargeUp Pilot's framework. It
16 would not be reasonable to seek to retroactively relitigate that settlement in this proceeding.

17 Moreover, Mr. Nelson's concern is unfounded. The EV ChargeUp Pilot's
18 objectives were intentionally broad because the EV market is so nascent in our service
19 territory, and the Company needed to collect baseline information on the technologies and
20 customers interests as well as behaviors. The EV ChargeUp Pilot accomplished these goals
21 and provided data for EV charging stations installed in public locations. As a result of
22 having this data, the Company was able to determine that no transformers or distribution
23 equipment required upgrades or replacement to accommodate the Level 2 charging

1 stations. While the EV ChargeUp Pilot provided valuable data, the COVID-19 pandemic
2 reduced the representativeness of the data collected. Mr. Nelson acknowledges COVID-
3 19 as a hindrance to the EV ChargeUp Pilot's results (OCA St. No. 6, p. 21, line 19 – p.
4 22, line 2).

5
6 **Q. Please explain, from a distribution planning and operations perspective, the benefits**
7 **and limitations of the data produced by the Company's existing EV ChargeUp Pilot.**

8 A. As I discuss above, the Company's EV ChargeUp Pilot provided valuable data related to
9 charging of EVs at public charging locations, but these data were necessarily limited by
10 the Pilot's scope. The EV ChargeUp Pilot did not provide data related to the charging
11 behaviors of the Company's residential customers at home (which, as Ms. Olexsak
12 observes, is where the majority of charging occurs), fleets, or public DC fast charging
13 (DCFC) stations. Data such as charging profiles and peak charging demands from
14 individual as well as residential customers are valuable from a distribution system planning
15 and operations perspective because they can be used to evaluate loading impacts on
16 distribution equipment. EVs represent a significant demand increase to most residential
17 customers, as Mr. Nelson acknowledges in his testimony stating that "charging a Chevy
18 Volt would increase residential non-coincident peak demand by over 50%, which could
19 create local distribution capacity constraints" (OCA St. No. 6, p. 24, lines 6-8). As part of
20 the proposed TE Programs, the Company will evaluate the local distribution capacity
21 constraints and implement reinforcements to prevent equipment failures which would
22 result in customer outages and negatively impact customer reliability.

23

1 **Q. Please summarize the Company's current efforts related to the development of**
2 **advanced grid planning and capabilities.**

3 A. As described in Company witness Morris's direct testimony, the Company is continuing to
4 invest in distribution system equipment and technology to support customer reliability and
5 resilience. One specific project is the Company's Outage Management System (OMS)
6 which will help improve reaction time to service interruptions (DLC St. No. 4, p. 12).
7 Technology, such as the OMS, is foundational to the Company's business to provide safe
8 and reliable electric service to its customers. The Company continually monitors the
9 proliferation of new technologies and systematically implements technology to improve
10 operational capabilities and efficiencies. The deployment of these systems requires
11 significant effort to plan and test to ensure a seamless integration.

12
13 **Q. How do these efforts relate to load management programs?**

14 A. Investments in technologies such as the OMS are foundational to the deployment of
15 advanced systems, including, but not limited to, active load management programs. The
16 Company's OMS project will provide an electric connectivity model which will provide
17 the foundational visibility to link a specific customer meter to an upstream distribution
18 transformer and associated distribution circuit. Until this connectivity and additional
19 operational tools to identify grid constraints are established, the Company is unable to
20 efficiently implement active or automated load management systems. The OMS is
21 projected to go into service in 2022; thus, any load management systems that use the OMS
22 cannot be implemented until after the fully-projected future test year in this case, and
23 therefore could not have been included in the Company's rate proposal.

21
22

Q. Please summarize how the Company’s proposed TE Programs would support advanced grid planning and operations, and the development of load management programs.

A. The Company’s proposed TE Programs will provide insights into the charging behaviors of residential customers, fleet customers, workplace charging, and additional insights into public charging including DCFC. This data will allow the Company to better understand the impacts EVs will have on the grid capacity in order to tailor additional load management programs in the future. Specifically, this data can be combined with the loading information for all of the customers connected to the same transformer to determine if a transformer’s rating will be exceeded. Understanding charging behaviors, such as, hours of the day in which most customers charge their EVs, and the amount of power consumed by the EVs during those hours, will support the Company’s efforts to determine which load management programs can be used most effectively to shift the EV charging times to periods in the day which will not result in distribution system equipment, such as transformers, becoming overloaded. The Company’s TE Programs will also provide more visibility into the differences in charging behaviors of the different market segments (residential, public, MUD, fleet) resulting in some load management programs being more effective in one market segment but not as effective in a different market segment. This will improve the design of such programs, and, once the Company has the technical capability to implement them, facilitate such implementation.

1 **Q. Can the Company develop load management programs without implementing its**
2 **proposed TE Programs, as Mr. Nelson recommends?**

3 A. The Company has already implemented and proposed passive load management programs.
4 The Company may be able to implement active load management programs as
5 recommended by Mr. Nelson, but the programs would be less robust, and potentially less
6 cost-effective, than a deployment after the Company has implemented its TE Programs and
7 established an electrical connectivity model as part of its OMS project.

8

9 **Q. Are the programs Mr. Nelson recommends premature at this time?**

10 A. Yes. As I discuss above, the Company does not have the foundational technology systems
11 to enable efficient deployment of active or automated load management systems. The
12 Company's proposed TE Programs will provide additional data to inform the development
13 of such programs in the future. Moreover, I note that the Company's latest load
14 management offering – the EV Time of Use (TOU) supply rate – only recently became
15 available on June 1. Thus, the Company has not had the opportunity to glean any learnings
16 from that program that might have informed other load-management proposals in this case.
17 It is conceivable that EV-TOU learnings might support development of certain of Mr.
18 Nelson's proposals, but it is premature to say at this point.

19

20 **Q. Respond to Mr. Nelson's averment, "According to the Company's response to**
21 **discovery OCA-IV-7, the Company does not have any load management programs**
22 **under development." (OCA St. No. 6, p. 27, line 18 – p. 28, line 1.)**

1 A. Mr. Nelson’s comment mischaracterizes the Company’s discovery response. OCA’s
2 discovery question asked the Company to describe, together with the associated anticipated
3 filing date, each of “the Company’s EV load management programs that are being
4 considered or in the planning phase.” The only EV-specific program the Company
5 discussed in its response is its EV-TOU rate. However, contrary to Mr. Nelson’s
6 suggestion, this does not mean the Company is not considering other potential load-
7 management programs. As the Company explained in other discovery responses, the
8 Company is currently monitoring technologies related to automated load management
9 systems – which are not necessarily specific to EVs – and may seek to implement such a
10 system in the future. See Exhibit JMH-1-R (OCA-XI-22). However, as discussed above, it
11 would be premature at this time to commit to the ultimate content or filing timelines (to the
12 extent filings are necessary) associated with such systems.

13

14 **Q. Is the Company currently developing any load management programs?**

15 A. Yes. The Company is actively developing potential programs. For example, the Company
16 is developing ideas for systems that would improve operational flexibility and management
17 of customer-owned generation. Additionally, the Company is exploring options for
18 implementation of an Advanced Distribution Management System (ADMS) to provide
19 advanced management, control, and optimization of the existing distribution system and
20 distribution automation equipment. However, as described above, the most effective way
21 to deploy load management programs is to first establish foundational technologies such
22 as the electrical connectivity model which is being developed as part of the Company’s
23 OMS Project. The OMS project is planned to be deployed in 2022 which is a driver for

1 why the Company has not elected to include an active or automated load management
2 program as part of this proceeding. The Company will also have to balance development
3 of these programs against other priorities.

4

5 **Q. Does this conclude your rebuttal testimony?**

6 A. Yes, it does. I reserve the right to supplement my testimony through the course of this
7 proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 2-SR

**Surrebuttal Testimony of Jaime A. Bachota
Subjects: COVID-19 Expenses; Cloud-Based Software Costs**

Date: August 10, 2021

1 **SURREBUTTAL TESTIMONY OF JAIME A. BACHOTA**

2

3 **Q. Please state your full name and business address.**

4 A. My name is Jaime A. Bachota. My business address is 411 Seventh Avenue,
5 Pittsburgh, PA 15219.

6

7 **Q. What is your position at Duquesne Light Company?**

8 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”)
9 as the Assistant Controller.

10

11 **Q. Did you previously submit testimony in this proceeding on behalf of the**
12 **Company?**

13 A. Yes. I submitted my direct testimony, DLC Statement No. 2, on April 16, 2021;
14 and rebuttal testimony, DLC Statement No. 2-R, on July 26, 2021.

15

16 **Q. What is the purpose of your surrebuttal testimony?**

17 A. My surrebuttal testimony responds to portions of the rebuttal testimony of Bureau
18 of Investigation & Enforcement (“I&E”) witness Christine Wilson as to COVID-
19 19 Related Uncollectible Expenses and Incremental COVID-19 related costs net of
20 savings. This surrebuttal also will serve to further clarify the Company’s position
21 as it relates to Cloud-Based Software Implementation Costs.

22

23 **Q. What is the purpose of I&E Witness Wilson’s rebuttal testimony?**

1 A. Among other things, Ms. Wilson’s rebuttal testimony addresses the direct
2 testimony of Natural Resources Defense Council (“NRDC”) witness Amanda
3 Levin concerning the Company’s proposed recovery of incremental COVID-19
4 related costs.

5
6 **Q. How does I&E Witness Wilson address NRDC Witness Levin’s testimony on
7 this issue of proposed recovery of incremental COVID-19 related costs?**

8 A. Ms. Wilson disagrees “with Ms. Levin’s conclusion that the Commission’s May
9 13, 2020 Secretarial Letter at Docket M-2020-3019775 ‘provides the right and
10 opportunity to track and recover incremental costs, net of savings, associated with
11 COVID-19 as a regulatory asset in proceedings,’ (outside of uncollectibles-related
12 expenses).” I&E St. 1-R, p. 4, lines 1-4.

13
14 **Q. Does the Company agree with I&E Witness Wilson’s statement?**

15 A. No. The May 13, 2020 Secretarial Letter did not explicitly state that incremental
16 costs, net of savings, could be recovered as a regulatory asset in proceedings.
17 However, the Company’s position is that the Commission’s July 15, 2021 Order
18 clarified that the Company may track and recover these costs, as I explained in my
19 rebuttal testimony at pp. 20-21. Again, that Order provides in part “that utilities
20 shall continue tracking extraordinary, nonrecurring incremental COVID-19 related
21 expenses and shall maintain detailed accounting records of such expenses.
22 Additionally, the Commission hereby confirms that electric, natural gas, water,
23 wastewater, steam, and all rate base/rate of return telecommunications utilities are

1 authorized to create a regulatory asset for any incremental expenses incurred above
2 those embedded in rates resulting from the directives contained in this Order.”

3

4 **Q. What is I&E Witness Wilson’s recommendation related to the recovery of**
5 **extraordinary, non-recurring incremental COVID-19 related costs net of**
6 **savings (other than uncollectibles)?**

7 A. Ms. Wilson continues to recommend that recovery of these types of costs be
8 disallowed in their entirety, and she also recommends disallowance of the
9 Company’s proposal to continue including any such costs in future rate
10 proceedings. I&E St. 1-R, p. 5, line 16 – p. 6, line 6.

