

**UGI UTILITIES, INC. – GAS DIVISION**

**BEFORE**

**THE PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Information Submitted Pursuant to**

**Section 53.51 et seq of the Commission’s Regulations**

**UGI GAS STATEMENT NO. 1 – PAUL J. SZYKMAN  
UGI GAS STATEMENT NO. 2 – ANN P. KELLY  
UGI GAS STATEMENT NO. 3 – PAUL R. MOUL  
UGI GAS STATEMENT NO. 4 – PAUL R. HERBERT  
UGI GAS STATEMENT NO. 5 – JOHN F. WIEDMAYER  
UGI GAS STATEMENT NO. 6 – DAVID E. LAHOFF**

**ORIGINAL TARIFF**

**UGI UTILITIES, INC. – GAS DIVISION – PA P.U.C. NO. 6**

**DOCKET NO. R-2015-2518438**

**Issued: January 19, 2016**

**Effective: March 19, 2016**

**UGI GAS STATEMENT NO. 1 – PAUL J. SZYKMAN**

**BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Docket No. R-2015-2518438**

**UGI Utilities, Inc. – Gas Division**

**Statement No. 1**

**Direct Testimony of  
Paul J. Szykman**

**Topics Addressed:**

- Rate Filing Overview**
- Need for Rate Relief**
- UGI-1 Initiative**
- UNITE Systems Improvement Initiative**
- Interruptible Revenues**
- Management Performance**

Dated: January 19, 2016

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your name and business address.**

3 A. My name is Paul J. Szykman. My business address is 2525 North 12<sup>th</sup> Street,  
4 Suite 360, Reading, PA 19612-2677.

5

6 **Q. By whom and in what capacity are you employed?**

7 A. I am employed by UGI Utilities, Inc. (“UGI”) as Vice President – Rates &  
8 Government Relations and Vice President & General Manager – Electric Utilities.

9

10 **Q. Please briefly describe your responsibilities in that capacity.**

11 A. As Vice President – Rates and Government Relations, I am responsible for all  
12 rate and governmental affairs activities for UGI Utilities, Inc. – Gas Division (“UGI  
13 Gas” or the “Company”), UGI Penn Natural Gas, Inc. (“PNG”), UGI Central Penn  
14 Gas, Inc. (“CPG”) and UGI Utilities, Inc. – Electric Division (“UGI Electric”). For  
15 the rates component, I oversee the areas of sales and revenue forecasting, tariff  
16 administration and compliance, Choice administration and compliance, rate  
17 administration, 1307(f) gas cost filings, electric POLR filings, 1307(e) filings and  
18 UGI’s supportive gas management information technology systems and  
19 functionality.

20 As far as government relations are concerned, I am responsible for  
21 managing the development and implementation of the Company’s strategies in  
22 federal and state legislative and regulatory arenas.

1           Finally, I have recently taken on management of the operations of UGI  
2           Electric. In all of these capacities, I report directly to the President and Chief  
3           Executive Officer of UGI.

4  
5   **Q.    What is your educational and professional background?**

6   A.    Please see my resume, UGI Gas Exhibit PJS-1, which is attached to my  
7           testimony.

8  
9   **Q.    Have you testified previously before this Commission?**

10   A.    Yes. UGI Gas Exhibit PJS-1 contains a list of those proceedings.

11  
12   **II.   PURPOSE OF TESTIMONY**

13   **Q.    Please describe the purpose of your testimony in this proceeding.**

14   A.    My testimony addresses several issues. First, I present an overview of the rate  
15           filing, including a brief explanation of the reasons for rate relief and an outline of  
16           the testimony of each witness in this proceeding. Second, I will describe UGI-1,  
17           which is an initiative designed to align UGI's people, processes and tools across  
18           the utility business units and identify the expected benefits from that initiative. As  
19           part of my UGI-1 discussion, I briefly discuss the UGI's Next Information  
20           Technology Enterprise ("UNITE") Initiative, which is UGI's ongoing effort to  
21           develop and implement a next generation technology solution, including a state-  
22           of-the-art customer information system ("CIS") and other work management and

1 regulatory compliance programs, and summarize the benefits that UNITE will  
2 bring to UGI's Customers. Third, I discuss the Company's interruptible service  
3 program and how continuing value of service pricing for those customers is  
4 reasonable and appropriate. Lastly, I will summarize UGI's focus on  
5 management and its success in improving management performance. As further  
6 explained below, UGI Gas's management continues to improve service to  
7 customers through various initiatives, including, but not limited to: the UGI-1  
8 initiative; the UNITE system improvement initiative; an accelerated infrastructure  
9 replacement plan; an innovative expansion and extension program; sustained  
10 customer growth; customer service that has generated nationally recognized  
11 customer satisfaction; implementation of recently expanded universal services  
12 offerings; development of an energy efficiency and conservation plan; and  
13 dedication to continuous safety improvement initiatives designed to keep  
14 employees, customers and property safe and reduce workplace injuries and  
15 motor vehicle accidents.

16 At the same time, the Company has been able to offer excellent service to  
17 customers at just and reasonable rates. A comparison of residential rates,  
18 shown in Table 1 below, illustrates that UGI Gas currently has the lowest  
19 distribution rates in the Commonwealth.

20

1

Table 1

2

3

4

5

6

Even if the proposed increase is approved in full, the average monthly residential heating customer bill will be 3.2% lower than the average bill following UGI Gas's last rate case in 1995.

7

**Q. Are you sponsoring any exhibits in this proceeding?**

8

9

10

11

12

13

A. Yes. In addition to UGI Gas Exhibit PJS-1 mentioned above, I am sponsoring certain responses to the Commission's filing requirements. Each filing requirement response identifies the witness sponsoring it. Specifically, I am sponsoring those schedules that were prepared by me or under my direction as appropriately identified in this filing.

1 **III. OVERVIEW OF THE COMPANY'S FILING**

2 **Q. Please discuss the rate relief that UGI Gas is requesting.**

3 A. UGI Gas is requesting an increase in its annual base rate operating revenues of  
4 \$58.6 million, or 17.5 percent on a total revenue basis, with a proposed effective  
5 date of March 19, 2016. The base rate increase requested in this filing is based  
6 on a fully projected future test year ending September 30, 2017 ("FPFTY"). The  
7 Company also proposes substantial changes to its existing tariff to both  
8 harmonize the UGI Gas tariff with those previously approved by the Commission  
9 for CPG and PNG and to implement best practices and procedures. The  
10 Company also is proposing a new five-year energy conservation program, the  
11 Energy Efficiency and Conservation ("EE&C") Plan, designed to promote efficient  
12 use of natural gas. Finally, the Company is proposing a Technology and  
13 Economic Development ("TED") Rider to, among other things, provide rate  
14 flexibility needed to encourage developing technologies, and to address  
15 competitive conditions and customer preferences in seeking to expand the  
16 availability and use of the Commonwealth's abundant natural gas supplies.

