

March 8th 2022

Dear Sir or Madam,

The accompanying Act 127 Pipeline Operator form is representative of Eastern Shore Natural Gas's Pennsylvania transmission pipeline facilities for the 2021 calendar year.

In 2021 Eastern Shore performed an aerial orthophotography survey of the company's transmission pipeline corridor for change detection of adjacent building footprints. The updated building footprints were used when executing class analysis for 2021 filings. As a result of the updated data, class total mileages in *Attachment B* of the Act127 filing may have shifted contingent on what the survey revealed.

The class updates will also be reflected in ESNG's 2021 PHMSA Annual Report filing.

If you have any questions regarding this year's filing please contact me or the reference listed on the report.

Sincerely,

Paul Lalancette
