Confidential Testimony and Exhibits

52 Pa. Code § 53.52(a)(1)

- Q. The specific reasons for each change.
- A. Please refer to Schedule A of DLC Exhibit 2 (Fully Projected Test Year)

52 Pa. Code § 53.52(a)(2)

- Q. The total number of customers served by the utility.
- A. Currently there are approximately 600,000 customers served by Duquesne.

52 Pa. Code § 53.52(a)(3)

- Q. A calculation of the number of customers, by tariff subdivision, whose bills will be affected by the change.
- A. See Duquesne's Exhibit 2 (Fully Projected Future Test Year), Schedule D-5 D and DFR IV-A.

52 Pa. Code § 53.52(a)(4)

- Q. The effect of the change on the utility's customers.
- A. See Duquesne's Exhibit 2 (Fully Projected Future Test Year), Schedule D-5 D and DFR IV-A.

52 Pa. Code § 53.52(a)(5)

- Q. The direct or indirect effect of the proposed change on the utility's revenue and expenses.
- A. See Duquesne's Exhibit 2 (Fully Projected Future Test Year), Schedule D.

52 Pa. Code § 53.52(a)(6)

- Q. The effect of the change on the service rendered by the utility
- A. The Company is not proposing any changes to the service rendered by the utility.

52 Pa. Code § 53.52(a)(7)

- Q. A list of factors considered by the utility in its determination to make the change. The list shall include a comprehensive statement about why these factors were chosen and the relative importance of each. This subsection does not apply to a portion of a change seeking a general rate increase as defined in 66 Pa. C. S. & 1308 (relating to voluntary changes in rates).
- A. Not applicable.

52 Pa. Code § 53.52(a)(8)

- Q. Studies undertaken by the utility in order to draft its proposed change. This paragraph does not apply to a portion of a tariff change seeking a general rate increase as defined in 66 Pa. C. S. & 1308.
- A. Not applicable.

52 Pa. Code § 53.52(a)(9)

- Q. Customer polls taken and other documents which indicate customer acceptance and desire for the proposed change. If the poll or other documents reveal discernible public opposition, an explanation of why the change is in the public interest shall be provided.
- A. Please refer to DLC Exhibit 5, Statement No. 9, Direct Testimony of Jennifer Neiswonger.

52 Pa. Code § 53.52(a)(10)

- Q. Plans the utility has for introducing or implementing the changes with respect to its ratepayers.
- A. The Company proposes to publish in newspapers in general circulation in its service territory the notice of the rate filing. Additional publications may be made based on Commission order. Bill inserts describing changes proposed and ultimately approved will be provided to customers. Additionally, news releases, and other media outlets will be utilized to communicate with customers. Additionally, after the Commission acts on this filing, the Company will notify all customers in accordance with Commission requirements. The Company also plans to inform customers about approved rate changes in customer newsletters.

52 Pa. Code § 53.52(a)(11)

Q. FCC, FERC or Commission orders or rulings applicable to the filing.

A. None.

52 Pa. Code § 53.52(b)(1)

Q. The specific reasons for each Increase or decrease.

A. See Duquesne's Statement of Reasons in DLC Exhibit 2 (Fully Projected Future Test Year), Schedule A.

52 Pa. Code § 53.52(b)2

Q. The operating income statement of the utility for a 12-month period, the end of which may not be more than 120 days prior to the filing.

A. See Duquesne's DLC Exhibit 4 (Historic Test Year), Schedule B.

52 Pa. Code § 53.52(b)3

Q. A calculation of the number of customers, by tariff subdivision, whose bills will be increased.

A. See Duquesne's DLC Exhibit 2 (Fully Projected Future Test Year), Schedule D-5 D and DFR IV-A.

52 Pa. Code § 53.52(b)4

Q. A calculation of the total increases, in dollars, by tariff subdivision, projected to an annual basis.

A. See Duquesne's DLC Exhibit 2 (Fully Projected Future Test Year), Schedule D and DFR IV-A.

52 Pa. Code § 53.52(b)5

- Q. A calculation of the number of customers, by tariff subdivision, whose bills will be decreased.
- A. See Duquesne's DLC Exhibit 2 (Fully Projected Future Test Year), Schedule D-5 D and DFR IV-A.

52 Pa. Code § 53.52(b)6

- Q. A calculation of the total decreases, in dollars, by tariff subdivision, projected to an annual basis.
- A. See Duquesne's DLC Exhibit 2 (Fully Projected Future Test Year), Schedule D-5 D and DFR IV-A.

52 Pa. Code § 53.52(c)1

- Q. A statement showing the utility's calculation of the rate of return earned in the 12-month period referred to on subsection (b)(2), and the anticipated rate of return to be earned when the tariff, revision, or supplemental becomes effective. The rate base used in this calculation shall be supported by summaries of original cost for the rate of return calculation.
- A. See Schedule C-1 of DLC Exhibit 2 (Fully Projected Future Test Year), DLC Exhibit 3 (Future Test Year) and DLC Exhibit 4 (Historic Test Year).

52 Pa. Code § 53.52(c)2

- Q. A detailed balance sheet of the utility as of the close of the period referred to in subsection (b)(2).
- A. See Schedule B-1 of Duquesne's DLC Exhibit 2 (Fully Projected Future Test Year), DLC Exhibit 3 (Future Test Year) and DLC Exhibit 4 (Historic Test Year).

52 Pa. Code § 53.52(c)3

- Q. A summary, by detailed plant accounts, of the book value of the property of the utility at the date of the balance sheet required by paragraph (2).

- A. See Schedule C-2 of Duquesne's DLC Exhibit 2 (Fully Projected Future Test Year), DLC Exhibit 3 (Future Test Year) and DLC Exhibit 4 (Historic Test Year) – DFR V-A-3.

52 Pa. Code § 53.52(c)4

- Q. A statement showing the amount of the depreciation reserve, at the date of the balance sheet required by paragraph (2), applicable to the property, summarized as required by paragraph (3).
- A. See Schedule C-2 of Duquesne's DLC Exhibit 2 (Fully Projected Future Test Year), DLC Exhibit 3 (Future Test Year) and DLC Exhibit 4 (Historic Test Year) – DFR V-A-3.

52 Pa. Code § 53.52(c) 5

- Q. A statement of operating income, setting forth the operating revenues and expenses by detailed accounts for the 12-month period ending on the balance sheet required by paragraph (2).
- A. See Schedule B of Duquesne's DLC Exhibit 2 (Fully Projected Future Test Year), DLC Exhibit 3 (Future Test Year) and DLC Exhibit 4 (Historic Test Year).

52 Pa. Code § 53.52(c) 6

- Q. A brief description of a major change in the operating or financial condition of the utility occurring between the date of the balance sheet required by paragraph (2) and the date of transmittal of the tariff, revision or supplement. As used in this paragraph, a major change is one which materially alters the operating or financial condition of the utility from that reflected in paragraphs (1) - (5).
- A. There have been no major changes in the operating and financial conditions of Duquesne between the date of the balance sheet and the date of this filing.

Q.1. Provide a summary discussion of the rate change request, including specific reasons for each increase or decrease. Also provide a breakdown, which identifies the revenue requirement value of the major items generating the requested rate change.

A.1. See Schedule A of DLC Exhibit 1, Part 1.

- Q.2. Identify the proposed witnesses for all statements and schedules of revenues, expenses, taxes, property, valuation and the like.
- A.2. Please refer to DLC Exhibit 5, Statement 1 – Direct Testimony of C. James Davis

Q.3. Provide a single page summary table showing, at present and at proposed rates, together with references to the filing information, the following as claimed for the fully adjusted test year:

Revenues
Operating Expenses
Operating Income
Rate Base
Rate of Return (produced)

A.3. Attachment I-A-3 provides the requested information.

Total PA Jurisdiction
Year Ending December 31, 2022
(Thousands of Dollars)

	AT PRESENT RATES		AT PROPOSED RATES	
	<u>Amount</u>	<u>DLC Exhibit 2 (Fully Projected Future) Reference</u>	<u>Amount</u>	<u>DLC Exhibit 2 (Fully Projected Future) Reference</u>

Rate Base	<u>\$ 2,276,464</u>	Sch. C-1, Col. (2), line 1	<u>\$ 2,276,464</u>	Sch. C-1, Col. (2), line 1
Rate of Return	<u>5.356%</u>	Sch. C-1, Col. (2), line 3	<u>7.840%</u>	Sch. C-1, Col. (2), line 5

- Q.4. Whenever a major generating plant is placed in operating service or removed from operating service the utility shall separately indicate the effect of the plant addition or removal from service upon rate base, revenue, expense, tax, income and revenue requirement as it affects the test year.
- A.4. This filing requirement is not applicable to Duquesne Light Company's current rate filing.

Sponsor: Jaime A. Bachota

Q.1. Provide a corporate history including the dates of original incorporation, subsequent mergers and acquisitions. Indicate all counties, cities and other governmental subdivisions to which service is provided, including service areas outside this Commonwealth, and the total number of customers or billed units in the areas served.

A.1.

Duquesne Light Company
Incorporation History and Conversion to a Limited Liability Company

The present Duquesne Light Company was formed on November 15, 1912 by the consolidation and merger of Duquesne Light Company, Oakmont and Verona Light, Heat and Power Company and Monongahela Light Company under Section 1 of the Act of May 3, 1909, P.L. 408. By the terms of this Act all of the rights, powers, franchises and property of the constituent companies became vested in the present Duquesne Light Company. Comm. vs. Citizens Light, Heat and Power Company of Penna., 41 C.C. 222.

Of the constituent companies, Duquesne Light Company was incorporated on August 5, 1903 under the Act of April 29, 1874, P.L. 73, and its supplement, the Act of May 8, 1889, P.L. 136, for the purpose of supplying light, heat and power by means of electricity to the City of Pittsburgh (Allegheny County), and by the terms of its charter was to have perpetual existence.

Oakmont and Verona Light, Heat and Power Company was incorporated on June 18, 1890, under the Act of April 29, 1874, and its supplement, the Act of May 8, 1889, for the purpose of supplying light, heat and power by means of electricity to the Borough of Oakmont (Allegheny County), and by the terms of its charter was to have existence for 999 years.

Monongahela Light Company was incorporated on April 4, 1902, under the Act of April 29, 1874, and its supplement, the Act of May 8, 1889, for the purpose of supplying light, heat and power by means of electricity within the districts lying east and west of the Monongahela and Youghiogheny Rivers in the County of Allegheny, Pennsylvania between a point on the said Monongahela River where the boundary line of the City of Pittsburgh intersects said river to a point where the boundary line of the County of Westmoreland intersects said river, and from the mouth of the Youghiogheny River to a point where the boundary line of said County of Westmoreland intersects the said Youghiogheny River, and more particularly bounded and described as follows, on the east by the Townships of Rostraver, Sewickley, North Huntingdon, Penn, Franklin and Burrell in the County of Westmoreland, on the north by the Allegheny River, on the west by the City of Pittsburgh and the Townships of Snowden and Baldwin in Allegheny County, and on the south by the Townships of Union and Carroll, in Washington County, Pennsylvania, and by the terms of its charter was to have perpetual existence.

Sponsor: Jaime A. Bachota

Duquesne Light Company restated its Articles of Amendment last on June 30, 1999. The stated purposes for which the Company is incorporated under the Business Corporation Law of the Commonwealth of Pennsylvania are to engage in, and do any lawful act concerning, any of all lawful business for which corporations may be incorporated under said Business Corporation Law, including but not limited to:

- A. The supply of light, heat and power to the public by any means;
- B. The production, generation, manufacture, transmission, transportation, storage, distribution or furnishing of electricity, natural or artificial gas, steam or air conditioning, or any combination thereof to or for the public; and
- C. Manufacturing, processing, owning, using and dealing in personal property of every class and description, engaging in research and development, the furnishing of services, and acquiring, owning, using and disposing of real property of every nature whatsoever.

In April 2017, Duquesne Light Company submitted an “Application of Duquesne Light Company for Approval to Convert from a Business Corporation to a Limited Liability Company”, (Docket No. A-2017-2599375) to the Pennsylvania Public Utility Commission (PUC). The PUC approved this application in an Order dated August 31, 2017 and effective November 2017, Duquesne Light Company completed its conversion to a Limited Liability Company.

Duquesne Light Holdings, Inc. is the sole holder of Duquesne Light Company common stock (10 shares @\$1 par value). Duquesne Light's subsidiaries are:

Duquesne Light Company and its Subsidiaries

- Q.2. Provide a description of the property of the utility and an explanation of the system's operation, and supply the following, using available projections if actual data is unavailable:
- a. A schedule of generating capability showing for the test year, and for the two consecutive 12-month periods prior to the test year, net dependable capacity in KW by unit, plant capacity factor by unit, and total fuel consumption by type and cost for each unit, if available, or for each station, and operation and maintenance expenses by station.
 - b. A schedule showing for the test year and for the 12-month period immediately prior to the test year the scheduled and unscheduled outages—in excess of 48 hours—for each station, the equipment or unit involved, the date the outage occurred, duration of the outage, maintenance expenses incurred for each outage, if available, and amounts reimbursable from suppliers or insurance companies.
 - c. A schedule for each unit retired during the test year or subsequent to the end of the test year, which shows the unit's KW capacity, hours of operation during the test year, net output generated, cents/KWH of maintenance and fuel expenses, and date of retirement.
 - d. A schedule showing latest projections of capacity additions and retirements—costs and KW—and reserve capacity at the time of peak for at least 10 years beyond the test year, including the in-service dates—actual or expected—and AFDC cutoff dates—if different from in-service dates—for all new generating units coming on line during or subsequent to the test year, if claimed.
- A.2. This filing requirement is not applicable to Duquesne Light Company's current rate filing.

- Q.3. Provide an overall system map, including and labeling all generating plants, transmission substations—indicate voltage, transmission system lines—indicate voltage, and all interconnection points with other electric utilities, power pools, and other like systems.
- A. Attachment DFR I-B-3 is considered Highly Confidential since it contains Critical Energy Infrastructure Information and is being provided to the Commission and will be provided to parties upon the execution of a Stipulated Protective Agreement and/or Protective Order.

- Q.1. Provide a schedule showing the test year rate base and rates of return at original cost less accrued depreciation under present rates and under proposed rates. Claims made on this schedule should be cross-referenced to appropriate supporting schedules.
- A.1. Schedules C-1 and D-1 of DLC Exhibit 2 (Fully Projected Future Test Year) provide the requested information.

- Q.2. If the schedule provided in response to item 1, is based upon a future test year, provide a similar schedule which is based upon actual data for the 12-month period immediately prior to the test year.
- A.2. Please refer to Schedules C-1 and D-1 for DLC Exhibit 3 (Future Test Year) and DLC Exhibit 4 (Historic Test Year).

- Q.3. When a utility files a tariff stating a new rate based in whole or in part on the cost of construction, as defined in 66 Pa.C.S. § 1308(f) (relating to voluntary changes in rates), of an electric generating unit, the utility shall identify:
- a) The total cost of the generating unit.
 - b) The following costs:
 - 1) The cost and quantity of each category of major equipment, such as switchgear, pumps or diesel generators and the like.
 - 2) The cost and quantity of each category of bulk materials, such as concrete, cable and structural steel and the like.
 - 3) Manual labor.
 - 4) Direct and indirect costs of architect/engineering services.
 - 5) Direct and indirect costs of subcontracts or other contracts involving major components or systems such as turbines, generators, nuclear steam supply systems, major structures and the like.
 - 6) Distributed costs.
 - c) A cost increase of \$5 million or more, including AFUDC, over the original utility estimates provided under 66 Pa.C.S. § 515(a) (relating to construction cost of electric generating units) and its causes.
 - d) Compliance with subsections (a) and (b) will be identical in format and substance as that provided under 52 Pa. Code § 57.103 (relating to estimate of construction costs) for original cost estimates submitted under 66 Pa.C.S. § 515(a).
- A.3. This filing requirement is not applicable to Duquesne Light Company's current rate filing.

- Q.1. If a claim is made for plant held for future use, supply the following:
- a. A description of the plant or land site and its cost and any accumulated depreciation.
 - b. The expected date of use for each item claimed.
 - c. An explanation as to why it is necessary to acquire each item in advance of its date of use.
 - d. The date when each item was acquired.
 - e. The date when each item was placed in plant held for future use.
- A.1. Duquesne Light Company is not making a claim in measures of value in the fully projected future test year for plant held for future use. The Company is requesting authorization to record AFUDC on land acquired to provide future service in this proceeding. Please refer to the testimony of Jaime A. Bachota in DLC Exhibit 5, Statement No. 2.

- Q.2. If a claim is made for construction work in progress, provide a supporting schedule which sets forth separately, revenue-producing and nonrevenue producing amounts, and include, for each category a summary of all work orders, amounts expended at the end of the test year and anticipated in-service dates. Indicate if the construction work in progress will result in insurance recoveries, reimbursements, or retirements of existing facilities. Describe in exact detail the necessity of each project claimed if not detailed on the summary page from the work order. Include final completion dates and estimated total amounts to be spent on each project.
- A.2. Duquesne Light Company is not making a claim in the fully projected future test year for construction work in process.

- Q.3. If a claim is made for materials and supplies or fuel inventory provide a supporting schedule for each claim showing the latest actual 13 monthly balances and showing in the case of fuel inventory claims, the type of fuel, and location, as in station, and the quantity and price claimed.
- A.3. The requested information for materials and supplies is provided in Attachment II-B-3. The claim for materials and supplies is based upon the actual 13 monthly balances in the Historic Test Year. There is no claim being made for fuel inventory.

- Q.4. If a claim is made for cash working capital provide a supporting schedule setting forth the method and all detailed data utilized to determine the cash working capital requirement. If not provided in the support data, provide a lead-lag study of working capital, completed no more than 6 months prior to the rate increase filing.
- A.4. Schedule C-4 of Exhibits 2 (Fully Projected Future Test Year), 3 (Future Test Year) and 4 (Historic Test Year) and the testimony of Robert O'Brien in DLC Statement Number 10 sets forth the method and detailed data utilized to determine the Company's claimed cash working capital requirements.

- Q.5. If a claim is made for compensating bank balances, provide the following information:
- a. Name and address of each bank
 - b. Types of accounts with each bank - checking, savings, escrow, other services, and the like.
 - c. Average daily balance in each account.
 - d. Amount and percentage requirements for compensating bank balance at each bank.
 - e. Average daily compensating bank balance at each bank.
 - f. Documents from each bank explaining compensating bank balance requirements.
 - g. Interest earned on each type of account.
 - h. A calculation showing the average daily float for each bank.
- A.5. There are no claims for compensating bank balances.

- Q.6. Explain in detail by statement or exhibit the appropriateness of additional claims or the use of a method not previously mentioned, in the claimed rate base.
- A.6. An explanation of Duquesne Light Company's claim for any additional rate base items is set forth in Section C of DLC Exhibit 2 (Fully Projected Future Test Year).

Q.1. Prepare a Statement of Income including:

- a. The book, or budgeted, statement for the test year.
- b. Adjustments to annualize and normalize under present rates, including an elimination of the effects on income of the energy cost rate and state tax adjustment surcharge.
- c. The income statement under present rates after adjustment.
- d. The adjustment for the revenue requested.
- e. The income statement under requested rates after adjustment.

Each adjustment, including those relating to adjustment clauses, shall contain an explanation in sufficient clarifying detail to allow a reasonably informed person to understand the method and rationale of the adjustment.

A.1. The information requested in items a. through e. is set forth in Section D of DLC Exhibit 2 (Fully Projected Future Test Year).

- Q.2 If the schedule provided in item 1 is based upon budgeted data for a future test year, provide a similar schedule which is based upon actual data for the 12-month period immediately prior to the test year.
- A.2. Please refer to Section D of DLC Exhibit 2 (Fully Projected Future Test Year) and DLC Exhibit 4 (Historic Test Year).

- Q.1. Provide a schedule showing all revenues and expenses for the test year and for the 12-month period immediately prior to the test year, together with an explanation for major variances between test year revenues and expenses and those for the previous 12-month period. Revenues and expenses shall be summarized by the major account categories listed below. If budgeted data for a future test year is not readily available by these categories, an analysis of the data for the 12-month period immediately prior to the future test year or for the most recent available calendar year may serve as the basis for ratably allocating the budgeted data into the account categories.
- A.1. See Attachment II-D-1.

Attachment II - D-1a
Page 4 of 10

For the 12 Months Ended December 31, 2020 and December 31, 2021

Account 400

Residential Sales - (\$12,101) - The overall decrease is primarily driven by lower throughput as residential customers begin working in the commercial office environment as social distancing guidelines begin to ease and the economy reopens post the COVID-19 pandemic. These decreases are being partially offset by increased DSIC revenues.

Commercial Sales - \$18,101 - The overall increase is primarily driven by increased throughput as social distancing guidelines begin to ease and the economy reopens post the COVID-19 pandemic and increased DSIC revenues.

Industrial Sales - (\$2,993) - The overall decrease is primarily driven by forecasted demand reductions with the Company's larger industrial customers. These decreases are being partially offset by increased DSIC revenues.

Other Electric Revenue - \$12,380 - The overall increase is primarily driven by increased forfeited discounts associated with the Company's ability to collect late payment fees from our customers post COVID-19 pandemic as well as increased transmission revenues associated with the Company's FERC formula.

Accounts 401 - 402

Power Production Expense - \$1,671 - The overall increase in the power production expense is primarily driven by higher projected capacity prices.

Customer Accounts Expense - (\$4,018) - The overall decrease is driven by an assumed decrease in bad debt as social distancing guidelines begin to ease and the economy reopens post the COVID-19 pandemic allowing customers to pay down delinquent balances.

Customer Service & Informational Expenses - (\$7,408) - The overall decrease is driven by normalization of electrical model costs which were deferred through Customer Service & Informational Expenses in the historic test year.

Administrative and General Expenses - \$9,738 - The overall increase is primarily driven by headcount additions, annual wage increases and an increase in training costs as social distancing guidelines begin to ease and the economy reopens post the COVID-19 pandemic.

(Thousands of Dollars)

Attachment II - D-1a
Page 5 of 10

For the 12 Month Periods Ended December 31, 2020 and December 31, 2021

Account 403 - 405

Depreciation Expense and Amortization of Electric Plant - \$20,654 - The overall increase is primarily driven by capital additions in the twelve months ended December 31, 2021 and a full year of depreciation for capital additions placed in service in the twelve months ended December 31, 2020.

Account 408

Taxes Other Than Income Taxes - \$2,768 - The overall increase is primarily attributable to increases in sales revenue discussed above.

Account 409 - 411

Total Federal & State Income Taxes - \$8,356 - Income tax expense higher due to several factors including lower net state property deductions and cost of removal, net of the excess deferred income tax (EDIT) flow back partially offset by lower operating income.

Account 426

Miscellaneous - \$1,807 - The overall decrease is primarily driven by increased donations in support of the community in the COVID-19 pandemic and increased costs associated with the Company's POLR program.

Account 427 - 432

Interest on Long-term Debt - \$1,942 - The overall increase in interest on long term debt is primarily driven by a long-term debt issuance in the twelve months ended December 31, 2022 for which the proceeds are forecasted to be utilized for general corporate purposes.

Duquesne Light Company
Operating Statements
For the 12 months ended Dec 31
(Thousands of Dollars)

Attachment II - D-1a
Page 9 of 10

For the 12 Month Periods Ended December 31, 2021 and December 31, 2022

Account 400

Residential Sales - \$1,745 - The overall increase is primarily driven by higher generation revenues as a result of higher capacity prices and increased DSIC revenues partially offset by lower throughput.

Commercial Sales - \$13,310 - The overall increase is primarily driven by higher generation revenues as a result of higher capacity prices, increased DSIC revenues and slight throughput increases as the economy rebounds from COVID-19.

Other Electric Revenue - \$8,350 - The overall increase is primarily driven by increases associated with the Company's FERC formula.

Accounts 401 - 402

Power Production Expense - \$9,449 - The overall increase in the power production expense is primarily driven by higher projected capacity prices.

Distribution Expenses (\$1,270) - The overall decrease is primarily driven a reduction in the Company's electrical model costs which have been primarily recorded in the HTY and FTY and normalized through Customer Service & Informational Expenses. Annual wage increases are partially offsetting this

Customer Service & Informational Expenses \$8,307 - The overall increase is driven by normalization of electrical model costs which were deferred through Customer Service & Informational Expenses in the historic test year.

Administrative and General Expenses - \$4,380 - The overall increase is primarily driven by annual wage increases, benefit cost inflation, incremental headcount to enhance the Company's cyber security program and additional costs in support of the Company's Electric Vehicle initiatives.

Duquesne Light Company
Operating Statements

(Thousands of Dollars)

Attachment II - D-1a
Page 10 of 10

For the 12 Months Ended December 31, 2021 and December 31, 2022

Account 403 - 405

Depreciation Expense and Amortization of Electric Plant - \$9,539 - The overall increase is primarily due to capital additions in the twelve months ended December 31, 2022 and a full year of depreciation for capital additions placed in service in the twelve months ended December 31, 2021.

Account 408

Taxes Other Than Income Taxes - \$2,738 - The overall increase is primarily attributable to increases in sales revenue discussed above.

Account 418 - 421

Other Income - \$1,280 - The overall increase in Allowance for Other Funds Used During Construction is primarily due to increased CWIP balances.

Account 427 - 432

Interest on Long-Term Debt - \$4,559 - The overall increase in interest on long term debt is primarily driven by a long-term debt issuance in the twelve months ended December 31, 2022 for which the proceeds are forecasted to be utilized for general corporate purposes.

- Q.2 Provide a summary of test year adjustments which sets forth the effect of the adjustment upon the following: operating revenues, operating expenses, taxes other than income taxes, operating income before income taxes, State income tax, Federal income tax and income available for return. In addition, test year adjustments shall be presented on the basis of the major account categories set out at II-D-1.
- A.2. Schedule D-3 of DLC Exhibit 2 (Fully Projected Future Test Year) provides a summary of test year adjustments claimed by Duquesne by major account categories.

- Q.3. List and explain all nonrecurring or extraordinary expenses incurred in the test year and all expenses included in the test year which do not occur yearly but are of a nature that they do occur over an extended period of years, for example, non-yearly maintenance programs, and the like.
- A.3. Test year expenses that are non-recurring, extraordinary or do not occur yearly, but over an extended period of years, are explained and adjusted in Section D of DLC Exhibit 2 (Fully Projected Future Test Year).

- Q.4. As a separate item, list extraordinary property losses related to property previously included in cost of service when the gain or loss on this property has occurred or is likely to occur in the future test year. The proposed ratemaking treatment of extraordinary gains and losses must also be disclosed. Sufficient supporting data must be provided.
- A.4. In the fully projected future test year and the future test year, Duquesne Light Company does not anticipate incurring any extraordinary gains or losses related to property previously included in cost of service.

- Q.5. Provide the amount of accumulated reserve for uncollectible accounts, method and rate of accrual, amounts accrued and amounts written off in each of the last 3 calendar years.
- A.5. The provision for uncollectible accounts for any year is determined by reviewing the current reserve balance, the current receivable status, the projected annual revenue, the trends of receivables and write-offs, and the projected impact of collection initiatives on the quality of receivables.

Delinquent accounts receivable balances are separated into different categories. Each category of delinquent receivables is assigned a low and high reserve percentage. Considering the historical trends and future expectations, the accumulated reserve for uncollectible accounts is adjusted monthly to a balance that falls within the low and high reserve range.

Beginning with new distribution rates in April 2011, Duquesne Light Company began to recover customer assistance program expenses through a separate surcharge (Universal Service Surcharge). As such, the Company has bifurcated the reserve into customer and customer assistance program allowances within Attachment II-D-5 as amounts associated with these programs are not recovered through base distribution rates.

Attachment II-D-5 presents the accumulated provision for uncollectible amounts and the amounts written off for the years ended December 31, 2018, December 31, 2019 and December 31, 2020.

Duquesne Light Company

*Prior to April 21, 2011, CAP related allowance was included within general distribution rates. Commencing April 21, 2011, such costs were included within the Universal Service Charge and thus are not included base distribution rates as discussed within DFR II-D-5.

- Q.6. Supply detailed calculations to support the total claim for rate case expense, including supporting data for outside service rendered. Provide the items comprising the estimated rate case expense claim for the current rate case.
- A.6. The requested information is set forth in Schedule D-8 of DLC Exhibit 2 (Fully Projected Future Test Year).

Q.7. Submit schedules for the test year and for the 12-month period immediately prior to the test year showing by major components, if included in claimed test year expenses, the expenses incurred in each of the following expense categories.

- a. Miscellaneous general expenses, including account 930
- b. Outside service expenses.
- c. Regulatory commission expenses.
- d. Advertising expenses, including advertising engaged in by trade associations whenever the utility has claimed a contribution to the trade association as a ratemaking claim – provide explanation of types and purposes of such advertising.
- e. Research and development expenses – provide a listing of major projects.
- f. Charitable and civic contributions, by recipient and amount.

Explain major variances between the test year expenses and those expenses for the prior 12-month period.

A.7. See the following attachments for the requested data and an explanation of the major variances:

- a. Attachment II-D-7a – Miscellaneous general expenses including account 930
- b. Attachment II-D-7b Outside service expenses
- c. Attachment II-D-7c Regulatory commission expenses
- d. Attachment II-D-7d Advertising expenses
- e. Attachment II-D-7e Research and development expenses
- f. Attachment II-D-7f Charitable and civic contributions

Duquesne Light Company
Miscellaneous General Expenses - Account 930.2
For the Period
(Thousands of Dollars)

Line No.	Expense	1/1/2021 - 12/31/2021	1/1/2020 - 12/31/2020	Increase (Decrease)
1	Utilities (electricity, gas, water, etc)	996	1,532	(536)
2	Membership Dues	805	1,239	(434)
3	Other miscellaneous	5,415	8,329	(2,914)
4	Total	<u>\$ 7,216</u>	<u>\$ 11,100</u>	<u>\$ (3,884)</u>

Note:

As the budget is not prepared by FERC account, the above information was determined based on an allocation to FERC account which was based on the same relationship to the total as the actual costs shown for the Historic Test Year.

Other Miscellaneous - Decreased costs are attributable to allocation of outside services between FERC account 930.2 and 923. See Attachment II-D7b for further discussion.

Line No.	Expense	1/1/2022- 12/31/2022	1/1/2021 - 12/31/2021	Increase (Decrease)
1	Utilities (electricity, gas, water, etc)	1,082	996	86
2	Membership Dues	875	805	69
3	Other miscellaneous	5,881	5,415	466
4	Total	<u>\$ 7,837</u>	<u>\$ 7,216</u>	<u>\$ 621</u>

Note:

As the budget is not prepared by FERC account, the above information was determined based on an allocation to FERC account which was based on the same relationship to the total as the actual costs shown for the Historic Test Year.

Other Miscellaneous - Increased costs relate to the functional and technical upgrade associated with the Company's customer care and billing system.

Duquesne Light Company
Purchased Power
Purchased Power Expense
(Thousands of Dollars)

Duquesne Light Company (DLC) no longer purchases a portion its electricity supply needs from Duquesne Power, LLC as Duquesne Power, LLC does not participate in POLR auction under its POLR VIII agreement.

**Duquesne Light Company
Fiber Lease and Lit Services
Operating Expenses
(Thousands of Dollars)**

The fiber optic network lease is an approved arrangement entered into between DLC and its DQE Communications affiliate. The network is used for voice and data communications between Company facilities, including supervision, protection and control of the distribution and substation systems. Attachment II-D-8b is a copy of this agreement. The fiber may be located on or within DLC poles, conduits, ducts and related property. In addition, pursuant to the terms of the Sonet Fiber Use Agreement entered into in 2006 between Duquesne Light and its DQE Communications affiliate, Duquesne Light replaced its outdated microwave network with access to a fiber optic ring that connects the operations control center with equipment at various locations throughout the service territory. Attachment II-D-8c is a copy of that agreement.

In addition, Duquesne Light maintains a Master Service Agreement with DQE Communications which provides the general terms and conditions and a framework within which Duquesne Light may from time to time purchase certain telecommunications and related infrastructure services from DQE Communications. Specifically the agreement relates to (i) Metro Ethernet & Internet Services; (ii) Colocation Services and (iii) Managed Services. See agreement maintained at Attachment II-D-8f.

Duquesne Light Company
Electronic Meter Reading
Operations Expense
(Thousands of Dollars)

Electronic meter reading services are no longer provided from Datacom Information Systems, LLC (an affiliate).

Historically, Datacom provided services related to electronic meter reading services and related services for all DLC's customers who currently, or in the future utilize electronic metering devices with Encoder Receiver Transmitters (ERT). The ERT meters number approximately 570,000. They are principally utilized by DLC's residential and small commercial customers. The services provided include (1) the use of network facilities, including Cell Control Units and Network Control Nodes, over which the meter reading data is transmitted and obtained; (2) maintenance, replacement, construction, and alteration of the network system as needed to provide and operate said meter reading services; (3) leases and licenses required in order to physically locate and operate the network devices throughout DLC's service territory; (4) such other services that are needed or beneficial and agreed to by the parties and the Commission.

**Duquesne Light Company
Intercorporate Tax Payment Agreement**

Duquesne Light Holdings, Inc. (DLH), the parent of DLC entered into an Intercorporate Tax Payment Agreement with its affiliated companies, effective January 1, 1992. The purpose of the Agreement was to provide for payments between the parent company and its affiliated companies with respect to each company's share of the consolidated income tax liability of the entire affiliated group. See DLC Exhibit 4, and Testimony of Matthew Simpson – Statement No. 7. Refer to attachment II-D-8d for a copy of this agreement.

Duquesne Light Company
Affiliated Interest Agreement
(Thousands of Dollars)

On January 17, 2010, DLC entered into a short-term affiliated interest agreement with its parent, Duquesne Light Holdings, Inc (DLH). This agreement provided DLC with the ability to borrow from DLH in the form of short-term intercompany loans in an amount not to exceed \$200 million at any given point in time. In February 2021, the Pennsylvania Public Utility Commission approved DLC's application to amend the affiliated interest agreement requesting an increase of the maximum borrowing capacity of this short term intercompany borrowing facility from \$200.0 million to \$300.0 million. As of December 31, 2020, DLC had \$10.0 million of intercompany loans outstanding. The specific terms of the affiliated interest agreement are included as Attachment II-D-8e.

Function	1/1/2020 - 12/31/2020	1/1/2021 - 12/31/2021	Variance
Intercompany Interest	\$ 1,379	\$ 1,128	\$ (251.1)

Function	1/1/2021 - 12/31/2021	1/1/2022 - 12/31/2022	Variance
Intercompany Interest	\$ 1,128	\$ 423	\$ (705.0)

**Duquesne Light Company
Cash Pool Arrangement**

Duquesne Light Holdings, Inc. (DLH), the parent company of DLC, established a Cash Pool in November 1997. The Cash Pool was established as a mechanism to concentrate excess funds and combine the cash of DLH and its subsidiaries to invest in short term investments. DLC does not participate within the Cash Pool Arrangement.

**Re: Affiliated Interest Agreement between Duquesne Light Company and Its Affiliates
Docket No. G-2018-3002809**

Dear Secretary Chiavetta,

Pursuant to the Secretarial Letter in the above-captioned matter dated January 22, 2020, enclosed please find the executed copy of Duquesne Light Company's Administrative Services Agreement ("ASA"). Signatures were obtained for all entities except DH Energy LP, which was dissolved on January 13, 2020. BrightR, Inc. was also dissolved in January 2020. Included with the executed ASA and labeled as "Updated Appendix B" is the most recent organizational chart, which removes DH Energy LP and BrightR, Inc. from the corporate organizational structure.

Please feel free to contact me with any questions, comments, or concerns.

Respectfully Submitted,

A handwritten signature in blue ink, appearing to read "Emily M. Farah", is written over the typed name and title.

Emily M. Farah

ADMINISTRATIVE SERVICES
AGREEMENT

THIS ADMINISTRATIVE SERVICES AGREEMENT (this "Agreement") is made as of June 18, 2018 by and among DUQUESNE LIGHT HOLDINGS, INC., a Pennsylvania corporation ("Parent"), DUQUESNE LIGHT COMPANY, a Pennsylvania limited liability corporation ("Duquesne"), and the affiliates of Parent and Duquesne named on the signatures pages hereto (each, an "Affiliate" and collectively, the "Affiliates").

WITNESSETH:

WHEREAS, Duquesne is a public utility providing electric service subject to regulation by the Pennsylvania Public Utility Commission (the "Commission" or "PUC");

WHEREAS, Parent, f/k/a DQE, Inc., pursuant to its articles of incorporation, has unlimited power to engage in any lawful act concerning any lawful business for which corporations may be incorporated under the Pennsylvania Business Corporation Law and was formed for the purpose of engaging in energy-related diversification opportunities which could arise from time to time in the marketplace;

WHEREAS, Duquesne companies desire, need and require from time to time the administrative, management and other services as described in **Appendix A**.

NOW, THEREFORE, in consideration of the mutual covenants and undertakings herein contained, the parties hereto agree as follows:

1. DESCRIPTION OF SERVICES

Any affiliated members of the Parent may from time to time perform, on a regular or temporary basis administrative, management, and other services for one or more of the other companies. An exclusive list of services that may be provided is included within **Appendix A** to this Agreement. Those affiliates that receive services from, or provide services to, the Parent are listed within **Appendix B** to this Agreement. No service shall be performed in contravention of any applicable law, regulation, rule, order, judgment, or decision of

any governmental entity.

2. PERSONNEL

In order to provide the services, the Parties will employ executive officers, accountants, financial advisors, technical advisers, attorneys, and other persons with the necessary qualifications. If necessary, the Parties may also arrange for the services of nonaffiliated experts, consultants and attorneys in connection with the performance of any of the services provided under this agreement.

3. ALLOCATION

In consideration of services rendered, the party receiving administrative services ("Receiving Party") under this Agreement agrees to reimburse the party providing such services ("Providing Party") the fully-loaded cost of such service, including charges for interest where appropriate. The allocation methodologies for directly charging and allocating costs between affiliates are detailed in **Appendix C**. Generally, the following allocation methods shall be used:

- a) The Providing Party will allocate to any administrative services provided the direct costs associated with performing such services.
- b) Direct labor costs of any employee of the Providing Party who provides identifiable services to the Receiving Party will be charged to the Receiving Party's operation based on such employee's total compensation, including salary and fringe benefits.
- c) Other identifiable direct costs, including third party service fees and supplies, will be charged to the Receiving Party's operations at the actual cost incurred by the Providing Party.
- d) All costs charged are subject to periodic review and adjustment, as appropriate.

The Providing Party shall directly assign costs when practicable. National Association of Regulatory Utility Commissioners (NARUC) Guidelines for Cost Allocation and Affiliate Transactions are followed to assign costs to the Receiving Party. If it is not practicable to directly assign costs for completed services, such costs shall be allocated based on such NARUC guidelines.

4. PAYMENT FOR SERVICES

A Receiving Party agrees to pay the Providing Party the actual cost of providing the services. In

this regard, the Providing Party shall deliver monthly to the Receiving Party written documentation of the cost of providing services under this Agreement, which invoice shall be due and payable within 30 days after its receipt. When it is not reasonably possible or practical to determine actual costs, the Providing Party may substitute allocation factors for actual costs as set forth within Section 3 of this Agreement.

All such costs incurred by the Providing Party on behalf of the Receiving Party shall become the liability of the Receiving Party when incurred by the Providing Party, shall be determined in accordance with generally accepted accounting principles and shall be determined in accordance with the cost allocation procedures set forth within Section 3 of this Agreement; provided however that if a particular transaction is subject to regulation by the FERC or another federal regulatory agency, and the rules of these agencies require a pricing mechanism that is different than provided herein, the Parties will follow the rules required by the federal agency, as applicable.

5. INTEREST ON PAST DUE AMOUNTS

From and after the Effective Date (as hereinafter defined), in the event any amount payable under Section 4 of this Agreement is not paid by a Receiving Party when due, such unpaid amount shall bear interest, from the due date shown in the invoice therefor (or, if no such due date is shown, from the date that is 30 days after the Receiving Party receives such invoice), at a rate equal to the then-current average monthly rate of interest applicable to DQE Capital Corporation's cash pool arrangement.

6. AGENT STATUS OF PROVIDING PARTY

All services, materials, equipment, and supplies purchased by a Providing Party at the request of a Receiving Party shall be purchased by the Providing Party on behalf of and as agent for the Receiving Party. In that regard, the Receiving Party hereby appoints the Providing Party as its agent, and the Providing Party hereby agrees as such agent to negotiate, execute and enforce contracts (including purchase order contracts) providing for the purchase of services, materials, equipment and supplies.

Each such contract shall be made in the name of the Receiving Party and shall provide, among other things, that the Providing Party shall be the agent for the Receiving Party concerning the administration of the contract and that performance of the contract shall be for the account of, title to all property acquired thereunder shall vest in, and charges therefore shall be paid by, the Receiving Party.

7. JOINDER TO AGREEMENT

Any future subsidiary or other affiliate of Parent or Duquesne may elect to participate in this Agreement by executing a joinder or similar agreement indicating such entity's willingness to be bound by the terms of this Agreement. Duquesne Light Holdings will file an updated listing of subsidiaries with the PUC, as necessary and appropriate. Subject to PUC approval, new Duquesne Light subsidiaries that are added prior to the annual update will be subject to this Agreement.

8. SEVERAL OBLIGATIONS; NO RIGHTS TO BIND

The duties, obligations and liabilities of the parties under this Agreement are intended to be several and not joint or collective, and nothing in this Agreement shall ever be construed to create an association, joint venture, trust or partnership between the parties or to impose a trust or partnership duty, obligation or liability on or with regard to any of the parties. Each party shall be individually responsible for its own obligations as herein provided. No party shall be under the control of or shall be deemed to control the other party solely by virtue of this Agreement. No party shall have a right or power to bind another party without its express written consent, except as expressly provided in this Agreement.

9. WITHDRAWAL FROM AGREEMENT

Any party shall have the right at any time to withdraw from this Agreement by giving 90 days' prior written notice of withdrawal. In the event any Affiliate desires to withdraw from this Agreement, it shall send written notice of withdrawal to Parent and Duquesne. In the event Parent desires to withdraw from this Agreement, it shall send written notice of withdrawal to Duquesne. In the event Duquesne desires to withdraw from this Agreement, it shall send written notice of withdrawal. This Agreement automatically shall terminate upon the effective date of Duquesne's withdrawal from this Agreement.

10. NOTICES

Any notice required or permitted to be given to a party hereunder shall be in writing and shall be sent to such party at its address set forth below (or to such other address as such party may notify the other parties by notice given in accordance with the requirements of this Section 10):

If to Parent:

Duquesne Light Holdings, Inc.
411 Seventh Avenue
Pittsburgh, PA 15219
Attn: Chief Legal Officer

If to Duquesne:

411 Seventh Avenue
Pittsburgh, PA 15219
Attn: Chief Legal Officer

11. APPROVAL BY COMMISSION

This Agreement is subject to the approval of the Commission and shall be effective on the entry date of the Commission's order approving this Agreement or on such other date that this Agreement is deemed approved by the Commission (such date, the "Effective Date").

12. GOVERNING LAW

This Agreement shall be governed by, and construed in accordance with, the laws of the Commonwealth of Pennsylvania, without regard to its conflict of laws principles.

13. COUNTERPARTS

This Agreement may be executed in two or more counterparts, and by the different parties hereto on separate counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same document.

IN WITNESS WHEREOF, the parties hereto have caused this Administrative Services Agreement to be duly executed by their duly authorized representatives of the date first written above.

Appendix A

Description of Services

This Appendix provides a description of services provided under the Administrative Service Agreement dated June 18, 2018. Listed below are services provided. All services listed are allocated directly when possible. If direct allocation is not possible, the indirect allocation method that is used is listed.

Service	Description	Basis of Allocation
Alarm Monitoring Services	Provides alarm monitoring services for the Company.	The allocation for these services is based on the Average Asset allocation method.
Audit Services	Provide services including coordinating the examination of accounting records with the external auditors.	The allocation for these services is based on the Average Asset allocation method.
Compliance Services	Provide enterprise-wide compliance and consultation to the Company as well as to specific corporate projects on compliance matters.	The allocation for these services is based on the EBITDA allocation method.
Disbursement Services	Provides Company-wide disbursement processing functions.	The allocations for these services are allocated based on the Direct method.
Executive Services	Provide leadership and strategic services for the Company.	The allocation for these services is based on the EBITDA allocation method.
Finance / Accounting Services	Provide services including the setting accounting policies and practices, preparation and dissemination of consolidated financial results, research of new financial reporting requirements, maintenance of the general ledger system, management of the budget and forecasting process and preparation and review all external financial reporting.	The allocation for these services is based on the EBITDA allocation method.
Financial Planning & Analysis Services	Provide services related to the preparation and development of budgets and budgetary controls.	The allocation for these services is based on the EBITDA allocation method.
Human Resources	Provide services to manage and maintain employee policy and program development and oversight of all human resource initiatives.	The allocation for these services is based the Headcount allocation method.
Information Services	Provide services including, but not limited to, service and IT support, maintenance and support of existing corporate business applications, system implementation costs, report coordination, consultative support, and mail and printer/copier services.	The allocation for these services is based on the Average Asset allocation method.
Internal Audit Services	Provide audit plans and strategies for the Company for financial, compliance, information technology and operational audits. Additionally provide services related to control risk assessments and special investigations.	The allocation for these services is based on the EBITDA allocation method.

Legal Services	Provide the Company with legal services, including, but not limited to, general corporate matters and internal corporate maintenance, contract drafting and negotiation, litigation, liability and risk assessment, financing, state and federal regulatory compliance, state and federal regulatory support and rule interpretation and advice, bankruptcy and collection matters, union contracting and all other matters requiring legal services.	The allocation for these services is based on the EBITDA allocation method.
Materials	Provides the Company with non-inventory related materials, which are materials relating to the Company's office supplies that do not flow through inventory accounts.	The allocation for these materials is based on total materials per employee. The listing of materials is updated annually.
New Hire Background Services	Provide new hire background check processes.	The allocation for these charges are based on Headcount allocation.
Payroll Services	Provides Company-wide payroll processing functions.	The allocation for these charges are based on Headcount allocation.
Pension Administration Services	Provide services for the management and administration of all pension and savings plan assets for the Company. Services provided include, but are not limited to, the implementation of investment policies, monitoring of investment performance, and coordination of actuarial valuation reviews.	The allocation for these charges are based on Headcount allocation.
Rent Services	Provides office space at the headquarters building. For all employee time that is charged directly to a subsidiary, the Company allocates a portion of DLC rent expense to the associated subsidiary in connection with the direct charge. The annual rent expense is updated in accordance with changes in lease terms. Additionally, the number of employees per floor is updated annually with an employee by location listing.	The allocation for these services is based on total cost per employee per floor.
Safety & Workforce Development	Provides Company-wide safety and workforce development reporting and initiatives.	The allocation for these services is based on the EBITDA allocation method.
Tax Services	Provide services related to preparation of tax returns and other filings, consultation services, research of tax planning initiatives, coordination of audits, and various other tax related accounting functions.	The allocation for these services is based on the EBITDA allocation method.
Treasury Services	Provide services including, but not limited to, daily banking transactions, monitoring of cash holdings, monitoring of credit facilities, forecasting cash requirements, various reporting requirements, management of bank, investor and agency relationships, and management of insurance policies.	The allocation for these services is based on the Average Asset allocation method.

Appendix C

The allocation factors described below will be used by the Accounting and Reporting department for apportioning project charges to DQE Holdings LLC and subsidiaries (the Company).

Allocation 1 – DIRECT COSTS

Project charges will be allocated to each benefited affiliate on the basis of the relation of its direct costs billed by the shared service to the total of all direct costs billed by the shared service. All affiliates may be included in this allocation.

Allocation 2 – NUMBER OF REGULAR EMPLOYEES

Project charges will be allocated to each benefited affiliate on the basis of the relation of its number of regular employees to the total number of all regular employees of the benefited affiliates. All affiliates may be included in this allocation. Part time, temporary and full time employees will record their time into the timekeeping system and their time will be allocated based on the employee's charge code that is selected. All contractor and subcontractors will be billed through invoices received and would be excluded from this calculation. Contractor and subcontractor time will be billed directly to the subsidiary. In the event that the contractor's time cannot be directly charged, the charges will be manually recorded through a monthly journal entry.

Allocation 3 – FIXED ALLOCATION

Project charges will be allocated to each benefited affiliate on the basis of fixed percentages on an individual project basis. All affiliates may be included in this allocation.

Allocation 4 – EARNINGS BEFORE INTEREST, TAXES, DEPRECIATION AND AMORTIZATION (EBITDA)

Project charges will be allocated to each benefited affiliate on the basis of the relation of its total EBITDA to the sum of the total EBITDA of all benefited affiliates. All affiliates may be included in this allocation. On an annual basis, EBITDA balances of each company will be updated using 12/31 balances. This will be updated subsequent to the finalization of year-end financial statements. The total EBITDA will be reduced by the previous year's administration fee allocation per company and then the balance will be translated to the absolute value. Then, utilizing the absolute value, a percent of total EBITDA per company will be calculated. All discontinued operations will be removed from the overall calculation. Note: The 'administration fee allocation' refers to the entry made to reallocate costs to the relevant affiliate. It is the summary of all of the outlined allocation methods. Each month, the Company calculates all costs to be reallocated and records a manual journal entry (i.e. the administration fee allocation). This ensures all appropriate costs are recorded and invoiced at the subsidiary. When determining the EBITDA percentages, the impact of the previous year allocation from EBITDA is removed in order to neutralize the calculation.

Allocation 5 – AVERAGE ASSETS

Project charges will be allocated to each benefited affiliate on the basis of the relationship of its total average assets to the sum of the total average assets of all benefited affiliates. All affiliates may be included in this allocation. On an annual basis, the average asset calculation will be updated utilizing November balances. The current asset balances will be adjusted by removing cash, intercompany, goodwill, and investment in subsidiaries in order to calculate an adjusted asset balance per company. The previous 12 months (including November) will be used to determine an average asset balance per company. Then, utilizing the 12 month average asset balances, a percent of total average assets will be calculated per company. All discontinued operations will be removed from the overall calculation.

Allocation 6 – REVENUE

Project charges will be allocated to each benefited affiliate on the basis of the relationship of its total revenue to the sum of the total revenue of all benefited affiliates. All affiliates may be included in this allocation. On an annual basis, revenue balances per company will be updated utilizing November balances. A percent of total revenue per company will be calculated to determine the percentage of allocation.

Allocation 7 – CAPITALIZATION

Project charges will be allocated to each benefited affiliate on the basis of the relationship of its capitalization (debt and equity) to the sum of the total capitalization of all benefited affiliates. All affiliates may be included in this allocation.

Allocation 8 – NUMBER OF TRANSACTIONS

Project charges will be allocated to each benefited affiliate on the basis of the relationship of the number of transactions to the affiliate to the sum of the total transactions of all benefited affiliates. All affiliates may be included in this allocation.

Allocation 9 - MASSACHUSETTS METHOD

The Massachusetts Method allocates costs based on the benefiting company's revenue, total assets, and payroll or labor relative to the totals for all companies benefiting from a service. All affiliates may be included in this allocation.

Allocation 10 – PENNSYLVANIA METHOD

The Pennsylvania Method allocates the costs of a service based on the relevant company's invested capital, operation and maintenance expenses, and number of employees relative to all other affiliates receiving the service at issue. All affiliates may be included in this allocation.

Direct Time Allocations - e-Time Procedures

The Company has identified certain shared service employees which are employees of DLC. These employees utilize the eTime process described below in order to directly allocate time to affiliates or charge projects requiring additional allocation. A listing of shared service cost centers is maintained by the accounting department and reviewed on a quarterly basis to ensure the proper allocation of time to affiliates.

eTime – eTime is an internet scheduling tool used by employees of the Company. eTime was established in order for employees to track and assign time based on the actual hours spent performing tasks for a particular project or affiliate.

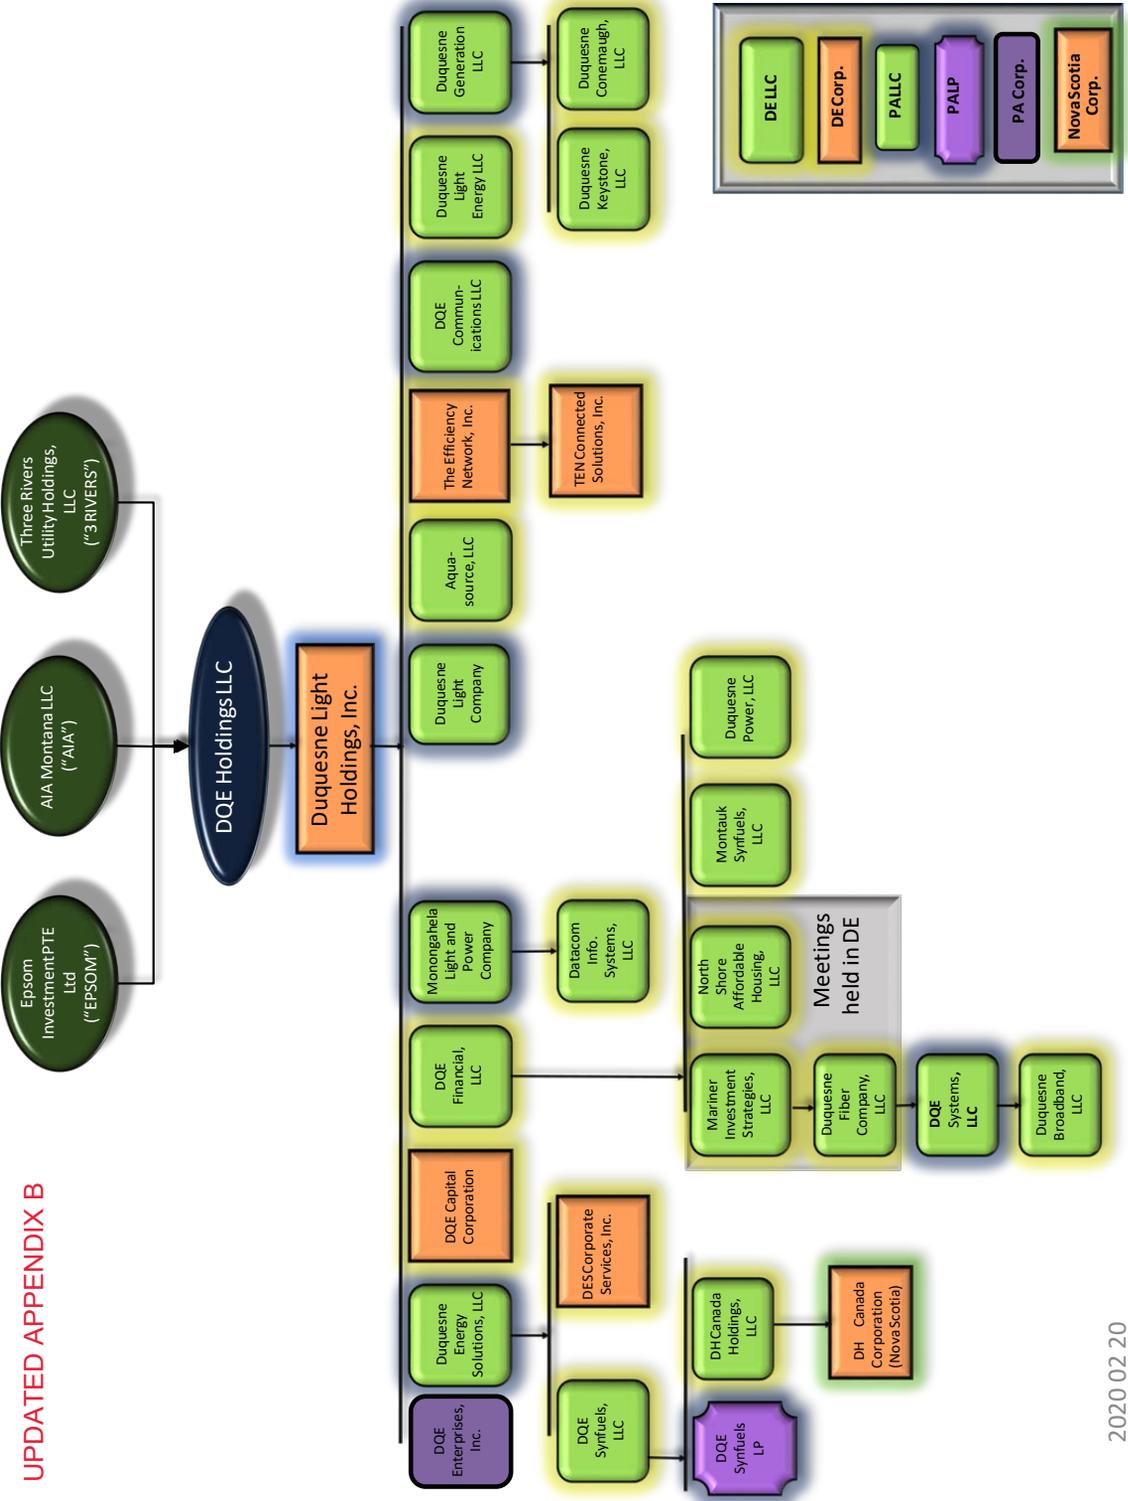

As described above, all shared service employees of the Company are considered DLC employees and are required to complete a timesheet or submit their time via eTime for each period whether they are paid hourly or receive a salary. Employees who utilize eTime must enter their time based on the activities that were performed during the pay period. A screen within eTime allows the employee to select certain projects and/or affiliates. Employees are required to select the entity or project to which their time should be charged. If an employee does not select an entity or project, eTime will not be submitted. An eTime file is then generated monthly with all allocations and a manual entry is recorded within the accounting department to transfer the labor charges to the appropriate affiliate.

Employees are encouraged to enter their time in one quarter hour increments. Employees are also encouraged to keep their timesheets updated on a regular basis, so that they do not have to enter an entire pay period of time on the last day of the pay period. It is best if they enter their time on a daily basis, when feasible, so that it is as accurate as possible. Employees may face disciplinary action for not adhering to the Company's policies regarding eTime.

Employees who fail to submit their eTime at the end of a pay-period receive an initial automated email reminding them to submit their time via eTime. If the employee does not submit their time after receiving the initial reminder, the employee is sent a second automated email communicating that they have committed a compliance violation for eTime non-submittal. This second email prompts the employee to immediately report their time. If the employee continues to delay, a notice is sent to the employees direct Supervisor for follow-up and possible disciplinary action. Multiple delays in eTime submissions are considered a performance issue and may warrant disciplinary action.

eTime allocations will be reviewed on an annual basis to ensure that shared service employees are properly allocating time to benefiting affiliates.

UPDATED APPENDIX B

Affiliated Interest Agreement Between
Duquesne Light Company and DQE
Communications, Inc.

Docket No.
G-00970585

OPINION AND ORDER

BY THE COMMISSION:

On October 14, 1997, an Affiliated Interest Agreement ("Agreement") between Duquesne Light Company ("Duquesne") and DQE Communications, Inc. ("DQE Communications") was filed to become effective on November 13, 1997. The period for consideration of this Agreement was extended by the Commission to January 16, 1998. On January 14, 1998, the period for consideration of this Agreement was extended until further order of the Commission.

This is a Master Fiber Services Agreement which provides for the lease back by Duquesne from DQE of portions of the Fiber Optic Network and other fiber services for use in Duquesne's utility business.

Duquesne is a public utility subject to the Commission's jurisdiction and is a wholly-owned subsidiary of DQE, Inc. a Pennsylvania corporation. DQE Communications is a wholly-owned subsidiary of Duquesne Enterprises, a Pennsylvania corporation, which is also a wholly-owned subsidiary of DQE, Inc.

Duquesne currently owns, operates and maintains a fiber optic telecommunications network ("Fiber Optic Network") used in Duquesne's utility business to carry voice and data information and to supervise, protect and control Duquesne's distribution and substation system.

Two other affiliated interest agreements have been submitted by Duquesne and are interrelated and pertain to Duquesne's proposed sale of its Fiber Optic Network to DQE Communications and the lease by Duquesne of certain fiber

services from DQE Communications for operation of its telecommunications network. These related agreements have been filed at Docket Nos. G-00970584 and G-00970586. Also related to this Agreement is an Application of Duquesne Light Company and DQE Communications, Inc. (Docket No. A-110150 F0016), for approval of the transfer by sale of a fiber optic network from Duquesne Light Company to DQE Communications, Inc., and for the lease of fiber services by Duquesne Light Company from DQE Communications, Inc.

The subject Agreement is filed in accordance with the requirements of Section 2102(b) of the Public Utility Code, 66 Pa. C.S. 2102(b).

We have examined the Agreement and have determined that it appears to be reasonable and consistent with the public interest; however, approval of the Agreement does not preclude us from investigating, during any formal proceeding, the reasonableness of charges incurred under the Agreement; THEREFORE,

IT IS ORDERED:

1. That the Affiliated Interest Agreement between Duquesne Light Company and DQE Communications, Inc. filed on October 14, 1997, be and hereby is, approved.

2. That acceptance does not preclude the Commission from investigating during any formal proceeding the reasonableness of charges incurred under the Agreement.

3. That a copy of this order be served on the Office of Consumer Advocate, the Office of Small Business Advocate, the Office of Trial Staff and parties to the Duquesne Restructuring Proceeding at Docket No. R-00974104, and made available to other interested parties.

4. That this Docket No. G-00970585 be marked closed.

BY THE COMMISSION

James J. McNulty
James J. McNulty
Secretary

MASTER FIBER SERVICES AGREEMENT

THIS AGREEMENT (the "Agreement") made this 26th day of September, 1997 (the "Effective Date"), by and between DUQUESNE LIGHT COMPANY, a Pennsylvania corporation ("Duquesne") and DQE COMMUNICATIONS, INC., a Pennsylvania corporation ("Company").

WHEREAS, Duquesne requires the use of a fiber optic telecommunications network (such network being hereinafter referred to as the "Telecommunications Network") and for this purpose desires that Company provide to Duquesne Fiber Services (as defined below); and

WHEREAS, Company currently owns and may acquire additional fiber optic cables ("Fiber") which comprise a portion of the Telecommunications Network, which Fiber may be located on or within Duquesne's poles, conduits, ducts and related property (hereinafter referred to collectively as "Facilities"); and

WHEREAS, Company is willing, to the extent it may lawfully do so and subject to the terms and conditions set forth, to provide to Duquesne Fiber Services; and

NOW, THEREFORE, in consideration of the mutual covenants, terms, conditions and obligations contained herein, and intending to be legally bound hereby, the parties agree as follows:

Article 1 FIBER SERVICES; RIGHTS OF WAY

a. Fiber Services

As used herein, the term "Fiber Services" shall mean the provision of such capacity on Fiber (whether now owned by Company or to be acquired in the future) as Duquesne shall from time to time require, and shall include, without limitation: (i) specific strands of Fiber as set forth on Exhibit C and as requested by Duquesne, (ii) maintenance, replacement and repair of all Fiber used to provide Fiber Services and (iii) the construction and/or acquisition of additional Fiber and related facilities as and when needed to meet Duquesne's Fiber requirements.

Duquesne shall request from time to time the Fiber Services required; Company shall provide to Duquesne all the Fiber Services requested by Duquesne. Company covenants to use its best efforts to provide all Fiber Services required by Duquesne for the fulfillment of its electric service requirements. This Agreement contains the basic terms and conditions upon which Fiber Services shall be provided by Company to

Duquesne. Subject to such terms and conditions, when the parties agree on the location of additional Fiber to be used in the provision of Fiber Services, they will execute a completed Fiber Services Acknowledgment (substantially in the form of Exhibit A hereto):

b. **Periodic Plan Reports**

Within 90 days of the end of its fiscal year, Duquesne shall provide Company with an annual plan setting forth in writing Duquesne's projected needs for additional Fiber Services in such year. Within 45 days of the end of the second fiscal quarter in each year, Duquesne shall provide Company with a written update of such annual plan, setting forth any changes therein and any new projected needs for additional Fiber Services. Duquesne shall also keep Company informed of any known Fiber Services needs which will arise beyond the then current fiscal year.

c. **Franchise and Other Requirements**

Company covenants to Duquesne that it will obtain and maintain all of the necessary approvals, authorities, franchises, permits, consents and easements from federal, state and local authorities including, but not limited to, the Pennsylvania Public Utility Commission, relating to the construction and operation of the Telecommunications Network. Compliance with this Article shall not relieve Company of the obligation to obtain any necessary or additional rights-of-way from private property owners.

Article 2

INSTALLATION, OWNERSHIP, SERVICES AND MAINTENANCE

a. **Installation, Ownership and Maintenance of Fiber**

Company shall be responsible for ensuring the proper maintenance and repair of all Fiber used in the provision of Fiber Services on a 24 hours a day, seven days a week basis (including good faith efforts to dispatch a repair crew within two hours of notice of a problem). Duquesne shall have the right to perform, or cause the performance of, the maintenance and repair of the Fiber (whether or not used in the provision of Fiber Services) and the provision of such other services, as set forth on Exhibit D-1, including all engineering, splicing, termination, patching and testing of Fiber at Company's expense. Company shall pay Duquesne a fee for such services in accordance with the terms set forth on Exhibit D-2.

Duquesne reserves to itself, its successors and assigns the exclusive right to maintain the Fiber used in the provision of Fiber Services and to operate its equipment in a manner to enable it to fulfill its electric service requirements. Company acknowledges that Duquesne's Fiber Services needs in connection with fulfilling its electric service requirements will always receive priority over the needs of Company.

The relevant strands of Fiber used in the provision of Fiber Services shall be tested by Duquesne in the manner specified in the attached Exhibit B to determine compliance with the specifications set forth in the attached Exhibit B. Company may

have representatives present during such testing. Duquesne shall promptly deliver to Company a copy of the test results within two weeks after receipt of such test results. If the Fiber meets the specifications, it shall be deemed to be in service as of the date of the test and such in service date shall be the rent commencement date for the Fee for those strands. If the Fiber does not meet the specifications, Duquesne shall attempt to repair, or at its option replace, and retest the subject Fibers.

b. **Change in Location of Fiber**

In the event that Company shall at any time be required by any entity having the legal authorization to compel such action, to transfer, rearrange or relocate any portion of the Fiber used in the provision of Fiber Services, Company may require such transfer, rearrangement or relocation at its own expense. Company shall use commercially reasonable efforts to transfer, rearrange or relocate such Fiber in such a manner as to avoid interruption in service to Duquesne or its customers. Company shall provide Duquesne with not less than one hundred eighty (180) days written notice prior to commencing any transfer, rearrangement or relocation of any portion of such Fiber, except in the event that earlier action is required by any entity having the legal authorization to compel such earlier action, in which event Company shall notify Duquesne promptly upon learning of the proposed action of such entity. Company shall advise Duquesne of the location of the relocated Fiber. Duquesne shall have the right to approve or disapprove any such new location for the relocated Fiber to the extent necessary to ensure its continued ability to fulfill its electric service requirements.

c. **Use of Fiber**

Company acknowledges that Duquesne shall have unrestricted and exclusive use of all Fiber used in the provision of Fiber Services.

Article 3
DAMAGE; COSTS

Each party shall promptly and in writing inform the other party of any damage to Fiber used in the provision of Fiber Services of which such party is aware. If any such damage is the result of negligent or intentional acts of Duquesne or its agents or contractors Duquesne shall be responsible for the cost of repairing such damage; otherwise, Company shall be responsible for the cost of repairing such damage.

As used in this Agreement, the term "costs" shall include, without limitation, all labor costs, fringe benefits, pensions, taxes, supervision, transportation, clearing costs, equipment costs, costs associated with materials and supplies, and purchasing and warehousing costs, all as described in more detail on Exhibit D-2, all of which shall be billed on a time and materials basis.

Article 4 INTERRUPTIONS

Company shall not be liable to Duquesne or any third party for any interruption of Duquesne's service or for any interference with the operations of Duquesne arising out of any act or omission by Company or any person acting on behalf of Company (except for negligent or willful acts). Company shall use its commercially reasonable efforts to avoid any interference with Duquesne's Telecommunications Network or its operations. Company shall not be responsible for any incidental or consequential damages.

Article 5 FEES

Duquesne shall pay Company an annual fee for Fiber Services as follows:

Fees are due and payable quarterly in advance on the first day of each calendar quarter. Fees for Fiber Services for which utilization began during a quarter will be calculated on a pro-rated basis in accordance with the number of days of use and reflected in the next quarterly bill.

With respect to Fiber which exists at the date of this Agreement, the annual fee charged for strands of Fiber providing service to Duquesne (and the maintenance thereof) shall be \$111 for each mile of each fiber strand used in each cable. This fee has been negotiated on an individual basis specifically with, and shall apply specifically to, Duquesne.

With respect to Fiber which is acquired or constructed at the request of Duquesne, the annual fee charged for strands of such Fiber providing service to Duquesne (and the maintenance thereof) shall be an amount no more than the annualized cost of construction and maintenance which Duquesne would have incurred had Duquesne carried out such construction and maintenance for its own account, prorated for each strand of Fiber providing service to Duquesne. The calculation of this fee shall be based on, but not limited to, such factors as construction costs, maintenance costs and depreciation. Company shall have the right to review, but not participate in, Duquesne's calculation. If there is a dispute regarding the accuracy of such calculation which cannot be resolved by good faith negotiations between Duquesne and Company within 30 days, such dispute shall be submitted to a mutually agreeable, nationally recognized, independent accounting firm with offices in Pittsburgh, who shall be instructed to make a final determination within 30 days of being appointed. Such determination shall be binding on Duquesne and Company. Notwithstanding the foregoing, if Company has no Fiber available to provide services to Duquesne due to such Fiber's being committed to third parties and Company must therefore acquire or construct additional Fiber to meet Duquesne's electric service requirements, the annual fee charged for such strands of Fiber providing service to Duquesne (and the maintenance thereof) shall be the lesser of (i) the amount set forth in the immediately preceding paragraph and (ii) the amount calculated pursuant to the first sentence of this paragraph.

**Article 6
TERM**

This Agreement shall become effective upon the later to occur of (i) approval by the Pennsylvania Public Utility Commission of this Agreement and the transactions contemplated herein and (ii) approval by the Pennsylvania Public Utility Commission of the Asset Purchase Agreement between Duquesne and Company of even date herewith and the transactions contemplated therein, and, if not earlier terminated in accordance with the provisions hereof, shall continue in effect until December 31, 2017. Notwithstanding the foregoing, this Agreement shall not be effective until approved by Duquesne's Board of Directors. In consideration for the mutual promises contained herein, this Agreement shall automatically be extended for additional ten (10) year terms unless either party has delivered written notice no later than five (5) years prior to the date of termination of the initial term or any additional term.

Notwithstanding the foregoing paragraph, Duquesne shall at all times have the right, upon 12 months' written notice, to terminate this Agreement (and/or any related Fiber Services Acknowledgment) with respect to some or all of the Fiber Services if such Fiber Services are no longer necessary for Duquesne to fulfill its electric service requirements.

**Article 7
BILLING**

All amounts due Company under this Agreement shall be paid by Duquesne within 45 days of the date set forth on the invoice ("Payment Date") from Company along with a detailed accounting of such amounts.

**Article 8
EVENTS OF DEFAULT**

The following shall constitute an event of default under this Agreement:

1. The failure of a party to pay a sum of money owed to the other party on or before the date on which such payment is due, and the continuance of such failure for ten (10) days after written notice.
2. Any material breach of any term of this Agreement, other than the payment of money, and the failure of the breaching party to cure such breach within thirty (30) days after written notice, provided that if the breach by its nature is not capable of being cured within thirty (30) days, then an event of default shall not occur if within such thirty (30) days the party commences curing the breach and thereafter diligently and continuously pursues such cure to completion. Failure to pay monies owed shall never be deemed a breach not capable of being cured within thirty (30) days.

3. Any change in control of Company. A "change in control" shall be deemed to have occurred if (i) at any time Company is no longer a DQE Affiliate (defined below), (ii) Company enters into an agreement providing for the merger or consolidation of Company with or into another person other than a DQE Affiliate, (iii) Company enters into an agreement providing for the sale of all or substantially all of Company's assets to any person or entity other than a DQE Affiliate, (iv) Company enters into an agreement providing for the transfer of title in the Fiber to any person or entity other than a DQE Affiliate or (v) Company assigns its rights, duties or obligations under this Agreement to any person or entity other than a DQE Affiliate.

As used herein, the term "DQE Affiliate" shall mean any person or entity, the majority of the voting securities of which are owned by DQE, Inc. or any of its wholly-owned direct or indirect subsidiaries.

Upon the occurrence of a change in control, Duquesne shall have the right, in its sole discretion, to acquire all right, title and interest in some or all of the Fiber for an amount equal to the depreciated book value of such Fiber, pursuant to documentation reasonably acceptable to Duquesne.

Upon the occurrence of any event of default (including without limitation a change in control), the non-breaching party may exercise any and all remedies available at law or equity, including but not limited to termination of the Agreement. Such remedies are not intended to be exclusive and a party may pursue multiple remedies.

Article 9 TERMINATION

a. In the event that (i) any federal, state or local authority takes any action that preempts or otherwise invalidates any material provision of this Agreement or revokes the approvals, authorities, franchises, consents or easements necessary for Duquesne to operate the Telecommunications Network or (ii) a court of competent jurisdiction issues an order preventing Duquesne from operating the Telecommunications Network, either party shall have the option, to terminate this Agreement, provided that if the action or order affects less than all of the Fiber used in the provision of Fiber Services the Agreement shall only be terminated with respect to the affected Fiber, unless Duquesne determines in its sole discretion that the remaining Fibers could not be utilized economically in its business, in which event Duquesne may elect to terminate the entire Agreement.

b. In the event that this Agreement is terminated, (i) Duquesne shall pay to Company any and all sums then due and owing within 30 days thereof, and (ii) each party shall return all documents, work papers and other materials of the other party relating to the transactions contemplated hereby (or copies thereof), whether obtained before or after the execution hereof, to the party furnishing the same or each party shall destroy such material at the request of the furnishing party, except that each party may keep one copy of such items for its records.

c. Upon termination of this Agreement for any reason (including without limitation pursuant to Article 6), Duquesne shall have the right to purchase some or all of the Fiber (whether or not used in the provision of Fiber Services) for an amount equal to the depreciated book value thereof.

**Article 10
WAIVER OF COMPLIANCE**

Any failure to exercise or delay in exercising any right, power, privilege or remedy herein contained, or any failure or delay at any time to require the other party's performance of any obligation under this Agreement, shall not affect the right to subsequently exercise that right, power, privilege or remedy or to require performance of that obligation. A waiver of any of the provisions of this Agreement shall not be deemed, nor shall constitute, a waiver of any other provision, nor shall any waiver constitute a continuing waiver. A waiver shall not be binding unless executed in writing and delivered to the other party.

**Article 11
ASSIGNMENT**

This Agreement shall not be sublet, assigned, transferred, pledged or otherwise encumbered by either party without the prior written consent of the other. Notwithstanding the foregoing, Company agrees that Duquesne may sublet Fiber used in the provision of Fiber Services in accordance with the agreements listed on Schedule 11 hereto.

**Article 12
QUIET ENJOYMENT**

Company shall not take any action that would prohibit Duquesne from peaceably and quietly holding and using any and all Fiber used in the provision of Fiber Services for the entire term of the Agreement.

**Article 13
REPRESENTATIONS AND WARRANTIES**

a. Duquesne represents and warrants to Company that Duquesne has full power and authority to execute and deliver this Agreement and to consummate the transactions contemplated hereby. This Agreement is a valid and binding agreement of Duquesne enforceable in accordance with its terms.

b. Company represents and warrants to Duquesne that Company has full power and authority to execute and deliver this Agreement and to consummate the transactions contemplated hereby. This Agreement is a valid and binding agreement of Company enforceable in accordance with its terms.