17

18 **Q. Why is UGI Gas seeking a rate increase at this time?**

19 A. The Company's current rates do not provide it with a reasonable opportunity to  
20 earn its cost of capital. Since its last rate case in 1995, UGI Gas has made over  
21 \$1.0 billion in system investments, increasing the Company's rate base by over  
22 120 percent. These investments were necessary to serve new residential and

1 commercial customers; connect customers converting to natural gas; accelerate  
2 the replacement of aging gas plant infrastructure; upgrade and improve system  
3 segments and modernize facilities; and install and upgrade supporting  
4 information technology, all as part of growing and maintaining a safe and reliable  
5 distribution system and providing quality customer service. Over the same  
6 period, UGI Gas has adopted modest annual wage and salary adjustments and  
7 will continue to do so, where reasonable, and has experienced other general  
8 price increases for the products and services it must procure. Although UGI Gas  
9 has implemented significant cost containment measures, implemented efficiency  
10 enhancements including major strides toward integrating its operations with  
11 those of CPG and PNG, and seen substantial customer growth over time, the  
12 growth in operating and capital costs, along with experienced and anticipated  
13 declines in per customer usage, have caused UGI Gas to be unable to earn a fair  
14 rate of return on its investment, at present rate levels.

15 Specifically, as reflected in UGI Gas Exhibit A (Fully Projected), Schedule  
16 A-1, the Company's operations are projected to produce an overall return on rate  
17 base of 4.52%, which equates to a return on common equity of only 4.30% for  
18 the twelve months ending September 30, 2017. As explained by UGI Gas  
19 witness Paul R. Moul (UGI Gas Statement No. 3), those returns are not adequate  
20 based on applicable financial data and the risks confronted by UGI Gas. Unless  
21 UGI Gas receives the requested substantial rate relief, those returns will continue  
22 to decline and potentially jeopardize the Company's ability to attract the capital

1 needed to make system investments that will enhance the reach and capacity of  
2 its distribution system and to replace older, obsolete facilities, each of which is  
3 prudent to ensure continued system reliability, safety, and customer service  
4 performance.

5  
6 **Q. Please identify the other witnesses providing direct testimony on behalf of**  
7 **UGI Gas in this proceeding and the subject matter of their testimony.**

8 A In addition to my testimony, the following witnesses are providing testimony in  
9 support of the Company's rate request:

10  
11 **Ann P. Kelly** (UGI Gas Statement No. 2) serves as Controller of UGI. Ms. Kelly  
12 addresses the Company's accounting and budgeting processes. She also  
13 presents the UGI Gas overall revenue requirement for the FPFTY, including test  
14 year revenue, rate base, and operating expense claims, and certain pro forma  
15 adjustments as set forth in UGI Gas Exhibit A (Fully Projected). Ms. Kelly also  
16 presents the Company's historic test year ("HTY"), ended September 30, 2015,  
17 and future test year ("FTY"), ending September 30, 2016, with appropriate  
18 ratemaking adjustments.

19  
20 **Paul R. Moul** (UGI Gas Statement No. 3) is Managing Consultant of P. Moul &  
21 Associates, Inc. Mr. Moul presents expert testimony concerning the overall rate  
22 of return that UGI Gas should be afforded in order to have a reasonable

1 opportunity to earn a fair return on its rate base investment. Mr. Moul also  
2 supports the Company's claimed capital structure, its embedded cost of debt, as  
3 well as its requested return on common equity. Schedules and work papers  
4 supporting Mr. Moul's findings are set forth in UGI Gas Exhibit B.

5  
6 **Paul R. Herbert** (UGI Gas Statement No. 4) is President of Gannett Fleming  
7 Valuation & Rate Consultants, LLC. Mr. Herbert prepared and sponsors the  
8 Company's fully allocated cost of service studies used in this case, which are  
9 found in UGI Gas Exhibit D.

10  
11 **John F. Wiedmayer** (UGI Gas Statement No. 5) is Project Manager at Gannett  
12 Fleming Valuation & Rate Consultants, LLC. Mr. Wiedmayer developed and  
13 supports the Company's claim for annual depreciation expense and the  
14 accumulated depreciation reserve. His studies are presented in UGI Gas Exhibit  
15 C (Fully Projected), UGI Gas Exhibit C (Future) and UGI Gas Exhibit C (Historic).

16  
17 **David E. Lahoff** (UGI Gas Statement No. 6) is Manager – Tariff & Supplier  
18 Administration for UGI. Mr. Lahoff is responsible for all areas of the Company's  
19 rate design and revenue allocation except where I discuss interruptible service  
20 pricing in my testimony. Mr. Lahoff also addresses and sponsors related exhibits  
21 that show the proof of revenues and proposed rate design, as presented in UGI  
22 Gas Exhibit E - Proof of Revenue. Mr. Lahoff's testimony also presents the

1 detailed supporting sales and revenue adjustments for each tariff customer class,  
2 including related models and assumptions.

3 Mr. Lahoff is also sponsoring UGI Gas Exhibit F, which is Original Tariff –  
4 Gas Pa. P.U.C. No. 6 (“Tariff No. 6”), which replaces current Tariff – Gas Pa.  
5 P.U.C. No. 5. Mr. Lahoff provides a summary of the proposed changes to the  
6 tariff rules, regulations, and rate schedules included in UGI Gas’s Tariff No. 6,  
7 and changes to the Choice Supplier Tariff, which is incorporated into Tariff No. 6  
8 as Tariff No. 6-S. Mr. Lahoff also provides an explanation of the EE&C Rider,  
9 Merchant Function Rider, Universal Service Program Rider, and Growth  
10 Extension Tariff (“GET Gas”) Rider.

11  
12 **Robert R. Stoyko** (UGI Gas Statement No. 7) is Vice President, Marketing and  
13 Customer Relations for UGI. Among the issues addressed in his testimony, Mr.  
14 Stoyko discusses the variety of risks affecting the economics of serving large firm  
15 and interruptible customers, including such variables as physical bypass and the  
16 spread between delivered natural gas prices and competing alternate fuels. Mr.  
17 Stoyko also explains and provides support for the Company’s proposed TED  
18 Rider, large customer usage projections, proposed changes to the Company’s  
19 Universal Service Program cost recovery mechanism, and implementation plans  
20 for the Company’s proposed EE&C Plan.

21  
22 **Thomas P. Lord** (UGI Gas Statement No. 8) is Vice President & Chief

1 Information Officer for UGI. Mr. Lord provides a detailed explanation of the  
2 benefits of the UNITE initiative and how Phase I of UNITE, involving the  
3 implementation of a new CIS and other features, will assist the Company in  
4 improving its ability to interact with customers and improve the service provided  
5 by the Company. Mr. Lord's testimony also presents the project schedule and  
6 the important milestones that will be met to place the CIS into service during the  
7 FPFTY.

8  
9 **Hans Bell** (UGI Gas Statement No. 9) is Vice-President Engineering &  
10 Operations Support for UGI. In his testimony, Mr. Bell discusses the Company's  
11 natural gas distribution system, its Commission-approved Long Term  
12 Infrastructure Improvement Plan ("LTIIIP"), and the Company's performance  
13 against its infrastructure replacement and improvement objectives. Mr. Bell also  
14 discusses the impact of the LTIIIP and other initiatives on system performance,  
15 safety, and reliability. Additionally, Mr. Bell discusses the changes to the  
16 Company workplace safety program and the favorable impact those changes  
17 have had on various employee safety performance metrics over the course of the  
18 first year those changes were in effect, fiscal year 2015. Finally, Mr. Bell  
19 addresses the Company's enhanced efforts and future plans to investigate and,  
20 where necessary, remediate sites in Pennsylvania where the Company or  
21 corporate predecessors once owned and operated manufactured gas plants in  
22 connection with gas utility operations.