11

12 **Q. Do you agree with I&E Witness Wilson’s recommendation regarding the**
13 **recovery of extraordinary, nonrecurring incremental COVID-19 related costs**
14 **net of savings?**

15 A. No, I do not. As stated in my rebuttal testimony, I believe that the Commission
16 further clarified its position regarding the treatment of these costs within its Order
17 dated July 15, 2021. With respect to the continuation of these costs in future rate
18 proceedings, the Company agrees to discontinue recording a regulatory asset upon
19 the effective date of new rates set in this proceeding. In addition, as noted in my
20 rebuttal testimony regarding non-uncollectible COVID-19-related expenses, the
21 Company reserves the right to seek regulatory asset treatment in the event of future
22 extraordinary, nonrecurring events outside the Company’s control, which could

1 conceivably include re-imposition of government mandates associated with new or
2 resurgent public health emergencies.

3

4 **Q. What additional argument does I&E Witness Wilson continue to make in her**
5 **rebuttal testimony?**

6 A. On page 6 of Ms. Wilson’s testimony, she argues that the Company should not
7 recover incremental COVID-19 related expenses net of savings because the amount
8 that the Company is requesting in its claim is immaterial. Ms. Wilson further argues
9 that “the Company should not be fully insulated from all costs associated with the
10 pandemic.” I&E St. 1-R, p. 6, lines 2-6.

11

12 **Q. Do you agree with this argument?**

13 A. No, I do not. The Commission did not place a materiality threshold on what should
14 be considered when calculating extraordinary, nonrecurring incremental COVID-
15 19 related expenses net of savings.

16

17 **Q. Did I&E Witness Wilson comment on the Company’s proposal to defer**
18 **incremental uncollectible expenses associated with COVID-19?**

19 A. Yes. She reiterates her recommendation to use a 43-month amortization period for
20 incremental uncollectible expenses up to the effective date of new rates in this
21 proceeding. She also recommends that the Company stop deferring COVID-19
22 related incremental uncollectible costs after the effective date of new rates,
23 “because the Company should have a new uncollectible percentage built into the

1 rate formula in this proceeding which accounts for changes due to COVID-19.”
2 I&E St. 1-R, p. 6, lines 11-17.

3

4 **Q. Do you agree with these recommendations?**

5 A. No, I do not. Please refer to the rebuttal and surrebuttal testimony of Robert L.
6 O’Brien for further discussion regarding the Company’s proposed amortization
7 period of 36 months as well as discussion as to why the Company will not have a
8 new uncollectible percentage built into the rate formula that will account for
9 COVID-19 changes.

10 As noted within Robert L. O’Brien’s surrebuttal testimony, the Company
11 excluded 2020 data from the calculation of uncollectible expense in this proceeding
12 due to the impacts of the pandemic and related Commission directives. Those
13 impacts will continue to be felt beyond the effective date of new rates. For example,
14 as Mr. O’Brien observes, the Company continues to see increased number and
15 length of deferred payment arrangements, consistent with the Commission’s
16 COVID-19 Orders. Payment arrangements entered into after April 1, 2021, total
17 approximately \$27.7 million as of early August. This amount of payment
18 arrangements is unprecedented for the Company, as the Company’s 3-year average
19 prior to 2020 was approximately \$10.0 million. The Company is not able to
20 ultimately predict the outcome of these arrangements. For instance, based on the
21 most current data, approximately 26% of customers entering into payment
22 arrangements in April 2021 and approximately 30% of customers entering into
23 payment arrangements in May 2021 are already past due on their new payment

1 arrangement. These delinquency rates were not available when the Company filed
2 this case; the majority of customer delinquencies on Commission-mandated special
3 payment arrangements have occurred recently. As the Company did not include
4 these effects in its uncollectibles expense claim in this proceeding, there is no way
5 for the Company to fully recover these costs other than that proposed in this
6 proceeding.

7

8 **Q. In the alternative, if the Commission agrees with Witness Wilson that the**
9 **Company's uncollectible expense adopted in this proceeding should reflect**
10 **COVID-19-related impacts, what would such uncollectible expense be?**

11 A. Based on the amount of customer debt currently in, or potentially subject to, a
12 Commission-mandated COVID-19 deferred payment arrangement, and assuming
13 the same default rates as the Company's other deferred payment arrangements, I
14 would estimate a 2020 uncollectible expense of approximately \$19.0 million.
15 Witness O'Brien explains the ratemaking impacts of such increased uncollectible
16 expense in his surrebuttal testimony. However, I must stress that this \$19 million is
17 a rough estimate, and it depends on assumptions that may not apply to the unique
18 and unpredictable impacts of the COVID-19 pandemic. Therefore, as witness
19 O'Brien and I have explained, the Company's initial proposal represents the more
20 appropriate (and precise) means of recovering COVID-19-related uncollectible
21 expense.

22

1 **Q. What do you wish to clarify as it related to Cloud-Based Software**
2 **Implementation Costs?**

3 A. I would like to further clarify the Company's requested claim for Cloud-Based
4 Software Implementation Costs, which was discussed in my rebuttal testimony.

5
6 **Q. What was the Company's initial claim for Cloud-Based Software**
7 **Implementation Costs?**

8 A. In my direct testimony, I stated that the Company included approximately \$3.1
9 million of cloud-based service arrangements from January 1, 2021 through
10 December 31, 2022 as operating expenses for GAAP purposes.

11

12 **Q. Is the above statement accurate?**

13 A. No, I misspoke related to the recording of these arrangements.

14

15 **Q. What should the direct testimony have read related to Cloud-Based Software**
16 **Implementation Costs?**

17 A. My direct testimony should have stated that amounts related to these arrangements
18 are recorded as regulatory assets for GAAP purposes in accordance with the
19 Company's last rate case settlement. Also, in accordance with the last rate case
20 settlement, the Company has included these arrangements within rate base for this
21 proceeding.

22

1 **Q. What is the Company's revised claim for Cloud-Based Implementation**
2 **Software Costs?**

3 A. The Company is requesting to discontinue previously issued settlement language
4 which permitted the Company to record these arrangements as regulatory assets vs.
5 operating expenses for purposes of U.S. GAAP. The Company would like to adopt
6 the accounting guidance of ASU 2018-15 with approval in this proceeding, and
7 capitalize the amount previously recorded as a regulatory asset and the future costs
8 of these arrangements in accordance with U.S. GAAP. This guidance, which was
9 not available at the time of the Company's last base rate filing, aligns GAAP
10 treatment with regulatory treatment and therefore there is no need for additional
11 settlement language as both GAAP and FERC allow these costs to be capitalized
12 for ratemaking purposes.

13
14 **Q. Does this conclude your surrebuttal testimony?**

15 A. Yes. I reserve the right to supplement my testimony through the course of this
16 proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 6-SR

**Surrebuttal Testimony of Yvonne Phillips
Subject: Master Metering Proposals**

Date: August 10, 2021

1 (“OSBA”) Statement No. 1-R; and Harry Geller, CAUSE-PA Statement No. 1-R;
2 regarding metering of multitenant buildings.

3

4 **Q. Please summarize these witnesses’ comments in rebuttal testimony related to**
5 **master metering.**

6 A. Each witness responded to NEP witness Ringenbach’s proposal to implement a new
7 tariff rule 41.2 to allow residential master metering and submetering. They
8 indicated concerns with NEP’s proposal, including but not limited to the proposal’s
9 implications regarding consumer protections, universal service availability, energy
10 efficiency programs, rate establishment, cost and revenue allocation impacts, and
11 customer supplier choice. Witnesses Colton, Geller, and Knecht all recommend that
12 NEP’s proposal be rejected. OCA St. 4-R, p. 8, lines 5-8; CAUSE-PA St. 1-R, p.
13 59, lines 1-2; OSBA St. 1-R, p. 25, line 1.

14 Witnesses Geller and Knecht also comment upon the Company’s master
15 metering proposal, which I presented in my direct testimony, DLC St. 6. Witness
16 Geller supports the Company’s proposal, contrasting it with NEP’s. CAUSE-PA
17 St. 1-R, pp. 59-61. Witness Knecht alleges that the Company’s proposal did not
18 adequately address revenue allocation issues, and recommends that if it were
19 approved, the Company should create a new rate sub-class within Rate RS for
20 master metered multifamily buildings. OSBA St. 1-R, p. 19, lines 8-29.

21

22 **Q. Is the Company making any changes to its master metering proposal, as**
23 **described in your direct testimony (DLC St. 6)?**

1 A. Yes. The Company is withdrawing its master metering proposal in its entirety,
2 including the proposed revision to tariff rule 41 and addition of new tariff rule 41.1
3 included in the Company's initial filing. Such withdrawal will be reflected in the
4 Company's compliance tariff filing upon the conclusion of this proceeding.

5

6 **Q. Please explain.**

7 A. The Company's initial master metering proposal reflected a good-faith effort to
8 address the concerns of commentators in the Company's 2018 rate case and
9 participants in the subsequent master metering collaborative. As Company witness
10 DeMatteo explained in his rebuttal testimony in the 2018 proceeding and as I
11 reiterated in my direct testimony, DLC St. 6, the Company has historically taken a
12 cautious position with respect to residential master metering because of its attendant
13 potential for customer harm, which witnesses Colton, Knecht, Geller, and I
14 elucidated further in rebuttal testimony. The Company therefore worked with
15 collaborative participants to fashion a master metering rule that would address their
16 interests while also maintaining adequate customer protections. The Company's
17 resulting proposal sought to strike this balance and support low-income customers.

18 The comments of witnesses Colton, Knecht, and Geller, however, have
19 reaffirmed my opinion that the potential customer benefits of allowing limited
20 residential master metering, as contemplated in the Company's initial proposal, are
21 substantially outweighed by the risk of customer harm that could result from
22 expanding residential master metering more generally. Moreover, their comments
23 helped to demonstrate that NEP's proposal appears to be motivated more by profit

1 than customer service.¹ I do not believe it would be appropriate to jeopardize
2 residential customer protections in service of certain developers’ profit margins.

3 The Company is accordingly withdrawing its master metering proposal to
4 streamline the issues under review in this proceeding. While the Company’s initial
5 proposal was entirely distinct from NEP’s proposal, they both concern similar
6 subject matter, and so may have the potential to be conflated or otherwise
7 considered jointly. The Company’s withdrawal of its initial proposal therefore
8 allows the Commission to focus on NEP’s master metering proposal – and in doing
9 so, recognize the detriments of the proposal and reject it.

10

11 **Q. OSBA witness Knecht alleges that the Company’s initial master metering**
12 **proposal failed to satisfy the Company’s obligations under the 2018 rate case**
13 **settlement. OSBA St. 1-R, p. 19, lines 15-18. Please respond.**

14 A. I disagree with Mr. Knecht’s allegation. First, I observe that Mr. Knecht’s concern
15 is untimely. Mr. Knecht did not raise this issue in his direct testimony. This failure
16 was through no fault of the Company; rather, it may have been due to an internal
17 “communications snafu” at OSBA (see OSBA St. 1, p. 1, lines 25-26). Furthermore,
18 OSBA participated in the master metering collaborative meeting held on February
19 24, 2021, where the parties discussed a near-final version of the Company’s initial

¹ E.g., CAUSE-PA St. 1-R, p. 47, lines 7-8 (explaining that NEP’s submetering proposal would allow NEP to profit on the difference between residential and nonresidential rates for electric service); OSBA St. 1-R, p. 24, lines 6-11 (observing that “there does not appear to be anything to stop developers/landlords from implicitly including the cost of universal service charges in their bills to residents,” despite not providing any universal service programs in return for such charges).

1 master metering proposal. OSBA raised no concerns regarding settlement
2 compliance or revenue allocation at that meeting.

3 Second, I disagree with Mr. Knecht's suggestion that the Company did not
4 "address[] revenue allocation implications" of its initial proposal. As I explained in
5 my direct testimony, limiting master metering to new services prevents migration
6 of existing customers between rate classes, thereby mitigating related revenue
7 allocation impacts. DLC St. 6, p. 6, lines 2-9. Moreover, while the Company does
8 not have a projection of how many new customers would have sought master
9 metering under the Company's initial proposal, the number would likely have been
10 small, due to the narrow range of buildings that would have been eligible under that
11 proposal. Company witness Gorman responds to this issue in more detail in his
12 surrebuttal testimony, DLC St. 15-R.