**Article 14
MEMORANDA OF AGREEMENT**

If required, Company and Duquesne shall prepare a Memorandum of Agreement outlining the general terms of this Agreement. Subject to the limitations contained in Article 17 contained in this Agreement, the Memorandum shall be suitable for submission to the regulatory agencies with jurisdiction over such agreements and, if Duquesne and Company agree, for other recording purposes. Any and all costs associated with such recording shall be paid by Company.

**Article 15
THIRD-PARTY BENEFICIARIES**

This Agreement shall not confer any rights or remedies upon any person other than the parties hereto and their respective successors and permitted assigns provided.

**Article 16
NOTICE**

Any notice from one party to the other under this Agreement shall be written notice effective upon receipt sent by the United States mail, certified mail, with return receipt requested and postage prepaid, or by facsimile transmission followed by written notice as set forth above.

Notice to Duquesne shall be addressed as follows:

Duquesne Light Company
2101 Beaver Avenue
M-GSU
Pittsburgh, PA 15233
Attn: Richard A. Nickel
Assistant General Manager
Fax: (412) 393-8869

and notice to Company shall be addressed as follows:

DQE Communications, Inc.
One NorthShore Center
12 Federal Street
Pittsburgh, PA 15212
Attn: Anthony J. Villiotti
Treasurer
Fax: (412) 231-2140

Each party may change its address for purposes of notice requirements at any time by written notice to the other party given in accordance with this Article 16.

**Article 17
PAYMENTS**

All payments due to Company hereunder shall be paid by check, wire transfer or by such other means and/or to such other accounts as Company may designate from time to time.

**Article 18
CONFIDENTIALITY**

Except as may be required by law (as provided for below), both parties agree to hold and maintain any information (in written or any tangible form) each discloses to the other ("Confidential Information") with the same degree of confidentiality with which each party treats its own confidential information and in no case less than a reasonable degree of confidentiality. Information materially relating to or arising under this Agreement, including all terms and exhibits of this Agreement, shall be deemed to be "Confidential Information" for purposes of this Agreement. If a party or any of its representatives becomes legally compelled to disclose any Confidential Information, the receiving party shall provide the disclosing party with prompt notice of such requirement and shall cooperate with the disclosing party in seeking to obtain a protective order or other arrangement pursuant to which the confidentiality of the Confidential Information is preserved. Any legally compelled disclosure shall not change the status of the disclosed information as Confidential Information. The provisions of this Article shall bind the parties throughout the term of this Agreement, including extensions, and shall survive for a period of five (5) years thereafter. The term Confidential Information shall not include information that: (a) was publicly known at the time of disclosure, (b) becomes publicly known through no fault of the recipient, (c) was in recipient's possession free of any obligation of confidence at the time of the owner's disclosure to recipient, (d) is developed by recipient independently of and without reference to any of owner's Confidential Information or other information that owner disclosed in confidence to any third party, (e) is rightfully obtained by recipient from third parties authorized to make such disclosure without restriction, or (f) is identified by owner as no longer confidential or proprietary.

**Article 19
FORCE MAJEURE**

Whenever a period of time is provided for in this Agreement for either party to do or perform any act or obligation, neither party shall be liable for any delays or inability to perform due to causes beyond the reasonable control of said party such as but not limited to war, riot, insurrection, rebellion, strike, lockout, unavoidable casualty, or injury or damage to personnel, material or equipment, fire, flood, storm, earthquake, tornado or any act of God provided that said time period shall be extended for only the actual amount of time said party is so delayed. For purposes of this Article, acts or omissions shall not be deemed "beyond the reasonable control of a party" if committed, omitted or caused by a party to this Agreement, or its employees, officers, agents or affiliates, or by any corporation or other business entity that holds a controlling interest in said party, whether held directly or indirectly. In addition, the inability to perform for financial

reasons shall not be deemed an act or omission "beyond the reasonable control of a party" and shall not be deemed force majeure.

**Article 20
DISCLOSURE**

Each party will promptly inform the other of any fact or omission that would make any representations, warranty or disclosure made herein materially untrue or misleading or which constitutes a material breach of any covenant contained herein.

**Article 21
SEVERABILITY**

In the event that any term or provision of this Agreement is declared to be illegal, invalid or unconstitutional, then that provision shall be deemed to be deleted from this Agreement and have no force or effect and this Agreement shall thereafter continue in full force and effect, as modified.

**Article 22
HEADINGS**

The headings contained in this Agreement are included for convenience of reference only and shall in no way affect the construction or interpretation of any of the terms or provisions of this Agreement.

**Article 23
GOVERNING LAW**

This Agreement shall be governed by and interpreted in accordance with the substantive laws of the Commonwealth of Pennsylvania, without reference to its conflicts of laws principles. Any litigation shall be filed and pursued in either state or federal court in Pittsburgh, Pennsylvania.

**Article 24
ENTIRE AGREEMENT AND AMENDMENT**

This Agreement contains the entire agreement between the parties with respect to the subject matter and supersedes any and all prior oral or written agreements. This Agreement may not be modified or amended except in writing and signed by both parties.

**Article 25
EXECUTION IN COUNTERPARTS**

This Agreement may be executed in one or more counterparts, each of which shall be deemed an original instrument, and all of which taken together shall constitute one and the same agreement.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement the day and year first above written.

EXHIBIT A

FIBER SERVICES ACKNOWLEDGMENT
LEASE NUMBER

This Fiber Services Acknowledgment (this "Acknowledgment") is made to the Master Fiber Services Agreement between Duquesne Light Company ("Duquesne") and DQE Communications, Inc., ("Company") dated _____, 1997. Capitalized terms used in this Acknowledgment have the same meaning as such terms in the Master Fiber Services Agreement unless otherwise indicated.

This Acknowledgment is entered into as of _____, 1997.

1. Location (demarcation points): The Fiber used in the provision of Fiber Services to Duquesne under this Acknowledgment will be between (pole, manhole, facility), located on (street name), near (street name), in (City, Twp. Borough) and (pole, manhole, facility), located on (street name), near (street name), in (City, Twp. Borough).
2. Length: The cable sheath length distance between the above two demarcation points is: _____ miles.
3. Number of strands of Fiber: The specific number of strands of Fiber so used will be _____, ().
4. Fiber miles (for billing purposes): _____ Fiber miles, (item #2 times item #3).
5. Work required to provide connection to Duquesne's Telecommunications Network:

6. The terms and conditions set forth in the Master Fiber Services Agreement shall govern.
7. Approvals:

DQE Communications, Inc. Name: _____ Title: _____ Date: _____	Duquesne Light Company Name: _____ Title: _____ Date: _____
--	--

EXHIBIT B

ACCEPTANCE TEST PLAN AND SPECIFICATIONS

FIBER ACCEPTANCE TESTING PROCEDURES

Duquesne will conduct the following tests as part of its Acceptance Testing Plan:

1. Non-destructive Attenuation Tests (End-to-End)
2. Optical Time Domain Reflectometer Tests (OTDR)

Fiber acceptance testing will be performed to ensure that the Telecommunications System will operate within the parameters of the Specifications set forth below.

More specifically, fiber acceptance testing will include the following:

1. Continuity/Uniformity Tests:

All fibers shall be tested bi-directionally at 1310 nm or 1550 nm, as applicable, with an OTDR; the subsequent traces shall be inspected for end-to-end continuity and for uniform attenuation. These traces will be stored on diskette and will be compatible with Laser Precision PC-OTDR software.

2. Optical Length:

The OTDR will be used to determine the end-to-end optical length of the cable where possible.

3. Splice Loss:

Splice loss will be measured bi-directionally with an OTDR using the Splice Loss Average method. The average acceptance splice loss shall be the measurement for splice loss set forth below.

4. End-to-End Loss:

Using a light source and a power meter, the bi-directional, connector-to-connector attenuation will be measured for each fiber at 1310 nm and 1550 nm, as applicable. The acceptance average attenuation per kilometer shall be the attenuation set forth below.

FIBER ACCEPTANCE SPECIFICATIONS

I. Design Criteria

Duquesne will endeavor to keep the number of splices in a span to a minimum.

II. Optical Fiber Specifications

Company will meet the optical specifications as detailed below for all cable:

A. Optical Fiber Specifications - Singlemode Fiber (if applicable)

<u>Parameter</u>	<u>Specification</u>	<u>Units</u>
Maximum attenuation, 1310nm (A1)	0.50	dB/km
Maximum attenuation, 1550nm (A2)	0.40	dB/km
Cladding diameter	125 ±3	um
Cutoff Wavelength	1250 ±100	nm
Zero dispersion wavelength	1310 ±12	nm
Maximum dispersion (1285-1330nm)	3.5	ps/(nm km)

III. Splice Loss

Splice loss on cables will average less than or equal to 0.3 db for all splices made under this Agreement. The 0.3 dB splice average will only apply to splices between cables of identical physical and optical properties (i.e. core and cladding dimensions, refractive index and optical loss characteristics).

IV. End-To-End Attenuation Acceptance Criteria

The cable system will be tested at both wavelengths specified for each cable type as specified below unless otherwise stated in this Agreement:

Singlemode fiber - 1310 nm. and 1550 nm.

The end-to-end attenuation acceptance criteria will be based on the following formula:

$$\text{Maximum acceptable end-to-end attenuation} = (A \times L) + (0.3 \times N_{sp}) + C$$

where:

A = Max. attenuation at each wavelength (A1 and A2) as specified in section II above.

L = Optical length of the cable in kilometers (km).

N_{sp} = Number of fiber splices in the cable system.

C = Connector/pigtail loss. The attenuation contribution of each pigtail with associated connector is considered to be 1.3 dB, comprised of 1.0 db connector loss and 0.3 dB splice loss (pigtail to OSP cable splice).

Therefore, C = 1.3 dB if the span is connectorized on one end and 2.6 db if the span is connectorized on both ends.

The parameters above are guaranteed unless otherwise specified.

In the event that the fiber measured attenuation values change after the cable is installed, and is degraded by 2 dB or greater than specified above, Company will ensure corrective maintenance is performed to attempt to restore the fiber to its original specified attenuation values.

EXHIBIT D-1 SERVICES

One or more of the following services may be provided by Duquesne (or by a third party retained by Duquesne), at Duquesne's sole discretion. All costs shall be billed on a time and material basis as set forth in Exhibit D-2:

- I. Outside Plant Engineering Services
 - A. Route Selection (if requested)
 - B. Field Surveys
 - C. Preparation of Permit (if required) and Construction Drawings
 - D. Preparation of Splice Prints (if required)
 - E. Preparation of Operating Drawings
 - F. Material Procurement
 - G. Field Support (as required)
 - H. Other Engineering activities as requested by Company

- II. Project Management Services
 - A. Scheduling/Project Status Monitoring
 - B. Coordination of construction and engineering
 - C. Monitoring of Charges
 - D. Charge dispute resolution
 - E. Miscellaneous Project Management services that may be requested by Company

- III. Procurement of Rights of Way
 - A. Procurement of construction permits required for Duquesne to perform work
 - B. Investigation and/or Procurement of private right of ways required
 - C. Procurement of licenses for attachments to non-Duquesne owned poles
 - D. Procurement of Licenses required to operate the system (if requested)
 - E. Miscellaneous rights of way activities that may be requested by Company.

- IV. Overhead Fiber Installation
 - A. Installation of attachment hardware, messenger wire and guying as required.
 - B. Installation of rollers and ropes, pulling of fiber optic cable and lashing of the cable to the messenger in accordance with construction drawings provided and in accordance with Duquesne standards.
 - C. Tree trimming required to perform the installation
 - D. Miscellaneous activities required to perform the installation
 - E. Installation of attachment hardware to customers building and drilling of building wall (if requested by Company).

- V. Underground Fiber Installation

- A. Rodding and Roping of ductline
- B. Removal of dead Duquesne cable if required to provide ductline capacity for fiber optic cable.
- C. Pulling of fiber optic cable in accordance with Duquesne construction drawings and in accordance with Duquesne and industry accepted standards.
- D. Racking cable in manholes, installing protective inner duct over cable exposed in manholes and tagging of cable in manholes. Tag to contain label identifying cable owner/designation.
- E. Installation of cable in customer owned transformer vaults and drilling of vault walls (if requested by Company).
- F. Miscellaneous activities that are associated with underground cable installation or that may be requested by Company.

VI. Pole Make-ready

A. Routine

- 1. Adjustment of Street Light location/power feed
- 2. Adjustment or Replacement of Duquesne secondary conductors
- 3. Adjustment of guying
- 4. Adjustment of Third Party of BT cables (if requested by owner)
- 5. Miscellaneous minor make-ready work

B. Major (must be preauthorized by Company)

- 1. Adjustment of primary (voltage greater than 460 volts) conductors or supports
- 2. Pole replacement
- 3. Other make-ready work not stated above

VII. Fiber Splicing (Overhead and Underground)

- A. Test Cable upon receipt (unless waived by Company)
- B. Install splice cases and splice fibers according to construction drawings and in accordance with Duquesne splicing procedures
- C. Upon completion of splicing, perform end to end tests as follows:
 - 1. Provide OTDR traces measured from each end
 - 2. Provide end to end loss measurements (in each direction)
- D. Install splice cases and splice fibers (ring cuts) to spur cables as requested
- E. Miscellaneous fiber splicing activities as requested by Company

VIII. Maintenance (including Emergency Restoration)

A. Provide emergency restoration services as required

- 1. Provide test and troubleshooting support (OTDR analysis)

**EXHIBIT D-2
RATES FOR SERVICES**

All costs shall be billed on a time and materials basis.
For employees of Duquesne, Company will be charged:

1) Company will be charged the actual hours spent performing the service. Included in these hours are time required to travel to and from the location at which the service is performed, if that location is not the location that the employee normally reports to.

In the event of an emergency "callout," Company will be charged a minimum of 4 hours, regardless of the actual number of hours worked.

In the event that an employee, because of the service provided, is entitled to "rest table" under the terms of the Duquesne Bargaining Unit Agreement, Company will be charged the rest table hours as well.

2) A prorated supervision rate based upon the number of employees required to perform the service divided by the number of employees that the supervisor is responsible to supervise.

The actual hours spent will be multiplied by the direct hourly rate which the employee(s) performing the service is(are) paid. To this hourly rate a surcharge in accordance with Duquesne general accounting practices will be added for costs that are directly linked to hourly labor (Duquesne Fringe Benefits).

3) The cost of equipment/transportation required to perform the service. These costs will be the transportation and equipment charges normally incurred by Duquesne in accordance with Duquesne's standard accounting practices.

4) A 45% surcharge to direct labor, Duquesne Fringe Benefits and transportation charges for such costs as vacation time, holidays, sick time, convenience days, inclement weather time, training time, consumable tools, payroll and administration and union activities.

For Contractors Engaged by Duquesne, Company will be charged:

1) Company will be charged the actual hourly rate paid by Duquesne to a contractor for the performance of the service, including allocation of sales taxes if applicable. If, in the performance of a service, Duquesne negotiates a contract for a fixed fee for the performance of a portion of the service by a contractor, Duquesne will charge Company the fixed fee.

2) Company will be charged for Duquesne inspectors required to supervise the contractor as well as Duquesne's administrative charges in regards to the contractor in accordance with the actual hours spent by Duquesne employees on the contractor related task. Billing for Duquesne's actual hours will be as specified above.

PITTSBURGH PA 15219

Re: Affiliated Interest Agreement between Duquesne Light Company and
DQE Communications LLC

Dear Mr. Jack:

On April 6, 2006, Duquesne Light Company ("Duquesne") and DQE Communications LLC ("DQEC") filed an Affiliated Interest Agreement. This agreement was filed in accordance with the requirements of Section 2102(b) of the Public Utility Code, 66 Pa. C.S. §2102(b). On April 13, 2006, the Commission extended the period for consideration of this Agreement until further order of the Commission.

The Agreement relates to the lease of a fiber optic communications system (Sonet Fiber Use Agreement) between Duquesne and DQEC.

Upon review of the company's filing, it does not appear that this filing is unreasonable or contrary to the public interest. Therefore, this filing is hereby approved. However, approval of this filing does not constitute a determination that such filing is consistent with the public interest and that the associated costs or expenses are reasonable or prudent for the purposes of determining just and reasonable rates. Furthermore, the Commission's approval is contingent upon the possibility that subsequent audits, reviews, and inquiry, in any Commission proceeding, may be conducted, pursuant to 66 Pa. C.S. §§ 2102, *et seq.*

In addition, this approval will apply only to the agreement(s), service(s), matters, and parties specifically and clearly defined under this instant filing, as well as under any associated and previously filed filings.

Sincerely,

James J. McNulty
Secretary

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Application of Duquesne Light :
Company for approval of Affiliated :
Interest Agreement between : Docket No. _____
Duquesne Light Company and :
DQE Communications, LLC :

**Affiliated Interest Application
(66 Pa. C. S. Section 2102)**

Duquesne Light Company (“Duquesne”) requests approval pursuant to Section 2102 of the Public Utility Code, 66 Pa. C. S. §2102, of the Sonet Fiber Use Agreement between Duquesne and its affiliate, DQE Communications, LLC (“DQEC”), and sets forth the following in support thereof:

1. The name and address of the Applicant is:

Duquesne Light Company
411 Seventh Avenue
Pittsburgh, PA 15219

2. The name and address of the Applicant’s attorney are:

Gary Jack, Esq.
Assistant General Counsel
411 Seventh Avenue, Mail Drop 8-2
Pittsburgh, PA 15219
Phone: 412-393-3662
Fax: 412-393-5602
E-mail: gjack@duqlight.com

3. Duquesne is a duly incorporated Pennsylvania public utility engaged in the distribution of electric service to the public, primarily within Allegheny and Beaver Counties, Pennsylvania, in an area of approximately 800 square miles. The Company’s corporate headquarters is located at 411 Seventh Avenue, Pittsburgh, PA 15219.

4. DQE Communications, LLC (“DQEC”) is a Pennsylvania limited liability company organized for the purpose of fiber optic telecommunications network services.

5. Applicants are affiliated with each other. Duquesne is a first tier subsidiary of Duquesne Light Holdings, Inc. DQEC is a first tier subsidiary of DQE Systems, Inc., which is a first tier unregulated subsidiary of Duquesne Light Holdings, Inc.

6. Pursuant to the terms of the Sonet Fiber Use Agreement, attached as Exhibit A, Duquesne seeks to improve its internal communications with its substations by replacing the existing microwave and copper communications plant serving its protective relay system with a fiber optic communications system (“Sonet Network”) by leasing certain portions of DQEC’s fiber optic network in Allegheny, Beaver and Washington counties.

7. The salient terms of the Sonet Fiber Use Agreement are as follows:

- a. The Agreement facilitates improved internal communications with Duquesne substations by replacing the existing microwave and copper communications plant serving its protective relay system with a fiber optic communications system leased from DQEC. Two single mode fiber optic strands configured in a point-to-point mode will be leased;
- b. The Agreement provides that the Sonet Network constructed by DQEC for Duquesne will consist of two fiber rings, diversely routed between all Sonet equipment locations;
- c. The Agreement provides fair, reasonable and non-discriminatory rates, and fair and reasonable terms and conditions for the uses and services authorized thereunder; and
- d. The Agreement provides for the continued safe and reliable operation of Duquesne’s electric facilities and will not jeopardize the safety,

reliability or quality of electric service provided to Duquesne's customers.

- e. The Agreement provides for lease payments for operation, use, maintenance and support for the needed communication facilities at the rate of \$75,250 per month. That rate is fixed for a 15 year period. The term is for 15 years, with the possibility of extension(s). Any additional construction beyond the present facilities and build-outs to be constructed this year, shall be done by request and payment for services shall be at market based pricing.

8. The Agreement is reasonable and consistent with the public interest, and in furtherance of Duquesne's obligation to provide safe, adequate and reasonable service to its customers.

WHEREFORE, Duquesne respectfully requests the Commission to approve Duquesne entering into the Sonet Fiber Use Agreement with DQE Communications, LLC..

Re: Affiliated Interest Agreement for an Intercorporate Tax Payment Agreement
among Duquesne Light Company and its affiliated companies

Dear Mr. Herskovitz:

On December 1, 2005, Duquesne Light Company filed pursuant to Chapter 21 of the Pennsylvania Utility Code, 66 Pa. C.S. §2102, an Affiliated Interest Agreement requesting approval of an Intercorporate Income Tax Payment Agreement among the Duquesne Light Holdings, Inc. (Holding) affiliated companies covered by Holding's consolidated income tax filings.

Upon review of the filing, it does not appear that the arrangement is unreasonable and contrary to the public interest. Therefore, this filing is approved. However, approval of this filing does not constitute a determination that such a filing is consistent with public interest, and that the associated costs are reasonable or prudent for the purposes of determining just and reasonable rates. Furthermore, the Commission's approval is contingent upon the possibility that subsequent audits, reviews, and inquiry, in any Commission proceeding, may be conducted, pursuant to 66 Pa. C.S. §§ 2102, *et seq.*

In addition, this approval will apply only to the agreement(s), services(s), matters, and parties specifically and clearly defined under this instant filing as well as any associated and previously filed filings.

Sincerely,

James J. McNulty
Secretary

**Re: Application of Duquesne Light Company
For Approval of Affiliated Interest Agreement
Docket No. G-00051152**

Dear Secretary McNulty:

Enclosed for filing on behalf of Duquesne Light Company ("Duquesne") are the original and three (3) copies of an Application for Approval Nunc Pro Tunc of an Affiliated Interest Agreement between Duquesne and its affiliated companies. Specifically, this Application, filed pursuant to 66 Pa. C.S. §2102 of the Public Utility Code, requests Commission approval of Duquesne's inclusion as a party in an Intercorporate Tax Payment Agreement.

Also, a fourth copy of this Application is enclosed to be date-stamped and returned to me in the self-addressed stamped envelope for my file.

Thank you.

Very truly yours,

Richard S. Herskovitz

Company for approval of an :
Affiliated Interest Agreement : Docket No. _____
Between Duquesne Light Company :
And Affiliated Companies :
(Tax Sharing Arrangement) :

**Affiliated Interest Application
(66 Pa. C. S. Section 2102)**

Duquesne Light Company ("Duquesne") requests approval Nunc Pro Tunc, pursuant to Section 2102 of the Public Utility Code ("Code"), 66 Pa. C. S. §2102, of its entering into a tax payment agreement with its affiliates, and sets forth the following in support thereof:

1. The name and address of the Applicant is:

Duquesne Light Company
411 Seventh Avenue
Pittsburgh, PA 15219

2. The name and address of the Applicant's attorney are:

Richard S. Herskovitz
Assistant General Counsel
411 Seventh Avenue, Mail Drop 8-2
Pittsburgh, PA 15219
Phone: 412-393-3662
Fax: 412-393-5602
E-mail: rherskovitz@duqlight.com

3. Duquesne is a duly incorporated Pennsylvania public utility engaged in the distribution of electric service to the public, primarily within Allegheny and Beaver Counties, Pennsylvania, in an area of approximately 800 square miles. Duquesne's corporate headquarters is located at 411 Seventh Avenue, Pittsburgh, PA 15219.

4. Duquesne Light Holdings, Inc. (“DLH”), formerly known as DQE, Inc. the parent company of Duquesne, entered into an Intercorporate Tax Payment Agreement (“Agreement”) with its affiliated companies, effective January 1, 1992. The purpose of the Agreement was to provide for payments between the parent company and its affiliated companies with respect to each company’s share of the consolidated income tax liability of the entire affiliated group. A complete and detailed description of the intent and operation of this tax sharing arrangement is set forth in the Agreement attached as Exhibit A.

5. Duquesne’s inclusion in the Agreement is evidenced by the signature of Raymond H. Panza, former Duquesne Controller, on an undated counterpart signature page attached to the Agreement (page 7 of Exhibit A). This signature page has only recently been located by Duquesne.

6. In the Public Utility Commission’s most recent Management Audit of Duquesne (field work commencing in August, 2004 and ending in March, 2005), the Auditors investigated whether Duquesne’s inclusion in the Agreement had been approved by the Commission under the affiliated interest provisions of the Code. As stated in paragraph 5, neither Duquesne nor the Auditors were able to locate a counterpart signature page for Duquesne. Duquesne contended that its inclusion in the Agreement would have been authorized by the Company’s Administrative Services Agreements (“ASA”), which was previously approved by the Commission. Although a final report of the audit has not yet been issued, the Auditors have indicated that, in their opinion, the ASA did not contain such an authorization.

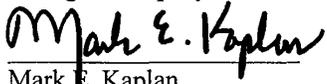

7. Duquesne subsequently located the Duquesne Light Company counterpart signature page and is now filing for approval of its inclusion in the Agreement under the affiliate provisions of the Code, retroactive to January 1, 1992.

8. Inclusion by Duquesne in the tax sharing arrangement is appropriate for accounting purposes so as to allocate taxes among affiliates of a holding company according to taxable income.

WHEREFORE, Duquesne respectfully requests the Commission to approve Duquesne's inclusion as a party in the subject Intercorporate Tax Payment Agreement, retroactive to January 1, 1992.

Exhibit A

INTERCORPORATE TAX PAYMENT AGREEMENT

THIS INTERCORPORATE TAX PAYMENT AGREEMENT ("Agreement"), dated and effective as of January 1, 1992, among DQE, Inc. ("Parent Company"), and its Affiliated Companies (as defined by this agreement).

Recitals:

A. This Agreement is entered into by the Parent Company and each other member of the "affiliated group", as defined in Section 1504 of the Internal Revenue Code of 1986 as amended (the "Code"), of which the Parent Company is a member (each such other member being called an "Affiliate Company" and all such other members being called collectively the "Affiliated Companies") and which are includible in the Parent Company's consolidated annual federal Income Tax return. The "Parent Affiliated Group" means the affiliated group of which the Parent Company is the common parent company in any taxable year of the Parent Company.

B. The Parent Company and its Affiliated Companies wish to enter into an agreement to provide for payments to Parent Company by, or by Parent Company to, each of the Affiliated Companies with respect to federal Income Taxes, as that term is defined in Section 2.02 below.

C. The purpose of this Agreement is to provide for payments between the Parent Company and its Affiliated Companies with respect to the members' shares of the consolidated Income Tax liability of the Parent Affiliated Group (each such payment being called an "Intercorporate Tax Payment") and is not intended to affect any separate company financial statement accounting, the elected calculation of earnings and profits as determined under Code Section 1552 or any other tax or accounting issues.

D. Subject to the terms hereof, the general intent of this Agreement is to provide for (i) payment to the Parent Company, by each Affiliate Company which would have incurred a separate return Income Tax liability for any period (a "Tax Reporting Period") with respect to which the consolidated Income Tax liability of the Parent Affiliated Group is estimated, reported or finally determined, of the amount of Income Taxes which the respective Affiliate Company would have incurred on a separate-return basis and (ii) payment, by the Parent Company, to each Affiliate Company that generated on a separate-return basis a net operating loss or capital loss (each individually a "tax loss") or a tax credit which is not utilized by the respective Affiliate Company in such Tax Reporting Period but is determined under the terms of this Agreement to be applied against separate-return income or Income Tax liability of the Parent Company or another Affiliate Company, of an amount equal to the sum of (a) the product of each such tax

loss so applied multiplied by the effective tax rate of Income Tax paid or payable by the Parent Company for such Tax Reporting Period on the consolidated income of the Parent Affiliated Group (such effective rate being determined before the application of tax credits) plus (b) the amount of tax credits so generated and applied.

NOW THEREFORE, the parties hereto, intending to be legally bound hereby, agree as follows:

ARTICLE I

INTERCORPORATE TAX PAYMENT

1.01. Payments by the Parent Company to Affiliated Companies. The amount of the reduction in the separate return Income Tax liability or the amount of the refunds or credits received by the Parent or any member of the Parent Affiliated Group from the use of a tax loss or tax credit attributable to an Affiliate Company (a "Loss Company") shall be remitted by the Parent Company to the Affiliate Company in cash on the respective due date of Income Taxes to which the Parent Company is subject, whether under Code Section 6655 with regard to estimated payments, Code Section 6151 with regard to payments required to accompany the consolidated federal Income Tax return of the Parent Affiliated Group or any later date of any actual payment of Income Taxes pursuant to administrative adjustment or unappealable final determination of a court of competent jurisdiction; provided, always, that such payment shall be conditioned on the Loss Affiliate Company continuing as a member of the Parent Affiliated Group for not less than 30 days after the respective due date and that any Loss Affiliate Company which ceases to be such a member within 30 days after the respective due date but has received an Intercorporate Tax Payment shall repay the Intercorporate Tax Payment to Parent on demand. In determining the amounts of the Loss Affiliate Company's separate return tax losses and tax credits and the amount of the Intercorporate Tax Payment, the tax losses and tax credits of the Loss Affiliate Company determined on a separate-return basis and available for application to the separate-return Income Tax liability of other members of the Parent Affiliated Group shall exclude (i) all tax losses and tax credits of the Loss Affiliate Company which were applied to its or another member's separate-return Income Tax Liability for any prior Tax Reporting Period and (ii) all tax losses and tax credits of the Loss Affiliate Company which may be applied to reduce the Loss Affiliate Company's separate return Income Tax liability for the current Tax Reporting Period. If for a Tax Reporting Period the total tax losses (or tax credits) of the Parent Company and all Loss Affiliate Companies, determined on a separate-return basis, exceed the total separate-return income (or Income Tax liability)

of all members of the Parent Affiliated Group with positive, separate-return income or Income Tax liability (so that not all available tax losses or tax credits may be utilized in the Tax Reporting Period), then, subject to the SRLY rules and any other rules limiting for tax purposes the intercompany availability of tax losses or tax credits, the available tax losses and tax credits respectively of a Loss Affiliate Company shall be deemed to be applied intercompany in the amount equal to (i) the total of the tax losses and tax credits, respectively, which the members with positive net income and separate-return Income Tax liability can utilize times (ii) a fraction, the numerator of which is the tax losses (or tax credits, as the case may be) of the Loss Affiliate Company available and usable for such Tax Reporting Period and the denominator of which is the total of the available and usable tax losses (or tax credits, as the case may be) of all Loss Affiliate Companies. The Intercompany Tax Payment to a Loss Affiliate Company shall equal the sum of (a) the product of the amount of tax loss of the Loss Affiliate Company which is applied for the Tax Reporting Period to separate-return income of any other member multiplied by the effective rate of Income Taxes (determined before application of tax credits) paid or payable by the Parent Company on the consolidated federal Income Tax liability of the Parent Affiliated Group for that Tax Reporting Period plus (b) the amount of tax credits of the Loss Affiliate Company which are applied for the Tax Reporting Period to separate-return Income Tax liability of any other member. The amount of all items of tax losses and tax credits of the Parent Company and each Affiliate Company shall be determined under the terms of this Agreement. To the extent that this Agreement does not cover the treatment or timing of a particular item, the determination shall be made under the Code.

1.02. Overpayments. The portion of any overpayment of Income Taxes resulting in a refund which is attributable to a Loss Affiliate Company shall be remitted by the Parent Company to the Loss Affiliate Company upon receipt of the overpayment by the Parent Company, provided, always, that such Loss Affiliate Company is then a member of the Parent Affiliated Group and that any overpayment of Income Taxes which is treated by the Parent Company as a payment of consolidated Income Taxes for a succeeding Tax Reporting Period and which is attributable to a Loss Affiliate Company may be retained by the Parent Company, so long as such overpayment (or portion thereof) is credited as an Intercompany Tax Payment, pursuant to Section 1.03 below, of any actual separate return Income Tax liability of such Loss Affiliate Company for such succeeding Tax Reporting Period.

1.03. Payments by Affiliated Companies to Parent Company. The amount of the positive separate-return Income Tax liability of each Affiliate Company for the respective Tax Reporting Period shall be remitted by the Affiliate Company to the Parent Company in cash on the due date, of any actual or required payment of

consolidated Income Taxes of the Parent Affiliated Group, whether such payment is due or made with respect to the estimated, reported or finally determined consolidated Income Tax liability of the Parent Affiliated Group.

ARTICLE II
TAX LIABILITY

2.01. Determination of Separate Return Tax Liability. For purposes of determining the separate return Income Tax liability of each Affiliate Company, the tax liability of each member shall be computed as if it had filed a separate Income Tax return for the taxable period. The separate return Income Tax liability shall be computed in a manner consistent with the provisions of Treasury Regulations Section 1.1552-1(a)(2)(ii) and as provided in Section 1.01 above. Any penalty or interest with respect to any underpayment of estimated or final consolidated Income Taxes of the Parent Affiliated Group shall be attributed to the respective member to which the adjustment of income, deduction or credit resulting in the penalty or interest is attributable, but if there are no such members, then to those Affiliate Companies with positive separate-return Income Tax Liability (as reported, adjusted or redetermined) for such Tax Reporting Period, ratably in proportion to their respective separate-return Income Tax liabilities. If any adjustment is made to the consolidated Income Tax liability of the Parent Affiliated Group for any year by amended return, by adjustment upon audit by the Internal Revenue Service conceded by the Parent Company, or by final nonappealable determination of a court of competent jurisdiction, the overpayment or deficiency for such year shall be allocated to those members or former members which had the items of income, deduction or credit to which the overpayment or deficiency is attributable. If due to disaffiliation of a former member or any other reason there is no Affiliate Company to which an Intercompany Tax Payment may be paid (or an overpayment paid or credited), such payment or credit shall be retained by the Parent Company.

2.02. Income Taxes. For purposes of this agreement the term "Income Taxes" shall mean federal income taxes, taxes on preference items, and any minimum tax or alternative minimum tax, imposed under the Code or any successor statute, together with any interest and penalties related thereto.

ARTICLE III
COVENANTS

3.01. Continuation of this Agreement. For so long as the Parent Company is permitted it shall continue to file consolidated federal Income Tax returns pursuant to Code Section 1501 for the

Parent Affiliated Group, and this Agreement shall continue in effect and be implemented and enforced in accordance with its terms. Except as otherwise expressly agreed by the Parent Company and all Affiliated Companies, any corporation which becomes an includible corporation in the Parent Affiliated Group shall be treated as a party to this Agreement, effective as of the first day the results of its operations for that day are included within the consolidated taxable income of the Parent Affiliated Group, upon (i) execution and delivery to the Parent Company of an addendum hereto agreeing to be bound and benefitted by the terms of this Agreement or (ii) the inclusion (constituting implied consent) of the results of its operations in any consolidated federal Income Tax return of the Parent Affiliated Group.

3.02. Decisions Affecting the Amount of the Intercorporate Tax Payments. In determining the amount of Intercorporate Tax Payments to be made under the terms of this Agreement, the Parent Company shall make decisions concerning tax matters, refunds or credits of the Parent Affiliated Group, which would affect (for purposes of determinations of Intercorporate Tax Payments) the separate Income Tax return liability, refunds or credits of the respective Affiliated Companies (including, without limitation, the making, not making, or revoking of elections, resolution of disputes in connection with audits of Income Tax returns, and defending or settling any Income Tax return or any matter related thereto) in a manner which minimizes the cumulative total consolidated Income Tax liability of the Parent Affiliated Group.

ARTICLE IV
MISCELLANEOUS

4.01. Amendments, Modifications and Supplements. Except as provided in Section 3.01 above regarding additional includible corporations, no amendment, modification or supplement relating hereto shall be effective unless in writing signed by or on behalf of the party to be charged therewith. This Agreement may be executed in one or more counterparts and with counterpart signature pages, all of which, taken together, shall constitute one and the same instrument. Furthermore, it is agreed that an Affiliate Company's execution of a counterpart signature page for attachment originally, or as an addendum hereto as provided in Section 3.01 above, shall be effective to bind all Affiliated Companies without reexecution by previously includible corporations.

4.02. Duration; Survival. All covenants and agreements contained herein shall continue in full force and effect from and after the hereof so long as the Parent Affiliated Group remains and so long as the Parent Affiliated Group continues in filing a federal consolidated Income Tax return.

4.03. Governing Law. This Agreement shall be governed by, and construed and enforced in accordance with, the laws of the Commonwealth of Pennsylvania.

IN WITNESS WHEREOF, the parties hereto, by their officers thereunto duly authorized, have executed and delivered this Agreement as of the date first above written.

Request of Duquesne Light :
Company for Approval of an :
Amendment to its Affiliated Interest : Docket No. G-2009-2148505
Arrangement with its Parent for :
Short Term Borrowing :

**Request for Approval of An Amendment
to Affiliated Interest Agreement
(66 Pa. C. S. Section 2102)**

Duquesne Light Company (“DLC”) requests the Pennsylvania Public Utility Commission’s (“Commission”) consent and approval pursuant to Section 2102 of the Public Utility Code (“Code”), 66 Pa. C. S. § 2102, to amend its existing Affiliated Interest Agreement with its parent company, Duquesne Light Holdings Inc. (“DLH”), by increasing the allowed amount of borrowings from \$200 million to \$300 million. The increased borrowing threshold will provide DLC with the capability and flexibility to finance necessary construction of facilities, greater flexibility for working capital and capital structure management, and otherwise fund and operate its business. DLC sets forth the following in support thereof:

1. DLC is a Pennsylvania limited liability company and an electric utility engaged in the supply (through its provider-of-last-resort service (POLR)), transmission and distribution of electric energy. DLC provides electric service to more than 600,000 customers in Pennsylvania’s Allegheny and Beaver counties (including in the city of Pittsburgh), a territory of approximately 800 square miles. DLC’s corporate headquarters is located at 411 Seventh Avenue, Pittsburgh, PA 15219.

2. DLH is the parent company of DLC, and DLC is DLH’s principle subsidiary.

3. On December 16, 2009, DLC filed with this Commission a petition requesting authorization for DLH to be able to lend to its utility subsidiary, DLC, up to \$200 million at any one time on commercially reasonable terms as dictated in the petition. By Secretarial Letter dated May 3, 2010 at Docket No. G-2009-2148505, the affiliated interest agreement was approved by operation of law pursuant to 66 Pa. C.S. § 2102(b)

4. Said authorization has been utilized by DLC since Commission approval of the arrangement. The credit facility has been helpful and beneficial to both the utility and its customers in providing short term borrowings to DLC for financing needs.

5. In order to provide necessary funding for construction, as well as finance and pay other obligations of DLC in normal course of operating its utility business, DLC desires to increase its ability to borrow, on a short term basis from time to time, from up to \$200 million to up to \$300 million at any given point in time from its parent, DLH, on market terms and conditions. This borrowing would be used in addition to normal equity contributions, retained earnings, long-term borrowings of DLC, and short-term borrowings from outside credit lenders utilized by DLC to operate its business. Borrowing is necessary to support construction and general corporate needs, and provide DLC greater flexibility in timing debt issuances in the capital markets to obtain more favorable terms and an overall lower cost of capital.

6. DLC also recommends an amendment of the interest rate of the Affiliated Interest Agreement from London Interbank Offered Rate (LIBOR) + 1.25% to LIBOR + 0.875% to align with DLC's Credit Agreement executed on October 31, 2019. All other specific terms of the loan will be unchanged. The amended, specific terms of the loan arrangement are attached as Exhibit A. DLC represents that these terms are commercially reasonable and reflect today's prevailing market conditions. Increasing the threshold as requesting in this filing will provide no preference or undue advantage to DLH or any other company in the DLH family.

7. Upon Commission approval, an amended Promissory Note will be executed between DLC and DLH in the form attached as Exhibit B.

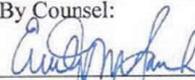

8. The approval of this amendment is necessary and in the public interest, providing necessary financing for construction and operation of DLC's obligation to provide reliable and cost effective electric service to its customers.

WHEREFORE, DLC respectfully requests the Commission to approve this amendment to its short term borrowing arrangement with its parent, DLH, and to authorize borrowings up to \$300 million from DLH to its utility subsidiary, DLC, and it to perform all necessary and incidental tasks thereto in carrying out said borrowing arrangement.

Attachment B

PROMISSORY NOTE

Amount: Up to \$300 Million

Date: _____

Interest Rate: LIBOR + 0.875%

Payment: Upon Demand

Duquesne Light Company, a Pennsylvania Limited Liability Company (herein called the “Company”, which term includes any successor entity), for value received, hereby promises to pay to Duquesne Light Holdings, Inc. (the “Lender”), the principal sum of its draws or loans from the Lender, in an amount not to exceed \$300 million dollars (\$300,000,000.) at any one time or, if less, the aggregate principal amount of advances outstanding on demand, plus interest due thereon.

This Promissory Note is payable ON DEMAND, and Company shall pay interest thereon on a quarterly basis on the unpaid principal amount of each such loan at the Market Rate of interest. The Market Rate of interest shall be the London Interbank Offered Rate (LIBOR) plus 0.875% per year. Interest payments shall be due and payable on the last day of each quarter for the amount accrued on a daily basis in such quarter. Also, on said last day of each quarter, the Market Rate shall be recalculated on a forward basis for the principal to be outstanding during the succeeding quarter. Notwithstanding such payment arrangements, all outstanding and unpaid principal and interest shall be due and payable upon Demand.

Payment of the principal of this Note and interest hereon shall be made, at the request and demand of the lender, upon presentation hereof at the office of the Company in Pittsburgh, Pennsylvania or at such other office or agency as may be designated for such purpose by the Company from time to time. Payment of the principal of and interest on this Note, as aforesaid, shall be payable in lawful money of the United States of America to the Lender in Pittsburgh, Pennsylvania in same day funds and may be paid or prepaid by the Company at any time and from time to time to reduce its outstanding balance.

The registered holder of this Note may demand payment of the principal hereof, in whole or in part, plus accrued interest by delivering to the Treasurer of the Company at the office of the Company in Pittsburgh, Pennsylvania a notice specifying the portion of such principal amount to be paid and the date of payment and then presenting this Note for payment at such office on the date specified for payment.

This Note is exchangeable for a like aggregate principal amount of Notes of like tenor upon surrender of this Note to be exchanged at the office of the Company in Pittsburgh, Pennsylvania. No service charge shall be made for any such exchange, but the Company may require payment of a sum sufficient to cover any tax or other governmental charge payable in connection therewith.

The principal amount to be repaid by the Company may, at the Company’s option, be offset by the amount of any obligations which are then owed by Lender to the

Attachment B

Company. This Note shall be governed by and construed in accordance with the laws of the Commonwealth of Pennsylvania.

No recourse shall be had for the payment of the principal of or interest on this Note, or any part hereof, for any claim based thereon or otherwise in respect thereof, or of the indebtedness represented thereby against, and no personal liability whatsoever shall attach to, or be incurred by, any officer or director of such Company as such, past, present or future of the Company, whether by virtue of any constitutional provisions, statute or rule of law, or by the enforcement of any assessment or penalty or otherwise, it being expressly agreed and understood that this Note is solely a Company obligation and that any such personal liability is hereby expressly waived and released as a condition of, and as part of the consideration for, the execution and the issuance of this Note.

IN WITNESS WHEREOF, the Company has caused this instrument to be duly executed.

Terrance J. Fitzpatrick

Affiliated interest agreement among Duquesne Light Company and its non-jurisdictional affiliates for participation in a cash pool arrangement.

Docket Number:

G-00051141

ORDER

BY THE COMMISSION:

On October 7, 2005, Duquesne Light Company (Duquesne Light) filed, pursuant to Chapter 21 of the Pennsylvania Public Utility Code, 66 Pa. C.S. §§2101, *et seq.*, an affiliated interest agreement for participation in a Cash Pool (the Pool) arrangement among its affiliates. By Secretarial Letter dated October 7, 2005, the Commission extended the 30-day statutory consideration period until further order of the Commission as provided in Chapter 21 of the Public Utility Code.

Background

Duquesne Light is a jurisdictional utility that provides electric distribution and transmission services primarily within Allegheny and Beaver counties. Duquesne

Light Holdings, Inc. (DLH) is an energy services holding company formed to serve as the holding company for Duquesne Light and to engage in other unregulated energy and energy-related businesses.

DLH, formerly DQE, Inc., originally established its Cash Pool in November of 1997 as a mechanism to concentrate and combine the excess funds of it and its affiliates for investing in short-term securities. The aggregation of these funds was designed to provide a more efficient means for managing the excess cash of the DLH subsidiaries. The applicants state that Duquesne Light became a member of the Pool in July of 2000.

In the most recent Management Audit conducted by the Commission, the Audit Staff discovered a number of arrangements or transactions that they felt were not covered by Commission approved affiliated interest agreements. One of these was the participation of Duquesne Light in the Cash Pool arrangement. Duquesne Light, however, contends that its participation in the Pool was authorized by the Commission under a previously approved Administrative Services Agreement (ASA). The Auditors in turn contend that the ASA did not contain authorization for Duquesne Light to participate in the Pool. In its Implementation Plan, which was acknowledged by the Commission at its Public Meeting of June 1, 2006, Duquesne Light accepted the recommendations in the report issued by PA Public Utility Commission Bureau of Audits including the requirement to file an affiliated interest agreement for Duquesne Light's participation in the Pool.

Even though Duquesne Light originally disputed the Auditors' conclusion regarding its participation in the Pool, the company agreed to file for approval of its membership and participation in the Pool under the affiliated provisions of the Code.

Subsequently, Duquesne Light exited the pool November 28, 2005, pending Commission approval of this affiliated interest application for participation in the Pool.

Subsequent to making its filing Duquesne Light responded to the Commission's requests for additional information.

The Cash Pool Agreement

The Cash Pool is used by DLH as a mechanism to concentrate excess funds and combine the cash of DLH and its subsidiaries to invest in short-term investments. The applicants state that by aggregating their funds DLH and its subsidiaries are able to invest in short-term securities previously not available to individual Pool participants. Additionally, the applicants aver that the Pool is a more efficient method of managing funds by reducing the administrative costs of the Pool participants and results in higher investment returns for the Pool participants.

Participants in the Cash Pool include DLH and all of the wholly-owned direct and indirect subsidiaries of DLH. DQE Capital Corporation acts as the Agent and is the current Pool administrator. The cash position of the Pool participants is determined by the Agent on a daily basis. The sources of these funds include normal operating receipts, external borrowings or contributions made by DLH. Pool participants, with the exception of DLH, can contribute to the Pool but cannot borrow from the Pool. DLH through the Agent is permitted to borrow from the Pool but does not contribute to the Pool. The Agent is permitted to borrow from the Pool to facilitate intercompany borrowing arrangements and operating requirements. There are no individual limits on the amounts that any individual participant can deposit into the Pool and DQE Capital Corporation borrowings from the Pool are only limited by the amount deposited into the Pool. Excess cash, the net of the amount contributed less borrowings by the Agent, will

be invested by the Agent in approved investments that are consistent with the Duquesne Light Holdings Short Term Investment Policy¹.

DQE Capital Corporation, acting as the Agent, is the only Pool participant that may borrow from the Pool and its borrowing are only limited by the amount that is contributed by the other Pool members. The borrowings by the Agent are then lent to DLH as a demand loan. Borrowings made by that Agent from the Pool are at an internal short-term borrowing rate, typically the London Inter-Bank Offered Rate (LIBOR). The Agent then lends to DLH at an interest rate equal to the rate charged by external lenders on DLH's current revolving credit arrangement. The interest rate charged to DLH on its revolving credit facility, and therefore on its borrowings from the Pool, is LIBOR plus a margin based on DLH's current senior unsecured credit rating. The margin between the borrowing rate from the Pool and lending rate to DLH charged by the Agent is used by the Agent to cover the administrative costs of operating the Pool.

DLH may use the money for general corporate purposes or may advance funds to its subsidiaries on an as needed basis. These advances may be in the form of a capital contribution or a loan. Advances to Duquesne Light are done only in the form of a capital contribution.

Should a participant require its cash that is deposited in the Pool and there is insufficient cash to meet its withdrawal needs, the Agent would make a demand against DLH for repayment of all or a portion of its loan. If need be, DLH would access its available credit lines to obtain the cash needed to satisfy the Agent's demand.

¹ According to the Applicants, the Short Term Investment Policy of DLH is designed to provide a high degree of safety, liquidity and to a lesser extent yield. Permissible investments include but are not limited to: U.S. Treasury obligations, Commercial Paper, Certificates of Deposits, Bankers Acceptances and Money Market Funds.

Discussion

In reviewing Duquesne Light's participation in the Pool, the Commission raised the following concerns:

1. There is no formal agreement among participants of the Pool.
2. There is no borrowing or lending limits placed on any of the Pool participants.
3. DLH's ability to borrow money from the Pool through the Agent DQE Capital.
4. Capital arbitrage between regulated and unregulated entities.
5. Duquesne Light's risk versus benefits in participating in the Pool.

The company agreed that there is no formal agreement that is signed by the Pool participants. DLH does have, as required by FERC and filed with FERC, a written document that specifies the duties of the administrator and the participants. Duquesne Light also notes that each participant in the Pool has signed the ASA and that this agreement covers the provision of services provided by one affiliate to another. The company reiterates that each participant is aware of the operating procedures provided by the Cash Pool operating document.

In reviewing the Code, 66 Pa. C.S. §2102(a) states in part that:

If such contract is oral, a complete statement of the terms and conditions thereof shall be filed with the commission and subject to its approval.

Additionally, 66 Pa. C.S. §§2102(b) states in part that:

It shall be the duty of every public utility to file with the commission a verified copy of any such contract or arrangement, or a verified summary as described in subsection (a) of any unwritten contract or arrangement.

The Commission has determined that the Pool operating document that Duquesne Light filed with their application adequately describes the operation of the Pool. Therefore, the Commission will not require that a formalized signed contract for Duquesne Light to participate in the Pool.

Unlike other cash pools that the Commission has reviewed, the DLH Pool does not allow its Pool participants to borrow from the Pool nor does it have borrowing or contribution limits for individual participants. As noted above, DQE Capital, acting as the Agent, is the only Pool participant that may borrow from the Pool and its borrowing is only limited by the amount that is contributed into the Pool. In other intra-system money pool arrangements², pool participants may borrow from the pool and the pool administrator is prohibited from borrowing from the pool. Under this scenario, the pool administrator may contribute money to the pool whenever borrowings from the participants exceed contributions. This would be done by the pool administrator having access to externally available credit sources.

DLH's borrowing arrangement is dissimilar to what has been seen recently by the Commission in other cash pool arrangements. Our concern is that DLH borrowing through the Agent from the Pool lacks transparency in how these funds are being used and which entities, through DLH, may be borrowing money. Along with this lack of transparency, it may be that the regulated entity is helping to fund DLH's non-regulated operations. As Sharon Bonelli of Fitch Ratings notes "Cost benefits of pools reflect cost of capital arbitrage between regulated and unregulated subsidiaries; or simply put, money pools may provide an affiliate cross-subsidy."

² For example, see the Secretarial Letter regarding the First Energy Pennsylvania Utilities intra-system money pool at docket no. G-00020956.

There are a number of ring-fencing strategies suggested by Fitch that may help to insulate the public utility from the risks of its affiliates and parents when participating in a money pool arrangement. These are:

- Separate pools for regulated and unregulated subsidiaries
- Prohibit parent from borrowing from the pool, but permit the parent to lend to subsidiaries via the pool
- Restrict borrowing of unregulated subsidiary to the amount invested in the pool
- Restrict borrowings to a level commensurate with internal cash flow capability
- Require an annual 'clean down' period, where each participant has no outstanding borrowings from the pool for two consecutive weeks
- Prohibit funding of the pool with proceeds of external borrowings such as credit facilities and commercial paper

The Duquesne Pool tends not to follow these guidelines:

- The Duquesne cash pool mixes both regulated and unregulated subsidiaries. Duquesne Light would be the only regulated sub of DLH.
- DLH, the Parent Company, through DQE Capital, is the only entity borrowing from the pool. (In other money pools such as the one approved for the First Energy Utilities, the Agent could lend to the pool but could not borrow.)
- There appears not to be any limits on external borrowing funding the Pool. In fact, sources for cash to the pool includes: "external borrowings against lines of credit."

DLH counters some of these concerns by stating that Duquesne Light is the only regulated affiliate of DLH and that Duquesne Light does not borrow money to deposit in the Pool. Money borrowed by DLH from the Agent is charged interest at the same rate that the company would be charged for using its current revolving credit arrangement. Therefore, the money being borrowed by DLH is not at an interest rate lower than DLH could obtain from other external short term borrowing facilities. For these reasons, the company concludes that there is no cost of capital arbitrage taking place between regulated and unregulated DLH entities.

DLH also states that there is total transparency on how the cash is being used because borrowings can only be done by the Agent to DLH. They go on to explain that each DLH affiliates' funding requirements is established each year by the Board of Directors. If Duquesne Light requires cash in excess of its cash pool balance, it can access the capital markets, borrow under bank facilities or request equity from DLH. Since Pool participants other than Duquesne Light do not have access to the credit markets or bank facilities, they must request cash from DLH if their cash needs exceed their respective cash balances. These advances would be funded by DLH first from available cash on hand, second from available Pool funds and third from bank credit or capital markets.

DLH opines that having their subsidiaries borrow from them rather than directly from the Pool poses less default risk to Pool participants. Since Pool participants cannot borrow directly from the Pool, the other Pool participants are not at risk should the borrowing affiliate be unable to meet its financial obligations. Having DLH, who has access to lines of credit and the capital markets, assume the default risk makes contributing to the Pool less risky. In this way, Duquesne Light is not exposed to risk from the smaller unregulated companies that participate in the Pool.

In addition to having minimal risk in participating in the Pool, DLH states that Duquesne Light receives cost benefits by participating in the Pool. Administrative cost benefits are achieved by not having to maintain separate brokerage accounts, lower bank settlement costs through book entry with affiliates, reduced transaction costs and lower bank services fees. Also, the additional interest paid by DLH on money borrowed from the Agent is used to cover the administrative costs of the Pool.

Our analysis and conclusions differ somewhat from those provided by DLH. However, the Commission agrees that the Pool provides a cost benefit, and funds

contributed to the Pool by Duquesne Light are not being used to subsidize its unregulated affiliates. The Commission also concludes that the use of borrowed funds by DLH lacks transparency, and these borrowed funds may be used to support its non-regulated affiliates.

In analyzing the Pool data from April 2005 through September 2005, the data shows that Duquesne Light was always a net contributor to the Pool and tended to be the largest contributor to the Pool. DQE Capital Corporation was always a borrower from the Pool and tended to borrow an amount that exceeded Duquesne Light's contributions. In light of this information, it is possible that capital arbitrage could be taking place. However, it is difficult to monitor the flow of these funds because what DLH does with funds borrowed from the Pool is not readily transparent by viewing Pool data.

Upon further investigation, the Commission found that money being borrowed by DLH from the Pool is being borrowed at a rate similar to its external short term credit facility. Therefore, capital arbitrage between the regulated entity, Duquesne Light, and the unregulated subsidiaries participating in the Pool, does not occur if participating affiliates have similar risk profiles. That is, DLH and its unregulated affiliates gain no short-term rate advantage by borrowing from the Pool versus borrowing externally. Having DLH borrow internally rather than externally benefits all Pool members by providing additional funds that are used by the Agent to pay the administrative costs of the Pool. Had these funds been borrowed externally, benefits would accrue to DLH's lenders rather than internally to the DLH subsidiaries.

The Commission does agree with the assessment that the Pool provides benefits to Duquesne Light. Cost sharing through a single Agent, DQE Capital Corporation, helps to reduce administrative and transaction costs which in turn benefits Duquesne Light. There appears to be no additional exposure to default risk whether a

DLH affiliate borrows directly from the Pool, or indirectly, as is currently being done. Duquesne Light exposure to an affiliates' financial non-performance would be comparable in either case.

Additionally, if a company is reliant upon its corporate parent as the sole source of short-term financing, the company is exposed to the liquidity risk of its parent. Having access to its own bank credit facilities, Duquesne Light is not dependent upon DLH as its sole source of short-term financing. This minimizes any short-term liquidity risk exposure of Duquesne Light should DLH or one of its unregulated affiliates experience liquidity problems.

DLH affiliates are involved in the purchase of electricity and are therefore subject to a great deal of financial risk due to price volatility in these markets. Since funds from the Pool may be lent to these affiliates through DLH, the Commission is obliged to monitor the financial health of these affiliates and will request quarterly financial reporting to monitor the financial health of the DLH affiliates involved in the purchase and supply of electricity.

Lastly, the Commission concludes that there is no additional exposure to default risk for Duquesne Light to participate in the Pool because, in general, Duquesne Light's overall operations and structure are not ring-fenced from DLH. Since minimal structural separation exists between Duquesne Light and DLH, Duquesne Light's participation in the Pool will not increase the risk to the utility. As noted by Standard & Poor's in their summary of Duquesne Light: "The ratings on electric utility Duquesne Light Co. reflect the consolidated credit profile of its parent, Duquesne Light Holdings Inc., and DLH's remaining riskier competitive businesses."

In summary, the Commission finds that:

- Pool participation by Duquesne Light provides some cost benefits and operating efficiencies to the company;
- Internal controls are in place so that funds borrowed by DLH are not being used to provide capital arbitrage between regulated and unregulated subsidiaries;
- Borrowing by DLH from the Pool does not provide adequate transparency in regards to the use of Pool funds.

Therefore, the Commission will approve Duquesne Light's participation in the Pool. However, we caution the company that in continuing its participation in the Pool, Duquesne Light and DLH and its unregulated affiliates must continue to follow the current guidelines presented in the body of this order. The Commission emphasizes that: 1) Duquesne Light must not provide funding to the Pool with externally borrowed funds; 2) DLH must continue to pay its external rate of interest on monies borrowed from the pool; and, 3) Duquesne Light should abide by all the guidelines as required by the DQE Capital Corporation Cash Pool operating agreement. Should the DQE Capital Corporation Cash Pool operating agreement change, Duquesne Light should notify the Commission of any change prior to implementing that change.

Additionally, as noted above, the use of the funds being borrowed by DLH is not readily transparent. Because of this lack of transparency, the Commission requests that on a quarterly basis DLH provide a summary detailing the use of borrowed funds.

The Commission has examined the Cash Pool arrangement and has determined that it appears to be reasonable and consistent with the public interest under Section 2102(b) of the Public Utility Code; however, approval of the Cash Pool

arrangement does not preclude the Commission from investigating during any formal proceeding the reasonableness of any charges under this arrangement; **THEREFORE,**

IT IS ORDERED:

1. That the Affiliated Interest Agreement among Duquesne Light Company, Duquesne Light Holdings and its affiliates be, and hereby is, approved consistent with this Opinion and Order.

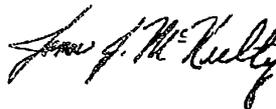

2. That acceptance does not preclude the Commission from investigating during any formal proceeding the reasonableness of any charges under the Agreement.

3. That Duquesne Light Company file with the Commission and provide to the Bureau of Fixed Utility Services a quarterly report that details the use of borrowed funds by Duquesne Light Holdings from the Cash Pool. Reports will be due 60 days following the end of each quarter beginning with the quarter ended December 31, 2006.

4. That Duquesne Light Company file with the Commission and provide to the Bureau of Fixed Utility Services quarterly financial reports including income statement, balance sheet and cash flow statement of the energy supply affiliates of Duquesne Light Holdings. Reports will be due 60 days following the end of each quarter beginning with the quarter ended December 31, 2006.

5. That the case be marked closed.

BY THE COMMISSION,

James J. McNulty
Secretary

**Re: Application of Duquesne Light Company
For Approval of Affiliated Interest Arrangement
Docket No. _____**

Dear Secretary McNulty:

Enclosed for filing on behalf of Duquesne Light Company ("Duquesne") are the original and three (3) copies of an Application for Approval Nunc Pro Tunc of an Affiliated Interest Arrangement between Duquesne and its affiliates. Specifically, this Application, filed pursuant to 66 Pa. C.S. §2102 of the Public Utility Code, requests Commission approval of Duquesne's participation in a cash pool arrangement among its affiliates.

Please date stamp the fourth copy of this Application enclosed, and kindly return it to me in the self-addressed stamped envelope for my file.

Thank you.

Very truly yours,

Richard S. Herskovitz

Enclosures

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Application of Duquesne Light :
Company for approval of an :
Affiliated Interest Arrangement : Docket No. _____
Between Duquesne Light Company :
And Affiliated Companies :
(Cash Pool Arrangement) :

**Affiliated Interest Application
(66 Pa. C. S. Section 2102)**

Duquesne Light Company ("Duquesne") requests approval Nunc Pro Tunc, pursuant to Section 2102 of the Public Utility Code ("Code"), 66 Pa. C. S. §2102, of its participation in a cash pool arrangement among its affiliates, and sets forth the following in support thereof:

1. The name and address of the Applicant is:

Duquesne Light Company
411 Seventh Avenue
Pittsburgh, PA 15219

2. The name and address of the Applicant's attorney are:

Richard S. Herskovitz
Assistant General Counsel
411 Seventh Avenue, Mail Drop 8-2
Pittsburgh, PA 15219
Phone: 412-393-3662
Fax: 412-393-5602
E-mail: rherskovitz@duqlight.com

3. Duquesne is a duly incorporated Pennsylvania public utility engaged in the distribution of electric service to the public, primarily within Allegheny and Beaver Counties, Pennsylvania, in an area of approximately 800 square miles. Duquesne's corporate headquarters is located at 411 Seventh Avenue, Pittsburgh, PA 15219.

4. Duquesne Light Holdings, Inc. (“DLH”), formerly known as DQE, Inc. the parent company of Duquesne, established a Cash Pool (“Pool”) in November, 1997. The Pool was established as a mechanism to concentrate excess funds and combine the cash of DLH and its subsidiaries to invest in short-term investments not previously available to Pool participants. The Pool is a more efficient method of managing the funds of the subsidiaries and will result in higher returns for investing members. A complete description of the operation of the Pool is attached as Exhibit A.

5. Members of the Pool are DLH and its wholly owned, direct or indirect, subsidiaries. Currently, DQE Capital Corporation, another subsidiary of DLH, acts as Agent for the members and administers the Pool. Duquesne became a member of the Pool in July, 2000.

6. In the Public Utility Commission’s most recent Management Audit of Duquesne (field work commencing in August, 2004 and ending in March, 2005), the Auditors investigated whether Duquesne’s participation in the Pool had been approved by the Commission under the affiliated interest provisions of the Code. Duquesne contended that its participation in the Pool was authorized by the Company’s Administrative Services Agreements (“ASA”), which was previously approved by the Commission. Although a final report of the audit has not yet been issued, the Auditors have indicated that, in their opinion, the ASA did not contain such an authorization.

7. Although Duquesne disputed the Auditors’ conclusion, the Company has agreed to file for approval of its membership and participation in the Pool under the affiliate provisions of the Code.¹

¹ Exhibit A has been revised since the conclusion of the Management Audit only to reflect the current name of the Cash Pool and to indicate that DLH or one of its subsidiaries will act as agent for the participants and will administer the Pool. DQE Capital Corporation is the current Agent.

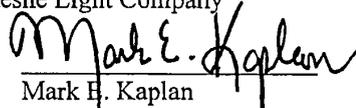

8. Membership and participation by Duquesne in the Pool is reasonable and in the public interest because it enhances investment returns and reduces the number and costs of investment transactions.

WHEREFORE, Duquesne respectfully requests the Commission to approve Duquesne's membership and participation in the subject Cash Pool arrangement, retroactive to July, 2000.

Dated: October 7, 2005

City of Pittsburgh, Allegheny County
My Commission Expires Oct. 6, 2007
Member, Pennsylvania Association of Notaries

Exhibit A

**Duquesne Light Holdings
CASH POOL**

The Duquesne Light Holdings (“Holdings”) Cash Pool (“Pool”) is a mechanism to concentrate excess funds and combine the cash of Holdings and its subsidiaries to invest in short-term investments not previously available to Pool participants. The Pool is a more efficient method of managing the funds of the subsidiaries and will result in higher returns for participants.

Participants of the Pool include Holdings and its wholly owned, direct or indirect, subsidiaries. Holdings or one of its subsidiaries will act as Agent (“Agent”) for the participants and will administer the Pool. DQE Capital Corporation is currently the Agent.

The cash position of the Pool participants will be determined by the Agent on a daily basis. The cash position of each participant will be reported on a regular basis by the Agent.

Each Pool participant will provide for the funding of its cash requirements through sources currently available. These sources include, but are not limited to, normal operating receipts, external borrowings against established lines of credit, sales of commercial paper, etc. or contributions by Holdings. However, the Agent is permitted to borrow from the Pool to facilitate intercompany borrowing arrangements and operating requirements. Due to the timing of receipt of funds and disbursement thereof, any excess cash will become part of, and will be invested through the Pool.

(Page 2)

When cash is available, it will be invested in the approved investments shown below. The approved investments are consistent with the Duquesne Light Holdings Short Term Investment Policy as in effect at the time to provide a high degree of safety, liquidity and, to a lesser extent, yield. The interest income resulting from the investments will be accrued and allocated to the participants in the Pool on a daily basis. Interest will be paid on the fifth day of the month following the monthly earnings period.

The following investments are permissible:

- 1) Direct or indirect obligations of the United States of America
- 2) Repurchase Agreements, Loan Participations, Commercial Paper, Certificates of Deposit, and Bankers Acceptances
- 3) Euro Time Deposits
- 4) Tax Exempt Notes, Commercial Paper or Bonds
- 5) Auction Rate Preferred Stock
- 6) Money Market Funds

Specific characteristics as to credit quality, maturities and investment limits are outlined in Duquesne Light Holdings Short Term Investment Policy and should be referred to when investing the Pool's cash.

The XRT Treasury Workstation software (XRT TWS), or its successor, will be used to account for the Pool transactions and to calculate and allocate internal and external expense/income.

A copy of the activity detail report reflecting transactions, balances and expense/income is attached.

Direct input to be provided by each of the participants is:

- (1) Anticipated deposits for the current day;
- (2) Wire transfers (outbound and inbound) for the current day;

(Page 3)

- (3) Five (5) week cash forecast;
- (4) Four (4) days notice for investments, acquisitions or other expenditures of a capital nature.

The Agent will provide the daily investment rate. The rate will be the composite external investment rate earned on such investments and will be used as the earnings rate within the Pool.

The software will calculate the daily balances for each participant as well as funds contributed and withdrawn. The interest accrual calculation for each participant's transactions is calculated as follows:

$$\text{Day's balance} \times \text{interest rate} / 360 \text{ days} = \text{daily accrual}$$

ATTACHMENTS:

- (A) Participant Bank Account Flowchart
- (B) Participant Inter-company Activity Detail Report

- Q.9. Prepare a detailed schedule for the test year showing types of social and service organization memberships paid for, the cost thereof, the accounting treatment and whether included in claimed test year expenses.
- A.9. Attachment II-D-9 presents the social and service organization memberships to be paid for in the test years. Memberships paid for an annual period are accrued as prepaid expenses and amortized over the life of the membership period. Those memberships not included in claimed test year expenses are detailed on attachment II-D-9.

- Q.10. Provide the following payroll and employee benefit data – regular and overtime – separately for the test year and the 12-month period immediately prior to the test year:
- a. The average and year-end number of employees and the unadjusted annual payroll expense and employee benefit expense associated with union personnel.
 - b. The average and year-end number of employees and the unadjusted annual payroll expense and employee benefit expense associated with nonunion personnel.
 - c. The average and year-end number of employees and the unadjusted annual payroll expense and employee benefit expense associated with management employees, if different than b.
 - d. A summary of the wage rate, salary and employee benefit changes granted or to be granted during the year.
 - e. The claimed test year payroll expense and employee benefit expense.
 - f. The percentage of payroll expense and employee benefit expense applicable to operation and maintenance expenses and the basis thereof.

A.10. Attachment DFR-II-D-10 provides the Company's requested data.

	1/2020 - 12/2020 (\$ 000's)	1/2021 - 12/2021 (\$ 000's)	1/2022 - 12/2022 (\$ 000's)
a. Union Personnel			
Average Number of Employees	820	833	818
Year-End Number of Employees	821	833	817
Payroll Costs			
Normal	\$ 75,457	\$ 78,766	\$ 84,881
Overtime	\$ 29,447	\$ 22,825	\$ 22,456
Benefit Costs	\$ 26,917	\$ 26,220	\$ 27,112
b. Non-Union Personnel			
Average Number of Employees	753	805	820
Year-End Number of Employees	763	819	825
Payroll Costs			
Normal	\$ 92,183	\$ 98,511	\$ 105,257
Overtime	\$ 4,400	\$ 3,411	\$ 3,356
Benefit Costs	\$ 28,949	\$ 28,193	\$ 29,118
Note:	Benefit costs were allocated based on the normal wage costs because costs are basically the same for both union and non-union personnel.		
	Historical and future year benefits for union personnel include \$7,241, \$4,909 and \$4,014 attributable to pension expenses respectively.		
	Historical and future year benefits for non-union personnel include \$7,788, \$5,279 and \$4,311 attributable to pension expenses respectively.		
c. Same as b.			
d. Wage Rate Changes			
Union			
Rate	3.0%	3.0%	2.75%
Annualized Impact	\$ 2,264	\$ 2,363	\$ 2,334
Note:	Union wage rate increases are effective October 1st of each year. The union contract expires 9/30/2023 and wage rate increases have been negotiated as of the date of this filing for 2021.		
Non-Union			
Rate	3.0%	3.0%	2.75%
Annualized Impact	\$ 2,765	\$ 2,955	\$ 2,895
Benefit Changes			
Note:	Benefits remain unchanged, other than the cost of providing them to employees.		
e. Claimed for Test Year (excluding any pro-forma adjustments)			
Payroll Expense	\$ 97,507	\$ 103,866	\$ 105,860
Benefit Expense	\$ 22,813	\$ 28,037	\$ 32,470
Note:	Historical and future years benefit expense includes \$5,000, \$18,500 and \$5,000 attributable to pension expense respectively.		
f. Percent applicable to O&M			
Payroll Expense	48.4%	51.0%	49.0%
Benefit Expense	40.8%	51.5%	57.7%
Note:	The charge to expense is based on activities performed or expected to be performed during the applicable years.		

Q.11. Describe costs relative to leasing equipment, including computer rentals, and office space, including terms and conditions of the leases. State method for calculating monthly or annual payments.

A.11. Attachment II-D-11 provides the costs, terms and conditions of Duquesne Light's major leasing agreements as of December 31, 2020.

Duquesne Light Company
Annual Leasing Costs
(Thousands of dollars)

Lessor	Item Leased	Term	Expense for 12 Months Ending 12/31/2020	Method of Calculating Payment

- (a) Rent agreement contains planned escalation of square footage charge; however, rent expense is recognized on a levelized basis.
- (b) Monthly payment set in original lease.

- Q.12. Submit a statement of past and anticipated changes, since the previous rate case, in major accounting procedures, explain any differences between the basis or procedure used in allocations of revenues, expenses, depreciation and taxes in the current rate case and that used in the prior rate cases, and list all internal and independent audit reports for the most recent 2 year period.
- A.12. Attachment II-D-12a provides a list of major accounting changes since Duquesne Light Company's last base rate case. Attachment II-D-12b provides a list of internal audits performed for Duquesne Light Company in 2019 and 2020. Attachment II-D-12c provides a list of third-party audits performed for Duquesne Light Company in 2019 and 2020.

Duquesne Light Company
Accounting Changes Since Duquesne Light Company's
Last Base Rate Case

2018:

In May 2014, the FASB issued ASU No. 2014-09, "Revenue from Contracts with Customers," requiring entities to recognize revenue by applying a five-step model in accordance with the core principle to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. The Company adopted this standard as of January 1, 2018 utilizing the full retrospective adoption method. Transition to the new revenue standard did not result in any material adjustments to historical balances and the Company expects the adoption of the new standard to have an immaterial impact to results of operations on an ongoing basis. In accordance with the new provisions of this standard, the Company has included enhanced quantitative and qualitative disclosures.

In November 2016, the FASB issued ASU No. 2016-18, "Statement of Cash Flows: Restricted Cash," which requires the inclusion of restricted cash within total cash and cash equivalents when reconciling the beginning and ending period cash balances in the consolidated statements of cash flows. Transfers between cash and cash equivalents and restricted cash are no longer presented as cash flow activity. The Company retroactively adopted this standard as of January 1, 2018. The implementation of this ASU had no retroactive impact to cash flows from operating, investing or financing activities for the year ended December 31, 2017.

In March 2017, the FASB issued ASU No. 2017-07, "Retirement Benefits: Improving the Presentation of Net Periodic Pension Cost and Net Periodic Postretirement Benefit Cost," which requires the service cost component of net periodic benefit cost to be disaggregated from other components of net periodic benefit cost and presented in the same line on the consolidated statement of operations as other employee compensation costs arising from services rendered during the period. The other components of net periodic benefit costs are required to be presented separately outside of operating income. Additionally, only the service cost component is eligible for capitalization. The Company adopted this standard as of January 1, 2018. The presentation of the components of net periodic benefit costs on the consolidated statement of operations was applied retrospectively. The guidance that limits the capitalization to the service cost component of net periodic benefit costs was applied prospectively. The adoption of this standard resulted in an increase to operating income of \$9.9 million, a decrease to investment and other income (loss) of \$9.9 million and no change to net income on the Company's consolidated statement of operations for the year ended December 31, 2017.

2019:

In February 2016, the FASB issued ASU No. 2016-02, "Leases," which requires lessees to recognize a lease liability and a right-of-use asset for all leases, including operating leases, with a term greater than twelve months on the balance sheet. The Company adopted this standard as of January 1, 2019 utilizing the modified retrospective transition method. As most of the Company's leases do not provide an implicit rate, the Company took the portfolio approach of applying its incremental borrowing rate based on the information available at the adoption date to calculate the present value of lease payments over the lease term. The Company elected the package of practical expedients permitted under the transition guidance within the new standard, which allowed the Company (i) to not reassess whether any expired or existing contracts are or contain leases, (ii) to not reassess the lease classification for any expired or existing leases and (iii) to not reassess initial direct costs for any existing leases. The Company also elected the practical expedient to not evaluate land easements that existed or expired before the entity's adoption of this standard and the practical expedient to not separate lease and non-lease components, that is, to account for lease and non-lease components in a contract as a single lease component for all classes of underlying assets. Further, the Company

made an accounting policy election to keep leases with an initial term of twelve months or less off of the balance sheets. The adoption of this standard resulted in the recognition of \$34.9 million of operating lease right-of-use assets within other non-current assets, \$5.0 million of current operating lease liabilities within other current liabilities and \$29.9 million of operating lease liabilities within non-current liabilities on the balance sheet as of December 31, 2018. In accordance with the new provisions of this standard, the Company has included enhanced quantitative and qualitative disclosures in its notes to the financial statements.

In February 2018, the FASB issued ASU No. 2018-02, "Reclassification of Certain Tax Effects from Accumulated Other Comprehensive Income," which allows for a reclassification from accumulated other comprehensive income to retained earnings for stranded tax effects resulting from the 2017 Tax Cuts and Jobs Act (TCJA), eliminating any stranded tax effects associated with accumulated other comprehensive income. The Company adopted this standard as of January 1, 2019 and elected to present the change in the period of adoption. As a result, the Company recognized a \$0.1 million cumulative effect adjustment for stranded tax effects from accumulated other comprehensive income to retained deficit.

2020:

In August 2018, the FASB issued ASU No. 2018-14, "Compensation—Retirement Benefits—Defined Benefit Plans—General (Subtopic 715-20)," to improve the effectiveness of disclosures in the notes to the financial statements by facilitating clear communication of the information required by GAAP. The amendments modify the disclosure requirements for employers that sponsor defined benefit pension or other postretirement plans. These changes will be effective for fiscal years ending after December 15, 2020. The Company adopted this standard as of January 1, 2020 utilizing the retrospective method of adoption.

- Q.14. State the amount of debt interest utilized for test year income tax calculations, including the amount so utilized which has been allocated from the debt interest of an affiliate, and provide details of debt interest and allocation computations.
- A.14. Duquesne Light Company does not utilize any debt interest, which has been allocated from the debt interest of an affiliate, in the computation of taxable income. In determining the interest expense deduction to be used in the income tax calculations for the test year, Duquesne Light has used the interest synchronization method that has been adopted by the Commission. The calculation of interest utilized for the income tax calculations is set forth on Schedule D-18 in DLC Exhibits 2 (Fully Projected Future Test Year), Exhibit 3 (Future Test Year) and Exhibit 4 (Historic Test Year).