22

**Nicole McKinney** (UGI Gas Statement No. 10) is UGI’s Principal Tax Analyst. Ms. McKinney addresses the Company’s claim for federal and state income taxes, taxes other than income taxes, the calculation of the accumulated deferred income taxes (“ADIT”) offset to rate base, the ratemaking treatment of the impact of the Company’s repairs tax method election on federal and state income taxes, and issues pertaining to UGI Gas’s participation in a consolidated group for federal income tax purposes.

**Theodore M. Love** (UGI Gas Statement No. 11) is Senior Analyst of Green Energy Economics Group, Inc. Mr. Love presents the Company’s proposed EE&C Plan and discusses its costs and benefits. As part of this presentation, Mr. Love also provides the results of an analysis applying the total resource cost (“TRC”) test. Mr. Love also discusses the implementation schedule for the EE&C Plan.

**IV. UGI-1 INITIATIVE**

**Q. Please describe the UGI-1 initiative.**

A. UGI-1 is a company-wide improvement initiative focusing on people, tools and processes. UGI Gas has a history of pursuing excellent performance for its customers, employees and shareholders. Moving forward, the Company plans to build upon its strong past as it looks for ways to become an even better service

1 provider in the future. Over the past few years, UGI Gas has experienced  
2 substantial growth opportunities as well as significant operational challenges. To  
3 act on these opportunities and to address these challenges, UGI Gas is working  
4 harder than ever to take advantage of synergies, equip employees for future  
5 success, and improve vertical and lateral communications throughout the  
6 organization. By implementing these initiatives, UGI Gas will position itself for  
7 continued growth and success and outstanding customer service.

8 UGI-1 includes a number of fundamental improvement efforts, including  
9 such programs as: UNITE technology improvement project; UGI's 'Making a  
10 Difference' safety improvement program; the migration of all employee computer  
11 workstations to a set of common workplace applications; the migration of all field  
12 employees to a single set of gas operations and construction processes and  
13 specifications; UGI building and grounds improvements and renovations; UGI's  
14 natural gas pipeline facility extension and betterment programs; an enhanced  
15 focus on physical and cyber security; and a range of enhanced and expanded  
16 employee development and training programs.

17 As a visible and public sign of these changes, the Company introduced a  
18 new logo and brand image. UGI no longer describes itself to the public as a set  
19 of entities named UGI Gas Division, UGI Penn Natural Gas, UGI Central Penn  
20 Gas, and UGI Electric Division; the company is now publically presented across  
21 all service territories as UGI Gas or UGI Electric.

22

1 **Q. How do the changes envisioned by UGI-1 benefit customers?**

2 A. The overall goal of UGI-1 is to place all of our operations on the same common  
3 set of information systems, tools, equipment, and uniform work management and  
4 performance platforms. This will allow the Company to become more efficient  
5 and effective in performing all aspects of its business, whether it is in the areas of  
6 handling calls from customers, performing billing and related activities, building a  
7 pipeline, operating and maintaining the gas distribution system, or handling  
8 emergencies. An effective and common system of performing and measuring  
9 performance among our geographically disparate service territories and  
10 segments thereof will also expedite identification of problems that can be  
11 corrected more readily or even before they happen, driving further efficiency  
12 gains and service improvements.

13 Fully integrating three separately regulated natural gas distribution  
14 systems (UGI Gas, CPG, and PNG) and one electric distribution system will  
15 enable the Company to ensure that costs incurred to provide service reflect a  
16 common way of doing our work. This will help eliminate differences in cost  
17 drivers among the three regulated natural gas distribution systems, to the extent  
18 feasible and where geographic or industry (natural gas versus electric) factors do  
19 not dictate the result.

20

21 **Q. Please provide some examples of the operational benefits that are being**  
22 **derived from the UGI-1 initiative.**

1 A. There have been several improvements in the operations area. For example,  
2 UGI has made a concerted effort over the past two years to establish and  
3 implement a common methodology for rating the severity of natural gas system  
4 leaks to place all three of UGI's gas distribution systems in line with the Gas  
5 Pipeline Technology Committee standard. Now that this common rating system  
6 has been established and implemented, UGI is better situated to allocate its  
7 pipeline replacement, leak survey and repair, financial, internal labor, and  
8 contractor resources to the segments of the UGI Gas, CPG, and PNG distribution  
9 systems that require the most attention based on uniform measures of risk. This  
10 common approach to regulatory compliance has achieved significant  
11 improvements to system safety performance over the past two years, including:  
12 (i) a 20 percent system-wide reduction (11 percent for UGI Gas) in overall Class  
13 A and Class B leak inventory over the past year; (ii) a 32 percent system-wide  
14 reduction in the more critical Class B leaks (29 percent for UGI Gas); and (iii) a  
15 17 percent system-wide reduction in hazardous Class C leaks (34 percent for  
16 UGI Gas). As discussed further in the direct testimony of Mr. Bell (UGI Gas  
17 Statement No. 9), UGI's common set of initiatives in workplace safety,  
18 Pennsylvania 1-Call, and its Distribution Integrity Management Program ("DIMP")  
19 have begun to bear fruit in terms of achieving improved safety based on  
20 measurable performance criteria.

21

1 **Q. Are there examples of additional improved customer service performance?**

2 A. Yes. In the area of natural gas line extensions, UGI is a demonstrated leader in

3 adding new residential and commercial customers to its gas distribution system.

4 Over the course of the past three years, UGI Gas has led Pennsylvania in adding

5 new customers, averaging over 15,000 new residential heating and 2,000 new

6 commercial customers per year. In fact, since the Company's last base rate

7 case in 1995, UGI Gas has grown its customer base by 50%, or by over 120,000

8 customers.<sup>1</sup> No other gas utility in the Commonwealth has experienced such

9 significant customer growth, and the Company's 50% customer base expansion

10 is over 150% greater than any other gas utility growth rate during that same

11 period. The management of customer growth of this magnitude in and of itself,

12 while challenging, is an indicator of superior customer focus and performance in

13 execution.

14 More recently, UGI's Commission-approved GET Gas Pilot Program has

15 been nationally recognized as an innovative tariff mechanism designed to

16 expand natural gas service to unserved and underserved areas in and around

17 the Company's gas distribution service territory. The GET Gas program, as well

18 as the Company's considerable growth and new construction over the past

19 several years, is discussed further in the Direct Testimony of Mr. Stoyko (UGI

20 Gas Statement No. 7).

21 In this case, the Company's proposed TED Rider and EE&C Program, as

---

<sup>1</sup> Comparison based on customers as of 12/31/14 compared to 12/31/95.

1 discussed in more detail below, further demonstrate the Company's commitment  
2 to expand its customer base and to do so in an effective, efficient, economic and  
3 environmentally friendly manner.