13 In any event, the Company is withdrawing its master metering proposal as
14 discussed above, rendering Mr. Knecht's concern moot.

15

16 **Q. Does this conclude your surrebuttal testimony?**

17 A. Yes. I reserve the right to supplement my testimony through the course of this
18 proceeding.

Duquesne Light Company
Docket No. R-2021-3024750

Interrogatories of
Nationwide Energy Partners, LLC

Set III

Witness: Yvonne Phillips and David Defide

NEP-III-4

4. Re Phillips Rebuttal St. No. 6-R p. 8 lines 9-13: Please provide the sampling data cited which demonstrates the “return” from participating tenants that install Duquesne provided equipment.

Response:

The “return” reflects evaluation, measurement, and verification activities during Act 129 Phase III (period ending 5/31/2021) performed by the Company’s independent evaluator for the Multifamily Housing Retrofit Program, which verified 6,188 MWh annualized savings and paid \$1,315,000 incentives. These results are reported annually, and are available on the Commission’s website at <https://www.puc.pa.gov/filing-resources/issues-laws-regulations/act-129/electric-distribution-company-act-129-reporting/>.

These findings are also annually reviewed and validated by the Commission’s Act 129 Statewide Evaluator. See <https://www.puc.pa.gov/filing-resources/issues-laws-regulations/act-129/act-129-statewide-evaluator-swe/>.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 7-SR

**Surrebuttal Testimony of Katherine M. Scholl
Subject: Residential COVID-19 Debt Relief and Universal Services**

Date: August 10, 2021

1 **SURREBUTTAL TESTIMONY OF KATHERINE M. SCHOLL**

2

3 **Q. Please state your full name and business address.**

4 A. My name is Katherine M. Scholl. My business address is 411 Seventh Avenue,
5 Mail Drop 15-1, Pittsburgh PA 15219.

6

7 **Q. What is your position at Duquesne Light Company?**

8 A. I am the Director of Billing and Revenue Management.

9

10 **Q. Did you previously submit testimony in this proceeding on behalf of the**
11 **Company?**

12 A. Yes. I submitted my direct testimony, DLC Statement No. 7, on April 16, 2021;
13 and rebuttal testimony, DLC Statement No. 7-R, on July 26, 2021.

14

15 **Q. Are you sponsoring any Exhibits along with your surrebuttal testimony?**

16 A. Yes, I am sponsoring Exhibit KMS-1-SR, an example CAP bill.

17

18 **Q. What is the purpose of your surrebuttal testimony?**

19 A. I am responding to the rebuttal testimonies of Christine Wilson, Bureau of
20 Investigation and Enforcement Statement No. 1-R regarding the proposed COVID-
21 19 Residential Debt Relief Program; and Roger Colton, Office of Consumer

1 Advocate (“OCA”) Statement No. 4-R, regarding proposed changes to the
2 Company’s Universal Services programs.

3 **Q. What is Witness Wilson’s position on the proposed COVID-19 Residential**
4 **Debt Relief Program?**

5 A. Witness Wilson recommends that the COVID-19 Residential Debt Relief Program
6 be disallowed, citing decreasing unemployment levels and the Commission’s order
7 (M-2020-3019244) earlier this year to offer flexible payment arrangements.

8 **Q. Do you agree with Witness Wilson’s position on disallowing the COVID-19**
9 **Residential Debt Relief program?**

10 A. I do not. Decreasing unemployment levels mean that customers may be better
11 suited to pay their bills going forward, though they may still need help to pay-off
12 large balances that accumulated during the 16-month moratorium. Payment
13 arrangements – while flexible – continue to challenge affordability for this already-
14 challenged group of customers.

15 **Q. Does witness Wilson provide any recommendations, should the Commission**
16 **decide to approve the COVID-19 Residential Debt Relief Program?**

17 A. Yes. I will summarize Witness Wilson’s recommendation as follows:

18 1. Eliminate the minimum income eligibility so that all low-income
19 households that meet the qualifications may participate;

- 1 2. Maintain the originally proposed end-date of March 31, 2022 at the very
2 latest;
- 3 3. The administrative costs – proposed at \$500,000 – should be tracked and
4 recorded for future consideration and potential recovery in the next base
5 rate proceeding;
- 6 4. The costs related to waiving of reconnection charges and service
7 restoration should not be in addition to the proposed \$3 million budget; and
8 5. That the budget be capped at \$3 million, excluding the administrative costs.

9

10 **Q. Do you agree with Witness Wilson’s recommendations?**

11 A. I accept each of Witness Wilson’s recommendations as noted in the previous
12 question.

13

14 **Q. Describe the parts of Witness Colton’s rebuttal testimony to which you are
15 responding.**

16 A. Witness Colton agrees with certain recommendations made by Witness Geller,
17 including the recommendation to “...notify all customers when they reach 50, 75,
18 and 90% of their CAP maximum levels and advise them of their potential eligibility
19 for exemptions.” (OCA 4-R at page 2.)

20

21 **Q. Do you agree with this recommendation?**

22 A. I do not.

1 First, the Company recently launched new bill designs, including one that
2 was specifically designed for CAP customers and was reviewed with CAP
3 customers for feedback prior to its development and launch. An example of this
4 new CAP bill is included as Exhibit KMS-1-SR. The new bill design clearly
5 illustrates how much of the maximum annual discount has been used, and when the
6 discount will be reset.

7 Second, the Company recently worked with one of its CBOs – Holy Family
8 Institute – to appoint a Customer Success Associate. This person routinely reviews
9 the accounts of customers who are at 70% or more of their maximum annual
10 discount. She reaches out to them and discusses both LIURP and any causes for
11 exceptions due to usage out of the customer’s direct control.

12 I believe these two measures are sufficient for notifying a customer that he
13 or she is approaching the maximum annual discount.

14

15 **Q. Has the Company found outreach such as that proposed by Witness Colton to**
16 **be effective?**

17 A. For many customers, additional letters and outreach do not appear to affect
18 behavior.

19 Consider the case of recertification. In his direct testimony, Mr. Colton took
20 exception of the Company’s number of customers who fail to recertify:

21 From January 2019 through May 2021, 9,074 low-income
22 customers exited the Duquesne Light CAP. ... more than 77%
23 (6,989 of 9,074) were removed due to a failure to reverify their
24 income.
25

1 For a utility that has a current CAP participation of less than 35,000
2 customers, to lose nearly 7,000 participants in one 17-month period
3 due to a failure to recertify, when not everyone is required to
4 recertify every year, and when recertifications were halted
5 completely for four months (April – July), should present concerns
6 to the Commission and to the utility.
7

8 Mr. Colton failed to recognize that the Company did not actually “lose” nearly
9 7,000 CAP customers. CAP participation remained in the 34,000 – 35,000 range
10 throughout.

11 Customers receive multiple forms of outreach – by letter and often by phone
12 – prior to being removed from CAP for failure to recertify. After they are defaulted
13 – and presumably when they recognize that they have been defaulted through their
14 first non-CAP bill – they reach out to our CBOs and are reinstated in CAP.

15 More letters and automated calls do not necessarily equate to better
16 outcomes. I firmly believe that personalized outreach and coaching, which the
17 Company is employing with the addition of the Customer Success Associate, is a
18 much better approach.
19

20 **Q. Are there any other areas of Mr. Colton’s rebuttal testimony to which you**
21 **would like to respond?**

22 A. Yes. I would like to address how Mr. Colton responded to Mr. Geller’s
23 recommendation that if more than 5% of the Company’s CAP customers reach the
24 maximum prior to the 11th month of a program year, the Company should be
25 required to further increase CAP maximums, presumably across the board. See
26 OCA St. 4-R, pp. 2-5.
27

1 **Q. Do you agree with Mr. Colton’s position on not automatically increasing the**
2 **maximum annual discounts if the percent of customers reaching the maximum**
3 **exceeds 5%?**

4 A. I do. Mr. Colton makes a compelling argument, noting that it is important to
5 understand why customers are reaching the maximum discount; who is reaching
6 the maximum discount; and for how long CAP participants are exceeding the
7 maximum annual discount. Knowing the underlying cause of customers reaching
8 the maximum discount is critical to crafting an appropriate response. Mr. Colton
9 wisely notes, “Duquesne should not adopt, in advance, a single remedy to a
10 “problem” that may well have any number of alternative causes and, therefore, any
11 number of reasonable remedies.” OCA St. 4-R, p. 5 lines 11-13. I wholeheartedly
12 agree. Further, I believe that this matter is best addressed in a Universal Services
13 proceeding.

14
15 **Q. Does this conclude your surrebuttal testimony?**

16 A. Yes. I reserve the right to supplement my testimony through the course of this
17 proceeding.

Billing and Service Options

Sign up online for any of the following services

E-Billing - Free service lets you view bills online

Budget Billing - Levels out payments across the year

Start/Stop Service - If you re moving and need to have your service turned on or off you must call Customer Service at 412-3 3- 100 or visit our website

Double Notice Protection - Sends a payment reminder to you and a person you designate

Understanding Your Bill

Customer Charge - A monthly basic service charge that includes costs for meter reading customer billing service equipment and other expenses. These expenses are incurred even in months when customers do not use electricity.

Distribution Charges - Basic service charges for delivering electricity over a distribution system to the home or business from the transmission system.

Distribution System Improvement Charge (DSIC) - A charge for company investment to improve service quality and increase safety by repairing improving or replacing eligible infrastructure used to deliver electricity.

DLC Charges - Services necessary for the physical delivery of electricity service such as supply including default service transmissions and distribution.

Kilowatt-Hour (kWh) - The basic unit of electric energy for which most customers are charged. It equals the amount of electricity used by 10 100-watt light bulbs left on for one hour.

Meter Reading - An actual (Act) reading is a reading taken from the meter. An estimated (Est) reading is used when no actual reading is available and is based on past electric usage.

Non-Basic Service Charges - Any category of service not related to basic service.

Smart Meter Charge - Charges for advanced metering technology and related infrastructure that will provide the ability for features such as two-way communication and interval usage data.

Supply Charges - Basic service charges for generation supply to retail customers.

Transmission Charges - Basic service charges for the cost of transporting electricity over high voltage wires from the generator to the distribution system.

Customer Assistance Program (CAP)

CAP is Duquesne Light Company's discount program for residential customers whose total household income is at or below 150% of the Federal Poverty Guidelines. Customers who enroll in CAP are eligible for a reduced monthly payment based on their verified household income. The CAP Program also includes an opportunity to have existing debt forgiven. Please call a CAP Specialist at 888-3 3- 600 with any questions or for information on how to enroll in the program.

CAP Discount - The difference between your actual billed amount and your CAP Monthly Payment amount.

CAP Recertification - CAP customers are required to verify their income every two years on the anniversary of the CAP enrollment. Failure to recertify results in removal from CAP.

Debt Forgiveness - The portion of your pre-program amount that is forgiven based on receipt of regular monthly payments under the CAP program.

Grant Payment - Energy assistance grants such as LIH AP and Dollar Energy Fund which are applied directly to the bill.

Maximum Annual CAP Discount - The maximum amount of CAP discounts allowed annually.

CAP Payment Amount - Your monthly CAP payment amount is based on a percent of your income. At any time if your average or actual billed amount is less than that will become your CAP Payment Amount.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2021-3024750

Duquesne Light Company
Statement No. 10-SR

Surrebuttal Testimony of Robert L. O'Brien

Dated: August 10, 2021

1 **I. INTRODUCTION**

2 **Q. Please state your name.**

3 A. My name is Robert O'Brien.

4 **Q. Have you previously testified in this proceeding?**

5 A. Yes, I submitted Direct Testimony on behalf of Duquesne Light Company ("DLC"
6 or "Company") in this proceeding, dated April 16, 2021, before the Pennsylvania
7 Public Utility Commission ("Commission"); and I also submitted rebuttal
8 testimony on July 26, 2021.