Q.15 Provide a schedule for the test year of Federal and Pennsylvania taxes other than income taxes, per books, pro forma at present rates, and pro forma at proposed rates, including the following categories:

- a) Social security
- b) Unemployment
- c) Capital stock
- d) Public utility
- e) PUC assessment
- f) Other property taxes
- g) Any other appropriate categories

Q.19. Explain how the Federal corporate graduated tax rates have been reflected for rate case purposes. If the Pennsylvania jurisdictional utility is part of a multi-corporate system, explain how the tax savings are allocated to each member of the system.

A.19. The Tax Cut and Jobs Act of 2017 (TCJA) reduced the corporate income tax rate from 35 percent to 21 percent and eliminated the graduated corporate rate schedule.

DQE Holdings LLC, the parent of the affiliated group, has chosen for book purposes and all other purposes to allocate consolidated Federal Income Tax among all companies based on net taxable income or loss and credits of each subsidiary on a separate return basis.

- Q.20. Explain the treatment given to the cost of removal in the income tax calculation and the basis for such treatment.
- A.20. Duquesne Light Company adheres to the treatment provided in section 1.167(a)-11(d)(3) of the IRS regulations related to ADR property which provides: “The cost of dismantling, demolishing, or removing an asset in the process of retirement from the vintage account shall be treated as an expense deductible in the year paid or incurred, and such costs shall not be subtracted from the depreciation reserve for the account.” This applies to ADR property acquired after December 31, 1970.

For consistency, Duquesne Light requested and was granted permission from the IRS to deduct as expense all removal costs applicable to property retired after December 31, 1971. This accounting change applied to all property retired after December 31, 1971, regardless of when it was acquired or the method of depreciation used to recover the expenditures. Duquesne Light has consistently followed this method of accounting on all income tax returns filed since 1972.

Question:

- Q.21 Show income tax loss/gain carryovers from previous years. Show loss/gain carryovers by years of origin and amounts remaining by years at the beginning of the test year.
- A.21 Duquesne Light Company does not have any federal or state net operating loss carryovers.

- Q.22. State whether the company eliminates tax savings by the payment of actual interest on construction work in progress not in the rate base claim. If response is affirmative:
- a) Set forth amount of construction claimed in this tax savings reduction, and explain the basis for this amount.
 - b) Explain the manner in which the debt portion of this construction is determined for purposes of the deferral calculations.
 - c) State the interest rate used to determine the tax savings reduction, and state whether State taxes are increased to reflect the construction interest elimination.
 - d) Provide details of calculation to determine tax savings reduction, and state whether State taxes are increased to reflect the construction interest elimination.

A.22. The Company does not.

- Q.23 Under section 1552 of the Internal Revenue Code (26 U.S.C.A. §1552) and 26 CFR 1.1552-1 (1983), if applicable, a parent company, in filing a consolidated income tax return for the group, must choose one of four options by which it must allocate total income tax liability of the group to the participating members to determine each member's tax liability to the Federal government (if this interrogatory is not applicable, so state):
- a. State what option has been chosen by the group.
 - b. Provide, in summary form, the amount of tax liability that has been allocated to each of the participating members in the consolidated income tax return for the test year and the most recent 3 years for which data is available.
 - c. Provide a schedule, in summary form, of contributions, which were determined on the basis of separate tax return calculations, made by each of the participating members to the tax liability indicated in the consolidated group tax return. Provide total amounts of actual payments to the tax depository for the tax year, as computed on the basis of separate returns of members.
 - d. Provide the most recent annual income tax return for the group.
 - e. Provide details of the amount of the net operating losses of any member allocated to the income tax returns of each of the members of the consolidated group for the test year and the 3 most recent years for which data is available, together with a summary of the actual tax payments for those years.
 - f. Provide details of the amount of net negative income taxes, after all tax credits are accounted for, of any member allocated to the income tax return of each of the members of the consolidated group for the test year and the 3 most recent years for which data is available, together with a summary of the actual tax payments for those years.

A.23 Please see responses below:

- a. Internal Revenue Code Section 1552 provides for an allocation of consolidated income tax for "earnings and profits" purposes only based on the Company's elected method. DQE Holdings LLC (DQE) made no election and therefore under the default method contained in the IRS Treasury Regulations, the tax liability is apportioned among the members of the group in accordance with the ratio which that portion of the consolidated taxable income attributable to each member of the group having taxable income bears to the consolidated taxable income. DQE has chosen for book purposes and all other purposes, to allocate consolidated Federal income tax among all companies based on net taxable income or loss and credits of each subsidiary on a separate return basis.

- b. Attachment II-D-23 details the tax liability of each of the participating member in the consolidated federal income tax return filed for the last 3 years in 2017, 2018, and 2019.
- c. DQE is the parent company of Duquesne Light Holdings, Inc. (DLH), which is a member of the consolidated group that includes Duquesne Light Company. DQE makes all necessary income tax payments to the Internal Revenue Service for the net tax liability that is due for the consolidated group. DLH collects from member companies that have a positive federal income tax allocation and pays member companies that have a negative federal income tax allocation. The amounts DLH receives from or pays each member company are the same amounts as detailed in attachment II-D-23.
- d. The most recent federal income tax return filed by the consolidated group is tax year 2019. It will be made available for review electronically or at the offices of Post & Schell P.C., subject to the execution of a separate confidentiality agreement.
- e. Attachment II-D-23 details actual payments made or that will be made to members of the consolidated group with a net operating loss.
- f. Attachment II-D-23 details the actual payments made or that will be made to members of the consolidated group with a net negative income tax allocation after credits.

- Q.24 Provide detailed computations by vintage year showing State and Federal deferred income taxes resulting from the use of accelerated tax depreciation associated with post-1969 public utility property, ADR rates, and accelerated tax depreciation associated with post-1980 public utility property under the Accelerated Cost Recovery System (ACRS).
- a) Reconcile and explain any differences in the base used to calculate State and Federal deferred income taxes.
 - b) State whether tax depreciation is based on all rate base items claimed as of the end of the test year, and whether it is the annual tax depreciation at the end of the test year.
 - c) Reconcile differences between the deferred tax balance, as shown as a reduction to rate base, and the deferred tax balance as shown on the balance sheet.
- A.24 See Attachment DFR II-D-24 – Attachment which provides detailed computations for the fully projected future test year ended December 31, 2022 of federal deferred income taxes by vintage year resulting from the use of accelerated tax depreciation associated with post-1980 public utility property under the Accelerated Cost Recovery System (ACRS), post-1969 public utility property, and differences in tax depreciation related to using class lives under the ADR system versus tax depreciation using the guideline lives in effect prior to the ADR system of depreciation.
- a) Duquesne Light Company does not provide for any state deferred income taxes associated with the use of accelerated tax depreciation on its distribution property. The Company does provide for state deferred income taxes for transmission property under the FERC full normalization method.
 - b) Tax depreciation is not based on all rate base items claimed as of the end of the test year. Certain assets that are included in rate base are fully depreciated for tax purposes. Additionally, there are basis differences between book cost and tax cost for which tax depreciation is not calculated. Tax depreciation claimed is the annual tax depreciation projected at the end of the fully projected future test year.
 - c) The reconciliation is not applicable since there are no differences between the deferred tax balance and the deferred tax balance as shown on the balance sheet.

- Q.25. Submit a schedule showing a breakdown of accumulated and unamortized investment tax credits, by vintage year and percentage rate, together with calculations supporting the amortized amount claimed as a reduction to pro forma income taxes. Provide details of methods used to write-off the unamortized balances.
- A.25. Duquesne Light Company has no accumulated and unamortized investment tax credits in the test year. As such, there will be no investment tax credit amortization reflected on Schedule D-18 in DLC Exhibits 2 (Fully Projected Future Test Year), Exhibit 3 (Future Test Year) and Exhibit 4 (Historic Test Year).

- D.26. Explain in detail by statement or exhibit the appropriateness of claiming any additional items, not otherwise specifically explained and supported in the statement of operating income.

- A.26. An explanation of Duquesne Light Company's claim for any additional operating income items is set forth in Section D of DLC Exhibit 2 (Fully Projected Future Test Year).

- Q.27. If the utility's operations include non-jurisdictional activities, provide a schedule which demonstrates the manner in which rate base and operating income date have been adjusted to develop the jurisdictional test year claim.
- A.27. Total system measures of value and components of operating income have been allocated between the Total Company and Pennsylvania PUC jurisdictions and the proposed revenue increase has been determined on a Pennsylvania PUC jurisdictional basis only. Please refer to Exhibit 5, Statement No. 15 – direct testimony of Howard Gorman and DLC Exhibit 6.

- Q.1. Supply a copy of any budget utilized as a basis for any test year claim, and explain the utility's budgeting process.
- A.1. Attachment DFR-II-E-1 is a summary of the operating budget utilized as the basis for the Duquesne Light Company's future test year claim. An explanation of the Company's budgeting process is contained in the Direct Testimony of Jaime A. Bachota.

Confidential Testimony and Exhibits

- Q.1. Provide a schedule showing the major components of claimed capitalization, and the derivation of the weighted costs of capital for the rate case claim. This schedule shall include a descriptive statement concerning the major elements of changes in claimed capitalization, cost rates and overall return from comparable historical data.
- A.1. See Attachment III-A-1 for the major components claimed capitalization, and the derivation of the weighted cost of capital for the fully projected future test year rate case claim.

The major elements of change to Duquesne Light Company's (DLC) December 31, 2021 and December 31, 2022 capitalization were as follows:

In April 2020, DLC priced first mortgage bonds totaling \$200.0 million through a private placement offering. The issuance consisted of a 30-year tranche that settled on May 5, 2020 with a maturity date of May 5, 2050. The bonds bear interest at an annual rate of 3.11%. On May 6, 2020, a portion of the net proceeds were utilized to repay \$167.0 million of existing indebtedness with Duquesne Light Holdings, Inc. The remaining proceeds were utilized for general corporate purposes, including capital expenditures.

DLC cancelled all of its remaining pollution control revenue bonds in 2020, equaling \$196.9 million.

DLC does not plan to issue any long-term debt in 2021. In 2022, DLC plans to issue long-term debt in the form of first mortgage bonds totaling \$150.0 million, with an estimated interest rate of 3.50% and a 30-year term.

- Q.2. Provide a schedule in the same format as Schedule 1, except for the omission of the descriptive statement, for the most immediate comparable annual historical period prior to the test year and the two calendar years most immediately preceding the rate of return claim period. Irrespective of whether the capitalization claimed on Schedule 1 includes short-term debt, Schedule 2 should reflect capital ratios with and without short-term debt.
- A.2. See the attached schedules showing capital ratios with and without short-term debt for the most immediate comparable annual historical period prior to the test year and the two calendar years most immediately preceding the rate of return claim period.

Q.1. Provide a schedule showing the calculation of embedded cost of long-term debt by issue, supporting the related rate case claim. The schedule shall contain the following information:

- a. Date of issue.
- b. Date of maturity.
- c. Amount issued.
- d. Amount outstanding.
- e. Amount retired.
- f. Amount reacquired.
- g. Gain or loss on reacquisition.
- h. Coupon rate.
- i. Discount or premium at issuance.
- j. Issuance expense.
- k. Net proceeds.
- l. Sinking fund requirements.
- m. Effective cost rate.
- n. Total average weighted effective cost rate.

Projected new issues, retirements and other major changes from the comparable historic data should be clearly noted.

A.1. Please refer to Schedule III-A-1, pages 3 and 4. Additionally, projected new issues, retirements and other major changes from the comparable historic data are noted below.

In April 2020, Duquesne Light Company (DLC) priced first mortgage bonds totaling \$200.0 million through a private placement offering. The issuance consisted of a 30-year tranche that settled on May 5, 2020 with a maturity date of May 5, 2050. The bonds bear interest at an annual rate of 3.11%. On May 6, 2020, a portion of the net proceeds were utilized to repay \$167.0 million of existing indebtedness with Duquesne Light Holdings, Inc. The remaining proceeds were utilized for general corporate purposes, including capital expenditures.

DLC cancelled all of its remaining pollution control revenue bonds in 2020, equaling \$196.9 million.

DLC does not plan to issue any long-term debt in 2021. In 2022, DLC plans to issue long-term debt in the form of first mortgage bonds totaling \$150.0 million, with an estimated interest rate of 3.50% and a 30-year term.

- Q.1. In the event that a claim made for a true or economic cost of debt exceeds that shown in the preceding nominal cost schedule because of convertible features, sale with warrants or for any other reason, a full statement of the basis for such a claim should be provided.
- A.1. No claim is being made for a true or economic cost of debt that exceeds that shown in the preceding response DFR III-B-1.

Q.1. Provide the following information concerning bank notes payable for test year and for latest comparable annual historical period prior to the test year:

- a. Line of credit at each bank.
- b. Average daily balances of notes to each bank, by name of bank.
- c. Interest rate charged on each bank note. (Prime rate, formula rate, or other).
- d. Purpose of each bank note (for example, construction, fuel storage, working capital, debt retirement).
- e. Prospective future need for this type of financing.

A.1.

- a. Duquesne Light Company maintains a \$250 million Revolving Credit Agreement with a consortium of banks.
- b. Attachment III-B-3 details the average daily balance and interest rate charged. From 1/1/2020 to 12/31/2020, the average daily balance of outstanding loans under the Revolving Credit Agreement was \$70.5 million. From 1/1/2021 to 12/31/2021, the average daily balance is projected to be \$23.4 million. The Company does not forecast average daily balances through 2022, but projects an average 2022 monthly balance of \$24.2 million and a year-end 2022 balance of zero.
- c. Attachment III-B-3 details the average daily balance and interest rate charged. From 1/1/2020 to 12/31/2020, the average interest rate of outstanding loans under the Revolving Credit Agreement was 0.65%. From 1/1/2021 to 12/31/2021, the average interest rate of outstanding loans is projected to be 0.93%. The Company projects the average 2022 rate to be 0.92% for 2022.
- d. The Company's purpose for the revolving credit facility is to provide working capital, short-term payment of capital expenditures and general corporate purposes.
- e. The Company plans to maintain its credit facility to provide working capital, make short-term payment for capital expenditures (i.e., construction work-in-progress) and for general corporate purposes.

Q.1. Provide detailed information concerning all other short-term debt outstanding.

A.1.

- a. Duquesne Light Company maintains a \$300.0 million short-term intercompany loan facility with its parent, Duquesne Light Holdings, Inc. The facility was approved by the Pennsylvania Public Utilities Commission (Docket #G-2008-2060987 and amended in Docket #G-2009-2148505). The interest rate is the applicable LIBOR plus 0.875% margin.
- b. The Attachment to DFR III-B-4 details the average daily balance and interest rate charged.

From 1/1/2020 to 12/31/2020, the average daily balance was \$43.8 million and the average interest rate was 1.35%.

From 1/1/2021 to 12/31/2021, the average daily balance is projected to be \$30.2 million. The Company projects the average interest rate to be 0.93% for 2021.

The Company does not forecast average daily balances through 2022, but projects an average 2022 monthly balance of \$80.1 million and a year-end 2022 balance of \$11.0 million. The Company projects the average interest rate to be 1.01% for 2022.

- c. The Company utilizes short-term intercompany debt under the affiliated interest credit facility to provide working capital and for general corporate purposes.
- d. The Company continues to maintain its credit facility to provide working capital and for general corporate purposes.

- Q.1. Describe long-term debt reacquisition by Company and Parent as follows:
- a. Reacquisition by issue by year.
 - b. Total gain or loss on reacquisition by issue by year.
 - c. Accounting for gain or loss for income tax and book purposes.
 - d. Proposed treatment of gain or loss on such reacquisition for ratemaking purposes.
- A.1. See DFR III-B-5-Attachment for the requested information.

Duquesne Light Company
Long-term Debt Reacquisition by Issue

Attachment DFR III-B-5
Page 1 of 2

The unamortized debt expense and/or debt discount/premium associated with bonds that are reacquired at a loss were added to the premium paid to reacquire the bonds. In accordance with General Instruction 17 of the Uniform System of Accounts, the loss is amortized over the remaining life of the bonds, or if the bonds were refinanced, the life of the new issuance.

Accounting for losses for income tax purposes:

Loss on reacquired debt set forth above was deducted as incurred for income tax purposes.

Proposed treatment of losses for ratemaking purposes:

The Company proposes that the current practice of adhering to General Instruction 17 of the Uniform System of Accounts be continued.

Loss on Recquired Debt Description	Year Acquired	Monthly Amortization	Unamortized Balance

- Q.1. Provide a schedule showing the calculation of embedded cost of preferred stock equity by issue, supporting the related rate case claim. The schedule shall contain the following information:
- a. Date of issue.
 - b. Date of maturity.
 - c. Amount issued.
 - d. Amount outstanding.
 - e. Amount retired.
 - f. Amount reacquired.
 - g. Gain or loss on reacquisition.
 - h. Dividend rate.
 - i. Discount or premium at issuance.
 - j. Issuance expenses.
 - k. Net proceeds.
 - l. Sinking fund requirements.
 - m. Effective cost rate.
 - n. Total average weighted effective cost rate.

Projected new issues, retirements and other major changes from the comparable historic data should be clearly noted.

- A.1. The Company does not have any preferred stock outstanding and does not project any new issues. Therefore, a schedule with the above requested information has not been provided, as it is not applicable.

Q.1. Provide complete support for claimed equity rate of return.

A.1. Please refer to Duquesne Light Company Exhibit PRM-1, Statement No. 9, the direct testimony of Paul R. Moul.

Q.2. Provide a summary statement of all stock dividends, splits or par value changes during the calendar year period preceding the rate case filing.

A.2. Quarterly dividends from Duquesne Light Company to Duquesne Light Holdings, Inc. in 2019 and 2020:

1st quarter 2019 – \$25.0 million
2nd quarter 2019 – \$25.0 million
3rd quarter 2019 – \$0.0 million
4th quarter 2019 – \$0.0 million

1st quarter 2020 – \$50.0 million
2nd quarter 2020 – \$10.0 million
3rd quarter 2020 – \$10.0 million
4th quarter 2020 – \$10.0 million

Q.3. Provide a schedule of all issuances of common stock, whether or not underwriters are used, for the most immediately available annual historical period and the 2 calendar years most immediately preceding the test year.

A.3. There have been no issuances of common stock by the Company.

- Q.4. Submit details on the utility and parent company stock offerings - past 5 years to present - as follows:
- a. Date of prospectus.
 - b. Date of offering.
 - c. Record date.
 - d. Offering period - dates and numbers of days.
 - e. Amount and number of shares offered.
 - f. Offering ratio, if rights offering.
 - g. Percent subscribed.
 - h. Offering price.
 - i. Gross proceeds per share.
 - j. Expenses per share.
 - k. Net proceeds per share (i-j)
 - l. Market price per share.
 - 1) At record date.
 - 2) At offering date.
 - 3) One month after close of offering.
 - m. Average market price during offering.
 - 1) Price per share.
 - 2) Rights per share.
 - n. Latest reported earnings per share at time of offering.
 - o. Latest reported dividends at time of offering.
- A.4. There have been no stock offerings in the past 5 years. As of May 31, 2007, DQE Holdings LLC (the ultimate parent company) has been privately held.

- Q.1. If a claim of the filing utility is based on utilization of the capital structure or capital costs of the parent company and system - consolidated - the reasons for this claim must be fully stated and supported.
- A.1. Duquesne Light Company will not be filing a claim based on the capital structure or capital costs of the parent company and system.

- Q.2. Regardless of the claim made, provide the capitalization data requested at Item III-A-2 for the parent company and for the system - consolidated.
- A.2. See Attachment DFR III-E-2 for capitalization data for years ended December 31, 2022, December 31, 2021, December 31, 2020, and December 31, 2019.

GENERAL INFORMATION

1. Provide name and title of officer having custody of the general corporate books of account and address of office where the general corporate books are kept, and address of office where any other corporate books of account are kept, if different from that where the general corporate books are kept.

Mark E. Kaplan, Senior Vice President & CFO
 411 Seventh Avenue
 Pittsburgh, PA 15219

2. Provide the name of the State under the laws of which respondent is incorporated, and date of incorporation. If incorporated under a special law, give reference to such law. If not incorporated, state that fact and give the type of organization and the date organized.

Duquesne Light Company (DLC) is a limited liability company (LLC) under Pennsylvania law. DLC became a Pennsylvania LLC on November 27, 2017.

3. If at any time during the year the property of respondent was held by a receiver or trustee, give (a) name of receiver or trustee, (b) date such receiver or trustee took possession, (c) the authority by which the receivership or trusteeship was created, and (d) date when possession by receiver or trustee ceased.

Not Applicable

4. State the classes or utility and other services furnished by respondent during the year in each State in which the respondent operated.

Furnished electric service - Pennsylvania

5. Have you engaged as the principal accountant to audit your financial statements an accountant who is not the principal accountant for your previous year's certified financial statements?

- (1) Yes...Enter the date when such independent accountant was initially engaged:
 (2) No

INFORMATION ON FORMULA RATES
Formula Rate Variances

1. If a respondent does not submit such filings then indicate in a footnote to the applicable Form 1 schedule where formula rate inputs differ from amounts reported in the Form 1.
2. The footnote should provide a narrative description explaining how the "rate" (or billing) was derived if different from the reported amount in the Form 1.
3. The footnote should explain amounts excluded from the ratebase or where labor or other allocation factors, operating expenses, or other items impacting formula rate inputs differ from amounts reported in Form 1 schedule amounts.
4. Where the Commission has provided guidance on formula rate inputs, the specific proceeding should be noted in the footnote.

IMPORTANT CHANGES DURING THE QUARTER/YEAR

Give particulars (details) concerning the matters indicated below. Make the statements explicit and precise, and number them in accordance with the inquiries. Each inquiry should be answered. Enter "none," "not applicable," or "NA" where applicable. If information which answers an inquiry is given elsewhere in the report, make a reference to the schedule in which it appears.

1. Changes in and important additions to franchise rights: Describe the actual consideration given therefore and state from whom the franchise rights were acquired. If acquired without the payment of consideration, state that fact.
2. Acquisition of ownership in other companies by reorganization, merger, or consolidation with other companies: Give names of companies involved, particulars concerning the transactions, name of the Commission authorizing the transaction, and reference to Commission authorization.
3. Purchase or sale of an operating unit or system: Give a brief description of the property, and of the transactions relating thereto, and reference to Commission authorization, if any was required. Give date journal entries called for by the Uniform System of Accounts were submitted to the Commission.
4. Important leaseholds (other than leaseholds for natural gas lands) that have been acquired or given, assigned or surrendered: Give effective dates, lengths of terms, names of parties, rents, and other condition. State name of Commission authorizing lease and give reference to such authorization.
5. Important extension or reduction of transmission or distribution system: State territory added or relinquished and date operations began or ceased and give reference to Commission authorization, if any was required. State also the approximate number of customers added or lost and approximate annual revenues of each class of service. Each natural gas company must also state major new continuing sources of gas made available to it from purchases, development, purchase contract or otherwise, giving location and approximate total gas volumes available, period of contracts, and other parties to any such arrangements, etc.
6. Obligations incurred as a result of issuance of securities or assumption of liabilities or guarantees including issuance of short-term debt and commercial paper having a maturity of one year or less. Give reference to FERC or State Commission authorization, as appropriate, and the amount of obligation or guarantee.
7. Changes in articles of incorporation or amendments to charter: Explain the nature and purpose of such changes or amendments.
8. State the estimated annual effect and nature of any important wage scale changes during the year.
9. State briefly the status of any materially important legal proceedings pending at the end of the year, and the results of any such proceedings culminated during the year.
10. Describe briefly any materially important transactions of the respondent not disclosed elsewhere in this report in which an officer, director, security holder reported on Page 104 or 105 of the Annual Report Form No. 1, voting trustee, associated company or known associate of any of these persons was a party or in which any such person had a material interest.
11. (Reserved.)
12. If the important changes during the year relating to the respondent company appearing in the annual report to stockholders are applicable in every respect and furnish the data required by Instructions 1 to 11 above, such notes may be included on this page.
13. Describe fully any changes in officers, directors, major security holders and voting powers of the respondent that may have occurred during the reporting period.
14. In the event that the respondent participates in a cash management program(s) and its proprietary capital ratio is less than 30 percent please describe the significant events or transactions causing the proprietary capital ratio to be less than 30 percent, and the extent to which the respondent has amounts loaned or money advanced to its parent, subsidiary, or affiliated companies through a cash management program(s). Additionally, please describe plans, if any to regain at least a 30 percent proprietary ratio.

Item 6
On October 31, 2019, the Company entered into an agreement to amend and extend its existing credit agreement, which would have terminated on November 24, 2021. The amended credit agreement allows for a revolving credit facility borrowing capacity of \$250.0 million, with a final maturity date of October 31, 2024. Additionally, the Company is authorized to borrow up to \$200.0 million on a short-term basis from Duquesne Light Holdings, Inc. under the terms of a PUC order (Docket No. G-2009-2148505) approved on May 3, 2010. As of December 31, 2019, the Company had \$85.0 million borrowings under this order. The Company is authorized to borrow up to a total of \$425.0 million on a short-term basis under the terms of a FERC order (Docket No. ES19-31-000) approved on August 2, 2019. As of December 31, 2019, the Company had \$85.0 million borrowings under this order. The Company is also authorized to borrow up to \$400.0 million on a long-term basis under the terms of a PUC order (Docket No. S-2019-3013570) approved on December 5, 2019. As of December 31, 2019, the Company had zero borrowings under this order, which expires December 31, 2021.

Item 7
None

Item 8
Market Adjustments and merit increases were granted to management employees effective March 1, 2019, resulting in an incremental annual increase to the payroll of \$2,069,057 (593 employees affected). Under terms of the collective bargaining agreement, union employees received a 3.00% increase effective October 1, 2019, which resulted in an increase to annual compensation of \$1,880,189 (738 employees affected).

Item 9
See Note #9 in the Notes to Financial Statements beginning on Page 123.1

STATEMENT OF INCOME

Quarterly

- Report in column (c) the current year to date balance. Column (c) equals the total of adding the data in column (g) plus the data in column (i) plus the data in column (k). Report in column (d) similar data for the previous year. This information is reported in the annual filing only.
- Enter in column (e) the balance for the reporting quarter and in column (f) the balance for the same three month period for the prior year.
- Report in column (g) the quarter to date amounts for electric utility function; in column (i) the quarter to date amounts for gas utility, and in column (k) the quarter to date amounts for other utility function for the current year quarter.
- Report in column (h) the quarter to date amounts for electric utility function; in column (j) the quarter to date amounts for gas utility, and in column (l) the quarter to date amounts for other utility function for the prior year quarter.
- If additional columns are needed, place them in a footnote.

Annual or Quarterly if applicable

- Do not report fourth quarter data in columns (e) and (f)
- Report amounts for accounts 412 and 413, Revenues and Expenses from Utility Plant Leased to Others, in another utility column in a similar manner to a utility department. Spread the amount(s) over lines 2 thru 26 as appropriate. Include these amounts in columns (c) and (d) totals.
- Report amounts in account 414, Other Utility Operating Income, in the same manner as accounts 412 and 413 above.

NOTES TO FINANCIAL STATEMENTS

1. Use the space below for important notes regarding the Balance Sheet, Statement of Income for the year, Statement of Retained Earnings for the year, and Statement of Cash Flows, or any account thereof. Classify the notes according to each basic statement, providing a subheading for each statement except where a note is applicable to more than one statement.
2. Furnish particulars (details) as to any significant contingent assets or liabilities existing at end of year, including a brief explanation of any action initiated by the Internal Revenue Service involving possible assessment of additional income taxes of material amount, or of a claim for refund of income taxes of a material amount initiated by the utility. Give also a brief explanation of any dividends in arrears on cumulative preferred stock.
3. For Account 116, Utility Plant Adjustments, explain the origin of such amount, debits and credits during the year, and plan of disposition contemplated, giving references to Commission orders or other authorizations respecting classification of amounts as plant adjustments and requirements as to disposition thereof.
4. Where Accounts 189, Unamortized Loss on Reacquired Debt, and 257, Unamortized Gain on Reacquired Debt, are not used, give an explanation, providing the rate treatment given these items. See General Instruction 17 of the Uniform System of Accounts.
5. Give a concise explanation of any retained earnings restrictions and state the amount of retained earnings affected by such restrictions.
6. If the notes to financial statements relating to the respondent company appearing in the annual report to the stockholders are applicable and furnish the data required by instructions above and on pages 114-121, such notes may be included herein.
7. For the 3Q disclosures, respondent must provide in the notes sufficient disclosures so as to make the interim information not misleading. Disclosures which would substantially duplicate the disclosures contained in the most recent FERC Annual Report may be omitted.
8. For the 3Q disclosures, the disclosures shall be provided where events subsequent to the end of the most recent year have occurred which have a material effect on the respondent. Respondent must include in the notes significant changes since the most recently completed year in such items as: accounting principles and practices; estimates inherent in the preparation of the financial statements; status of long-term contracts; capitalization including significant new borrowings or modifications of existing financing agreements; and changes resulting from business combinations or dispositions. However were material contingencies exist, the disclosure of such matters shall be provided even though a significant change since year end may not have occurred.
9. Finally, if the notes to the financial statements relating to the respondent appearing in the annual report to the stockholders are applicable and furnish the data required by the above instructions, such notes may be included herein.

PAGE 122 INTENTIONALLY LEFT BLANK
SEE PAGE 123 FOR REQUIRED INFORMATION.

NOTES TO FINANCIAL STATEMENTS (Continued)			

NOTES TO FINANCIAL STATEMENTS

1. General Information

DQE Holdings LLC (the LLC), a Delaware limited liability company, was formed in July 2006 to acquire Duquesne Light Holdings, Inc. (Holdings) and had no principal operations prior to the acquisition of Holdings on May 31, 2007.

The LLC is a holding company. The LLC is owned by a consortium of private equity investors (the Members) including Epsom Investment Pte. Ltd (Epsom) at 44.4%, Three Rivers Utility Holdings, LLC at 30.4% and AIA Montana LLC (AIA) at 25.2%.

Duquesne Light Company (the Company), a direct subsidiary of Holdings and an indirect subsidiary of the LLC, was formed in 1912 by the consolidation and merger of three constituent companies. The Company operates as a limited liability company. The Company is an electric utility engaged in the supply (through its provider-of-last-resort service (POLR)), transmission and distribution of electric energy.

2. Accounting Policies

Basis of Accounting - The financial statements included herein are prepared in accordance with the accounting requirements of the FERC as set forth in its applicable USofA and published accounting releases, which is a comprehensive basis of accounting other than generally accepted accounting principles in the United States (GAAP). The primary differences between FERC accounting requirements and GAAP are (1) deferred tax assets (Account 190) are shown on the asset side of the comparative balance sheet for FERC purposes but are netted against deferred tax liabilities under GAAP; (2) the tax effect of the items included in the Statement of Accumulated Comprehensive Income and Comprehensive Income is not required to be disclosed separately for FERC, but is required under GAAP; (3) GAAP requires the presentation of certain information about operating segments which is not included for FERC reporting purposes; (4) in accordance with Accounting Standards Codification (ASC) No. 740 – Income Taxes, the Company recognized uncertain tax positions that were recorded as current and non-current tax reserve liabilities under GAAP. FERC requires such uncertain tax positions to be recorded within taxes accrued if they represent permanent differences and deferred tax liabilities if they represent temporary differences; (5) for FERC purposes debt issuance costs are shown as assets on the comparative balance sheet within unamortized debt expense (Account 181) and unamortized loss on reacquired debt (Account 189), but debt issuance costs are netted against the long-term debt liability for GAAP purposes; (6) GAAP requires that the gains and losses recorded to the income statements related to unrealized non-hedging activities be recorded along with the underlying transaction. For GAAP reporting purposes, non-hedging activities are recorded as operating expenses. For FERC reporting purposes, non-hedging transactions are recorded as below-the-line amounts in accordance with FERC Order No. 627; (7) GAAP requires under Accounting Standards Update (ASU) 2017-07 that net periodic pension and postretirement benefit cost components associated with service costs be reported in the same financial statement line as employee compensation costs and all other net periodic benefit costs be presented separately outside of income from operations. For FERC reporting purposes, the Company has continued to report all net periodic pension and postretirement benefit cost components together in their respective jurisdictional account without separation of their various cost components; (8) GAAP also requires under ASU 2017-07 that net periodic pension and postretirement benefit cost components associated with service costs are the only allowable costs for capitalization. Other non-service cost components of net periodic benefit costs must be presented as an expense. For FERC reporting purposes, the Company has continued to capitalize allowable charges associated with net periodic benefit costs regardless of their cost component; (9) GAAP requires cash and cash equivalents to be presented net of outstanding checks, however for FERC reporting purposes outstanding checks are presented in accounts payable; (10) GAAP now requires under ASU 2016-02 that lessees recognize a lease liability and a right-of-use asset for all leases, including operating leases, with a term greater than twelve months on the balance sheet. For FERC reporting purposes, the Company has elected not to show operating lease right-of-use assets and operating lease liabilities on the balance sheet, creating a FERC to GAAP difference, in order to ensure that there is no impact on existing ratemaking processes; (11) GAAP requires restricted cash to be presented separately from cash and cash equivalents, however for FERC reporting purposes restricted cash should be combined with cash and cash equivalents; (12) GAAP now allows under ASU 2018-02 for a reclassification from accumulated other comprehensive income (AOCI) to retained earnings for stranded tax effects resulting from the Tax Cuts and Jobs Act (TCJA). For FERC reporting purposes, the FERC issued an order that provided approval for this reclassification if both AOCI and retained earnings are included in the Company's capital structure for ratemaking purposes. Since the Company has not included AOCI in the capital part of the FERC

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

formula, the Company will not report the stranded tax effects in AOCI and retained earnings for FERC purposes, creating a FERC to GAAP difference.

The Company's electricity delivery business segment is subject to regulation by the PUC and the FERC with respect to rates for delivery of electric power, accounting, issuance of securities and other matters. The electricity supply business segment is regulated by the FERC for wholesale power sales.

The electricity delivery business segment operations are subject to utility-specific accounting provisions and accordingly reflect regulatory assets and liabilities consistent with cost-based ratemaking regulations. Regulatory assets established by the Company represent probable future revenue, because provisions for these costs are currently included, or are expected to be included, in charges to electric utility customers through the ratemaking process. Regulatory liabilities established by the Company represent probable future reductions in revenues associated with amounts that are to be credited to customers through the ratemaking process. The preparation of financial statements in conformity with USofA requires management to make estimates and assumptions with respect to values and conditions that affect the reported amounts of assets and liabilities, and disclosure of contingent assets and liabilities, at the date of the financial statements. The reported amounts of revenues and expenses during the reporting period also may be affected by the estimates and assumptions management is required to make. Management evaluates these estimates on an ongoing basis, using historical experience and other methods considered reasonable in the particular circumstances. Nevertheless, actual results may differ significantly from these estimates.

Customer Concentrations - The Company's electric utility operations provide service to approximately 600,000 direct customers in southwestern Pennsylvania (including in the City of Pittsburgh), a territory of approximately 800 square miles.

Revenues from Utility Sales - The Company's meters are read at least monthly and electric utility customers are billed on a monthly basis. Revenues reflect estimated customer usage in an accounting period, regardless of when billed (see Note 4).

Retail sales of electricity include related excise and other taxes, primarily gross receipts taxes that are collected from ratepayers and remitted to the appropriate taxing agency. These taxes are recorded as an expense in taxes other than income taxes and as an offset to a prepaid tax account that is created at the beginning of every year. The excise and other taxes recorded in the Company's revenue were approximately \$50.2 million and \$48.6 million for the years ended December 31, 2019 and 2018, respectively.

The Company is annually permitted to recalculate its transmission revenue requirement pursuant to the formula rate accepted by the FERC. The annual update contains a true-up mechanism that allows the Company to recover expenses and earn a return on and recover investments in transmission on a current rather than a lagging basis. Accordingly, revenue is recognized for services provided during each reporting period based on actual net revenue requirements calculated using the annual update formula. The Company accrues or defers revenues to the extent that the actual net revenue requirement for the reporting period is higher or lower, respectively, than the net revenue requirement estimate (and thus billed to customers) for the reporting period. The true-up amount is amortized over the period it is included in rates to customers.

Other Operating Revenues - Other operating revenues include (i) rental fees from third parties who have cable or other equipment attached to the Company's utility poles and transmission towers, or who have cable included in the Company's underground ducts, (ii) transmission fees charged to others that use the Company's transmission system, (iii) late payment and other customer fees and (iv) short-term sales of power to other utilities made at market rates.

Investment and Other Income (Loss) - Investment and other income (loss) includes (i) allowance for funds used during construction (AFUDC), which represents the estimated cost of equity funds to finance construction, (ii) contributions in aid of construction, (iii) interest income, (iv) income or losses from long-term investments, (v) portion of pension expenses and (vi) various other gains or losses.

Cash Equivalents - Cash equivalents are short-term, highly liquid investments with original maturities of three or fewer months. They are stated at cost, which approximates market.

Restricted Cash - Deposits and other cash equivalents that are restricted by agreement or that have been clearly designated for a specific purpose are classified as restricted cash. On the balance sheets, restricted cash is classified as

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

current or non-current based on the time period in which the Company expects to utilize the cash for its intended purpose.

Receivables - Receivables on the balance sheets are comprised of outstanding billings for electric customers, other utilities and amounts related to unbilled revenues. In addition, the Company has certain transactions with affiliates that give rise to receivables (see Note 11).

Purchase of Receivables - The Company purchases without recourse, at a discount, the accounts receivable for residential, small commercial and small industrial customers who have chosen (i) an alternative electric generation supplier (EGS) and (ii) to receive a consolidated bill from the Company. The discount rate reflects the costs related to the estimated incremental EGS uncollectible expenses and recovers operating and administrative costs associated with the program. The Company records a receivable for amounts due from the EGS customers and a liability for amounts owed to the EGSs. The Company reimburses the EGSs for their customer billings regardless of whether the Company receives payment from the customer.

Property, Plant and Equipment - Property, plant and equipment consists of (i) distribution poles and equipment, (ii) lower voltage distribution wires used in delivering electricity to customers, (iii) substations and transformers, (iv) high voltage transmission wires used in delivering electricity to substations, (v) meters and automated meter reading assets and (vi) internal telecommunication equipment, vehicles, software and office equipment primarily used in the electricity delivery business segment.

The asset values of the Company's utility properties are stated at original construction cost, which includes labor costs, related payroll taxes, pensions and other fringe benefits, as well as allocated overhead costs. Also included in original construction cost is an AFUDC.

Additions to, and replacements of, property units are charged to plant accounts. Maintenance, repairs and replacement of minor items of property are recorded as expenses when they are incurred. The costs of electricity delivery business segment properties that are retired (plus removal costs and less any salvage value) are charged to accumulated depreciation and amortization.

Substantially all of the electric utility properties are subject to the lien of the Company's first mortgage indenture.

Depreciation expense of \$167.7 million and \$159.1 million was recorded in the years ended December 31, 2019 and 2018, respectively. Depreciation of property, plant and equipment is recorded on a straight-line basis over the estimated remaining useful lives of properties, which is approximately 24 years for both the transmission and distribution portions of electric plant in service.

Impairment of Assets - The Company evaluates long-lived assets for recoverability whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. Indicators of impairment may include a deteriorating business climate, including, but not limited to, market conditions, condition of the asset, specific regulatory disallowance, or plans to dispose of a long-lived asset significantly before the end of its useful life.

The Company determines whether or not long-lived assets and asset groups are impaired by comparing their undiscounted expected future cash flows to their carrying value. When the undiscounted cash flow analysis indicates a long-lived asset or asset group is not recoverable, the amount of the impairment loss is determined by measuring the excess of the carrying amount of the long-lived asset or asset group over its fair value less costs to sell.

Intangible assets are reviewed for impairment whenever events or circumstances indicate the carrying value of such assets may not be recoverable.

Income Taxes - The Company uses the liability method in computing deferred taxes on all differences between book and tax basis of assets and liabilities. These book/tax differences occur when events and transactions recognized for financial reporting purposes are not recognized in the same period for tax purposes. The deferred tax liability or asset is also adjusted in the period of enactment for the effect of changes in tax laws or rates. Valuation allowances are provided against deferred tax assets for amounts which are not considered more likely than not to be realized.

The Company files a consolidated United States (U.S.) federal income tax return with the LLC and its subsidiaries, all of whom participate in an intercompany tax sharing arrangement which generally provides that taxable income for each subsidiary be calculated as if it filed a separate return. The Company's federal tax receivable/payable is reflected in affiliate receivables/payable to affiliates on the balance sheets.

The Company recognizes a regulatory asset or liability for deferred tax liabilities or assets that are expected to be recovered or refunded through rates. The difference in the provision for deferred income taxes related to depreciation of

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year/Period of Report
Duquesne Light Company	(1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	04/29/2020	2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

electric plant in service and the amount that otherwise would be recorded under GAAP is deferred and included in regulatory assets or liabilities on the balance sheets.

The Company accounts for uncertainty in income taxes using a recognition threshold and measurement attribute for the financial statement recognition and measurement of tax positions taken or expected to be taken in a tax return. The recognition threshold is the first step which requires the Company to determine whether it is more likely than not that a tax position will be sustained upon examination, including resolution of any related appeals or litigation processes, based on the technical merits of the position in order to record any financial statement benefit. If the first step is satisfied, then the Company must measure the tax position to determine the amount of tax benefit to recognize in the financial statements. The tax position is measured at the largest amount of tax benefit that has a cumulative probability greater than 50% of being realized upon ultimate settlement.

Contingent Losses/Gains - The Company establishes reserves for estimated loss contingencies when it is management's assessment that a loss is probable and an amount or range of amounts can be reasonably estimated. Reserves for contingent liabilities are based upon management's assumptions and estimates and the advice of legal counsel, consultants or others regarding the probable outcomes of the matter. Should additional information become known, or circumstances change with respect to the likelihood or amount of loss indicating that the ultimate outcome will differ from the estimates, revisions to the estimated reserves for contingent liabilities would be recognized in income in that period. Gain contingencies are not recognized in income until they have been realized.

Dividends - Holdings' practice is for its subsidiaries to dividend their earnings on a quarterly basis, based on the availability of cash and future cash needs. Cash dividends totaling \$50.0 million and \$78.0 million were declared and paid for the years ended December 31, 2019 and 2018, respectively.

Subsequent Events - The Company has evaluated the impact of events occurring after December 31, 2019 through March 5, 2020, the date on which the financial statements were available for issuance. Through March 5, 2020, there were no subsequent events identified that would materially affect the financial statements or notes to the financial statements. The Company has additionally evaluated subsequent events for disclosure purposes through April 29, 2020 and there were no subsequent events identified that would materially affect the financial statements or notes to the financial statements other than the COVID-19 disclosure discussed below.

COVID-19 Pandemic - COVID-19 is a rapidly evolving pandemic causing heightened social and economic uncertainty worldwide, as well as within the territory of the Company. As the extent and duration of the recent outbreak of COVID-19 remains unclear, the full effect on the business, its customers and suppliers, and the regulatory environment is unknown at this time. The continued spread of the pandemic has the potential to adversely impact the Company's business by reducing the ability to collect on receivables from customers, decreasing the demand for electricity, reducing the supply of electricity from generation facilities, interrupting the Company's supply chain, and disrupting the Company's workforce and contractors, as well as other factors. The extent to which COVID-19, and associated regulatory activities, impacts the Company's future financial condition, results of operations, cash flows, liquidity, debt covenants and fair value of pension plan assets will depend on future developments, which are highly uncertain and cannot be predicted with confidence at this time. In response to the uncertainty of COVID-19 and the capital market volatility, the Company borrowed the full amount available on its revolving credit facility, \$250.0 million, on March 24, 2020.

Federal and state government and regulatory agencies have begun instituting programs in an attempt to both curb the spread of COVID-19 and to also provide economic stimulus to mitigate the economic impacts of the virus. On March 13, 2020, the Pennsylvania Public Utility Commission issued an emergency order prohibiting the termination of service of electric utility customers. The termination moratorium will remain in place for as long as the COVID-19 Proclamation of Disaster, issued by Pennsylvania Governor Tom Wolf on March 6, 2020, is in effect. Additionally, on March 27, 2020, the Coronavirus Aid, Relief, and Economic Security (CARES) Act was passed by Congress and signed into law by President Trump. The CARES Act contained a number of provisions including providing financial relief from the regulations surrounding loans and distributions from 401(k) retirement plans. The Company has complied with these regulations and will continue to react to these measures as they are released.

Recent Accounting Pronouncements - In December 2019, the Financial Accounting Standards Board (FASB) issued ASU No. 2019-12, "Income Taxes (Topic 740) – Simplifying the Accounting for Income Taxes," which adds improvements

Name of Respondent	This Report is:	Date of Report	Year/Period of Report
Duquesne Light Company	(1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	(Mo, Da, Yr) 04/29/2020	2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

and removes exceptions to Topic 740 to simplify GAAP and existing guidance. The standard is effective for fiscal years beginning after December 15, 2020 with early adoption permitted. The standard must be applied on a prospective basis. The Company is currently in the process of evaluating the potential impact of this standard on the financial statements.

Recently Adopted Accounting Pronouncements - In February 2016, the FASB issued ASU No. 2016-02, "Leases," which requires lessees to recognize a lease liability and a right-of-use asset for all leases, including operating leases, with a term greater than twelve months on the balance sheet. The Company adopted this standard as of January 1, 2019 utilizing the modified retrospective transition method for GAAP reporting. For FERC reporting purposes, the Company has elected not to show operating lease right-of-use assets and operating lease liabilities on the balance sheet, creating a FERC to GAAP difference, in order to ensure that there is no impact on existing ratemaking processes.

3. Rate Matters

The Company is involved in rate and regulatory proceedings with the FERC and the PUC. This note is a discussion of rate matters that could have a material effect on the Company's financial statements.

POLR Service

The Company's customers may choose to receive their electric energy from an alternative EGS; otherwise they will be served through the Company's POLR arrangements. Customers who select an alternative EGS pay for generation and transmission charges set by that supplier and pay the Company's distribution charges.

Effective June 1, 2017, customers who do not choose an alternative EGS are served through the Company's POLR VIII plan. POLR VIII provides for a descending clock auction process for the determination of electric generation supply rates. This auction process is designed to provide greater transparency to all participants and further ensures that POLR customers are receiving the lowest price possible at the time of the auction. POLR VIII plan provisions include conducting an annual auction process for hourly price service (HPS) customers, the introduction of a combination of 12 and 24 month laddered contracts to residential and small commercial and industrial customers to provide greater rate stability and the recovery of the incremental EGS uncollectible expenses from the Company's purchase of receivable program through customer billings. Under POLR VIII, the Company also proposed to enter into long-term purchased power agreements (PPA) with developers of utility scale solar projects for a quantity of up to 27 megawatts (MW) to satisfy Alternative Energy Portfolio Standard (AEPS) requirements. The Company will collaborate with the PUC regarding potential approval of the solar plan at a later date. Pursuant to the PUC approved POLR VIII plan, the Company will continue to act as an administrative intermediary only.

The Company filed the POLR IX plan on April 20, 2020, which has an expected effective date of June 1, 2021.

Transmission and Distribution Rates

Annually, the Company is permitted through its PUC approved Transmission Service Charge (TSC) filing to recover on a dollar-for-dollar basis the expenses it incurs from the PJM Interconnection (PJM) as a provider of transmission service to retail customers taking POLR service, as well as, update the Company's retail transmission rates to reflect the annually updated FERC revenue requirements and rates. In May 2019 and May 2018, the Company filed its annual formula update (as described in Note 2) with the FERC resulting in an increase in revenue of \$4.0 million and a decrease in revenue of \$2.6 million, respectively. Simultaneously, the Company also filed with the PUC for a pass through of costs in its state transmission rates. The updated formula and state rates are effective for customers beginning June 1st of each year. As of December 31, 2017, the Company recorded a regulatory liability for excess accumulated deferred income taxes (EDIT) that is to be refunded to transmission customers as a result of the TCJA. On November 21, 2019, FERC issued final rule Order 864, requiring public utility transmission providers with existing formula rates to revise those formula rates to account for changes caused by the TCJA, specifically the treatment of EDIT. In the order, the FERC requires utilities to refund to customers any excess tax balances collected following the change in tax rate, but did not prescribe a specific mechanism to be applied to all formula rates or a specific flow-back period for unprotected EDIT. Instead, the FERC will consider each of these on a case-by-case basis and allow each utility to propose and justify the method. Additionally, the FERC did not require the refund of interest accrued over the last year while utilities awaited final guidance. Transmission Utilities must file either a compliance filing within 30 days of the effective date of this final rule or make such changes during the utility's next annual informational filing. The Company's next annual informational filing is May 1, 2020 and is currently assessing changes to its formula filing for the final rule.

Name of Respondent	This Report is:	Date of Report	Year/Period of Report
Duquesne Light Company	(1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	(Mo, Da, Yr) 04/29/2020	2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

In September 2016, the PUC approved the Company's long-term infrastructure improvement plan (LTIIP). The approval of the LTIIP allows the Company to recover reasonable and prudently incurred costs related to the repair, improvement and accelerated replacement of aging infrastructure over a six year period without the need for a traditional distribution rate case. During the six year period between 2017 and 2022, the Company plans to have capital expenditures totaling \$130.0 million related to the accelerated distribution projects capital expenditure and \$651.1 million related to the overall distribution projects.

In June 2018, the Governor of Pennsylvania signed Act 58 of 2018, which authorized the PUC to review and approve utility-proposed alternative rate mechanisms, including options such as decoupling mechanisms, formula rates, multi-year plans and performance based rates. The Company cannot predict the outcome or the potential financial impact, if any, of this matter.

In December 2018, the PUC approved new distribution rates for the Company. These rates became effective on December 29, 2018 and provide for an increase of \$40.5 million in new revenues as well as the inclusion of an additional \$52.2 million of revenues recovered under current surcharges for a total of a \$92.7 million increase to base distribution revenues. Key issues resolved in the settlement included a \$24.0 million refund to customers related to 2018 federal corporate income tax savings resulting from the TCJA, an electric vehicle pilot program, the ability to treat cloud-based computing costs as rate base and the continued recovery of pension contributions.

4. Revenue from Contracts with Customers

The Company generates substantially all of its revenues from contracts with tariff-based distribution and transmission electric service customers and POLR electric energy customers.

Distribution Revenue

The Company provides distribution electric services to residential, commercial and industrial customers. The Company satisfies its performance obligation to its customers and revenue is recognized over time as electric service is delivered and simultaneously consumed by the customer. The amount of revenue recognized is based on the volume of electric service delivered during the period and a per-unit state-regulated electric rate tariff, in addition to a monthly fixed charge, applicable demand charges and any regulatory approved surcharges. Customers are typically billed monthly on a metered cycle basis and outstanding amounts are typically due within 21 days of the date of the bill. An estimate of unbilled revenues is calculated to recognize electric service provided from the last meter reading through the end of the calendar month.

Distribution customers are "at will" customers with no term contract and no minimum purchase commitment. Performance obligations are limited to the service requested and received to date. Accordingly, there are no material unsatisfied performance obligations.

Electric Supply (POLR)

The Company serves electric energy needs for its customers who do not choose an alternative EGS through its POLR arrangements (see Note 3). These POLR arrangements serve customers under a competitive procurement process approved by the PUC. The amount of revenue recognized is based on the Company's volume of electric energy transferred to the customer at the competitive electric generation supply market rates obtained through the Company's PUC approved competitive procurement process. Customers are typically billed monthly and outstanding amounts are typically due within 21 days of the date of the bill.

The Company's agreement to provide electric energy needs contains no minimum purchase commitment. The performance obligation is limited to the service requested and received to date. Accordingly, the Company has no unsatisfied performance obligations.

Transmission Revenue

The Company generates transmission revenue from a FERC-approved PJM Open Access Transmission Tariff. The Company calculates transmission revenue pursuant to a formula-based rate accepted by the FERC. An annual revenue requirement to provide transmission services is calculated using this formula-based rate (see Note 2). The Company satisfies its performance obligation to provide transmission services and revenue is recognized (and thus billed to customers) over time as transmission services are provided and consumed. This method of recognition fairly presents the Company's transfer of transmission services as the daily rate is set by the FERC approved formula-based rate. PJM

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4

remits payment on a weekly basis.

The Company's agreement to provide transmission services contains no minimum purchase commitment. The performance obligation is limited to the service requested and received to date. Accordingly, the Company has no unsatisfied performance obligations.

The following table shows revenues from contracts with customers disaggregated by type of service for the years ended December 31, 2019 and 2018, respectively.

	(Millions of Dollars)	
	2019	2018
Distribution	\$ 571.3	\$ 526.6
Electric Supply (POLR)	237.2	255.5
Transmission	137.4	137.7
Other (a)	17.9	18.4
Revenue from Contracts with Customers	\$ 963.8	\$ 938.2

(a) Primarily includes revenues from pole attachments and other miscellaneous revenues.

Contract receivables from customers are included in electric customer receivables, unbilled electric customer receivables and other receivables on the balance sheets.

Contract liabilities primarily result from recording contractual billings in advance for customer pole attachments to the Company's infrastructure in addition to payments received in excess of revenues earned to date. Advanced billings for customer pole attachments are recognized as revenue ratably over the billing period. Payments received in excess of revenues earned to date are recognized as revenue as services are delivered in subsequent periods.

The following table shows the balances of contract liabilities resulting from contracts with customers:

(Millions of Dollars)	
Balance at December 31, 2017	\$ 0.1
Increases as a result of additional cash received or due	5.4
Amounts recognized into operating revenues (a)	(4.4)
Balance at December 31, 2018	\$ 1.1
Balance at December 31, 2018	\$ 1.1
Increases as a result of additional cash received or due	4.5
Amounts recognized into operating revenues (a)	(4.5)
Balance at December 31, 2019	\$ 1.1

(a) Recognized in other operating revenues on the statement of operations.

5. Fair Value Measures and Derivative Instruments

The FASB provides a framework for measuring fair value under GAAP. Fair value is defined as the price that would be received for an asset or paid to transfer a liability (exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between the willing market participants on the measurement date. The fair value hierarchy prioritizes the inputs utilized to measure fair value. The hierarchy gives the highest priority to unadjusted quoted market prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The Company uses, as appropriate, a market approach (generally, data from market transactions), income approach (generally, present value techniques and option-pricing models), and/or a cost approach (generally, replacement cost) to measure the fair value of an asset or a liability. The three levels of the fair value hierarchy are as follows:

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

Level 1 – Financial instruments that are valued using quoted prices available in active markets for identical assets or liabilities as of the reporting date. Active markets are those where transactions for the asset or liability occur in sufficient frequency and volume to provide pricing information on an ongoing basis. The Company’s Level 1 assets primarily consist of money market funds listed on active exchanges. The Company uses quoted prices in active markets for identical assets in valuing its money market funds.

Level 2 – Financial instruments that are valued using models or other valuation methodologies based on assumptions that are observable in the marketplace throughout the full term of the instrument, can be derived from observable data or supported by observable levels at which transactions are executed in the marketplace. These models are primarily industry-standard models that consider various assumptions including quoted forward prices for commodities, time value, volatility factors and current market and contractual prices for the underlying instruments, as well as other relevant economic measures.

Level 3 – Financial instruments that are valued using pricing inputs that are generally less observable from objective sources. These inputs may be used with internally developed methodologies that result in management’s best estimate of fair value.

In some cases, the inputs used to measure fair value may meet the definition of more than one level within the fair value hierarchy. The lowest level input that is significant to the fair value measurement in its totality determines the applicable level in the fair value hierarchy. The Company’s assessment of the significance of a particular input to the fair value measurement requires judgment, and may affect the valuation of fair value assets and liabilities and their placement within the fair value hierarchy levels.

The Company measures the fair value of other long-lived assets on a non-recurring basis using Level 2 or Level 3 inputs when the assets are determined to be impaired. The carrying values of accounts receivable, accounts payable, inventory and other short-term assets and liabilities are deemed to be reasonable estimates of fair values because of their short-term nature.

The Company’s assets measured at fair value on a recurring basis as of December 31, 2019 and 2018 consisted of the following:

(Millions of Dollars)
As of December 31, 2019

Recurring Fair Value Measures	Level 1	Level 2	Level 3	Other	Cash Collateral	Total
Assets:						
Cash and cash equivalents (a)	\$ 6.7	\$ -	\$ -	\$ -	\$ -	\$ 6.7
Restricted cash (b)	-	-	-	-	-	-
Total assets	\$ 6.7	-	-	-	-	6.7

(a) Level 1 amounts primarily represent investments in money market funds.

(b) Amounts in "Other" column primarily represent restricted cash in bank accounts with financial institutions.

(Millions of Dollars)
As of December 31, 2018

Recurring Fair Value Measures	Level 1	Level 2	Level 3	Other	Cash Collateral	Total
Assets:						
Cash and cash equivalents (a)	\$ 6.1	\$ -	\$ -	\$ -	\$ -	\$ 6.1
Restricted cash (b)	-	-	-	0.5	-	0.5
Total assets	\$ 6.1	\$ -	\$ -	\$ 0.5	\$ -	6.6

(a) Level 1 amounts primarily represent investments in money market funds.

(b) Amounts in "Other" column primarily represent restricted cash in bank accounts with financial institutions.

NOTES TO FINANCIAL STATEMENTS (Continued)			

6. Income Taxes

On November 15, 2018, FERC issued a policy statement, Docket No. PL19-2-000, requiring companies to disclose the following items related to the accounting and rate treatment of excess and deficient accumulated deferred income taxes (ADIT) that resulted from the U.S. Federal Income Tax rate change from 35% to 21%, as enacted by the TCJA on December 22, 2017, and made effective January 1, 2018.

The accounts affected by the re-measurements of ADIT in 2017 due to the TCJA were account 190 – accumulated deferred income taxes, account 282 - accumulated deferred income taxes (other property), account 283 – accumulated deferred income taxes (other), account 182.3 - other regulatory assets, account 254 - other regulatory liabilities, accounts 410.1 - provision for deferred income taxes, and accounts 411.1 - provision for deferred income taxes (credit).

The Company re-measured all ADIT balances in accounts 190, 282 and 283 at December 31, 2017, and its tax-related balances in account 182.3 and 254 recorded prior to TCJA enactment. The re-measurement of ADIT that is not recoverable or refundable through rates was recorded to provision for deferred income taxes through the income statement accounts listed above. The re-measurement of plant-related ADIT created excess ADIT refundable to customers, which was recorded to account 254 - other regulatory liabilities. The re-measurement of non-plant-related ADIT created both excess and deficient ADIT to be paid to and received from customers. The non-plant excess and deficient ADIT were recorded to account 254 - other regulatory liabilities and account 182.3 - other regulatory assets, respectively. As the excess and deficient ADIT reverse through the amortization period shown in the table below, the regulatory assets and liabilities will reverse with an offset to the income statement accounts 410.1 - provision for deferred income taxes and 411.1 - provision for deferred income taxes (credit), respectively. The re-measured ADIT that was recorded to other regulatory assets and liabilities was based on the regulatory treatment of the original ADIT prior to the TCJA as discussed below.

PUC Jurisdiction – Excess ADIT on distribution plant and distribution-allocated general plant is refundable. In accordance with the Company’s distribution rate case settlement, the excess ADIT is being refunded to customers through new base distribution rates that became effective on December 29, 2018. The PUC approved the amortization of both protected and unprotected plant-related excess ADIT using the Average Rate Assumption Method (“ARAM”).

FERC Jurisdiction – Excess ADIT on transmission plant is fully refundable. Non-plant related excess ADIT on transmission-allocated general plant and reacquired debt costs is refundable based on a net plant allocator. Non-plant related excess or deficient ADIT on employee benefits and other accruals is recoverable or refundable based on a wage and salary allocator. In accordance with FERC Order 864, Docket No. RM19-5-000, the Company expects to amortize and refund to customers through the Formula Rate beginning with the 2019 true-up filing both protected and unprotected transmission plant-related excess ADIT using the Average Rate Assumption Method (“ARAM”). The true-up adjustment with respect to the 2019 service year affects customer rates beginning on June 1, 2020. In addition, non-plant transmission excess ADIT will be refunded over a three-year period beginning on June 1, 2020.

The table below categorizes protected and unprotected excess and deficient ADIT the amortization recorded in 2019 and the proposed amortization periods. The tables also include the tax gross-up and other items to provide a complete representation of the tax-related regulatory asset and liability balances as of December 31, 2019.

Unprotected Plant-Related Items:							
AFUDC Equity	(8.1)	-	(0.4)	(8.5)	-	1.0	(7.5)
Flow-Through Items (c)	(98.7)	-	(4.5)	(103.2)	-	(15.3)	(118.5)
Net Regulatory Liability related to Distribution Plant	96.8	(8.7)	(6.4)	81.7	(8.9)	(10.7)	62.1
Transmission Plant							
Excess ADIT:							
Protected Plant	63.7	-	(3.0)	60.7	(1.0)	1.6	61.3
Unprotected Plant	-	-	-	-	-	(1.0)	(1.0)
Total Plant-Related Excess ADIT	63.7	-	(3.0)	60.7	(1.0)	0.6	60.3
Unprotected Plant-Related Items:							
AFUDC Equity	(2.0)	-	(0.3)	(2.3)	-	0.1	(2.2)
Flow-Through Items (e)	(41.3)	-	3.6	(37.7)	-	(0.1)	(37.8)
Net Regulatory Liability related to Transmission Plant	20.4	-	0.3	20.7	(1.0)	0.6	20.3
Total Plant-Related ADIT Recorded to Account 254	117.2	(8.7)	(6.1)	102.4	(9.9)	(10.1)	82.4
Unprotected Non-Plant:							
Unprotected Non-Plant Transmission Excess ADIT (f)	3.4	-	-	3.4	(0.9)	(0.7)	1.8
Total Excess ADIT and Flow-Through Items Recorded to Account 254	120.6	(8.7)	(6.1)	105.8	(10.8)	(10.8)	84.2
Tax Gross Up	45.6			41.6			35.3
Regulatory Liability including Gross Up (g)	\$ 166.2			147.4			\$ 119.5

(a) The ADIT and excess ADIT include the impacts of the provision-to return-adjustments recorded in 2018 after filing the 2017 tax return. The adjustments to excess ADIT were recorded in account 254.

(b) Both protected and unprotected excess ADIT related to distribution plant are being amortized under the Average Rate Assumption Method as approved by the Pennsylvania PUC. Certain plant-related excess deferred tax amounts are subject to statutory normalization requirements restricting the extent to which rate base is reduced and amortization of excess deferred taxes reduces recoverable income tax expense. Other deficient or excess deferred tax amounts are not "protected" by such rules.

(c) Due to flow-through ratemaking in the state of Pennsylvania, various plant-related items do not result in rate recovery of deferred income taxes as the temporary differences originate. The tax-related regulatory assets are recoverable only as current tax expense results. Remeasurement of flow-through ADIT resulted in a reduction of the related regulatory assets.

(d) Pursuant to FERC Order 864, the Company began amortizing transmission related excess ADIT and reflecting in prices charged to customers beginning with the 2019 FERC formula true up filing. Protected and unprotected excess ADIT related to transmission plant will be amortized under the Average Rate Assumption Method pursuant to the TCJA and consistent with FERC guidance.

(e) Includes FERC-approved recovery of previously flowed through tax benefits.

(f) Amortization of transmission related non-plant excess ADIT will be reflected in prices charged to customers beginning with the 2019 FERC formula true-up filing, based on a three-year amortization period.

(g) Agrees to Regulatory Tax Liability in Account 254. Refer to page 278.

Details of federal and state income tax expense are as follows:

Income Tax Expense for the Years Ended December 31,

		(Millions of Dollars)	
		2019	2018
Current:			
Federal	\$	27.8	\$ 15.6
State		9.6	9.9
Deferred:			
Federal		7.2	10.7
State		3.4	0.3
Income Taxes	\$	48.0	\$ 36.5

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year/Period of Report
Duquesne Light Company	(1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	04/29/2020	2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

Currently, the Company is not subject to any federal or state income tax examinations. The IRS previously completed examinations of the LLC's consolidated U.S. federal income tax returns for tax years 2007 through 2012. There are no unresolved matters with the IRS from these examinations.

The Company remains subject to examination by the IRS and Pennsylvania for tax years ending December 31, 2015 through December 31, 2019.

Total income taxes differ from the amount computed by applying the statutory federal income tax rate to income before income taxes, as set forth in the following table:

Income Tax Expense Reconciliation for the Years Ended December 31,

	(Millions of Dollars)	
	2019	2018
Computed federal income tax statutory rate of 21% at December 31, 2019 and 2018	\$ 48.8	\$ 39.6
Increase (decrease) in taxes resulting from:		
State income taxes, net of federal income tax benefits	18.0	14.4
Non-deductible expenses	0.1	0.3
Property related items	(18.9)	(15.7)
Tax reform adjustment	-	(2.3)
Other	-	0.2
Total Income Tax Expense	\$ 48.0	\$ 36.5

The deferred income tax assets and liabilities consisted of the following:

Deferred Tax Assets (Liabilities) as of December 31,

	(Millions of Dollars)	
	2019	2018
Benefit costs	\$ 63.8	\$ 69.5
Legacy liabilities	4.7	5.1
Receivables	5.1	4.9
Regulatory liability - property	119.5	143.2
Other	12.3	3.4
Deferred tax assets	\$ 205.4	\$ 226.1
Property depreciation	(674.1)	(666.5)
Pension liability	(83.4)	(87.5)
Unamortized loss on reacquired debt	(5.3)	(5.9)
Other	(19.6)	(6.1)
Deferred tax liabilities	\$ (782.4)	\$ (766.0)
Net Deferred Tax Liability	\$ (577.0)	\$ (539.9)

The Company believes there are no unrecognized tax benefits that could change significantly during the next twelve months.

7. Leases

The Company leases office buildings and other property and equipment. Rental expense of \$3.9 million and \$3.6 million was recorded for the years ended December 31, 2019 and 2018, respectively. The Company also leases communication fiber from DQE Communications LLC (DQE Communications). Rental expense associated with this fiber of \$4.0 million and \$3.6 million was recorded for the years ended December 31, 2019 and 2018, respectively.

Future minimum lease payments for operating leases are related principally to corporate offices and are as follows:

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

**Future Minimum Lease Payments as of December 31, 2019
(Millions of Dollars)**

Year Ended December 31,	Operating Leases
2020	\$ 6.8
2021	5.4
2022	4.0
2023	3.6
2024	3.5
2025 and thereafter	14.0
Total lease payments (a)	\$ 37.3

(a) Total future minimum lease payments as of December 31, 2019 include approximately \$8.7 million with DQE Communications.

8. Employee Benefits

Pension Benefits

The Company maintains a qualified retirement plan that provides pension benefits to all eligible full-time employees hired before October 1, 2010. Upon retirement, an eligible employee receives a monthly pension based on his or her length of service and compensation. In 2019, the Company approved multiple amendments to the plan as part of the International Brotherhood of Electrical Workers (IBEW) collective bargaining agreement negotiations. These amendments included an annual rolling of the earnings window for the purposes of calculating pension benefits and an extension of the pre-retirement spousal protection provisions for participants. Additionally, the Plan was amended to give certain participants a limited-time opportunity to elect a lump sum distribution of their vested pension benefit. Approximately 400 former employees who had not yet commenced receiving their pension benefits were eligible to participate in this lump sum option. Lump sum payments were made in December 2019. The year-end obligation reflects the removal of participants who elected and received a lump sum payment, as well as the impacts of the previously noted amendments. The cost of funding the pension plan is determined by the unit credit actuarial cost method. Pension costs charged to expense or construction were \$15.4 million and \$21.2 million for the years ended December 31, 2019 and 2018, respectively. The Company is required to establish a regulatory asset or regulatory liability for the difference between the amount of retirement plan expense collected in rates and the amount of retirement plan expenses incurred (see Note 2). This amount is recorded in other operating and maintenance or investment and other income (loss) in the statements of operations. The amount recorded in investment and other income (loss) was \$2.4 million and \$9.7 million for the years ended December 31, 2019 and 2018, respectively. The actual amount recognized in the statements of operations was \$5.0 million and \$18.6 million for the years ended December 31, 2019 and 2018.

The Company funds the pension plan by an amount that is at least equal to the minimum funding requirements of the Pension Protection Act of 2006, but which does not exceed the maximum tax-deductible amount for the year.

The Company made pension plan contributions of \$10.0 million and \$23.0 million in 2019 and 2018, respectively. The Company is not currently required to contribute to the pension plan in 2020. Under the terms of the rate case settlement, approved by the PUC in December 2018 (see Note 3), should the Company conclude that a contribution of less than \$10.0 million (as prescribed in the rate case settlement) to the pension plan is appropriate, the Company may reduce the pension contribution and will record a regulatory liability that is equal to 50% of the reduction of the contribution below the level of \$10.0 million. Any regulatory liability recorded will be reduced to the extent of 50% of the contributions in excess of \$10.0 million in subsequent years. If a regulatory liability remains at the time of the Company's next rate proceeding, the regulatory amount will be refunded to rate payers as directed in the next base rate proceeding. Any amount recorded as a regulatory liability will not bear an interest obligation. As of December 31, 2019, there was no regulatory liability associated with the pension plan.

Postretirement Benefits

In addition to pension benefits, the Company provides certain postretirement plans that provide health care benefits and life insurance for some retired employees that were hired before October 1, 2012. The life insurance plan is non-contributory. Participating retirees make contributions, which may be adjusted annually, to the health care plan.

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

Health care benefits terminate when retirees reach age 65. The Company has the right to modify or terminate the plans. The Company maintains a Voluntary Employees Beneficiary Association (VEBA) trust for a portion of its postretirement obligations. The Company made contributions of \$4.0 million and \$4.2 million to the VEBA trust in 2019 and 2018, respectively. The Company expects to contribute approximately \$3.0 million to the VEBA trust in 2020.

The Company accrues the actuarially determined costs of the postretirement benefits over the period from the date the employee was hired until the date the employee becomes fully eligible for benefits.

The Company is required to establish a regulatory asset or liability for the difference between the amount of net periodic postretirement plan expense collected in rates and the amount of postretirement plan expense incurred. The non-current regulatory liability recorded on the Company's balance sheets as of December 31, 2019 and 2018 was \$3.2 million and \$4.0 million, respectively (see Note 2).

During 2018, due to market conditions and availability, the Company agreed to allow all retirees to retain existing Company sponsored medical plan coverage at a Company-indexed cost equivalent to the amount agreed to in the March 2016 amendment to the Plan. This plan amendment makes all healthcare cost trend rates no longer applicable. In 2019, as part of the IBEW collective bargaining agreement negotiations, the Company approved amendments to the plan including an increase in retiree life insurance coverage for future retirees and an increase in the Health Reimbursement Arrangement (HRA) stipend for retirees and spouses in 2020. The year-end obligation reflects the impacts of these amendments.

The Company uses a December 31 measurement date for its pension and postretirement plans. The following tables provide a reconciliation of the changes in the pension and postretirement plans' benefit obligations and fair value of plan assets, a statement of the funded status as of December 31, 2019 and 2018 and a summary of assumptions used in the measurement of the Company's benefit obligations:

Funded Status of the Pension and Postretirement Benefit Plans as of December 31,

(Millions of Dollars)

	2019		2018	
	Pension	Postretirement	Pension	Postretirement
Change in benefit obligation:				
Benefit obligation beginning of year	\$ 1,084.7	\$ 28.5	\$ 1,199.2	\$ 33.4
Service cost	8.1	0.4	10.1	0.5
Interest cost	46.1	1.1	42.8	1.1
Plan amendments	14.0	1.5	0.6	-
Plan participants' contributions	-	1.1	-	0.9
Actuarial (gain) loss	115.0	1.8	(97.6)	(2.3)
Benefits paid	(88.6)	(5.1)	(70.4)	(5.1)
Benefit obligation at end of year	\$ 1,179.3	\$ 29.3	\$ 1,084.7	\$ 28.5
Change in plan assets:				
Fair value of plan assets beginning of year	984.7	-	1,081.3	-
Actual (loss) return on plan assets	182.2	-	(49.2)	-
Plan participants' contributions	-	1.1	-	0.9
Employer contributions	10.0	4.0	23.0	4.2
Benefits paid	(88.6)	(5.1)	(70.4)	(5.1)
Fair value of plan assets at end of year	\$ 1,088.3	\$ -	\$ 984.7	\$ -
Funded status at end of year	\$ (91.0)	\$ (29.3)	\$ (100.0)	\$ (28.5)

The funded status of the pension and postretirement plans as of December 31, 2019 and 2018 was a liability of \$91.0 million and \$29.3 million and \$100.0 million and \$28.5 million, respectively, and was reflected on the balance sheets as follows:

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

Amounts reflected on the balance sheets as of December 31,

(Millions of Dollars)

	2019		2018

	\$ 300.2	\$ (9.1)	\$ 314.6	\$ (13.8)

The Company records a regulatory asset or regulatory liability for qualifying costs of its regulated operations that for ratemaking purposes will be deferred for future recovery or refund. Amortization expense recognized by the Company in the years ended December 31, 2019 and 2018 for pension benefits related to regulatory assets and regulatory liabilities totaled \$20.1 million and \$32.3 million, respectively.

The accumulated benefit obligation for the defined benefit pension plan was \$1,157.2 million and \$1,067.4 million as of December 31, 2019 and 2018, respectively.

Weighted-average Assumptions Used to Determine Benefit Obligations as of December 31,

Rate of compensation increase	3.75%	2.50%	3.75%	2.50%

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

The estimated net loss for the pension plan that will be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2020 is approximately \$0.4 million. The estimated prior service cost that will be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2020 is approximately \$0.1 million.

The estimated net gain for the postretirement plan that will be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2020 is zero. The estimated prior service credit that will be amortized from accumulated other comprehensive loss into net periodic benefit cost in 2020 is \$0.9 million.

Pension and Postretirement Plan Assets, Expected Rate of Return on Pension and Postretirement Plan Assets and Investment Policy

The Company used a 5.9% and 6.3% expected long-term rate of return on plan assets in determining net periodic pension benefit cost in 2019 and 2018, respectively. The Company's expected return on plan assets used to develop net periodic pension benefit costs for 2019 was 5.8%.

The Company's expected return on plan assets for 2020 does not have net periodic postretirement benefit costs since all remaining assets meet the requirements to be held in cash for the foreseeable future.

The Company develops the long-term rate of return for the pension and postretirement benefit plans using a building block approach, taking into account the target asset class allocations contained in the table below as well as the investment management mix. Under this approach, current market factors such as inflation, interest rates and asset class risks and returns are evaluated and considered before long-term capital market assumptions are determined. Long-term historical returns and relationships between the asset classes are reviewed to verify reasonability and appropriateness. The long-term rate of return is established through this building block approach with proper consideration of diversification to reduce volatility of expected return.

The following represents the Company's target investment allocations for the pension plan assets based on the Company's pension benefit obligation funded status:

Funded Status	Target Investment Allocation				
	90%	95%	100%	105%	110%
Domestic equity securities	25 - 35 %	20 - 30 %	15 - 25 %	10 - 20 %	4 - 14 %
International equity securities	3 - 13 %	1.5 - 11.5 %	0 - 9 %	0 - 6.5 %	-
Fixed income securities	55 - 65 %	62.5 - 72.5 %	70 - 80 %	77.5 - 87.5 %	85 - 95 %
Cash and cash equivalents	0 - 4 %	0 - 4 %	0 - 4 %	0 - 4 %	0 - 4 %
Alternative investments	0 - 6 %	0 - 5 %	0 - 5 %	0 - 5 %	0 - 5 %

The following represents the Company's target investment allocation policy when postretirement plan assets are held in investments other than solely in cash:

Asset Category	Target Investment Allocation
	Postretirement
Domestic equity securities	43 - 53 %
International equity securities	7 - 17 %
Fixed income securities	30 - 50 %
Cash and cash equivalents	0 - 5 %

The following tables set forth by level within the fair value hierarchy (see Note 5) the pension plan assets that were accounted for at fair value:

Investments measured at net asset value (a)				\$ 409.8
Investments at fair value				\$ 984.7

(a) In accordance with accounting standards, certain investments that were measured at net asset value (NAV) per share (or its equivalent) have not been classified in the fair value hierarchy. The fair value amounts presented in this table are intended to permit reconciliation of the fair value hierarchy to the line items presented in the statements of net assets available for benefits.

