As a resident of Delaware County and the Rose Tree Media School District, I am concerned about the operation of the Mariner East pipeline in a densely populated area.

The industry – those individuals and companies who profit from these pipelines – have not made a compelling case in their comments that their product benefits the public good. Nor have they demonstrated their work is without error. There have been, and will continue to be, mishaps as Sunoco ET attempts to operate this dangerous pipeline.

They have asked the PUC to refrain from putting more regulations into place because they know that assuring public safety makes their projects unachievable. Common sense precautions need to be put in place and the penalty for violation should be a halt to operation. Financial penalties are not effective.

Our local communities and our Commonwealth will benefit financially when clean, renewable energy receives the investment it deserves.