9 **Q. What is the purpose of your Surrebuttal Testimony?**

10 A. My Surrebuttal Testimony will address a portion of the rebuttal testimony of
11 Bureau Investigation and Enforcement ("I&E") witness Christine Wilson.
12

13 **Q. Are you sponsoring any Exhibits along with your surrebuttal testimony?**

14 A. Yes, I am sponsoring Exhibit RLO-1-SR, which illustrates the adjustment to the
15 Company's revenue requirement that would be required if the Commission were to
16 adopt witness Wilson's recommendation to include COVID-19-related
17 uncollectibles in the Company's uncollectible expense for the FPFTY.
18

19 **Q. What portion of I&E Witness Wilson's rebuttal testimony will you address?**

20 A. I will address Ms. Wilson's statement on page 6, lines 13 to 17 of I&E Statement
21 No. 1-R where she states, "...that the Company be required to discontinue
22 recording a regulatory asset for COVID-19 related to incremental uncollectible
23 costs after the effective date of new rates in this proceeding. This is because the

1 Company should have a new uncollectible percentage built into the rate formula in
2 this proceeding which accounts for changes due to COVID-19.”

3

4 **Q. Did the Company, as Ms. Wilson suggests, include any amount for the**
5 **COVID-19 related uncollectible expense recovery in setting its new**
6 **uncollectible percentage that is built into the rate formula in this proceeding?**

7 A. No, it did not. As shown on DLC Exhibit 2, Schedule D-10, the Company used the
8 years 2015 to 2019 to establish the base percentage built into rates in this
9 proceeding. This removes the impact of the COVID-19 uncollectible activity in
10 2020 from the uncollectible account percentage used to establish prospective rates.
11 The Company has made a separate claim for the deferred amounts through June 30,
12 2021, for COVID-19 uncollectible expense to be recovered through amortization
13 as part of this rate case.

14

15 **Q, Did any party to this proceeding propose any change in the Company’s use of**
16 **the 2015 to 2019 period to establish the base percentage used to determine the**
17 **normal uncollectible expense in this proceeding?**

18 A. No, there were no proposed adjustments to the use of those years or to the
19 percentage established as presented in DLC Exhibit No. 2, Schedule D-10.

20

21 **Q. Should, as Ms. Wilson also suggests, the Company have included an amount**
22 **which accounts for changes due to COVID-19?**

1 A. No, it would be wrong to incorporate any impact from COVID-19 on uncollectible
2 expense into the base rates in the proceeding. The normal procedure used to
3 establish the uncollectible expense is to use a historic period to develop a base
4 percent as shown on Schedule D-10 as done in this proceeding. As described in
5 my direct testimony, the year 2020 was not included because of the distortion
6 caused by COVID-19 and related Commission directives regarding uncollectible
7 activities.

8

9 **Q. Do you agree that the COVID-19 uncollectible expense to be recovered should**
10 **be amortized as recommended by Ms. Wilson?**

11 A. Yes, I agree with the use of an amortization procedure with respect to these
12 expenses, though I continue to disagree with Ms. Wilson's recommendation to use
13 a 43-month period.

14

15 **Q. How does the use of an amortization procedure impact the total recovery of**
16 **the COVID-19 uncollectible expense recovery?**

17 A. As Ms. Wilson states on I&E Statement No. 1, page 11, lines 21 and 22,
18 "[A]mortization allows for full recovery of the regulatory asset no matter when a
19 utility makes a subsequent base rate case filing."

20

21 **Q. Is the Company able to establish what the final amounts for the COVID-19**
22 **uncollectible expense will be at this time?**

1 A. No. As I understand it, because of the significant increase in the number of deferred
2 payment agreements that exist as a direct result of COVID-19, some of which
3 extend for up to 60 months, and the Commission’s related Orders, the Company
4 can only estimate what the total COVID-19 uncollectible costs might be. To allow
5 the Company to continue to identify all COVID-19 uncollectible amounts and
6 record them in the regulatory asset will allow the Company the opportunity for full
7 recovery of the actual uncollectible amounts.

8

9 **Q. Are the details regarding the COVID-19 uncollectible procedures described**
10 **by DLC Witness Bachota?**

11 A. Yes, they are.

12

13 **Q. In the alternative, if the Company is not permitted to defer incremental**
14 **COVID-19 uncollectible expense following the effective date of new rates, will**
15 **changes to the Company’s claimed uncollectible expense for the FPFTY be**
16 **required?**

17 A. Yes. In such instance, the Company’s claimed uncollectible expense would need to
18 be adjusted to conform to witness Wilson’s recommendation that “the Company
19 should have a new uncollectible percentage built into the rate formula in this
20 proceeding which accounts for changes due to COVID-19.” Otherwise, if this
21 adjustment is not included, the Company would be denied the opportunity to
22 recover these expenses.

1 This approach would necessitate an increase in the Company's claimed
2 uncollectible expense for the FPFTY of \$3.007 million, for a total uncollectible
3 expense of \$15.332 million, in addition to the \$2.094 million for the COVID-19
4 uncollectible expense included in the Company's original filing on Schedule D-12
5 (line 3 + line 6 / 3).

6

7 **Q. Have you prepared a schedule showing the calculation of the additional**
8 **uncollectible expense resulting from including these COVID-19**
9 **uncollectibles?**

10 A. Yes, I have. Exhibit RLO-1-SR is an update of my original uncollectible expense
11 calculation of \$12.325 million and a factor of 1.30% as shown on Exhibit DLC 2,
12 Schedule D-10 line 11 and line 8 respectively.

13

14 **Q. Please describe your changes to Exhibit DLC 2, Schedule D-10 which are**
15 **shown on Schedule RLO-1-SR.**

16 A. The changes are shown in columns 6 and 7. Line 10a shows the \$19.0 million that
17 DLC Witness Bachota estimates will be the total 2020 related uncollectibles
18 including all estimated COVID-19 related uncollectibles (see DLC St. 2-SR). Line
19 10b shows the recorded 2020 uncollectibles of \$3.697 million shown on line 6
20 while line 10c shows the COVID-19 estimates that the Company included in its
21 original filing on Exhibit DLC 2, Schedule D-12 of \$6.281 million. The net of
22 these three amounts is the additional COVID-19 uncollectible expense to be
23 recovered. Using the three-year amortization period, the \$9.022 million would be

1 recovered annually at \$3.007 million per year as shown on lines 10d, 10e and 11b.
2 This additional uncollectible expense of \$3.007 million would result in an increase
3 of the uncollectible factor used in the gross revenue conversion factor from the
4 1.300% shown on line 8 to the 1.617% shown on line 15.

5
6 **Q. How do you recommend the additional COVID-19 uncollectible expenses,**
7 **beyond the \$6.281 million, be identified and included in the Company's**
8 **revenue requirement?**

9 A. I think the Company's initial proposal - to continue to identify and defer the
10 incremental COVID-19 related uncollectible expense, and recover such expense
11 through amortization until fully recovered – remains the preferable approach. In
12 this manner, the Company will be able to recover no more or less than the actual
13 amounts. Unlike the proposal by Ms. Wilson, which would increase the FPFTY
14 revenue requirement by \$3.007 million, the Company's proposal to continue to
15 identify and add these additional COVID-19 uncollectible expenses to the
16 deferred account would simply continue the amortization recovery into the future
17 and not increase the current FPFTY revenue requirement.

18
19 **Q. Does this complete your prepared surrebuttal testimony at this time?**

20 A. Yes, it does.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 15-SR

Surrebuttal Testimony of Howard S. Gorman

Dated: August 10, 2021

1 **Q. Please state your name.**

2 A. My name is Howard Gorman.

3 **Q. Have you previously submitted testimony in this proceeding?**

4 A. Yes, I submitted Direct Testimony on April 16, 2021, on behalf of DLC in this
5 proceeding before the Commission. I also submitted Rebuttal Testimony on July
6 26, 2021. My testimony described the jurisdictional separation studies and the
7 unbundled, allocated cost of service study that I prepared for DLC. The purpose of
8 the JSS is to determine the portion of DLC's total annual revenue requirement that
9 is subject to the jurisdiction of the Commission, i.e., the distribution revenue
10 requirement. The purpose of the ACOS is to assign, on a cost-causation basis,
11 DLC's distribution revenue requirement among the rate classes in its Tariff.
12 Abbreviations used in this Rebuttal Testimony have the same meaning as in my
13 Direct Testimony.

14 **Q. What is the purpose of your Surrebuttal Testimony?**

15 A. My Surrebuttal Testimony will respond to the Rebuttal Testimony of the following
16 witnesses in the following areas:

- 17 • OSBA Witness Knecht regarding cost allocation and regarding his
18 comments on aspects of the Company's proposal on Master Metering, and
19 • OCA Witness Watkins regarding cost allocation.

20

21

22

23

1 Allocated Cost of Service

2 **Q. Was the methodology that you used to prepare the JSS and the ACOS the same**
3 **as in the past?**

4 A. Yes. The JSS and ACOS are presented in Exhibit 6, and an updated JSS and ACOS
5 in Exhibit 6(R). The methodology used in the present rate case was the same as in
6 the Company's last four rate cases and the development of the allocators in the
7 present rate case was also the same as in prior cases.

8 **Q. Other than OSBA and OCA, did any party object to the Company's ACOS?**

9 A. No. As stated in my Rebuttal testimony, the Company's ACOS was accepted
10 explicitly or implicitly by all other parties in this case. In addition, no party
11 objected to the Company's ACOS in the four prior cases, except for OCA, which
12 has consistently opposed any customer component of the distribution system
13 (another party in 2018 shared OCA's concerns but did not object to the ACOS);
14 and Wal-Mart in 2006, which asked the Commission to order the Company to
15 classify a portion of primary as customer-related.

16 In the present case, I&E did not raise any objections to the Company's
17 ACOS, and I&E and other parties relied on it for their rate design testimony.

18 **Q. Please summarize OSBA's and OCA's Rebuttal testimony in this area.**

19 A. OSBA and OCA each put forth, in their Direct Testimony, cost allocation
20 approaches that favor their respective constituents. In their Rebuttal Testimony,
21 OSBA and OCA each criticized the cost allocation approach of the other.

22 OSBA would "recommend that the Commission not adopt Witness
23 Watkins' cost allocation approach" (OSBA St. 1-R, p. 6). The cost allocation

1 approach put forth by OCA, and objected to by OSBA, would reduce costs to the
2 parties OCA represents and increase costs to the parties OSBA represents.

3 OCA stated, "...the results of Mr. Knecht's CCOSS cannot be considered
4 credible in any way and therefore should not be given any consideration in this
5 proceeding" (OCA St. 3-R, p. 6). The cost allocation approach put forth by OSBA,
6 and objected to by OCA, would reduce costs to the parties OSBA represents and
7 increase costs to the parties OCA represents.

8 **Q. Please summarize OSBA's objections to OCA's cost allocation approach, and**
9 **OCA's objections to OSBA's cost allocation approach.**

10 A. OSBA criticized the OCA cost allocation approach largely based on OSBA's
11 claims that OCA fails to reflect economies of scale because OCA denies a customer
12 component for any portion of the distribution system, and because it claims that
13 OCA's approach is not consistent with Commission precedent.

14 OCA criticized the OSBA cost allocation approach largely based on OCA's
15 claim that OSBA's approach is not based on the facts attributable to DLC's
16 distribution system, and further that OSBA's approach uses "arbitrary and
17 inconsistent adjustments" (OCA St. 3-R, p. 6).