4  
5 **Q. Has UGI been recognized as an environmental leader?**

6 A. Yes. As discussed in the testimony of Mr. Bell (UGI Gas Statement No. 9), UGI  
7 is nationally recognized as an environmental leader in the gas industry, as  
8 evidenced by UGI's recent selection as an "Environmental Champion" by Cogent  
9 Reports™, a division of Marketing Strategies International. The Environmental  
10 Champion status was conferred based on Environmental Dedication scores that  
11 reflect the extent consumers believe companies are supporting environmental  
12 causes, are committed to environmentally friendly energy sources, are  
13 encouraging green initiatives, and are offering tools to help customers save  
14 energy. In brief, we believe that these scores reflect UGI's advocacy in support  
15 of Combined Heat and Power ("CHP") applications, converting customers from  
16 home heating oil to natural gas, and through its management of legacy  
17 environmental sites.

18 In addition, as discussed in Mr. Bell's testimony (UGI Gas Statement No.  
19 9), UGI Gas has undertaken an expanded program to remediate the  
20 environmental conditions at a number of sites in Pennsylvania formerly used to  
21 manufacture gas for consumption by its customers. By joining with its affiliated  
22 gas companies, CPG and PNG, in this effort, UGI Gas is now taking more

1 aggressive steps to address the environmental concerns presented by these  
2 former manufactured gas plant sites.

3  
4 **Q. Why is the Company proposing an energy efficiency and conservation  
5 program?**

6 A. UGI Gas's proposal is consistent with its environmental effort and approach  
7 towards customer service. The EE&C Plan will provide customers with a  
8 financial incentive to install higher efficiency gas burning appliances and  
9 equipment. The resulting reduction in consumption will provide savings to  
10 customers who take advantage of the program, as well as environmental benefits  
11 and downward pressure on natural gas prices to the benefit of all customers.  
12 Moreover, UGI Gas believes key elements of the EE&C Plan that focus on the  
13 most efficient use of energy resources, including greater CHP and direct use  
14 natural gas applications, can be a key element of the Commonwealth's  
15 compliance with the U.S. Environmental Protection Agency's Clean Power Plan.  
16 A more detailed discussion of this program and its benefits is provided in the  
17 testimony of Mr. Love (UGI Gas Statement No. 11).

18  
19 **Q. Has the Company undertaken any recent initiatives to assist low income  
20 customers to afford their natural gas service?**

21 A. UGI Gas recently received approval from the Commission to implement several  
22 new components to its Universal Service Programs that should assist low income

1 customers, including: eliminating the maximum level of low income customers  
2 that can be served under the Company's Customer Assistance Program ("CAP"),  
3 formerly the Low Income Self Help Program ("LISHP"); and increasing the level  
4 of expenditures under its Low Income Usage Reduction Program ("LIURP") to  
5 \$1.1 million.

6 While the Company is not proposing to change any of the terms and  
7 conditions related to any of its recently approved Universal Service Programs, it  
8 is anticipating growth in CAP participation and is proposing to adopt a cost  
9 recovery mechanism identical to those it has already implemented at CPG and  
10 PNG.

11  
12 **Q. You mentioned earlier in your testimony the Company's UNITE initiative as**  
13 **part of UGI-1. Please discuss.**

14 A. As noted earlier, UNITE stands for UGI's Next Information Technology  
15 Enterprise. As discussed in the direct testimony of Mr. Lord (UGI Gas Statement  
16 No. 8), UNITE is a multi-phased, multi-year project designed to replace and  
17 update UGI's core, non-financial computer systems including the Customer  
18 Information System ("CIS"), Work Management System, Asset Management  
19 System and Mobile Data Management System. In its first phase, UGI's two  
20 aging CISs will be replaced with one state-of-the-art system. Having a common  
21 CIS for all four of its utility business (UGI Gas, UGI Electric, CPG, and PNG) will  
22 allow UGI to develop and apply a common set of processes so that it can

1 maximize the efficiency of rendering service to its customers at a reasonable  
2 cost. This initiative will allow 1,200 of our employees system wide to provide  
3 safer and more reliable service in the field and to address other concerns related  
4 to billing and affordability of service. Importantly, this new system will also  
5 support key Choice customer business processes, including seamless moves,  
6 instant connects and 3-day switching, as may be required. UNITE will address a  
7 number of objectives including: reducing operational risks related to the age of  
8 certain applications where there is no vendor support and the people who know  
9 the systems best are retiring; improving operational capabilities with new  
10 "scalable" technology platforms; standardizing and reducing the number of  
11 systems and duplicate processes across UGI; improving business information to  
12 make more informed business decisions; and gaining efficiency related to  
13 process and system integration.

14  
15 **Q. Has the Company made other efforts to make the Company's service more**  
16 **economic for its customers?**

17 A. Yes. UGI Gas has implemented a series of portfolio changes that allow it, and  
18 Natural Gas Suppliers serving Choice customers on the UGI Gas system to  
19 maximize the purchase of natural gas from the Marcellus and Utica Shale  
20 sources. While the majority of UGI Gas's natural gas purchases were from the  
21 Gulf region in 1995, today nearly all of UGI Gas's natural gas purchases are  
22 physically sourced from Marcellus and Utica Shale sources. The impact related

1 to shale gas on pricing has been significant; while UGI Gas had a purchased gas  
2 price of \$13.62/Mcf in September 2008, the current purchased gas price is  
3 \$4.27/Mcf. This 69% reduction in gas costs not only represents the significant  
4 impact shale production has had on natural gas pricing nationwide, but it also  
5 demonstrates the impact of UGI Gas's efforts to focus on creating value for its  
6 customers.

7  
8 **V. INTERRUPTIBLE REVENUES**

9 **Q. Please explain the Company's proposal relative to revenues received under**  
10 **its Interruptible Service rates.**

11 A. As explained in the testimony of Mr. Stoyko (UGI Gas Statement No. 7), the  
12 construction of natural gas distribution systems is very capital intensive.  
13 However, unlike some other utility services, natural gas is subject to competition  
14 from alternative fuels, direct customer bypass and locational competition, and  
15 there are no uses for natural gas for which there are no other viable energy  
16 alternatives. Competition from alternative energy sources is particularly acute for  
17 UGI Gas's largest customers, and for those with installed alternate fuel  
18 capabilities. UGI Gas currently provides interruptible gas service to  
19 approximately 320 customers, comprising over 40 percent of annual system  
20 throughput, under contracts voluntarily entered into that have rates based on the  
21 alternatives available to such customers, whether that is an alternate fuel option,  
22 an alternative natural gas solution, *i.e.*, physical bypass, or a locational

1 alternative, *i.e.*, moving production to a different facility with lower energy costs.

2 As a result of the capital-intensive nature of natural gas distribution  
3 systems, it benefits all customers if costs can be shared over the largest possible  
4 customer base. However, due to the market risks presented by customers with  
5 installed alternate fuel capabilities served under interruptible rate schedules, UGI  
6 Gas generally does not make distribution system investments to serve such  
7 interruptible loads given the threat that such investments could be stranded  
8 under changing market conditions. To reflect this business reality, Mr. Herbert  
9 presents two cost of service studies: one of which allocates main costs via the  
10 average and excess method outlined by Mr. Herbert, and one which allocates no  
11 main costs to interruptible customers. The Company has based its revenue  
12 allocation and rate design for firm customers based on the average of the results  
13 of these two cost of service studies, while continuing to price interruptible  
14 customers based on market conditions. This approach properly reflects both  
15 cost of service and value of service principles and provides a balanced and  
16 reasonable basis for setting rates.