The pension plan's Level 1 assets consist primarily of interest bearing cash, including sweep accounts, mutual funds, and equity securities. Interest bearing cash, sweep accounts, and mutual funds are valued daily at the NAV of shares held by the pension plan as quoted in an active market. Equity securities are valued based on observable market prices.

The pension plan's Level 2 assets consist of corporate debt instruments, U.S. government securities, corporate debt instruments, other debt instruments, and preferred stock, which are valued based on yields currently available on comparable securities of issuers with similar credit ratings.

The pension plan's Level 3 assets consist of private equity investments and are considered alternative investments. The fair values of the investments in this category have been estimated based on partner pricing, appraisals or by investment managers with whom the portfolio resides.

Benefit Payments

The following benefit payments (shown net of postretirement plan participants' contributions), which reflect expected future service as appropriate, are expected to be paid as follows:

Balance as of December 31	\$ 10.6	\$ 16.1

Retirement Savings Plans

There are separate 401(k) retirement savings plans for the Company's management and International Brotherhood of Electrical Workers (IBEW) represented employees.

The Holdings 401(k) Retirement Savings Plan provides for employer contributions that vary by subsidiary. Contributions may include a participant base match, automatic contributions, and a participant incentive match. Compensation costs, excluding incentive match, that were charged to expense or construction related to this 401(k) plan were \$3.3 million and \$2.7 million for the years ended December 31, 2019 and 2018.

The Company's 401(k) Retirement Savings Plan for IBEW Represented Employees provides that the Company will match employee contributions with a base match and an additional incentive match. The Company recognized compensation charges, excluding incentive match, in expense or construction related to this plan of \$2.6 million for the years ended December 31, 2019 and 2018, respectively.

A 2019 and 2018 incentive target was established for the Holdings 401(k) Retirement Savings Plan and for the Company's 401(k) Retirement Savings Plan for IBEW Represented Employees, for which the Company will match

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

employee contributions with a base match and an additional incentive match if the target is met. In 2019 and 2018, the incentive target was not achieved.

In 2019, the Company approved an increase to the non-elective core contribution amounts from 3.0% to 5.0% for both IBEW and management employees effective January 1, 2020.

SECURE Act & More

On December 20, 2019, The Further Consolidated Appropriations Act was passed and signed into law. The “SECURE Act & More” inclusion of the act contains legislation changes to employer-provided benefit programs. The new law includes updates such as an increase in the age for required minimum distributions from age 70½ to age 72 for both defined benefit and defined contribution plans, requirements for in-service distributions to be available at age 59½ for defined benefit pension plans, new rules for providing part-time employees access to 401(k) plans, as well as other provisions. The Company is still in progress of measuring impacts associated with the new legislation, which became effective as of January 1, 2020.

9. Commitments and Contingencies

Employees – IBEW Contract

The Company is a party to a labor contract with the IBEW Local 29, which represents 53.0% of its approximately 1,600 employees. In October 2019, members of the IBEW ratified a new four year labor contract extension that commenced on October 1, 2019 and expires on September 30, 2023. The agreement addressed key topics such as wages, retirement and workforce renewal and investment, while maintaining quality healthcare and benefit offerings at affordable levels.

Environmental Liabilities

In 1992, the Pennsylvania Department of Environmental Protection (DEP) issued Residual Waste Management Regulations governing the generation and management of non-hazardous residual waste, such as coal ash. Following the divestiture of its generation assets, the Company retained certain facilities that remain subject to these regulations. The Company has assessed the residual waste management sites and the DEP has approved the Company’s compliance strategies. The total undiscounted expected costs associated with the Company’s compliance strategies were approximately \$2.1 million and \$2.2 million as of December 31, 2019 and 2018, respectively. As of December 31, 2019 and 2018, the expected discounted costs of compliance, using a discount rate of 5.75% and 6.00%, respectively, were approximately \$1.5 million and \$1.4 million with respect to sites that the Company continues to own. These costs were previously recovered from ratepayers.

The Company also owns the closed Warwick Mine, located along the Monongahela River in Greene County, Pennsylvania. This property had been used in the electricity supply business segment. The remaining liability represents amounts for mine water treatment and certain healthcare liabilities. As of December 31, 2019 and 2018, the Company’s estimated discounted liability, using a discount rate of 5.75% and 6.00%, respectively, for mine water treatment and certain healthcare costs, was approximately \$12.5 million and \$13.7 million, respectively. The Company’s undiscounted estimated liability associated with mine water treatment is approximately \$0.8 million per year, perpetually. These costs were previously recovered from ratepayers.

The Company was directed by the Environmental Protection Agency (EPA) pursuant to Section 308 of the Clean Water Act to perform water quality testing at the outfalls at the closed Warwick facility. The Company cannot predict the EPA’s response to the testing results.

The discounted amounts associated with the Company’s liabilities are combined and included in legacy liabilities on the balance sheets.

Litigation

In the ordinary course of business, various legal claims and proceedings are pending or threatened against the Company. While the amounts claimed may be substantial, the Company is unable to predict with certainty the ultimate outcome of such claims and proceedings. The Company has established reserves for pending litigation, which it believes are adequate, and after consultation with counsel and giving appropriate consideration to available insurance, the Company believes that the ultimate outcome of any matter currently pending will not materially affect the financial statements.

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

Off-Balance Sheet Arrangements

Except for the letters of credit (LOCs) discussed in Note 10, the Company does not have any material off-balance sheet financial arrangements.

10. Long-Term Debt and Revolving Credit Facilities

On October 31, 2019, the Company entered into an agreement to amend and extend its existing credit agreement, which would have terminated on November 24, 2021. The amended credit agreement allows for a revolving credit facility borrowing capacity of \$250.0 million, with a final maturity date of October 31, 2024.

The Company is permitted to increase the size of its revolving credit facility by up to \$50.0 million. This expansion feature is unfunded. The revolving credit facility permits borrowings at the London Interbank Offered Rate (LIBOR) plus a margin of 0.75% to 1.25% or an alternate base rate plus a margin of 0.0% to 0.25%. The revolving credit facility also has annual commitment fees ranging from 0.06% to 0.175%. Interest rates and commitment fees are based on the Company's then-current senior debt rating. A portion of the revolving credit facility not in excess of \$50.0 million is available for the issuance of LOCs.

As of December 31, 2019 and 2018, the Company had zero and \$45.0 million in borrowings under the revolving credit facility. During the year ended December 31, 2019, the maximum amount of credit facility borrowings outstanding was \$145.0 million and the average daily borrowings were \$47.4 million. As of December 31, 2019 and 2018, the Company had zero current debt maturities. As of December 31, 2019 and 2018, the Company had \$0.1 million of outstanding LOCs issued under the revolving credit facility, and \$0.8 million and \$0.9 million of outstanding LOCs issued under stand-alone facilities unrelated to the revolving credit facility, respectively.

The credit agreement contains a covenant package consistent with investment grade companies, including default provisions for non-payment. As of December 31, 2019 and 2018, the Company was in compliance with these covenants.

The following table summarizes the long-term debt that is included in the balance sheets:

Long-term Debt as of December 31,	Interest Rate*	Maturity	(Millions of Dollars) Principal Outstanding	
			2019	2018
First Mortgage Bonds (a)	3.78- 5.12%	2042- 2058	1,195.0	1,195.0
Revolver Borrowings (b)	Variable	2024	-	45.0
Total Long-Term Debt			\$ 1,195.0	\$ 1,240.0

(a) Excludes first mortgage bonds issued to secure pollution control notes. First mortgage bonds are all subject to make whole provisions if the bonds are redeemed prior to their stated maturity or par call date.

(b) The average rate was 3.49% for the year ended December 31, 2019.

The average rate was 3.04% for the year ended December 31, 2018.

* Interest rates and maturities reflect 2019 principal information.

In December 2019, the PUC approved the Company's application for a securities certificate requesting approval to issue up to \$400.0 million of debt in the form of first mortgage bonds, unsecured notes, pollution control revenue bonds (PCRBs) and/or long-term borrowings from Holdings, through December 31, 2021. The total available amount under the securities certificate was \$400.0 million as of December 31, 2019.

An existing PUC approved affiliated interest agreement is maintained between the Company and Holdings, which authorizes short-term borrowings up to \$200.0 million at market rates from Holdings to the Company. As of December 31, 2019, the Company was authorized to issue up to \$425.0 million of short-term debt under the terms of a FERC order approved in August 2019. As of December 31, 2019, the Company had \$85.0 million in borrowings outstanding under these approvals.

As of December 31, 2019, maturities of long-term debt outstanding, excluding revolving credit facility borrowings, for the next five years are zero.

Interest costs attributable to debt (excluding amounts capitalized as AFUDC) were \$56.1 million and \$55.6 million for the years ended December 31, 2019 and 2018, respectively. Amounts capitalized as AFUDC were \$3.9 million and \$2.3 million for the years ended December 31, 2019 and 2018, respectively. Debt discount or premium and related issuance

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
NOTES TO FINANCIAL STATEMENTS (Continued)			

expenses are amortized over the lives of the applicable issues.

The fair value of long-term debt, including revolver borrowings, is estimated using quoted market prices for the same or similar issues, or current rates offered for debt of the same remaining maturities and is categorized as Level 2 in the fair value hierarchy. As of December 31, 2019, the estimated fair value of long-term debt, including revolver borrowings, was \$1,370.5 million. The principal amount was \$1,195.0 million as of December 31, 2019.

11. Transactions with Affiliates

The Company participates in a tax sharing arrangement with Holdings to provide, among other things, for the payment of taxes for periods during which Holdings and the Company are included in the same consolidated group for federal tax purposes. The Company shares in the consolidated tax liability to the extent of the Company's income or loss for the year (see Note 6). The Company made tax sharing payments of \$29.9 million and \$19.3 million to Holdings for the year ended December 31, 2019 and December 31, 2018 respectively. The Company received state and federal tax refunds of \$1.2 million and \$0.4 million for the years ended December 31, 2019 and December 31, 2018, respectively.

The Company charges an administrative fee to Holdings and its affiliates based on an allocation method that considers the cost of actual or estimated services performed and other expenses incurred on behalf of Holdings or its affiliates. Holdings also charge an administrative fee to the Company, as well as its other subsidiaries.

The Company collects pole and duct revenue from DQE Communications, its affiliate, and pays it for the rental of communication fiber.

Certain of the Company's revenues and expenses relate to transactions with Holdings and its affiliates, including the following:

	(Millions of Dollars)			
	Years Ended December			
	2019		2018	
Revenues and Other Income:				
Duct and pole rental revenue	\$	1.2	\$	1.2
Expenses:				
Ancillary charges	\$	0.1	\$	1.8
Administrative cost allocations (a)	\$	(2.6)	\$	(2.0)
Rental of communication fiber	\$	4.0	\$	3.6
Interest on short-term and long-term affiliate borrowings (b)	\$	2.0	\$	-

(a) Allocated labor charges include the associated fringe benefits, including pension and health care costs.

(b) For the year ended December 31, 2019 interest rates were LIBOR plus a margin of 1.25% on short-term intercompany facility. The Company had no affiliate borrowings for the year ended December 31, 2018.

12. Supplemental Cash Flow Disclosure

	As of December 31,			
	2019		2018	
	2019		2018	
Cash (Account 131)	\$	2,781,400	\$	(4,982,218)
Working Fund (Account 135)		10,000		10,000
Temporary Cash Investments (Account 136)		3,900,000		11,100,000
Total	\$	6,691,400	\$	6,127,782

Non-cash investing activity in 2019 and 2018 included a \$15.9 million increase and a \$2.8 million increase, respectively, in accounts payable related to construction expenditures. As of December 31, 2019 and 2018, the amount of capital expenditures included within accounts payable was \$49.4 million and \$33.5 million, respectively.

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106)				
<p>1. Report below the original cost of electric plant in service according to the prescribed accounts.</p> <p>2. In addition to Account 101, Electric Plant in Service (Classified), this page and the next include Account 102, Electric Plant Purchased or Sold; Account 103, Experimental Electric Plant Unclassified; and Account 106, Completed Construction Not Classified-Electric.</p> <p>3. Include in column (c) or (d), as appropriate, corrections of additions and retirements for the current or preceding year.</p> <p>4. For revisions to the amount of initial asset retirement costs capitalized, included by primary plant account, increases in column (c) additions and reductions in column (e) adjustments.</p> <p>5. Enclose in parentheses credit adjustments of plant accounts to indicate the negative effect of such accounts.</p> <p>6. Classify Account 106 according to prescribed accounts, on an estimated basis if necessary, and include the entries in column (c). Also to be included in column (c) are entries for reversals of tentative distributions of prior year reported in column (b). Likewise, if the respondent has a significant amount of plant retirements which have not been classified to primary accounts at the end of the year, include in column (d) a tentative distribution of such retirements, on an estimated basis, with appropriate contra entry to the account for accumulated depreciation provision. Include also in column (d)</p>

ELECTRIC PLANT IN SERVICE (Account 101, 102, 103 and 106) (Continued)

distributions of these tentative classifications in columns (c) and (d), including the reversals of the prior years tentative account distributions of these amounts. Careful observance of the above instructions and the texts of Accounts 101 and 106 will avoid serious omissions of the reported amount of respondent's plant actually in service at end of year.

7. Show in column (f) reclassifications or transfers within utility plant accounts. Include also in column (f) the additions or reductions of primary account classifications arising from distribution of amounts initially recorded in Account 102, include in column (e) the amounts with respect to accumulated provision for depreciation, acquisition adjustments, etc., and show in column (f) only the offset to the debits or credits distributed in column (f) to primary account classifications.

8. For Account 399, state the nature and use of plant included in this account and if substantial in amount submit a supplementary statement showing subaccount classification of such plant conforming to the requirement of these pages.

9. For each amount comprising the reported balance and changes in Account 102, state the property purchased or sold, name of vendor or purchase, and date of transaction. If proposed journal entries have been filed with the Commission as required by the Uniform System of Accounts, give also date

ACCUMULATED PROVISION FOR DEPRECIATION OF ELECTRIC UTILITY PLANT (Account 108)					
<p>1. Explain in a footnote any important adjustments during year.</p> <p>2. Explain in a footnote any difference between the amount for book cost of plant retired, Line 11, column (c), and that reported for electric plant in service, pages 204-207, column 9d), excluding retirements of non-depreciable property.</p> <p>3. The provisions of Account 108 in the Uniform System of accounts require that retirements of depreciable plant be recorded when such plant is removed from service. If the respondent has a significant amount of plant retired at year end which has not been recorded and/or classified to the various reserve functional classifications, make preliminary closing entries to tentatively functionalize the book cost of the plant retired. In addition, include all costs included in retirement work in progress at year end in the appropriate functional classifications.</p> <p>4. Show separately interest credits under a sinking fund or similar method of depreciation accounting.</p>

FOOTNOTE DATA			

Schedule Page: 232 Line No.: 1 Column: a

These amounts represent recovery of costs associated with employee vacation and are being recovered over a period of up to three years.

Schedule Page: 232 Line No.: 3 Column: a

These amounts represent future recoverable pension costs. Amounts are being recovered over the remaining life of the Company's retirement plan.

Schedule Page: 232 Line No.: 5 Column: a

These amounts represent future recoverable costs related to the Company's distribution rate case filing, which are amortized over a period of up to three years.

Schedule Page: 232 Line No.: 7 Column: a

These amounts represent future recoverable costs incurred related to the POLR VIII filing and are amortized over a period of up to three years.

Schedule Page: 232 Line No.: 9 Column: a

These amounts represent future recoverable costs incurred related to the POLR IX filing and are amortized over a period of up to three years.

Schedule Page: 232 Line No.: 11 Column: a

Represents amounts received from customers related to the Smart Meters program. These amounts will be amortized as the Company continues to incur costs associated with these programs.

Schedule Page: 232 Line No.: 13 Column: a

Represents the costs incurred by the Company in order to update the electric Eligible Customers Lists (ECL), which are made available to Electric Generation Suppliers (EGSS). Costs are recovered over a period of up to two years.

Schedule Page: 232 Line No.: 15 Column: a

Represents the difference between the estimated revenue requirement billed to customers and the actual revenue requirement calculated after a calendar year's books are final.

Schedule Page: 232 Line No.: 17 Column: a

These amounts represent costs recovered from customers associated with the Company's Universal Services Programs. These amounts will be amortized as the Company continues to incur costs associated with these programs.

Schedule Page: 232 Line No.: 19 Column: a

These amounts represent recovery of \$5.0M in pension contributions as agreed upon

Name of Respondent Duquesne Light Company	This Report is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report 2019/Q4
FOOTNOTE DATA			

per the 2018 rate case settlement.

Schedule Page: 232 Line No.: 21 Column: a

These amounts represent costs incurred for cloud computing services. These amounts will be amortized over a period of up to five years. Per FERC Order AI20-1-000, under Accounting Standard Update (ASU) No. 2018-15, cloud computing costs should be capitalized as a utility plant asset. Since the Company has adopted this ASU as of 12/31/2019, cloud computing is no longer considered to be a regulatory asset. The Company moved the asset to Utility Plant (line 2 of page 110) and the accumulated depreciation to Accum. Prov. for Depr. Amort. Depl. (line 5 of page 110).

Schedule Page: 232 Line No.: 23 Column: a

Represents amounts received in advance from customers from the State Tax Adjustment Surcharge. This surcharge pertains to the Company's obligation of state taxes due and any interest.

Schedule Page: 232 Line No.: 25 Column: a

These amounts represent ADMS costs permitted to be amortized.

Schedule Page: 232 Line No.: 27 Column: a

This balance relates to an undercollection of DSIC revenue. Under the 2019 rate case, DLC will be permitted to charge the DSIC when the total DSIC plant balances exceed the levels projected at the end of the fully projected future test year.

Schedule Page: 232 Line No.: 29 Column: a

This balance represents spending related to customer rebates for infrastructure to provide electric service to charging stations available to the public.

Schedule Page: 232 Line No.: 31 Column: a

These amounts represent the excess of revenue collected vs. costs incurred in regards to the company's Energy Efficiency Program.

LONG-TERM DEBT (Account 221, 222, 223 and 224) (Continued)

10. Identify separate undisposed amounts applicable to issues which were redeemed in prior years.
11. Explain any debits and credits other than debited to Account 428, Amortization and Expense, or credited to Account 429, Premium on Debt - Credit.
12. In a footnote, give explanatory (details) for Accounts 223 and 224 of net changes during the year. With respect to long-term advances, show for each company: (a) principal advanced during year, (b) interest added to principal amount, and (c) principle repaid during year. Give Commission authorization numbers and dates.
13. If the respondent has pledged any of its long-term debt securities give particulars (details) in a footnote including name of pledgee and purpose of the pledge.
14. If the respondent has any long-term debt securities which have been nominally issued and are nominally outstanding at end of year, describe such securities in a footnote.
15. If interest expense was incurred during the year on any obligations retired or reacquired before end of year, include such interest expense in column (i). Explain in a footnote any difference between the total of column (i) and the total of Account 427, interest on Long-Term Debt and Account 430, Interest on Debt to Associated Companies.
16. Give particulars (details) concerning any long-term debt authorized by a regulatory commission but not yet issued.

RECONCILIATION OF REPORTED NET INCOME WITH TAXABLE INCOME FOR FEDERAL INCOME TAXES				
<p>1. Report the reconciliation of reported net income for the year with taxable income used in computing Federal income tax accruals and show computation of such tax accruals. Include in the reconciliation, as far as practicable, the same detail as furnished on Schedule M-1 of the tax return for the year. Submit a reconciliation even though there is no taxable income for the year. Indicate clearly the nature of each reconciling amount.</p> <p>2. If the utility is a member of a group which files a consolidated Federal tax return, reconcile reported net income with taxable net income as if a separate return were to be filed, indicating, however, intercompany amounts to be eliminated in such a consolidated return. State names of group member, tax assigned to each group member, and basis of allocation, assignment, or sharing of the consolidated tax among the group members.</p> <p>3. A substitute page, designed to meet a particular need of a company, may be used as long as the data is consistent and meets the requirements of the above instructions. For electronic reporting purposes complete Line 27 and provide the substitute page in the context of a footnote.</p>

TAXES ACCRUED, PREPAID AND CHARGED DURING YEAR						
<p>1. Give particulars (details) of the combined prepaid and accrued tax accounts and show the total taxes charged to operations and other accounts during the year. Do not include gasoline and other sales taxes which have been charged to the accounts to which the taxed material was charged. If the actual, or estimated amounts of such taxes are known, show the amounts in a footnote and designate whether estimated or actual amounts.</p> <p>2. Include on this page, taxes paid during the year and charged direct to final accounts, (not charged to prepaid or accrued taxes.) Enter the amounts in both columns (d) and (e). The balancing of this page is not affected by the inclusion of these taxes.</p> <p>3. Include in column (d) taxes charged during the year, taxes charged to operations and other accounts through (a) accruals credited to taxes accrued, (b) amounts credited to proportions of prepaid taxes chargeable to current year, and (c) taxes paid and charged direct to operations or accounts other than accrued and prepaid tax accounts.</p> <p>4. List the aggregate of each kind of tax in such manner that the total tax for each State and subdivision can readily be ascertained.</p>

OTHER REGULATORY LIABILITIES (Account 254)

1. Report below the particulars (details) called for concerning other regulatory liabilities, including rate order docket number, if applicable.
2. Minor items (5% of the Balance in Account 254 at end of period, or amounts less than \$100,000 which ever is less), may be grouped by classes.
3. For Regulatory Liabilities being amortized, show period of amortization.

FOOTNOTE DATA			

Schedule Page: 278 Line No.: 1 Column: a

These amounts represent environmental costs previously recovered from customers associated with previously owned generation sites. These amounts are amortized as the Company incurs environmental costs associated with these sites.

Schedule Page: 278 Line No.: 3 Column: a

These amounts represent costs recovered from customers associated with the Company's OPEB costs.

Schedule Page: 278 Line No.: 5 Column: a

These amounts represent the true up of costs under the PUC Transmission Service Charge annual filing which are amortized June thru May each year.

Schedule Page: 278 Line No.: 7 Column: a

Represents amounts recovered from customers related to supplier auctions of small and medium commercial and industrial generation customers.

Schedule Page: 278 Line No.: 9 Column: a

Represents a net regulatory liability on regulated utility property that includes the excess deferred income tax flow back to customers over the average remaining book life of the regulated property resulting from the corporate tax rate reduction; net of the FAS 109 property basis differences and corresponding FAS 109 tax gross up resulting from book depreciation versus accelerated tax deduction that are being recovered over the remaining depreciable life of the regulated utility property, plant and equipment.

Schedule Page: 278 Line No.: 11 Column: a

These amounts represent the excess of costs incurred vs. revenue collected in regards to the company's Energy Efficiency Program.

Schedule Page: 278 Line No.: 13 Column: a

These amounts represent the excess accumulated deferred income taxes (EDIT) that are required by the FERC to be refunded to customers as a result of the change in tax rate caused by the adoption of TCJA.

Schedule Page: 278 Line No.: 15 Column: a

This balance represents the underspend related to the electric vehicle customer registration credits allowed annually.

Schedule Page: 278 Line No.: 17 Column: a

These amounts represent amounts recovered from customers associated with the Company's Universal Services programs. These amounts will be amortized as the Company continues to incur costs associated with these programs.

Schedule Page: 278 Line No.: 19 Column: a

This balance relates to an overcollection of DSIC revenue associated with a change in tax rates that must be given back to customers.

Name of Respondent Duquesne Light Company		This Report Is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report End of <u>2019/Q4</u>
ELECTRIC OPERATING REVENUES (Account 400)				
<p>1. The following instructions generally apply to the annual version of these pages. Do not report quarterly data in columns (c), (e), (f), and (g). Unbilled revenues and MWH related to unbilled revenues need not be reported separately as required in the annual version of these pages.</p> <p>2. Report below operating revenues for each prescribed account, and manufactured gas revenues in total.</p> <p>3. Report number of customers, columns (f) and (g), on the basis of meters, in addition to the number of flat rate accounts; except that where separate meter readings are added for billing purposes, one customer should be counted for each group of meters added. The -average number of customers means the average of twelve figures at the close of each month.</p> <p>4. If increases or decreases from previous period (columns (c),(e), and (g)), are not derived from previously reported figures, explain any inconsistencies in a footnote.</p> <p>5. Disclose amounts of \$250,000 or greater in a footnote for accounts 451, 456, and 457.2.</p>

SALES FOR RESALE (Account 447)

1. Report all sales for resale (i.e., sales to purchasers other than ultimate consumers) transacted on a settlement basis other than power exchanges during the year. Do not report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges on this schedule. Power exchanges must be reported on the Purchased Power schedule (Page 326-327).

2. Enter the name of the purchaser in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the purchaser.

3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:
 RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projected load for this service in its system resource planning). In addition, the reliability of requirements service must be the same as, or second only to, the supplier's service to its own ultimate consumers.
 LF - for long-term service. "Long-term" means five years or Longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for Long-term firm service which meets the definition of RQ service. For all transactions identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or setter can unilaterally get out of the contract.
 IF - for intermediate-term firm service. The same as LF service except that "intermediate-term" means longer than one year but Less than five years.
 SF - for short-term firm service. Use this category for all firm services where the duration of each period of commitment for service is one year or less.
 LU - for Long-term service from a designated generating unit. "Long-term" means five years or Longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of designated unit.
 IU - for intermediate-term service from a designated generating unit. The same as LU service except that "intermediate-term" means Longer than one year but Less than five years.

Name of Respondent Duquesne Light Company	This Report Is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report End of 2019/Q4
--	---	--	---

SALES FOR RESALE (Account 447) (Continued)

OS - for other service. use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote.

AD - for Out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. Group requirements RQ sales together and report them starting at line number one. After listing all RQ sales, enter "Subtotal - RQ" in column (a). The remaining sales may then be listed in any order. Enter "Subtotal-Non-RQ" in column (a) after this Listing. Enter "Total" in column (a) as the Last Line of the schedule. Report subtotals and total for columns (9) through (k)

5. In Column (c), identify the FERC Rate Schedule or Tariff Number. On separate Lines, List all FERC rate schedules or tariffs under which service, as identified in column (b), is provided.

6. For requirements RQ sales and any type of-service involving demand charges imposed on a monthly (or Longer) basis, enter the average monthly billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.

7. Report in column (g) the megawatt hours shown on bills rendered to the purchaser.

8. Report demand charges in column (h), energy charges in column (i), and the total of any other types of charges, including out-of-period adjustments, in column (j). Explain in a footnote all components of the amount shown in column (j). Report in column (k) the total charge shown on bills rendered to the purchaser.

9. The data in column (g) through (k) must be subtotaled based on the RQ/Non-RQ grouping (see instruction 4), and then totaled on the Last -line of the schedule. The "Subtotal - RQ" amount in column (g) must be reported as Requirements Sales For Resale on Page 401, line 23. The "Subtotal - Non-RQ" amount in column (g) must be reported as Non-Requirements Sales For Resale on Page 401, line 24.

10. Footnote entries as required and provide explanations following all required data.

Name of Respondent Duquesne Light Company		This Report Is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission		Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report End of <u>2019/Q4</u>	
PURCHASED POWER (Account 555) (Including power exchanges)						
<p>1. Report all power purchases made during the year. Also report exchanges of electricity (i.e., transactions involving a balancing of debits and credits for energy, capacity, etc.) and any settlements for imbalanced exchanges.</p> <p>2. Enter the name of the seller or other party in an exchange transaction in column (a). Do not abbreviate or truncate the name or use acronyms. Explain in a footnote any ownership interest or affiliation the respondent has with the seller.</p> <p>3. In column (b), enter a Statistical Classification Code based on the original contractual terms and conditions of the service as follows:</p> <p>RQ - for requirements service. Requirements service is service which the supplier plans to provide on an ongoing basis (i.e., the supplier includes projects load for this service in its system resource planning). In addition, the reliability of requirement service must be the same as, or second only to, the supplier's service to its own ultimate consumers.</p> <p>LF - for long-term firm service. "Long-term" means five years or longer and "firm" means that service cannot be interrupted for economic reasons and is intended to remain reliable even under adverse conditions (e.g., the supplier must attempt to buy emergency energy from third parties to maintain deliveries of LF service). This category should not be used for long-term firm service firm service which meets the definition of RQ service. For all transaction identified as LF, provide in a footnote the termination date of the contract defined as the earliest date that either buyer or seller can unilaterally get out of the contract.</p> <p>IF - for intermediate-term firm service. The same as LF service expect that "intermediate-term" means longer than one year but less than five years.</p> <p>SF - for short-term service. Use this category for all firm services, where the duration of each period of commitment for service is one year or less.</p> <p>LU - for long-term service from a designated generating unit. "Long-term" means five years or longer. The availability and reliability of service, aside from transmission constraints, must match the availability and reliability of the designated unit.</p> <p>IU - for intermediate-term service from a designated generating unit. The same as LU service expect that "intermediate-term" means longer than one year but less than five years.</p> <p>EX - For exchanges of electricity. Use this category for transactions involving a balancing of debits and credits for energy, capacity, etc. and any settlements for imbalanced exchanges.</p> <p>OS - for other service. Use this category only for those services which cannot be placed in the above-defined categories, such as all non-firm service regardless of the Length of the contract and service from designated units of Less than one year. Describe the nature of the service in a footnote for each adjustment.</p>

PURCHASED POWER(Account 555) (Continued)
(Including power exchanges)

AD - for out-of-period adjustment. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting years. Provide an explanation in a footnote for each adjustment.

4. In column (c), identify the FERC Rate Schedule Number or Tariff, or, for non-FERC jurisdictional sellers, include an appropriate designation for the contract. On separate lines, list all FERC rate schedules, tariffs or contract designations under which service, as identified in column (b), is provided.

5. For requirements RQ purchases and any type of service involving demand charges imposed on a monthly (or longer) basis, enter the monthly average billing demand in column (d), the average monthly non-coincident peak (NCP) demand in column (e), and the average monthly coincident peak (CP) demand in column (f). For all other types of service, enter NA in columns (d), (e) and (f). Monthly NCP demand is the maximum metered hourly (60-minute integration) demand in a month. Monthly CP demand is the metered demand during the hour (60-minute integration) in which the supplier's system reaches its monthly peak. Demand reported in columns (e) and (f) must be in megawatts. Footnote any demand not stated on a megawatt basis and explain.

6. Report in column (g) the megawatthours shown on bills rendered to the respondent. Report in columns (h) and (i) the megawatthours of power exchanges received and delivered, used as the basis for settlement. Do not report net exchange.

7. Report demand charges in column (j), energy charges in column (k), and the total of any other types of charges, including out-of-period adjustments, in column (l). Explain in a footnote all components of the amount shown in column (l). Report in column (m) the total charge shown on bills received as settlement by the respondent. For power exchanges, report in column (m) the settlement amount for the net receipt of energy. If more energy was delivered than received, enter a negative amount. If the settlement amount (l) include credits or charges other than incremental generation expenses, or (2) excludes certain credits or charges covered by the agreement, provide an explanatory footnote.

8. The data in column (g) through (m) must be totalled on the last line of the schedule. The total amount in column (g) must be reported as Purchases on Page 401, line 10. The total amount in column (h) must be reported as Exchange Received on Page 401, line 12. The total amount in column (i) must be reported as Exchange Delivered on Page 401, line 13.

9. Footnote entries as required and provide explanations following all required data.

TRANSMISSION OF ELECTRICITY FOR OTHERS (Account 456.1) (Including transactions referred to as 'wheeling')					
<p>1. Report all transmission of electricity, i.e., wheeling, provided for other electric utilities, cooperatives, other public authorities, qualifying facilities, non-traditional utility suppliers and ultimate customers for the quarter.</p> <p>2. Use a separate line of data for each distinct type of transmission service involving the entities listed in column (a), (b) and (c).</p> <p>3. Report in column (a) the company or public authority that paid for the transmission service. Report in column (b) the company or public authority that the energy was received from and in column (c) the company or public authority that the energy was delivered to. Provide the full name of each company or public authority. Do not abbreviate or truncate name or use acronyms. Explain in a footnote any ownership interest in or affiliation the respondent has with the entities listed in columns (a), (b) or (c)</p> <p>4. In column (d) enter a Statistical Classification code based on the original contractual terms and conditions of the service as follows: FNO - Firm Network Service for Others, FNS - Firm Network Transmission Service for Self, LFP - "Long-Term Firm Point to Point Transmission Service, OLF - Other Long-Term Firm Transmission Service, SFP - Short-Term Firm Point to Point Transmission Reservation, NF - non-firm transmission service, OS - Other Transmission Service and AD - Out-of-Period Adjustments. Use this code for any accounting adjustments or "true-ups" for service provided in prior reporting periods. Provide an explanation in a footnote for each adjustment. See General Instruction for definitions of codes.</p>

DEPRECIATION AND AMORTIZATION OF ELECTRIC PLANT (Account 403, 404, 405) (Except amortization of acquisition adjustments)						
<p>1. Report in section A for the year the amounts for : (b) Depreciation Expense (Account 403; (c) Depreciation Expense for Asset Retirement Costs (Account 403.1; (d) Amortization of Limited-Term Electric Plant (Account 404); and (e) Amortization of Other Electric Plant (Account 405).</p> <p>2. Report in Section 8 the rates used to compute amortization charges for electric plant (Accounts 404 and 405). State the basis used to compute charges and whether any changes have been made in the basis or rates used from the preceding report year.</p> <p>3. Report all available information called for in Section C every fifth year beginning with report year 1971, reporting annually only changes to columns (c) through (g) from the complete report of the preceding year. Unless composite depreciation accounting for total depreciable plant is followed, list numerically in column (a) each plant subaccount, account or functional classification, as appropriate, to which a rate is applied. Identify at the bottom of Section C the type of plant included in any sub-account used. In column (b) report all depreciable plant balances to which rates are applied showing subtotals by functional Classifications and showing composite total. Indicate at the bottom of section C the manner in which column balances are obtained. If average balances, state the method of averaging used. For columns (c), (d), and (e) report available information for each plant subaccount, account or functional classification Listed in column (a). If plant mortality studies are prepared to assist in estimating average service Lives, show in column (f) the type mortality curve selected as most appropriate for the account and in column (g), if available, the weighted average remaining life of surviving plant. If composite depreciation accounting is used, report available information called for in columns (b) through (g) on this basis.</p> <p>4. If provisions for depreciation were made during the year in addition to depreciation provided by application of reported rates, state at the bottom of section C the amounts and nature of the provisions and the plant items to which related.</p>

Name of Respondent Duquesne Light Company		This Report Is: (1) <input checked="" type="checkbox"/> An Original (2) <input type="checkbox"/> A Resubmission	Date of Report (Mo, Da, Yr) 04/29/2020	Year/Period of Report End of <u>2019/Q4</u>
DISTRIBUTION OF SALARIES AND WAGES				
Report below the distribution of total salaries and wages for the year. Segregate amounts originally charged to clearing accounts to Utility Departments, Construction, Plant Removals, and Other Accounts, and enter such amounts in the appropriate lines and columns provided. In determining this segregation of salaries and wages originally charged to clearing accounts, a method of approximation giving substantially correct results may be used.

AMOUNTS INCLUDED IN ISO/RTO SETTLEMENT STATEMENTS

1. The respondent shall report below the details called for concerning amounts it recorded in Account 555, Purchase Power, and Account 447, Sales for Resale, for items shown on ISO/RTO Settlement Statements. Transactions should be separately netted for each ISO/RTO administered energy market for purposes of determining whether an entity is a net seller or purchaser in a given hour. Net megawatt hours are to be used as the basis for determining whether a net purchase or sale has occurred. In each monthly reporting period, the hourly sale and purchase net amounts are to be aggregated and separately reported in Account 447, Sales for Resale, or Account 555, Purchased Power, respectively.

Line No.	Description of Item(s) (a)	Balance at End of Quarter 1 (b)	Balance at End of Quarter 2 (c)	Balance at End of Quarter 3 (d)	Balance at End of Year (e)

TRANSMISSION LINE STATISTICS								
<p>1. Report information concerning transmission lines, cost of lines, and expenses for year. List each transmission line having nominal voltage of 132 kilovolts or greater. Report transmission lines below these voltages in group totals only for each voltage.</p> <p>2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.</p> <p>3. Report data by individual lines for all voltages if so required by a State commission.</p> <p>4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.</p> <p>5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction. If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.</p> <p>6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.</p>

2. Transmission lines include all lines covered by the definition of transmission system plant as given in the Uniform System of Accounts. Do not report substation costs and expenses on this page.
3. Report data by individual lines for all voltages if so required by a State commission.
4. Exclude from this page any transmission lines for which plant costs are included in Account 121, Nonutility Property.
5. Indicate whether the type of supporting structure reported in column (e) is: (1) single pole wood or steel; (2) H-frame wood, or steel poles; (3) tower; or (4) underground construction. If a transmission line has more than one type of supporting structure, indicate the mileage of each type of construction by the use of brackets and extra lines. Minor portions of a transmission line of a different type of construction need not be distinguished from the remainder of the line.
6. Report in columns (f) and (g) the total pole miles of each transmission line. Show in column (f) the pole miles of line on structures the cost of which is reported for the line designated; conversely, show in column (g) the pole miles of line on structures the cost of which is reported for another line. Report pole miles of line on leased or partly owned structures in column (g). In a footnote, explain the basis of such occupancy and state whether expenses with respect to such structures are included in the expenses reported for the line designated.

TRANSMISSION LINE STATISTICS (Continued)								
<p>7. Do not report the same transmission line structure twice. Report Lower voltage Lines and higher voltage lines as one line. Designate in a footnote if you do not include Lower voltage lines with higher voltage lines. If two or more transmission line structures support lines of the same voltage, report the pole miles of the primary structure in column (f) and the pole miles of the other line(s) in column (g)</p> <p>8. Designate any transmission line or portion thereof for which the respondent is not the sole owner. If such property is leased from another company, give name of lessor, date and terms of Lease, and amount of rent for year. For any transmission line other than a leased line, or portion thereof, for which the respondent is not the sole owner but which the respondent operates or shares in the operation of, furnish a succinct statement explaining the arrangement and giving particulars (details) of such matters as percent ownership by respondent in the line, name of co-owner, basis of sharing expenses of the Line, and how the expenses borne by the respondent are accounted for, and accounts affected. Specify whether lessor, co-owner, or other party is an associated company.</p> <p>9. Designate any transmission line leased to another company and give name of Lessee, date and terms of lease, annual rent for year, and how determined. Specify whether lessee is an associated company.</p> <p>10. Base the plant cost figures called for in columns (j) to (l) on the book cost at end of year.</p>

TRANSMISSION LINES ADDED DURING YEAR

- Report below the information called for concerning Transmission lines added or altered during the year. It is not necessary to report minor revisions of lines.
- Provide separate subheadings for overhead and under- ground construction and show each transmission line separately. If actual costs of competed construction are not readily available for reporting columns (l) to (o), it is permissible to report in these columns the

SUBSTATIONS					
<p>1. Report below the information called for concerning substations of the respondent as of the end of the year. 2. Substations which serve only one industrial or street railway customer should not be listed below. 3. Substations with capacities of Less than 10 MVa except those serving customers with energy for resale, may be grouped according to functional character, but the number of such substations must be shown. 4. Indicate in column (b) the functional character of each substation, designating whether transmission or distribution and whether attended or unattended. At the end of the page, summarize according to function the capacities reported for the individual stations in column (f).</p>

TRANSACTIONS WITH ASSOCIATED (AFFILIATED) COMPANIES				
<p>1. Report below the information called for concerning all non-power goods or services received from or provided to associated (affiliated) companies.</p> <p>2. The reporting threshold for reporting purposes is \$250,000. The threshold applies to the annual amount billed to the respondent or billed to an associated/affiliated company for non-power goods and services. The good or service must be specific in nature. Respondents should not attempt to include or aggregate amounts in a nonspecific category such as "general".</p> <p>3. Where amounts billed to or received from the associated (affiliated) company are based on an allocation process, explain in a footnote.</p>

- Q.3. State what coverage requirements or capital structure ratios are required in the most restrictive of applicable indentures/charter tests and how these measures have been computed.
- A.3. Duquesne Light Company's \$250.0 million 5-year Revolving Credit Facility ("RCF") expiring October 2024, has a Leverage Ratio that shall not be more than 65.0%. At December 31, 2020, the Company's Leverage as defined by the RCF was 47.8%. See DFR III-F-3 – Attachment A for the computation of the ratio.

Duquesne Light Company's Indenture of Mortgage and Deed of Trust ("Indenture") dated as of October 1, 2004 has two restrictions regarding the issuance of First Mortgage Bonds under the Indenture. The first restriction limits the issuance of secured debt upon the basis of Property Additions (which excludes Funded Property) in a principal amount not to exceed 70% of the cost or fair value of the utility's assets. A copy of the most recently completed calculation with respect to a new First Mortgage Bond issuance has been attached as DFR III-F-3 - Attachment B. The second restriction requires the Company to provide a Net Earnings Certificate showing the Adjusted Net Earnings of the Company to have been not less than an amount equal to twice the Annual Interest Requirements, as a condition precedent to the issuance of First Mortgage Bonds. A copy of the most recently completed Net Earnings Certificate issued with respect to a new First Mortgage Bond issuance in 2020 has been attached as DFR III-F-3 - Attachment C as reference.

DUQUESNE LIGHT COMPANY

NET EARNINGS CERTIFICATE

(Under Sections 103, 105 and 401(d) of the Indenture
of Mortgage and Deed of Trust of Duquesne Light Company)

We, the undersigned, James H. Milligan, the Treasurer of Duquesne Light Company (the “Company”), and Matthew Ankrum, the Controller of the Company and an accountant, in accordance with Sections 103 and 401(d) of the Indenture of Mortgage and Deed of Trust, dated as of April 1, 1992, as supplemented and amended by various instruments and as amended and restated in its entirety by Supplemental Indenture No. 22, dated as of October 1, 2004 and as further supplemented and amended, including as supplemented and amended by Supplemental Indenture No. 33, dated as of April 15, 2020 (as so supplemented, amended and restated, the “Indenture”; capitalized terms used herein and not defined herein having the meanings specified in the Indenture), of the Company to The Bank of New York Mellon Trust Company, N.A. (successor in trust to JPMorgan Chase Trust Company, National Association, successor by merger to The Chase Manhattan Trust Company, N.A., successor in trust to Mellon Bank, N.A.), as trustee, and in connection with the Company Order of even date herewith for the authentication and delivery of \$200,000,000 in aggregate principal amount of a new series of the Company’s Securities, to be designated First Mortgage Bonds, Series AC (the “Bonds”), do hereby certify that the Adjusted Net Earnings for the twelve month period ended December 31, 2019 are not less than an amount equal to twice the Annual Interest Requirements, as shown by the following tabulations:

Adjusted Net Earnings (in millions)

(i)	Operating Revenues	
	Sales of Electric Energy	\$ 944.4
	Other Electric Revenues [excludes profits and losses from the sale and disposition of property of \$0 (net)]	<u>19.4</u>
	Total Operating Revenues	\$ 963.8
(ii)	Operating Expenses	
	Repairs and Maintenance	\$ 232.3
	Taxes (except as provided in Section 103 of the Indenture)	57.5
	Other Operating Expenses (including, without limitation, assessments, rentals and insurance; and except as provided in Section 103 of the Indenture)	<u>221.7</u>
	Total Operating Expenses	\$ 511.5
(iii)	Amount remaining after deducting (ii) from (i)	\$ 452.3
(iv)	Rental revenues (net of expenses not included in clause (ii) above)	\$ 0.0
(v)	Sum of (iii) and (iv)	\$ 452.3
(vi)	Other income	\$ 2.4
(vii)	Sum of (v) and (vi)	\$ 454.7
(viii)	The amount, if any, by which the aggregate of (A) such other income and (B) that portion of the amount stated in clause (v) which is directly received from the operations of property (other than paving, grading and other improvements to, under or upon public highways, bridges, parks or other public properties of analogous character) not subject to the Lien of the Indenture at the date of this certificate, exceeds twenty per centum (20%) of the sum stated by clause (vii); provided, however, if the amount stated in clause (v) includes revenues from the operation of property not subject to the Lien of the Indenture, the calculation made pursuant to this clause (viii) includes such reasonable interdepartmental or interproperty revenues and expenses between the Mortgaged Property and the property not subject to the Lien of the Indenture as is allocated to such respective properties by the Company.	<u>0.0</u>

(ix)	Adjusted Net Earnings for twelve (12) consecutive months ended December 31, 2019 amount remaining after deducting (viii) from (vii)	\$ 454.7
------	---	-----------------

Annual Interest Requirements (in millions)

(i)	Upon all Securities Outstanding under the Indenture at the date of this Net Earnings Certificate as shown in Schedule A hereto	\$ 52.2
(ii)(a)	Upon Securities applied for in the application in connection with which this Net Earnings Certificate is made (\$200,000,000 aggregate principal amount at a Stated Interest Rate of 3.11% per annum)	\$ 6.2
(b)	Upon Securities applied for in other pending applications	\$ 0.0
(iii)	Upon all Class "A" Bonds Outstanding (none) under Class "A" Mortgages (none), except those held by the Trustee under the Indenture	\$ 0.0
(iv)	Upon the principal amount of all other indebtedness outstanding at this date and secured by a Lien prior to the Lien of the Indenture upon property subject to the Lien of the Indenture (except indebtedness excluded in accordance with Section 103(b)(iv) of the Indenture)	\$ 0.0
	Total Annual Interest Requirements	\$ 58.4
	Twice Annual Interest Requirements	\$ 116.8

In accordance with Section 105 of the Indenture, the undersigned further hereby certify that:

(a) we have read the Indenture, including without limitation the covenants and conditions precedent provided for therein with respect to compliance with which this Net Earnings Certificate is delivered and the definitions in the Indenture relating thereto;

(b) we have made an examination of the accounting records of the Company and caused to be followed such other procedures as we consider necessary in the circumstances to determine the correctness, in accordance with generally accepted accounting principles applied on a consistent basis and in accordance with the

provisions of the Indenture, of the information in this Net Earnings Certificate set forth;

(c) in our opinion, we have made such examination or investigation as is necessary to enable us to express an informed opinion as to the matters set forth herein and as to whether or not such covenants and conditions have been complied with; and

(d) in our opinion, such covenants and conditions have been complied with.

IN WITNESS WHEREOF, we have executed this Net Earnings Certificate this
5th day of May 2020.

 - m. Construction work in progress as a % of net utility plant
 - n. Effective income tax rate
 - o. Internal cash generations as a % of total capital requirements
- A.4. See DFR III F-4 - Attachment A for above computations (a through o) for the years ended December 31, 2022, December 31, 2021, December 31, 2020 and December 31, 2019.

Changes to credit ratings:

On December 19, 2019, S&P upgraded Duquesne Light Company's (DLC) credit ratings, specifically the long-term issuer credit rating was revised to 'BBB+' from 'BBB' and the senior secured debt rating was revised to 'A' from 'A-'. DLC's outlook remained 'stable'. The ratings action was the result of a S&P methodology revision, and not a reflection of action taken by DLC. No additional revisions occurred to DLC's credit ratings or outlook during 2020.

No revisions occurred to Duquesne Light Holdings, Inc.'s credit ratings or outlook during 2019 or 2020.

See DFR III F-4 - Attachment B for detailed listings of credit ratings, and DFR III-F-4 - Attachment C for the most recent rating agency publications as well as the publication detailing DLC's 2019 credit ratings upgrade.

Research Update:

Duquesne Light Co. Upgraded To 'BBB+' On Revised Group Rating Methodology, Ratings Removed From UCO, Outlook Stable

December 19, 2019

Rating Action Overview

- We have reviewed our ratings on Duquesne Light Co. (DLC) that we labeled as under criteria observation (UCO) after publishing our revised Group Rating Methodology criteria on July 1, 2019.
- Following this review, we concluded that the cumulative value of the regulatory and structural protections between DLC and its parent Duquesne Light Holdings Inc. (DLH), are sufficient to insulate our issuer credit rating on DLC from our group credit profile on DLH by as much as one notch.
- We are raising our long-term issuer credit rating on DLC to 'BBB+' from 'BBB' and our issue-level ratings on DLC's first-mortgage bonds to 'A' from 'A-' and are removing our ratings on the company from UCO.
- At the same time, we are revising our stand-alone credit profile (SACP) on DLC to 'aa-' from 'a', largely reflecting our view of the company's track record of effectively managing its regulatory risk that we expect will persist.
- The stable outlook on DLC is consistent with our outlook on parent DLH as well as our expectation that DLC will maintain stand-alone funds from operations (FFO) to debt of about 26%-29% over our forecast period. The stable outlook on DLH reflects our baseline forecast of DLH's consolidated FFO to debt of about 11%-13% over the next few years. Our baseline forecast also includes our expectation that DLC will continue to effectively manage its regulatory risk, thereby supporting consistent operating results and a financial profile for DLH that is in line with expectations at the current ratings.

Rating Action Rationale

The upgrade follows the review of our ratings on DLC under our revised Group Rating Methodology criteria, which we published on July 1, 2019.

Research Update: Duquesne Light Co. Upgraded To 'BBB+' On Revised Group Rating Methodology, Ratings Removed From UCO, Outlook Stable

We view the strength of DLC's stand-alone credit profile (SACP), as well as the cumulative value of the regulatory and structural protections that insulate the company from DLH, as warranting an upgrade.

Our analysis of the insulating measures incorporates the following:

- DLC's distribution business is independently regulated by the Pennsylvania Public Utility Commission (PPUC) and its transmission business is independently regulated by the Federal Energy Regulatory Commission;
- DLC holds itself out as a separate entity from DLH;
- DLC has its own funding arrangements including issuing its own long-term debt and has a separate committed credit facility to cover its short-term funding needs;
- DLC has no significant operational dependence on other group entities;
- DLC maintains its own records;
- DLC does not commingle funds, assets, or cash flows with the rest of the DLH group;
- DLC's financial performance is independent of DLH;
- We believe there is a strong economic basis for DLH to preserve DLC's credit strength due to DLC's low-risk, profitable, and regulated operations that make up the vast majority of DLH's operations;
- DLC is a regulated utility with a regulatory capital structure; and
- There are no cross-default provisions between DLC and DLH that imply that a default at DLH would lead to a default at DLC, which supports our opinion that a default at DLH would not directly lead to a default at the company.

We assess the above insulating measures as sufficient to insulate our ratings on DLC from our group credit profile on its parent by as much as one notch. Furthermore, we deem DLC to be a core subsidiary of DLH.

Our revised SACP on DLC primarily stems from the use of our low volatility financial benchmark table to assess DLC's financial measures, which we previously assessed under our medial volatility table. Our revised assessment reflects DLC's track record of effectively managing its regulatory risk in Pennsylvania, and because we expect this track record to persist.

We base our business risk assessment for DLC on its low-risk electric transmission and distribution operations that provide an essential service to DLC's customers. Furthermore, DLC effectively manages its regulatory risk. Although DLC's customer base is smaller than other electric utility peers and is concentrated in one regulatory jurisdiction, it benefits from numerous credit supportive mechanisms, such as future test years and the distribution system improvement charge (DSIC) rider, which mitigate regulatory lag, allow DLC to recover expenditures in between rate cases, and support its cash flow stability. Furthermore, DLC demonstrated effective management of regulatory risk through the PPUC's approval of its distribution rate settlement at the end of 2018, as the company was able to negotiate a constructive settlement with numerous interveners that was beneficial for its future cash flows (a \$40.5 million net increase to revenues). In addition, the company's business risk benefits from load stability as the electric transmission and distribution (T&D) provider to the City of Pittsburgh.

We assess DLC's financial measures using our low volatility table, which largely reflects our view of the company's low-risk electric T&D operations and its effective management of regulatory risk. Under our base case scenario, we expect FFO to debt to average about 26%-29%. Our base case

Research Update: Duquesne Light Co. Upgraded To 'BBB+' On Revised Group Rating Methodology, Ratings Removed From UCO, Outlook Stable

assumes continued use of existing regulatory mechanisms, the impact of the company's most recent rate case, capital spending that averages about \$330 million annually over the next three years, a dividend policy that enables the company to maintain its debt-to-capitalization ratio at or below its regulatory capital structure, and the refinancing of all debt maturities.

Our assessment of the comparable ratings analysis modifier on the company as negative reflects our holistic view of the company's business risk and financial risk, which we view to be moderately weaker relative to peers with similar stand-alone credit profiles.

Outlook

The stable outlook on DLC reflects our stable outlook on DLH as well as our expectation that DLC will maintain a stand-alone FFO-to-debt ratio of about 26%-29% over our forecast period. The stable outlook on DLH reflects our baseline forecast of parent DLH's consolidated FFO to debt of about 11%-13% over the next few years. Our baseline forecast also includes our expectation that DLC will continue to effectively manage its regulatory risk, thereby supporting consistent operating results and a financial profile for DLH that is in line with expectations at the current ratings.

Downside scenario

Absent a downgrade of DLH, we view a downgrade of DLC as unlikely over the next 24 months. However, a downgrade could result if business risk at DLH increases due to an unexpected increase in nonutility operations or if financial performance at DLH is lower than projected, such that DLH's consolidated FFO to debt is less than 9% for a sustained period. Such deterioration in financial performance could result from inadequate cost recovery or materially large distributions to the company's owners.

Upside scenario

We could upgrade DLC over the next 24 months if we upgrade DLH, which could occur if consolidated cash flow and leverage improve such that DLH maintains consolidated FFO to debt at more than 13% and its business profile remains focused on growing its low-risk electric T&D operations.

Company Description

DLC engages in the supply (through its provider-of-last-resort services), transmission, and distribution of electricity to about 600,000 customers in Southwestern Pennsylvania, inclusive of the City of Pittsburgh. It is owned by DLH, which is a utility holding company based in Pittsburgh that is ultimately owned by Epsom Investment Pte. Ltd. (an affiliate of Singaporean sovereign wealth fund GIC Pte. Ltd., which owns about 44.4% of DLH), Three Rivers Utility Holdings LLC (a company whose members are large Dutch pension fund services provider PGGM Infrastructure Fund and subsidiaries of multinational Manulife Financial Corp., which collectively own 30.4% of DLH), and AIA Energy North America (a fund owned by large Dutch pension manager APG Americas Infrastructure and the California State Teachers' Retirement System, which collectively own 25.2% of DLH).

Liquidity

DLC has adequate liquidity, reflecting our expectation that its liquidity sources will exceed uses by more than 1.1x over the next 12 months, even if EBITDA declines by 10%. Under our stress scenario, we do not expect that DLC would require access to the capital markets during that period to meet its liquidity needs. DLC likely has the ability to absorb a high-impact, low-probability event with limited need for refinancing. Moreover, it has sound relationships with banks, a generally satisfactory standing in the credit markets, and maintains generally prudent risk-management practices.

Principal Liquidity Sources

- FFO of about \$365 million over the next 12 months;
- Credit facility availability of about \$180 million; and
- Minimal cash on hand.

Principal Liquidity Uses

- Capital spending of about \$340 million over the next 12 months; and
- No long-term debt maturities in 2020

Issue Ratings - Recovery Analysis

- We assign recovery ratings to first-mortgage bonds (FMB) issued by U.S. utilities, which can lead us to notch our issue-level ratings above our issuer credit rating on a utility depending on the rating category and the extent of the collateral coverage. The FMBs U.S. utilities issue are a form of secured utility bond (SUB) that qualify for a recovery rating as defined in our criteria (see "Utilities: Collateral Coverage And Issue Notching Rules For '1+' And '1' Recovery Ratings On Senior Bonds Secured By Utility Real Property," published Feb. 14, 2013).
- DLC's FMBs benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue-level rating two notches above the issuer credit rating.

Duquesne Light Company

Update to credit analysis

Summary

Duquesne Light Company's (DLC) credit profile is supported by the company's low risk, stable and predictable regulated transmission and distribution (T&D) business model. The credit profile also considers DLC's position as a subsidiary of privately owned Duquesne Light Holdings, Inc. (DLH). DLC's credit profile has been constrained by a significant level of parent debt at DLH since 2007 when DQE Holdings LLC (DQE) was acquired by a private consortium. The differential in the credit profiles of DLC and DLH reflects the structural subordination of the parent debt compared to the debt at DLC and some ring-fencing provisions at DLC. DLH relies significantly on cash flows from DLC to service its debt and to pay equity distributions to its owners. We note that DLC does not provide a guarantee for either the existing senior unsecured notes or the bank facility at DLH.

The rapid spread of the coronavirus outbreak, severe global economic shock, low oil prices, and asset price volatility are creating a severe and extensive credit shock across many sectors, regions and markets. The combined credit effects of these developments are unprecedented. We regard the coronavirus outbreak as a social risk under our ESG framework, given the substantial implications for public health and safety. We expect DLC to be relatively resilient to recessionary pressures related to the coronavirus because of its fully rate regulated operations. However we are monitoring customer usage declines, utility bill payment delinquency, and the regulatory response to counter any negative impacts on earnings and cash flow. The effects of the pandemic could result in financial metrics that are temporarily weaker than expected but not reflective of the companies' core operations or long-term financial or credit profile.

Exhibit 1
Historical CFO Pre-WC, Total Debt and CFO Pre-WC to Debt(\$MM)

Source: Moody's Investors Service

Credit strengths

- » Approximately \$2 billion distribution rate base and \$630 million transmission rate base utility operating in the credit supportive Pennsylvania regulatory environment
- » Strong financial metrics on a stand-alone basis

Credit challenges

- » Heavily levered parent company
- » Primary subsidiary supporting the parent company's financial standing

Rating outlook

DLC's stable outlook recognizes the regulated, predictable nature of its T&D operations, continued strong financial metrics, and no significant changes to the capital structure. It also reflects our expectation that DLC's regulatory jurisdiction will remain credit supportive.

Factors that could lead to an upgrade

- » Significant deleveraging of the parent such that holding company debt is below 40% of consolidated debt, alleviating pressure on DLC's cash flow and obligation to support parent debt
- » Cash flow from operations pre-working capital (CFO pre-WC) to debt sustained above 25%
- » A material improvement of the utility's regulatory environment, further shortening regulatory lag and positively impacting its financial profile

Factors that could lead to a downgrade

- » A significant increase in parent level debt
- » Parent company's cash needs lead to an increase in the level of dividends from DLC
- » A deterioration in credit metrics such that the CFO pre-WC to debt ratio is sustained below 20%
- » Regulatory jurisdiction becomes less credit supportive such that regulatory lag increases or cost recovery is negatively affected

Key indicators

Profile

Duquesne Light Company (DLC, A3 stable) is a regulated electric transmission and distribution (T&D) utility subsidiary of Duquesne Light Holdings (DLH, Baa3 stable). DLC serves approximately 600,000 residential, commercial, and industrial customers in

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody's.com for the most updated credit rating action information and rating history.

southwestern Pennsylvania, including Pittsburgh. Residential customers account for about 90% of total customers. DLC's operations are subject to purview of the Pennsylvania Public Utility Commission (PUC) and the Federal Energy Regulatory Commission (FERC).

DLH is a wholly owned subsidiary of DQE Holdings LLC (Not Rated). DQE Holdings is privately owned by a consortium of institutional investors.

Detailed credit considerations**Supportive regulatory environment in Pennsylvania**

We view the regulatory environment in Pennsylvania for transmission and distribution (T&D) utilities as credit supportive, with regulatory mechanisms that allow T&D utilities to recover investment costs on a timely basis and earn reasonable returns.

Legislative initiatives that have worked to improve DLC's regulatory framework include the Distribution System Improvement Charge (DSIC). Established in 2012, the DSIC is a recovery mechanism for investment costs related to the repair, improvement, and replacement of infrastructure. The DSIC is designed to provide timely recovery of reasonable costs incurred to execute the company's Long Term Infrastructure Improvement Plan (LTIP), a credit positive as it helps reduce regulatory lag for infrastructure spending. The LTIP reflects DLC's plan to improve, repair and replace aging distribution infrastructure to enhance efficiency and reliability of service for customers. DLC's last LTIP was approved in September 2016 and is expected to be in effect until 2022.

DLC has little commodity risk as a result of deregulation in Pennsylvania. As a wires only utility, DLC provides power through a Default Service Plan (DSP) for those customers who do not choose another power provider. DLC procures the power to meet customer needs through a competitive Provider of Last Resort (POLR) auction process. The POLR auction process places volume and price risk onto third party generators. This eliminates cash flow volatility related to changes in commodity prices and the differences in purchased volume and usage, a credit positive.

In December 2018, DLC received final approval from the PUC for its distribution rate case settled in September 2018. The rate case was filed by the company in March 2018. The approved settlement was for a revenue increase of \$40.5 million, about half of the utility's request. The settlement also included a provision rolling \$52.2 million in annual surcharge revenue into base revenue and a one-time \$24 million refund to customers through the first quarter of 2019 related to tax reform. The settlement did not specify an allowed return on equity (ROE) or equity layer, as is often the case in Pennsylvania.

We expect DLC to spend approximately \$350-\$400 million per year in capital investments over the next two years. This level of spending compares to about \$350 million in capex in 2019 and 2018 and a much lower historical average before then of approximately \$250 million. Drivers of the utility's elevated capital spending include the expansion of its transmission system capacity in its service

territory due to the planned retirement of several nearby power plants. DLC has approval to earn a return on construction work in progress (CWIP) on the transmission expansion projects and also to recover investments made in the event that the projects are not needed if power plant closures do not occur as planned.

The company's capital investment plan also includes a new substation to support growth in the Oakland neighborhood of its service territory. Capital expenditures on DLC's distribution system may be added to rate base upon the filing of a distribution rate case or DSIC with the PUC. Capital investment in the transmission system is added to rate base annually through the company's Federal Energy Regulatory Commission (FERC) approved filing.

Strong financial metrics on a stand-alone basis

Historically, DLC's credit profile has been supported by strong credit metrics and we expect the company to maintain a strong financial profile. For the last three years ended 2019, DLC's CFO pre-WC to debt and interest coverage ratios averaged 26.1% and 6.7x, respectively. For the twelve months ended 31 March 2020, DLC's CFO pre-WC to debt and interest coverage ratios were 23.0% and 6.7x respectively. The lower CFO pre-WC to debt ratio was driven by higher short term debt as a result of the company's effort to bolster its liquidity in response to market uncertainty due to the coronavirus pandemic, by drawing the full \$250 million available under its revolving credit facility.

We expect 2020 credit metrics to be temporarily lower than historical levels due to the impact of the coronavirus pandemic. In addition to working with regulators to recover some pandemic associated costs, we expect DLC to use other avenues, such as O&M improvements, to offset some of these costs. We also expect dividends to be managed to achieve the utility's targeted capital structure. We project DLC's key financial metrics to be in the low-to-mid twenty percent range for CFO pre-WC to debt and between 6.5x - 7.0x for interest coverage over the next two years.

Parent level constraints

The DLH corporate family is characterized by high financial leverage at the parent holding company, which is a major constraint on DLH's credit profile. Approximately 53% of total reported debt was at the parent level as of 31 March 2020. Through the refinancing and repayment of debt, DLH has reduced the level of parent debt materially over the last few years. However, we see holding company debt maintained around 55% over the next two years, with new borrowings primarily at the parent. Over the last three years, the dividend payout ratio for DLC averaged approximately 65%. DLH's ownership group has demonstrated a willingness to forego dividends to preserve the financial health of the utility and we expect that dividends out of DLC will be moderated as needed during the next few years of high capital spending.

DLH has a small fiber optics and telecommunications business, DQE Communications, LLC, currently representing about 6% of the company's consolidated EBITDA. In June 2019, DLH acquired The Efficiency Network, Inc. (TEN), a provider of customized energy solutions for large organizations. TEN generated less than 1% of DLH's 2019 EBITDA but helps to position DLH to better meet the energy efficiency and sustainability goals of its customers. We anticipate that DLH will approach the growth of non-utility operations conservatively such that they do not become a strain on the less risky T&D business.

ESG considerations

Environmental considerations incorporated into our credit analysis for DLC are primarily related to the company's exposure to carbon regulations. As a T&D utility, DLC owns no generation and as such has much lower carbon transition risk than vertically integrated utility peers. All commodity costs associated with power procurement for customers are fully passed through to customers.

Social risks are primarily related to demographic trends, safety, customer and regulatory relations. To help support customers financially affected by the coronavirus pandemic, DLC has discontinued shutoff activities and has been waiving late fees since March 2020. The utility also increased the size of its bill payment assistance fund and expanded customer eligibility for payment assistance.

Corporate governance considerations, including financial policy and risk management, are key to managing the company's environmental and social risk. DLH's owners have demonstrated a credit supportive willingness to forego dividends during times of high capital spending or reduced cash flows to help preserve the utility's credit quality.

Liquidity analysis

We expect DLC to maintain an adequate liquidity profile over the next 12-18 month horizon.

As of 31 March 2020, DLC reported \$225 million of cash on hand. DLH and DLC have a combined revolving credit facility borrowing capacity of \$500 million (\$250 million at DLH and \$250 million at DLC), each with a maturity date in October 2024. Both entities have the ability to increase the size of their respective credit facilities by up to \$50 million. At 31 March 2020, DLC had borrowed the full amount available under its revolving credit facility to strengthen its liquidity in response to the coronavirus related capital markets uncertainty.

DLC also has in place a PUC approved affiliated interest agreement which makes up to \$200 million available to the utility at market rates from DLH. There was \$167 million borrowed under this agreement at 31 March 2020.

DLC and DLH's facilities do not have material adverse event clauses for new borrowings. However, the DLH revolving credit facility is subject to cross default if it or any of its subsidiaries default on interest or principal payments exceeding \$50 million in aggregate. Also, DLC and DLH are subject to financial covenants that require a maximum debt-to-capitalization ratio of 65% and 70% respectively. Both entities were in compliance with these covenants as of 31 March 2020.

DLC's next long term debt maturity is in 2042.

Duquesne Light Co.

Credit Highlights

Overview

Key strengths

Lower-risk, rate-regulated electric transmission and distribution operations in Pennsylvania, including from Pittsburgh.

The company effectively manages its regulatory risk under a generally constructive regulatory framework.

Several regulatory mechanisms, including future test years and a distribution system improvement charge rider, help mitigate regulatory lag and support credit measures.

Our view of Duquesne Light Co. (DLC) as an insulated subsidiary of its parent Duquesne Light Holdings Inc. (DLH) allows us to rate DLC one notch above DLH.

Key risks

A lack of regulatory diversity makes the company dependent on the Pennsylvania Public Utility Commission to sustain its credit quality.

Forecast negative discretionary cash flow indicates future external funding needs.

S&P Global Ratings expects Duquesne Light Co. (DLC) to effectively manage regulatory risk, bolstering its business risk profile. The company benefits from numerous regulatory mechanisms under a generally constructive regulatory environment in Pennsylvania. However, the company's lack of regulatory diversity makes it dependent on the Pennsylvania Public Utility Commission (PPUC) to sustain its credit quality.

There is some potential for regulatory lag due to COVID-19. DLC does not have a revenue decoupling mechanism and derives about 40% of its distribution revenue from more cyclical commercial and industrial (C&I) customers, which have been hurt throughout the pandemic. Although residential sales, which make up most of the company's margins, did help offset the company's C&I load declines, we still expect its funds from operations (FFO) for fiscal year 2020 to be hampered due to the COVID-19 pandemic. This being said, we expect the company's financial measures to remain within the modest financial risk profile category, with FFO to debt averaging 23%-26% throughout our forecast period.

Although the company is ultimately owned by a small number of investors, this does not directly affect our ratings because none of the owners are controlling shareholders. The company's ultimate owners are large and stable funds with long-term investment horizons and we do not expect any material deviations from currently implemented financial policies or governance arrangements.

We view DLC as a core insulated subsidiary of Duquesne Light Holdings (DLH). The cumulative value of the structural and regulatory protections that insulate DLC from DLH, combined with the strength of DLC's stand-alone credit profile, allow us to rate DLC one notch above DLH.

Outlook: Stable

The stable outlook on DLC reflects our stable outlook on DLH, as well as our expectation that DLC will maintain a stand-alone FFO-to-debt ratio of about 23%-26% over our forecast period. The stable outlook on DLH reflects our baseline forecast of parent DLH's consolidated FFO to debt of about 11%-13% over the next few years. Our baseline forecast also includes our expectation that DLC will continue to effectively manage its regulatory risk, thereby supporting consistent operating results and a financial profile for DLH that is in line with expectations at the current rating.

Downside scenario

Absent a downgrade of DLH, we view a downgrade of DLC as unlikely over the next 24 months. However, a downgrade could result if:

- DLH's business risk increases due to an unexpected increase in nonutility operations.
- DLH's financial performance is lower than projected, such that its consolidated FFO to debt is less than 9% for a sustained period. Such deterioration in financial performance could result from inadequate cost recovery or materially large distributions to the company's owners.

Upside scenario

We could upgrade DLC over the next 24 months if we upgrade DLH, which could occur if:

- Consolidated cash flow and leverage improve such that DLH maintains consolidated FFO to debt at more than 13% while its business profile remains focused on growing its low-risk electric transmission and distribution (T&D) operations.

Our Base-Case Scenario

Assumptions

- Continued use of existing regulatory mechanisms;
- Sales load decline in 2020 stemming from the COVID-19 pandemic;
- Capital spending that averages about \$380 million annually;
- A dividend policy that enables the company to maintain its debt to capitalization ratio close to its current level;
- Negative discretionary cash flow; and
- All debt maturities are assumed to be refinanced.

Key Metrics

	2019a	2020e	2021f
FFO to debt (%)	28.3	22-25	22-25
Debt to EBITDA (x)	2.8	3.0-3.5	3.0-3.5
OCF to debt (%)	25.7	17-20	21-24

a--Actual. e--Estimate. f--Forecast. FFO--Funds from operations. OCF--Operating cash flow.

Company Description

DLC engages in the supply (through its provider-of-last-resort services), transmission, and distribution of electricity to about 600,000 customers in Southwestern Pennsylvania, including Pittsburgh. Its parent DLH is a utility holding company based in Pittsburgh that is ultimately owned by Epsom Investment Pte. Ltd. (an affiliate of Singaporean sovereign wealth fund GIC Pte. Ltd., which owns about 44.4% of DLH), Three Rivers Utility Holdings LLC (a company whose members are large Dutch pension fund services provider PGGM Infrastructure Fund and subsidiaries of multinational Manulife Financial Corp., which collectively own 30.4% of DLH), and AIA Energy North America (a fund that is owned by large Dutch pension manager APG Americas Infrastructure and the California State Teachers' Retirement System, which collectively own 25.2% of DLH).

Business Risk: Excellent

We base our business risk assessment for DLC's electric T&D operations, which are low risk and provide an essential service to its customers, as well as the company's effective management of its regulatory risk. Although DLC's customer base is smaller than other electric utility peers and is concentrated in one regulatory jurisdiction, it benefits from numerous credit-supportive mechanisms, such as future test years and the distribution system improvement charge rider, which mitigate regulatory lag, allow DLC to recover expenditures in between rate cases, and support its cash flow stability. This being said, DLC does not have a revenue decoupling mechanism and derives about 40% of its distribution revenue from more cyclical C&I customers, which have been hurt throughout the pandemic. However, the company's business risk benefits from load stability as the electric T&D provider to Pittsburgh, and residential sales, which make up most of the company's margins, did offset the company's C&I load declines.

Financial Risk: Modest

We assess DLC's financial measures using our low volatility table, which reflects our view of its low-risk electric T&D operations and its effective management of regulatory risk. Under our base-case scenario, we expect FFO to debt to average about 23%-26%, which is consistent with a modest financial risk profile. Our base case assumes continued use of existing regulatory mechanisms, sales load decline in 2020 stemming from the COVID-19 pandemic, capital spending that averages about \$380 million annually, a dividend policy that enables the company to maintain its debt-to-capitalization ratio near its current level, negative discretionary cash flow, and refinance all debt maturities. Our assessment of the comparable ratings analysis modifier on the company as negative reflects our holistic view of

the company's business risk and financial risk, which we view to be moderately weaker relative to peers with similar stand-alone credit profiles.

Liquidity: Adequate

DLC has adequate liquidity, reflecting our expectation that liquidity sources will exceed uses by more than 1.1x over the next 12 months, even if EBITDA declines 10%. Under our stress scenario, we do not expect that DLC would require access to the capital markets during that period to meet its liquidity needs. DLC likely could absorb a high-impact, low probability event with limited need for refinancing. Moreover, it has sound relationships with banks, a generally satisfactory standing in the credit markets, and maintains generally prudent risk management practices.

Principal liquidity sources	Principal liquidity uses
<ul style="list-style-type: none"> • FFO of about \$350 million over the next 12 months; and • Credit facility availability of about \$250 million. 	<ul style="list-style-type: none"> • Capital spending of about \$420 million over the next 12 months; and • Dividends of about \$50 million.

Covenant Analysis

Compliance expectations

- We expect the company to maintain cushion under the leverage ratio covenants in its credit agreements.

Requirements

- DLC's revolving credit agreement contains a maximum leverage ratio covenant of 65% (as defined in the relevant documents).

Environmental, Social, And Governance

DLC's exposure to environmental risk is limited compared to peers, reflecting its lower-risk electric T&D network utility operations. Furthermore, no social factors have had a material impact on the rating, although the affordability of steadily increasing rates could be a future risk and the company will need to continue to comply with very high standards in relation to security given the nature of its utility business. Nevertheless, DLC's internal safety system has enabled it to effectively provide T&D services to its customers throughout its history.

Governance factors are neutral. Although the company has a small number of ultimate owners, none of them have a controlling interest in the company's parent. Furthermore, DLH has a board of directors that is largely independent from management and, in our view, is capably engaged in risk oversight on behalf of all stakeholders.

Group Influence

We assess DLC as a core subsidiary of DLH because it is highly unlikely to be sold, is integral to the overall group strategy, is successful at what it does, possesses the strong long-term commitment from parent management, is a significant contributor to the group, operates as a profit center of the group, and is closely linked to the parent's name and reputation.

Furthermore, we rate DLC one notch higher than DLH's 'bbb' group credit profile because of the strength of DLC's stand-alone credit profile and the cumulative value of structural and regulatory protections in place that insulate it from DLH.

Key insulating measures include:

- DLC's distribution business is independently regulated by the PPUC and its transmission business is independently regulated by the Federal Energy Regulatory Commission;
- DLC holds itself out as a separate entity from DLH;
- DLC has its own funding arrangements including issuing its own long-term debt and has a separate committed credit facility to cover its short-term funding needs;
- DLC has no significant operational dependence on other group entities;
- DLC maintains its own records;
- DLC does not commingle funds, assets, or cash flows with the rest of the DLH group;
- DLC's financial performance is independent of DLH;
- We believe there is a strong economic basis for DLH to preserve DLC's credit strength due to DLC's low-risk, profitable, and regulated operations that make up the vast majority of DLH's operations;
- DLC is a regulated utility with a regulatory capital structure; and
- There are no cross-default provisions between DLC and DLH that imply that a default at DLH would lead to a default at DLC, which supports our opinion that a default at DLH would not directly lead to a default at the company.

Issue Ratings - Recovery Analysis

We assign recovery ratings to first-mortgage bonds (FMB) issued by U.S. utilities, which can lead us to notch our issue-level ratings above our issuer credit rating on a utility depending on the rating category and the extent of the collateral coverage. The FMBs U.S. utilities issue are a form of secured utility bond that qualify for a recovery rating as defined in our criteria (see "Utilities: Collateral Coverage And Issue Notching Rules For '1+' And '1' Recovery Ratings On Senior Bonds Secured By Utility Real Property," published Feb. 14, 2013).