18 **Q. Please comment.**

19 A. Both OSBA and OCA ignored the actual design and construction of DLC's
20 distribution system. OSBA is correct in that OCA, by rejecting a customer
21 component for secondary distribution, ignores the economies of scale for larger
22 customers reflected in DLC's system design and therefore in its ACOS.

23 OCA is correct in that OSBA, by assuming that there must be a customer
24 component for primary distribution, incorrectly relies on the NARUC Manual and

1 what it claims is precedent (this issue is addressed extensively in my Rebuttal).
2 Further, OCA is correct in that OSBA's calculation of the primary distribution
3 customer component is arbitrary.

4 **Q. Please summarize.**

5 A. Each of OSBA and OCA has found a fundamental flaw in the cost allocation study
6 presented by the other. Each of OSBA and OCA largely accepted the Company's
7 JSS and ACOS, except for the specific objections each raised.

8 Each of OSBA and OCA is correct in finding that the cost allocation study
9 presented by the other is flawed and must be rejected by the Commission.

10 The Company's JSS and ACOS is the only one presented in this case that
11 fairly reflects the design and operation of the Company's distribution system. The
12 Company's ACOS was accepted explicitly or implicitly by all parties in this case,
13 other than OSBA and OCA, each of which objected only to limited portions, and
14 in ways that would favor their own constituents. In particular, I&E Witness Mr.
15 Sakaya relied on the Company's ACOS study to present his proposed revenue
16 allocation scale back.

17 **Q. What do you recommend?**

18 A. I recommend the Commission accept the JSS and the ACOS submitted by the
19 Company in this case, and the underlying methodology, because it reflects the
20 design and operation of the Company's distribution system, and is consistent with
21 precedent as well as authoritative guidance.

22

23

1 Master Metering

2 **Q. What did the Company propose regarding Master Metering?**

3 A. The Company proposed a new Rule 41.1, which would have allowed a single meter
4 for certain multi-tenant premises; the specifics are presented by the Company at
5 DLC St. 6.

6 **Q. What aspects of OSBA's criticism of the Company's Rule 41.1 proposal will**
7 **you address here?**

8 A. OSBA criticized the Company for not reflecting the revenue allocation effects of
9 the proposed change in its filing, and for not having the information to predict such
10 effects of the change (OSBA St.1-R, p. 15 *et seq.*).

11 **Q. Please address these criticisms.**

12 A. The Company has withdrawn its Rule 41.1 proposal, as discussed by Company
13 Witness Phillips, DLC St. 6-SR. I am responding here to address the assertion by
14 OSBA that the Company's proposal was deficient, which Witness Phillips also
15 discusses in DLC St. 6-SR.

16 The proposed change would have been for new customers only. The
17 Company's forecast did not include any new customers selecting this option,
18 therefore the effect on FPFTY revenue allocation was nil. OSBA did not object to
19 the Company's forecast in this regard.

20 OSBA's statement that the Company's rationale for excluding the impact
21 "makes little sense" because it will affect "future base rates proceedings . . ." is not
22 correct. It would have been speculative, and therefore inappropriate, to estimate
23 the effects of the Company's proposal on class cost of service and on revenue
24 allocation.

1

2 **Q. Does this conclude your Surrebuttal Testimony at this time?**

3 A. Yes.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 16-SR

**Surrebuttal Testimony of David B. Ogden
Subject: Revenue Allocation, Customer Charge, Rate Design**

Date: August 10, 2021

1 rate case perspective, while Witness Colton proposes a shift in surcharge cost
2 responsibility to make nonresidential customers subject to the Company’s Rider
3 No. 5 – Universal Service Charge (“USC”). From a distribution base rate
4 perspective, Table IEc-S1 (OSBA St. 1-R, pg. 11) combines both the base rate
5 revenue allocation proposal that was originally proposed by Witness Watkins
6 (OCA St. 3, Table 10), along with the proposal to shift cost responsibility with the
7 Company’s USC (OCA St. 3, Schedule GAW-7). Combining surcharge and base
8 rate revenue allocation proposals could be construed as misleading from a pure base
9 rate revenue allocation perspective.

10

11 **II. RESIDENTIAL CUSTOMER CHARGE**

12 **Q. Mr. Watkins disagrees with I&E Witness Mr. Sakaya’s recommendation to**
13 **scale-back the residential customer charge proportionally based on the overall**
14 **increase to the residential class, and reiterates his recommendation that the**
15 **residential customer charge not increase (OCA St. No. 3-R, p. 9, lines 6-15).**
16 **Do you agree with Mr. Watkins’s position?**

17 A. No. I continue to disagree with Mr. Watkins’s recommendation of no increase to
18 the Residential customer charge. As discussed in my rebuttal testimony (DLC St.
19 16-R, Page 9, Lines 9-11), the Company continues to request the originally
20 proposed Residential customer charge. In the alternative, if the Commission
21 ultimately authorizes a smaller-than-proposed increase in the Residential customer
22 charge, it should instead employ Mr. Sakaya’s recommended scale-back. This
23 scale-back should take into account the proposed revenues as reflected within

1 Exhibit RLO-5-R, Schedule D-1, Page 1 of 3, Column 2, Line 2, along with the
2 proposed roll in of surcharge revenues (i.e. Rider No. 10 – State Tax Adjustment
3 (“STAS”) and Rider No. 22 – Distribution System Improvement Charge (“DSIC”))
4 as reflected within Exhibit RLO-5-R, Schedule D-5, Column 9, Line 2.

5

6

III. RATE DESIGN

7 **Q. What is your position on Mr. Knecht’s recommendation that the Company’s**
8 **Rider No. 3 – School and Governmental Service Discount Period be**
9 **eliminated, and payment terms for government customers be the same as that**
10 **for other customers in the general service rate classes (OSBA St. 1-R, p. 14,**
11 **lines 4-14)?**

12 A. This recommendation should be denied. First, this recommendation is not timely.
13 Mr. Knecht blames its late submission on receipt of interrogatory responses after
14 the due date for direct testimony. OSBA St. 1-R, p. 14, lines 2-3. This appears to
15 have been a consequence of OSBA’s internal “communications snafu” (see OSBA
16 St. 1, p. 1, lines 25-26), and not through any fault of the Company. Regardless of
17 OSBA’s reason for the late submission of discovery requests, presenting new
18 recommendations in rebuttal testimony does not allow for other interested parties
19 to fully rebut; and deprives customers served under Rider No. 3 of their opportunity
20 to intervene and participate. I have been advised by counsel that Mr. Knecht should
21 have proposed this rate design recommendation in his direct testimony.

22 In theory, providing a 30-day bill payment grace period for Rider No. 3
23 customers should contribute to lower delinquencies for these particular customers,

1 which could translate to lower uncollectible expenses being allocated to the
2 applicable rate classes within the Company’s ACOS (i.e. Applicable to Rates
3 GS/GM, GMH, GLH, GL and L). Lower uncollectible expenses should benefit all
4 customers within the applicable rate class.

5 I also disagree with Mr. Knecht that Rider 3 is “unreasonably
6 discriminatory.” It is reasonable to provide schools and other governmental
7 customers an additional 15-days grace period before late payment charges begin to
8 accrue. This additional grace period recognizes the public service those entities
9 provide, and accommodates the possibility that those entities may have more
10 cumbersome accounts-payable processes than non-public entities. The Company
11 notes that several other Pennsylvania EDC retail tariffs have similar payment terms
12 for governmental entities. By way of further background, the Commission allowed
13 the Company to place Rider No. 3 into its Tariff No. 13 effective January 19, 1973,
14 pursuant to its Order issued on December 19, 1972, at Docket No. C.19276. The
15 Company made an attempt to retrieve this Order directly from the Commission, and
16 was advised that the files were destroyed due to a flood years ago at the state
17 archives.

18

19 **Q. What is your position on Ms. Harris’s rate design recommendation?**

20 A. Ms. Harris recommends in rebuttal testimony that the Company include proposals
21 in this proceeding for long-term, sustainable rate design, particularly for
22 commercial and industrial electric fleet use cases. NRDC St. 1-R, p. 7, lines 4-5.
23 Ms. Harris did not initially recommend a specific rate design proposal in direct

1 testimony, nor does she in rebuttal testimony. Ms. Harris's proposal lacks the
2 specificity needed to analyze and put into effect any rate design plans in this
3 proceeding. Further, there is no basis for providing rate design proposals that the
4 Company may or may not recommend in a future distribution rate case. This
5 recommendation should be denied.

6

7 **Q. Does this conclude your surrebuttal testimony?**

8 A. Yes. I reserve the right to supplement my testimony through the course of this
9 proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 2-RJ

Rejoinder Testimony of Jaime A. Bachota

Subjects: COVID-19 Expenses; Cloud-Based Software Costs; Pension

Date: August 13, 2021

1 **REJOINDER TESTIMONY OF JAIME A. BACHOTA**

2

3 **Q. Please state your full name and business address.**

4 A. My name is Jaime A. Bachota. My business address is 411 Seventh Avenue,
5 Pittsburgh, PA 15219.

6

7 **Q. What is your position at Duquesne Light Company?**

8 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”)
9 as the Assistant Controller.

10

11 **Q. Did you previously submit testimony in this proceeding on behalf of the**
12 **Company?**

13 A. Yes. I submitted my direct testimony, DLC Statement No. 2, on April 16, 2021;
14 rebuttal testimony, DLC Statement No. 2-R, on July 26, 2021; and surrebuttal
15 testimony, DLC Statement No. 2-SR, on August 10, 2021.

16

17 **Q. What is the purpose of your rejoinder testimony?**

18 A. My rejoinder testimony responds to portions of the surrebuttal testimony of Bureau
19 of Investigation & Enforcement (“I&E”) witness Christine Wilson as to COVID-
20 19 Related costs net of savings, and Office of Consumer Advocate (“OCA”)
21 witness Lafayette Morgan regarding Cloud-Based Software Implementation Costs
22 and Pension Capitalization Adjustment.

23

1 **Q. What is the purpose of I&E Witness Wilson’s surrebuttal testimony?**

2 A. Among other things, Ms. Wilson’s surrebuttal testimony addresses non-
3 uncollectible COVID-19 related costs net of savings.

4

5 **Q. Please summarize I&E Witness Wilson’s assertion regarding the Company’s**
6 **inclusion of lost late payment charges within its incremental COVID-19**
7 **related cost.**

8 A. As noted in Ms. Wilson’s surrebuttal testimony, she characterizes the Company’s
9 lost late payment charges as “simply lost fees and not lost revenue for goods or
10 services provided.” I&E St. 1-SR, p. 17, line 1.

11

12 **Q. Do you agree with Ms. Wilson’s characterization?**

13 A. I do not. Late payment charges are not merely a revenue stream. They reflect the
14 Company’s costs of providing goods and services to customers – specifically, the
15 Company’s costs of extending credit to customers who do not make timely
16 payments. As required under the Commission’s relevant Orders prohibiting service
17 termination, the Company provided this service to customers during the applicable
18 period of the pandemic, but has not had the opportunity to recover the costs thereof.
19 In addition, late payment charges are an item that is specifically included in the
20 ratemaking formula and offset the Company’s revenue requirement. It is reasonable
21 to allow the Company to recover its costs of this service through a regulatory asset.

22

23 **Q. What is the purpose of OCA Witness Morgan’s surrebuttal testimony?**

1 A. Among other things, OCA Witness Morgan’s surrebuttal testimony addresses
2 cloud-based software implementation costs and the capitalized pension adjustment.

3

4 **Q. What is OCA Witness Morgan’s continued concern regarding the Company’s**
5 **claim for cloud-based software implementation costs?**

6 A. Mr. Morgan expresses a concern that the Company may be double counting costs
7 in rate base associated with cloud-based software implementation costs. OCA St.
8 1-SR, p. 4, lines 1-11.