17 Specifically, UGI Gas proposes to continue its past practice in which it (1)  
18 establishes the overall revenue requirement and revenue allocation for firm  
19 customers based on cost of service, and (2) charges interruptible service  
20 customers value of service prices and retains or absorbs any difference between  
21 cost of service and value of service pricing between rate cases.

22 This approach to the interruptible market provides the proper incentives to

1 ensure the Company will strive to maximize the amount of revenues that can be  
2 achieved from interruptible service customers under higher risk and  
3 unpredictable market conditions over time. It also recovers system costs over  
4 the largest possible customer base, provides for greater rate stability to all  
5 classes, can defer the need for future base rate relief, and will shield firm  
6 customers from the possible adverse ratemaking consequence associated with  
7 the higher risk interruptible market. In my view, this approach produces a better  
8 outcome for all customers as compared to the alternatives of not offering  
9 interruptible service or offering it under an alternate pricing structure that is not  
10 value based. UGI Gas's longstanding success in avoiding the need for base rate  
11 relief is, in significant part, the result of this rate design approach and can be  
12 expected to provide similar future benefits as well.

13  
14 **Q. Please explain how value of service pricing assists the Company in**  
15 **managing its business risk.**

16 A. Value of service pricing, to the extent that the Company can charge rates above  
17 a proxy cost of service that allocates reasonable mains investment to  
18 interruptible customers, provides the Company with an additional source of  
19 revenue to maintain a return on investment for the total enterprise that meets the  
20 expectations of its shareholders in return for assuming the risks of the associated  
21 revenue requirement offset. In years where temperatures are warmer than  
22 normal, revenue generated from the interruptible market helps UGI Gas to earn a

1 more stable return. Similarly, as weather becomes colder than normal, firm  
2 usage increases and interruptible usage and related revenue declines as  
3 distribution capacity becomes constrained and interruptions are implemented for  
4 this market segment. Moreover, as usage per customer in our core market has  
5 declined over time, and is expected to continue to decline, having interruptible  
6 revenue, which may contribute to earning a reasonable return, will assist to  
7 support necessary capital attraction at reasonable rates. By doing so, customers  
8 may benefit by being exposed to fewer base rate increases and benefit from the  
9 resulting lower rates. Having value of service based interruptible revenues is one  
10 of the important reasons UGI has not required base rate relief for over 20 years  
11 and has still been able to fund needed capital projects and provide outstanding  
12 service to customers.

13  
14 **Q. Please discuss how value of service pricing provides a source of capital for  
15 use in the Company's capital improvement program.**

16 A. The revenue generated from interruptible customers provides greater cash flows  
17 that are available for the Company to finance its operations. These increased  
18 cash flows would not be available if interruptible rates were determined strictly on  
19 cost of service principles.

20  
21 **Q. Why is value of service pricing appropriate for the interruptible market?**

22 A. Value of service pricing is appropriate for two principal reasons. First,

1 interruptible customers have competitive alternatives and are capable of  
2 choosing those alternatives and leaving the UGI system at any time. It is  
3 reasonable under these circumstances, in the Company's view, to charge these  
4 customers competitive prices because they have competitive alternatives. Cost  
5 of service pricing is more appropriate and indeed is designed for regulated  
6 monopoly conditions, which by definition do not exist where customers have  
7 competitive alternatives. Strict cost of service pricing is not appropriate where a  
8 customer group has verified competitive alternatives for gas service and can  
9 leave the utility system at any time.

10 Second, and relatedly, interruptible customers have the option to become  
11 firm customers and take service under a cost-based firm service rate if they  
12 choose to do so, and to the extent that the system has sufficient capacity to allow  
13 for a conversion to firm service or if they contribute sufficient capital to finance  
14 the investment necessary to render firm service. In fact, UGI Gas has had  
15 interruptible customers elect the firm service conversion option in recent years; in  
16 particular, customers have elected to convert as the real and perceived risk  
17 associated with cold weather interruptions and operational realities have been  
18 experienced over the last two colder-than-normal winter periods.

19 In summary, the Company's proposal to provide a fixed offset to revenue  
20 requirement, which is equal to the proxy cost of service for the interruptible  
21 market in exchange for assuming the ongoing risks related to serving this  
22 competitive market under value of service pricing, properly reflects both cost of

1 service and value of service pricing principles, properly reflects the competitive  
2 alternatives available to interruptible customers, and provides important benefits  
3 to all customers that would not be available under strict cost of service principles.  
4

5 **VI. STRONG MANAGEMENT EFFECTIVENESS AND PERFORMANCE**

6 **Q. Please summarize the Company's initiatives and activities related to**  
7 **management performance.**

8 A. UGI Gas has focused on a number of areas that demonstrate the quality and  
9 effectiveness of UGI Gas's current management performance and its  
10 management's focus on safe, reliable, and outstanding service, as well as a  
11 strong commitment to growth. These management efforts include:

- 12 ○ An accelerated infrastructure replacement plan focused on replacing all  
13 remaining cast-iron and bare steel mains, as further explained in the  
14 testimony of Hans G. Bell (UGI Gas Statement No. 9). UGI Gas already is  
15 a leader in the Commonwealth, as its distribution system is comprised of  
16 the highest percentage of contemporary mains. See Table 2 below.  
17 Moreover, as shown in UGI Gas's LTIP filed in accordance with Act 11,  
18 the Company projects that it will eliminate all UGI system cast-iron mains  
19 by February 2027 and all bare steel mains by September 2041. The  
20 Commission approved this filing on July 31, 2014, at Docket No. P-2013-  
21 2398833. UGI Gas has just concluded its second year of the 5-year LTIP  
22 and is ahead of the schedule established by the LTIP.

- Developing an innovative expansion and extension program (GET Gas), which will invest \$25 million in UGI Gas’s service territory as part of a total \$75 million commitment across the UGI companies to reach new customers in unserved and underserved areas. UGI’s GET Gas program has been highlighted nationwide at American Gas Association events and has been called a model program.
- Proposing to implement a new rider, the TED Rider, to facilitate non-commercial customers with large up-front payments for line extensions, as further described in the direct testimony of Robert R. Stoyko (UGI Gas Statement No. 7).
- Managing record growth and managing to increase overall customer counts by over 50% since UGI Gas’s last base rate case in 1995. This growth rate by UGI Gas is the highest among all natural gas distribution companies across the Commonwealth during the same period. UGI Gas’s new customer additions have continually helped to provide incremental

1 revenues, which have helped defer the need for rate relief since 1995.