DLC's FMBs benefit from a first-priority lien on substantially all of the utility's real property owned or subsequently acquired. Collateral coverage of more than 1.5x supports a recovery rating of '1+' and an issue-level rating two notches

above the issuer credit rating.

Duquesne Light Holdings, Inc.

Update to credit analysis

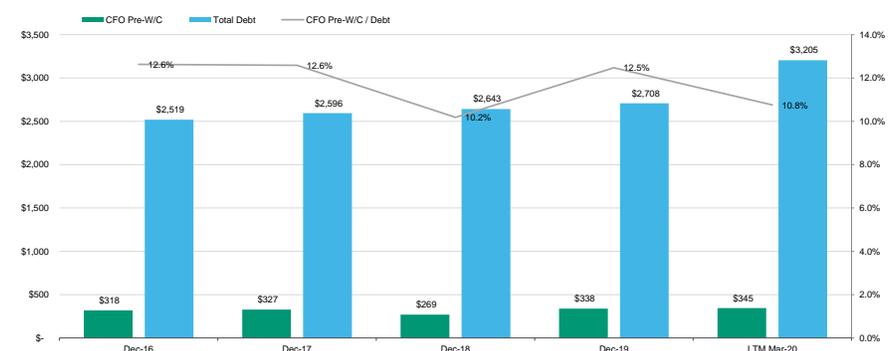

Summary

Our credit view of Duquesne Light Holdings, Inc. (DLH) considers the low risk transmission and distribution (T&D) operations of its primary subsidiary Duquesne Light Company (DLC). DLH's credit profile is constrained by a sizable amount of debt at the parent level and weak credit metrics. Approximately 53% of reported total consolidated debt is at the parent level and is structurally subordinated to the debt at DLC. DLH relies greatly on cash flows from DLC to meet its significant debt service obligations and dividends. We note that DLC does not provide a guarantee to either the existing senior unsecured notes or the bank facility at DLH.

The rapid spread of the coronavirus outbreak, severe global economic shock, low oil prices, and asset price volatility are creating a severe and extensive credit shock across many sectors, regions and markets. The combined credit effects of these developments are unprecedented. We regard the coronavirus outbreak as a social risk under our ESG framework, given the substantial implications for public health and safety. We expect DLH to be relatively resilient to recessionary pressures related to the coronavirus because of its predominantly rate regulated operations. However we are monitoring customer usage declines, utility bill payment delinquency, and the regulatory response to counter any negative impacts on earnings and cash flow at DLC. The effects of the pandemic could result in financial metrics that are temporarily weaker than expected but not reflective of the core operations or long-term financial or credit profile.

Exhibit 1

Historical CFO Pre-WC, Total Debt and CFO Pre-WC to Debt (\$ MM)

Source: Moody's Financial Metrics

Credit strengths

- » Supportive regulatory environment for utility subsidiary
- » Approximately \$2 billion distribution rate base and \$630 million transmission rate base utility subsidiary with strong financial profile

Credit challenges

- » Continued high level of parent debt and weak coverage metrics
- » Heavy dependence on utility cash flow

Rating outlook

DLH's stable outlook incorporates our expectation that leverage at the DLH parent company level will not increase significantly, and that the more predictable regulated operations of DLC will remain DLH's primary business. Also, we expect DLH to maintain its cash flow from operations pre-working capital (CFO pre-WC) to debt ratio in the low teens range.

Factors that could lead to an upgrade

- » A rating upgrade could be considered with significant deleveraging of the parent such that holding company debt falls below 40% of total debt, which could cause a narrowing of the ratings notching between DLH and DLC. Additionally, an upgrade could be possible with an improvement in credit metrics such that the ratio of CFO pre-WC to debt is sustained above 15% on a consolidated basis.

Factors that could lead to a downgrade

- » A rating downgrade could be considered if parent company leverage increases or if DLH materially increases its unregulated operations. A downgrade could also be possible if cash flow deteriorates, or CFO pre-WC to debt declines to 11% or lower on a sustained basis.

Profile

Duquesne Light Holdings, Inc. (DLH, Baa3 stable) is an intermediate holding company headquartered in Pittsburgh Pennsylvania. Its principal subsidiary, Duquesne Light Company (DLC, A3 stable), is a regulated electric transmission and distribution company, serving approximately 600,000 primarily residential (90%), commercial and industrial customers in and around the city of Pittsburgh and southwestern Pennsylvania. DLH additionally has two small non-utility subsidiaries, DQE Communications, which owns, operates, and maintains a high-speed, fiber based network in southwestern Pennsylvania and The Efficiency Network, Inc. (TEN), a provider

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody.com for the most updated credit rating action information and rating history.

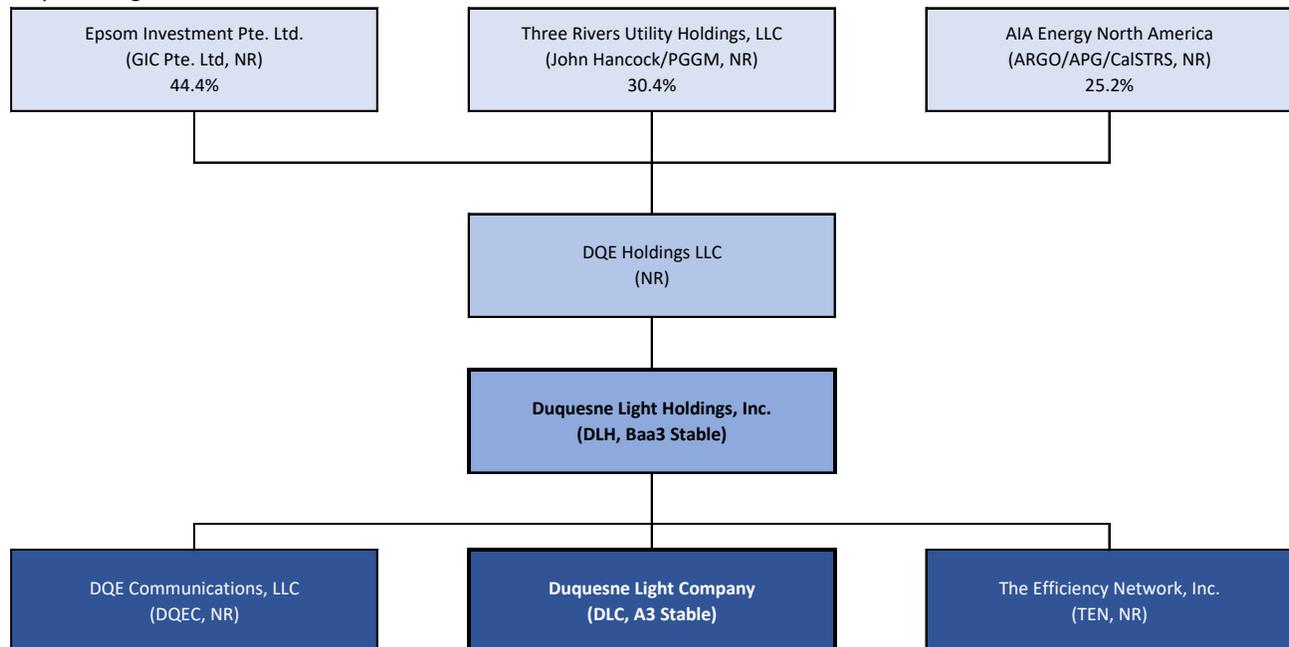

of customized energy solutions for large organizations. DQE Communications and TEN represented about 6% and 1% of DLH's consolidated 2019 EBITDA, respectively.

DLC's operations are subject to the purview of the Public Utility Commission of Pennsylvania (PUC) and the Federal Energy Regulatory Commission (FERC).

Since 2007, DLH has been a wholly owned subsidiary of DQE Holdings LLC (Not Rated). DQE Holdings is privately owned by a consortium institutional investors.

Exhibit 3

Duquesne Organizational Chart

Source: Duquesne Light Holdings

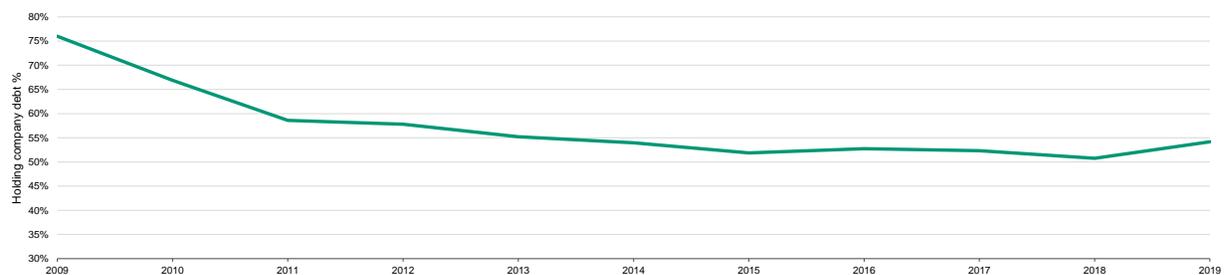

Detailed credit considerations

Significant holding company debt

The DLH corporate family is characterized by high financial leverage at the parent company, which acts as a major constraint on DLH's credit profile. The wide differential between the credit profiles of DLH and utility subsidiary DLC reflects both the sizeable amount of holding company debt, with approximately 53% of consolidated reported debt at the holding company level as of 31 March 2020 and, to a lesser degree, the modest amount of unregulated non-utility business activities. These unregulated activities are primarily related to a small fiber optics and telecommunications business, which accounts for about 6% of the company's consolidated EBITDA.

Since 2007, when DQE Holdings was acquired by a private equity consortium and levered up at the DLH level, DLH has made a material effort to reduce the amount of holding company debt. In 2009, approximately 76% of reported total consolidated debt was at the holding company level. Parent company debt was meaningfully reduced to 55% by the end of 2013 and has stayed between 50% and 55% since, reaching a low of 51% at the end of 2018. We expect holding company debt to be maintained close to 55% of total debt over the next two years.

Exhibit 4

Holding company debt has declined over time but remains high

Source: Moody's Investors Service

Supportive regulatory environment for primary subsidiary DLC

We view the regulatory environment in Pennsylvania for T&D utilities as credit supportive, with regulatory mechanisms that allow T&D utilities to recover investment costs on a timely basis and earn reasonable returns.

Legislative initiatives that have worked to improve DLC's regulatory framework include the Distribution System Improvement Charge (DSIC). Established in 2012, the DSIC is a recovery mechanism for investment costs related to the repair, improvement, and replacement of infrastructure. The DSIC is designed to provide timely recovery of reasonable costs incurred to execute the company's Long Term Infrastructure Improvement Plan (LTIP), a credit positive as it helps reduce regulatory lag for infrastructure spending. The LTIP reflects DLC's plan to improve, repair and replace aging distribution infrastructure to enhance efficiency and reliability of service for customers. DLC's last LTIP was approved in September 2016 and is expected to be in effect until 2022.

DLC has little commodity risk as a result of deregulation in Pennsylvania. As a wires only utility, DLC provides power through a Default Service Plan (DSP) for those customers who do not choose another power provider. DLC procures the power to meet customer needs through a competitive Provider of Last Resort (POLR) auction process. The POLR auction process places volume and price risk onto third party generators. Thus, DLC eliminates the cash flow volatility related to changes in commodity prices and the differences in purchased volume and usage, a credit positive.

In December 2018, DLC received final approval from the PUC for its distribution rate case settled in September 2018. The rate case was filed by the company in March 2018. The approved settlement was for a revenue increase of \$40.5 million, about half of the utility's request. The settlement also includes a provision rolling \$52.2 million in annual surcharge revenue into base revenue and a one-time \$24 million refund to customers through the first quarter of 2019 related to tax reform. The settlement did not specify an allowed return on equity (ROE) or equity layer, as is often the case in Pennsylvania.

We expect DLC to spend approximately \$350-\$400 million per year in capital investments over the next two years. This level of spending compares to about \$350 million in capex in 2019 and 2018 and a much lower historical average before then of approximately \$250 million. Drivers of the utility's elevated capital spending include the expansion of its transmission system capacity in its service territory due to the planned retirement of several nearby power plants. DLC has approval to earn a return on construction work in progress (CWIP) on the transmission expansion projects and to also recover investments made in the event that the projects are not needed if power plant closures do not occur as planned.

The company's capital investment plan also includes a new substation to support growth in the Oakland neighborhood of its service territory. Capital expenditures on DLC's distribution system may be added to rate base upon the filing of a distribution rate case or DSIC with the PUC. Capital investment in the transmission system is added to rate base annually through the company's Federal Energy Regulatory Commission (FERC) approved filing.

Weak financial profile

For the last three years ended 2019, DLH's CFO pre-WC to debt and interest coverage ratios have been weak, averaging about 11.8% and 3.2x, respectively. For the last twelve months (LTM) ending 31 March 2020, the ratio of CFO pre-WC was 10.8% due to a higher debt balance as financial market uncertainty related to the coronavirus drove the company to draw down the full \$500 million

available under the DLC and DLH revolving credit facilities to bolster liquidity. We project the CFO pre-WC to debt ratio to be in the 11-13% range over the next two years.

DLC's strong financial performance continues to support DLH's credit profile. For the last three years ended 2019, DLC's CFO pre-WC to debt and interest coverage ratios averaged 26.1% and 6.7x, respectively. For the twelve months ended 31 March 2020, DLC's CFO pre-WC to debt and interest coverage ratios were 23.0% and 6.7x respectively. We project DLC's key financial metrics to be in the low-to-mid twenty percent range for CFO pre-WC to debt and between 6.5x - 7.0x for interest coverage over the next two years.

DLH's ownership group has demonstrated a willingness to forego dividends to preserve the financial health of the company. DLH's dividend payouts in 2018 and 2019 were 43% and 23% respectively, significantly lower than historical levels of 100% or higher, following the passage of tax reform and to support higher capital spending. We expect that dividends out of DLC and DLH will be moderated as needed to achieve the companies' targeted capital structure and maintain credit quality.

DLH has a small fiber optics and telecommunications business, DQE Communications, LLC. It currently represents about 6% of the company's consolidated EBITDA. In June 2019, DLH acquired The Efficiency Network, Inc. (TEN) a provider of customized energy solutions for large organizations. TEN generated less than 1% of DLH's 2019 EBITDA but helps to position DLH to better meet the energy efficiency and sustainability goals of its customers. We anticipate that DLH will approach the growth of non-utility operations conservatively such that they do not become a strain on the less risky T&D business.

ESG considerations

Environmental considerations incorporated into our credit analysis for DLH are primarily related to the company's exposure to carbon regulations. As a T&D utility, DLH's primary subsidiary DLC owns no generation and therefore has much lower carbon transition risk than vertically integrated utility peers. All commodity costs associated with power procurement for customers are fully passed through to customers.

Social risks are primarily related to demographic trends, safety, customer and regulatory relations. To help support customers financially affected by the coronavirus pandemic, DLC has discontinued shutoff activities and has been waiving late fees since March 2020. The utility also increased the size of its bill payment assistance fund and expanded customer eligibility for payment assistance.

Corporate governance considerations, including financial policy and risk management, are key to managing the company's environmental and social risk. DLH's owners have demonstrated a credit supportive willingness to forego dividends during times of high capital spending or reduced cash flow to help preserve the utility's credit quality.

Liquidity analysis

We expect DLH to maintain an adequate, albeit strained, liquidity profile over the next 12-18 months given upcoming debt maturities.

As of 31 March 2020, DLH reported about \$447 million of cash on hand. DLH and DLC have a combined revolving credit facility borrowing capacity of \$500 million (\$250 million at DLH and \$250 million at DLC), each with a maturity date in October 2024. Both entities have the ability to increase the size of their respective credit facilities by up to \$50 million each. As of 31 March 2020, DLC and DLH had borrowed the full amount available under their revolving credit facilities to strengthen its liquidity in response to the coronavirus related capital markets uncertainty.

DLC also has in place a PUC approved affiliated interest agreement which makes up to \$200 million available to the utility at market rates from DLH. There was \$167 million outstanding under this agreement at 31 March 2020.

DLC and DLH's facilities do not have material adverse event clauses for new borrowings. However, the DLH revolving credit facility is subject to cross default if it or any of its subsidiaries default on interest or principal payments exceeding \$50 million in aggregate. Also, DLC and DLH are subject to financial covenants that require a maximum debt-to-capitalization ratio of 65% and 70% respectively. Both entities were in compliance with these covenants as of 31 March 2020.

DLH has a \$250 million 364-day term loan due in April 2021, a \$150 million term loan due in June 2021 and \$350 million of unsecured notes due in December 2021.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$2,700,000. MCO and Moody's investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY125,000 to approximately JPY250,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

Credit Highlights

Overview

Key strengths	Key risks
The vast majority of Duquesne Light Holdings Inc.'s (DLH's) cash flows are derived from lower-risk, rate-regulated electric transmission and distribution operations in Pennsylvania, including from Pittsburgh.	A lack of regulatory diversity makes the company dependent on the Pennsylvania Public Utility Commission to sustain its credit quality.
The company effectively manages its regulatory risk under a generally constructive regulatory framework.	DLH's higher-risk fiber optics business, which is subject to competitive market forces, contributes about 5%-10% of consolidated EBITDA.
Several regulatory mechanisms, including future test years and a distribution system improvement charge rider, help mitigate regulatory lag and support credit measures.	Forecast negative discretionary cash flow indicates future external funding needs.
	Forecast credit measures indicate an aggressive financial risk profile.

S&P Global Ratings expects Duquesne Light Holdings (DLH) to effectively manage regulatory risk, bolstering its business risk profile. The company benefits from numerous regulatory mechanisms under a generally constructive regulatory environment in Pennsylvania. However, the company's lack of regulatory diversity makes it dependent on the Pennsylvania Public Utility Commission (PPUC) to sustain its credit quality.

There is some potential for regulatory lag due to COVID-19. DLH does not have a revenue decoupling mechanism and derives about 40% of its distribution revenue from more cyclical commercial and industrial (C&I) customers, which have been hurt throughout the pandemic. Although residential sales, which make up most of the company's margins, did offset the company's C&I load declines, we still expect its funds from operations (FFO) for fiscal year 2020 to be hampered due to the COVID-19 pandemic. This being said, we expect the company's financial measures to remain within the aggressive financial risk profile category, with FFO to debt averaging 11%-13% throughout the forecast period.

We view the company's fiber-optics business as riskier than its utility operations. The company's fiber optics business is subject to competitive market forces that could introduce volatility to its credit metrics, though the proportion of this business to the consolidated company is limited (about 5%-10% of EBITDA). In the company's latest debt offering, it announced that it was considering a strategic review of this business. We continue to monitor the developments surrounding this strategic review, as well how may affect the company's credit quality.

Although the company is owned by a small number of investors, this does not directly affect our rating because none of the owners are controlling shareholders. Furthermore, the company's owners are large and stable funds with long-term investment horizons and we do not expect any material deviations from currently implemented financial policies or governance arrangements.

Outlook: Stable

The stable outlook on Pittsburgh-based DLH reflects our baseline forecast of DLH's consolidated FFO to debt of about 11%-13% over the next few years. Our baseline forecast also includes our expectation that DLH will continue to effectively manage its regulatory risk, thereby supporting consistent operating results and a financial profile that's in line with expectations at the current rating.

Downside scenario

A downgrade could result over the next 12 months if:

- Business risk increases due to an unexpected increase in nonutility operations.
- Financial performance is lower than projected, such that DLH's FFO to debt is less than 9% for a sustained period. Such deterioration in financial performance could result from inadequate cost recovery or materially large distributions to the company's owners.

Upside scenario

We could raise the rating on DLH over a similar period if:

- Cash flow and leverage improve such that DLH maintains FFO to debt at more than 13% while its business profile remains focused on its growing low-risk electric transmission and distribution (T&D) operations.

Our Base-Case Scenario

Assumptions

- Continued use of existing regulatory mechanisms;
- Load decline in 2020 stemming from the COVID-19 pandemic;
- Capital spending that averages about \$400 million annually;
- A dividend policy that enables the company to maintain its debt to capitalization ratio close to its current level;
- Negative discretionary cash flow; and
- All debt maturities are assumed to be refinanced.

a--Actual. e--Estimate. f--Forecast. FFO--Funds from operations.

Company Description

DLH is a utility holding company based in Pittsburgh that is ultimately owned by Epsom Investment Pte. Ltd. (an affiliate of Singaporean sovereign wealth fund GIC Pte. Ltd., which owns about 44.4% of DLH), Three Rivers Utility Holdings LLC (a company whose members are large Dutch pension fund services provider PGGM Infrastructure Fund and subsidiaries of multinational Manulife Financial Corp., which collectively own 30.4% of DLH), and AIA Energy North America (a fund that is owned by large Dutch pension manager APG Americas Infrastructure and the California State Teachers' Retirement System, which collectively own 25.2% of DLH).

Through its electric utility subsidiary Duquesne Light Co. (DLC) (about 90%-95% of consolidated EBITDA), DLH engages in the supply (through its provider-of-last-resort services), transmission, and distribution of electricity to about 600,000 customers in Southwestern Pennsylvania, including Pittsburgh. In addition, DLH's subsidiary DQE Communications LLC (about 5%-10% of EBITDA) owns, operates, and maintains a high-speed fiber optic-based metropolitan network, leases dark fiber, and provides managed ethernet and internet services to commercial, industrial, governmental, and academic customers.

Business Risk: Excellent

We base our business risk assessment for DLH on its operations through DLC, as these operations make up most of DLH's business. DLC's electric T&D operations are low risk and provide an essential service to its customers. Furthermore, it effectively manages its regulatory risk. Although DLC's customer base is smaller than other electric utility peers and is concentrated in one regulatory jurisdiction, it benefits from numerous credit supportive mechanisms, such as future test years and the distribution system improvement charge rider, which mitigate regulatory lag, allow DLC to recover expenditures in between rate cases, and support its cash flow stability. This being said, DLC does not have a revenue decoupling mechanism and derives about 40% of its distribution revenue from more cyclical C&I customers, which have been hurt throughout the pandemic. However, the company's business risk benefits from load stability as the electric T&D provider to Pittsburgh, and residential sales make up most of the company's margins, offsetting the company's C&I load declines.

DLH's fiber optics business introduces some risk to the company. This reflects our view that the business is subject to competitive market forces, and the recoverability of costs for these operations is less certain compared to DLH's regulated utility business. Overall DLH's fiber optics business could introduce volatility to its cash flows. However, the relative size of this business, which accounts for about 5%-10% of DLH's consolidated EBITDA, partially mitigates its

relative risk in relation to DLH, and hence, is not the primary focus of our business risk assessment for DLH.

Financial Risk: Aggressive

We assess DLH's financial measures using our medial volatility table, which largely reflects our view of the company's low-risk electric T&D operations and its effective management of regulatory risk. Under our base-case scenario, we expect FFO to debt to average about 11%-13%, which is consistent with an aggressive financial risk profile. Our base case assumes continued use of existing regulatory mechanisms, load decline in 2020 stemming from the COVID-19 pandemic, capital spending that averages about \$400 million annually, a dividend policy that enables the company to maintain its debt-to-capitalization ratio near its current level, negative discretionary cash flow, and the refinancing of all debt maturities.

Liquidity: Adequate

DLH has adequate liquidity, reflecting our expectation that the company's liquidity sources will exceed uses by more than 1.1x over the next 12 months, even if EBITDA declines 10%. Under our stress scenario, we do not expect that DLH would require access to the capital markets during that period to meet its liquidity needs. DLH likely could absorb a high-impact, low probability event with limited need for refinancing. Moreover, it has sound relationships with banks, a generally satisfactory standing in the credit markets, and maintains generally prudent risk management practices.

Principal liquidity sources	Principal liquidity uses
<ul style="list-style-type: none"> • FFO of about \$350 million over the next 12 months; • Credit facility availability of about \$450 million; • Cash on hand of about \$115 million. 	<ul style="list-style-type: none"> • Assumed maintenance capital spending of about \$250 million over the next 12 months; • Long-term debt maturities of \$500 million; and • Dividends of about \$25 million.

Covenant Analysis

Compliance expectations

- We expect the company to maintain cushion under the leverage ratio covenants in its credit agreements.

Requirements

- DLH's revolving credit agreement contains a maximum leverage ratio covenant of 70% (as defined in the relevant documents).

Environmental, Social, And Governance

DLH's exposure to environmental risk is limited compared to peers, reflecting its lower-risk electric T&D network utility operations. Furthermore, no social factors have had a material impact on the rating, although the affordability of steadily increasing rates could be a future risk and the company will need to continue to comply with very high standards in relation to security given the nature of its utility and fiber optics businesses. Nevertheless, DLH's internal safety system has enabled it to effectively provide T&D and fiber optics services to its customers throughout its history.

Governance factors are neutral. Although the company has a small number of owners, none of them have a controlling interest in the company. Furthermore, DLH has a board of directors that is largely independent from management and, in our view, is capably engaged in risk oversight on behalf of all stakeholders.

Group Influence

Under our group rating methodology, we view DLH as the parent and the ultimate rated entity in the group. As a result, DLH's group and stand-alone credit profile are the same at 'bbb'.

Issue Ratings - Subordination Risk Analysis

Capital structure

- DLH's capital structure consists of about \$2.7 billion of long-term debt, out of which about \$1.4 billion is at DLC and the balance is unsecured debt at DLH.

Analytical conclusions

- We rate DLH's senior unsecured debt 'BBB-', one notch below the issuer credit rating because this debt is structurally subordinated to a significant amount of subsidiary debt.

The Content is provided on an "as is" basis. S&P PARTIES DISCLAIM ANY AND ALL EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, FREEDOM FROM BUGS, SOFTWARE ERRORS OR DEFECTS, THAT THE CONTENT'S FUNCTIONING WILL BE UNINTERRUPTED OR THAT THE CONTENT WILL OPERATE WITH ANY SOFTWARE OR HARDWARE CONFIGURATION. In no event shall S&P Parties be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including, without limitation, lost income or lost profits and opportunity costs or losses caused by negligence) in connection with any use of the Content even if advised of the possibility of such damages.

Credit-related and other analyses, including ratings, and statements in the Content are statements of opinion as of the date they are expressed and not statements of fact. S&P's opinions, analyses and rating acknowledgment decisions (described below) are not recommendations to purchase, hold, or sell any securities or to make any investment decisions, and do not address the suitability of any security. S&P assumes no obligation to update the Content following publication in any form or format. The Content should not be relied on and is not a substitute for the skill, judgment and experience of the user, its management, employees, advisors and/or clients when making investment and other business decisions. S&P does not act as a fiduciary or an investment advisor except where registered as such. While S&P has obtained information from sources it believes to be reliable, S&P does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives. Rating-related publications may be published for a variety of reasons that are not necessarily dependent on action by rating committees, including, but not limited to, the publication of a periodic update on a credit rating and related analyses.

To the extent that regulatory authorities allow a rating agency to acknowledge in one jurisdiction a rating issued in another jurisdiction for certain regulatory purposes, S&P reserves the right to assign, withdraw or suspend such acknowledgment at any time and in its sole discretion. S&P Parties disclaim any duty whatsoever arising out of the assignment, withdrawal or suspension of an acknowledgment as well as any liability for any damage alleged to have been suffered on account thereof.

S&P keeps certain activities of its business units separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain business units of S&P may have information that is not available to other S&P business units. S&P has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

S&P may receive compensation for its ratings and certain analyses, normally from issuers or underwriters of securities or from obligors. S&P reserves the right to disseminate its opinions and analyses. S&P's public ratings and analyses are made available on its Web sites, www.standardandpoors.com (free of charge), and www.ratingsdirect.com (subscription), and may be distributed through other means, including via S&P publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.

Confidential Testimony and Exhibits

Q.1. Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information for the test period elected:

1. Rate schedule designation.

A.1. DFR IV - Attachment A – Fully Projected Future provides the requested information.

Q.2. Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information for the test period elected:

1. For existing rates:

- (a) Customers served as of end of period.
- (b) Annual Kwh sales.
- (c) Base rate revenues adjusted for any changes in base rate application that may have occurred during the test period.
- (d) Tax surcharge revenues.
- (e) Energy Cost adjustment clause revenues.
- (f) Revenues received from other clauses or riders separately accounted for.
- (g) Total of all revenues.

A.2. DFR IV - Attachment A – Fully Projected Future provides the requested information.

Q.3. Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information for the test period elected:

1. For proposed rates:

(a) Estimated number of customers whose charges for electric service will be increased or decreased as a result of this filing.

(b) Base rate revenues:

(1) Annual dollar amount of increase or decrease.

(2) Percentage change.

(c) Estimated tax surcharge revenues based on the assumption that the base rate changes proposed were in place.

(d) Estimated Energy cost adjustment clause revenues.

(e) Revenues received from other clauses or riders separately accounted for.

(f) Total of all revenues:

(1) Amount of total annual dollar change.

(2) Percentage change.

A.3. DFR IV - Attachment A – Fully Projected Future provides the requested information.

- Q.4. Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information for the test period elected:
1. Supplement the revenue summary to obtain a complete revenue statement of the electric business, that is, show delayed payments, other electric revenues, FERC jurisdictional sales and revenues and all other appropriate revenue items and adjustments.
- A.4. DFR IV - Attachment A – Fully Projected Future provides the requested information.

- Q.5. Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information for the test period elected:
1. Develop the grand total showing total sales and revenues as adjusted and the various increases and decreases and percent effects as described above.
- A.5. DFR IV - Attachment A – Fully Projected Future provides the requested information.

Q.1. Provide a description of changes proposed for the new tariff:

- (1) For each rate schedule proposed to be modified.
- (2) For each rate schedule proposed to be deleted.
- (3) For each new rate schedule proposed to be added.

A.1. Please refer to the direct testimony of David B. Ogden in Exhibit 5, Statement No. 16 and Exhibit No. DBO-3.

- Q.1. The annual revenue effect of any proposed change to any rate must be supported by a billing analysis. This may consist of the use of bill frequency distributions or individual customer billing records for the most recent annual periods available. All billing determinants should be displayed. The blocking and corresponding prices of the existing rate and the proposed rate should be applied to the determinants to derive the base rate revenues under both present and proposed rates. The derived base rate revenues should form the basis for measuring the annual base rate effect of the rates in question for the test periods.
- A.1. Attachment DFR IV-C-Proof provides the bill frequency analysis and proof of revenue calculations for each rate schedule. These calculations are based on forecast fully projected future test year billing determinants at current and proposed distribution rates.

DFR IV - Attachment C, Parts 1-13, provide a bill distribution for each of the metered rate classes.

- Q.1. The effects of the proposed rates on monthly billing conditions should be provided as follows:

Residential Bill Comparisons

For each rate applicable to residential service provide a chart or tabulation which shows the dollar and percentage effect of the proposed base rate on monthly bills ranging from the use of zero kWh to 5,000 kWh at appropriate intervals.

- A.1. DFR IV - Attachment D-1 provides the requested information in tabular format for each of the residential rate classes. Each residential rate class table shows the monthly distribution charges at current and proposed rates. Current rates include the forecasted January 15, 2022 surcharges that the Company is proposing to roll into base rates. For heating rates, separate tables are provided showing the monthly billing at both winter and summer rates.

- Q.2. The effects of the proposed rates on monthly billing conditions should be provided as follows:

General Bill Comparisons

For each rate that requires both a billing demand (kW) and kWh's as the billing determinants, provide a tabulation or graphical comparison showing the percentage effect of the proposed base rate on monthly bills using several representative demand (kW) levels, the monthly kWh for each demand selected to be in load factor increments of 10% starting at 0% and ending at 100% (730H) or by hours' use increments that covers approximately 95% of the bills.

- A.2. DFR-IV - Attachment D-2 provides the requested information in tabular format for each of the general service classes that include demand and energy billing determinants. Each general service class table shows the monthly distribution charges at current and proposed rates. Current rates include the forecasted January 15, 2022 surcharges that the Company is proposing to roll into base rates. For the heating rates, separate tables are provided showing the monthly billing at both winter and summer rates. The demand used for the calculations for each table is representative of customers on each of these rates schedules.

- Q.1. Provide a cost study which allocates the total cost of service to each proposed tariff rate schedule. Tariff rates schedules may be combined for this purpose provided that they are of a similar supply or end use nature. A statement describing which rates were combined and the reasons therefor should be submitted.

The rates of return for each tariff rate schedule as defined above should be determined at both the present and proposed rate levels. Base rate revenues should be used for this purpose unless there are good and sufficient reasons to include revenues derived from other sources. Should the latter be the case, an explanation of other revenue sources included and reasons therefor should accompany the cost allocation study.

The methods selected for use in allocating costs to rate classes should include cost analyses based on:

- a. Peak responsibility.
- b. Average and excess, on a non-coincident demand basis.
- c. Company preferred method if different from the above-referenced methods, with rationale behind the selection.

This study should include a statement of the source and age of the load data used in the determination of demand responsibilities, a description of any special studies used to prepare the cost study, and the most recent overall system line loss study.

The cost data used in the allocation study may be based on the test year.

- A.1. Please refer to DLC Exhibit 5, Statement No. 15, the direct testimony of Company witness Howard S. Gorman and DLC Exhibit 6 for the requested information.

- Q.2. Provide comparisons in either graphical or tabular form showing cost, as defined in the cost of service study, and proposed base rate revenues and usage for all residential and demand/energy rate schedules. Demand shall be for representative loads for each demand/energy rate schedule.
- A.2. DFR IV - Attachment E-2 provides a tabulation comparison for the general service rate classes that contain demand and energy charges. This attachment compares the monthly cost to the monthly distribution charges at current and proposed rates for the following size customers representative of customers on those rate classes. Current rates include the forecasted January 15, 2022 surcharges that the Company is proposing to roll into base rates.

Q.4 Provide a schedule showing details of rate case adjustments.

A.4. Schedules of rate adjustments are set forth in Schedules C and D of DLC Exhibit 2 (Fully Projected Future Test Year) and DLC Exhibit 3 (Future Test Year). Schedules C-2 and D-3 provide a summary of the adjustments.

- Q. Provide a comparison of calculated depreciation accruals versus book accruals by function and by account if available.

- A. Attachment V-B-1, pages 2 through 7, provide Duquesne Light Company's calculated and book accruals by function and by account for the historic test year ending December 31, 2020, future test year ending December 31, 2021 and fully projected future test year ending December 31, 2022.

*Annual Accrual is charged on a vehicle by vehicle basis.

- Q. Supply a schedule by account or by depreciable group showing the survivor curve or interim survivor curve and annual accrual rate estimated to be appropriate:
- a) For the purpose of this filing.
 - b) For the purpose of the most recent rate filing prior to the current proceeding.
 - c) Supply an explanation for any major change in annual accrual rate by account or by depreciable group.
 - d) Supply a comprehensive statement of major changes made in depreciation methods, procedures and techniques and the effect of the changes upon accumulated and annual depreciation, if any.
- A.
- a) Attachment V-B-2, columns 4 & 5, provides Duquesne Light Company's survivor curve and annual estimated accrual rate for the future and fully projected future test years.
 - b) Attachment V-B-2, columns 2 & 3, provides Duquesne Light Company's survivor curve and annual estimated accrual rate for the most recent filing with the Commission.
 - c) Attachment V-B-2, column 6, provides an explanation for any change in annual accrual rate by account. Changes reflect plant and reserve activity, life characteristics and amortization of certain accounts.
 - d) The depreciation methods and procedures used in this filing are the same as those used in the previous filing. The survivor curve estimates are based on a service life study as described in Exhibit JJS 2 in the section titled, "Service Life Statistics," beginning on page VI-2.

LEGEND:

- a - NEW LIFE STUDY CHARACTERISTICS
- b - AMORTIZATION ACCOUNT
- c - PLANT AND RESERVE ACTIVITY

- Q. Where the retirement rate actuarial method of mortality analysis is utilized, set forth representative examples including charts depicting the observed and estimated survivor curves and a tabular presentation of the observed and estimated life tables plotted on the chart. Other analysis results shall be subject to request.
- A. Exhibit JJS-2 provides the observed and estimated survivor curves and life tables for all accounts analyzed by the actuarial method in Part VI of Exhibit JJS-2.

- Q. Provide the surviving original cost plant at the appropriate test year date or dates by account or functional property group and include claimed depreciation reserves. Provide annual depreciation accruals where appropriate. These calculations should be provided for plant in service as well as other categories of plant, including but not limited to, contributions in aid of construction, customers' advances for construction, and anticipated retirements associated with construction work in progress claims, if applicable.
- A. Exhibit JJS-1, Exhibit JJS-2 and Exhibit JJS-3 provides Duquesne Light Company's surviving original cost electric plant in service, accumulated book depreciation reserve, annual depreciation expense accruals, survivor curve, future depreciation accruals, and composite remaining life by test year date. No claim is being made in this rate case filing for contributions in aid of construction. No claim is being made in this rate case for customer advances for construction. No claim is being made in this rate case filing for construction work in progress.

- Q. Provide representative examples of detail calculations by vintage at account or at a more detailed level, as performed for these purposes. Other vintage detail calculations shall be subject to request.

- A. Examples of detailed depreciation calculations by vintage within account as of December 31, 2020 are set forth on pages II-7 through II-94 of Exhibit JJS 1; as of December 31, 2021 are set forth on pages VII-7 through VII-91 of Exhibit JJS 2; and as of December 31, 2022 are set forth on pages II-7 through II-92 of Exhibit JJS 3.

- Q. Provide a description of the depreciation methods utilized in calculating annual depreciation amounts and depreciation reserves, together with a discussion of the significant factors which were considered in arriving at estimates of service life and forecast retirements by facilities, accounts or sub-accounts, as applicable.

- A. The depreciation methods utilized in calculating annual and accrued depreciation are discussed in the section titled, "Calculation of Annual and Accrued Depreciation," beginning on page IV-2 of Exhibit JJS 2.

- Q.1. Provide the following unadjusted detailed schedules by function and by FERC account for the claimed test year and for each of the 3 preceding comparable years:
- a. Balance sheet, in the form available.
 - b. Statement of income.
 - c. Plant in service.
 - d. Accumulated depreciation.
- A.1. See below:
- a. Attachment VI-A provides Duquesne Light Company's fully projected balance sheet by FERC account as of December 31, 2022, Duquesne Light Company's projected balance sheet by FERC account as of December 31, 2021, and actual balance sheets by FERC account as of December 31, 2020, 2019 and 2018.
 - b. Attachment VI-B provides Duquesne Light Company's fully projected income statement by FERC account for the year ending December 31, 2022, Duquesne Light Company's projected income statement by FERC account for the year ending December 31, 2021 and actual income statements by FERC account for the years ended March 31, 2020, 2019, and 2018.
 - c. Attachment VI-C provides Duquesne Light Company's fully projected plant in service balances by FERC account for the year ending December 31, 2022, Duquesne Light Company's projected plant in service balances by FERC account for the year ending December 31, 2021 and actual plant in service balances by FERC account for the years ended December 31, 2020, 2019 and 2018.
 - d. Attachment VI-D provides Duquesne Light Company's fully projected accumulated depreciation and accumulated amortization by FERC account as of December 31, 2022, Duquesne Light Company's projected accumulated depreciation and accumulated amortization by FERC account as of December 31, 2021 and actual accumulated depreciation and accumulated amortization by FERC account as of December 31, 2020, 2019 and 2018.

STATEMENT OF REASONS
52 Pa. Code § 53.52(a)(1)

INTRODUCTION

Duquesne Light Company (“Duquesne Light” or the “Company”) is responsible for providing adequate, efficient, safe, and reliable electric service to its customers and must have the ability to raise capital to meet such requirements. The Company is allowed to charge just and reasonable rates as established by the Pennsylvania Public Utility Commission (“Commission”) that provide the Company with a fair opportunity to recover its operating costs and earn a fair return on its investment. This is accomplished through a rate case process.

In this filing, Duquesne Light is requesting that the Commission approve an overall annual increase in distribution revenue of approximately \$115.0 million. Included in the requested increase is approximately \$29.2 million in revenue currently collected through one existing Commission approved surcharge, resulting in a net increase in distribution revenue of approximately \$85.8 million. If granted by the Commission as filed, this request would produce a system average increase in distribution rates of approximately 15.6 percent and an increase in total rates (distribution, transmission, and generation charges) of approximately 7.72 percent for a typical residential using 600 kilowatt-hours per month and taking default power service from the Company. The percentage increase in rates differs for each individual rate class.

DUQUESNE LIGHT COMPANY’S COSTS

Duquesne Light has controlled its operation and maintenance expenses by implementing process improvements and deploying cost saving measures. Nevertheless, the cost of providing electric distribution service has increased since the last distribution rate increase in December 2018. Significant cost increases have occurred in many areas, including increased investment in facilities to maintain high levels of service and reliability, increased investment in information technology, increased operation and maintenance expenses to maintain safe and reliable service, including expenses associated with the Distribution System Improvement Charge Rider included in base rates, and the expenses associated with the development of an electrical model. In addition, the Company’s estimated rate base at December 31, 2022 has increased by approximately \$337 million since the 2018 base rate proceeding.

DUQUESNE LIGHT’S FINANCIAL CONDITION

Absent increases in rates, Duquesne Light’s financial condition would continue to decline in the fully projected future test year due to continued capital expenditures, increased operating expenses, and a significant decline in customer sales. On a pro forma basis for the fully projected future test year, Duquesne Light anticipates an overall return on rate base of only 5.36% absent rate relief. These financial results do not provide a return that will permit the Company to attract new capital on reasonable terms. Revenues at present rates do not provide the Company the

opportunity to earn a fair return and simply do not provide sufficient funds for Duquesne Light to adequately operate its business, abide by federal and state requirements, and provide reliable electric service to its customers.

RELIABLE ELECTRIC SERVICE

Duquesne Light has consistently provided its customers with service at reliability levels as measured by SAIDI and SAIFI that are at or near the top of the levels provided by all the major Pennsylvania electric distribution companies. Duquesne Light has increased efficiency and reliability through the use of technology, such as automated meter reading systems and automated control systems that continuously monitor remote switches that can be operated to re-route power during storms and other outages to quickly restore service to large blocks of customers. The Company also implemented a Long Term Infrastructure Improvement plan to address its ageing infrastructure and improve its reliability.

CUSTOMER SERVICE

Duquesne Light has consistently provided high levels of customer service. The Company has implemented a series of programs, supported by technology and process improvements, to enhance the customer experience, including a payment arrangement portal, CAP (“Customer Assistance Program”) redesign to a percentage of income payment, CAP enrollment automation, and a high bill advisory tool. In 2020, the Company was second lowest for needs further investigation (NFI) residential consumer complaints and in first contact resolution (FCR) statistics for residential and commercial segments compared to the other PA Electric Distribution Companies. Also, in 2020, the J.D. Power Business Electric Utility Customer Satisfaction survey indicated that Duquesne Light ranked third in its peer group (East Mid-size) with a score of 791, only 7 points out of first place.

STATEMENT OF REASONS
52 Pa. Code § 53.52(a)(1)

INTRODUCTION

Duquesne Light Company (“Duquesne Light” or the “Company”) is responsible for providing adequate, efficient, safe, and reliable electric service to its customers and must have the ability to raise capital to meet such requirements. The Company is allowed to charge just and reasonable rates as established by the Pennsylvania Public Utility Commission (“Commission”) that provide the Company with a fair opportunity to recover its operating costs and earn a fair return on its investment. This is accomplished through a rate case process.

In this filing, Duquesne Light is requesting that the Commission approve an overall annual increase in distribution revenue of approximately \$115.0 million. Included in the requested increase is approximately \$29.2 million in revenue currently collected through one existing Commission approved surcharge, resulting in a net increase in distribution revenue of approximately \$85.8 million. If granted by the Commission as filed, this request would produce a system average increase in distribution rates of approximately 15.6 percent and an increase in total rates (distribution, transmission, and generation charges) of approximately 7.72 percent for a typical residential using 600 kilowatt-hours per month and taking default power service from the Company. The percentage increase in rates differs for each individual rate class.

DUQUESNE LIGHT COMPANY’S COSTS

Duquesne Light has controlled its operation and maintenance expenses by implementing process improvements and deploying cost saving measures. Nevertheless, the cost of providing electric distribution service has increased since the last distribution rate increase in December 2018. Significant cost increases have occurred in many areas, including increased investment in facilities to maintain high levels of service and reliability, increased investment in information technology, increased operation and maintenance expenses to maintain safe and reliable service, including expenses associated with the Distribution System Improvement Charge Rider included in base rates, and the expenses associated with the development of an electrical model. In addition, the Company’s estimated rate base at December 31, 2022 has increased by approximately \$337 million since the 2018 base rate proceeding.

DUQUESNE LIGHT’S FINANCIAL CONDITION

Absent increases in rates, Duquesne Light’s financial condition would continue to decline in the fully projected future test year due to continued capital expenditures, increased operating expenses, and a significant decline in customer sales. On a pro forma basis for the fully projected future test year, Duquesne Light anticipates an overall return on rate base of only 5.36% absent rate relief. These financial results do not provide a return that will permit the Company to attract new capital on reasonable terms. Revenues at present rates do not provide the Company the

opportunity to earn a fair return and simply do not provide sufficient funds for Duquesne Light to adequately operate its business, abide by federal and state requirements, and provide reliable electric service to its customers.

RELIABLE ELECTRIC SERVICE

Duquesne Light has consistently provided its customers with service at reliability levels as measured by SAIDI and SAIFI that are at or near the top of the levels provided by all the major Pennsylvania electric distribution companies. Duquesne Light has increased efficiency and reliability through the use of technology, such as automated meter reading systems and automated control systems that continuously monitor remote switches that can be operated to re-route power during storms and other outages to quickly restore service to large blocks of customers. The Company also implemented a Long Term Infrastructure Improvement plan to address its ageing infrastructure and improve its reliability.

CUSTOMER SERVICE

Duquesne Light has consistently provided high levels of customer service. The Company has implemented a series of programs, supported by technology and process improvements, to enhance the customer experience, including a payment arrangement portal, CAP (“Customer Assistance Program”) redesign to a percentage of income payment, CAP enrollment automation, and a high bill advisory tool. In 2020, the Company was second lowest for needs further investigation (NFI) residential consumer complaints and in first contact resolution (FCR) statistics for residential and commercial segments compared to the other PA Electric Distribution Companies. Also, in 2020, the J.D. Power Business Electric Utility Customer Satisfaction survey indicated that Duquesne Light ranked third in its peer group (East Mid-size) with a score of 791, only 7 points out of first place.

STATEMENT OF REASONS
52 Pa. Code § 53.52(a)(1)

INTRODUCTION

Duquesne Light Company (“Duquesne Light” or the “Company”) is responsible for providing adequate, efficient, safe, and reliable electric service to its customers and must have the ability to raise capital to meet such requirements. The Company is allowed to charge just and reasonable rates as established by the Pennsylvania Public Utility Commission (“Commission”) that provide the Company with a fair opportunity to recover its operating costs and earn a fair return on its investment. This is accomplished through a rate case process.

In this filing, Duquesne Light is requesting that the Commission approve an overall annual increase in distribution revenue of approximately \$115.0 million. Included in the requested increase is approximately \$29.2 million in revenue currently collected through one existing Commission approved surcharge, resulting in a net increase in distribution revenue of approximately \$85.8 million. If granted by the Commission as filed, this request would produce a system average increase in distribution rates of approximately 15.6 percent and an increase in total rates (distribution, transmission, and generation charges) of approximately 7.72 percent for a typical residential using 600 kilowatt-hours per month and taking default power service from the Company. The percentage increase in rates differs for each individual rate class.

DUQUESNE LIGHT COMPANY’S COSTS

Duquesne Light has controlled its operation and maintenance expenses by implementing process improvements and deploying cost saving measures. Nevertheless, the cost of providing electric distribution service has increased since the last distribution rate increase in December 2018. Significant cost increases have occurred in many areas, including increased investment in facilities to maintain high levels of service and reliability, increased investment in information technology, increased operation and maintenance expenses to maintain safe and reliable service, including expenses associated with the Distribution System Improvement Charge Rider included in base rates, and the expenses associated with the development of an electrical model. In addition, the Company’s estimated rate base at December 31, 2022 has increased by approximately \$337 million since the 2018 base rate proceeding.

DUQUESNE LIGHT’S FINANCIAL CONDITION

Absent increases in rates, Duquesne Light’s financial condition would continue to decline in the fully projected future test year due to continued capital expenditures, increased operating expenses, and a significant decline in customer sales. On a pro forma basis for the fully projected future test year, Duquesne Light anticipates an overall return on rate base of only 5.36% absent rate relief. These financial results do not provide a return that will permit the Company to attract new capital on reasonable terms. Revenues at present rates do not provide the Company the

opportunity to earn a fair return and simply do not provide sufficient funds for Duquesne Light to adequately operate its business, abide by federal and state requirements, and provide reliable electric service to its customers.

RELIABLE ELECTRIC SERVICE

Duquesne Light has consistently provided its customers with service at reliability levels as measured by SAIDI and SAIFI that are at or near the top of the levels provided by all the major Pennsylvania electric distribution companies. Duquesne Light has increased efficiency and reliability through the use of technology, such as automated meter reading systems and automated control systems that continuously monitor remote switches that can be operated to re-route power during storms and other outages to quickly restore service to large blocks of customers. The Company also implemented a Long Term Infrastructure Improvement plan to address its aging infrastructure and improve its reliability.

CUSTOMER SERVICE

Duquesne Light has consistently provided high levels of customer service. The Company has implemented a series of programs, supported by technology and process improvements, to enhance the customer experience, including a payment arrangement portal, CAP (“Customer Assistance Program”) redesign to a percentage of income payment, CAP enrollment automation, and a high bill advisory tool. In 2020, the Company was second lowest for needs further investigation (NFI) residential consumer complaints and in first contact resolution (FCR) statistics for residential and commercial segments compared to the other PA Electric Distribution Companies. Also, in 2020, the J.D. Power Business Electric Utility Customer Satisfaction survey indicated that Duquesne Light ranked third in its peer group (East Mid-size) with a score of 791, only 7 points out of first place.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 1

DIRECT TESTIMONY OF C. JAMES DAVIS

Subjects: Overview, Cost Management, and Economic Development

PUBLIC VERSION

April 16, 2021

1 **Q. Please state your name and business address.**

2 A. My name is C. James Davis. My business address is 411 Seventh Avenue,
3 Pittsburgh, PA 15219.

4

5 **Q. By whom are you employed and in what capacity?**

6 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”)
7 as the Director – Rates, Energy Procurement, and Federal/RTO Affairs. I am
8 responsible for the oversight and direction of the Company’s Rates & Tariff
9 Services Department, Supply Procurement and RTO Settlement activities, as well
10 as Federal and RTO affairs.

11

12 **Q. What are your qualifications, work experience and educational background?**

13 A. I graduated from St. Vincent College with a Bachelor of Arts degree in Computer
14 Science in 1989 and Duquesne University with a Master of Business
15 Administration in 1995. Prior to joining Duquesne Light, I had more than 24 years
16 of diversified experience in the utility industry working for Allegheny Energy and
17 FirstEnergy. I have held positions in Risk Management, Finance, Portfolio
18 Management, Generation Dispatch, and Commodity Operations.

19

20 **Q. Have you previously testified before the Commission or other regulatory
21 agencies?**

22 A. Yes, I testified in the 2016 Petition of Duquesne Light Company for Approval of a
23 Distribution System Improvement Charge at Docket No. P-2016-2540046, in the

1 Company's Petition for a Default Service Plan for the period of June 1, 2017
2 through May 31, 2021 at Docket No. P-2016-2543140, in the Company's 2018 base
3 rate proceeding at Docket No. R-2018-3000124, in the Peoples Natural Gas 2018
4 base rate proceeding at Docket No. R-2018-3006818, and in the Company's
5 Petition for a Default Service Plan for the period of June 1, 2021 through May 31,
6 2025 at Docket No. P-2020-3019522.

7

8 **Q. What is the purpose of your testimony?**

9 A. The purpose of my testimony is to provide an overview of Duquesne Light, to
10 explain the reasons for the proposed rate increase and to identify the witnesses
11 providing direct testimony on behalf of Duquesne Light. My testimony has been
12 divided into five sections: Section I provides an overview of Duquesne Light and
13 its requested rate increase. In Section II, I discuss the Company's initiatives to
14 manage cost, provide outstanding support for our customers, and provide highly
15 reliable electric service. Section III details the primary reasons for requesting this
16 rate relief. Section IV describes the proposed economic development program for
17 large nonresidential customers. Section V describes the organization of the filing,
18 introduces Duquesne Light's witnesses in the proceeding and reviews the
19 importance of this case to Duquesne Light, its customers, and Southwestern
20 Pennsylvania.

21

22 **Q. Are you sponsoring any exhibits at this time?**

1 A. Yes, I am sponsoring the Statement of Reasons; CONFIDENTIAL Exhibit CJD-1,
2 the Company’s 2020 Annual Diversity Report; and CONFIDENTIAL Exhibit
3 CJD-2, a special rate contract.

4

5 **I. OVERVIEW OF DUQUESNE LIGHT AND THE REQUESTED**
6 **DISTRIBUTION RATE INCREASE**

7 **Q. Please provide some background on Duquesne Light**

8 A. For more than 135 years, Duquesne Light has been serving the people of the greater
9 Pittsburgh region with reliable electric service. The Company provides
10 distribution, transmission, and default supply services to approximately 600,000
11 customers within its service territory that extends across two counties and covers
12 approximately 817 square miles. Duquesne Light is a “public utility” and an
13 “electric distribution company” (“EDC”) as those terms are defined under 66 Pa.
14 C.S. §§ 102 and 2803.

15

16 **Q. Why is the Company filing a general rate case requesting an overall increase**
17 **in rates at this time?**

18 A. The Company has been investing in the distribution system to provide safe, reliable
19 service to its customers, which has been especially essential in the time of the
20 COVID-19 pandemic. The Company must continue to invest to satisfy the needs
21 of its customers, while also maintaining the ability to attract capital to support these
22 investments. The Company’s proposal will enable it to maintain a balance
23 amongst: 1) providing safe, reliable service to customers; 2) controlling costs; 3)

1 providing enhanced customer assistance for those in need; and 4) stimulating
2 beneficial customer growth to mitigate the economic effects of the pandemic on our
3 region and our customers.

4

5 **Q. Please describe the increases and changes in rates for distribution service that**
6 **the Company is proposing.**

7 A. The Company is proposing a general rate increase to its distribution rates and is
8 also proposing to roll its Distribution System Improvement Charge (“DSIC”) into
9 base rates. The Company also proposes to expand its offering of a Transportation
10 Electrification Program and to provide a Community Development Rider aimed at
11 nonresidential customers that would attract new customers to the region and/or
12 enable existing customers to expand operations. The Company also is proposing to
13 establish COVID-19 relief programs for residential and small/medium commercial
14 customers that are currently dealing with the economic effects of the pandemic.

15

16 **Q. Please describe the changes to existing rate riders that affect distribution base**
17 **rate revenue in this proceeding.**

18 A. The Company implemented a Distribution System Improvement Charge (“DSIC”) Rider beginning October 1, 2016, pursuant to the Commission’s order at Docket
19 No. P-2016-2540046. The Company proposes to roll the projected DSIC Rider
20 charges and costs into base distribution rates and reset the DSIC Rider to zero as of
21 the effective date of the base distribution rates determined in this proceeding. The
22 DSIC Rider will remain at zero until the Company has placed in service plant in
23

1 DSIC eligible accounts in excess of the claimed amounts included in its estimated
2 December 31, 2022 rate base in the current proceeding. As explained by Mr.
3 O'Brien in his direct testimony (Duquesne Light St. No. 10), while the roll in of the
4 DSIC charges has the effect of increasing base distribution rates by \$29.2 million,
5 this will have no impact on customers' bills, because customers will no longer pay
6 the current surcharge which will be set to zero when new distribution rates become
7 effective as a result of this proceeding.

8

9 **Q. Please provide a summary of the Company's request for a distribution rate**
10 **increase.**

11 A. Duquesne Light is requesting the Commission approve a \$115.0 million
12 distribution rate increase effective January 15, 2022. If the Company's request is
13 approved as submitted, the total bill (which includes rates for distribution,
14 surcharges, transmission, and generation) for a residential customer using 600
15 kilowatt-hours ("kWh") per month and taking default power service from the
16 Company would increase from \$100.12 per month to \$107.85 per month or by 7.72
17 percent.

18

19 **II. COMPANY INITIATIVES TO MANAGE COSTS, PROVIDE**
20 **OUTSTANDING SUPPORT FOR OUR CUSTOMERS, AND HIGHLY**
21 **RELIABLE ELECTRIC SERVICE**

22

23 **Q. Please describe some of Duquesne Light's efforts to control costs while**
24 **maintaining high levels of customer service and reliability.**

1 A. The Company has always recognized a need to control costs and in 2020 created a
2 team specifically focused on this issue, The Affordability and Innovation
3 Management (“AIM”) Organization. The AIM Organization provides the structure
4 and support to take an idea and ensure its implementation to create value to our
5 customers. The organization has four pillars of focus to drive improvement in our
6 business while remaining focused on our customers. The AIM Organization’s
7 pillars are the Affordability Office, Business Analytics, Business Process Maturity,
8 and the Innovation Center. I will provide a high-level overview of each: The
9 Affordability Office takes ideas in a data driven approach to ensure risk and value
10 are identified throughout the life cycle of the idea. The Affordability Office
11 deploys the training, methodology, and performance accountability to ensure
12 progression of the ideas. The Business Analytics group establishes governance and
13 quality around our data while also deriving sophisticated insights from the data.
14 Business Process Maturity looks at the maturity of our processes across the business
15 and evaluates our maturity in those particular areas in comparison with our peers.
16 Lastly, the Innovation Center takes a holistic look on innovative thought and
17 explores new and forward-thinking opportunities.

18

19 **Q. Please describe some of benefits Duquesne Light’s AIM Organization has**
20 **realized to date.**

21 A. In 2020, the Company realized approximately \$7 million in sustainable cash
22 savings via AIM initiatives, which represents a combination of capital deployment,
23 operations and Maintenance (“O&M”) expense and working capital savings.

1

2 **Q. What benefits does the Company project for the Future Test Year?**

3 A. The Company has engaged in over 125 initiatives to drive approximately \$6.3
4 million in projected sustainable O&M savings and approximately \$8 million in
5 projected sustainable capital savings across the business. These initiatives not only
6 drive affordability but also improve safety, reliability, customer service, and
7 sustainability.

8

9 **Q. What benefits does the Company project for the Fully Projected Future Test**
10 **Year?**

11 A. In addition to the sustainable savings discussed above, the Company projects
12 approximately \$1.0 million in sustainable O&M savings and approximately \$11.0
13 million in sustainable capital savings.

14

15 **Q. Please provide an example of a program that reduces cost and addresses**
16 **sustainability.**

17 A. The Company has developed an E-Bill initiative that touches upon several of these
18 areas. The Company's ability to offer a simpler E-Bill enrollment process, along
19 with easy access to E-Bill, improves the affordability of our product, serves our
20 customers in their preferred communication channel, and reduces the consumption
21 of paper to drive sustainability.

22

1 **Q. Has the Company performed any surveys or studies to track customer**
2 **satisfaction?**

3 A. As Ms. Neiswonger describes in her direct testimony (Statement No. 9), the
4 Company has conducted transaction surveys of customers who have had
5 interactions with the Company as well as other surveys conducted on a monthly
6 basis to measure overall satisfaction with Duquesne Light.

7
8 **Q. Please describe the results of the surveys.**

9 A. In general, the surveys indicate that for the four-year period beginning in 2017 over
10 seventy three percent of Duquesne Light customers have been satisfied with our
11 service and in 2020, the percentage increased to seventy five percent. Ms.
12 Neiswonger describes the results in detail in her direct testimony.

13
14 **Q. Please describe some of Duquesne Light's efforts to provide outstanding**
15 **customer service.**

16 A. The Company has undertaken several initiatives to improve customer satisfaction
17 and engagement over the past several years as well as a complete bill redesign to
18 improve the readability of the customer bill. The initiatives include:

- 19 – A new Duquesne Light mobile app available in the App Store and Google
20 Play;
21 – Customer segmentation and initiative-specific personas to deliver more
22 timely and relevant messages to customers in the channel they prefer;

- 1 – A self-serve Payment Arrangement portal on DuquesneLight.com to
- 2 provide a simplified process for customers to set up a payment arrangement;
- 3 – A small and medium-size concierge Business Center within our Contact
- 4 Center to better serve business customers;
- 5 – An email engagement platform to send relevant, timely email
- 6 communications to customers with content related to storm preparation,
- 7 energy efficiency information, products and services, and more; and
- 8 – A presence on Nextdoor, a social platform that allows the Company to
- 9 send targeted neighborhood messages regarding outages and other
- 10 important information.

11

12 **Q. How has the Company helped low-income customers meet their need and**

13 **ability to afford electric service?**

14 A. In addition to energy efficiency programs, the Company has four Universal

15 Services programs that assist low-income customers: 1) Customer Assistance

16 Program (“CAP”), 2) Customer Assistance Referral and Evaluation Services

17 (“CARES”), 3) the Hardship Fund, and 4) Smart Comfort/Low Income Usage

18 Reduction Program (“LIURP”). These programs are described in detail by Ms.

19 Scholl in her direct testimony (Statement No. 7).

20

21 **Q. How has the Company performed with respect to its reliability metrics?**

22 A. The Company measures its reliability performance based on three system and

23 customer reliability metrics: System Average Interruption Duration Index

1 (“SAIDI”), System Average Interruption Frequency Index (“SAIFI”), and
2 Customer Average Interruption Duration Index (“CAIDI”). Mr. Morris describes
3 in his direct testimony (Statement No. 4) the overall reliability metrics of the
4 Company. In summary over the past five years of benchmarked data (*i.e.*, 2016
5 through 2020 utilizing the Pennsylvania Public Utility Commission’s annual
6 *Electric Service Reliability in Pennsylvania* report and *Quarterly Electric*
7 *Reliability* reports), Duquesne Light has been either the top-performing large
8 Electric Distribution Company (“EDC”) or the second top-performing EDC in the
9 Commonwealth, depending on the specific reliability metric.

10
11 **Q. How has the Company been able to continue to perform at such a high level?**

12 A. The Company attributes its strong reliability performance over the 2016 to 2020
13 period to the Company’s ongoing T&D System Capacity and Reliability plant
14 additions initiated in its LTIP as well as vegetation management efforts.

15
16 **Q. What steps is the Company taking to further improve its service reliability
17 and reduce outages?**

18 A. As Mr. Morris discusses in his testimony (Statement No. 4), the Company must
19 continue to invest in its distribution system to maintain and enhance its reliability
20 and resilience, which is a main driver of the Company’s rate proposal.

21

1 **Q. Mr. Morris addresses the Company’s projected investments in 2022. Is the**
2 **Company also considering how to provide safe, reliable, and affordable service**
3 **in subsequent years?**

4 A. Yes. The Company is looking ahead to understand customers’ potential future
5 needs and how to address them. Duquesne Light is focused on leveraging
6 investments in the distribution grid to provide better visibility and situational
7 awareness of the system, ensuring the integration of Distributed Energy Resources
8 (“DER”) and other emerging technologies. As the distribution system owner and
9 operator, Duquesne Light plays an integral role in ensuring that the grid remains
10 reliable and safe as new technologies emerge. The Company looks forward to
11 engaging with the Commission and stakeholders on these issues in the future.

12

13 **Q. What steps has the Company taken to support diversity, equity, and inclusion?**

14 A. In 2019, the Company established a Diversity and Inclusion Committee (“Diversity
15 Committee”) composed of a cross functional selection of employees tasked with
16 enhancing the Company’s culture of inclusion and equity. The Diversity Committee
17 began by implementing a comprehensive internal education and awareness
18 campaign including unconscious bias training as well as various heritage month
19 celebrations. To build upon those efforts, the Company also hired its first Chief
20 Diversity Officer and worked to establish a comprehensive strategy to advance
21 diversity, equity, and inclusion at Duquesne Light.

22

1 **Q. Please describe management’s program to address diversity, equity, and**
2 **inclusion.**

3 A. In 2020, the Company reaffirmed and accelerated its commitment to diversity,
4 equity, and inclusion by introducing its first Inclusion Strategy, launching three
5 newly formed Business Employee Resource Groups (BERGs), transforming its
6 Diversity Committee to a Diversity, Equity and Inclusion Council (“DEI Council”),
7 initiating phase two of unconscious bias training, and expanding its talent attraction
8 and outreach programs. The Company’s 2020 Annual Diversity Report, which is
9 provided to the Commission on a confidential basis pursuant to the Commission’s
10 Diversity Policy Statement and is attached as CONFIDENTIAL Exhibit CJD-1,
11 describes these efforts in more detail, along with priorities and plans for 2021 and
12 beyond.

13
14 **III. REASONS FOR REQUESTED RATE RELIEF**

15 **Q. Please explain the reasons for the increase in base rates proposed in this**
16 **proceeding.**

17 A. The three primary reasons for the Company to increase its base distribution rates
18 are as follows:

19 1. **The continued growth in the Company’s distribution rate base.** The
20 Company has invested heavily in the distribution system, consequently the
21 rate base has grown by 17.4 percent since the last base rate proceeding. As
22 Mr. O’Brien describes in his direct testimony (Statement No. 10) the

1 projected rate base at December 31, 2022 will be \$336.758 million greater
2 than the level currently reflected in current base distribution rates.

3 2. **The sharp reduction in sales.** Duquesne Light’s projected 2022 revenue
4 at current rates is \$9.2 million dollars less than what was agreed to in the
5 Settlement Agreement approved by the Commission. As Mr. Mobley
6 addresses in his direct testimony (Statement No. 3), sales to residential,
7 commercial and industrial customers combined are expected to decline by
8 approximately 1.4 percent annually each year between 2019-2025. The
9 decline in usage in the Company’s service area is due to a combination of
10 factors that include the increases in efficiency of appliances, increases in
11 net metering, and federal mandates to lighting standards, as well as the
12 implementation of Pennsylvania’s state-mandated energy efficiency and
13 conservation programs under Act 129. These declines are partially offset
14 by projected customer and Electric Vehicle growth. The Company has
15 made an \$8.450 million revenue adjustment to reflect this projected loss, as
16 Mr. O’Brien describes in his direct testimony and calculates in Schedule D-
17 5B.

18 3. **Increase in operations and maintenance (“O&M”) expense.** Duquesne
19 Light’s projected O&M expenses are 10.76 percent higher than in the last
20 rate proceeding. The primary drivers include: 1) an increase of
21 approximately 100 employees primarily in the Operations and Information
22 Technology areas; 2) wage increases of approximately 3.0 percent per year;
23 3) costs of the previously mentioned Riders and COVID-19 relief programs

1 included in base rates; 4) inclusion of the Company's electrical model to
2 improve reliability and responding to customer outages; and 5) increased
3 costs associated with COVID-19. These increases are partially offset by
4 AIM cost saving measures.

5
6 **IV. DESCRIPTION OF THE PROPOSED COMMUNITY DEVELOPMENT**
7 **RIDER**

8 **Q. Does the Company's tariff currently provide for an economic development**
9 **rate or rider?**

10 A. No, the current tariff does not provide for a programmatic rate or rider for economic
11 development. It does, however, provide for the Company to enter into special
12 contracts for electric service with industrial or commercial customers on an
13 individual basis to address changing business needs, operating conditions, or less
14 expensive competitive alternatives for energy.

15
16 **Q. Is the Company proposing a new economic development rate or rider in this**
17 **case?**

18 A. Yes. As detailed in the direct testimony of Ms. Everett (Statement No. 17),
19 Duquesne Light is proposing a Community Development Rider that will provide a
20 defined discount to eligible commercial and industrial customers in Duquesne
21 Light's service territory.

22
23 **Q. If the Company can enter into special contracts, why does it seek a specific**
24 **Community Development Rider?**

1 A. The Company is proposing a Community Development Rider for two reasons.
2 First, to establish a measured, time bound program that has defined parameters
3 addressing when an industrial or commercial customer could qualify for such
4 program. These parameters would address issues such as the number of new or
5 incremental jobs being created, the amount of new or incremental load being added
6 to the service territory, the amount of a discount to the applicable general service
7 rate that would be applied and a term for how long the discount would apply.
8 Second, a standalone Community Development Rider will reduce the
9 administrative burden of implementing such a program, compared to pursuing
10 economic development through a series of individual special contracts.

11

12 **Q. Will the Community Development Rider be subsidized by other customers?**

13 A. No, as Ms. Everett addresses in her direct testimony (Statement No. 17), the rate
14 design of the Community Development Rider will collect all incremental costs
15 created by the customer utilizing the rider and in addition provide a contribution to
16 fixed costs.

17

18 **Q. Will the Community Development Rider be available for only new customers?**

19 A. No, the Company is proposing that the Rider would be available for both new and
20 existing customers. In the case of existing customers, the discount available under
21 the rider would only apply to the new incremental load.

22

23 **Q. Does the Company intend to eliminate the use of special contracts?**

1 A. No, the Company does not intend to eliminate the use of special contracts; however,
2 they will continue to be used sparingly. Special contracts still have a useful purpose
3 to address changing business needs, operating conditions, or less expensive
4 competitive alternatives for energy. The Community Development rider is meant
5 to specifically address growth in our service territory, whereas the special contracts
6 would still be used to address more complex situations.

7
8 **Q. Does the Company currently have any special contracts?**

9 A. Yes, the Company does have one special contract that was reviewed and approved
10 by the Commission at Docket P-2019-3014640.

11
12 **Q. Is the Company providing a confidential report concerning the customer
13 contract approved by the Commission at Docket P-2019-3014640?**

14 A. Yes. As the Company explained in its Petition seeking approval of the contract on
15 November 21, 2019, the contract was entered into with [BEGIN
16 CONFIDENTIAL] [REDACTED] [END
17 CONFIDENTIAL] (“Customer”) pursuant to Rule 4 of the Company’s tariff. The
18 contract establishes a special distribution rate for the Customer for the period
19 [BEGIN CONFIDENTIAL] [REDACTED] [END
20 CONFIDENTIAL]. Specifically, the contract provides a [BEGIN
21 CONFIDENTIAL] [REDACTED]
22 [REDACTED] [END CONFIDENTIAL].

1 The Company incurred approximately [BEGIN CONFIDENTIAL]
2 [REDACTED] [END CONFIDENTIAL] in capital costs to extend service to the
3 customer. The contract was designed to recover all of these costs over the contract's
4 [BEGIN CONFIDENTIAL] [REDACTED] [END CONFIDENTIAL] term. In its
5 confidential response to discovery request TUS P-4, the Company agreed to
6 “provide a confidential report to the Commission that details the revenue resulting
7 from this Contract at the end of the contract period, or in a future rate case,
8 whichever occurs first.” I am providing this report on behalf of the Company via
9 my testimony.

10
11 **Q. What are the revenues the Company has realized resulting from the contract?**

12 A. As of the date of this testimony, the Company has not realized revenues from the
13 contract because the customer has not yet energized service. During the period the
14 contract was pending before the Commission, the COVID-19 pandemic struck, and
15 [BEGIN CONFIDENTIAL] [REDACTED]
16 [REDACTED] [END CONFIDENTIAL]. This impacted the customer's
17 construction activities and necessitated several successive postponements of
18 service energization.

19 The customer has since resumed construction, and the Company anticipates
20 it will energize service in spring of 2021; however, the remaining duration of the
21 rate contract – [BEGIN CONFIDENTIAL] [REDACTED] [END
22 CONFIDENTIAL] – will not be sufficient to recover the Company's incremental
23 capital costs to serve the customer.

1

2 **Q. How does the Company propose to recover these costs?**

3 A. The Company has executed a revised contract with the customer to continue until
4 **[BEGIN CONFIDENTIAL]** [REDACTED] **[END CONFIDENTIAL]** and
5 include a revenue guarantee. This revised contract is attached to my testimony as
6 CONFIDENTIAL Exhibit CJD-2. This revised contract duration, together with the
7 revenue guarantee, will ensure the Company's recovery of incremental capital costs
8 incurred to serve the Customer. The Company is requesting the Commission's
9 approval of this revised contract as part of this proceeding.

10

11 **V. ORGANIZATION OF THE FILING, WITNESSES, AND THE**
12 **IMPORTANCE OF THE CASE TO DUQUESNE LIGHT**

13 **Q. Please identify the other witnesses presenting testimony on behalf of Duquesne**
14 **Light and the principal matters they will address.**

15 A. In addition to my testimony, which is Statement No. 1, the Company's witnesses
16 are presenting testimony as follows:

Jaime Bachota	Statement No. 2	Provides an overview of the Company's accounting process. Explains the Company's actual financial results for the Historic Test Year and reviews the budgeted financial results for the Future Test Year and the Fully Projected Future Test Year.
---------------	-----------------	--

Todd Mobley	Statement No. 3	Provides an overview of the sales forecast. Describes the outcome of the sales forecast model for the Historic Test Year, the Future Test Year, and the Fully Projected Future Test Year. Gives supporting details on the impacts of key drivers to the
-------------	-----------------	---

		overall sales forecast including the effects of Energy Efficiency and Conservation.
Benjamin Morris	Statement No. 4	Describes the Company’s capital additions planned to be placed in service through the end of the Fully Projected Future Test Year. Provides a description of the Company’s electric delivery system, a description of the planning process to ensure the system continues to meet the needs of its customers. This would include items such as reliability metrics, line losses, and other capital projects.
Krycia Kubiak	Statement No. 5	Describes the Company’s proposal to create a Stimulus Rider to address commercial customers impacted by the COVID-19 pandemic.
Yvonne Phillips	Statement No. 6	Describes the Company’s proposal to modify Tariff Rule 41 – Prohibition of Residential Master Metering to allow master metering of certain new multifamily residential premises.
Katie Scholl	Statement No. 7	Describes the Company’s Universal Service Program as well as the Company’s education and outreach for its proposed residential customer COVID-19 relief program.
Sarah Olexsak	Statement No. 8	Describes the proposed Transportation Electrification Programs (“TE Programs”) and explains how the Company proposes to recover costs associated with the TE Programs.
Jennifer Neiswonger	Statement No. 9	Describes the Company’s customer satisfaction and the initiatives designed to further enhance

		Duquesne Light customers' experience.
Robert L. O'Brien	Statement No. 10	Discusses the components of Duquesne Light's overall revenue requirement, and supports certain pro forma ratemaking adjustments for the fully projected future test year ended December 31, 2022 ("FPFTY"), the future test year ended December 31, 2021 ("FTY") and the historic test year ended December 31, 2020 ("HTY"), and portions of the claimed measures of value, including Duquesne Light's cash working capital allowance.
John J. Spanos	Statement No.1 1	Provides the service life study and depreciation study which supports the Company's depreciation accruals for rate making purposes utilizing Commission approved procedures.
Matthew L. Simpson	Statement No. 12	Discusses the Company's tax expense and related tax information for the Historic Test Year, the Future Test Year, and the Fully Projected Future Test Year, and describes the proposed Federal Tax Adjustment Charge.
Paul R. Moul	Statement No. 13	Provides evidence, analysis and recommendation concerning the appropriate rate of return that the Commission should recognize in the determination of the revenues that the Company should realize as a matter of the proceeding.
Jim Milligan	Statement No. 14	Provides explanation of the Company's current and future capital structure, cost of long-term debt, current credit ratings and the importance of maintaining the credit worthiness of the Company.

Howard S. Gorman	Statement No. 15	Describes the Jurisdictional Separation Studies and the unbundled, Allocated Cost of Service Study used in this proceeding.
Dave Ogden	Statement No. 16	Addresses the allocation of the proposed revenue increase among the rate classes and the relative rate class returns. Describes the rate design principles and how they are used to determine the proposed rates. Proves out that the proposed rates produce the target revenue for each class. Describes the proposed changes to the Company's retail tariff.
Margot Everett	Statement No. 17	Describes the rate design principles for the Community Development Rider, TE Programs, Residential Subscription Rate Pilot, and Standby Service.