9

10 **Q. Do you agree with Mr. Morgan’s concern?**

11 A. No, I do not. Please see additional clarification regarding the Company’s treatment
12 of cloud-based software implementation costs within my surrebuttal testimony at
13 pages 7-8, and as follows.

14 For GAAP books and GAAP reporting as well as for budgeting purposes,
15 the Company records, reports and budgets cloud-based software implementation
16 costs as regulatory assets which is in accordance with the procedures established in
17 the Company’s last rate case settlement agreement.

18 For FERC reporting purposes, the Company reclassifies the cloud-based
19 software implementation cost regulatory asset recorded for GAAP purposes into
20 plant.

21 As stated in my direct testimony, the Company utilizes its budget in order
22 to arrive at amounts for the FPFTY in its rate proceedings. As cloud-based software
23 implementation costs are recorded as a regulatory asset for budgeting purposes,

1 they are excluded from both O&M expenses as well as capital (rate base) items. In
2 order to abide by the Company's last rate case settlement agreement, the Company
3 performs an adjustment to its budgeted amounts (regulatory asset) to properly
4 include an adjustment to rate base for ratemaking purposes. The Company's books
5 and records do not currently include any cloud based software implementation costs
6 in its plant-in-service accounts. Those cloud-based software costs are recorded as
7 regulatory assets in compliance with the Company's last rate case settlement
8 agreement.

9

10 **Q. Can you explain why, as Mr. Morgan cites in his surrebuttal testimony on page**
11 **4, there are three projects with the same name on the Company's response to**
12 **I&E-RB-7-D, which shows budgeted additions to plant for 2021, and also on**
13 **the Company's response to OCA-VI-5, which shows budgeted additions to the**
14 **cloud regulatory asset for 2021?**

15 A. Yes, I can. The Company's policy is to bifurcate the project costs into what are
16 considered solely [1] cloud-based software implementation costs, [2] expense costs
17 primarily associated with testing and training costs and [3] capital costs associated
18 with primarily on-premise integrations. As shown in each of the three projects, the
19 budgeted dollar amounts to be included in plant are different from the budgeted
20 dollar amounts that are to be included in the cloud regulatory asset. For example,
21 the addition to plant for the Work Planning Integration Software Replacements
22 shown on line 114 of I&E-RB-7-D is \$269,349 while the addition to the cloud

1 regulatory asset shown on the last line before the total line in 2021 is \$320,000.
2 This reflects two separate activities as described above.

3

4 **Q. Is there any double-counting as alleged by Mr. Morgan with regard to the**
5 **amounts included in the cloud regulatory assets?**

6 A. No, there is not.

7

8 **Q. What is the Company's recommendation regarding the current and future**
9 **treatment of cloud-based implementation costs?**

10 A. As noted in my surrebuttal testimony, the Company is requesting
11
12 to discontinue previously issued settlement language which
13 permitted the Company to record these arrangements as regulatory
14 assets vs. operating expenses for purposes of U.S. GAAP. The
15 Company would like to adopt the accounting guidance of ASU
16 2018-15 with approval in this proceeding, and capitalize the amount
17 previously recorded as a regulatory asset and the future costs of
18 these arrangements in accordance with U.S. GAAP. This guidance,
19 which was not available at the time of the Company's last base rate
20 filing, aligns GAAP treatment with regulatory treatment and
21 therefore there is no need for additional settlement language as both
22 GAAP and FERC allow these costs to be capitalized for ratemaking
23 purposes.
24

25 **Q. Please summarize OCA Witness Morgan's surrebuttal testimony as it relates**
26 **to the Company's ability to earn a return on its pension trust.**

27 A. Mr. Morgan implies that the Company earns a return on its contributions through
28 its pension trust (OCA St. 1-SR, p. 8, lines 4-8), and asserts that the capitalized
29 pension adjustment does not represent costs recorded in plant accounts on which
30 the Company is allowed to earn a return. OCA St. 1-SR, p. 7, line 23 – p. 8, line 3.

1

2 **Q. Do you agree with OCA Witness Morgan’s surrebuttal as it relates to the**
3 **ability of the Company to earn a return?**

4 A. No, I do not. The Company does not benefit from the return that is earned through
5 the pension trust which incorporates the Company’s pension contributions. As Mr.
6 Morgan stated in his surrebuttal testimony, “the return earned by the pension plan
7 is earned within the pension trust, based on the pension plan’s investments and is
8 separate from the Company’s earnings”. OCA St. 1-SR, p. 8, lines 6-8. The return
9 that is earned on the pension trust benefits the Company’s employees through
10 further funding the pension plan, as well as its customers through lower future
11 contributions. As I have previously explained, the Company should be able to earn
12 a return on the additional pension contributions that it has funded to the pension
13 trust and that has neither been recovered from customers nor included in plant
14 balances, as this amount has continued to benefit both the customer and the
15 employees.

16

17 **Q. Does this conclude your rejoinder testimony?**

18 A. Yes. I reserve the right to supplement my testimony through the course of this
19 proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 6-RJ

**Rejoinder Testimony of Yvonne Phillips
Subject: Master Metering Proposals**

Date: August 13, 2021

1 **REJOINDER TESTIMONY OF YVONNE PHILLIPS**

2

3 **Q. Please state your full name and business address.**

4 A. My name is Yvonne Phillips. My business address is Duquesne Light Company,
5 411 Seventh Avenue, Pittsburgh, PA 15219.

6

7 **Q. What is your position at Duquesne Light Company?**

8 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”)
9 as Director, Meter Operations.

10

11 **Q. Did you previously submit testimony in this proceeding on behalf of the**
12 **Company?**

13 A. Yes. I submitted my direct testimony, DLC Statement No. 6, on April 16, 2021;
14 rebuttal testimony, DLC Statement No. 6-R, on July 26, 2021; and surrebuttal
15 testimony, DLC Statement No. 6-SR, on August 10, 2021.

16

17 **Q. What is the purpose of your rejoinder testimony?**

18 A. I respond to the surrebuttal testimony of Teresa Ringenbach, Nationwide Energy
19 Partners (“NEP”) Statement No. 2, regarding master metering and submetering of
20 multitenant buildings.

21

22 **Q. Please summarize Ms. Ringenbach’s surrebuttal testimony related to master**
23 **metering and submetering.**

1 A. Ms. Ringenbach responds to many of the comments made by me, as well as
2 witnesses Watkins, Geller, and Knecht, in opposition to NEP’s proposal to expand
3 residential master metering and submetering via a new tariff Rule 41.2. She
4 indicates disagreement with many of these other witnesses’ comments, but also
5 modifies NEP’s proposal in response to certain of these comments. NEP’s updated
6 proposal is memorialized in the form of a revised proposed Rule 41.2 marked as
7 Exhibit TR-22 to Ms. Ringenbach’s surrebuttal testimony.

8

9 **Q. Does NEP’s revised proposal resolve your concerns with expanded residential**
10 **master metering and submetering, as you discussed in your rebuttal and**
11 **surrebuttal testimonies?**

12 A. No. NEP’s updated proposal retains many of the shortcomings in its initial
13 proposal, including but not limited to shortcomings related to customer assistance
14 programs, electric supply shopping programs, customer/tenant due process, and
15 other customer protections. It also introduces new problems. For example, it would
16 appear to significantly expand the scope of landlord requirements that Duquesne
17 Light would need to police; though it apparently does not provide the Company
18 with either the resources or the enforcement powers to do so.

19

20 **Q. What do you recommend with respect to NEP’s revised proposal, as**
21 **articulated in Ms. Ringenbach’s surrebuttal testimony?**

22 A. I recommend it be denied.

23

1 **Q. Does this conclude your rejoinder testimony?**

2 A. Yes. I reserve the right to supplement my testimony through the course of this
3 proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 9-RJ

**REJOINDER TESTIMONY OF
JENNIFER NEISWONGER**

Subjects: Residential Subscription Rate Pilot

Dated: August 13, 2021

1 **I. INTRODUCTION & BACKGROUND**

2 **Q. Please state your name, title, and business address.**

3 A. My name is Jennifer Neiswonger. I am the Director of Customer Experience for Duquesne
4 Light Company (“Duquesne Light” or the “Company”). My business address is 411
5 Seventh Avenue, Mail Drop 15-1, Pittsburgh, PA 15219.

6

7 **Q. Have you previously submitted testimony in this proceeding on behalf of Duquesne**
8 **Light?**

9 A. Yes. On April 16, 2021, I submitted direct testimony (Duquesne Light Statement No. 9);
10 and on July 26, 2021, I submitted rebuttal testimony (Duquesne Light Statement No. 9-R).

11

12 **Q. What is the purpose of your rejoinder testimony?**

13 A. My rejoinder testimony briefly clarifies, and responds to critiques of I&E witness Cline
14 and OCA witness Nelson, regarding the Company’s proposed Residential Subscription
15 Rate Pilot.

16

17 **Q. Do witness Cline and witness Nelson continue to aver that the Residential**
18 **Subscription Rate would be difficult for participants to understand?**

19 A. Yes, they do.

20

21 **Q. Do you agree?**

22 A. No, for the reasons I describe in my rebuttal testimony. Additionally, for the avoidance of
23 any potential doubt, I wish to confirm that customers participating in the Residential

1 Subscription Rate will be able to view their hourly demands via the Company's website,
2 and their billing demand will appear on their monthly bills. The Company's educational
3 programming related to this Pilot will, among other things, instruct participants in viewing
4 and understanding this content.

5
6 **Q. Are you proposing any changes to the Residential Subscription Rate Pilot?**

7 A. Yes. In response to witness Cline's and Nelson's concerns that the Pilot may disincen-
8 tivate energy efficiency and conservation by participating customers, the Company will provide
9 energy conservation kits to all participants through its Phase IV Energy Efficiency and
10 Conservation programs. These kits, which may include items such as power strips and/or
11 smart thermostats, will help customer manage their electric demands and reduce their
12 electric consumption.

13
14 **Q. Does this conclude your rejoinder testimony?**

15 A. Yes. I reserve the right to supplement my testimony as may be necessary through the
16 course of this proceeding.

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1 **Q. Please state your name, occupation and business address.**

2 A. My name is Paul R. Moul and I am Managing Consultant at the firm P. Moul &
3 Associates. My business address is 251 Hopkins Road, Haddonfield, NJ 08033-3062.

4

5 **Q. Mr. Moul, have you previously submitted direct and rebuttal testimony in this
6 proceeding?**

7 A. Yes. My direct testimony (Duquesne Light Statement 9) was submitted with the
8 Company's case-in-chief on April 16, 2021 and my rebuttal testimony (Duquesne
9 Light Statement No. 9-R) was submitted on July 26, 2021.

10

11 **Q. What is the purpose of your rejoinder testimony?**

12 A. Duquesne Light Company ("Duquesne Light" or the "Company") has requested that I
13 respond to the surrebuttal testimony presented by Mr. Christopher Keller, a witness
14 appearing on behalf of the Bureau of Investigation and Enforcement ("I&E"), and Mr.
15 David J. Garrett, a witness appearing on behalf of the Office of Consumer Advocate
16 ("OCA"). If I fail to address each and every issue in the surrebuttal testimony of these
17 witnesses, it does not imply agreement with those issues.