- 2 ○ Winning the J.D. Power award for customer satisfaction among utilities in  
3 two of the last 3 years, and has won it a total of 7 times since the start of  
4 the J.D. Power award for utility customer satisfaction as further explained  
5 in the testimony of Robert R. Stoyko (UGI Gas Statement No. 7).
- 6 ○ Significantly expanding its universal services offerings since its last rate  
7 case in 1995. As further explained in the testimony of Robert R. Stoyko  
8 (UGI Gas Statement No. 7), UGI Gas now has over 8,000 participants in  
9 its CAP and has committed to fund its LIURP program at an increased  
10 level of \$1.1 million annually.
- 11 ○ Developing and implementing numerous safety improvement initiatives to  
12 reduce injuries and motor vehicle accidents, as further explained in the  
13 testimony of Hans G. Bell (UGI Gas Statement No. 9). These initiatives  
14 include a First Move Forward policy, a 360-degree “cone” policy, a  
15 “Making a Difference” safety program, use of dash-cams to record and  
16 review incidents or close-calls, Smith Driving School training, an annual  
17 Safety Summit involving all employees, establishing safety committees for  
18 root cause review, and Company-wide education and appropriate  
19 employee coaching and engagement tracks.
- 20 ○ Focusing on increasing spend with Minority and Women-Owned  
21 Businesses (“MWBEs”). Since 2011, UGI has increased MWBE spending  
22 significantly, increasing Women-Owned spending by over 100% and

1 Minority-Owned spending by over 400%. UGI's overall MWBE spending  
2 of 11.6% ranks above the utility industry average of 11.4%, as published  
3 in the 2012 Supplier Diversity Program Performance study conducted by  
4 nationally recognized CAPS Research.

5 ○ Launching a Company-wide initiative, UGI-1, which is aligning UGI's  
6 people, processes and tools to drive additional efficiencies and  
7 effectiveness across the organization, including the implementation of new  
8 state-of-the-art customer information, work management and other  
9 supportive systems.

10 ○ Undertaking the UNITE Project to further improve customer service. As  
11 explained in the direct testimony of Thomas N. Lord (UGI Gas Statement  
12 No. 8), the UNITE Project is a multi-year, multi-phased information system  
13 modernization project. Phase 1 of the Project entails the development  
14 and implementation of a new CIS to replace our two legacy mainframe  
15 CIS systems. This new CIS will harmonize the two systems and provide  
16 increased functionality and improved customer service.

17 ○ Proposing to implement an EE&C Plan. The EE&C Plan is a  
18 comprehensive portfolio of energy efficiency and conservation programs  
19 that was designed to assist customers save energy through various cost-  
20 effective measures. The full contents of the EE&C Plan are described in  
21 detail in the direct testimony of Theodore M. Love (UGI Gas Statement  
22 No. 11).

1 In addition to these management efforts, it should be noted that UGI Gas has  
 2 been able to provide excellent service to customers at just and reasonable rates.  
 3 The above-described initiatives, as well as those described by the other  
 4 witnesses, UGI Gas will continue to improve service to customers.

5 It also should be noted that, as shown earlier, current UGI Gas residential  
 6 distribution rates are the lowest in the Commonwealth. Further, even if UGI  
 7 Gas's proposed residential rates are implemented, the average monthly bill for a  
 8 residential heating customer will be 3.2% lower today than the average bill  
 9 following the Company's last base rate case in 1995. Comparatively, the price  
 10 for many household consumer products has increased significantly over that  
 11 same time period. Tables 3 and 4 below, provide that comparison.

Table 3

<b>Household Items</b>			
	<b>Price (\$) September 1995</b>	<b>Price (\$) November 2015</b>	<b>Percent Increase</b>
<b>Pound of White Bread<sup>1</sup></b>	0.81	1.41	74%
<b>Dozen of Grade A Large Eggs<sup>1</sup></b>	0.96	2.66	179%
<b>Gallon of Whole Milk<sup>1</sup></b>	2.46	3.30	34%
<b>Postage Stamp<sup>2</sup></b>	0.32	0.49	53%

Table 4

<b>UGI Average Monthly Bill</b>			
	<b>Amount (\$) September 1995</b>	<b>Amount (\$) January 2016 (Proposed)</b>	<b>Percent Change</b>
<b>Residential Heating</b>	64.01	61.97	-3.2%

12

1           The Company believes that the management efforts described above and the  
2           other improvements described by the UGI Gas witnesses in this proceeding, as  
3           well as the Company's provision of service at reasonable rates, support an  
4           additional upward adjustment to the Company's rate of return in recognition of its  
5           management effectiveness.

6

7   **Q.    Does this conclude your direct testimony?**

8   **A.    Yes, it does.**

**UGI GAS STATEMENT NO. 2 – ANN P. KELLY**

**BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Docket No. R-2015-2518438**

**UGI Utilities, Inc. – Gas Division**

**Statement No. 2**

**Direct Testimony of  
Ann P. Kelly**

**Topics Addressed:      Rate Base  
                                 Operating Revenues and Expenses**

Dated: January 19, 2016

1 **I. INTRODUCTION**

2 **Q. Please state your name and business address.**

3 A. Ann P. Kelly, 2525 North 12<sup>th</sup> Street, Reading, Pennsylvania 19612-2677.

4

5 **Q. By whom are you employed and in what capacity?**

6 A. I am employed by UGI Utilities, Inc. (“UGI”) as Controller. UGI is a subsidiary of UGI  
7 Corporation (“UGI Corp.”). UGI has two separate operating divisions: UGI Utilities,  
8 Inc. – Gas Division (“UGI Gas” or the “Company”) and UGI Utilities, Inc. – Electric  
9 Division.

10

11 **Q. What are your responsibilities as Controller?**

12 A. I would note that the position of Chief Financial Officer of UGI became vacant during  
13 the preparation of this base rate case filing, and that I had taken on many of the  
14 responsibilities of that position on an interim basis, assuming overall responsibility for  
15 the finance and accounting functions for UGI and its wholly-owned subsidiaries, UGI  
16 Penn Natural Gas, Inc. (“PNG”) and UGI Central Penn Gas, Inc. (“CPG”). My duties  
17 currently include accounting, accounts payable and cash remittance functions for these  
18 distribution companies and the coordination of these functions with the Chief Financial  
19 Officer of UGI Corp. I am also currently responsible for supervising the preparation and  
20 submission of financial, accounting, and related regulatory filings with the Pennsylvania  
21 Public Utility Commission (“PUC”), Federal Energy Regulatory Commission (“FERC”),  
22 the United States Securities and Exchange Commission (“SEC”) and the United States  
23 Internal Revenue Service (“IRS”).

24

1 **Q. What is your educational background?**

2 A. I received a Bachelor's degree in accounting with a minor in economics from Ohio  
3 Wesleyan University in 1992, and a Master's degree with a concentration in finance from  
4 Villanova University in 2000.

5  
6 **Q. Please describe your professional experience.**

7 A. I began my professional career as a fund accountant for Dean Witter Intercapital and then  
8 worked as an auditor for Price Waterhouse LLC. I then spent ten years at Radnor  
9 Holdings Corporation, rising to the position of Treasurer, where I performed various  
10 finance-related functions, including consolidation and corporate reporting, external  
11 financial reporting, cash management and treasury. I then spent five years working for  
12 Exelon Corporation entities, where my positions included: Director of Financial  
13 Planning and Analysis for Exelon Generation; Director, Office of the President, for  
14 Exelon Generation's Power Team; Director of Finance Operations for PECO Energy  
15 Company; and finally Director, Risk Control for Exelon Generation. After two years  
16 away from the utility industry, I assumed my current position with UGI on December 15,  
17 2014.