1

2 **Q. Please explain the importance of the proposed rate increase to Duquesne**
3 **Light.**

4 A. In order to provide continued and enhanced reliability, prepare for catastrophic
5 events such as storms or cyber-attack, and meet increasing customer service needs,
6 the Company must continue to make substantial investments in new distribution
7 plant as well as replace ageing infrastructure including the investments identified
8 in its Commission-approved LTIIP. The Company must do this during a period of
9 declining sales, DSIC revenues reaching the limit of 5.0 percent of distribution
10 revenue provided by 66 Pa. C.S. §1358(a) by the end of the Future Test Year, and
11 increasing O&M expenses. Due to these factors, Duquesne Light's projected
12 overall rate of return for the Fully Projected Future Test Year, at present rates, is

1 only 5.36 percent, with an estimated return on common equity of 6.29 percent. As
2 Mr. Moul will address in his direct testimony (Statement No. 13), this level of return
3 on equity is inadequate to attract the capital and sustain the level of investment
4 necessary to ensure customers continue to receive safe, reliable electric service.
5 Therefore, it is important that the Company be granted the rate relief it has
6 requested in this proceeding.

7

8 **Q. Does this complete your Direct Testimony at this time?**

9 A. Yes. I reserve the right to supplement my testimony as may be necessary through
10 the course of this proceeding.

Duquesne Light Company

CONFIDENTIAL EXHIBIT CJD-2

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 2

Direct Testimony of Jaime A. Bachota

Subject: Accounting Overview and Budget

Dated: April 16, 2021

DIRECT TESTIMONY OF JAIME A. BACHOTA

1 **Q. Please state your full name, business affiliation and address.**

2 A. My name is Jaime A. Bachota. I am the Assistant Controller of Duquesne Light
3 Company ("Duquesne Light" or the "Company"). My business address is 411
4 Seventh Avenue, Pittsburgh, PA 15219.

5

6 **Q. Please describe your education and work experience.**

7 A. I graduated from Duquesne University with a Bachelor of Science in Business with
8 a concentration in accounting. After graduating I was employed with Deloitte &
9 Touche LLP for seven years.

10 I joined the Company in 2007 in the title of Supervisor of Internal and
11 External Reporting and was promoted to Assistant Controller in 2018. In my role
12 as Assistant Controller, I have responsibility for accounting, financial reporting,
13 payroll, timekeeping and accounts payable.

14

15 **Q. Have you previously testified before the Commission or other regulatory
16 agencies?**

17 A. No.

18

19 **Q. What is the purpose of your testimony in this proceeding?**

20 A. My testimony covers two main areas. First, I will provide an overview of the
21 Company's accounting processes and explain the Company's actual financial
22 results for the Historic Test Year ended December 31, 2020. Second, I will present

1 and review the budgeted financial results for the Future Test Year ending December
2 31, 2021 and the Fully Projected Future Test Year ending December 31, 2022.

3

4 **Q. Are you sponsoring any exhibits as part of your direct testimony?**

5 A. Yes, I am. I am responsible for all of the recorded historical accounts, as well as
6 the budgeted and projected accounts of the Company. As such, I am sponsoring all
7 of the Company's financial statements, including income statements and balance
8 sheets for the Historic Test Year ended December 31, 2020. I am sponsoring the
9 Company's budget for the Future Test Year ending December 31, 2021 and the
10 Fully Projected Future Test Year ending December 31, 2022. With regard to the
11 Pennsylvania Public Utility Commission's ("Commission") data filing
12 requirements filed with this proceeding, I sponsor the responses related to the
13 Company's financial statements and regarding measures of value and operating
14 income. Please see Exhibit JAB-1 to my testimony for the listing of data filing
15 requirements that I am sponsoring. My name is at the top of each data filing
16 requirement that I sponsor.

17

18 **Q. Please describe the material presented on Schedules B-1 through B-4 and**
19 **Schedules B-6 through B-8 of DLC Exhibits 2, 3 and 4?**

20 A. All of the data shown in Schedules B-1 through B-4 and Schedules B-6 through B-
21 8 were derived from either the books and records of Duquesne Light for the twelve
22 months ended December 31, 2020 and prior, or the budget for Duquesne Light for
23 the twelve months ending December 31, 2021 and twelve months ending December

1 31, 2022. Schedules B-1 shows the budgeted balance sheet of Duquesne Light as
2 of December 31, 2021 and December 31, 2022, and the actual balance sheet as of
3 December 31, 2020. The balance sheets of Duquesne Light are prepared in
4 accordance with Federal Energy Regulatory Commission (“FERC”) requirements.
5 Schedules B-2 include the statements of Duquesne Light’s operating income for the
6 twelve months ended December 31, 2020 and budgeted for the twelve months
7 ending December 31, 2021 and twelve months ending December 31, 2022. Details
8 of actual and budgeted operating revenues are provided in Schedules B-3.
9 Schedules B-4 provide the actual and budgeted operations and maintenance
10 expenses of Duquesne Light by FERC account, including the major categories of
11 expense, such as purchased power, transmission, distribution, customer accounts,
12 customer service and administrative and general expenses. Schedules B-6 and B-7
13 present the embedded cost of debt as of December 31, 2020 and estimated as of
14 2021, as well as December 31, 2022. The capital structure of Duquesne Light for
15 the test year and prior years is shown on Schedules B-8. Please see further
16 discussion of Schedules B-6, B-7 and B-8 in the testimony of Mr. James Milligan
17 (DLC Statement No. 14).

18
19 **Q. Please explain the accounting system utilized by the Company.**

20 A. For the twelve months ended December 31, 2020, Duquesne Light maintained its
21 accounting records on the Oracle Fusion general ledger package, which is cloud
22 based and was fully implemented in 2018. The accounting records are maintained
23 in accordance with the FERC’s Uniform System of Accounts (“USofA”). Financial

1 statements for Duquesne Light are also prepared in accordance with accounting
2 principles generally accepted in the United States of America (“GAAP”).

3 Duquesne Light maintains its property, plant and equipment accounting
4 records on the Power Plan Consultant’s fully integrated asset accounting system,
5 referred to as PAAM. The USofA requires that utilities record all construction and
6 retirements of electric plant by means of work orders. The work order system must
7 show the nature of each addition to, or retirement from, electric plant, the total cost
8 thereof, and the plant account or accounts affected. Duquesne Light uses such a
9 work order system, and under this system, an authorized work order is used for all
10 capital work performed.

11

12 **Q. Are there cloud-based service arrangements that are included in the**
13 **proceeding?**

14 A. Yes, \$3.1 million of implementation costs associated with cloud-based service
15 arrangements from January 1, 2021 through December 31, 2022 have and will be
16 recorded as operating expenses for GAAP purposes.

17

18 **Q. Is Duquesne Light including cost of cloud-based software in rate base in its**
19 **claim for recovery in this rate case?**

20 A. Yes. As the Company explained in its 2018 base rates case, cloud-based
21 information systems provide benefits to customers over extended periods of time
22 and not just the period in which the costs are incurred, and so should be treated as
23 capital and includable in rate base. The Commission approved the inclusion of

1 cloud-based software costs in the Company's rate base in that 2018 proceeding,
2 finding in relevant part: "Commencing with implementations subsequent to May 1,
3 2015, the Company shall be permitted to capitalize the development costs for cloud-
4 based information systems." Consistent with that approval, the Company has
5 continued to include such costs in rate base in this case. These costs are reflected
6 as an adjustment to rate base in DLC Exhibit 2, Schedule D-11, which is sponsored
7 by Mr. Robert L. O'Brien. Please see further discussion of this adjustment in the
8 testimony of Mr. Robert L. O'Brien (DLC Statement No. 10).

9
10 **Q. How does Duquesne Light account for new plant put into service and**
11 **associated retirements of existing plant?**

12 A. Costs of new construction are tracked in the system by the use of work orders. At
13 the completion of each project, operations personnel notify asset accounting that
14 the constructed or purchased assets related to a specific work order are now used
15 and useful for their intended purpose. Based on this information, the work order is
16 placed in service and ultimately unitized, or charged to the correct units of property
17 in the plant accounting system. At month end, journal entries are automatically
18 generated and posted to the general ledger for these new in-service dollars. In
19 addition, the system calculates the allowance for funds used during construction
20 ("AFUDC"), spreads overheads, calculates depreciation expense, processes
21 unitized additions and processes plant retirements. The related journal entries are
22 created and automatically posted to our general ledger.

23

1 **Q. Please explain why Duquesne Light is requesting permission to recover**
2 **AFUDC for land held for future use.**

3 A. Duquesne Light has not included land held for future use in rate base in this
4 proceeding because the land is not currently providing service to customers.
5 However, larger projects often have relatively long lead times from commencement
6 to completion. While Duquesne Light is authorized to record AFUDC on the
7 project expenditures once the project commences, Duquesne Light frequently must
8 acquire land or land rights before construction begins. It is appropriate to allow
9 Duquesne Light to record AFUDC on land acquired to provide future service and
10 add such amount to rate base when the project is used to provide service to
11 customers.

12
13 **Q. Does Duquesne Light have an internal audit program?**

14 A. Yes, Duquesne Light has an Internal Audit Department, which implements the
15 annual internal audit program approved by the Audit Committee of our Board of
16 Directors. This department reports to the Audit Committee, as well as the Vice
17 President, Rates and Regulatory Affairs, General Counsel. They perform a slate of
18 annual internal audit and analysis projects to ensure the Company maintains strong
19 internal controls.

20
21 **Q. Does Duquesne Light have an external audit conducted periodically?**

22 A. Yes, both Duquesne Light Holdings, Inc. and Duquesne Light (“Companies”) have
23 external audits conducted annually by Deloitte & Touche LLP. Deloitte & Touche

1 LLP recently completed their audits of the financial statements of the Companies
2 for 2020, the results of which were unqualified opinions on the consolidated
3 financial statements of the Companies as of December 31, 2020. Deloitte & Touche
4 LLP also performs an annual audit of Duquesne Light’s regulatory financial
5 statements that are included in the FERC Form 1. Deloitte & Touche LLP is in the
6 fieldwork phase of its audit of the December 31, 2020 regulatory financial
7 statements to be included in the December 31, 2020 FERC Form 1. The Company
8 anticipates filing its FERC Form in April 2021. In addition to the annual audits
9 performed by Deloitte & Touche LLP, both the FERC and the Commission have
10 performed periodic audits of Duquesne Light.

11

12 **Q. Have any major accounting changes occurred since the Company’s last rate**
13 **case?**

14 A. There have been accounting changes that have occurred since our last distribution
15 rate case in response to new pronouncements that have been issued by the Financial
16 Accounting Standards Board (“FASB”) and others. The Company has
17 implemented these new standards and pronouncements in order to maintain their
18 accounting records in accordance with GAAP. Please refer to data filing
19 requirement II-D-12 that outlines the accounting changes that have occurred since
20 our last rate case filing.

21

22 **Q. Are you responsible for the budget process for the Future Test Year and the**
23 **Fully Projected Future Test Year?**

1 A. Yes. In coordination with the Financial Planning & Analysis (FP&A) and Business
2 Valuation Department, the Finance department accumulates all of the budget data
3 from various sources each year to prepare a full income statement, balance sheet
4 and cash flow budget for the Company for the year. The Company prepares a five
5 year budget during its annual budgeting process.

6

7 **Q. Please describe the Company's budget process.**

8 A. Each year there is an annual planning process that begins in June. The budget
9 process requires active participation at many levels throughout the organization.
10 Retail sales of electricity are budgeted by our FP&A and Business Analysis and
11 Valuation Department, while other revenues such as pole and duct attachment and
12 rental of electric property are budgeted by our operations group. Operations and
13 maintenance expenses are budgeted by individual cost center managers within the
14 Company. Our Human Resources Department provides input on employee levels,
15 salary increase projections and fringe benefit costs. The Tax Department assists in
16 the budgeting of taxes other than income taxes, as well as income tax expense.
17 Asset Accounting prepares the budget for depreciation and amortization expense,
18 as well as AFUDC, based in part on information received from the Operations
19 Group for expected capital expenditures. Our Treasury Department assists by
20 preparing financing plans, budgeting the interest expense we expect to incur and
21 calculating the amortization of debt discounts and premiums. The information
22 necessary for the budget is summarized by the Financial Planning & Analysis
23 Department in cost element detail, which shows total labor, fringes, outside services

1 and other cost elements. See Exhibit JAB-2 to my testimony, which describes the
2 cost elements the Company uses to prepare its budget, and Exhibit JAB-3 for a
3 listing of the individual cost centers within Duquesne Light.

4

5 **Q. Does the Company typically prepare its budget by FERC account?**

6 A. No, we typically prepare the budget for Duquesne Light by cost element detail as
7 this level of detail enhances the review by our cost center managers and assists them
8 in estimating their expenses for budgeting purposes. To satisfy the requirements
9 for this rate filing, our cost element budget was allocated to FERC accounts.
10 Certain cost element budget amounts could be specifically assigned to certain
11 FERC accounts as they are easily identifiable to those accounts. For other cost
12 element budget amounts, an allocation to FERC accounts was performed based on
13 the same percentage to the total as the actual costs for fiscal year 2020 operating
14 and maintenance expenditures, which were reported by both cost element and
15 FERC account. Once this allocation was performed, the results were reviewed to
16 ensure they appeared reasonable and adjustments were made as necessary to reflect
17 expected variances. This process is more fully described in the testimony of Mr.
18 Robert O'Brien (DLC Statement No. 10).

19

20 **Q. Has the operating budget historically provided a reasonable estimate of actual**
21 **expenditures?**

22 A. Yes, over the past three years the total operations and maintenance budget has
23 reasonably approximated the actual costs incurred.

1

2 **Q. How was the budgeted retail sales derived?**

3 A. Mr. Mobley prepares a detailed budget for retail sales based on an extensive
4 econometric analysis. Please see his testimony in DLC Statement No. 3 for details
5 regarding this budget process.

6

7 **Q. How were the other operating revenues budgeted?**

8 A. Other operating revenues may be divided into two categories, operationally-
9 oriented and miscellaneous. Our Operations Group provides the budgeted amounts
10 for operationally-oriented revenues such as pole and duct attachment, rental of
11 electric property, miscellaneous transmission charges and other miscellaneous
12 operationally-oriented revenue. The miscellaneous categories are determined
13 based on historical trends adjusted for known changes or initiatives being
14 undertaken. These amounts include late payment charges, returned check fees and
15 reconnect fees.

16

17 **Q. How do cost center managers prepare their budgets for operations and**
18 **maintenance expenses?**

19 A. Cost center managers across the Company are provided with budgeting instructions
20 and a budget template to fill out and submit to the Company's Senior Manager of
21 Financial Planning & Analysis, who reports to me. This template identifies and
22 requires cost center managers to budget using cost elements that the Company uses
23 to develop, track and report on its budget. Cost center managers use their

1 knowledge of the employee salary costs in their cost center and guidance provided
2 in the budgeting directions on employee levels and management salary increases to
3 determine the budgeted wages. Throughout the year, these cost center managers
4 receive monthly reports that compare their actual spending to budgeted expenses.
5 Cost center managers are required to explain any significant deviations from budget
6 as they occur throughout the year. This reporting and the related accountability
7 helps managers to improve each successive year's budget and more accurately
8 quantify the various costs that they expect to incur during the coming year, such as
9 outside consultants, materials and supplies and others.

10

11 **Q. Do these cost center managers budget for costs that are expected to be**
12 **capitalized, as well as expensed?**

13 A. Yes they do. The Operations Group and other groups that spend capital dollars are
14 provided with budget templates including all of the cost elements that are budgeted
15 for capital. They use their understanding of the capital projects that have been
16 planned for the next several years, as well as projections of the operating costs that
17 they incur on an annual basis, to accurately project the capital spending for their
18 cost center. During the year, these cost center managers receive monthly reports of
19 the actual capital work they have performed to help them manage their costs and
20 plan their work activities in a manner consistent with their budget.

21

22 **Q. Do the budgeted employee levels for the Company include an assumed level of**
23 **open positions at any given time?**

1 A. Yes, the Company incorporates into its budget a “vacancy reserve” of 100 people
2 to prevent ongoing, normal transitional openings from inflating our salary and wage
3 expense. We anticipate that we will always have a level of open positions equal to
4 our vacancy reserve unfilled but believe that vacant positions beyond those
5 reflected in this reserve will be filled by the end of the fully projected future test
6 year.

7
8 **Q. How do you budget for depreciation expense?**

9 A. Our Asset Accounting Department prepares the budget for depreciation and
10 amortization expense based on current property, plant and equipment accounts and
11 projected capital expenditures and retirements, including estimated in-service
12 dates, for the coming year.

13
14 **Q. How are income taxes and taxes other than income taxes budgeted?**

15 A. Our Tax Department performs calculations to project income taxes and each type
16 of taxes other than income taxes for budgeting purposes. Budgeted pre-tax book
17 income is used to project income taxes based on statutory tax rates. The process of
18 budgeting taxes other than income differs based on the type of tax. Gross receipts
19 tax is based on estimated taxable revenues multiplied by the expected tax rate,
20 projected to be 59 mills in 2021 and 2022. The Public Utility Realty Tax
21 (“PURTA”) and other real estate taxes are budgeted based on the amounts paid in
22 the prior year, adjusted for any major additions or sales of real estate property.
23 Payroll taxes are budgeted based on the expected tax rates applied against the

1 estimated payroll costs to be incurred. Miscellaneous taxes are budgeted based on
2 the expected amounts expected to be incurred for items such as sales and use tax
3 audits.

4

5 **Q. Please describe how interest expense and the amortization of debt discounts**
6 **are calculated for the budget.**

7 A. Our Treasury Department calculates the interest costs by multiplying the
8 outstanding debt balances by the applicable interest and dividend rates. Annual
9 amortization expense is determined by dividing the original unamortized balance
10 of costs and premiums by the original life of the debt issuance. New financings are
11 modeled into the budget when capital requirements exceed cash sources. The
12 expected costs for these new financings, such as the expected interest rates and
13 costs to be incurred are provided by outside financial institutions.

14

15 **Q. Please provide a general description of the process used by the Company to**
16 **determine its distribution revenue requirement.**

17 A. The Company first developed the 2021 and 2022 budgets for construction
18 expenditures, operating revenues, operating expenses and other elements. Next,
19 each of the budget elements were analyzed to determine where pro forma
20 adjustments would be required to reflect the Future Test Year or Fully Projected
21 Future Test Year under normalized conditions. The pro forma results for the Future
22 Test Year and the Fully Projected Future Test year were used to prepare a

1 jurisdictional separation to show the distribution plant, revenue and expenses for
2 the Company's Pennsylvania jurisdiction only.

3

4 **Q. Can you provide more detail on the overall process you described?**

5 A. Yes, I can. I will use the operating budget as the example, but each of the measures
6 of value, revenue and expense elements were determined following the same basic
7 procedures. I was responsible for the development of the overall Duquesne Light
8 budget for the Fully Projected Future Test Year. With regard to the operating
9 expenses, Mr. Robert O'Brien (Statement No. 10) converted the Company's fully
10 projected future test year budget from the cost element format that we use, to a
11 FERC format, which is presented on DLC Exhibit 2, Schedule B-4 and included on
12 DLC Exhibit 2, Schedule D-2. Mr. Robert O'Brien, working with myself and other
13 Company personnel, developed pro forma adjustments to the budget expenses by
14 cost element, as shown on DLC Exhibit 2, Schedules D-7 through D-16. Each of
15 these adjustments was distributed to the appropriate FERC account as shown on
16 DLC Exhibit 2, Schedule D-3. These processes provided a total Duquesne Light
17 pro forma level of expenses by FERC accounts for the fully projected future test
18 year ending December 31, 2019. Mr. Howard Gorman (Statement No. 15) then
19 used these pro forma expenses in preparation of his Jurisdictional Separation Study,
20 which is summarized on DLC Exhibit 2, Schedules C-1 and D-1.

21

22 **Q. Was this process followed for each of the elements included in the Company's**
23 **revenue requirement presentation?**

1 A. Yes it was. For example, Mr. Robert O'Brien used the Company's budget for
2 construction expenditures, construction closed to plant, plant retirements,
3 depreciation expense, and other measures of value components as a starting point
4 for pro forma adjustments. The resulting total Company pro forma measures of
5 value was used by Mr. Howard Gorman in his Jurisdictional Separation Study to
6 determine the amounts for the Pennsylvania jurisdiction. A comparison of the total
7 Company and Pennsylvania jurisdictional pro forma measure of value amounts is
8 shown on DLC Exhibit 2, Schedule D-1, page 3. In addition, Mr. Robert O'Brien
9 used the Company's budget calculation for depreciation expense and made pro
10 forma adjustments to reflect the use of the year-end plant in service for the Fully
11 Projected Future Test Year ending December 31, 2022, using the depreciation rates
12 recommended by Mr. John Spanos (Statement No. 11) and pro forma plant
13 additions to determine the total pro forma depreciation expense for the total
14 Company. Mr. Howard Gorman used this data to determine the portion assigned
15 to the Pennsylvania jurisdiction on a pro forma basis for the test year.

16
17 **Q. Do you have an administrative services agreement that allows Duquesne Light**
18 **employees to provide services to affiliates?**

19 A. Yes, Duquesne Light has an administrative services agreement in place with its
20 affiliates. This agreement has been filed with the Commission, and is updated
21 periodically as necessary. This agreement is explained and included as part of the
22 response to data filing requirement II-D-8.

23

1 **Q. Do you consider work that Duquesne Light employees may be doing for**
2 **affiliates in the budgeting process?**

3 A. Yes, cost center managers provide information in the budgeting process regarding
4 any work that their department is doing for any affiliate company. In addition, the
5 Company maintains an electronic time recording system (“E-Time”) for recording
6 and allocating employees’ time between various affiliates and projects. Employee
7 costs are budgeted using actual historical allocation data from E-Time, adjusted for
8 information received from cost center managers about changing circumstances or
9 project assignments. A projected allocation of all employees’ costs between the
10 Company and its affiliates is prepared in this manner. The cost charged to any
11 affiliate includes the employee’s salary and related benefits, as well as
12 proportionate rent and supply costs. A total of all of the allocation amounts is
13 calculated and is included in the budget process as a reduction in Duquesne Light’s
14 expense, which we refer to as subsidiary reimbursements.

15
16 **Q. Does Duquesne Light share office space with its affiliates, and are the affiliates**
17 **charged for this space?**

18 A. Affiliates of Duquesne Light do not lease office space in the same building as the
19 Company, and those affiliates have separate lease agreements with the building
20 owner for the space they utilize.

21

1 **Q. Please provide a summary of ring fencing measures that are in place at**
2 **Duquesne Light in order to provide a separation between Duquesne Light's**
3 **regulated operations and those of its parent and other nonregulated affiliates.**

4 A. Duquesne Light and its parent, Duquesne Light Holdings (“DQE Holdings”),
5 maintain policies and practices which provide effective segregation (ring fencing)
6 between the activities of the Company and those of its parent and nonregulated
7 affiliates. In addition, various external agencies and regulatory bodies have placed
8 restrictions on the Company that provide additional assurance that effective
9 separation has been achieved. The Company is a separate legal entity from DQE
10 Holdings, maintains stand-alone financial statements, receives its own credit rating
11 from Standard & Poor’s and Moody’s and is able to independently raise capital via
12 external markets.

13 Other ring fencing measures include:

- 14 • The Company’s Articles of Incorporation limit it from declaring or paying
15 dividends on any shares of capital stock ranking junior to Duquesne Light's
16 Preferred Stock if the Common Stock equity of Duquesne Light is less than
17 25% of total capitalization.
- 18 • DQE Holdings LLC, the ultimate parent company, has appointed a locally
19 based, independent director to its Board of Directors in order to ensure that our
20 organization models best practices in corporate governance and that corporate
21 decisions reflect the interests of our local community.
- 22 • The Company does not participate in its Parent’s cash concentration system
23 (cash pool) with DQE Holdings or other affiliates that are not regulated by the

1 Commission. As a result, nonregulated entities cannot use the Company's
2 surplus cash for their operations.

3
4 **Q. In conjunction with other Commission approved settlement agreements, has
5 the Company agreed to ring fencing measures?**

6 A. Yes. The Company has agreed to the following ring fencing measures:

- 7 • Duquesne Light shall not guarantee the debt or credit instruments of its parent
8 or any affiliate not regulated by the Commission, except as approved by the
9 Commission upon a determination that such guarantee provides net benefits to
10 customers.
- 11 • Duquesne Light shall not grant a mortgage or other lien on any property used
12 and useful by Duquesne Light in providing retail utility service to the public
13 subject to the Commission's jurisdiction, except for the financing needs of
14 Duquesne Light.
- 15 • Duquesne Light shall not make any loan or otherwise extend credit to its parent
16 or any affiliate not regulated by the Commission for a term of one year or more,
17 except as approved by the Commission upon a determination that such loan or
18 credit extension provides net benefits to customers.
- 19 • DQE Holdings will not permit a change in ownership among the members of
20 DQE Holdings without prior Commission approval if such change would result
21 in a change in control under the then-applicable Commission standards.
- 22 • Duquesne Light will seek Commission approval of all new or amended
23 agreements with affiliates consistent with Chapter 21 of the Public Utility Code.

- 1 • Duquesne Light shall continue to have outstanding separately issued debt held
2 by investors not affiliated with Duquesne Light or its affiliates, unless the
3 Commission authorizes to the contrary.
- 4 • Duquesne Light’s long-term debt ratio as a percentage of total capitalization
5 shall not exceed 60%, absent approval from the Commission.
- 6 • Duquesne Light shall notify the Commission of its intention to declare a special
7 cash dividend to DQE Holdings, at least 30 days before declaring the dividend.
- 8 • The Chief Executive Officer (“CEO”) of DQE Holdings will be a member of
9 DQE Holdings Board of Directors (Board), and will also chair a management
10 committee, which will contain representatives of both the senior management
11 team and the ownership consortium.
- 12 • DQE Holdings shall maintain, and cause its subsidiaries including Duquesne
13 Light to maintain, separate books and financial records.
- 14 • DQE Holdings will maintain corporate organizational and financial policies
15 sufficient to permit Duquesne Light to continue to meet requirements to
16 maintain its own credit ratings, separate from its parent.
- 17 • DQE Holdings and its subsidiaries shall remain organized in a manner that
18 provides corporate separation of regulated and non-regulated activities.

19
20 **Q. How do you budget for fringe benefits provided to employees?**

21 A. This process varies, depending on the type of fringe benefits. However, common
22 benefit programs are provided to employees of Duquesne Light and its affiliates.
23 Therefore, the initial step is determining the total cost expected to be incurred. The

1 Human Resources department reviews each of the health coverage plan costs for
2 the current year and then the budget is developed taking into consideration the
3 present number of eligible employees, projected changes in the numbers of eligible
4 employees, anticipated changes in employee contribution levels and estimated cost
5 increases. Once the total cost has been established, the percentage of that total cost
6 that is applicable to Duquesne Light employees and affiliate employees is
7 determined on a pro-rated basis. The respective cost allocable to each company is
8 then charged to the appropriate company.

9

10 **Q. Do you allocate the cost of fringe benefits to both capital jobs and expense?**

11 A. Yes we do. This allocation is calculated based on the total amount of budgeted
12 labor costs to be incurred from the annual budgeting process. Based on past
13 experience and their knowledge of planned capital projects, cost center managers
14 separately budget the amount of labor that will be charged to expense or to capital.
15 The result is used to allocate the benefit costs so that the benefit costs are allocated
16 between expense and capital in a manner that is proportionate to the related labor
17 costs.

18

19 **Q. Please briefly describe the process used to calculate the pro forma**
20 **jurisdictional measure of value, net operating income and required revenue**
21 **increase for the Pennsylvania jurisdiction.**

22 A. The process began with the Company's 2021 and 2022 calendar year budgets by
23 cost elements, which are determined by total Company requirements and can be

1 compared to budget and recorded amounts from prior years. The budgeted cost
2 elements were then distributed to FERC accounts where necessary. Pro forma
3 adjustments were made to the Company's budget amounts that allow for easy
4 comparison for each adjustment. Finally, the total pro forma amounts were
5 separated to the Pennsylvania jurisdictional level in the aggregate as opposed to
6 making this calculation for each budget element and each pro forma adjustment.

7

8 **Q. Please describe how the Company's request for an increase in its electric**
9 **distribution rates is supported by your data.**

10 A. The requested increase is supported by the Company's budgeted financial data. In
11 Schedule C-1 and D-1 of DLC Exhibit 2, we summarize the revenues, expenses,
12 rate base, and deficiencies in revenue for the Fully Projected Future Test Year.
13 Duquesne Light is requesting an overall rate increase for the total Pennsylvania
14 Jurisdiction of \$85.8 million, exclusive of DSIC roll-in. Duquesne Light's capital
15 structure is shown in DLC Exhibit 2, Schedule B-8, with the requested return on
16 equity of 10.95% reflected on DLC Exhibit 2, Schedule B-9.

17

18 **Q. Are you aware of the requirement that a comparison of actual to budget data**
19 **is to be supplied quarterly when you utilize a Future Test Year?**

20 A. Yes, Exhibit JAB-4 has been provided showing a breakdown of revenues and
21 expenses for the Future Test Year and Fully Projected Future Test Year. We will
22 provide quarterly comparisons of actual results to the budget numbers presented as
23 the actual data for each quarter becomes available. In addition, the Company will

1 provide, as directed by the Commission, data evidencing the accuracy of estimates
2 contained in its Fully Projected Future Test Year.

3

4 **Q. Did the Company prepare a schedule comparing its actual expenses for the**
5 **twelve months ended December 31, 2019 to its projections in the last rate case**
6 **proceeding?**

7 A. Yes, please see Exhibit JAB-5. As recognized in the previous rate case settlement
8 agreement, the agreement was deemed to be a black box settlement which
9 represents a compromise of the Parties' positions on various issues.

10

11 **Q. Did Duquesne Light prepare a comparison of its rate base additions for the**
12 **twelve months ended December 31, 2019 to its projections in the 2018 rate**
13 **case?**

14 A. Yes, please see Exhibit JAB-6 for this comparison.

15

16 **Q. Have you made any adjustments in your Future Test Year or Fully Projected**
17 **Future Test Year to account for known and measurable changes?**

18 A. Yes, we have. Mr. Robert O'Brien is sponsoring all the adjustments that are known
19 and measurable, and his testimony (Statement No. 10) will address those items
20 specifically.

21

22 **Q. Was the Company impacted by the effects of the novel coronavirus (COVID-**
23 **19) during the year ended December 31, 2020?**

1 A. Yes.

2

3 **Q. Did the Company incur incremental uncollectible expenses (as defined in the**
4 **Commission's May 13, 2020 Secretarial Letter at Docket No. M-2020-**
5 **3019775)?**

6 A. Yes. The Company experienced increased levels of customer delinquencies in the
7 year ended December 31, 2020 and thus far into 2021. These delinquent amounts
8 resulted in an increase (above uncollectible expense claimed in its last base rates
9 case of \$10,471,000) of \$4,186,575, which was recorded as a regulatory asset at
10 December 31, 2020. The amount of the regulatory asset has grown to \$5.3 million
11 through March 2021 due to the continuation of the moratorium on terminations for
12 nonpayment.

13

14 **Q. How were the uncollectable expenses included within the Company's current**
15 **rates and the incremental costs above that calculated?**

16 A. The Company used its uncontested projection of uncollectible expense in its prior
17 rate proceeding, \$10,471,000, as its baseline for calculating incremental amounts
18 attributable to the COVID-19 pandemic and associated Commission actions.

19

20 **Q. How does the Company plan to recover these incremental uncollectible**
21 **expenses?**

22 A. The Company has included an adjustment to normalize the associated incremental
23 uncollectible expenses over a three year period as described in Mr. Robert

1 O'Brien's testimony (Statement No. 10). The Company also proposes to continue
2 to record incremental uncollectible costs above what is included in this rate
3 proceeding as a regulatory asset to be recovered in future rate proceedings.
4

5 **Q. Why is the Company requesting a three-year recovery period?**

6 A. Three years was selected as the most appropriate average because it is consistent
7 with the typical and anticipated timing between distribution rate cases.
8

9 **Q. Has the Company incurred other extraordinary, nonrecurring incremental
10 COVID-19 related expenses (as defined in the Commission's May 13, 2020
11 Secretarial Letter at Docket No. M-2020-3019775) outside of incremental
12 uncollectible expenses?**

13 A. Yes. In accordance with the Secretarial Letter, the Company has tracked and
14 maintained records of other extraordinary, nonrecurring incremental COVID-19
15 related costs net of savings associated with the pandemic. These costs primarily
16 include waived late payment charges and waived reconnect fees, outside services
17 and materials. Savings primarily include employee expenses associated with
18 training costs and other employee events. These costs totaled approximately \$4.2
19 million, net of related savings, through December 31, 2020.
20

21 **Q. How does the Company plan to recover these other extraordinary,
22 nonrecurring incremental COVID-19 related costs net of savings?**

1 A. The Company has included an adjustment to normalize the associated other
2 extraordinary, nonrecurring incremental COVID-19 related costs net of savings
3 over a three year period as described in Mr. Robert O'Brien's testimony (Statement
4 No. 10). The Company also proposes to continue to record incremental costs above
5 what is included in this rate proceeding as a regulatory asset to be recovered in
6 future rate proceedings.

7
8 **Q. Why is the Company requesting a three-year recovery period?**

9 A. Three years was selected as the most appropriate average because it is consistent
10 with the typical and anticipated timing between distribution rate cases.

11

12 **Q. Is there a specific provision that should be included in the Commission's final
13 order related to the recovery of these other extraordinary, nonrecurring
14 incremental COVID-19 related costs net of savings?**

15 A. Yes. The Company proposes the following: "The Company shall be permitted to
16 recover prudently incurred other extraordinary, nonrecurring incremental COVID-
17 19 related costs net of savings included in this rate proceeding (commencing from
18 March 2020) and shall be able to defer future other extraordinary, nonrecurring
19 incremental COVID-19 related costs net of savings as a regulatory asset to be
20 recovered in future rate proceedings."

21

22 **Q. Does the Company plan to recover deferred costs of required Eligible
23 Customer Listing solicitations in this rate filing?**

1 A. Yes, pursuant to the Commission's order (Docket No. M-2010-2183412), the
2 Company was granted permission to recover the costs associated with its required
3 triennial eligible customer listing solicitations through its next base rate case
4 proceeding. As of December 31, 2020, the Company maintains a regulatory asset
5 of approximately \$0.3 million, associated with the Company's 2018 triennial
6 solicitation, for which recovery is being requested.

7
8 **Q. How does the Company plan to recover these deferred costs?**

9 A. As the costs associated with the Commission required solicitations is on-going, the
10 Company has included an adjustment to normalize the associated costs over a three
11 year period as described in Mr. Robert O'Brien's testimony (Statement No. 10).

12
13 **Q. Why are you using a three year period for the normalization of the costs
14 associated with Eligible Customer Listing solicitations?**

15 A. Three years is consistent with the triennial solicitation requirement as established
16 by the Commission.

17
18 **Q. Does the Company plan to recover deferred costs of Electric Vehicle programs
19 in this rate filing?**

20 A. Yes. The Company maintains a regulatory asset of approximately \$0.4 million, for
21 which recovery is being requested.

22
23 **Q. How does the Company plan to recover these deferred costs?**

1 A. The Company has included an adjustment to normalize the associated costs over a
2 three year period as described in Mr. Robert O'Brien's testimony (Statement No.
3 10).

4
5 **Q. Why are you using a three year period for the normalization of the costs**
6 **associated with Electric Vehicle programs?**

7 A. Three years was selected as the most appropriate average because it is consistent
8 with the typical and anticipated timing between distribution rate cases.

9
10 **Q. What types of benefits do you provide to Duquesne Light employees?**

11 A. Benefits for 2020 include medical and dental coverage, flexible spending accounts,
12 life insurance, pet insurance, accident insurance, business travel insurance,
13 disability benefits, an employee assistance program and tuition reimbursement. In
14 addition, we maintain a retirement plan ("Plan") to provide pensions for eligible
15 full-time employees. The Plan is closed to new participants. Upon retirement, an
16 eligible employee receives a monthly pension based on his or her length of service
17 and compensation. The cost of funding the pension plans is determined by the unit
18 credit actuarial cost method. Our policy is to budget using the actuarially
19 determined net periodic pension cost calculated by our actuaries under the
20 provisions of Accounting Standards Codification 715 ("ASC 715"). All employees
21 can also participate in the Company's defined contribution retirement plan;
22 however, employees not eligible to participate in the pension plan receive expanded
23 levels of Company matching funds in lieu of pension benefits.

1

2 **Q. Is the Company self-insured for any employee benefits, and if so, how is the**
3 **budget for those benefits estimated?**

4 A. Yes, Duquesne Light is self-insured for its employee medical coverage, which is
5 under national Preferred Provider Organizations (“PPO”) arrangements. The
6 budget estimates are developed based on the previous year’s claim costs with
7 adjustments for anticipated changes in the number of eligible employees, employee
8 contribution levels and cost increases based on healthcare industry outlook.
9 Duquesne Light does maintain stop-loss insurance coverage to cover individual
10 claims that are over \$300,000 per incident.

11

12 **Q. How has Duquesne Light tried to minimize healthcare coverage costs?**

13 A. Over the past several years, Duquesne Light has taken various steps to mitigate the
14 high cost of healthcare, such as promoting employee wellness programs,
15 performing dependent eligibility audits, increasing employee contribution levels,
16 negotiating reductions in administrative fees and reviewing opportunities to enter
17 healthcare exchanges.

18

19 **Q. What is the current funded status of Duquesne Light’s pension plan?**

20 A. The Plan’s funded status on a GAAP basis (the basis utilized for financial reporting
21 purposes) as of December 31, 2020 is a deficit of approximately \$69.5 million.

22

23 **Q. What is the expected funded status at December 31 over the next six years?**

1 A. Please see the chart below:

	<u>Expected Funded Status (in millions)</u>					
	<u>2021</u>	<u>2022</u>	<u>2023</u>	<u>2024</u>	<u>2025</u>	<u>2026</u>
Funded Status	<u>\$ (72.0)</u>	<u>\$(68.7)</u>	<u>\$ (65.1)</u>	<u>\$ (61.3)</u>	<u>\$ (57.3)</u>	<u>\$ (53.1)</u>

2

3 **Q. How does Duquesne Light determine its level of pension cash contributions?**

4 A. Duquesne Light’s contributions to its pension plan are typically the larger of either
5 the minimum amount required under the Pension Protection Act of 2006 (“PPA”)
6 or the amount required to fulfill regulatory commitments. However, in the event
7 that a PPA determined minimum amount is zero, the Company also reviews the
8 opportunity to make voluntary pension contributions in order to offset service costs
9 as to not degrade the pension plan’s funded status and to continue to foster the
10 Company’s de-risking strategies.

11

12 **Q. What are Duquesne Light’s projected pension contributions for the next 6**
13 **years?**

14 A. Please see the below table for the Company’s projected contributions (in millions).

15

	<u>2021</u>	<u>2022</u>	<u>2023</u>	<u>2024</u>	<u>2025</u>	<u>2026</u>
	\$10.0	\$10.0	\$10.0	\$10.0	\$10.0	\$10.0

16

17

18 **Q. Do these projected contributions represent PPA minimum funding**
19 **requirements?**

20 A. No. Based on currently projected pension plan funding levels, the Company is
21 not required to make any minimum pension plan contributions until 2025.

1 Projected pension plan contributions for inclusion in this rate filing represent
2 voluntary pension contributions in order to offset service costs as to not degrade
3 the pension plan's funded status and to continue to foster the Company's de-
4 risking strategies.

5
6 **Q. How have accounting changes affected the Company's pension plan?**

7 A. The Company's accounting changes to its pension plan are described in data filing
8 requirement II-D-12.

9
10 **Q. What level of pension funding is the Company requesting in this case?**

11 A. Consistent with its 2013 distribution rate case settlement agreement, the Company
12 has incorporated a three year (2022-2024) average into its ratemaking calculations
13 for the portion of contributions that will be recovered as an expense for ratemaking
14 purposes. Mr. Robert O'Brien (Statement No. 10) explains this calculation in his
15 testimony.

16
17 **Q. Why is the Company requesting a three-year projected average for pension
18 funding and not a six-year average?**

19 A. Three years was selected as the most appropriate average because it is consistent
20 with the typical and anticipated timing between distribution rate cases.

21
22 **Q. How is Duquesne Light's pension plan managed?**

1 A. Duquesne Light's Board of Directors periodically reviews the Plan's ongoing
2 performance and approves any changes to the Plan's allocation targets between
3 investment categories to ensure the portfolio is properly diversified. Plan
4 performance is evaluated by reviewing the performance of individual money
5 managers against established benchmarks. The Board delegates responsibility for
6 implementing the approved allocation to a group of executives that compose the
7 Pension Investment Committee. This Committee meets on a regular basis to review
8 investment performance, interview managers of funds in which the Plan is invested
9 and make the day to day decisions involved in managing the pension plan's
10 investment portfolio. The Committee utilizes an outside investment advisory firm,
11 LCG Associates, Inc., to provide technical analysis and administrative support in
12 its work. Please refer to the testimony of Mr. James H. Milligan (DLC Statement
13 No. 14) for additional information on the Pension Investment Committee.

14
15 **Q. What steps has Duquesne Light taken to minimize pension costs?**

16 A. In 2007, the Company amended the Plan such that non-represented employees hired
17 after June 1, 2007 would not be eligible to participate in the Company's defined
18 benefit pension plan. In 2010, the Company amended the Plan such that
19 represented employees hired on or after October 1, 2010 would not be eligible to
20 participate in the Company's pension plan. These two amendments effectively
21 closed the plan to new participants. Employees hired after these dates receive
22 expanded levels of Company matching under the Company's defined contribution
23 retirement fund in lieu of pension benefits.

1

2 **Q. Is the Company taking steps to reduce the investment risk associated with its**
3 **pension trust?**

4 A. Yes, we are. The Company is implementing a Liability Driven Investing (“LDI”)
5 strategy to mitigate the volatility associated with pension plan funding. LDI is an
6 investment strategy that focuses on managing pension assets in relation to pension
7 liabilities. The overall goal of LDI is to minimize the volatility of Plan funded
8 status, and thus contribution volatility, by investing in long duration fixed income
9 strategies that attempt to better match the duration of the Plan’s liabilities. Please
10 refer to the testimony of Mr. James Milligan (Statement No. 14) for further
11 discussion of the Company’s LDI strategy.

12

13 **Q. Why is it appropriate to take these steps?**

14 A. Reduced volatility in the pension plan funded status and pension plan funding will
15 provide greater predictability to the Company’s cash management and capital
16 planning and ultimately provide for more stable rates for customers.

17

18 **Q. Has Duquesne Light made the pension contributions under the terms of its**
19 **2018 Distribution Rate Case Settlement?**

20 A. Yes. The Company is required by its 2018 distribution rate case settlement to fund
21 the pension trust in an amount equal to \$10.0 million per year; provided, however,
22 contributions in any year in excess of the foregoing may be used on a cumulative
23 basis to satisfy future contribution obligations. The rate case settlement further

1 concludes that should a pension contribution less than \$10.0 million to the pension
2 trust be appropriate, the Company may reduce the pension contribution and record
3 a regulatory liability on its books that is equal to 50% of the reduction to the pension
4 contribution below the level of \$10.0 million. If a regulatory liability remains at the
5 time of the Company's next rate proceeding, the amount will be refunded to rate
6 payers as part of the next rate case proceeding. The Company made pension
7 contributions totaling \$30.0 million in the years 2018 through 2020. The Company
8 plans to make pension contributions of \$10.0 million in 2021. This represents an
9 average annual pension contribution of \$10.0 million over the last three years and
10 therefore the Company will have no outstanding regulatory liability balance owed
11 to rate payers as the end of the Future Test Year.

12

13 **Q. What pension plan contribution commitment is the Company making with**
14 **regard to its claim?**

15 A. The Company commits to making pension contributions based on the three-year
16 average (2022-2024) on a cumulative basis.

17

18 **Q. Is the Company claiming the actuarially determined net periodic pension cost**
19 **for pensions in this rate proceeding?**

20 A. No, we are not. Consistent with our 2006, 2010, 2013 and 2018 distribution rate
21 cases, we are requesting recovery of the expense component of the annual
22 contributions that we plan to make to the pension plan. These contributions reflect
23 voluntary pension contributions in order to offset service costs as to not degrade

1 the pension plan's funded status and to continue to foster the Company's de-risking
2 strategies. Therefore the expense claim for pensions in this proceeding is based on
3 projected pension plan voluntary contributions. The criteria used to determine
4 these contributions are different from the criteria required to be used to determine
5 pension costs under ASC 715.

6

7 **Q. Please explain the proposed future accounting treatment with regard to**
8 **pensions.**

9 A. The Company is required to accrue an amount for pension costs each year
10 determined in accordance with ASC 715. While the procedures used to determine
11 the annual ASC 715 expense will ultimately equal the total contributions over the
12 duration of the plan, the annual accrual will differ from the pension contribution on
13 a year-to-year basis. For this reason, the Company requests that the Commission
14 authorize the Company to continue to record annually the difference between the
15 pension reimbursement received in rates and the ASC 715 pension expense as either
16 a regulatory asset or liability. These amounts will then be reversed over time in the
17 future. The Company records ASC 715 capitalized pension amounts as part of the
18 previously discussed employee benefit allocation. Please refer to Mr. Robert
19 O'Brien's testimony for further discussion the Company's capitalized pension
20 amounts.

21

22 **Q. Is there a specific provision that should be included in the Commission's final**
23 **order related to pensions?**

1 A. Yes, the provision is as follows:

2 “Continuing in calendar year 2022, Duquesne Light will deposit into its pension
3 trusts an amount equal to \$10,000,000 per year; provided, however, that
4 contribution(s) in any year in excess of the foregoing may be used on a cumulative
5 basis to satisfy future contribution obligations. The provision provides for recovery
6 of the expense component of \$5,000,000 (50% of the average cash contributions)
7 of projected future pension contributions. Additionally, Duquesne Light will be
8 permitted to include the other 50% of actual pension contributions from January 1,
9 2007, forward, net of related accumulated deferred income taxes, in rate base for
10 rate making purposes. The rate base adjustment for pensions shall be the amount
11 necessary to adjust the ASC 715 capitalized pension amounts to equal accumulated
12 capitalized pension contributions, net of applicable deferred income taxes, from
13 January 1, 2007 forward. The depreciation expense for book and ratemaking
14 purposes will be based on the ASC 715 capitalized amounts. The adjusted amounts
15 will be used for reporting rate base in reports to the Commission.”

16

17 **Q. What other postretirement benefits (“OPEBs”) does Duquesne Light provide**
18 **to its employees?**

19 A. In addition to pension benefits, the Company provides certain healthcare benefits
20 and life insurance for retired employees hired before October 1, 2010. The retiree
21 life insurance plan is non-contributory. Retirees participating in the health care
22 plan do make contributions, which have increased as part of our efforts to control
23 costs. Health care benefits terminate when a retiree reaches age 65. We currently

1 account for and fund OPEBs through a Voluntary Employees Beneficiary
2 Associated (VEBA) trust, into which we deposit the full amount of annual costs
3 calculated by our actuary pursuant to ASC 715. Retiree OPEBs and administrative
4 costs of maintaining the trusts and/or accounts are paid from the amounts deposited
5 in the trust. The Company accrues the actuarially determined costs of the
6 aforementioned postretirement benefits over the period from the date of hire until
7 the date the employee becomes fully eligible for benefits.

8

9 **Q. How have accounting changes impacted the Company's postretirement**
10 **benefits?**

11 A. The Company's accounting changes to its postretirement benefits are described in
12 data filing requirement II-D-12.

13

14 **Q. Are you claiming the actuarially determined net periodic cost for**
15 **postretirement benefits in this rate proceeding?**

16 A. Yes we are. The Company has incorporated a two year average into its ratemaking
17 calculations for the portion of actuarially determined net periodic cost for
18 postretirement benefits that will be recovered as an expense for ratemaking
19 purposes. Two years was selected to be consistent with the treatment in its last
20 distribution rate case settlement.

21

1 **Q. Is Duquesne Light requesting that the difference between the rate allowance**
2 **and the annual OPEB expense accrual be deferred as a regulatory asset or**
3 **liability?**

4 A. Yes. Any difference between the annual book accrual and the ratemaking
5 allowance will be deferred and amortized over a reasonable period as an increase
6 or decrease to the rate allowance for OPEBs in the next rate proceeding. This
7 procedure is consistent with the Commission's requirement that the rate allowance
8 be placed in the trust without regard to the actual annual accrual. As of December
9 31, 2020, the Company had recorded a regulatory liability of approximately \$2.0
10 million related to OPEBs. The Company has amortized this amount over a three
11 year period in its ratemaking calculations. As explained in Mr. Robert O'Brien's
12 testimony (Statement No. 10), three year period was selected as it is consistent with
13 the typical and anticipated timing between distribution rate cases.

14
15 **Q. Is there specific language that should be included in the Commission's final**
16 **order on the subject of OPEBs?**

17 A. Yes, Duquesne asks for the same treatment as its last distribution case when the
18 following provision was adopted:

19 "The Company accounts for and funds OPEBs through a Voluntary Employees
20 Beneficiary Associated (VEBA) trust, into which it will deposit the full amount of
21 annual costs calculated by the Company's actuary pursuant to ASC 715. Retiree
22 OPEBs and administrative costs of maintaining the trusts and/or accounts are paid
23 from amounts deposited in the trust. The Company accounts for the difference

1 between the net periodic postretirement benefit expense determined annually by the
2 actuary in accordance with ASC 715 and the amount of ASC 715 postretirement
3 benefit expense used to establish rates. That difference is recorded as a regulatory
4 asset or liability and will be expensed or credited in future base rate proceedings in
5 determining OPEB expense included in rates.”

6

7 **Q. Does this conclude your direct testimony?**

8 A. Yes, it does. I reserve the right to supplement my testimony as may be necessary
9 through the course of this proceeding.

Q. Please state your full name and business address.

A. Todd Allen Mobley; 411 Seventh Avenue, 7th Floor, Pittsburgh, PA 15219.

Q. What is your position at Duquesne Light Company (“Duquesne Light” or “Company”)?

A. Director, Business Analytics.

Q. How long have you worked at Duquesne Light?

A. Since June 2014.

Q. What are your current responsibilities?

A. In addition to other responsibilities, I manage Duquesne Light’s sales throughput forecasting.

Q. What are your qualifications, work experience and educational background?

A. I have a Bachelor of Science in Mathematics and a Master of Business Administration from the University of Notre Dame, including classes in statistics, probability, and regression modeling and forecasting. Beyond my time at Duquesne Light, relevant work experience includes more than three years of experience as a Quantitative Analyst at Allegheny Energy. I also have industry training through Itron’s Energy Forecasting Group.

1 **Q. What is the purpose of your direct testimony regarding Duquesne Light's**
2 **request for increased rates?**

3 A. The purpose of my testimony is to present the Company's sales forecast and the
4 methodology used in its development.

5
6 **Q. Are you sponsoring any exhibits as part of your direct testimony?**

7 A. Yes, I am. I am sponsoring Exhibit TM-1, which is the past five years of weather
8 normalized Company sales segmented by customer class. I am also sponsoring
9 Exhibit TM-2, which is the Company's forecast of sales during the Historical Test
10 Year through 2025, including the Future Test Year and Fully Projected Future Test
11 Year, also segmented by customer class. Finally, I am sponsoring Exhibit TM-3,
12 which displays the savings we expect to achieve through the Company's Act 129
13 Programs for the period of 2020 through 2025.

14
15 **Q. Please explain how these exhibits were prepared?**

16 A. These exhibits were prepared by me, starting with Exhibit TM-1, which is based on
17 weather normalized internal Company sales records. Exhibit TM-2 comes from the
18 results of the annual forecast models I develop, which will be further described in
19 this testimony. Lastly, Exhibit TM-3 comes from the Company's most recent filing
20 detailing our energy efficiency and conservation ("EE&C") programs related to PA
21 Act 129. The Company's revised Act 129 EE&C Plan for the period June 1, 2021
22 through May 31, 2025 was filed with the Public Utility Commission on March 1,
23 2021.

24

1 **Q. Before discussing your findings and methodology in detail, could you please**
2 **address whether you accounted for the impacts of the COVID-19 pandemic?**

3 A. Yes. The COVID-19 pandemic has had significant impacts across many aspects of
4 customers' lives, including their electric consumption patterns. These anomalous
5 impacts are most prominent in the Historic Test Year (HTY), 2020, as my findings
6 below indicate. I discuss how the Company accounted for pandemic impacts in
7 sales forecasts later in my testimony.

8

9 **Q. Please summarize your findings.**

10 A. The forecast assumes normal temperature patterns for all years. Duquesne Light
11 control area sales declined 3.5% between 2019 and the Historic Test Year (HTY).
12 Control area sales are projected to decline an additional 0.2% between the HTY
13 and the Future Test Year (FTY). Control area sales are projected to decline an
14 additional 0.6% between the FTY and the Fully Projected Future Test Year
15 (FPFTY). Total control area sales are projected to decline at a compound annual
16 growth rate of 1.4% between 2019 and 2025.

17 Residential usage comprises approximately 32% of Duquesne Light's
18 annual sales during the FPFTY, and this segment is expected to decline at a
19 compound annual growth rate of 1.3% between 2019 and 2025. This projected
20 decline is being driven by energy efficiency and distributed generation trends, and
21 is partially offset by projected customer and electric vehicle (EV) growth.

22 Commercial usage comprises approximately 48% of Duquesne Light's
23 annual sales, and this segment is expected to decline at a compound annual growth
24 rate of 1.6% between 2019 and 2025. This projected decline is being driven by

1 energy efficiency and distributed generation trends, partially offset by growth
2 associated with EV and new large customers.

3 Finally, Industrial usage comprises approximately 20% of Duquesne
4 Light's annual sales. This segment is expected to decline at a compound annual
5 growth rate of 1.1% between 2019 and 2025. The projected decline is being driven
6 by energy efficiency trends and customer declines.

7 These forecasts are detailed in Exhibit TM-2.

8

9 **Q. What procedures and methodology does Duquesne Light utilize for preparing**
10 **its forecasts?**

11 A. I develop the sales forecasts by modeling each rate and customer class separately,
12 using multiple regression. For Residential and Commercial rate classes, I employ
13 Itron's Statistically Adjusted End-Use (SAE) framework, which captures electricity
14 usage for heating, cooling, and all other end-uses through a series of composite
15 variables. For Industrial rate classes, I use multiple regressions more heavily reliant
16 on trend variables.

17 The raw regression forecasts are then adjusted for a handful of external
18 factors, namely: projected growth in electric vehicles, growth in distributed
19 generation connections, known and potential new large commercial and industrial
20 customers, anticipated adoption of electric buses, and for Industrial rate classes,
21 projected deemed Act 129 energy efficiency savings. The outcome is a calendar
22 monthly forecast for kWh and customer count by rate class.

23

24 **Q. What data do you utilize for the inputs into your forecasts?**

- 1 A. The main data inputs used in the forecast models and their sources include:
- 2 • Historical kWh sales, customer count, and net metering requests by rate class
 - 3 provided internally
 - 4 • 15 year historical daily temperature for Duquesne Light territory provided by
 - 5 AccuWeather.
 - 6 • Historical and forecasted regional energy efficiency trends provided by Itron
 - 7 via the Energy Information Administration
 - 8 • Historical and projected Duquesne Light Act 129 program deemed savings for
 - 9 Industrial customer class
 - 10 • Historical and forecasted economic data for Allegheny and Beaver Counties
 - 11 provided by Oxford Economics
 - 12 • Electric Vehicle electricity usage forecast provided by Electric Power Research
 - 13 Institute
 - 14 • Projected growth rates in solar installations for PA provided by US Solar
 - 15 Market Insight report from GTM Research
 - 16 • Market intelligence regarding known and potential new large commercial and
 - 17 industrial customers and known and potential behind-the-meter generation
 - 18 projects
 - 19 • Google's Community Mobility Reports, which chart movement trends over
 - 20 time by geography, and across different categories of places such as retail and
 - 21 recreation, workplaces, and residential.

22

1 **Q. How are Duquesne Light Company's Pa. Act 129 Energy Efficiency and**
2 **Conservation obligations factored into your forecasts?**

3 A. For Residential and Commercial classes, all energy efficiency and conservation
4 effects, inclusive of Act 129, are incorporated through Itron's SAE model
5 framework, which leverages the Energy Information Administration regional
6 forecasts regarding end use equipment and appliance efficiency and saturation
7 trends. For Industrial classes, the projected Act 129 deemed savings are subtracted
8 from the unadjusted forecasts.

9
10 **Q. Are there any major events impacting the Company's test year forecasts?**

11 A. Major events addressed through adjustments to the raw regression forecasts and
12 include: projected growth in electric vehicles, growth in net metering connections,
13 known and potential new large commercial and industrial customers, known and
14 potential behind-the-meter generation projects, and anticipated adoption of electric
15 buses.

16 In addition to the above, the COVID-19 pandemic impacted the HTY,
17 serving to increase Residential usage and decrease Commercial and Industrial
18 usage due to the associated increased shelter at home and work from home activity,
19 restrictions on business activities, and the overall downturn in economic activity.
20 These trends are reflected in the regressions through incorporating Google's
21 Community Mobility Reports.

22

23 **Q. How does the COVID-19 pandemic impact the FPFTY?**

1 A. The forecast assumes that restrictions on business activities and work-from-home
2 activity mostly return to normal, pre-pandemic conditions by late 2021, and thus do
3 not impact the FPFTY. However, the forecast also projects some level of permanent
4 increase in working from home, which serves to increase the Residential forecast
5 and decrease the Commercial forecast during the FPFTY as a result of this shift in
6 behavior. Beyond these direct responses to the pandemic, the economic impacts
7 and their related effects on the forecast are reflected through the projected economic
8 data provided by Oxford Economics.

9
10 **Q. Could you explain Duquesne Light Company's peak load demand forecasts?**

11 A. Our peak load demand forecasts are provided to us by PJM, our Regional
12 Transmission Organization. PJM develops peak load demand forecasts for each
13 zone in its territory, and provides these forecasts to its members.

14
15 **Q. Were your procedures and methodology for preparing these forecasts
16 consistent with those utilized in prior Duquesne Light proceedings?**

17 A. Yes. With the exception of certain adjustments related to the COVID-19 pandemic,
18 which I discussed above, I employed the same methodology as in the Company's
19 prior base rates proceeding, Docket Nos. R-2018-3000124 et. al.

20
21 **Q Does this conclude your direct testimony?**

22 A. Yes, it does. I reserve the right to supplement my testimony through the course of
23 this proceeding.

Duquense Light Company

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 4**

Direct Testimony of Benjamin Buxton Morris

Subjects: Electrical System, Planning Process, Reliability Performance, Plant Additions, Vegetation Management, Consolidated Tax Savings Adjustment

Date: April 16, 2021

1 **DIRECT TESTIMONY OF BENJAMIN BUXTON MORRIS**

2

3 **I. INTRODUCTION**

4 **Q. Please state your full name and business address.**

5 A. My name is Benjamin Buxton Morris. My business address is 2825 New Beaver
6 Avenue, Pittsburgh, PA 15233

7

8 **Q. What is your position at Duquesne Light Company?**

9 A. I am the Director, Operations Work Management & Performance for Duquesne
10 Light Company (“Duquesne Light” or the “Company”).

11

12 **Q. Please summarize your responsibilities and duties as they relate to this**
13 **testimony.**

14 A. In my capacity as the Director, Operations Work Management & Performance, I
15 currently have three primary areas of responsibility: (1) Work Planning, (2) Work
16 Management, and (3) Work Performance.

17 The first of these areas, Work Planning, involves leading the development
18 of a five-year plan for Operations’ construction, inspection, and maintenance work
19 as part of the Company’s annual business planning process. Additionally, this
20 group tracks the Operations’ performance versus its schedule and cost targets
21 through a given year.

22 The second of these areas, Work Management, involves administering the
23 work of Operations’ field resources to ensure that the work being undertaken aligns

1 with what was included in the five-year plan for construction, inspection, and
2 maintenance work. This administration includes the facilitation of decisions
3 between the insourcing and outsourcing of work, depending on the capacity of the
4 Company's field workers to take on new work at any given point in time. The
5 administration of work also includes the scheduling of work for Company field
6 workers and the provision of asset accounting support, work order management,
7 and other clerical duties to the Company's field management.

8 The third and final of these areas, Work Performance, involves the
9 development, reporting, and analysis of key performance indicators for Operations.
10 The Work Performance function enables Company management to make data-
11 driven decisions with respect to its operations. Additionally, the Work Performance
12 function performs ad hoc quantitative analyses in support of the same goal of
13 operational excellence.

14 I am providing this testimony on behalf of the Company primarily due to
15 my oversight of the development of the five-year plan for Operations' construction,
16 inspection, and maintenance work, discussed above in the context of the Work
17 Planning function. This five-year plan underpins the operational expenditures for
18 which the Company is seeking recovery through this proceeding.

19

20 **Q. Please provide your educational background and describe your professional**
21 **experience.**

22 A. As stated above, I currently am the Director, Operations Work Management &
23 Performance at Duquesne Light. Prior to this role, I served as the Senior Manager,

1 Operations Strategic Planning from November 2016 through February 2017; the
2 Senior Manager, Strategic Planning & Operational Analytics from October 2015
3 through October 2016; and the Manager, Operational Analytics from December
4 2014 through September 2015.

5 Prior to joining Duquesne Light, I was a Vice President in the Regulated
6 Utilities group of Macquarie Infrastructure and Real Assets, Inc. (“MIRA”), where
7 I helped to identify new private equity investment opportunities and to manage
8 existing private equity investments in the regulated utility industry. Specific private
9 equity investments in the regulated utility industry that I helped to manage for
10 MIRA included investments in Duquesne Light; in Aquarion Company, a water
11 utility serving approximately 220,000 customers in Connecticut, Massachusetts,
12 and New Hampshire; and in Hawaii Gas, a gas utility serving approximately 68,000
13 customers in Hawaii.

14 Prior to joining MIRA, I was an Associate in the Oil & Gas investment
15 banking group of Macquarie Capital (USA) Inc., where I worked with clients in the
16 upstream, midstream, downstream, and equipment/services sectors of the oil and
17 gas industry. Specifically, I helped to provide strategic advice related to mergers
18 and acquisitions, restructurings, and recapitalizations and to raise capital in the
19 private and public equity and debt capital markets.

20 With respect to my educational background, I hold Bachelor of Arts degrees
21 from Middlebury College and from Columbia University. I additionally hold a
22 Master of Arts degree from Middlebury College, a Master of Finance degree from
23 INSEAD, and a Master of Business Administration degree from Columbia

1 University. I am credentialed by the Project Management Institute as a Project
2 Management Professional. I am credentialed by the Utility Safety & Ops
3 Leadership Network as a Certified Utility Safety Professional.

4
5 **Q. What is the purpose of your direct testimony?**

6 A. The purpose of my testimony is to describe and explain Duquesne Light's plant
7 additions in 2020, 2021, and 2022, which are the historic test year ("HTY"), future
8 test year ("FTY"), and fully projected future test year ("FPFTY"), respectively.
9 Specifically, my testimony describes: (1) Duquesne Light's electric delivery
10 system, (2) Duquesne Light's planning process to ensure its electric system
11 continues to meet the needs of its customers, (3) the Company's historical reliability
12 performance, (4) major plant additions through the FPFTY, (5) the Company's
13 vegetation management practices, and (6) the Company's plant additions in relation
14 to the consolidated tax savings adjustment ("CTA") calculation.

15
16 **II. ELECTRICAL SYSTEM**

17 **Q. Could you briefly describe Duquesne Light's electric system?**

18 A. Duquesne Light provides electric service to more than 600,000 customers located
19 primarily in Allegheny and Beaver counties (including the city of Pittsburgh), a
20 service territory of approximately 817 square miles. Duquesne Light delivers
21 electricity from a variety of generation sources through a transmission and
22 distribution system at the voltages and in the quantity required by our customers.
23 The system includes approximately 7,484 miles of distribution and sub-

1 transmission lines, approximately 669 miles of transmission lines, 159 company-
2 owned substations, 195 customer-owned substations, approximately 212,227 utility
3 poles, and 51,434 distribution transformers.

4 The transmission system consists of a network of 345 kV, 138 kV, and 69
5 kV transmission lines that supply a series of substations. These lines move bulk
6 power from various sources of supply, which are not owned by Duquesne Light, to
7 the places in Duquesne Light's service territory where it is needed. These lines are
8 the most reliable form of power delivery and are the most electrically efficient.
9 They enable the movement of large quantities of bulk power with minimal energy
10 loss or voltage drop. These transmission lines supply power to several types of
11 substations within our service territory. Substation transformers then convert the
12 transmission voltages to lower (distribution) voltages that are used for distribution
13 to the majority of Duquesne Light's customers. Costs for transmission assets are
14 recovered through Duquesne Light's FERC-approved formula rate.

15 Once converted down to distribution voltages (typically 23 kV or 4 kV,
16 except in our downtown Pittsburgh network system where there is both 11 kV and
17 23 kV primary distribution voltage), electricity is delivered to customers through
18 the local distribution system. The local distribution system consists of distribution
19 lines, transformers, switches, breakers, and other electrical equipment that
20 Duquesne Light uses to deliver power from the various substations to the customer.

21
22 **III. PLANNING PROCESS**

1 **Q. Does Duquesne Light have a planning process to ensure its electric system is**
2 **reliable and able to meet the needs of its customers?**

3 A. Yes. Duquesne Light’s planning process encompasses a review of plant additions
4 needed for service restoration, customer commitments, service capacity and
5 reliability, and infrastructure support. This planning process addresses both our
6 annual investment needs for plant additions and replacements as well as necessary
7 investments in our energy delivery and support infrastructure to replace physical
8 infrastructure that is either nearing obsolescence or unable to meet our customers’
9 needs.

10 In light of evolving customer behaviors and expectations, Duquesne Light’s
11 planning process takes into account the changing nature of the distribution system.
12 For instance, as the Company’s customers seek to interconnect DERs to the
13 distribution grid, Duquesne Light’s Distribution Planning team studies the grid’s
14 capacity to host DERs at our customers’ proposed interconnection-points, and
15 develops plans by which to facilitate the interconnection process. Similarly, as our
16 customers purchase electric vehicles and charge them at their residences or places
17 of business, Duquesne Light’s Distribution Planning team works to ensure that our
18 grid has sufficient capacity to support the increased demand on the system.

19

20 **IV. RELIABILITY PERFORMANCE**

21 **Q. Has Duquesne Light been able to maintain high levels of reliability since its**
22 **last base rate proceeding?**

1 A. Yes. The Company has maintained high levels of reliability. The Company
2 measures its reliability performance based on three system and customer reliability
3 metrics: System Average Interruption Duration Index (“SAIDI”), System Average
4 Interruption Frequency Index (“SAIFI”), and Customer Average Interruption
5 Duration Index (“CAIDI”). The Company consistently has performed well against
6 the standards set by the Commission.

7
8 **Q. Please summarize Duquesne Light’s reliability metrics in recent history (e.g.,
9 over the past five years of benchmarked data).**

10 A. Over the past five years of benchmarked data (*i.e.*, 2016 through 2020 utilizing a
11 combination of the Pennsylvania Public Utility Commission’s annual *Electric
12 Service Reliability in Pennsylvania* report) for 2016 through 2019 and large Electric
13 Distribution Companies’ (“EDCs”) individual *Quarterly Electric Reliability
14 Reports* for the fourth quarter of 2020 (Docket No. M-2016-2522508), Duquesne
15 Light has been, on average over the five-year period, either the top-performing
16 large EDC or the second top-performing large EDC in the Commonwealth,
17 depending on the specific reliability metric.

18 For the SAIDI reliability metric over the 2016 through 2020 period,
19 Duquesne Light was the top-performing (*i.e.*, #1) of the Commonwealth’s seven
20 large EDCs over the five-year period (*i.e.*, the arithmetic mean of 2016 through
21 2020 performance). With respect to individual years’ performances, Duquesne
22 Light was the #1 large EDC in 2016, 2018, 2019, and 2020 and the #3 large EDC
23 in 2017. Duquesne Light performed better than the Company’s Benchmark and

1 Standard values of 126 and 182, respectively, in each of the five years. This
 2 information is summarized in the following table.

3

4 **Table 1 - SAIDI Performance Among Large Pennsylvania EDCs, 2016-2020**

	2016	2017	2018	2019	2020	Mean
Duquesne Light	70	112	89	106	111	98
Benchmark	126	126	126	126	126	126
Standard	182	182	182	182	182	182
PA Large EDC "2"	178	217	165	253	190	201
PA Large EDC "3"	106	82	106	205	116	123
PA Large EDC "4"	171	239	195	252	214	214
PA Large EDC "5"	104	160	152	178	179	155
PA Large EDC "6"	94	104	141	150	122	122
PA Large EDC "7"	159	214	209	196	241	204
Rank (Duquesne Light)	#1	#3	#1	#1	#1	#1
Percentile (Duquesne Light)	0%	33%	0%	0%	0%	0%

5

6 For the SAIFI reliability metric over the 2016 through 2020 period, Duquesne Light
 7 was the second top-performing (*i.e.*, #2) of the Commonwealth's seven large EDCs
 8 over the five-year period (*i.e.*, the arithmetic mean of 2016 through 2020
 9 performance). With respect to individual years' performances, Duquesne Light was
 10 the #1 large EDC in 2018 and 2020; the #2 large EDC in 2016 and 2019; and the
 11 #3 large EDC in 2017. Duquesne Light performed better than the Company's
 12 Benchmark and Standard values of 1.17 and 1.40, respectively, in each of the five
 13 years. This information is summarized in the following table.

14

1

Table 2 - SAIFI Performance Among Large Pennsylvania EDCs, 2016-2020

	2016	2017	2018	2019	2020	Mean
Duquesne Light	0.85	0.98	0.84	1.01	0.84	0.90
Benchmark	1.17	1.17	1.17	1.17	1.17	1.17
Standard	1.40	1.40	1.40	1.40	1.40	1.40
PA Large EDC "2"	1.44	1.47	1.27	1.54	1.27	1.40
PA Large EDC "3"	1.00	0.83	0.97	1.08	0.84	0.94
PA Large EDC "4"	1.43	1.73	1.71	1.72	1.58	1.63
PA Large EDC "5"	1.09	1.06	1.10	1.38	0.97	1.12
PA Large EDC "6"	0.78	0.71	0.84	0.85	0.90	0.82
PA Large EDC "7"	1.08	1.29	1.22	1.19	1.12	1.18
Rank (Duquesne Light)	#2	#3	#1	#2	#1	#2
Percentile (Duquesne Light)	17%	33%	0%	17%	0%	17%

2

3 For the CAIDI reliability metric over the 2016 through 2020 period, Duquesne
4 Light was the top-performing (*i.e.*, #1) of the Commonwealth's seven large EDCs
5 over the five-year period (*i.e.*, the arithmetic mean of 2016 through 2020
6 performance). With respect to individual years' performances, Duquesne Light was
7 the #1 large EDC in 2016, 2018, 2019, and 2020 and the #2 large EDC in 2017.
8 Duquesne Light performed better than the Company's Benchmark value of 108 in
9 all years except 2017 and 2020, which were years marked by high storm activity.
10 Duquesne Light performed better than the Company's Standard value of 130 in
11 each of the five years except 2020. This information is summarized in the following
12 table.

13

1

2

Table 3 - CAIDI Performance Among Pennsylvania EDCs, 2016-2020

	2016	2017	2018	2019	2020	Mean
Duquesne Light	82	115	106	106	132	108
Benchmark	108	108	108	108	108	108
Standard	130	130	130	130	130	130
PA Large EDC "2"	124	147	130	164	150	143
PA Large EDC "3"	106	99	110	189	137	128
PA Large EDC "4"	120	138	114	147	136	131
PA Large EDC "5"	95	150	138	129	185	139
PA Large EDC "6"	121	146	168	176	135	149
PA Large EDC "7"	147	166	171	165	216	173
Rank (Duquesne Light)	#1	#2	#1	#1	#1	#1
Percentile (Duquesne Light)	0%	17%	0%	0%	0%	0%

3

4

Duquesne Light’s attributes its strong reliability performance over the 2016 to 2020 period to the Company’s ongoing T&D System Capacity and Reliability plant additions and vegetation management efforts.

5

6

7

8

Q. Please summarize Duquesne Light’s reliability metrics for 2020.

9

A. For 2020, the Company’s SAIDI, SAIFI, and CAIDI performance was 111, 0.84, and 132, respectively. The Company’s 2020 performance was below (*i.e.*, favorable to) the Benchmark values for SAIDI and SAIFI, but the Company’s 2020 value for CAIDI was above (*i.e.*, unfavorable to) the Benchmark and Standard values as detailed in the chart below:

10

11

12

13

14

1

Table 4 - Duquesne Light 2020 Reliability Metrics

	SAIDI	SAIFI	CAIDI
2020	111	0.84	132
Benchmark	126	1.17	108
Standard	182	1.40	130

2

3

4

5

6

7

8

9

The Company attributes its CAIDI results in 2020 to increased storm activity during the year. The Company experienced a total of 27 Storm Days in 2020. The Company had five PUC Reportable Storms in 2020, which occurred in the months of April, June, July, August, and November. The Company had one Major Event Exclusion in 2020. In light of this higher storm activity, the Company’s 2020 reliability performance was significantly impacted by the contribution of storm days. This fact is illustrated in the following table.

10

11

Table 5 - Duquesne Light 2020 Reliability Metrics by Day Type

	Incidents	SAIDI	SAIFI	CAIDI
Blue Sky Days	2,216	49	0.56	88
Storm Days	1,003	62	0.28	220
All Days	3,219	111	0.84	132
Benchmark	-	126	1.17	108
Standard	-	182	1.40	130

12

13

14

15

16

17

18

The Company’s 2020 reliability performance on Blue Sky days was significantly below (*i.e.*, favorable to) the Benchmark and Standard values. In contemplation of increasing storm frequency and severity, the Company plans to continue to increase its reliability-driven capital investment and storm restoration work, among other efforts, as I discuss in further detail below.

1 **Q. What steps is the Company taking to further improve its service reliability and**
2 **reduce outages?**

3 A. Duquesne Light must continue to invest in its distribution system to maintain and
4 enhance its reliability and resilience. The Company's plant additions to this end are
5 made in accordance with our planning process described above. Additionally,
6 Duquesne Light must continue to maintain vegetation around its distribution assets
7 to improve service reliability and reduce outages. The Company's vegetation
8 management efforts are described in Section VI.

9 In addition to Duquesne Light's traditional transmission and distribution
10 plant investments and vegetation management activities, the Company is investing
11 in technology designed to help improve reaction time to service interruptions.
12 Specifically, Duquesne Light is investing in an outage management system
13 ("OMS") that will be implemented in 2022. This project is described in the "Plant
14 Additions" section of this testimony, under the category of "IT Programs and
15 Projects."

16

17 **V. PLANT ADDITIONS**

18 **Q. Can you summarize the process used by Duquesne Light to determine which**
19 **plant additions are necessary and when they must be added?**

20 A. Yes. Duquesne Light identifies the need and priority for plant additions by
21 comparing knowledge regarding the condition and use of its assets to knowledge
22 regarding the future performance requirements of those assets. In cases when a
23 problem with future performance is predicted, or where a need to improve

1 performance has been identified, Duquesne Light engineers develop a variety of
2 reasonable alternatives to resolve the problem or meet the need. Each alternative is
3 then evaluated on its technical and financial merits and the alternative with the
4 greatest customer value consistent with Duquesne Light's materials, design, and
5 construction standards is recommended.