18

19 **Q. On pages 34 through 36 of his surrebuttal testimony, Mr. Keller asserts that the
20 percentage of electric utility revenues, as well as deregulated electric markets and
21 certain acquisitions disqualify some of the companies in your Electric Group.
22 Does Mr. Keller adequately support his position?**

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1 A. No. Mr. Keller says that his data source supports the elimination of Exelon Corp. from
2 his barometer group. But as I explained in my rebuttal testimony, Mr. Keller should
3 have delved deeper into his source to determine what true percentage of revenues from
4 regulated operations for Exelon. His conclusion is based on a faulty analysis by S&P
5 Global Market Intelligence that rests on a set of numbers that indicates that Exelon's
6 total segment revenues consist of 110.1% of its total revenues. Rather, total revenues
7 for Exelon cannot exceed 100%. Correcting for this misstatement places Exelon
8 within the Barometer Group. On the issue of Avangrid, which Mr. Keller would
9 eliminate due to a proposed acquisition, the monthly dividend yields of Avangrid
10 subsequent to the announced acquisition were equal to or less than the Electric Group,
11 thereby demonstrating that the acquisition of PNM Resources by it has not impacted
12 the group average DCF result for the Electric Group. He also quarrels with my
13 inclusion of MGE Energy, NextEra Energy, and Otter Tail in my barometer group. As
14 to NextEra Energy, its Florida rates, while fully regulated, are based on a 10.6% return
15 on equity, and those rates are well below the national average that includes both
16 traditional and restructured electric utilities. Both MGE Energy and Otter Tail operate
17 in fully regulated jurisdictions, which make them no different than members of Mr.
18 Keller's barometer group, including Ameren, American Electric Power, CMS Energy,
19 Dominion Energy, Duke Energy, Entergy, IDACORP, Portland General Electric, and
20 Xcel Energy, all of which have a meaningful portion of their business in fully
21 regulated integrated electric utilities. But Mr. Keller made no exclusions for those
22 companies.

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1

2 **Q. On page 38 of I&E Statement No. 2-SR, Mr. Keller claims that the DSIC return**
3 **should not be considered as a benchmark to establish the equity return in this**
4 **case. Do you agree?**

5 A. No. Mr. Keller claims that the DSIC rate provides a “marker” to determine whether a
6 utility is “overearning.” The DSIC rate is calculated from the same two models of the
7 cost of equity, namely DCF and CAPM, that Mr. Keller used in his direct testimony,
8 and that all of the same risk attributes are contained in those two models in both
9 proceedings. Mr. Keller has not adjusted his returns for any additional risk factors not
10 contained in the DCF and CAPM used in the DSIC proceedings. Furthermore,
11 mechanisms like the DSIC are widespread in the utility industry and the measures of
12 the cost of equity already reflect investor expectations of the benefits of these
13 mechanisms.

14

15 **Q. Is there evidence that the Commission usually sets the rate of return on common**
16 **equity in base rate cases that is at a higher rate than employed in the DSIC?**

17 A. Yes. The two most recent electric rate case decisions prove this point. In the UGI
18 Electric rate case at Docket No. R-2017-2640058, the Commission set the rate of
19 return on common equity at 9.85% when the DSIC return was 9.65% for electric
20 utilities. In the PPL Electric Utilities rate case at Docket No. R-2012-2290597, the
21 Commission set the return on equity at 10.40% when the DSIC return was 10.20% for
22 electric utilities. So, this evidence supports a higher return in a base rate case than the

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1 prevailing DSIC return, contrary to Mr. Keller’s opinion expressed on pages 8 and 9 of
2 his surrebuttal testimony. Moreover, in the PECO Energy – Gas Division rate case
3 decision, the Commission set the Company’s equity return at 10.24% at a time when
4 the DSIC return was 10.20% (Docket No. R-2021-3024750).

5
6 **Q. At pages 43 of his surrebuttal testimony, Mr. Keller claims that “financial risk
7 does not relate to the capital structure of a company.” Is this correct?**

8 A. This statement is unquestionably incorrect. The recognized measure of a company’s
9 financial risk is revealed by the balance sheet of a company. Indeed, it is the balance
10 sheet that provides the foundation for calculating the weighted average cost of capital,
11 which is the basis for a public utility’s weighted average cost of capital established in
12 rate cases. As stated in The Regulation of Public Utilities¹:

13 ...it is widely held that the cost of capital is related to a utility’s
14 capital structure. As the proportion of debt increases, “the
15 added *financial risks* for both the debt and equity holders result
16 in higher and higher costs for both debt and equity capital.
17

18 **Q. On page 50 of his surrebuttal testimony, Mr. Keller claims that less weight should
19 be given to more distant forecasts because they are “less reliable and more
20 speculative.” Please respond.**

21 A. This observation conflicts with his use of five-year projections of earnings growth in
22 his DCF analysis. If reliance upon five-year projections, whatever their reliability, is
23 okay for DCF purposes, then there is no reason to discount any of the projections of
24 Treasury yields when looking for the appropriate risk-free rate of return in the CAPM.

¹ Charles F. Phillips, Jr., The Regulation of Public Utilities (Public Utilities Reports, Inc. 1993) 233.

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1

2 **Q. At pages 51-52, Mr. Keller seems to imply that the evidence you used to support**
3 **the size adjustment in the CAPM is not specific to utility stocks. Is this correct?**

4 A. No. The article by Annie Wong (see page 51 of I&E Statement No. 2-SR) was
5 deficient because it attempted to correlate betas with size. As Fama/French
6 subsequently established as published in the Journal of Finance in 1992, beta is not the
7 correct measure to identify returns associated with the relative size of a company,
8 either utility or non-regulated. Betas measure systematic risk, and the size of a
9 company is an unsystematic risk.

10

11 **Q. What issues were contained in the surrebuttal testimony of OCA witness Garrett**
12 **that require a response?**

13 A. Mr. Garrett has addressed the following issues: capital structure, the DCF growth rate,
14 ROE comparisons, results of the CAPM, leverage adjustment, and management
15 performance.

16

17 **Q. Has Mr. Garret presented any new evidence that would justify departure from**
18 **the Commission's well established practice of using Company's actual capital**
19 **structure if it is reasonable?**

20 A. No. The Company's proposed capital structure complies with the Commission's
21 policy that supports the actual capital structure. Mr. Garrett does introduce the
22 "double leverage" concept, but that is not applicable here. The Commission has never
23 employed the double leverage concept in establishing the weighted average cost of

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1 capital in a rate case decision. This is in spite of the fact that all of the major utilities
2 in the state are affiliated with holding companies that have the potential for different
3 common equity ratios for the parent holding company and the subsidiary utility
4 company.

5
6 **Q. Regarding the issue DCF growth rates, Mr. Garrett lists three problems (see**
7 **pages 4-7 of OCA Statement No. 2SR) with the growth rates you used in the DCF.**
8 **Please respond.**

9 A. Even if there were any merit to the list compiled by Mr. Garrett, his observations do
10 not justify ignoring company-specific growth rates and defaulting to GDP growth as
11 the sole basis to measure growth rate in the DCF. His approach ignores entirely
12 company-specific factors that affect the stock price of a utility associated with its
13 growth prospects. Growth for a utility is determined principally from the
14 fundamentals of the utility in question and cannot be captured exclusively by long-
15 term GDP growth.

16
17 **Q. On pages 4-6 of his surrebuttal testimony, Mr. Garrett attempts to diminish the**
18 **usefulness of analysts' projected growth rates in the DCF. Please respond.**

19 A. Mr. Garrett sets forth three arguments. He claims that analysts' projected growth rates
20 are: (i) too short-term (i.e., covering a 3-10 period), (ii) that these growth rates cannot
21 exceed GDP growth, and (iii) some intrinsic measures of growth limit the growth rate
22 that can be used in the DCF.

23

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1 **Q. Please respond to each of Mr. Garrett's points.**

2 A. The fact that analysts' forecasts extend from 3 to 10 years is no reason to ignore them.
3 If longer term forecasts were necessary for investors to make buy, hold, or sell
4 decisions, then the demand for longer term forecasts would be fulfilled by investment
5 analysts on Wall Street. The reality is that extended forecasts are not required by
6 investors in making their buy, hold, or sell decisions. As to GDP growth, such
7 forecasts change so slowly that GDP growth rates are not responsive to a particular
8 company's fundamentals that cause stock prices to change at the pace they do. The
9 intrinsic growth argument also provides no basis for gauging the reasonableness of
10 company-specific growth rates. Increases in productivity (i.e., substitution of capital
11 for labor) is a key contributor to earnings growth that is not captured by any intrinsic
12 growth indicators.

13
14 **Q. At pages 6 and 7 of OCA Statement No. 2-SR, Mr. Garrett complains about your
15 references to comparisons to other ROEs established by the Commission. Are his
16 complaints valid?**

17 A. No. It is important to the regulatory ranking of a Commission that continuity exist in
18 its rate case decisions. So it matters not what the utility type or size that guides the
19 Commission's rate case decisions. Moreover, the Commission has already decided
20 that it will apply its standard ratemaking principles during the COVID pandemic.
21 Finally, as I noted below, a utility should not be penalized with a lower return where
22 assets are moved from the DSIC category to rate base treatment.

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1

2 **Q. Mr. Garrett suggests (see page 8 of OCA Statement No. 2-SR) that witnesses**
3 **representing utility companies are inclined to use interest rate forecasts as a**
4 **means to boost the risk-free rate of return in the CAPM. Please respond.**

5 A. It is necessary to understand the fundamentals surrounding those forecasts before
6 making the blank statement the witnesses representing utility companies are inclined to
7 use them in an attempt to increase the CAPM result. I do not dispute that in a low
8 interest rate environment, which exists today, that forecasts of future interest rates
9 generally trend toward higher rates than current rates. With the Fed Funds rate near
10 zero, there is little room for lower interest rates, unless negative interest rates were the
11 prospect, which they are not. Likewise, during periods of high interest rates, which we
12 have not seen for a long period, forecasts would trend toward lower rates. So the
13 absolute level of interest rates must be considered when assessing the validity of the
14 forecasts.

15

16 **Q. Mr. Garrett further disputes your position regarding the Value Line betas and**
17 **the market risk premium. Please respond.**

18 A. On page 8 of his surrebuttal, Mr. Garrett disputes my adjustment to the Value Line
19 betas. Notably, I have used the Value Line betas as a foundation just like all other
20 witnesses. I merely reflected the difference in financial risk attributed to the market
21 value of the capitalization and book value of the capitalization. As to his arguments
22 involving the “ERP,” on page 9 of his surrebuttal there is no support for the notion that

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1 the current ERP must be lower than the historical ERP, because the historical data is
2 widely employed in the investment and academic publications to provide a foundation
3 for comparative performance. Furthermore, the implied total market return with Mr.
4 Garrett's ERP using his survey approach is just 7.88% (2.28% + 5.6%), which is
5 clearly incompatible with actual stock market returns of 18.40% in 2020, 15.25%
6 YTD in 2021, and 12.16% on average for the past 95 years (1926-2020). Given the
7 deficiency in his approach, it is necessary to consider historical returns to encompass
8 reasonable investor-expected market returns.

9
10 **Q. At pages 12-13 of his surrebuttal, Mr. Garrett further opposes the Company's**
11 **proposal for recognition of management performance. Please respond.**

12 A. The Commission has a long history of recognizing management performance (either
13 positively or negatively) in rate case decisions. As I noted in my rebuttal testimony, the
14 Commission has an Above Average/3 ranking by RRA. If the Commission were to
15 abandon its constructive ratesetting approaches, such as recognition of management
16 performance, then its ranking by RRA would surely suffer.

17
18 **Q. Based on your review of the surrebuttal testimony of the opposing witnesses, do**
19 **you propose any change in your recommended return on equity for Duquesne**
20 **Light in this proceeding?**

21 A. No. There was nothing contained in the surrebuttal testimony of any of these
22 witnesses that change my position that Duquesne Light is entitled to a 10.95% rate of

**REJOINDER TESTIMONY
OF
PAUL R. MOUL**

1 return on common equity. The proposals of the opposing witness submitting cost of
2 equity testimony are entirely too low by reference to returns set by the Commission in
3 recent rate cases and DSIC proceedings.