18

19 **Q. Have you previously presented testimony in a proceeding before a regulatory  
20 agency?**

21 A. Yes, I presented testimony before the PUC in *Petition of PECO Energy Company for  
22 Approval of its Smart Meter Technology Procurement and Installation Plan* at Docket  
23 No. M-2009-2123944.

1 **Q. What is the purpose of your testimony?**

2 A. I am providing testimony on behalf of UGI Gas. First, I will provide an overview of the  
3 principal accounting exhibits used to support UGI Gas’s claims in this proceeding (Part  
4 II). Second, I will explain UGI Gas’s accounting and budgeting processes (Part III).  
5 Finally, I will address UGI Gas’s revenue requirement for the fully projected future test  
6 year ending September 30, 2017 (“FPFTY”), including its principal accounting exhibits,  
7 rate base claims, operating expenses claims, and certain *pro forma* adjustments (Part IV).

8

9 **Q. Ms. Kelly, are you sponsoring any exhibits in this proceeding?**

10 A. Yes, I am sponsoring those portions of UGI Gas Exhibit A (Fully Projected), Exhibit A  
11 (Future) and Exhibit A (Historic) addressing rate base and operating expenses. I am also  
12 sponsoring those responses to the Commission’s filing requirements and standard data  
13 requests where my name is indicated as the sponsoring witness.

14

15 **II. OVERVIEW OF PRINCIPAL ACCOUNTING EXHIBITS**

16 **Q. Please describe the principal accounting exhibits used to support UGI Gas’s claims  
17 in this proceeding.**

18 A. UGI Gas Exhibit A (Fully Projected) is the revenue requirement for the FPFTY ending  
19 September 30, 2017, including principal accounting exhibits, rate base claims, operating  
20 expenses claims, and certain *pro forma* adjustments. The FPFTY information is derived  
21 from UGI Gas’s operating and capital budgets for the 12 months ending September 30,  
22 2017. UGI Gas Exhibit A (Future) is the principal accounting exhibit for the future test  
23 year ending September 30, 2016 (“FTY”), including certain *pro forma* adjustments. The  
24 FTY information is derived from UGI Gas’s operating and capital budgets for the 12-

1 month period ending September 30, 2016. UGI Gas Exhibit A (Historic) is the principal  
2 accounting exhibit for the historic test year ended September 30, 2015 (“HTY”), with  
3 appropriate ratemaking adjustments. The HTY information is derived from the book  
4 accounting data for the 12-months ended September 30, 2015. The FTY and HTY  
5 schedules are provided as a benchmark for comparison with the FPFTY claim, which as  
6 explained above is the basis for UGI Gas’s proposed revenue increase.

7  
8 **Q. Please provide an overview of UGI Gas’s principal accounting exhibits.**

9 A. UGI Gas’s claims in this case are based on UGI Gas Exhibit A (Fully Projected), which  
10 includes a presentation for the FPFTY ending September 30, 2017. This presentation is  
11 comprised of four sections:

12 Section A summarizes UGI Gas’s requested rate base, revenues, and expenses at  
13 present rates and the calculation of its requested revenue increase.

14 Section B includes basic accounting data extracted primarily from UGI Gas’s  
15 financial, accounting, operating and capital budgets, and other records. This data  
16 includes a balance sheet, a statement of net operating income and test year  
17 revenues, a schedule of expense items by cost element, and a tax expense  
18 calculation. Also included are schedules showing UGI Gas’s embedded cost of  
19 debt, year-end capital structure and overall claimed rate of return.

20 Section C provides the elements of UGI Gas’s rate base claim and how each  
21 element of that claim is derived. UGI Gas’s rate base includes utility plant in  
22 service, gas storage inventory, cash working capital, materials and supplies

1 inventory, and offsets for accumulated depreciation, accumulated deferred income  
2 taxes, and customer deposits.

3 Section D presents UGI Gas's revenues and expenses on a *pro forma* ratemaking  
4 basis. Necessary adjustments to budgeted levels of expense items and revenues  
5 are summarized in Schedules D-1 through D-2 and detailed in the remaining  
6 schedules. The resulting FPFTY expense and revenue levels are shown on  
7 Schedule D-3, and were used to establish UGI Gas's *pro forma* income at present  
8 and proposed rates as set forth in Schedule A-1.

9  
10 **Q. What information is included in UGI Gas Exhibits A (Future) and A (Historic)?**

11 A. UGI Gas Exhibits A (Historic) and A (Future) follow the format of UGI Gas Exhibit A  
12 (Fully Projected), but reflect data for the fiscal year ended September 30, 2015, and the  
13 fiscal year ending September 30, 2016, respectively. This information is provided to  
14 comply with the Commission's filing requirements, and provides a basis for comparing  
15 our FPFTY claims with actual and projected results from the HTY and FTY,  
16 respectively.

17  
18 **Q. What are the data sources for the UGI Gas Exhibit A (Future) and UGI Gas Exhibit  
19 A (Historic)?**

20 A. This data is derived from the UGI Gas's books and records, and capital and operating  
21 budgets. UGI Gas Exhibit A (Future) is based on adjusted budgeted data for the year  
22 ending September 30, 2016. UGI Gas Exhibit A (Historic) is based on adjusted  
23 experienced data for the year ended September 30, 2015.

1 **III. ACCOUNTING AND BUDGET PROCESS**

2 **Q. How are the accounting records of UGI Gas maintained?**

3 A. The accounting records of UGI Gas are kept in accordance with generally accepted  
4 accounting principles ("GAAP") and the FERC's Uniform System of Accounts as  
5 required under the provisions of 52 Pa. Code § 59.42. The Company also maintains a  
6 continuing property records system in accordance with the requirements of 52 Pa. Code §  
7 59.47.

8

9 **Q. Are the books and records of UGI Gas subject to audit?**

10 A. Yes. The books and records of UGI Gas are audited by its internal auditors and its  
11 external auditor, Ernst & Young, LLP. They are also subject to audit by the PUC.

12

13 **Q. Do the continuing property records of UGI Gas reflect the original cost value of  
14 property?**

15 A. Yes, they do. UGI Gas's plant in service, plant additions, retirements, and book  
16 adjustments have been recorded on an original cost basis in accordance with GAAP and  
17 the Uniform System of Accounts requirements.

18

19 **Q. What process does UGI Gas follow to assure that property reflected in its plant  
20 accounts is used and useful?**

21 A. UGI Gas requires field personnel to create a record when property is placed into service  
22 or retired. The information from these records is then transferred through accounting  
23 entries into the appropriate UGI Gas plant property accounts, subject to review by  
24 authorized individuals, who must approve the entries. The process employed by UGI

1 Gas is the same as that employed by PNG and CPG, and its integrity has been reviewed  
2 by internal and external auditors.

3  
4 **Q. Please explain UGI Gas's budgetary preparation and approval process.**

5 A. UGI Gas's fiscal year begins on October 1 and ends on September 30 of the following  
6 year. Preparation of the UGI Gas Operating Budget for the subsequent fiscal year begins  
7 during the spring, *i.e.*, the budget for the October 1, 2015 through September 30, 2016  
8 fiscal year was prepared in the spring of 2015.