6 A Company management team reviews these recommended plant additions
7 and challenges the underlying technical and financial facts, assumptions, and
8 conclusions. This process ensures that appropriate analytical rigor is applied to the
9 decision-making process and ensures that each plant addition is considered within
10 the context of all other capital needs. This is an iterative process that continues until
11 a final decision is made on a plant addition.

12 Approved plant additions are then included in an integrated work plan that
13 is used by Duquesne Light planners, engineers, schedulers, and project managers
14 to ensure optimum sequencing of the many different additions made during any
15 given year. As projects are completed, field supervisors perform project reviews to
16 assure the scope of work has been completed and then notify the plant accounting
17 department to ensure proper accounting treatment of the capital project.

18

19 **Q. Can you explain how Duquesne Light seeks to balance plant additions with**
20 **customer affordability?**

21 A. Yes. With respect to plant additions, Duquesne Light strives to render its electric
22 distribution service as affordable as possible for our customers by (1) making plant
23 additions only when the Company believes that it is prudent to do so by virtue of

1 our planning process, (2) employing or procuring the least-cost labor, materials,
2 and services that meet our materials, design, and construction standards, and (3)
3 striving to maximize efficiency and productivity in our design and construction
4 processes. The Company is also increasingly exploring alternatives to traditional
5 distribution facility investments (also called “non-wires alternatives”) as potentially
6 cost-effective electric delivery solutions.

7
8 **Q. Please explain the reasons why Duquesne Light invests in its distribution**
9 **system.**

10 A. Duquesne Light makes plant additions in order to provide safe and reliable service
11 to our customers. Plant additions, including those planned through the end of the
12 FPFTY, are necessary for five primary reasons and are categorized accordingly as:
13 (1) Transmission and Distribution (“T&D”) Service Restoration, (2) T&D
14 Customer Commitments, (3) T&D System Capacity and Reliability, (4) T&D
15 Support, and (5) IT Projects & Programs. The value of plant additions in these five
16 functional categories during the HTY, FTY, and FPFTY is summarized in Exhibit
17 BBM-1.

18
19 **Q. Please explain Duquesne Light's anticipated Plant Additions for the time**
20 **period of 2020, 2021, and 2022.**

21 A. Duquesne Light plans to make \$549.9 million of additions to Distribution Plant for
22 the time period of 2020, 2021, and 2022. In addition to this amount, Duquesne Light
23 plans to make \$186.0 million of additions to Transmission Plant during the same

1 time period. The Company is not claiming any Transmission Plant additions in its
 2 rate base claim in this proceeding. Supporting these additions to both Distribution
 3 Plant and Transmission Plant, the Company plans to make \$71.8 million and \$69.6
 4 million of additions to General Plant and Intangible Plant, respectively, for the
 5 period of 2020, 2021, and 2022. The value of plant additions in these accounting
 6 categories during the HTY, FTY, and FPFTY is summarized in Exhibit BBM-2.

7

8 **Q. How do these Distribution Plant addition values compare with those of recent**
 9 **years (e.g., 2017, 2018, and 2019)?**

10 A. Duquesne Light's anticipated Distribution Plant additions for 2020, 2021, and 2022
 11 are comparable to recent years. The table, below, illustrates that the Company's
 12 Distribution Plant additions range between a low of \$161.0 million in 2022 and a
 13 high of \$216.9 million in 2018. 2022 is a relatively low year for Distribution Plant
 14 additions, but the Company is anticipating a relatively high level of Transmission
 15 Plant additions that same year.

16

17

Table 6 - Plant Additions, 2017-2022

	2017	2018	2019	2020	2021	2022
				HTY	FTY	FPFTY
<i>\$ Millions</i>	Actual	Actual	Actual	Actual	Forecast	Forecast
Intangible	\$23.3	\$32.9	\$39.8	\$12.7	\$29.6	\$27.2
Transmission	26.6	36.1	18.1	53.9	48.5	83.6
Regional Transmission	1.1	0.2	-	-	-	-
Distribution	166.4	216.9	181.4	178.9	210.0	161.0
General	21.8	30.9	43.3	10.2	31.7	29.9
Total	\$239.2	\$317.0	\$282.6	\$255.7	\$319.8	\$301.8

18

1 It is worth noting that the Duquesne Light's actual Distribution Plant additions for
2 2018 and 2019 exceeded its projections for those years presented in its last base
3 rate case, R-2018-3000124. Specifically, the Company made \$216.9 million of
4 Distribution Plant additions in 2018, compared with its original projection of
5 \$153.5 million. Similarly, Duquesne Light made \$181.4 million of Distribution
6 Plant additions in 2019, compared with its original projection of \$159.8 million.

7

8 **Q. Please explain T&D Service Restoration as a primary reason for making plant**
9 **additions.**

10 A. Duquesne Light customers expect their electric service to be restored promptly if it
11 is interrupted. T&D Service Restoration includes plant additions to replace
12 equipment that has failed and either resulted in a service interruption to Duquesne
13 Light customers or presented a significant risk of an imminent service interruption.
14 Plant additions in this category include additions to replace equipment failures
15 related to storms, adverse weather conditions, animal contacts, and equipment that
16 fails due to reaching the end of its service life. This category also includes plant
17 additions in response to outages caused by people and/or their equipment, including
18 motor vehicle crashes.

19 Forecasts of plant additions needed for Service Restoration are estimated
20 based on previous years' experience.

21

22 **Q. Please summarize the types of plant additions that are included in the January**
23 **1, 2020 through December 31, 2022, projections for T&D Service Restoration.**

1 A. In the time period of 2020, 2021, and 2022, Duquesne Light projects to make
2 \$111.3 million of plant additions in the T&D Service Restoration category. The
3 service restoration program provides funding for the restoration of equipment that
4 may require replacement due to damage caused by storms, wind, ice, or heat.
5 Replacement includes both overhead and underground facilities. It also includes
6 funding to replace equipment that may fail and cause customer outages or has the
7 potential for causing imminent outages to customers. In calendar year 2020,
8 Duquesne Light made \$39.6 million of plant additions in the T&D Service
9 Restoration category.

10

11 **Q. Please explain T&D Customer Commitments as a primary reason for making**
12 **plant additions.**

13 A. Duquesne Light serves residential, commercial, industrial, and lighting customers.
14 All customer classes rely on us to provide service for new or remodeled homes and
15 businesses, and also to upgrade existing services to meet new capacity requirements
16 they may have as a result of additional load such as computers, air conditioning,
17 and modernization. T&D Customer Commitments also include plant additions
18 associated with relocations of Company facilities that are regularly requested by
19 governmental agencies due to highway improvements or other rights-of-way
20 interferences. These projects include road widening, bridge repairs, sewer and
21 water main replacements/upgrades, or other infrastructure improvements.

22 Forecasts of plant additions needed as a result of T&D Customer
23 Commitments are based upon forecasted economic conditions in the Duquesne

1 Light service area, projected number of new customers, major customer projects
2 that are known to us, and projects identified to us by state, county, city and local
3 municipalities.

4

5 **Q. Please summarize the types of plant additions that are included in the January**
6 **1, 2020 through December 31, 2022, projections for T&D Customer**
7 **Commitments.**

8 A. In the time period of 2020, 2021, and 2022, Duquesne Light projects making \$68.3
9 million of plant additions for T&D Customer Commitments. This amount funds
10 hundreds of various sized projects to install overhead or underground distribution
11 equipment requested by residential, commercial or industrial customers, or
12 governmental agencies in accordance with Duquesne Light service policies.

13

14 **Q. Please explain T&D System Capacity and Reliability as a primary reason for**
15 **making plant additions.**

16 A. Duquesne Light customers expect our electric system to provide the equipment
17 capacity needed to assure reliability and voltage stability. Plant additions to the
18 Duquesne Light electric system are required to ensure that it continues to meet those
19 needs as customer load grows or the location of load shifts within the Duquesne
20 Light service territory. The types of additions required to ensure service capacity
21 and reliability include substation upgrades, circuit extensions and conversions to
22 ensure the distribution system meets our customers' voltage and load requirements,

1 and the installation of new equipment to replace deteriorated, obsolete, or failed
2 equipment.

3 Forecasts of plant additions needed to ensure T&D System Capacity and
4 Reliability are identified through analysis of inspection and maintenance program
5 results, reliability data analysis, reviews of customer requests, and an engineering
6 review of load growth in particular areas.

7
8 **Q. Please summarize the types of plant additions that are included in the January**
9 **1, 2020 through December 31, 2022, projections for T&D System Capacity and**
10 **Reliability.**

11 A. In the time period of 2020, 2021, and 2022, Duquesne Light's projections include
12 making \$515.6 million of plant additions for T&D System Capacity and Reliability.
13 The T&D System Capacity and Reliability forecasted plant additions of \$515.6
14 million includes \$433.3 million of programs and projects to address emergent
15 issues and to systematically replace equipment that is at the end of its useful life.
16 The remaining \$82.3 million is related to programs and projects approved as a part
17 of the Company's current Long Term Infrastructure Improvement Plan ("LTIIIP")
18 for the period through December 31, 2022.

19
20 **Q. Please describe the Company's major T&D System Capacity and Reliability**
21 **plant additions through the FPFTY that are not included in the current LTIIIP.**

22 A. There are three major capital programs and projects included in the T&D System
23 Capacity and Reliability category that are not included in the current LTIIIP. They

1 are (1) the Pole Assessment, Repair, and Replacement Program, (2) the Establish
2 Riazzi Substation Project, and (3) the Oakland Capacity and Resiliency Project.

3

4 **Q. Please describe the Pole Assessment, Repair, and Replacement Program.**

5 A. This program includes the replacement and repair of poles and any associated
6 supporting equipment for distribution class voltages. Transmission poles that fail
7 inspection are replaced under a separate program. As required by Duquesne Light's
8 Inspection and Maintenance ("I&M")¹ plan, the Company inspects distribution
9 poles on a 12-year cycle. The I&M plan also provides for the replacement of poles
10 as necessary and appropriate based on the condition of the pole.

11 The Company anticipates making \$61.3 million of plant additions in the
12 period from 2020 through 2022 as a result of this program.

13

14 **Q. Is this an increase from prior years?**

15 A. Yes, Duquesne Light is projecting increased cost of plant additions for its Pole
16 Assessment, Repair, and Replacement Program relative to prior years. A time-
17 series of plant additions related to the Pole Assessment, Repair, and Replacement
18 Program can be found in the following table.

19

20

¹ Duquesne Light files its Inspection and Maintenance plan with the PUC as required by 52 Pa. Code § 57.195. See Docket No. M-2009-2094773.

1 **Table 7 - Pole Assessment, Repair, and Replacement Additions, 2017-2022**

	2017	2018	2019	2020	2021	2022	'17-'22
	-	-	-	HTY	FTY	FPFTY	-
<i>\$ Millions</i>	Actual	Actual	Actual	Actual	Forecast	Forecast	CAGR
Plant Additions	\$9.9	\$21.1	\$24.7	\$21.3	\$22.1	\$20.8	16.0%

2

3 The table, above, shows an increase in plant additions related to the Company's
 4 Pole Assessment, Repair, and Replacement Program beginning in 2018. This
 5 increase is driven both by an increased failure rate in the Company's pole
 6 inspections, which has resulted in the need to replace a larger number of poles, and
 7 by an increase in the number of poles contracted out for replacement due to internal
 8 resource constraints resulting from the need to replace more poles, which has
 9 resulted in a higher unit-cost than internally replaced poles. The increased failure
 10 rate that Duquesne Light has experienced is the result of a combination of the
 11 condition of the poles in the specific geographic areas being inspected and the
 12 implementation of a new, more accurate testing methodology by the Company. To
 13 help mitigate the increase in plant additions, Duquesne Light began in 2019 to
 14 reinforce, as opposed to replace, certain poles that did not pass inspection. These
 15 facts are seen in the following table.

16

17

Table 8 - Pole Inspections and Replacement, 2017-2022

	2017	2018	2019	2020	2021	2022	'17-'22
	-	-	-	HTY	FTY	FPFTY	-
	Actual	Actual	Actual	Actual	Forecast	Forecast	CAGR
Poles Inspected	18,363	17,955	18,325	17,781	18,181	18,000	(0.4%)
Inspection Failure Rate	7.4%	9.3%	10.6%	11.7%	11.5%	11.5%	9.3%
Poles Failed	1,354	1,662	1,949	2,074	2,091	2,070	8.9%
Poles Reinforced	-	-	186	463	455	450	N/A
Poles Replaced	1,175	1,614	1,998	1,644	1,808	1,620	6.6%
Plant Additions (\$ Millions)	\$9.9	\$21.1	\$24.7	\$21.3	\$22.1	\$20.8	16.0%
Plant Additions / Pole Replaced	\$8,426	\$13,073	\$12,362	\$12,956	\$12,223	\$12,840	8.8%

This table illustrates a relatively constant level of Plant Additions related to pole replacements over the 2018 through 2022 period. Duquesne Light expects Plant Additions to remain generally around this same level through at least the time that the current twelve-year inspection and replacement cycle is completed.

Q. Please describe the Establish Riazzi Substation Project.

A. The Oakland area is a highly concentrated load center on the Duquesne Light system. There are four universities, three hospitals, two museums, and densely arranged homes, shops, and restaurants. Presently, this area is supplied by a single source, Oakland Substation. There are 22 circuits emanating from Oakland Substation with limited capacity ratings. The capacity ratings are limited due to the fact that Duquesne Light's distribution circuits are predominantly underground in Pittsburgh's urban Oakland neighborhood, and because underground distribution circuits located in the same duct bank cause each other to heat up, thermally, in a phenomenon known as "mutual heating." When distribution circuits are subject to thermal heating, they lose electric distribution capacity. Due to anticipated load growth and limited circuit ampacity, an additional power source to Oakland

1 Substation must be established in the form of a new 138 kV – 23 kV substation.
2 This substation is to be known as Riazzi Substation, and it will be located
3 centralized to Oakland Substation’s load center. Riazzi Substation will provide
4 power to customers in the neighborhoods of Oakland, Shadyside, Squirrel Hill,
5 Greenfield, Hazelwood, and Point Breeze.

6 This project will establish a new bulk substation in the Panther Hollow area
7 and adjacent to the underground Arsenal – Oakland 138 kV transmission line to
8 allow the line to be looped into the station. The substation is to consist of a 138 kV
9 ring bus with four bus sections; two 100 MVA, 138 kV–23 kV power transformers;
10 and three 23 kV bus sections each containing five 23 kV circuit positions.

11 The Company anticipates making \$36.7 million of plant additions in the
12 period from 2020 through 2022 as a result of this project.

13

14 **Q. Please describe the Oakland Capacity and Resiliency Project.**

15 A. The establishment of Riazzi Substation provides an alternate power source to
16 supply the Oakland area. The Establish Riazzi Substation project plan includes
17 construction of the substation and two distribution circuit getaways. The Oakland
18 Capacity and Resiliency Project will fully utilize Riazzi Substation by establishing
19 additional distribution duct paths and circuits. This expansion is intended to
20 alleviate forecasted overloads of Oakland Substation distribution circuits, eliminate
21 Oakland Substation circuits in order to increase ratings of the remaining circuits,
22 and transfer large customers from Oakland Substation to Riazzi Substation in order
23 to be able to support these and other customers. The scope of this project is to install

1 and extend an additional seven 23 kV circuits and underground infrastructure in
2 and around Riazzi Substation.

3 The Company anticipates placing \$17.6 million of plant additions in service
4 in the period from 2020 through 2022 as a result of this project.

5
6 **Q. You mentioned that the T&D System Capacity and Reliability category**
7 **included \$82.3 million in LTIP programs and projects. Please explain.**

8 A. On April 15, 2016, Duquesne Light filed a Petition for Approval of its LTIP
9 (“LTIP Petition”) at docket number P-2016-2540046. In the LTIP Petition,
10 Duquesne Light requested that the Commission approve its proposal for
11 accelerating the repair, improvement and replacement of aging infrastructure for
12 the six-year period beginning January 1, 2017. The Company’s LTIP was
13 approved on September 15, 2016.

14 On May 26, 2016, the Company filed a petition seeking approval of a
15 Distribution System Improvement Charge (“DSIC”). By Order entered April 20,
16 2017, the Commission approved the Company’s DSIC at docket number P-2016-
17 2540046. The Company recovers some costs associated with its LTIP through its
18 DSIC. As explained in the testimony of Mr. Davis (DLC Statement No. 1) and Mr.
19 Ogden (DLC Statement No. 16), the Company is proposing to roll current DSIC
20 into base rates and to reset the DSIC rate to zero.

21

22 **Q. Please explain T&D Support as a primary reason for making plant additions.**

1 A. Meeting the critical needs of Duquesne Light customers requires more than an
2 electric distribution system. It requires assets to support the workforce who operate
3 and maintain that system and provide other services to the Company's customers.
4 T&D Support plant additions include items such as new vehicle purchases needed
5 to replenish Duquesne Light's fleet upgrades to existing facilities, and the
6 construction of new facilities needed to support the Company's workforce.

7 Forecasts of plant additions for T&D Support are based on past experience
8 for items such as facility upgrades, and on analysis of needs for items such as new
9 facilities and vehicle replacements.

10

11 **Q. Please summarize the types of plant additions that are included in the January**
12 **1, 2020, through December 31, 2022, projections for T&D Support.**

13 A. In the time period of 2020, 2021, and 2022, Duquesne Light will anticipate making
14 \$80.7 million in T&D Support plant additions. These plant additions are primarily
15 programmatic in nature, and include annual additions to vehicle, metering, facility,
16 communications, and tools and testing equipment plant.

17

18 **Q. Please explain IT Programs and Projects as a primary reason for making plant**
19 **additions.**

20 A. Meeting the critical needs of customers requires IT assets to support the workforce
21 and systems that serve them.

22

1 **Q. Please summarize the types of plant additions that are included in the 2020,**
2 **2021, and 2022 projections for IT Programs and Projects.**

3 A. IT Programs and Projects plant additions include corporate applications, cyber
4 security, and Supervisory Control and Data Acquisition (“SCADA”), amongst
5 other needs. Forecasts of plant additions for IT Programs and Projects typically are
6 based both on past experience, on analyses of future needs for items such as
7 hardware and software upgrades or supplements, and on the specifics of projects’
8 scopes. Some of these projects, like the OMS implementation, have a direct impact
9 on Duquesne Light’s reliability.

10 The Company anticipates placing \$101.4 million of plant additions in
11 service in the period from 2020 through 2022 as a result of IT Programs and
12 Projects.

13
14 **Q. Please describe the OMS Project.**

15 A. The OMS Project is expected to automate Duquesne Light’s methods of handling
16 outages by utilizing a single system to group outages, track customers without
17 power, manage crews, update estimated times of restoration, and initiate automated
18 restoration verification.

19 The Company’s outage management process currently relies on the use of
20 paper maps, multiple computer applications and stand-alone databases to support
21 outage restoration. In today’s process, an Outage Analysis System (“OAS”)
22 processes customer calls and lists all electrical circuits in the vicinity. Employees
23 manually group customer outages together once the affected circuit is identified

1 and estimate the total number of customers without power. The outage management
2 process currently is labor intensive, as it requires teams of individuals to sort and
3 group individual trouble tickets, estimate customers out of power, enter data into
4 various computer systems, and perform manual customer callbacks.

5 The OMS implemented as part of this project will digitize and automate
6 Duquesne Light's current outage management process. For instance, where
7 Duquesne Light today has employees manually grouping customer outages
8 together once the affected circuit is identified and estimating the total number of
9 customers without power, in the future, the OMS automatically will group and
10 count customers together based on their electrical connectivity to one another.
11 Similarly, where the Company today must manually create the equivalent of a work
12 order into a restoration-specific work management system to repair identified
13 trouble, in the future, the OMS will serve as that same restoration-specific work
14 management system and eliminate the need for "swivel-chair" data-entry or for
15 electronic integrations between disparate restoration-related systems. With these
16 improvements to digitize and automate Duquesne Light's existing outage
17 management process, the Company believes that it should be able to decrease the
18 time and resources required to restore electric distribution service to our customers
19 following an outage.

20 The Company anticipates placing \$10.1 million of plant additions in service
21 in the period from 2020 through 2022 as a result of the OMS Project.

22

23 **VI. VEGETATION MANAGEMENT**

1 **Q. Please describe the Company’s vegetation management program.**

2 A. Duquesne Light professionally manages a comprehensive vegetation program
3 utilizing industry best management practices to provide safe and reliable
4 distribution service. This program is specifically designed for the management of
5 vegetation along Duquesne Light’s rights-of-way (“ROW”) for the dependable
6 operation of its distribution (4kV, 23kV, and 23TkV) system and includes: (i) select
7 tree pruning and removal within or along the ROW, (ii) hazard tree assessment and
8 the removal of defective, dead, or diseased trees within or along the ROW, and (iii)
9 the selective mechanical and/or chemical control of incompatible tall-growing
10 brush within the ROW. Specific methods for line clearance are chosen based on the
11 type of work involved while achieving it in a professional, economical, and
12 environmentally sound manner. This year-round operation ensures that the safety
13 and reliability of approximately 7,500 distribution circuit miles complies with
14 regulatory standards. The present frequency of vegetation management activities
15 for the distribution system ranges between four to six years.

16
17 **Q. What level of cost is the Company projecting for its vegetation management
18 program for the FPFTY?**

19 A. In total, the Company plans to spend \$20.8 million, comprising both expense and
20 capital costs, for its vegetation management program in the FPFTY. The Company
21 is requesting \$11.3 million of vegetation management expense in the FPFTY for
22 pruning and selective mechanical and/or chemical control of incompatible tall-
23 growing brush within the ROW. Additionally, the Company plans to make \$9.5

1 million of vegetation management capital expenditures in 2022 related to tree
2 removals and other ROW clearing.

3
4 **Q. Is this an increase from prior years?**

5 A. Yes, the Company's projected spending for its vegetation management activities in
6 the FPFTY does represent an increase from prior years. Duquesne Light is required
7 to manage vegetation within or along 1,300 miles of distribution circuits annually,
8 and these activities result in a mixture of both expense for pruning-type activities
9 and capital for removal-type activities. Depending on the vegetation management
10 needs of the specific distribution circuit-miles maintained in a given calendar year,
11 the mixture of pruning-type (*i.e.*, expense) vs. removal-type (*i.e.*, capital) activities
12 may fluctuate in a given calendar year. For this reason, looking at the total cost of
13 vegetation management activities, defined as the sum of both the pruning-type (*i.e.*,
14 expense) and removal-type (*i.e.*, capital) costs, provides the most meaningful view
15 of the true cost of the Company's vegetation management program. Additionally,
16 again dependent on the needs of the specific 1,300 circuit-miles maintained in a
17 given calendar year, each expense, capital, and total vegetation management costs
18 may fluctuate slightly from year to year. For this reason, a rolling arithmetic mean
19 (*e.g.*, a three-year mean) provides a normalized sense of cost-levels. The following
20 table provides time-series data for the Company's vegetation management costs.

1

Table 9 - Vegetation Management Costs, 2017-2022

	2017	2018	2019	2020	2021	2022	'17-'22
	-	-	-	HTY	FTY	FPFTY	-
<i>\$ Millions</i>	Actual	Actual	Actual	Actual	Forecast	Forecast	CAGR
Expense	\$11.7	\$11.4	\$11.9	\$9.9	\$8.7	\$11.3	(0.8%)
Capital	\$3.4	\$3.4	\$5.2	\$9.0	\$7.5	\$9.5	23.1%
Total	\$15.1	\$14.8	\$17.1	\$18.9	\$16.3	\$20.8	6.6%
<i>3-Year Mean</i>	<i>\$15.0</i>	<i>\$15.2</i>	<i>\$15.7</i>	<i>\$16.9</i>	<i>\$17.4</i>	<i>\$18.6</i>	<i>4.4%</i>

2

3 Focusing on the “3-Year Mean” for the Company’s total vegetation management
4 costs, one can see that these costs are forecast to increase at a compound annual
5 growth rate (“CAGR”) of 4.4% over the 2017 to 2022 period. This increase is
6 driven primarily by Duquesne Light’s removal-type (*i.e.*, capital) costs, which are
7 forecast to increase at a CAGR of 23.1% over the 2017 to 2022 period.

8 With specific respect to vegetation management expense, the above table
9 also illustrates that, while 2020 and 2021 were relatively low years for expense,
10 Duquesne Light’s forecasted 2022 level for expense is in line with the 2017 through
11 2019 period.

12 With specific respect to vegetation management capital, it is worth noting
13 that the one-time removal-type (*i.e.*, capital) activities ultimately should serve to
14 reduce ongoing pruning-type (*i.e.*, expense) activities, thereby reducing the multi-
15 year total cost of Duquesne Light’s vegetation management activities for the
16 Company’s customers. Ultimately, Duquesne Light’s vegetation management
17 capital should reduce over time as fewer removal-type activities remain on or near
18 the Company’s ROWs, and the ongoing pruning-type activities should be lower
19 than current levels since fewer vegetation units remain to be pruned.

1

2 **Q. Why are the Company's vegetation management costs increasing for the**
3 **FPFTY?**

4 A. While the Company's planned FPFTY vegetation management costs of \$20.8
5 million is an increase from prior years, this fact is more a function of the size and
6 quantity of the vegetation-units of the specific circuits along which Duquesne Light
7 plans to manage vegetation in the FPFTY than it is a reflection of either (1) a change
8 in total circuit-miles to be maintained, which remain fixed at the Company's
9 required 1,300 distribution circuit-miles per year, or (2) a change to the
10 specifications in accordance with which Company's manages vegetation along its
11 circuits.

12 Duquesne Light's total vegetation management cost is a function of the
13 number of vegetation-units (*i.e.*, trees) along the 1,300 distribution circuit-miles per
14 year that the Company manages. Duquesne Light's vegetation management
15 contractors walk the distribution circuit-miles that the Company intends to manage
16 each year and conduct an inventory of the different vegetation-units that will be
17 managed. In this manner, the Company creates an annual work plan and associated
18 cost forecast for the 1,300 distribution circuit-miles that it will maintain in a given
19 calendar year.

20 Since 2017, Duquesne Light has increased its focus on removal-type (*i.e.*,
21 capital) vegetation management activities as a means by which to improve the
22 reliability of the Company's electric distribution service for the benefit of our
23 customers. Specifically, Duquesne Light has been working to expand the removal

1 of vegetation units to the full width of the Company’s ROW. Additionally, in
2 cooperation with landowners adjacent to the Company’s ROWs, Duquesne Light
3 has removed trees alongside of, as opposed to within, the Company’s ROWs to
4 reduce the risk of certain trees falling into the ROWs and causing a service
5 interruption. This focus on expanding the width of Duquesne Light’s managed
6 corridors has increased the number of removal-type (e.g., capital) vegetation units
7 that the Company has encountered in managing vegetation within and along its
8 annual requirement of 1,300 distribution circuit-miles, and this fact is reflected in
9 Duquesne Light’s increased cost of removal-type (*i.e.*, capital) vegetation
10 management. These capital costs ultimately should decrease to lower levels once
11 the Company has completed expanding the width of its managed corridors.

12

13 **Q. What impact will the Company’s FPFTY vegetation management program**
14 **have on its reliability of service?**

15 A. As discussed above, Duquesne Light expects to be removing more vegetation-units
16 in the FPFTY than it did in the HTY and FTY. As each vegetation-unit along the
17 Company’s circuits poses a potential threat to reliability, Duquesne Light’s plan to
18 remove more vegetation-units in the FPFTY is anticipated to result in a
19 commensurately increased level of risk-reduction for the Company with respect to
20 vegetation-driven electric distribution service interruptions experienced by its
21 customers, all else equal.

22

23 **VII. CONSOLIDATED TAX SAVINGS ADJUSTMENT (“CTA”)**

1 **Q. In Mr. Simpson’s Exhibit MLS-2, he calculates the CTA to be \$5.8 million.**
2 **Has Duquesne Light used at least 50 percent of that amount to support**
3 **reliability or infrastructure related plant additions?**

4 A. Yes. Duquesne Light projects placing approximately \$549.9 million of Distribution
5 Plant additions in service in the period from 2020 through 2022, \$82.3 million of
6 which are attributable to LTIP Initiatives. This leaves \$467.6 million of
7 Distribution Plant additions projected to be placed in service in excess of the
8 Company’s LTIP plant in the period from 2020 through 2022. This \$467.6 million
9 amount is much greater than 50% of the \$5.8 million amount that Mr. Simpson
10 identifies as the CTA.

11

12 **VIII. CONCLUSION**

13 **Q. Are the plant additions and other programs described in your testimony**
14 **necessary?**

15 A. Yes, they are. The plant additions and other programs described herein are
16 necessary to meet the needs of Duquesne Light’s customers.

17

18 **Q. Has the Company included any plant additions related to its LTIP in its rate**
19 **base claim in this proceeding?**

20 A. As explained in the Direct Testimony of Mr. Davis, DLC Statement No. 1, and Mr.
21 Ogden, DLC Statement No. 16, the Company is proposing to roll its LTIP-related
22 plant additions and other DSIC-eligible rate base into base rates at this time and not
23 recover further costs through the Distribution System Improvement Charge, until

1 such time as the Company's DSIC-eligible rate base investment exceeds the levels
2 identified for the FPFTY.

3

4 **Q. Does this conclude your direct testimony?**

5 A. Yes, it does. I reserve the right to supplement my testimony through the course of
6 this proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 5**

**Direct Testimony of
Krysia Kubiak**

Subjects: New Business Stimulus Rider and Crisis Recovery Program

Dated: April 16, 2021

1 **I. INTRODUCTION**

2 **Q. Please state your full name and business address.**

3 A. My name is Krysia Kubiak. My business address is 411 Seventh Avenue, Pittsburgh, PA
4 15219.

5
6 **Q. By whom are you employed and in what capacity?**

7 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”) as
8 Director, External Affairs.

9
10 **Q. What are your job responsibilities?**

11 A. In my role with Duquesne Light, I oversee our teams that handle Regulatory Affairs,
12 Government Affairs, Clean Energy and New Development Connections, which helps new
13 customers with seamless transition to obtaining service for large construction projects.

14
15 **Q. What is your educational background?**

16 A. I am a licensed attorney in Pennsylvania. I graduated from Swarthmore College in 1994,
17 and from the College of William and Mary, Marshall-Wythe School of Law in 1997 with
18 a Juris Doctorate.

19
20 **Q. Please describe your professional experience.**

21 A. I am in my fourteenth year working for Duquesne Light. Prior to my current role, I worked
22 as an attorney for the Company handling litigation, Pennsylvania Public Utility
23 Commission (“PUC” or “Commission”) complaints and legal work at PJM Interconnection

1 LLC (“PJM”) and the Federal Energy Regulatory Commission (“FERC”). In those prior
2 roles, I developed an in-depth working knowledge of the legal and regulatory frameworks
3 that guided the Company’s customer-engagement, rate-setting, and financial assistance
4 programs.

5
6 **Q. What is the purpose of your testimony?**

7 A. The purpose of my testimony is to provide details supporting the proposal by Duquesne
8 Light to create two tariff riders that assist new and existing businesses that have
9 experienced financial hardship due to the COVID-19 pandemic. The remainder of my
10 testimony is organized as follows: Section II describes the COVID-19 pandemic and the
11 impact on the business community, Section III describes the New Business Stimulus Rider
12 (“NBSR”) proposal available to new customers in certain districts, and Section IV
13 describes the Crisis Recovery Program (“CRP”) available to existing business customers
14 who have been financially impacted by the COVID-19 pandemic.

15
16 **II. BACKGROUND**

17 **Q. Are you generally familiar with the COVID-19 pandemic?**

18 A. Yes. In or around March 11, 2020, the World Health Organization and the Centers for
19 Disease Control and Prevention (“CDC”) declared a novel coronavirus (“COVID-19”) a
20 “public health emergency of international concern,” and the U.S. Department of Health
21 and Human Services (“HHS”) Secretary declared that COVID -19 created a public health
22 emergency. On March 6, 2020 Pennsylvania Governor Tom Wolf proclaimed the
23 existence of a state-wide disaster emergency pursuant to 35 Pa. C.S. § 7301(c). Then, on

1 March 19, 2020, Governor Wolf issued an Executive Order mandating all non-life-
2 sustaining businesses in Pennsylvania close their physical locations because of the COVID-
3 19 crisis. As a result, many Pennsylvanians are experiencing financial hardship. On April
4 1, 2020, Governor Wolf issued a statewide stay-at-home order, allowing Pennsylvania
5 residents to leave their homes only for certain allowable activities and travel. On April 15,
6 2020, the Pennsylvania Secretary of Health issued an order directing life-sustaining
7 businesses to institute mitigation measures to protect the safety of employees and
8 customers. As mitigation efforts through the spring and into the summer limited the spread
9 of the virus, case counts were relatively low. In the fall of 2020, with the resumption of
10 certain congregant activities and in-person business operations, a resurgence of the
11 pandemic caused the Governor and Secretary of Health to repeatedly adjust their response
12 and renew mitigation orders at various times relating to limiting gatherings in social
13 settings, teleworking, business occupancy limits, alcohol sales and other restrictions on
14 business operations. As part of the November 23, 2020 order, the Secretary observed,
15 “Despite the efforts taken to date, the pandemic continues to spread, and taking action to
16 prevent that spread while continuing to allow for necessary resumption of economic and
17 social activity requires the Commonwealth to take steps to minimize the danger to
18 Pennsylvanians as a result of participating in that activity.” To limit spread related to
19 Thanksgiving holiday travel, the Governor concurrently issued a stay-at-home advisory
20 extending through January 4, 2021. That order halted all sit-down service for bars and
21 restaurants. According to the Pennsylvania COVID-19 Mitigation Guidelines as of late
22 January 2021, in-person businesses may operate at 75% occupancy, except in the following
23 instances: self-certified restaurants are restricted to 50% capacity for indoor dining; on-

1 premises alcohol consumption is conditionally permitted until 11 p.m.; gyms and spas are
2 restricted to 50% occupancy with appointments strongly encouraged; entertainment venues
3 such as casinos, theaters, and shopping malls are permitted to open at 50% occupancy.

4 Governor Wolf further amended his November 23, 2020 order, directing
5 Mitigation, Enforcement and Immunity Protections, such that on April 4, 2021 those
6 businesses identified above with 50% capacity restrictions were allowed to expand
7 operations to 75% occupancy. Social distancing, face covering, and other mitigation
8 measures still apply.

9 While Duquesne Light supports these efforts to protect public health and reduce the
10 spread of the COVID-19 virus, the Company recognizes that many businesses have been
11 adversely and disproportionately affected as a result of the restrictions. Specifically, small
12 businesses such as a restaurants, bars, gyms, child care centers and event venues have been
13 the hardest hit throughout this pandemic. Despite the recently expanded capacity, negative
14 residual impacts, including reluctant consumer behavior, will continue to affect businesses
15 to a significant degree for the foreseeable future.

16
17 **Q. How has the COVID-19 pandemic affected businesses in Duquesne Light's service**
18 **territory?**

19 A. Duquesne Light furnishes electric service to more than 600,000 customers throughout its
20 certificated service territory, which includes all or portions of Allegheny and Beaver
21 Counties and encompasses approximately 800 square miles in western Pennsylvania. Of
22 the 600,000 customers, approximately 55,000 customers are commercial business
23 accounts. According to a survey of economic impacts of the COVID-19 pandemic on

1 workers residing in Allegheny County conducted by the University Center for Social and
2 Urban Research (“UCSUR”) at the University of Pittsburgh, 20.1% of workers employed
3 at the beginning of March 2020 were no longer employed and receiving a wage or salary
4 at the time of the survey conducted between April 15 and May 8, 2020. 83.1% of these
5 reported that their recent separation was due to COVID-19.

6 According to the Allegheny Conference on Economic Development’s (“ACED”) *7*
8 Redefined Growth Outlook for Key Sectors and Near-term Solvency Risks for Small
9 Businesses, “... the region has lost over 200,000 jobs and has yet to recover 45% of them
10 [as of October 2020]. This represents a deeper setback than we experienced during the
11 Great Recession and even during the collapse of Pittsburgh’s industrial economy in the
12 early ‘80s.” Further, ACED offers, “Small businesses in the Pittsburgh region are
13 important engines of our region’s economy, accounting for 99% of all businesses and 75%
14 of all jobs. They play an integral role in every industry. Many of these businesses could
15 not absorb the pandemic-induced economic shock and are struggling to remain open. It is
16 vital that we shore up these lifelines for economies across our region, both related to jobs
17 and tax revenue for our towns and boroughs and to the essential role they play in
18 community vitality and sense of place. Many of these establishments are points of pride
19 in our communities and for our people – and must be supported as we move forward.” The
20 ACED analysis indicates that between a quarter and a third of small businesses (14,000 -
21 21,000) in the Pittsburgh region, accounting for between 100,000 – 188,000 jobs, are at
22 risk of closing permanently.

23 Data presently available to the Company demonstrates that small and medium
commercial customers are struggling to make payments. Duquesne Light anticipates that

1 small and medium commercial customers who have made timely payments prior to the
2 COVID-19 pandemic may increasingly become payment troubled due to the ongoing
3 pandemic. As of September 2020, small and medium commercial customers in Duquesne
4 Light's service territory are carrying approximately \$2 million more in delinquencies
5 compared to September 2019. The Company has observed that this payment difficulty has
6 affected certain businesses disproportionately, while other businesses continue to operate
7 with no delinquencies or delays in bill payment.

8
9 **Q. Have certain industries been disproportionately impacted by the COVID-19**
10 **pandemic?**

11 A. Yes. Due to the inherent nature of their operations, certain businesses are particularly
12 challenged to operate effectively, or at all, under the restrictions imposed to mitigate the
13 spread of the virus. Childcare centers, retail boutiques, restaurants, and bars have closed
14 in Duquesne Light's service territory. Many of the businesses that were once the heart of
15 small town "main streets" are now shuttered. Regional results mirror national data which
16 indicates that leisure and hospitality sector jobs were hardest hit, with an 11.7% year-over-
17 year increase in the December unemployment rate for restaurants, bars, and similar
18 hospitality venues. Personal service sector businesses, such as laundry and dry-cleaning
19 services, have also struggled to rebound, with a 4.2% year-over-year unemployment rate
20 increase. Allegheny Conference data for the region indicates that leisure and hospitality
21 sector employment has only rebounded to between 70-75% of pre-COVID levels.

22 A Penn State Harrisburg Institute of State and Regional Affairs report, *The Impact*
23 *of COVID-19 on Pennsylvania Child Care*, estimates that at least 280 child care providers

1 will close permanently statewide, with another 1,000 at risk of closure. Those providers
2 which remain open and operating will continue to struggle with reduced capacity (and
3 thereby reduced operating revenue) and ongoing overhead, payroll and facility expenses.
4

5 **Q. Based on the results of the analysis, has the Company developed a proposal to provide**
6 **assistance to new or existing “main street” businesses in its service territory?**

7 A. Yes. The Company has developed two riders that are designed to restore vitality on main
8 streets and assist existing businesses that have experienced financial hardship due to the
9 COVID-19 pandemic. The first rider is the New Business Stimulus Rider (“NBSR”): a
10 temporary discount provided to new small and medium commercial customers to
11 incentivize new business development in vacant “main street” store fronts. The second
12 rider is the Crisis Recovery Program (“CRP”): a temporary program for small and medium
13 commercial customers that have become payment troubled and developed delinquent
14 balances as a result of the COVID-19 pandemic.
15

16 **III. PROPOSED NEW BUSINESS STIMULUS RIDER**

17
18 **Q. Please summarize the Company’s New Business Stimulus Rider (“NBSR”) proposal.**

19 A. Duquesne Light’s NBSR is designed to assist new customers who are billed in accordance
20 with the following rate schedules as defined in the Company’s Retail Electric Tariff:
21 General Service Small (“GS”), General Service Medium Heating (“GMH”), General
22 Service Medium < 25 kW and General Service Medium > 25kW (collectively, “GM”).
23 New GS, GM, and GMH customers who apply for new electric service in a vacant
24 storefront after June 1, 2021 will be eligible for a reduced distribution rate for 2 years,

1 beginning at enrollment. Enrolled GS, GM, and GMH customers will receive a 30%
2 discount on the variable base distribution charges (distribution kilowatt hour and demand)
3 portions of their bills. Mr. O'Brien discusses the costs associated with the NBSR in his
4 direct testimony, Statement No. 10.

5
6 **Q. What is the purpose of Duquesne Light's NBSR?**

7 A. The NBSR will help support the rebuilding of small communities' business districts by
8 incentivizing new businesses to occupy and operate from vacant storefronts in certain
9 communities in Duquesne Light's service territory by providing them with a reduced
10 distribution rate for 2 years.

11
12 **Q. How will the Company's NBSR attract or retain businesses in Duquesne Light's
13 service territory?**

14 A. Research conducted among GS, GM, and GMH businesses in February 2021 indicates that
15 the NBSR is a welcomed opportunity for new businesses to get started on the right foot. A
16 majority of respondents (70%) expect the reduced distribution rate to be valuable to new
17 businesses, primarily because it provides some relief after incurring start-up costs, as well
18 as allowing for business owners to focus on other factors related to growing the business.

19
20 **Q. Is Duquesne Light's NBSR consistent with the PUC's mission?**

21 A. Yes. The PUC's mission includes balancing the needs of consumers and utilities,
22 furthering economic development. Both components of the Company's COVID-19

1 Stimulus Rider align with the PUC’s mission to balance the need of utilities and customers,
2 while also encouraging economic development.

3
4 **Q. Who is eligible for the NBSR?**

5 A. Duquesne Light’s NBSR will be available to new retail customers who will be billed in
6 accordance with the GS, GM, or GMH rate schedules who apply to establish new electric
7 service in a vacant storefront or brick-and-mortar location after June 1, 2021 within a Local
8 Neighborhood Commercial (“LNC”) Districts, as defined by City of Pittsburgh Code of
9 Ordinances, or Qualified Low-Income Census Tracts (“QCT”) as defined by the United
10 States Department of Housing and Urban Development, or Neighborhood Assistance
11 Program (“NAP”) Districts, as defined by the United States Department of Housing and
12 Urban Development.

13
14 **Q. How long will enrollees benefit from the NBSR?**

15 A. The NBSR will provide a discounted rate for 2 years. Upon enrollment, eligible customers
16 will receive a 30% discount on the variable base distribution portion of their bill for a
17 period of no more than 2 years from commencing service or until December 31, 2024,
18 whichever occurs earlier.

19
20 **Q. How will the potential enrollees apply for the NBSR?**

21 A. When potential customers call for service, the customer will be screened then for eligibility
22 in the program, and a customer service representative will send the customer a link to the

1 form to certify that they fit the criteria. Upon review, the business will be notified if they
2 are eligible for the program.

3
4 **Q. How will the Company promote or otherwise identify eligible customers for the**
5 **NBSR?**

6 A. When promoting a program to customers, Duquesne Light uses multiple channels to ensure
7 broad delivery across our diverse customer base. This program will be promoted in targeted
8 bill messages directly to customers, through social media channels, email communication,
9 and on the DuquesneLight.com website, where it will be featured on a relevant landing
10 page and highlighted on a promotional basis on the homepage carousel. The Company will
11 also proactively reach out to development corporations and other community-based non-
12 profit organizations to promote the program. Customers will be referred to contact the
13 Company's Business Contact Center, consisting of a group of Customer Service
14 Representatives ("CSRs") who are trained to address questions presented by small and
15 medium commercial customers.

16
17 **Q. Are NBSR customers eligible for other discounts offered by the Company during**
18 **their enrollment?**

19 A. No. Enrolled NBSR customers will be billed in accordance with the NBSR tariff
20 provisions for a period of no more than 2 years from commencing service or until
21 December 31, 2024, whichever occurs earlier. The tariff provision for the NBSR is shown
22 on Mr. Ogden's Exhibit DBO-1, which is the proposed tariff supplement to the currently

1 effective Tariff Electric Pa. P.U.C. No. 25 implementing the proposed rates, riders and
2 tariff revisions in this proceeding.

3
4 **Q. What is the expected cost associated with implementing the NBSR, and how was it
5 derived?**

6 A. The Company has estimated that it will provide approximately \$276,000 in discounts to
7 enrolled customers. The discount cost estimate is based on an average of 270 new GS,
8 GM, and GMH customers per year across Duquesne Light's service territory and assumes
9 100% enrollment.

10
11 **Q. How is Duquesne Light proposing to recover the costs associated with the NBSR?**

12 A. Duquesne Light proposes to recover the costs waived in accordance with the NBSR by
13 incorporating the cost of the program into rates for GS, GM, and GMH customers. The
14 Company is proposing to directly assign these costs to the rate classes that are eligible to
15 participate in the COVID related programs (GS, GM<25, GM>25, & GMH). The direct
16 assignment is reflected within the Company's allocated cost of service model and will be
17 reflected in each applicable customer class's base rates. The proposed costs are reflected
18 on Exhibit DLC 2, Schedule D-13 within the Company's Fully Projected Future Test Year.
19 The average bill impact is estimated to be an average of \$0.28 per month.

20
21 **Q. Do you believe that the proposed NBSR is cost-effective and reasonable?**

22 A. Yes. This program is cost-effective in that it provides assistance for business customers at
23 the time that they need assistance the most – in the beginning of their business, when most

1 businesses lose money. It is a reasonable cost for existing customers that will end up as a
2 significant benefit for the enrollees. Additionally, it is a well-timed program since it
3 incentivizes customers to begin businesses at a time there may still be impacts from the
4 pandemic. Furthermore, the program will benefit other businesses in the area, by
5 increasing the foot traffic on the “main street” corridors, which increases traffic for existing
6 businesses.

8 **IV. PROPOSED CRISIS RECOVERY PROGRAM**

9 **Q. Please describe the Company’s Crisis Recovery Program (“CRP”).**

10 A. Duquesne Light’s CRP is designed to assist existing GS, GM, or GMH customers who did
11 not have an overdue account balance on February 29, 2020, but have since accumulated a
12 balance. Program participants will have their existing delinquent account balances
13 temporarily frozen over a period of 6 bills, beginning with the first bill that renders 6 or
14 more days after enrollment.

15
16 **Q. Who is eligible for the CRP?**

17 A. Existing customers billed in accordance with rates GS, GM, or GMH who did not have an
18 overdue account balance on February 29, 2020, but have since accumulated a balance are
19 eligible for the CRP. Existing customers who already have a payment arrangement on their
20 account are also eligible, as long as they have complied with their existing payment
21 arrangement. A customer who established service after February 29, 2020 and has since
22 accumulated a balance would also be eligible for the CRP. Importantly, the customer must

1 demonstrate being impacted by the COVID-19 pandemic or subsequent orders from the
2 Governor.

3
4 **Q. For how long would the CRP participant's balance be frozen?**

5 A. CRP customers will have 25% of their frozen delinquent account balance forgiven if they
6 pay their electric charges in full at the end of 6 billing cycles, beginning with the first bill
7 that renders 6 or more days after enrollment. The Company will not pursue termination or
8 collection action on the frozen account balance until after the due date for the sixth bill has
9 lapsed. Accordingly, timely payment for each bill rendered while the delinquent balance
10 is frozen is not required.

11
12 **Q. What happens at the end of the 6-bill period?**

13 A. It depends on whether the enrolled customer paid their non-frozen electric charges in full
14 at the end of 6 billing cycles. If the enrolled customer pays all their non-frozen electric
15 charges, then 25% of the customer's frozen balance will be forgiven, and the customer will
16 receive an 18-month payment arrangement on any remaining balance, unless the customer
17 agrees to a shorter payment arrangement timeframe. If the enrolled customer does not
18 make the appropriate payment, then the customer will receive an 18-month payment
19 arrangement on the entire delinquent balance. Customers will be responsible for paying
20 their monthly electric charges in addition to their payment arrangement amount each month
21 until their balance is paid in full.

22
23 **Q. Who is responsible for administering the CRP?**

1 A. Duquesne Light Company’s Business Contact Center will administer the CRP by verifying
2 eligibility and setting up payment arrangements.

3

4 **Q. How will Duquesne Light promote or otherwise identify potential CRP customers?**

5 A. When promoting a program to customers, Duquesne Light uses multiple channels to ensure
6 broad delivery across our diverse customer base. The CRP will be promoted in targeted
7 bill messages directly to customers, through social media channels, email communication,
8 and on the DuquesneLight.com website, where it will be featured on a relevant landing
9 page and highlighted on a promotional basis on the homepage carousel. The Company will
10 also proactively reach out to development corporations and other community-based non-
11 profit organizations to promote the program. Customers will be referred to contact the
12 Company’s Business Contact Center, consisting of a group of Customer Service
13 Representatives (“CSRs”) who are trained to address questions presented by small and
14 medium commercial customers.

15

16 **Q. How will the Duquesne Light administer the CRP?**

17 A. Once the customer is confirmed eligible for the CRP, the customer’s existing account
18 balance will be frozen for 6 billing cycles. Approximately 10 days before the end of the
19 six billing cycles, the customer will receive a reminder that the customer must pay all
20 charges billed since enrollment into the CRP in order to be eligible to have 25% of the
21 account balance waived and an 18-month payment arrangement placed on the account for
22 the remaining balance. The Company will evaluate the CRP customer’s account balance
23 at the end of the six billing cycles, and if the customer has paid non-frozen charges at the

1 end of the six billing cycles, the Company will waive 25% of the frozen account balance
2 and provide the customer with an 18-month payment arrangement. Customers will be
3 permitted to enter into shorter payment arrangements if desired.

4
5 **Q. Under the proposal, when is the CRP expected to be complete?**

6 A. The CRP is designed to be a temporary program and enrollment in the CRP will end on
7 June 30, 2022.

8
9 **Q. Are CRP customers eligible for other rate discounts offered by the Company during
10 their enrollment?**

11 A. No. Enrolled CRP customers will be billed in accordance with the CRP tariff provisions.
12 The tariff provision for the CRP is shown on Mr. Ogden's Exhibit DBO-1, which is the
13 proposed tariff supplement to the currently effective Tariff Electric Pa. P.U.C. No. 25
14 implementing the proposed rates, riders and tariff revisions in this proceeding.

15
16 **Q. Please describe the benefits that the Company expects to achieve with the CRP.**

17 A. As stated above, many businesses are in danger of closing due to the financial pressures of
18 the pandemic. This program gives a break to those customers and makes it easier for them
19 to begin the process back to a full recovery. The company hopes that the 6 month break
20 from paying on their balance along with the 25% reduction in debt will allow these
21 businesses to start the post-pandemic time with a clean slate. Research conducted among
22 GS, GM, and GMH business owners in February 2021 revealed that a strong majority
23 (78%) were negatively impacted by the COVID-19 pandemic. More than one-half of

1 respondents (54%) cite concern for their business's ability to recover from the pandemic.
2 In addition, 75% report knowing of at least one small or mid-sized business in their
3 community that is considering closing their business as a result of the pandemic. Further,
4 more than one-half of those surveyed (58%) believe that support for struggling small
5 businesses is insufficient. The CRP is viewed favorably among many customers surveyed,
6 citing the opportunity to relieve a burden and focus on other expenses and recovery efforts.
7 About one-half of customers surveyed (54%) believe that the 25% reduction will provide
8 much needed relief to struggling businesses in the community and 44% believe it will allow
9 for a quicker recovery.

10
11 **Q. What is the expected cost associated with implementing the CRP, and how was it**
12 **derived?**

13 A. The write-off portion of the CRP program is estimated to be \$400,000, depending on
14 enrollment, which was calculated by comparing current delinquencies in the GS, GM, and
15 GMH rate classes with the historical delinquencies of the same rate classes.

16
17 **Q. How is Duquesne Light proposing to recover the costs waived in accordance with the**
18 **CRP?**

19 A. Duquesne Light proposes to recover the costs waived in accordance with the CRP by
20 incorporating the cost of the program into rates for GS, GM, and GMH customers. The
21 Company is proposing to directly assign these costs to the rate classes that are eligible to
22 participate in the COVID related programs (i.e. GS, GM<25, GM>25, & GMH). The direct
23 assignment is reflected within the Company's allocated cost of service model and will be

1 reflected in each applicable customer class's base rates. The proposed costs are reflected
2 on Exhibit DLC 2, Schedule D-13, within the Company's Fully Projected Future Test Year.
3 The average bill impact is estimated to be \$0.31 per month.
4

5 **Q. Do you believe that the proposed CRP is cost-effective and reasonable?**

6 A. Yes. This program allows customers a chance to get their feet under them. After facing
7 months of losses, experts predict that 2022 will be a time for recovery. However, if
8 businesses are still dealing with old debts that occurred during the pandemic, it will be
9 difficult for them to move forward. This program gives businesses an incentive to pay their
10 bill regularly, while giving them a discount for their effort.
11

12 **Q. Does this conclude your Direct Testimony at this time?**

13 A. Yes. I reserve the right to supplement my testimony through the course of this proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

Duquesne Light Company

Statement No. 6

**Direct Testimony of Yvonne Phillips
Subject: Master Metering Proposal**

Date: April 16, 2021

1 **DIRECT TESTIMONY OF YVONNE PHILLIPS**

2

3 **Q. Please state your full name and business address.**

4 A. My name is Yvonne Phillips. My business address is Duquesne Light Company,
5 411 Seventh Avenue, Pittsburgh, PA 15219.

6

7 **Q. What is your position at Duquesne Light Company?**

8 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”)
9 as Director, Meter Operations.

10

11 **Q. How long have you worked at Duquesne Light?**

12 A. I have been employed by Duquesne Light since 2014.

13

14 **Q. What are your current responsibilities?**

15 A. I currently oversee the Meter Operations organization which includes Field
16 Metering, Meter Shop, Meter Engineering, and our Smart Meter Operations
17 Center.

18

19 **Q. What are your qualifications, work experience and educational background?**

20 A. I graduated from Seton Hill University with an MBA in 2004. I’ve held various
21 utility management positions through my career with approximately 15 years in
22 Metering.

23

1 **Q. Are you sponsoring any exhibits, parts of exhibits or responses to the**
2 **Commission’s filing requirements as part of your direct testimony?**

3 A. I am sponsoring the revision to tariff Rule 41 and the addition of Rule 41.1, included
4 within witness Ogden’s Exhibit DBO-1.

5

6 **Q. What is the purpose of your direct testimony?**

7 A. I address the Company’s proposal to allow master-metering of certain new
8 multifamily residential premises.

9

10 **Q. Does the Company’s tariff currently allow master metering of new residential**
11 **multifamily premises?**

12 A. No. Currently, Rule 41 of the Company’s retail tariff prohibits residential master
13 metering, providing that each residential dwelling unit in a building must be
14 individually metered by the Company for buildings connected after January 1,
15 1981. Residential master metering would also violate tariff Rule 18, which provides
16 that all electric energy shall be consumed by the customer to whom the Company
17 supplies and delivers such energy, with limited exceptions.

18

19 **Q. Why has the Company historically prohibited master metering of new**
20 **residential multifamily premises?**

21 A. The Company has not allowed master metering for residential customers for several
22 reasons.

1 First, individual metering helps to ensure the Company can provide critical
2 customer protections and assistance programs. For example, the Company’s
3 Customer Assistance Program (CAP) offers benefits to low-income customers that
4 are linked to the customer’s individual Duquesne Light account. Without visibility
5 to residential customers through single metering applications, these programs
6 cannot be afforded to all eligible customers.

7 Second, individual metering affords customer access to advanced metering
8 infrastructure (AMI) functionalities, such as increased customer visibility to their
9 interval data, usage tracking tools, and suggestions on how customers can conserve
10 energy.

11 Third, individual metering allows residential customers to choose their own
12 electric generation supplier (EGS).

13 Fourth, individual metering protects against inappropriate or illegal use of
14 landlord-owned tenant submeters. For example, landlord-owned tenant submeters
15 installed behind a utility master meter could enable unscrupulous landlords to
16 overcharge their tenants for electricity, or turn off tenants’ electricity as a means of
17 eviction.

18

19 **Q. Why is the Company making a proposal regarding master metering in this**
20 **proceeding?**

21 A. The Company is making a proposal in this proceeding pursuant to the Joint Petition
22 for Settlement in its last base rates proceeding, Docket No. R-2018-3000124
23 (“Settlement”). Paragraph 59 of the Settlement provides:

1 Within 180 days of the effective date of rates, Duquesne Light will
2 convene a non-confidential collaborative with all parties to the
3 proceeding, and all interested stakeholders who are developers of
4 multifamily housing within its service territory, to discuss the
5 feasibility of revising its retail tariff to permit master-metering of
6 multifamily housing. Parties to the collaborative will specifically
7 consider:

- 8
- 9 a) Under what circumstances master-metering would be
10 permitted, and the factors Duquesne Light would require a
11 building owner to meet before approving a master-metering
12 configuration;
 - 13 b) The impact that any such tariff change would have on low
14 income tenants' ability to continue to afford utility service;
 - 15 c) The impact of individual customers not utilizing Advanced
16 Metering Infrastructure ("AMI") meters; and
 - 17 d) The impact that any such change would have on the Company's
18 revenue allocation and the ability to meet its projected revenue
19 requirements.
- 20

21 The parties to the collaborative will make a good faith effort, in coordination
22 with the Company, to develop consensus on the scope of a tariff revision
23 that permits master-metering, taking into consideration all of the foregoing
24 factors. Additional collaborative meetings will be held thereafter, as
25 necessary, but not less than on an annual basis, in an effort to reach
26 consensus on any issues which remain unresolved after the first
27 collaborative is held. Based on feedback from the collaborative meetings,
28 Duquesne Light will present a proposal regarding master-metering of
29 multifamily housing buildings as a part of its next general base rate case.
30 The treatment of any alleged confidential information during the
31 collaborative will be subject of an agreement of the parties and stakeholders
32 participating in the collaborative.

33

34 Collaborative meetings were held on June 19, 2019, and February 24, 2021.

35

36 **Q. Please summarize the Company's master metering proposal.**

37 A. The Company is proposing to permit master metering for new residential
38 multifamily premises where the premise:

- 1 • Is a new service (i.e., new construction or otherwise newly connected to the
2 Company’s distribution system);
- 3 • Is master-metered through entire building (i.e., no individual tenant meters);
- 4 • Has a minimum of four dwelling units; and
- 5 • Is low-income supportive housing. “Low-income supportive housing”
6 refers to housing that is permanently available to low-income tenants where
7 the housing provider is responsible for utility bills. To be eligible to master-
8 meter a given residential building, in addition to satisfying the other
9 eligibility criteria, a provider of low-income housing must either: (1) show
10 that the building is a Public Housing Authority development, or (2) certify
11 annually that all tenants are (i) eligible for a Housing Choice Voucher
12 (HCV), available to residents who make 50% or less of the median family
13 income, or (ii) have household incomes equal to or less than 150% of federal
14 poverty guidelines.

15 Customers that are master metered under this proposal would also be subject
16 to additional ongoing requirements, which I discuss later in my testimony. If a
17 customer master metered under this proposal subsequently falls out of compliance
18 with these eligibility criteria or ongoing requirements, they will be required to
19 update the building’s electrical systems, at customer expense, to allow the
20 Company to separately meter each residential dwelling unit.

21

22 **Q. Why is the Company proposing to limit master metering to new services?**

1 A. The Company is proposing to limit master metering to new services for several
2 reasons. First, converting an existing building from individual- to a master-metered
3 service would deprive tenants of the benefits and protections provided through the
4 individual customer meter, which I discussed earlier in my testimony. Also,
5 conversions of existing services may produce inter- and intra-class revenue
6 allocation impacts. Individually-metered dwelling units are billed on residential
7 rates, whereas master-metered buildings are billed on nonresidential rates. Shifting
8 existing loads between customer classes would therefore produce unpredictable
9 corresponding shifts in revenue allocation. Finally, the new-service requirement
10 mirrors the Company's original adoption of the residential master metering
11 prohibition, which per Rule 41, applies on a proactive basis only to buildings
12 connected after January 1, 1981.

13
14 **Q. How did the Company derive the minimum threshold of four dwelling units?**

15 A. The Company has historically applied this four-unit threshold for "multifamily
16 buildings" in each of its Act 129 Energy Efficiency & Conservation ("EE&C")
17 programs. Maintaining this threshold will support consistency across Company
18 programs. Furthermore, this requirement will probably not substantially limit
19 master-metering participation. The Company expects that the majority of
20 multifamily housing that would satisfy the Company's other proposed master-
21 metering eligibility criteria would already be designed to four units or larger.

22

1 **Q. Why is the Company proposing to limit master metering to supportive**
2 **housing?**

3 A. This proposal responds to expressed stakeholder interest and is intended to ensure
4 tenant protections. Parties' input in the Company's last base rates case, and in the
5 subsequent collaborative meetings, suggested that supportive housing was a high
6 stakeholder priority for master metering. The Company presented its plans for
7 supportive housing master metering at the collaborative meeting held on February
8 24, 2021, which met with a positive response from the external stakeholders in
9 attendance.

10 To an extent, supportive housing can be a substitute for the utility assistance
11 programs available to individually-metered low-income customers. As I discussed
12 above, these programs are not available to tenants of master-metered premises.
13 However, it is my understanding that supportive housing provides tenants with
14 other benefits that may help fill this gap. For example, based on stakeholder input,
15 I understand that providers of supportive housing typically pay their tenants'
16 electric bills, whether the building is individually- or master-metered. This
17 mitigates the drawbacks of low income tenants not being able to participate in CAP.

18

19 **Q. Will master metered customers be subject to any additional requirements?**

20 A. Yes. Master metered housing providers may not resell electricity delivered to the
21 building, such as through a tenant sub-metering arrangement. Such resale is already
22 prohibited under the Company's tariff Rule 18, but is restated here for avoidance
23 of doubt. Master metered housing providers will be required to participate in the

1 Company's applicable EE&C and LIURP programs, to ensure maximum benefits
2 to low-income tenants. Master metered housing providers will be required to
3 annually recertify their compliance with applicable master metering requirements,
4 including tenants' household incomes or HCV eligibility where applicable, so the
5 Company will know when a building will need to become individually metered.
6 Finally, the master metered housing providers must post a security deposit, in an
7 amount not to exceed two months' estimated bills, for the duration of the master
8 metering.

9

10 **Q. Why is the Company proposing to retain the customer's security deposit for**
11 **the duration of master metering?**

12 A. Compared to an individually-metered building, a master metered building may
13 represent increased collections risk if the landlord defaults on their electric bills.
14 Individual metering allows the Company to engage directly with payment-troubled
15 occupants, and where necessary, to terminate service to individual units.
16 Terminating service to a master metered building, on the other hand, is "all or
17 nothing." Such service terminations are therefore subject to extensive additional
18 process and tenant protections under sections 1521-1533 of the Public Utility Code.
19 In light of the practical and legal issues associated with landlord-ratepayer customer
20 collections, it is reasonable to allow the Company to retain these master metered
21 customers' security deposits.

22

23 **Q. Does this conclude your direct testimony?**

1 A. Yes. I reserve the right to supplement my testimony through the course of this
2 proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 7**

**Direct Testimony of Katherine M. Scholl
Subject: Residential Customer Assistance Programs**

Dated: April 16, 2021

1 **Introduction and Summary**

2

3 **Q. Please state your full name and business address.**

4 A. My name is Katherine Scholl. My business address is 411 Seventh Avenue, Mail
5 Drop 15-1, Pittsburgh PA 15219.

6

7 **Q. What is your position at Duquesne Light Company (“Duquesne Light” or
8 “Company”)?**

9 A. I am the Director of Billing and Revenue Management.

10

11 **Q. How long have you worked at Duquesne Light?**

12 A. I have been with Duquesne Light since May 2016.

13

14 **Q. What are your current responsibilities?**

15 A. In my current position, I oversee three areas: 1) Billing; 2) Credit and Collections;
16 and 3) Universal Services.

17

18 **Q. What are your qualifications, work experience and educational background?**

19 A. I attended Duquesne University, where I graduated Magna Cum Laude with a
20 Bachelor of Science in Business Administration and also completed my Masters in
21 Business Administration with High Honors.

22 I joined Duquesne Light in 2016 as the Director of Customer Experience.

23 In that role, I oversaw several areas including Energy Efficiency/Act 129; Universal

24 Services; Transportation Electrification; Customer Research and Experience

1 Recovery; and the more broad-based customer experience function, which included
2 oversight of customer interfaces including the website, mobile application, and
3 interactive voice response (IVR) system.

4 Prior to joining Duquesne Light in 2016, I spent nearly ten years at Giant
5 Eagle Inc. in Pittsburgh, where my responsibilities included directing various
6 aspects of customer relationship management (CRM), including the design and
7 administration of loyalty programs, targeted marketing, and customer data
8 analytics. I was also responsible for the company's Payment Acceptance Strategy,
9 which involved optimizing relationships with payment systems providers to
10 balance the cost of meeting customers' preferences for using various forms of
11 tender with the cost of payment acceptance.

12 Prior to joining Giant Eagle, I spent seven years at Acxiom Corporation
13 providing customer acquisition and relationship management consulting services
14 to top credit card issuers in the United States and the United Kingdom. Prior to
15 joining Acxiom Corporation, I spent 6 years in various roles in Consumer Lending
16 and Credit Card management at Mellon Bank.

17 **Q. Have you testified before the Pennsylvania Public Utility Commission ("PUC"**
18 **or "Commission") in prior proceedings?**

19 A. Yes. I have testified in Duquesne Light's 2018 base rate proceeding at Docket No.
20 R-2018-3000124 and the Company's Default Service Plan IX ("DSP IX")
21 proceeding at Docket No. P-2020-3019522.

22
23 **Q. What is the purpose of your direct testimony in this proceeding?**

1 A. The purpose of my testimony is to describe existing and proposed residential
2 customer assistance programs available to help Duquesne Light customers recover
3 from the economic impacts of the COVID-19 pandemic. These programs provide
4 long term or short term assistance designed to help customers maintain affordable
5 electric service based on the individual needs of the customer segment.

6
7

II. Universal Service and Energy Conservation Plan

8 **Q. Please describe the Company’s existing Universal Service and Energy**
9 **Conservation Plan (“USECP”).**

10 A. Duquesne Light’s USECP includes 4 programs: 1) Customer Assistance Program
11 (“CAP”), 2) Customer Assistance Referral and Evaluation Services (“CARES”), 3)
12 the Hardship Fund, and 4) Smart Comfort/ Low Income Usage Reduction Program
13 (“LIURP”).

14

15 **Q. Please describe CAP.**

16 A. CAP is a special payment program for payment-troubled customers with a gross
17 household income at or below 150 percent of Federal Poverty Level (“FPL”). The
18 program is designed to provide long term assistance to low income customers.
19 Most CAP customers are required to recertify their income every two years;
20 customers reporting zero income are required to recertify every six months. CAP
21 customers are given a discount on their monthly electric service bill based on their
22 income. In 2018, the Commission approved the implementation of a percentage of

1 payment plan (“PIPP”) for Duquesne Light CAP customers.¹ Under the current
2 plan, CAP customers are billed in one of three ways: 1) a percentage of their
3 monthly gross household income, as outlined in the chart below; 2) the average
4 monthly bill; or 3) their actual usage if less than PIPP and average monthly bill.

5
6 **Q. Please explain the PIPP tiers.**

7 A. Under the Company’s CAP, customers are billed in accordance with the following
8 tiers:

Income Category	Residential Service Percent of Income Payment:	Residential Electric Heat Percentage of Income Payment:
Up to 50% FPL	2%	6%
51% to 100% FPL	4%	10%
101% to 150% FPL	4%	10%
*Minimum Payment	\$20	\$40

9
10

11 **Q. Please explain the Average Monthly Bill method.**

12 A. If the customer’s average monthly bill (based on a 12 month rolling average that
13 would otherwise be the budget billing payment) is less than what the CAP bill
14 would be as determined under the PIPP, the customer’s monthly payment will equal
15 the 12 month average bill. The monthly payment is reviewed and updated (if
16 necessary) every four months to determine whether the customer is best served in
17 the PIPP or in the Average Monthly Bill plan. The average monthly bill is not the
18 budget amount and is not subject to reconciliation.

19

¹ See *Duquesne Light Company Universal Service and Energy Conservation Plan*, Order on Reconsideration, at Appendix A (entered April 19, 2018, at Docket No. M-2016-2543423).

1 **Q. Please explain the actual usage method.**

2 A. If the customer's bill based on their actual usage is less than what the CAP bill
3 would be as determined under the PIPP or average monthly bill methods, the
4 customer's payment will be based on their actual usage for that month. Customers
5 whose actual usage in any given month results in a bill that is less than the Minimum
6 Payment are billed based on actual usage.

7
8 **Q. How are customers with \$0 income billed under the new PIPP program
9 structure?**

10 A. Customers who report \$0 income are required to make the minimum CAP payment.
11 As a cost containment measure, the Company requires a monthly minimum CAP
12 payment amount of \$20 for residential service customers, and \$40 for residential
13 heating customers (except where a customer's actual usage in a given month results
14 in a bill that is less than the minimum payment; in which case, the customer is billed
15 based on actual usage). The mandatory minimum payment ensures that CAP
16 customers pay a portion of their energy costs while helping to control costs borne
17 by non-CAP residential service customers.

18
19 **Q. Other than a monthly discount, has the Company provided any additional
20 payment assistance for customers enrolled in CAP?**

21 A. Yes. When the Company implemented its new PIPP structure in January 2021,
22 CAP customers were provided the opportunity to earn forgiveness of their entire
23 delinquent balance. All CAP customer delinquent balances were frozen and will be
24 forgiven over a twenty-four month period if the customer makes the required

1 monthly payments. The total customer delinquency associated with CAP accounts
2 was approximately \$10.5M. The Company will recover 55% of the CAP account
3 delinquent amount through Rider No. 5 related to Universal Services. The
4 Company is not seeking recovery of the remaining 45% of the CAP account
5 delinquent amount.² Accordingly, CAP customers have been provided a fresh start
6 under the new program, and are virtually guaranteed affordable bills based on their
7 income moving forward.

8

9 **Q. Is the Company proposing any changes to its CAP in this proceeding?**

10 A. No, except to update the participation level to reflect the estimated CAP enrollment
11 in 2022 to 35,853, as identified in witness Ogden's Exhibit DBO-1. The
12 Company's USECP is currently pending Commission review at docket number M-
13 2019-3008227. The newly implemented CAP provides affordable payments as
14 described in the Commission's *Policy Statement on Customer Assistance Programs*
15 at 52 Pa. Code §§ 69.261- 69.267. The merits of the Company's USECP are
16 presently being considered in a prior proceeding. No additional changes are
17 proposed in this proceeding.

18

19 **Q. Please describe the CARES program.**

20 A. Duquesne Light's CARES program assists payment-troubled and special needs
21 customers to obtain necessary social service support and assistance. The CARES
22 program serves an important function in connecting customers in need of assistance

² See *Duquesne Light Company Universal Service and Energy Conservation Plan*, Order on Reconsideration (entered April 19, 2018, at Docket No. M-2016-2543423).

1 with community resources. The program focuses on residential customers whose
2 income is at or below 150% of the FPL and senior citizens whose income is at or
3 below 200% of the FPL. Customers may be referred to CARES by internal and
4 external sources including but not limited to other Duquesne Light departments,
5 other utility companies, community based organizations (“CBOs”) (e.g., Holy
6 Family and Catholic Charities), the PUC, or word of mouth. An outreach worker
7 or community agency acts as an intermediary between the customer and the
8 Company in an effort to link the customer to the necessary social service programs
9 that will enhance the customer’s ability to pay for electric service.

10

11 **Q. Is the Company proposing any changes to its CARES program in this**
12 **proceeding?**

13 A. No. The Company’s USECP is currently pending Commission review at docket
14 number M-2019-3008227. The merits of the Company’s USECP are presently
15 being considered in that proceeding. However, it is important to highlight the
16 availability of these programs given the Company’s request for base rate increase
17 as a reminder that Duquesne Light continues to work to provide needed assistance
18 to its customers.

19

20 **Q. Please describe the Hardship Fund.**

21 A. Duquesne Light’s Hardship Fund is administered by the Dollar Energy Fund
22 (“DEF”). The primary features of the DEF include direct financial assistance for
23 customers with overdue energy bills, protection against termination for
24 nonpayment, and referral to other programs and services. The Hardship Fund

1 operates from October 1st of each year and continues until funds are depleted. DEF
2 is designed specifically for lower-income residential customers (household income
3 at or below 200% of the FPL) who are unable to pay their electric service. Approved
4 applicants receive a grant of up to \$500 based on overdue balance. A household
5 can receive only one Dollar Energy Fund grant during a program year. Upon
6 receipt of the grant, a 30-day stay on termination is placed on the account.

7

8 **Q. Is the Company proposing any change to the Hardship fund in this**
9 **proceeding?**

10 A. No. The Company's USECP is currently pending Commission review at docket
11 number M-2019-3008227 and no additional changes are proposed in this
12 proceeding.

13 Notably, in April 2020, Duquesne Light was granted permission by the
14 Commission to temporarily expand DEF eligibility to customers up to 250% of the
15 FPL and to increase the maximum grant amount to \$1,000. The Company also
16 contributed an additional \$750,000 to the DEF program which enabled an
17 additional ~1,300 customer grants in 2020. This is another example of how the
18 Company has, and will continue to seek ways to balance affordability with the need
19 to invest in the infrastructure to maintain safe, reliable and affordable service to our
20 customers.

21

22 **Q. Please describe the Smart Comfort Program.**

23 A. Smart Comfort is Duquesne Light's Low-Income Usage Reduction Program
24 ("LIURP"). The program targets residential customers whose gross household

1 income is less than 150% of the FPL and senior citizens whose gross household
2 income is less than 200% of the FPL, with base load electric usage more than 500
3 kWh per month and who have been residing at their current address for at least six
4 months. Smart Comfort has evolved from strictly weatherization to an “end use”
5 strategy. Usage reduction measures include cost effective appliance and lighting
6 replacements in addition to determining if weatherization is warranted.
7 Additionally, low-income customers, whose base load usage is less than 500 kWh
8 per month, are referred to Watt Choices (Duquesne’s Energy Efficiency / Act 129
9 program. Through the Smart Comfort program, the Company provides energy
10 efficiency and conservations measure to low income customers to help reduce their
11 electric service bill. Recently, the Company has established an allowance for health
12 and safety that authorizes LIURP contractors to spend up to \$200 per electric
13 baseload Smart Comfort visit without prior Company approval on incidental repairs
14 including health and safety items when necessary to allow for conservation
15 measures to be installed. For electric heating customers, the Company will
16 authorize the Smart Comfort contractor an allowance up to \$600 per Smart Comfort
17 visit without prior Company approval where the inclusion of health and safety and
18 incidental repair will remedy situations that would otherwise impede the
19 installation of conservation measures.

20

21 **Q. Is the Company proposing any changes to the Smart Comfort program in this**
22 **proceeding?**

1 A. No. The Company's USECP is currently pending Commission review at docket
2 number M-2019-3008227 and no additional changes are proposed in this
3 proceeding.

4
5 **Q. How does the Company recover its cost for the USECP?**

6 A. The cost of Duquesne Light's four USECP programs are recovered through Rider
7 No. 5 – Universal Service Charge ("USC"). The USC is a cost recovery mechanism
8 to recover the costs incurred by the Company to provide its USECP. The USC is
9 applicable to all residential customers who take distribution service under Rate
10 Schedules RS, RH and RA except for residential customers in the CAP. The
11 Company's allocation of universal service cost to residential customers is
12 consistent with Commission precedent and principles of cost allocation. The
13 Company is not proposing changes to its cost recovery mechanism in this
14 proceeding.

15
16 **III. Residential COVID-19 Debt Relief Program**

17
18 **Q. Is Duquesne Light proposing any additional residential customer assistance
19 programs in this proceeding?**

20 A. Yes. The Company is proposing a new temporary residential COVID-19 debt relief
21 program. Unlike the Company's existing universal service programs, the COVID-
22 19 debt relief program is a short-term program designed to provide targeted
23 assistance to low to moderate income customers with delinquencies as a result of
24 the pandemic.