4

5 **Q. Does this conclude your rejoinder testimony?**

6 A. Yes.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 16-RJ

Rejoinder Testimony of David B. Ogden

Subject: Customer Electric Usage

Date: August 13, 2021

1 **REJOINDER TESTIMONY OF DAVID B. OGDEN**

2

3 **Q. Please state your full name and business address.**

4 A. My name is David B. Ogden. My business address is Duquesne Light Company,
5 411 Seventh Avenue, Pittsburgh, PA 15219.

6

7 **Q. What is your position at Duquesne Light Company?**

8 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”)
9 as the Manager, Rates and Tariff Services.

10

11 **Q. Did you previously submit testimony in this proceeding on behalf of the**
12 **Company?**

13 A. Yes. I submitted direct testimony, Exhibit 5, DLC Statement No. 16, on April 16,
14 2021; rebuttal testimony, DLC Statement No. 16-R, on July 26, 2021; and
15 surrebuttal testimony, DLC Statement No. 16-SR, on August 10, 2021.

16

17 **Q. Are you sponsoring any Exhibits along with your rejoinder testimony?**

18 A. Yes. I am sponsoring Exhibit DBO-1-RJ, a PDF version of the Company’s
19 discovery response to CAUSE-PA I-24.

20

21 **Q. What is the purpose of your rejoinder testimony?**

1 A. My rejoinder testimony will respond to the comments of Office of Consumer
2 Advocate (“OCA”) Colton, OCA St. 4-SR, regarding bill impacts of the Company’s
3 proposed residential customer charge.

4 I note that lack of a response to an argument made by any party should not
5 be construed as acceptance of that argument by the Company.

6

7 **Q. Please summarize witness Colton’s comments on this topic.**

8 A. Mr. Colton critiques my assessment, presented in my rebuttal testimony, that the
9 Company’s proposed residential rate design tends to be better for low-income
10 customers than OCA’s recommendation to recover any residential rate increase
11 through volumetric charges. Specifically, I observed that the Company’s low-
12 income customers (including both those enrolled in the Customer Assistance
13 Program (CAP) as well as other confirmed low-income customers) consume more
14 electricity, on average, than a typical residential customer of the Company. I
15 therefore concluded: “On average, the Company’s low-income customers would
16 pay more if the current customer charge remained at \$12.50 and the increase was
17 applied solely to the volumetric charge.” See DLC St. 16-R, p. 13, lines 3-5.

18 Mr. Colton does not disagree with the basic premise that a lower fixed
19 charge tends to allocate more costs to high-usage customers, and fewer costs to
20 lower-usage customers. See OCA St. 4-SR, p. 8, lines 6-8. Instead, he disputes the
21 accuracy of my statement that residential low-income customers tend to be higher-
22 usage. Mr. Colton implicitly asserts that the Company’s low-income customers
23 actually consume less electricity, on average, than its non-low-income customers.

1 He concludes, “Mr. Ogden’s testimony cannot support the conclusion that he
2 reaches: that low-income usage is higher than non-low-income usage.” OCA St. 4-
3 SR, p. 11, lines 17-19.

4

5 **Q. Do you agree with Mr. Colton that the Company’s low-income customers**
6 **actually use less electricity, on average, than its non-low-income customers?**

7 A. No, I do not, as I explain below.

8

9 **Q. Please first address Mr. Colton’s critique of the data you presented in your**
10 **rebuttal testimony that indicated that low-income customers consume more**
11 **electricity, on average, than non-low-income customers. What are those data**
12 **points?**

13 A. The customer usage data I presented in my rebuttal testimony at DLC St. 16-R, p.
14 12, lines 6-13, are reproduced below.

15

1
2
3
4

Table No. 1 Average Residential Monthly Consumption (kWh)
12 Months Ended April 2021

	CAP	Confirmed Low- Income, Non- CAP	Non-Low Income
Non-Heating	718	709	628
Heating	1,021	983	856

5
6
7
8

Table No. 2 Average Residential Monthly Consumption (kWh)
12 Months Ended April 2020

	CAP	Confirmed Low- Income, Non- CAP	Non-Low Income
Non-Heating	667	626	584
Heating	960	884	802

9

10 As the column headings suggest, the second column (labeled “CAP”) shows the
11 average monthly kWh usage of CAP customers in the respective years indicated in
12 each table, broken down by non-electric heating and electric heating. The third
13 column (“Confirmed Low-Income, Non-CAP”) shows the average monthly kWh
14 usage of non-CAP confirmed low-income customers. The fourth column (“Non-
15 Low Income”) shows the average monthly kWh usage of all other residential
16 customers.

17

18 **Q. Mr. Colton avers, “Mr. Ogden did not explain how he selected his ‘CAP**
19 **participants’ and provided no data underlying his calculation.” (OCA**
20 **Statement 4-SR, Page 8, Lines 14-15). Please respond.**

1 A. First and foremost, I observe that Mr. Colton had the opportunity to seek
2 clarification regarding these issues earlier in this proceeding, but apparently chose
3 not to do so. OCA has propounded nearly 250 interrogatories (not including
4 subparts) on the Company over the course of this proceeding, none of which raised
5 any questions regarding these data points.

6 Given Mr. Colton’s apparent confusion indicated in his surrebuttal
7 testimony, I will attempt to explain now. To develop Tables 1 and 2 in my rebuttal
8 testimony, the Company queried monthly billing detail from the Company’s billing
9 system that resulted in quantified customer level reports that flagged residential
10 customers as either CAP, Confirmed Low Income (“CLI”)/Non-CAP, or Non Low-
11 Income on a month-by-month basis. The Company treated each of these flags as
12 separate and distinct customer groups. The monthly queries captured CAP
13 participants during the months in which they were enrolled in the program. So, for
14 example, if a customer was confirmed low-income but not enrolled in CAP from
15 May through August 2020, then their usage in those four months was included in
16 the calculation of the average “Confirmed Low-Income, Non-CAP” customer
17 usage shown in Table 1. If that same customer was then enrolled in CAP for
18 September 2020 through April 2021, then the customer’s usage during those eight
19 months was included in the calculation of the average “CAP” customer usage Table
20 1. The data presented in my rebuttal testimony reflects individual customer level
21 billing detail for the time periods noted (DLC St. 16-R, page 12), and as such,
22 reflects the average usage for each customer segment.

23

1 **Q. Did the Company provide additional data during discovery that Mr. Colton**
2 **could have used to validate Tables 1 and 2?**

3 A. Yes. In response to an interrogatory from the Coalition for Affordable Utility
4 Services and Energy Efficiency in Pennsylvania (“CAUSE-PA), CAUSE-PA I-24,
5 the Company provided a spreadsheet containing median and mean annual usage for
6 the period 2019 to date in 2021, disaggregated by month, for (1) Residential
7 customers who participated in CAP; (2) Residential customers who are confirmed
8 low-income but not enrolled in CAP; and (3) Residential customers who are not
9 confirmed low-income. These data points confirm that residential customers who
10 participated in CAP, and residential customers who are confirmed low-income but
11 not enrolled in CAP, had larger average usages than residential customers who are
12 not confirmed low-income. These data points were provided to OCA, along with
13 all other parties of record to the proceeding, on June 10, 2021 – two months before
14 Mr. Colton submitted his surrebuttal testimony.

15
16 **Q. Mr. Colton avers that the CAP usage identified in your testimony “is**
17 **substantially too low” (OCA Statement No. 4-SR, p. 9, lines 4-6). Do you agree?**

18 A. No. Mr. Colton appears to be mischaracterizing base distribution only charges
19 (DLC Statement 16-R, page 14, Table No. 3 and Table No. 4) as if they reflected
20 the total bill (i.e. base distribution, surcharges, and transmission and generation
21 charges). Mr. Colton takes the data I provided regarding CAP non-heating
22 customers’ average monthly distribution bills, and extrapolates the CAP credits that
23 he would expect a customer to receive over the course of the year, as if those

1 distribution charges constituted the customer's entire bill. He then compares this
2 erroneously-derived CAP credit amount (\$213) to the average CAP credits actually
3 provided to comparable customers in calendar year 2019 (\$624) to conclude that
4 "the calculated CAP bill is too low based on Mr. Ogden's unreasonably low
5 consumption." OCA St. 4-SR, p. 10, lines 5-7.

6 In fact, Mr. Colton's calculated CAP bill amount is too low based on Mr.
7 Colton's own miscalculation, not any error in the Company's data. Mr. Colton's
8 calculation excludes customers' non-distribution charges. As I described in my
9 rebuttal testimony, "Table No. 3 sets forth the distribution bill impacts for non-
10 heating residential customers at the average usage levels shown in Table No. 1 and
11 Table No. 2 (DLC Statement 16-R, page 13, lines 16-18) (emphasis added). Mr.
12 Colton ignores this distinction and disregards customers' surcharges, supply and
13 transmission charges, which necessarily causes a dramatic reduction in his
14 calculation of CAP customer bill amounts. Based on this clear misunderstanding,
15 Mr. Colton's testimony on the CAP usage being substantially too low should be
16 disregarded in its entirety (OCA Statement 4-SR, page 9, line 4 through page 11,
17 line 22).

18 I would also observe that Mr. Colton's attempt to undermine the validity of
19 the Company's data appears to serve little purpose other than to introduce
20 opportunity for errors, such as the one Mr. Colton commits. My rebuttal testimony
21 on this issue was based upon primary source data – i.e., the Company's billing
22 system data.

23

1 **Q. Mr. Colton avers that “the CAP participant population is a subset of the**
2 **Confirmed Low-Income population.” (OCA State No. 4-SR, p. 11, lines 6-7).**
3 **With respect to how those terms are used in your rebuttal testimony, including**
4 **Tables 1 and 2, is he correct?**

5 A. Mr. Colton is incorrect. As I explained above, CAP customers were identified
6 separately from Confirmed Low-Income, Non-CAP customers in the usage data I
7 presented in my rebuttal testimony. This clear delineation is evidenced in my
8 rebuttal testimony within the column headings of Table No. 1 through Table No. 4
9 (DLC Statement 16-R, Pages 12 and 14).

10

11 **Q. Does this conclude your rejoinder testimony?**

12 A. Yes. I reserve the right to supplement my testimony through the course of this
13 proceeding.

Duquesne Light Company
Docket No. R-2021-3024750

Interrogatories of
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)

Set I

Witness: Katherine Scholl and Todd Mobley

CAUSE-PA-I-24

24. Please provide weather normalized median and mean annual usage for 2019 to date in 2021, disaggregated by month for:

- a. Residential customers who participated in CAP, disaggregated by the following FPIG tiers: 0-50% FPL; 51-100% FPL; and 101-150% FPL;
- b. Residential customers who are confirmed low-income but not enrolled in CAP;
- c. Residential customers who are not confirmed low-income.

For the purposes of responding to this question, the phrase “confirmed low income customer” should be defined consistent with the definition used for the purposes of reporting “confirmed low income customer” data to the Commission pursuant to 52 Pa. Code § 54.71 *et seq.*

Response:

See CAUSE-PA-I-24 - Attachment 1.xlsx

Please note that the weather normalization process is done at the rate class level, as such we cannot weather normalize for the requested subsets and the usage included in the attachment is actual usage.

CAUSE-PA I-24 - Attachment 1

24. Please provide weather normalized median and mean annual usage for 2019 to date in 2021, disaggregated by month for:

- a. Residential customers who participated in CAP, disaggregated by the following FPIG tiers: 0-50% FPL; 51-100% FPL; and 101-150% F
- b. Residential customers who are confirmed low-income but not enrolled in CAP;
- c. Residential customers who are not confirmed low-income.

For the purposes of responding to this question, the phrase “confirmed low income customer” should be defined consistent with the