20
21
22
23
24

Q. Please describe the residential COVID-19 debt relief program.

A. The residential COVID-19 debt relief program is available to non-CAP customers earning 151% - 300% FPL with a delinquent balance of at least \$100. Under the program, customers who make a payment will receive matching forgiveness up to \$300 and a payment arrangement up to 36 months on the remaining unpaid balance. Grants will be awarded to qualified applicants on a first come first serve basis. Total forgiveness will not exceed the total program budget of \$3 million.

For customers or applicants seeking restoration, the Company will also waive the reconnection fee and restore service if 25% of outstanding balance is paid. Subject to approval, the program would begin January 15, 2022 and remain open until the earlier of March 31, 2022 or when funding is exhausted.

Q. What is the program budget?

A. \$3 million for grants plus \$500,000 in administrative costs, which include technology development, resources for processing applications and customer inquiries, and marketing/promotional costs.

Q. How can customers apply for the residential COVID-19 Relief Program?

A. Customers will be able to apply online. Additionally, the Company is exploring opportunities to accept applications through a Community Based Organization such as the Dollar Energy Fund, and/or through the Company's own Contact Center.

Q. Does the Company plan to advertise the program?

1 A. Yes. The Company plans to advertise the program through bill messages and/or
2 inserts, social media, and emails to customers.

3

4 **Q. Are the costs for the residential COVID-19 Relief Program included in the**
5 **Company's claim?**

6 A. Yes. The total costs of the residential COVID-19 Relief Program are included in
7 the Company's revenue requirement as described in the testimony of Witness
8 O'Brien, Statement No. 10.

9

10 **Q. Does this conclude your direct testimony?**

11 A. Yes. I reserve the right to supplement my testimony through the course of this
12 proceeding.

**BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

Docket No. R-2021-3024750

**Duquesne Light Company
Statement No. 8**

**Direct Testimony of Sarah J. Olexsak
Subject: Transportation Electrification Programs**

Date: April 16, 2021

VII.	CONCLUSION	68

1 **I. INTRODUCTION AND PURPOSE OF TESTIMONY**

2 **Q. Please state your full name and business address.**

3 A. My name is Sarah J. Oleksak. My business address is Duquesne Light Company,
4 411 Seventh Avenue, Pittsburgh, PA 15219.

5
6 **Q. What is your position at Duquesne Light Company?**

7 A. I am employed by Duquesne Light Company (“Duquesne Light” or “Company”)
8 as Manager, Transportation Electrification.

9
10 **Q. How long have you worked at Duquesne Light?**

11 A. I have been employed by Duquesne Light since May 2018.

12
13 **Q. What are your current responsibilities?**

14 A. As the Manager, Transportation Electrification, my primary responsibilities include
15 developing and implementing the Company’s transportation electrification (“TE”)
16 strategy. In this role, I oversaw the execution of the EV ChargeUp Pilot approved
17 as part of the Company’s prior base rate case, Docket No. R-2018-3000124. I also
18 contributed to the development of the Company’s EV Time-of-Use Rate for default
19 supply, which was approved by the Commission at Docket No. P-2020-3019522
20 and will be available to customers in June 2021.

21
22 **Q. What are your qualifications, work experience and educational background?**

1 A. I have been employed in the energy and automotive sector since 2006. Prior to
2 joining Duquesne Light Company, I was employed at the U.S. Department of
3 Energy (“U.S. DOE”) within the Office of Energy Efficiency and Renewable
4 Energy (“EERE”). During my eight-year tenure in EERE, I held a variety of
5 positions within the Office of Strategic Programs and the Vehicle Technologies
6 Office. These positions included Manager, Electrification and Project Manager,
7 Innovation & Deployment, wherein I managed electric vehicle (EV) market
8 readiness research and performed analysis to inform strategic investment across
9 EERE’s research portfolio, and Coordinator of the Workplace Charging Challenge.
10 I also served as a Senior Sustainability Officer on assignment to the White House
11 Council on Environmental Quality. Prior to this, I worked as a consultant to the
12 U.S. DOE under employment by Sentech, Inc. managing the evaluation of EV and
13 battery manufacturing loan and tax credit proposals, and as an analyst at the U.S.
14 Fuel Cell Council (now the Fuel Cell and Hydrogen Energy Association), the trade
15 association of the hydrogen fuel cell industry.

16 I currently serve on the Pittsburgh Region Clean Cities Board. I have an
17 M.S. in Energy Policy and Climate from Johns Hopkins University, and a B.S. in
18 Biology from Muskingum University.

19

20 **Q. Are you sponsoring any exhibits, parts of exhibits or responses to the**
21 **Commission’s filing requirements as part of your direct testimony?**

22 A. Yes. I am sponsoring the following exhibits:

1 **Exhibit SO-1:** EV ChargeUp Pilot Annual Report (January 2019 – February 2020)

2 **Exhibit SO-2:** EV ChargeUp Pilot Annual Report (March 2020 – February 2021)

3 **Exhibit SO-3:** EV ChargeUp Pilot Progress Report

4 **Exhibit SO-4:** Duquesne Light Customer EV Survey Results Summary

5 **Exhibit SO-5:** Home Charging Pilot Customer Agreement

6 In addition, I am sponsoring Rider Nos. 23 (Home Charging Pilot) and 24
7 (Fleet Charging Pilot), which are included within Company witness Mr. Ogden’s
8 Exhibit DBO-1.

9

10 **Q. What is the purpose of your direct testimony?**

11 A. The purpose of my testimony is to present the Company’s proposed Transportation
12 Electrification Programs (“TE Programs”). Within my testimony, I will: 1)
13 describe why the Company is proposing the TE Programs; 2) report on the
14 performance of the Company’s transportation electrification pilots (“EV ChargeUp
15 Pilot”) to date; and 3) describe in detail the proposed TE Programs.

16

17 **Q. Why is the Company proposing the TE Programs in this case?**

18 A. Transportation electrification market trends demonstrate there is a need and benefit
19 for utility planning and investment in infrastructure and programs. The goal of the
20 TE Programs is to increase utilization of and equitable access to safe and reliable
21 electric transportation fuel in the Company’s service territory. The key objectives
22 of the TE Programs are:

- 1) Maximize the benefits of transportation electrification for customers and communities by evaluating the impacts EVs have on the electric grid, informing the Company's distribution system planning, and advancing our ability to serve our customers' evolving needs;
- 2) Serve as a trusted advisor to customers to help them transition to an electrified transportation environment; and
- 3) Leverage learnings from the EV ChargeUp Pilot and the Company's unique position to mitigate market obstacles through new products and services.

Q. Please summarize the Company's TE Programs.

A. The proposed TE Programs consists of two Portfolios. The first is the Charging Infrastructure Portfolio, comprising three programs intended to increase the number of EV charging stations in the Company's service territory, as a means of facilitating the EV market. The second component is the Customer Portfolio, which includes Awareness, Education, and Engagement, Fleet Electrification Advisory Service, and Registration Incentive programs. The Customer Portfolio is designed to increase customer knowledge of transportation electrification and allow the Company to more effectively engage customers.

These programs are summarized in the table below. This table includes projected program budgets for calendar year 2022; however, as I discuss later in my testimony, each of these programs is designed to operate on an ongoing basis through at least 2024.

1 Table 1: TE Programs Budgets

Component	Description	2022 Budget
Charging Infrastructure Portfolio		
Public, Workplace, and Multi-Unit Dwelling Make-Ready Pilot	Public, workplace, and multi-unit dwelling make-ready investment to support Level 2 and DC fast charging stations	\$1,047,940
Fleet and Transit Charging Pilot	Optional fleet and public transit make-ready and charging station program to install and support Level 2 and DC fast charging stations	\$2,013,730
Home Charging Pilot	Optional turnkey service for residential customers to install Level 2 charging stations at their home.	\$503,650
Customer Portfolio		
Awareness, Education, and Engagement	Support for customers to make informed decisions about fueling vehicles with electricity.	\$392,460
Fleet Electrification Advisory Service	Vehicle and charging infrastructure planning and analysis support for public and private fleet customers.	\$292,400
Registration Incentive	\$50 one-time registration incentive for customers who own or lease an EV.	\$68,000
	Capital Program Cost For 2022	\$2,964,090
	Expense Program Cost For 2022	\$1,353,090
	Total Program Cost For 2022	\$4,317,180

2

3 **Q. What are the projected bill impacts of the Company’s EV proposals?**

4 A. The Company estimates that these proposed programs would add approximately
 5 \$0.20, or 0.19%, to the monthly bills of a typical residential customer; and \$0.88,
 6 or 0.09%, to the monthly bills of a typical nonresidential customer on rate GM.

7

8 **II. TRANSPORTATION ELECTRIFICATION LANDSCAPE**

9

1 A. *EV and Charging Market Overview*

2

3 **Q. Please describe the market for EVs at the national level.**

4 A. Market trends indicate a broad movement towards vehicle electrification. Across
5 the U.S., EV production and sales have increased steadily over the last decade and
6 continue to trend upward. The Edison Electric Institute indicates that as of March
7 2021, there were more than 1.7 million EVs on the road.¹ From 2015 to 2021, EV
8 registrations increased by more than 300% across the U.S. EV sales are expected
9 to increase rapidly over the next decade.² By 2030, 18.7 million EVs are expected
10 on the roads and annual EV sales are forecasted to exceed 3.5 million per year,
11 accounting for more than 20% of annual vehicle sales. The forecasted growth is
12 driven by the more than \$135 billion automakers plan to invest in vehicle
13 electrification by 2030.³ American drivers will soon have even more choices, with
14 approximately 130 EV makes and models projected by 2026, up from 51 available
15 in 2019.⁴ National-level fleets are also driving demand. For example, President

⁴ Deloitte (2020, July). “Electric vehicles: Setting a course for 2030,” Obtained from:
<https://www2.deloitte.com/us/en/insights/focus/future-of-mobility/electric-vehicle-trends-2030.html>

1 Biden ordered the federal government, which purchases more than 50,000 vehicles
2 per year, to develop a plan to transition to zero emission vehicles.⁵

3

4 **Q. Please describe the EV market within the Company’s service territory.**

5 A. At the local level, EV penetration within the Company’s service territory is growing
6 rapidly, although it still represents a small portion of total market share. Despite the
7 COVID-19 pandemic, there was a 21% increase in new EV registrations and a 33%
8 increase in total number of EVs within the Company’s service territory from
9 December 2019 to December 2020, bringing the total registered to approximately
10 4,123.⁶ The Electric Power Research Institute indicates EV registration in the
11 Company’s service territory will be between 18,900 and 30,325 by 2025 – up to
12 635% more than the existing number of registrations.⁷

13 Fleets at the state and local are also driving demand. The State of
14 Pennsylvania plans to convert 25% of its fleet to electric by 2025 and the City of
15 Pittsburgh aims to have a fossil fuel free fleet by 2030.⁸ The Company has already

⁵ Federal Register (2021, January). “Tackling the Climate Crisis at Home and Abroad,” Obtained from: <https://www.federalregister.gov/documents/2021/02/01/2021-02177/tackling-the-climate-crisis-at-home-and-abroad>.

⁶ Electric Power Research Institute (2021, February). Duquesne Light Company Service Territory EV Registration Data as of December 2020.

⁷ Electric Power Research Institute (2021, January). Duquesne Light Company Service Territory EV Sales Projections as of 2020.

⁸ City of Pittsburgh Mayor William Peduto (2017, June). “Executive Order 2017-08: Reinforcing Pittsburgh’s Commitment to the Global Partnership on Climate Change,” Obtained from: [https://apps.pittsburghpa.gov/mayorpeduto/Climate_exec_order_06.02.17_\(1\).pdf](https://apps.pittsburghpa.gov/mayorpeduto/Climate_exec_order_06.02.17_(1).pdf).

1 started electrifying its fleet and aims to find electric solutions for 30% of its fleet
2 by 2030, including 100% of its light-duty vehicles.

3
4 **Q. What are some of the benefits of increased transportation electrification**
5 **driving this demand?**

6 A. Increased EV adoption displaces petroleum with more efficient electric fuel, which
7 results in benefits for customers who drive EVs, as well as those who do not. Such
8 benefits include:

- 9 • Increased Distribution System Utilization: EVs support efficient use of the
10 electric grid. Most charging occurs during non-peak hours, which helps spread
11 the Company’s fixed distribution costs over more kilowatt-hours, while
12 mitigating grid impacts. This applies downward pressure on delivery rates for
13 all customers, and supports efficient planning and construction of distribution
14 facilities.
- 15 • Reduced Greenhouse Gas (“GHG”) Emissions: Transportation is responsible
16 for 20% of annual CO₂ emissions in Pennsylvania, contributing to climate
17 change.⁹ A key strategy to reduce these emissions is to increase the
18 deployment of EVs. According to the U.S. Department of Energy, a light duty
19 vehicle charging up in Pennsylvania emits 1/3 of the amount of GHG

⁹ PA DEP (2021, January). “Pennsylvania Electric Vehicle Roadmap: 2021 Update,” Obtained from:
<http://files.dep.state.pa.us/Energy/OfficeofPollutionPrevention/StateEnergyProgram/PAElectricVehRoadmapBookletDEP5334.pdf>.

1 emissions of a comparable gasoline-fueled vehicle. As the local generation
2 mix continues to shift towards clean energy sources, total emissions
3 attributable to EV fueling will continue to decline over time. The average
4 passenger EV on the road is estimated to save 7,970 lbs. CO₂e per year
5 compared to an internal combustion engine vehicle. The Company's EV
6 ChargeUp Pilot has already supported the reduction of 100 tons CO₂
7 emissions (Exhibit SO-1: EV ChargeUp Pilot Annual Report (January 2019 –
8 February 2020) and Exhibit SO-2: EV ChargeUp Pilot Annual Report (March
9 2020 – February 2021).

- 10 • Improved Air Quality: Increased transportation electrification will cut criteria
11 pollutants emitted by motor vehicles including ozone, particulate matter,
12 carbon monoxide, nitrogen dioxide and hazardous air pollutants (HAPs),
13 leading to better overall health, including fewer respiratory conditions. This is
14 particularly important in the Company's service territory, where the air quality
15 consistently ranks among the worst in the nation. For example, in 2020,
16 Allegheny County received a failing "F" grade from the American Lung
17 Association for three measures of air pollution — ozone, particle pollution in
18 a 24-hour period and annual particle pollution.¹⁰ In this same area,
19 transportation is responsible for 22% of air pollution, according to the U.S.
20 EPA's 2015 National Emissions Inventory.

¹⁰ American Lung Association (2020). "State of the Air: Allegheny County," Obtained from:
<https://www.stateoftheair.org/city-rankings/states/pennsylvania/allegheny.html>.

- 1 • Boost to the Local Economy: Transportation electrification is also expected to
2 benefit Pennsylvania’s economy. As of 2019, the electric transportation
3 industry in Pennsylvania already supported nearly 4,400 jobs across 151
4 different companies and accounted for more than \$430 million in gross state
5 product. Jobs in the state’s electric transportation industry are projected to
6 grow 24% between 2019 and 2024,¹¹ compared with 3% growth across
7 statewide employment over the same timeframe.
- 8 • Customer Savings: Customers driving electric benefit from a reduced total
9 cost of ownership when compared to an internal combustion engine vehicle.
10 EVs require less maintenance¹² and electricity fueling costs are more
11 predictable and more than 50% cheaper compared to the costs of gasoline fuel
12 in Pennsylvania.¹³
- 13 • Energy Security: As noted by the U.S. Department of Energy, EVs are an
14 important part of continuing the country’s successful trend of minimizing
15 imported petroleum. The diversification of fuel sources used in the generation
16 of electricity results in a more secure and domestically generated energy

¹¹ Advanced Energy Economy (2020, May). “Electric Transportation Supply Chain in Pennsylvania,”

<https://www.energy.gov/maps/egallon>.

1 source for the electrified portion of the transportation sector, adding to our
2 nation's energy security.¹⁴

3
4 **Q. Does transportation electrification benefit disadvantaged communities?**

5 A. Yes. Transportation electrification helps to mitigate disproportionate health
6 impacts felt by disadvantaged communities. As noted by Synapse Energy
7 Economics, "Importantly, because transportation sector emissions occur at ground
8 level where they are less likely to be dispersed and more likely to have an impact
9 on customers' health, a decrease in tailpipe emissions is likely to produce the most
10 health benefits for the customers who are physically located near where the vehicles
11 are operated. This is particularly relevant in situations where EVs may be used to
12 reduce emissions from transit buses, school buses, and large trucks, which
13 disproportionately impact lower-income and communities of color located near
14 industrial and transit sites."¹⁵

15 This holds true in the Company's service territory, where low-income
16 individuals are disproportionately exposed to air pollution caused in part by ground
17 transportation used to move people and goods throughout a community. As part of
18 its EV ChargeUp Pilot, as summarized in Exhibit SO-3: EV ChargeUp Pilot

¹⁴ U.S. Department of Energy (2021, March). "Electric Vehicle Benefits and Considerations," Obtained from https://afdc.energy.gov/fuels/electricity_benefits.html.

¹⁵ Synapse Energy Economics (2019, November). "Making Electric Vehicles Work for Utility Customers," Obtained from: <https://www.synapse-energy.com/sites/default/files/Making-Electric-Vehicles-Work-for-Utility-Customers.pdf>.

1 Progress Report, attached to my testimony, the Company aligned with the PA
2 Department of Environmental Protection (DEP) definition of Environmental
3 Justice (EJ) Areas to identify disadvantaged communities within its service territory
4 that could especially benefit from greater transportation electrification. According
5 to the Breathe Project’s Black Carbon Map, many of the EJ Areas are also exposed
6 to some of the highest amounts of black carbon pollution in our region.¹⁶ A shift
7 toward transportation electrification will help reduce these impacts.

8

9 **Q. Is charging infrastructure in the Company’s service territory keeping pace**
10 **with the growing need?**

11 A. No. According to the U.S. Department of Energy’s Alternative Fuels Data Center,
12 the Pittsburgh region needs at least 2,149 workplace and public Level 2 (L2)
13 charging ports and 78 public direct current fast charger (DCFC) ports by 2025 to
14 keep up with a median projection of EV growth for the area. Currently, there are
15 only 389 Level 2 charging ports and 62 DCFC ports (20 accessible by non-Tesla
16 EVs) in the region.

17

18 **Q. Have state and local governments recognized the need for more EV charging**
19 **infrastructure?**

¹⁶ Breathe Project (2021, March). “Black Carbon Nitrogen Dioxide Map,” Obtained from:
<https://breatheproject.org/pollution-map/>.

1 A. Yes, and both have recommended that electric distribution companies play a role
2 in helping to meet this need. In 2019, the PA DEP released its “Electric Vehicle
3 Roadmap” describing five years of action to drive EV adoption. The Roadmap
4 includes a utility transportation and electrification directive, noting how utilities
5 can play a unique role in advancing transportation electrification due to their
6 existing role in serving public interests; knowledge of installing and maintaining
7 electricity infrastructure; stable business structure that continues to be involved in
8 electric distribution for the long-term; and cost recovery mechanisms that allow for
9 the installation of chargers where there is the greatest need rather than where there
10 is greatest profit. Additionally, the City of Pittsburgh’s EV Task Force made several
11 recommendations for transportation electrification at the local level to bridge
12 charging gaps by creating and then promoting regional charging opportunities and
13 networks. To address the need for more local public charging, the task force
14 recommends working with the Company to increase Level 2 public charging
15 infrastructure throughout city neighborhoods at existing and new properties and to
16 make obtaining permits for DCFC infrastructure easier.¹⁷

17

18 **Q. Are these state and local examples consistent with trends elsewhere in the**
19 **country?**

¹⁷ City of Pittsburgh (2019, September). “EV Task Force Recommendations,” Obtained from:
https://apps.pittsburghpa.gov/redtail/images/8371_EV_Task_Force_Recommendations.pdf.

1 A. Yes. Public utilities across the country are increasingly investing in EV programs
2 and infrastructure, ranging from residential charging services to charging
3 infrastructure make-ready investment to charging station ownership. As of January
4 2021, 52 electric companies in the U.S. received approval for transportation
5 electrification-related filings, representing a total investment of more than \$1.51
6 billion, representing a total potential investment of nearly \$3 billion.¹⁸

7

8 **Q. On March 31, 2021, President Biden proposed the American Jobs Plan, which**
9 **includes \$174 billion for transportation electrification programs.¹⁹ In light of**
10 **this announcement, why is Duquesne Light still proposing transportation**
11 **electrification programs in this case?**

12 A. President Biden's recent announcement in support of transportation electrification
13 is extremely encouraging, but it does not obviate the Company's proposed
14 programs for several reasons. First, as of the date of this testimony, the President's
15 infrastructure plan is a conceptual proposal that would require Congressional
16 approval to implement. Second, details of the President's plan have not been shared
17 with the public, so we cannot assume that it will address the objectives outlined in
18 the Company's proposal. Lastly, the Company is uniquely positioned to support its

¹⁸ Edison Electric Institute (2021, February). "Electric Transportation Biannual State Regulatory Update,"
Obtained from:
https://www.eei.org/issuesandpolicy/electrictransportation/Documents/FINAL_ET%20Biannual%20State%20Regulatory%20Update_February2021.pdf.

¹⁹The White House (2021, March) "Fact Sheet: The American Jobs Plan," Obtained from:

1 customers with programs that may not be included in a federal infrastructure plan,
2 such as those that address home charging.

3

4 *B. EV ChargeUp Pilot Performance*

5

6 **Q. What TE initiatives has the Company previously implemented?**

7 A. As part of the EV ChargeUp Pilot, the Company has implemented a Level 2
8 Charging Station Evaluation, a DCFC Evaluation, an EV Registration Incentive and
9 executed Education and Outreach activity.

10

11 **Q. Has the Company submitted annual reports concerning the Company's
12 implementation of the EV ChargeUp Pilot?**

13 A. Yes, the Company filed annual reports in 2020 and 2021 pursuant to the parties'
14 settlement in the Company's 2018 base rates case ("Settlement"). These reports are
15 attached as Exhibits SO-1 and SO-2, respectively, to my testimony. They provide,
16 among other things: (a) charging infrastructure deployed over time, including by
17 location, and activation date; (b) charging infrastructure installation costs by site
18 type (broken out by capital and rebate costs); (c) for all charging stations deployed,
19 the usage rate by site type and charger type; and (d) estimated avoided emissions
20 resulting from the programs.

21

1 **Q. Is the Company providing a report in this filing on the EV ChargeUp Pilot**
2 **Level 2 Charging Evaluation?**

3 A. Yes. The Settlement provides that the Company will provide a report in this
4 proceeding on the EV ChargeUp Pilot Level 2 Charging Evaluation. This report is
5 attached as Exhibit SO-3 to my direct testimony. The report evaluates customer
6 participation and feedback, public access to charging stations and charging station
7 usage, identifies the charging station revenues received by the Company from
8 charging station site host customers, and discusses the Company's activities under
9 the DCFC Evaluation, EV Registration Incentive, and Education and Outreach
10 components of the EV ChargeUp Pilot.

11 In addition to the results identified in Exhibit SO-3, as I discuss further in
12 my testimony, the EV ChargeUp Pilot yielded valuable experience that has
13 informed the development and design of the TE Programs proposed in this
14 proceeding.

15

16 **III. CHARGING INFRASTRUCTURE PORFOLIO**

17 **Q. Please summarize the proposed Charging Infrastructure Portfolio.**

18 A. The Charging Infrastructure Portfolio includes the following:

- 19 • A Public, Workplace, and Multi-Unit Dwelling (MUD) Make-Ready Pilot,
20 through which the Company will construct and own make-ready infrastructure
21 to facilitate the deployment of approximately 30 Level 2 charging stations and
22 4 DC fast charging stations annually.

1 • A Fleet and Transit Charging Pilot, through which the Company will construct
2 and own make-ready and charging station infrastructure to serve customers with
3 electric fleets. Approximately 38 Level 2 charging stations will be deployed
4 annually in partnership with non-transit customers, and 6 DC fast charging
5 stations will be deployed in 2022 to power electric buses for the Port Authority
6 of Allegheny County.

7 • A Home Charging Pilot, through which the Company will construct and own
8 make-ready and charging station infrastructure to serve residential customers.

9 The Company projects an average of 125 new residential participants each year.

10 The table below provides additional detail on the Charging Infrastructure Portfolio:

11

1 Table 2: Charging Infrastructure Portfolio

	Fleet and Transit Charging			
	Public, Workplace, and MUD Make-Ready Pilot	Fleet Pilot	Transit Pilot	Home Charging Pilot
Number of Installations	Average of 30 Level 2 and 4 DC fast charging stations installed annually	Average of 38 Level 2 charging stations installed annually	6 DC fast charging stations installed in 2022	125 Level 2 charging stations installed annually
Example Deployment	Public parking garage, community recreation center	Parcel delivery service, paratransit service	Port Authority of Allegheny County	Homeowner
Ownership Structure	DLC owns “make-ready” infrastructure; customer-site host owns charging station	DLC owns “make-ready” infrastructure; customer or DLC owns charging station	DLC owns “make-ready” infrastructure and charging station	Customer owns “make-ready” infrastructure and DLC owns charging station
Maintenance	DLC maintains make-ready infrastructure; customer site-host maintains charging station	DLC maintains make-ready infrastructure; Charging station owner maintains station	DLC maintains make-ready infrastructure and charging station	Customer maintains make-ready infrastructure; DLC maintains charging station
Cost to Participating Customers	Tariffed general service distribution rate	Tariffed general service distribution rate plus monthly per-port fee	Tariffed general service distribution rate	Tariffed residential distribution rate plus monthly fee
Low Income Customer and EJ Area Considerations	Specialized technical assistance and \$5,000 Level 2 charging station rebate for customers that serve EJ Areas	Target 25% of customers participating annually serve or are located in EJ Areas	Electric buses serve EJ Areas and low-income customers	Low-income customers eligible for \$2,000 installation upgrade allowance
2022 Capital Costs	\$899,570	\$728,710	\$984,000	\$351,810
2022 O&M Costs	\$147,370	\$201,190	\$99,830	\$151,840

2

3 **Q. Why is the Company proposing the Charging Infrastructure Portfolio?**

4 A. The Company’s Charging Infrastructure Portfolio will help address a market need,
 5 improve distribution system utilization, ensure installations are done safely and

1 economically, and expand access to the environmental and public health benefits
2 of EVs, particularly for low income customers and those living within EJ Areas.

3

4 **Q. Is the Company proposing to own infrastructure (make-ready and charging**
5 **stations) as part of its proposals?**

6 A. Yes. The Company is proposing to own make-ready and/or charging stations in
7 each of its Charging Infrastructure Portfolio programs. The Program Summary
8 table provides a description of the ownership structure and I will provide further
9 detail in my testimony about each program.

10

11 **Q. Why is it appropriate for the Company to install and own make-ready and**
12 **charging infrastructure?**

13 A. Through the EV ChargeUp Pilot, the Company has seen that the upfront cost of
14 charging infrastructure, together with the time and resources necessary to manage
15 an installation, can deter customers from deploying charging stations. This
16 exacerbates the lack of charging infrastructure and range anxiety, which, as I
17 discuss below, are the leading reasons the Company's customers cite for not
18 adopting EVs. The Company's proposed investments in charging infrastructure
19 address these primary obstacles to EV adoption, and will facilitate charging
20 infrastructure deployment in much-needed locations, including EJ Areas.

1 Additionally, the Company’s experience with electrical infrastructure
2 planning, and ability to achieve economies of scale, can help lower costs and
3 produce more efficient projects for customers than they could achieve on their own.
4

5 **Q. Will the Company’s proposals stifle competition?**

6 A. No. The Company’s proposed investments are intended to accelerate EV charging
7 development, particularly where market gaps exist such as for multi-unit dwellings
8 (“MUDs”) and fleets. This will encourage greater EV adoption that will, in turn,
9 expand opportunities for competitive market providers. Greater EV adoption can
10 help improve the economics of charging stations by expanding the population of
11 charging station customers and increasing charging station utilization.

12 Additionally, the Company’s proposed infrastructure deployments through
13 these programs represent a small fraction of the investment needed to support
14 anticipated EV growth. As I discuss further below, the Company’s programs would
15 support approximately 90 public, workplace and MUD L2 station and 12 public
16 DCFC deployments from 2022 through 2024, compared to the 1,760 L2s and
17 minimum of 16 DCFCs (with significantly more DCFC needed to support non-
18 Tesla drivers) needed in the Company’s service territory over the same time period
19 based on a median EV adoption projection. The Company’s proposed programs
20 will therefore not hinder the development of the competitive EV market.

21 Finally, the Company will maintain a market neutral approach by holding
22 competitive solicitations for the products and outside services procured to

1 implement these programs. This will provide opportunities for market providers, as
2 well as ensure competitive prices for customers.

3

4 **Q. How does the Company’s proposed Charging Infrastructure Portfolio provide**
5 **opportunities for low-income customers?**

6 A. As I discuss in further detail below, each of the Company’s proposed infrastructure
7 activities were informed by assessing best practices for ensuring equity in the
8 growth of electric mobility. These programmatic considerations will help address
9 the cost and awareness barriers, and provide a tailored approach to serving the
10 unique challenges of our low-income customers and those within EJ Areas.

11

12 A. *Public, Workplace, and Multi-Unit Dwelling Make-Ready Pilot*

13 **Q. Please summarize the Company’s proposed Public, Workplace, and Multi-**
14 **Unit Dwelling Make-Ready (“Make-Ready”) pilot.**

15 A. This pilot is designed to address the charging infrastructure gap in the Company’s
16 service territory by expanding upon its EV ChargeUp Pilot Level 2 Evaluation.
17 Through the Make-Ready pilot, the Company will work with customers to provide
18 all necessary supply infrastructure, including service connections and EV make-
19 ready behind the meter for L2 and DCFC stations in public, workplace, and MUD
20 settings. Customers will be responsible for the procurement, installation, ownership
21 and maintenance of the charging station. There will be no additional fees required

1 from the participating customers beyond applicable charges for electric delivery
2 and supply.

3

4 **Q. Why is the Company proposing the Make-Ready pilot?**

5 A. The Company is proposing the Make-Ready pilot based on the need for more
6 charging infrastructure in the Company's service territory. This need has been
7 substantiated from projections of EV growth and feedback from residential
8 customers, summarized in Exhibit SO-4, indicating the lack of charging and range
9 concerns as a barrier to purchasing an EV. For example, in a 2020 survey, the
10 Company's customers identified that the top two major barriers to purchasing EVs
11 were lack of public charging stations nearby (66%) and concerns regarding vehicle
12 driving range (64%).

13 To support the growth in light-duty EVs from approximately 4,000 today to
14 an estimated 18,900 to 30,325 by 2025,²⁰ the Pittsburgh region will need to
15 substantially increase its public, workplace, and MUD charging infrastructure. The
16 table below shows the number of public and workplace L2 and DCFC ports
17 available today and the additional ports required to support the anticipated range of
18 EV growth. These numbers do not fully account for the charging ports required to
19 support customers living in MUDs, which represent approximately 26% of

²⁰ Electric Power Research Institute (2020). Projections for Duquesne Light Company's Service Territory as of 2020.

1 households in Allegheny and Beaver counties. Additionally, an estimated 35% of
2 households rent their home, which can make home charging more challenging and
3 increases the need for sufficient public and workplace charging.²¹
4

5 Table 3: Regional Charging Infrastructure Needs

Year Scenario	L2 Ports*	DCFC Ports
2021 - Current Supply ²²	389	62**
2025 - Median Need ²³	2149	78
2025 - High Need ²⁴	3008	125

6 *Includes public and workplace ports. 2021 figure includes public L2 only. The
7 current number of non-public workplace charging installations is unknown.

8 **Currently only 20 of the 62 available DCFC ports can serve non-Tesla vehicles.
9

10 **Q. Please describe how learnings from the EV ChargeUp Pilot are applied to the**
11 **proposed activity.**

12 A. The Make-Ready pilot builds on lessons learned from the EV ChargeUp Pilot to
13 help minimize costs and streamline program management and implementation. The
14 Make-Ready pilot includes the following key changes:

- 15 • Include DCFC stations in addition to L2 charging stations.

²¹ United States Census Bureau (2019). “American Community Survey - Table DP04,” Obtained from: www.data.census.gov.

²² U.S. Department of Energy (2021, January). “Alternative Fuels Data Center,” Obtained from: <https://afdc.energy.gov>.

²³ U.S. Department of Energy (2021, January). “Alternative Fuels Data Center EVI Pro Lite tool estimate based on projection of EPRI median scenario of 18,900 EVs in Pittsburgh region,” Obtained from: <https://afdc.energy.gov/evi-pro-lite>.

²⁴ U.S. Department of Energy (2021, January). “Alternative Fuels Data Center EVI Pro Lite tool estimate based on EPRI High scenario of 30,325 EVs in Pittsburgh region,” Obtained from: <https://afdc.energy.gov/evi-pro-lite>.

- 1 • Include workplace and MUD sites, in addition to public charging station host
2 customers.
- 3 • Reduce the minimum number of required charging station ports per site.
- 4 • Provide specialized technical assistance and financial support for qualified
5 customers serving EJ Areas.
- 6 • The Company will construct and own electrical make-ready infrastructure
7 instead of providing a rebate to the customer for make-ready costs.

8

9 *Expand to Include DCFC*

10 As described above, the Pittsburgh region is severely lacking the required non-
11 Tesla DCFC infrastructure. Robust DCFC deployment is necessary because
12 customers need a much faster way to charge their vehicle (30-45 minutes) than the
13 4-8 hours it can take to fully charge using a L2 station. The upfront equipment costs
14 of DCFC stations can cost more than \$50,000. These higher equipment costs
15 combined with low early-stage levels of utilization can deter customer investment
16 in DCFCs.²⁵

17

18 *Expand to Include Workplace and MUD Locations*

²⁵ E.g., Ross McClane and Qiyu Liu (2021, January). “The United States Needs More Fast Charger: China Can Show How,” Obtained from: <https://rmi.org/the-united-states-needs-more-fast-chargers-china-can-show-how/>.

1 The Make-Ready pilot aims to ensure that investments are made in charging
2 infrastructure where they will see the greatest utilization. With the majority of
3 charging happening at home and 26% of households in Allegheny and Beaver
4 counties living in MUDs,²⁶ having sufficient charging is essential to support MUD
5 customers interested in EVs. MUD charging proved the most durable during the
6 pandemic. In fact, the two EV ChargeUp Pilot sites with the greatest usage during
7 the pandemic are public sites that are accessible to multi-unit dwelling residential
8 customers, reflecting the importance of charging accessibility at such locations.

9 Outside of the home, workplace charging is the most-utilized type of
10 charging infrastructure.²⁷ Studies show that individuals who have access to
11 workplace charging are six times more likely to purchase an EV than those who do
12 not.²⁸ Expanding the Make-Ready pilot to include site hosts at these locations will
13 make it more feasible for customers to switch to an EV and can help meet the
14 anticipated EV growth.

15

16 *Reduce Number of Required Ports*

²⁶ United States Census Bureau (2019). “American Community Survey - Table DP04,” Obtained from: www.data.census.gov.

²⁷ Idaho National Laboratory (2015). “Plugged In: How Americans Charge Their Electric Vehicles,” Obtained from: <https://avt.inl.gov/sites/default/files/pdf/arra/PluggedInSummaryReport.pdf>.

²⁸ U.S. Department of Energy (2017, January). “Workplace Charging Challenge Progress Update 2016: A New Sustainable Commute,” Obtained from: https://www.energy.gov/sites/prod/files/2017/01/f34/WPCC_2016%20Annual%20Progress%20Report.pdf.

1 The EV ChargeUp Pilot required participating customers to install at least 4 dual-
2 port charging stations, which translates to 8 charging ports, per site.²⁹ Several
3 customers that were interested in the program were unable to participate because
4 they could not meet this 8 charging port requirement. The Make-Ready pilot lowers
5 the required number of ports to 4 per site to expand customer access.

6

7 *EJ Area Support*

8 The Make-Ready pilot will provide specialized technical assistance and financial
9 support for qualified L2 charging station host customers within EJ Areas. While
10 these customers may be interested in hosting charging infrastructure for their
11 communities, they may lack the funding and internal resources to manage the
12 installation process. The Make-Ready pilot can help overcome these barriers.

13

14 **Q. Why is the Company proposing to own the make-ready rather than offer**
15 **customers a rebate as it did under the EV ChargeUp Pilot?**

16 A. From executing the EV ChargeUp Pilot, the Company learned that the upfront cost
17 of charging infrastructure, along with the resources to manage the project, can be
18 deterrents for customers. Providing customers with a rebate did not directly address
19 these impediments. For the Make-Ready Pilot, the Company is proposing

²⁹ See Settlement paragraph 45(b).

1 ownership of the make-ready to address these issues and accelerate charging
2 infrastructure investments in its service territory.

3

4 **Q. What services will the Company provide through the Make-Ready pilot?**

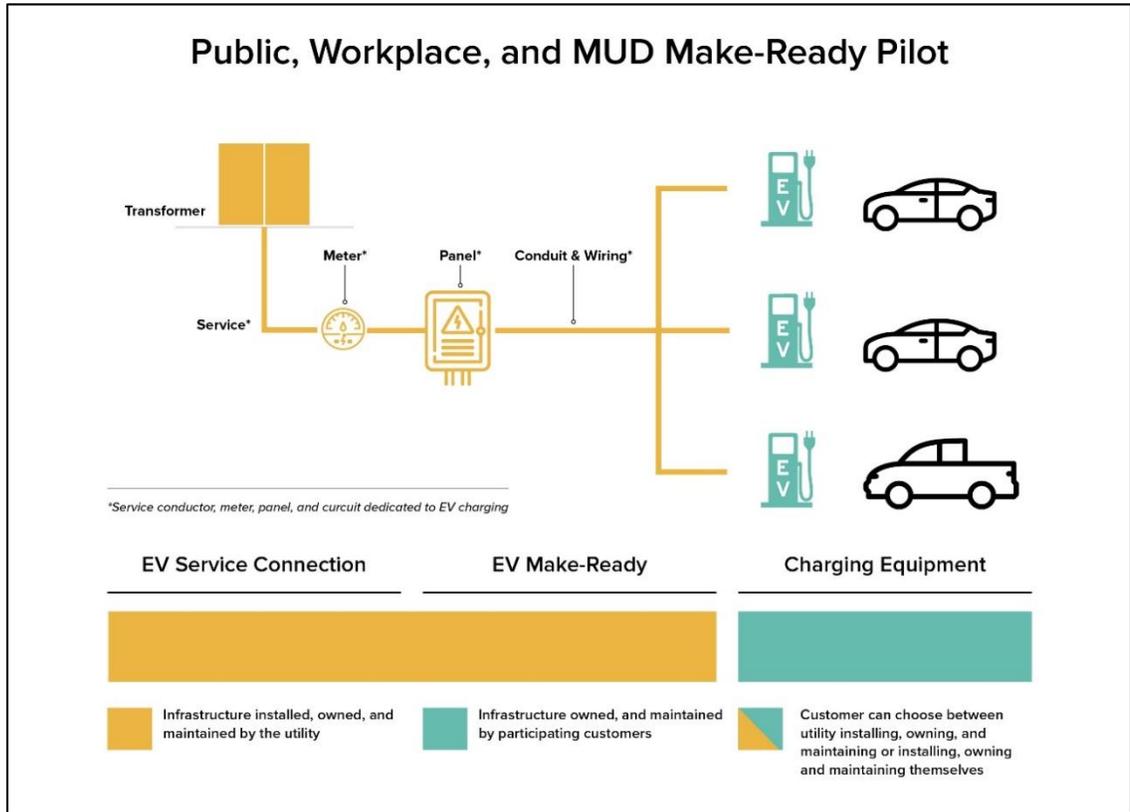

5 A. The Company will install, own, and maintain EV charging station make-ready,
6 which may include new panels, conduit, and wiring, located between the meter and
7 the charging station. The Customer will own, operate, and maintain the EV
8 charging stations. A simplified typical example is depicted in the below illustration:

9

10

1
2

Figure 1: Public, Workplace, and MUD Make-Ready Pilot Example Ownership Structure

3

4

5

6

7

8

9

10

11

12

In addition, in response to customer feedback from the EV ChargeUp Pilot, the Company will continue to provide participating customers with a list of pre-qualified vendors for the customer-owned and -installed charging stations. The Company will identify these qualified vendors and equipment through competitive solicitation. The stations will be required to, among other things, provide interoperability and managed charging capabilities that would enable customers participate in possible future managed charging programs, and to share usage data with the Company. Customers will choose their charging station hardware and

1 networking service from this qualified vendor list, or will have the option to select
2 their own stations so long as they meet the Company’s safety and technical
3 standards.

4
5 **Q. Will participants be required to separately meter the charging stations?**

6 A. No. The Company evaluated this option, but determined that the benefits of
7 requiring a separate meter were outweighed by the cost and inconvenience to the
8 participating customers. Customers interested in a separate meter for their EV
9 charging load may do so by establishing a separate service to the charging stations.

10
11 **Q. Will the Customer share charging data with the Company under the Make-
12 Ready pilot?**

13 A. Yes, participating customers will be required to grant the Company access to their
14 charging data through the network provider. The Company will use these data to
15 better understand charging station utilization, charging patterns for different use
16 cases, and potential grid impacts. These data may also help the Company identify
17 future services for these customer segments. The Company will follow its Privacy
18 Policy³⁰ for collecting, storing, and using these customer data.

19
20 **Q. Who will be eligible to participate in Make-Ready pilot?**

³⁰ Duquesne Light Company (2019, January). “Duquesne Light Privacy Policy,” Obtained from:
<https://www.duquesnelight.com/customer-support/policies-forms/privacy-policy>.

1 A. Non-residential customers that own, lease or manage commercial properties or
2 MUDs will be eligible to participate.

3

4 **Q. What will be the requirements to participate in the Make-Ready pilot?**

5 A. Eligible customers will be required to meet the following to participate in the Make-
6 Ready pilot:

- 7 • Own or lease property, and demonstrate site control thereof (which may
8 include written permission from the property owner), suitable for charging
9 station installation.
- 10 • For L2 sites: Install a minimum of 4 charging ports (e.g., 2 dual-port
11 chargers), or for customers in EJ Areas, a minimum of 2 charging ports
12 (e.g., 1 dual-port charger).
- 13 • For DCFC sites: Install a minimum of 2 DCFC charging ports of at least
14 150kW, which must be publicly accessible.
- 15 • Operate and maintain charging stations.
- 16 • Subscribe to charging station networking service.
- 17 • Provide the Company charging data via network vendor.
- 18 • Grant the Company any rights-of-way or easements deemed necessary.
- 19 • Execute a contract memorializing the Company's and customer's respective
20 obligations under the pilot.

21

1 **Q. How will the Company evaluate customer applications to the Make-Ready**
2 **pilot?**

3 A. The Company will evaluate applicant sites based on a variety of factors, including
4 technical feasibility and anticipated charging station utilization. As part of this
5 evaluation, the Company will analyze the projected costs of the project, as well as
6 the projected incremental distribution revenues the project may yield. The
7 Company will reject proposed projects with disproportionately high estimated per-
8 port costs and/or disproportionately low projected utilization.

9

10 **Q. How will the Make-Ready pilot support charging station growth in EJ Areas?**

11 A. Though the pilot removes customers' up-front costs of make-ready infrastructure,
12 the costs of the charging station alone may be too much to bear for some customers
13 who serve EJ Areas. Therefore, for qualified customers serving EJ Areas, the pilot
14 will provide a charging station rebate of up to \$5,000 per dual-port L2 unit. In
15 addition, the Company will provide specialized technical assistance, which can help
16 reduce the project management burden for the charging station installation portion
17 of the project. The Company aims to select charging station sites located in EJ
18 Areas for at least 25% of annual pilot participants.

19

20 **Q. Please describe how the Company will conduct outreach and education about**
21 **the Make-Ready pilot.**

1 A. The Company will conduct outreach and education through a variety of channels.
2 The Company will host content on its website explaining the pilot, as well as
3 produce print collateral materials. The Company's Major Account Managers will
4 also discuss the program directly with non-residential customers. In addition, the
5 Company will engage with local non-profits and trade association groups to target
6 groups like property managers and developers.

7 The Company will seek to leverage other funding sources, such as
8 governmental grants, to help expand the reach of the program. For example, as part
9 of its engagement with customers through this program, the Company will educate
10 customers on other funding that they may be eligible for, such as Driving PA
11 Forward rebates or grants.

12
13 **Q. How many customers are projected to participate in the Make-Ready pilot?**

14 A. The Company projects that a total of 14 customers, comprising 12 L2 site locations
15 and 2 DCFC locations, will participate in the Make-Ready pilot on an annual basis.
16 To help control Pilot costs, the Company will cap participation at 21 new customers
17 annually.

18

19 **Q. What are the Company's projected costs of the pilot in 2022?**

20 A. The Company's projected costs for 2022 are as follows:

21

22

1

Table 4: Make-Ready 2022 Pilot Cost

Make Ready 2022 Pilot Costs	
Capital	
Make Ready Design, Installation and Equipment	\$624,000
Operations Support and Oversight	\$275,570
Expense	
Program Management	\$29,600
Disadvantaged Community Support	\$112,770
Advertising and Collateral	\$5,000
Total	\$1,046,940

2

3 The Company estimates incurring similar annual capital and expense costs in
4 subsequent years.

5

6 **Q. How will the Company recover its costs of the Make-Ready pilot?**

7 A. Costs for this program will be recovered through base distribution rates.

8

9 *B. Fleet and Transit Charging Pilot*

10 **Q. Please summarize the Company’s proposed Fleet and Transit Charging pilot.**

11 A. Through the Fleet and Transit Charging pilot, the Company will install, own, and
12 maintain EV infrastructure, including make-ready infrastructure and charging
13 stations, on behalf of fleet customers, including the Port Authority of Allegheny
14 County (Port Authority). The goal of the pilot is to reduce the upfront cost for EV

1 charging infrastructure and reduce the project planning and execution burden for
2 customers to help spur transportation electrification adoption.

3

4 **Q. Why is the Company proposing the Fleet and Transit Charging pilot?**

5 A. The Company is proposing the Fleet and Transit Charging pilot to help customers
6 overcome key barriers to fleet electrification. As I mentioned earlier in my
7 testimony, the coming years will bring a host of new vehicle types to market,
8 including pick-up trucks and delivery vehicles. Switching to an electric option can
9 produce meaningful savings for customers. For example, an electric school bus is
10 estimated to save \$6,400 annually in fuel and maintenance costs, and an electric
11 transit bus is estimated to produce lifetime savings of \$81,000 compared to a diesel
12 transit bus.³¹ However, upfront costs of vehicles and charging infrastructure,³²
13 along with the resources required to execute projects with a new technology, can
14 hinder customers from realizing these savings. This pilot is intended to help bridge
15 this deployment gap. The Company believes it is well-positioned to help customers
16 navigate this emerging market and provide technical and implementation support
17 to encourage them to adopt EVs.

³¹ Alana Miller, Hye-Jin Kim, Jeffrey Robinson, and Matthew Casale of Frontier Group, PIRG Education Fund, and PennEnvironment. (2018, May). “Electric Buses Clean Transportation for Healthier Neighborhoods and Cleaner Air,” Obtained from: <https://pennenvironment.org/sites/environment/files/reports/Electric%20Buses%20-%20PA%20-%20May%202018.pdf>.

³² Lynn Daniels and Chris Nelder of the Rocky Mountain Institute (2021). “Steep Climb Ahead,” Obtained from: <https://rmi.org/insight/steep-climb-ahead/>.

1 This program also aligns with the Commonwealth’s goals of achieving
2 100% zero emission vehicles sales for all new medium and heavy duty vehicles by
3 2050 and reaching 30% of new medium and heavy duty sales by 2030, as articulated
4 in a 2020 Memorandum of Understanding among Pennsylvania, 14 other states,
5 and the District of Columbia.³³

6 Finally, fleet electrification promotes environmental health benefits as I
7 discussed earlier in my testimony. Medium and heavy-duty fleet electrification in
8 particular produces environmental and air quality benefits for surrounding
9 populations, “especially those residents nearest major roadways, warehouse
10 distribution centers and other pollution hotspots.”³⁴

11

12 **Q. Describe the Company’s proposal with respect to Transit Charging.**

13 A. The Company proposes to install, own, and maintain six 150kW DCFC stations at
14 Port Authority’s East Liberty Garage. These units are the same size as the stations
15 installed as part of the Company’s DCFC Evaluation Pilot. This charging
16 infrastructure is required by Port Authority to power six 40-foot electric buses that
17 Port Authority will receive in 2021, and will support its planned fleet electrification
18 objectives. In all other respects, except where I note otherwise, the Company’s
19 Transit Charging proposal mirrors the Fleet Charging pilot.

³³ NESCAUM (2020) “Multi-State Medium- and Heavy-Duty Zero Emission Vehicle Memorandum of Understanding,” Obtained from: <https://www.nescaum.org/documents/multistate-truck-zev-governors-mou-20200714.pdf/>.

³⁴ American Lung Association (2020, September). “The Road to Clean Air: Benefits of a Nationwide Transition to Electric Vehicles,” Obtained from: <https://www.lung.org/clean-air/electric-vehicle-report>.

1

2 **Q. How will the Fleet and Transit Charging Pilot be structured?**

3 A. Under the Fleet and Transit Charging Pilot, the Company will:

- 4 • Continue to install, own, operate and maintain electric facilities up to the
5 customer's service point.
- 6 • Install, own and maintain the make-ready infrastructure, including new
7 service panel, conduit, and wiring as applicable, from the service point up
8 to the charging station stub.

9 Participating customers will have the option to:

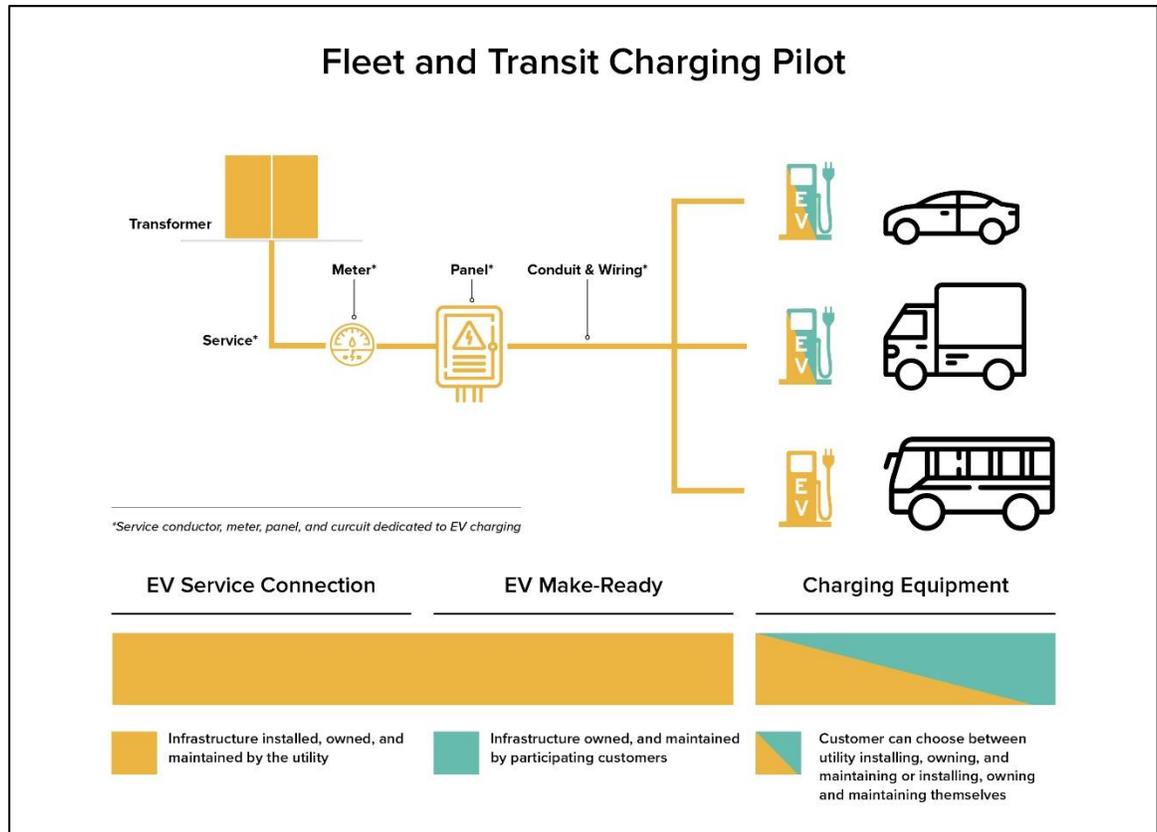

- 10 • Have the Company purchase, install, own and maintain the charging
11 stations. Customers will be assessed a monthly charge to cover the cost of
12 the charging stations and on-going data management and maintenance
13 (Bundled Option); or
- 14 • Have the Company purchase, install, own and maintain the charging
15 stations. Customers can pay up-front for costs of the charging stations and
16 pay a smaller, on-going monthly charge to cover data management and
17 maintenance ("Pre-Pay Option"); or
- 18 • Purchase, install, own and maintain their own charging stations
19 ("Customer-Supplied Charging Stations") with no additional fee applied.

20 For the Port Authority specifically, the Company will purchase, install, own and
21 maintain the make-ready and charging stations.

22

1 A simplified illustration is provided below:

2 Figure 2: Fleet and Transit Charging Pilot Example Ownership Structure

3

4

If the customer elects for the Company to own and maintain the charging stations under either the Bundled or Pre-Pay Options, the customer will select the charging stations from a pre-approved list. The Company plans to issue a competitive solicitation to identify the charging stations and network options for its pre-approved list.

5

6

7

8

9

Alternatively, customers selecting the Customer-Supplied Charging Station option can own and maintain the charging stations on their own, so long as they meet the Company's safety and technical standards. In this circumstance, the

10

11

1 Customer will own, install, and maintain the charging stations, and the Company
2 will install, own, and maintain the make-ready infrastructure, similar to the Make-
3 Ready pilot.

4
5 **Q. What services will the Company provide through the Fleet and Transit pilot?**

6 A. The Company will oversee the planning, design, and implementation of the
7 applicable EV infrastructure.

8 First, the Company will work with the customer through the proposed Fleet
9 Electrification Advisory Service, which I discuss later in my testimony, to conduct
10 a fleet assessment or leverage an existing assessment. Using an assessment, the
11 Company and customer will determine the size of the project and identify
12 appropriate and cost-effective locations for charging infrastructure. The Company
13 will work with the customer to design and install the make ready infrastructure and,
14 as applicable, the charging stations.

15 Following installation, the Company will maintain the Company-owned
16 equipment for the duration of the customer's participation in the pilot.

17

18 **Q. Will participants be required to separately meter the charging stations?**

19 A. With the exception of the Port Authority, no. The Company evaluated this option,
20 but determined that the benefits of requiring a separate meter were outweighed by
21 the cost and inconvenience to the participating customer. Customers interested in a

1 separate meter for their EV charging load may do so by establishing a separate
2 service to the charging stations.

3

4 **Q. Who will be eligible to participate in the pilot?**

5 A. Non-residential customers that own, lease, or operate a fleet of at least six on-road
6 vehicles will be eligible for this pilot.

7

8 **Q. What will be the requirements to enroll and participate in the pilot?**

9 A. Eligible customers will be required to meet the following to participate in the pilot,
10 for the duration of the customers' participation:

- 11 • Demonstrate that EVs are currently in-use at the participating site(s) or
12 provide proof of purchase with anticipated delivery date.
- 13 • Install a minimum of 4 charging ports per site.
- 14 • Own or lease property, and demonstrate site control thereof (which may
15 include written permission from the property owner), suitable for charging
16 station installation.
- 17 • Operate and maintain (as applicable) the charging stations.
- 18 • Where the Company will not own the charging stations, subscribe to a
19 charging station networking service.
- 20 • Provide the Company charging data via network vendor.
- 21 • Grant the Company and rights-of-way or easements deemed necessary.

- 1 • Execute a contract memorializing the Company’s and customer’s respective
2 obligations under the pilot.
3

4 **Q. How will the Company evaluate Customer applications?**

5 A. The Company will evaluate applicant sites based on a variety of factors, including
6 technical feasibility and anticipated charging station utilization. As part of this
7 evaluation, the Company will analyze the projected costs of the charging station
8 project, as well as the projected incremental distribution revenues the project may
9 yield. The Company will reject proposed projects with disproportionately high
10 estimated per-port costs and/or disproportionately low projected utilization.
11

12 **Q. What is the term of customer’s participation in the pilot?**

13 A. A customer’s participation in the pilot will be for ten years. The Company is
14 proposing a ten-year period to align with depreciable lives of the make-ready and
15 the charging stations, and to ensure Company’s recovery of the costs of the
16 charging stations from the participating customer when applicable. Upon expiration
17 of this ten-year period, ownership of the charging stations and make-ready will
18 either pass automatically to the customer on an “as is” basis, or the customer may
19 renew the service agreement under any applicable program then offered by the
20 Company.
21

1 **Q. What happens if the customer terminates the service agreement before the end**
2 **of the contract term?**

3 A. Customers that leave the program prematurely will be required to purchase the
4 make ready and charging stations at the remaining undepreciated value of the
5 equipment, or alternatively, to have the Company remove the infrastructure, and
6 reimburse the Company's costs of removal and stranded equipment (if any).

7

8 **Q. How will the pilot support disadvantaged communities?**

9 A. The Company will target school districts, municipal governments, and non-profit
10 organizations that serve EJ Areas to participate in the pilot. The Company will
11 target that 25% of projects annually serve or are sited within EJ Areas.

12

13 **Q. Please describe how the Company will conduct outreach about the pilot.**

14 A. The Company will conduct outreach and education through a variety of channels.
15 The Company will employ outreach strategies similar to those I outline above for
16 the Make-Ready Pilot. Additionally, the Company will leverage its relationships
17 with its Community Based Organizations (CBOs) to identify appropriate non-profit
18 entities serving low income customers and EJ Areas. The Company will also
19 conduct outreach to fleet distributors who sell in key customer segments. Finally,
20 the Company will leverage relationships with participating charging station
21 vendors, as well as the vendor providing the fleet electrification assessments, to
22 conduct outreach to prospective customers.

1

2 **Q. How many customers are projected to participate in the pilot?**

3 A. The Company projects that in addition to the Port Authority, a total of 7 customers
4 will participate annually, comprising a mix of customers including school districts
5 or bus operators, local government, non-profits, and commercial customers. To
6 help control Pilot costs, the Company will cap participation at 12 new participants
7 annually.

8

9 **Q. What are the Company’s projected costs of the Pilot?**

10 A. The Company projects the following costs for the non-Transit Fleet portion:

11 Table 5: Non-Transit Fleet 2022 Pilot Costs

Non-Transit Fleet 2022 Pilot Costs	
Capital	
Make Ready Design, Installation, and Hardware	\$198,900
Charging Stations, Network Fees, Commissioning	\$268,520
Operations Project Management and Oversight	\$137,790
IT	\$123,500
Expense	
Maintenance and Warranty	\$102,000
Shipping	\$4,590
Program Management and Administration	\$91,330
Marketing/Advertising/Education	\$1,000
Sales Tax	\$2,270
Total	\$929,900

1

2 The Company estimates incurring similar annual capital and expense costs in
3 subsequent years.

4

The Company projects the following costs for the Transit portion:

5

Table 6: Transit 2022 Pilot Costs

Transit 2022 Pilot Costs	
Capital	
Make Ready Installation and Hardware	\$300,000
Charging Stations and Commissioning	\$510,000
Operations Project Management and Oversight	\$174,000
Expense	
Maintenance and Warranty	\$99,830
Total	\$1,083,830

6

7 The Company anticipates no additional Transit capital expenditures after 2022.
8 Annual expenses for Transit are expected to decrease substantially after 2022. The
9 Company is therefore proposing to normalize recovery of the \$99,830 over a three-
10 year period, or \$33,280 per year.

11

12 **Q. Will customers be required to pay a separate fee to participate in the Pilot?**

13 A. With the exception of the Port Authority, yes. Participating customers who select
14 the Bundled Option will be required to pay a monthly fee designed to recover the
15 costs of the charging stations, shipping, commissioning, sales tax, and associated
16 network data and maintenance costs over the 10-year contract duration. Customers

1 who select the Pre-Pay Option will pay upfront for the charging station, shipping,
2 commissioning, and sales tax and will pay a smaller monthly fee designed to cover
3 the cost of maintenance, and network data. The monthly fee does not include costs
4 for make-ready design, equipment, and installation, program management, IT, and
5 marketing and education, which will be recovered through base rates.

6 Table 7: Fleet Pilot Monthly Per Port Fees

Option	Monthly Per Port Fee
Bundled Option	\$63.24
Pre-Pay Option	\$28.82

7
8 Company witness Ms. Everett discusses program cost recovery, including the
9 calculation of these monthly fees, in further detail in her direct testimony, DLC St.
10 No. 18.

11 The Port Authority will not be required to pay a separate fee to participate
12 in the Pilot. The Port Authority plays a critical role in the community – 80% of its
13 bus routes serve low-income communities and it provided over 40 million rides in
14 2020 even through the pandemic.³⁵ In light of its unique position and functions in
15 the Company’s service territory, the Port Authority will not be required to pay a
16 separate fee to participate in the Pilot.

17

18 **Q. Has the Company conducted a benefit-cost analysis of this pilot?**

³⁵ Port Authority of Allegheny County (2021). “Annual Service Report 2020,” Obtained from: https://www.portauthority.org/siteassets/inside-the-pa/surveys-and-reports/annual_service_report_fy2020_web.pdf

1 A. Yes. As Company witness Ms. Everett discusses in detail in her direct testimony,
2 DLC St. No. 18, the Company conducted benefit-cost analyses of this Pilot using
3 several methodologies. These analyses indicate that the Pilot is cost effective.
4

5 *C. Home Charging Pilot*

6 **Q. Please summarize the Company's proposed Home Charging pilot.**

7 A. The Company proposes to offer an optional pilot to install a L2 station in residential
8 customers' homes. The Company will install, own, and maintain the L2 station on
9 the customer's behalf over a 5-year period.
10

11 **Q. Why is the Company proposing the Home Charging pilot?**

12 A. The Company is proposing the Home Charging pilot to benefit customers and help
13 drive EV adoption.
14

15 **Q. What barriers to EV adoption does the pilot address?**

16 A. The pilot facilitates installation of L2 charging stations, which the Company has
17 identified as a central obstacle to residential EV adoption. For the average EV
18 driver, 80% of charging happens at home. In order to feel comfortable and to
19 maximize the convenience of converting to an EV, many people need to have
20 access to sufficiently-fast charging at home. L2 stations provide quick and
21 controllable charging.

1 Purchasing and installing a L2 station can present a number of barriers for
2 customers. For many people this is a brand new way to fuel their vehicle. The
3 technology is unfamiliar, with an array of options and features to consider. The
4 Company's customer surveys on this topic indicate that the majority of survey
5 respondents are unfamiliar with key topics, such as electrical requirements, general
6 price, charging station brands and models, and installation. See Exhibit SO-4:
7 Duquesne Light Customer EV Survey Results Summary for further details.

8 Additionally, the station and its installation can be expensive. The
9 Company's experience suggests that slightly less than half of L2 installations in its
10 service territory require additional electrical work in the form of panel upgrades or
11 additional breakers. This additional electrical work can cost anywhere from \$1,000-
12 \$3,000 or more, depending on the complexity and the upgrades required. This is in
13 addition to the cost of the station itself, which can range from \$250 for a basic, non-
14 WiFi connected station to \$750 for a Wi-Fi connected, "smart" station, plus an
15 average cost of \$500 to install the station.

16 These barriers can be overwhelming and create a "hassle" factor that turns
17 people off from switching to an EV. The pilot will address each of these obstacles
18 by offering customers an affordable, convenient, all-inclusive service to install a
19 L2 station in their home, potentially at no up-front cost.

20

21 **Q. Have the Company's customers indicated interest in the pilot?**

1 A. Yes. In a survey the Company conducted of customers who indicated that they were
2 extremely likely or likely to purchase an EV for their next vehicle, 69% of
3 participants agreed that the home charging install program would make it easier for
4 them to drive electric, and 65% responded that they were likely to participate in the
5 program if offered. See Exhibit SO-4 for further details.

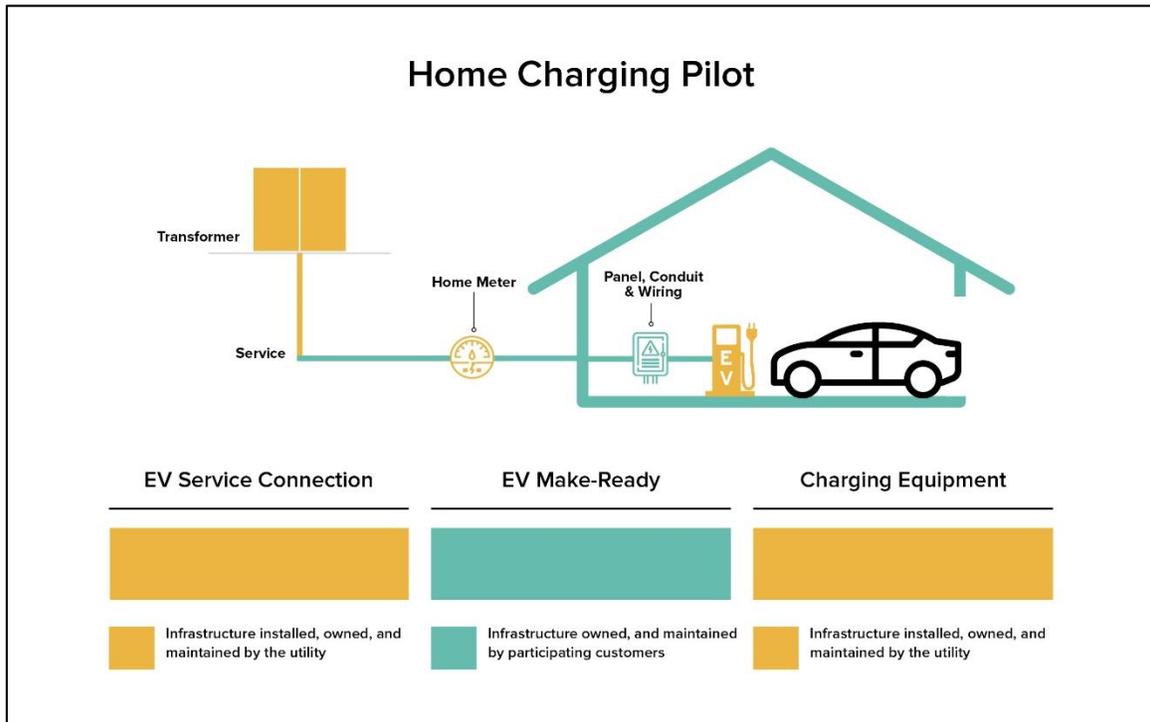

6

7 **Q. What services will the Company provide through the pilot?**

8 A. Through the pilot, the Company will install, own, and maintain L2 stations for
9 residential customers. The Company will also pay for a standard charging station
10 installation up to \$500 (“Standard Installation Costs”). Installation costs above
11 \$500, or upgrades to home electrical equipment such as for a new panel or breaker
12 (“Home Electrical Upgrade Costs”), shall be borne by the customer, except for low-
13 income participants, whom I address further below. In addition, the Company will
14 coordinate charging station troubleshooting and station repair or replacement in the
15 event of a station failure.

16 A simplified typical example is depicted in the below illustration:

1 Figure 3: Home Charging Pilot Example Ownership Structure

2

3

4 **Q. Who will be eligible to participate in the Home Charging pilot?**

5 A. All residential customers who meet the following requirements will be eligible to
6 apply:

- 7 • Be a Duquesne Light residential customer with no overdue bills at the
8 service address;
- 9 • Own a single-family detached, row house or duplex property with a
10 personal garage or private driveway suitable for charging station
11 installation; and
- 12 • Own or lease an EV, which is registered to the service address.

1 Customers' enrollment in the Pilot shall be for a period of five years. Participating
2 customers will be required to:

- 3 • Execute a Home Charging Pilot Customer Agreement, which is provided as
4 Exhibit SO-5;
- 5 • Agree to share their charging data via the charging station vendor for the
6 duration of their participation; and
- 7 • Maintain active Wi-Fi at the service address with sufficient signal at
8 charging station location for the duration of their participation.

9

10 **Q. What happens at the conclusion of the customer's five-year term of**
11 **participation?**

12 A. At the conclusion of the five year contract term, ownership of the charging station,
13 as well as all associated responsibilities for on-going maintenance and
14 management, will pass automatically to the customer. Alternatively, the customer
15 will have the option to enter into a new service agreement under any applicable
16 programs then offered by the Company, or pay the Company \$200 (i.e., the
17 Company's estimated average cost of charging station removal) to remove the
18 station.

19

20 **Q. What happens if the customer defaults or terminates the agreement early?**

21 A. Customers who default or terminate the agreement early will be required to make a
22 lump-sum payment of all amounts due under the remaining term of the agreement.

1 The Company will also remove the station at customer request for a fee of \$200. A
2 customer's default will not be grounds for termination of electric service to the
3 customer's residence.

4
5 **Q. Is the Company's proposal consistent with those adopted in other states?**

6 A. Yes. A number of other utilities, including Madison Gas & Electric and Xcel
7 Energy, have implemented similar charging station turn-key services.³⁶

8
9 **Q. Will the pilot provide the Company with additional insight that may aid
10 distribution planning?**

11 A. Yes. The average L2 load (7.2 kW-12kW) can significantly increase a household's
12 electric demand. The Pilot enrollment process will provide the Company notice of
13 increasing load, which can facilitate distribution system investment that may be
14 required to ensure grid reliability and safety. This advance notice will become
15 increasingly important as EV adoption, and corresponding system issues associated
16 with EV clustering, accelerate.

17
18 **Q. Will the Company offer additional assistance to low-income customers
19 interested in participating in the pilot?**

³⁶ Madison Gas and Electric (2019, March). Application of Madison Gas and Electric Company for Authority to Change Electric and Natural Gas Rates. Docket No. 3270-UR-120. Obtained from: <https://apps.psc.wi.gov/APPS/dockets/content/detail.aspx?id=3270&case=UR&num=120>; Xcel Energy (2019, May). Compliance Filing Residential Electric Vehicles Charging Tariff Docket No. E002/M-15-111 ANDE002/M-17-817. Obtained from: Document ID [20195-153306-01](#).

1 A. Yes. As I indicated earlier, the Company will cover up to the Standard Installation
2 Costs. Where a participant is low-income – i.e., where the customer’s household
3 income is no greater than 150% of federal poverty guidelines – the Company shall
4 cover up to \$2,000 of combined Standard Installation Costs and required Home
5 Electrical Upgrade Costs that are necessary to accommodate charging station
6 installation and that otherwise might put the program out of reach. The customer
7 will be responsible for paying for any upgrades beyond this allowance.

8

9 **Q. Please describe how the Company will conduct outreach and education about**
10 **the pilot.**

11 A. The Company will conduct outreach and education about its pilot through a variety
12 of methods. It will include information about the program and enrollment processes
13 on its website. The Company will also engage with local auto dealerships and
14 charging station vendors, conduct social media and digital advertising, and promote
15 the program at public events, such as ride-and-drives.

16

17 **Q. How many customers are projected to participate in the pilot?**

18 A. The Company projects 125 customers annually and will cap participation at this
19 amount.

20

21 **Q. What are the Company’s projected costs of the pilot?**

22 A. The Company projects the following pilot costs:

1

Table 8: Home Charging 2022 Pilot Costs

Home Charging 2022 Pilot Costs	
Capital	
Charging Station Hardware and Installation	\$183,040
IT	\$126,100
Operations Engineering	\$42,670
Expense	
Program Management	\$105,535
Data Management	\$7,800
Charging Station Maintenance	\$4,125
Marketing/Advertising/Education	\$13,600
Low-Income Assistance	\$19,500
Sales Tax	\$1,280
Total	\$503,650

2

3

The Company estimates incurring similar annual capital and expense costs in subsequent years.

4

5

Q. Will customers be required to pay a separate fee to participate in the pilot?

7

A. Yes. Similar to the Company’s proposed Fleet Charging pilot, participating customers will be required to pay a monthly fee of \$21.17 designed to recover the costs of the charging stations, installation, sales tax, and maintenance costs over the 5-year term of the agreement. The monthly fee does not include costs for program management, IT, operations engineering, and marketing and education, which will

8

9

10

11

1 be recovered through base rates. Company witness Ms. Everett discusses program
2 cost recovery, including the calculation of this fee, in further detail in her direct
3 testimony, DLC St. No. 18.

4
5 **Q. Has the Company conducted a benefit-cost analysis of this pilot?**

6 A. Yes. As Company witness Ms. Everett discusses in detail in her direct testimony,
7 DLC St. No. 18, the Company conducted benefit-cost analyses of this Pilot using
8 several methodologies. These analyses indicate that the Pilot is cost effective.

9

10 **IV. CUSTOMER PORFOLIO**

11 **Q. Please summarize the Company's proposed Customer Portfolio.**

12 A. The Customer Portfolio includes the following three components:

- 13 • Awareness, Education, and Engagement (“AEE”), which will allow the
14 Company to provide transportation electrification informational services to
15 customers.
- 16 • Fleet Electrification Advisory Service, which will support planning and
17 analysis for an average of 7 fleet customers annually.
- 18 • A Registration Incentive, which will allow the company to engage with EV
19 drivers and gather data to assist with distribution system planning.

20

21 *A. Awareness, Education, and Engagement*

22

1 **Q. Why is the Company proposing to conduct customer transportation**
2 **electrification awareness, education, and engagement?**

3 A. The Company's AEE efforts are intended to (1) fill an information gap in the
4 Company's service territory around EVs and charging stations generally; and (2)
5 educate customers about the Company's transportation electrification programs.
6 The Company will build upon its education and outreach efforts to date, as
7 discussed in Exhibit SO-3, to support customers who have not yet been reached and
8 provide assistance to customers who are navigating the rapidly evolving electric
9 transportation market transformation.

10 The Company's lessons learned to date indicate that customers face a
11 significant learning curve associated with transportation electrification, and lack of
12 consumer awareness continues to be one of the most significant barriers to greater
13 adoption of EVs.

14 The Company is well-positioned to address this barrier. Many aspects of
15 EV education bear directly on the Company's systems and functions. For example,
16 current and prospective EV owners may require fundamental information regarding
17 different EV charging technologies, how to connect EV charging equipment to the
18 Company's grid, and bill impacts. This information can often best be provided (and
19 in some instances, can only be provided) by the Company.

20

21 **Q. Please describe the Company's plans for future AEE activities.**

1 A. As mentioned elsewhere throughout my testimony, the Company will undertake
2 program-specific outreach to ensure that customers are aware of the programs
3 available to them and educate them on the program benefits and requirements. The
4 Company will continue employing several communication channels, including the
5 Company's website, web tools, community based events, technical assistance and
6 internal knowledge building. The Company will also continue to regularly examine
7 customer feedback and adjust its communication approaches accordingly. For
8 example, in a recent evaluation of its EV Guide web tool, the Company found that
9 the majority of users accessed the tool via a mobile device (50%) compared to 44%
10 on desktop and 6% on tablet. The Company therefore plans to evaluate and improve
11 the usability of EV educational content and support on mobile devices.

12

13 **Q. Does the Company plan to engage low-income customers and communities**
14 **through its AEE activities?**

15 A. Yes. As shown in the table below, the Company's research indicates that the
16 distribution of individuals who state that they are likely to purchase an EV as their
17 next vehicle is fairly evenly distributed among household income levels. This
18 suggests that EVs are not only for the Company's wealthiest customers; with
19 equitable awareness and education, all customers can evaluate how EVs can serve
20 as a cost-saving solution to their mobility needs.