9 The revenue portion of the budget is a joint effort between the Marketing and  
10 Rates Departments. The Marketing Department provides customer growth and attrition  
11 information by customer class along with specific large commercial and industrial sales  
12 and revenue budget projections. The Rates Department develops normalized usage per  
13 customer for core customer classes, annualized sales and total revenues. The number of  
14 customers by customer class is determined using a wide range of factors, including trends  
15 in usage, the level of applications and inquiries for service from existing customers, new  
16 construction, the cost of competing fuels, and shifts in type of residence and customer  
17 mix. Usage per customer is developed by reviewing the most recent year's usage trends  
18 adjusted to normal weather conditions, the price of competitive fuels relative to natural  
19 gas, and current and anticipated levels of operation. The budgeted number of customers  
20 and usage per customer are combined to produce monthly budgeted sales. The revenue  
21 budget is calculated by applying tariff rates for each customer class to budgeted sales,  
22 plus an adjustment for unbilled revenue. The sales and revenue budget is then reviewed  
23 with and approved by senior management.

1            Concurrently, the expense portion of the Operating Budget is prepared.  
2            Employee levels are reviewed and appropriate staffing levels are set for the upcoming  
3            fiscal year. Operating and maintenance expenses are developed by each functional  
4            manager based upon review of trends, monthly expenditure patterns, new or changed  
5            programs, and inflation. They are submitted for review and approval by senior  
6            management. UGI Gas expenses are then consolidated with allocated expenses from  
7            affiliated companies to develop the budgeted Statement of Operations. Allocated  
8            expenses in the Statement of Operations include functions such as accounting, rates, gas  
9            supply, human resources, information systems, payroll, and remittance processing, which  
10           are performed in accordance with PUC-approved affiliated interest arrangements or  
11           agreements.

12           The final Operating Budget is then submitted to the President of the Company for  
13           his review and approval, and to the Board of Directors for its review and approval. Each  
14           element of the UGI Gas Operating Budget is formulated by personnel responsible for that  
15           aspect of the operation and who will be held accountable for the accuracy of their  
16           forecasts. The first and primary use of the Operating Budget is as a working tool for the  
17           management and planning of the business.

18           The UGI Gas Capital Budget is prepared in conjunction with the Operating  
19           Budget. Operating personnel in each functional area prepare a detailed list of capital  
20           projects. Each project is identified, described and justified along with a breakdown of the  
21           costs associated with it. These projects are presented to senior management, which  
22           reviews them in terms of priorities, capital availability, and strategic alignment with the  
23           operating budget. After due consideration, the Capital Budget is set and presented, along

1 with the Operating Budget, to senior management in a series of review meetings.  
2 Additional information concerning the factors considered in establishing the UGI Gas  
3 Capital Budget is provided in the direct testimony of Hans G. Bell (UGI Gas Statement  
4 No. 9).

5 With the passage of Act 11 of 2012, UGI Gas has also instituted a process for  
6 establishing an Operating Budget and Capital Budget for an additional fiscal year in the  
7 future, *i.e.*, the FPFTY. This process is the same as outlined above; however, the starting  
8 point for the additional year is the FTY budget. Since the FTY budget is based on  
9 normalized weather conditions, no additional revenue normalizing adjustments are made.  
10 FTY amounts are then adjusted for salary and personnel increases, known incremental  
11 programs and expense needs, and inflation. For the capital budget, known capital  
12 projects are included based on the process described above, and also described in the  
13 direct testimony of Hans G. Bell (UGI Gas Statement No. 9). Additional assumptions  
14 also are made for emergent new business and other capital expenditures based on past  
15 experience and current trends.

16  
17 **Q. Please explain how expenses from affiliated companies are allocated to develop the**  
18 **budgeted Statement of Operations.**

19 A. UGI Gas incurs costs for services provided by UGI Corporation, UGI Utilities, and other  
20 affiliated companies, in accordance with affiliated interest arrangements authorized by  
21 the Commission. All costs which can be identified as pertaining exclusively to an  
22 operating unit are billed directly to that unit. Those costs which cannot be directly  
23 associated with the operation of an individual operating unit are allocated to the various

1 companies benefiting from the service by a formula internally referred to as the Modified  
2 Wisconsin Formula ("MWF"). The MWF achieves an equitable distribution of common  
3 expenses based on the relative activity and size of each operating unit to the total of all  
4 operating units. Activity is measured by total revenues and total operating expenses and  
5 size is measured by tangible net assets employed (excluding acquisition goodwill).

6  
7 **Q. Do you believe that the charges incurred by UGI Gas under these agreements are**  
8 **reasonably determined?**

9 A. Yes. These arrangements and the methods used to allocate the costs to the companies  
10 receiving service have been reviewed by the Commission in various management audits of  
11 UGI Gas, the most recent of which was the Focused Management and Operations Audit of  
12 UGI Utilities, Inc., prepared by the PUC's Bureau of Audits, issued in April of 2012, at  
13 Docket No. D-2011-2221061 ("Audit Report"). The Audit Report found UGI Corporation's  
14 and UGI Utilities' cost allocation methods to be reasonable and appropriate. Audit Report at  
15 p. 26.

16  
17 **Q. How is this budget information used to support UGI Gas's claims in this**  
18 **proceeding?**

19 A. This budget information is the starting point for UGI Gas's claims, and is adjusted as  
20 appropriate to reflect new information gained since the completion of the budgeting  
21 process and through application of other appropriate ratemaking principles.

22

1 **IV. FULLY PROJECTED FUTURE TEST YEAR**

2 **Q. How is your discussion of UGI Gas’s FPFTY revenue requirement presentation**  
3 **organized?**

4 A. In Section IV.A, I present a summary of UGI Gas’s FPFTY revenue requirement. In  
5 Section IV.B, I discuss UGI Gas’s proposed rate base. In Section IV.C, I explain the  
6 determination of UGI Gas’s revenues and operating expenses, depreciation, and income  
7 taxes.

8

9 **A. FULLY PROJECTED FUTURE TEST YEAR REVENUE**  
10 **REQUIREMENT**

11 **Q. How were the *pro forma* revenue increase and revenues at proposed rates**  
12 **established?**

13 A. This calculation is shown at a summary level on Schedule A-1, column 4 of UGI Gas  
14 Exhibit A (Fully Projected). Lines 1-9 summarize the *pro forma* measure of value (rate  
15 base). Lines 10-20 show *pro forma* revenues at present rates, *pro forma* expenses, taxes  
16 at present rates, *pro forma* net operating income at present rates, and the calculated rate  
17 of return at present rates. Lines 21-23 show the increase in net operating income required  
18 to permit UGI Gas to earn its required overall rate of return of 8.17%. Application of the  
19 Gross Revenue Conversion Factor (“GRCF”) on line 24 establishes the revenue increase  
20 shown on line 25 needed to generate that net operating income. Column 5 of Schedule  
21 A-1 shows the level of the revenue increase and the increase in expenses associated with  
22 the revenue increase. Column 6 of Schedule A-1 shows the revenue, expenses, and rate  
23 base at proposed rates, as well as the resulting rate of return of 8.17%.

24

1 **Q. What is the overall requested increase in revenue?**

2 A. The overall requested increase in revenue is \$58.56 million. This represents the  
3 difference between the *pro forma* FPFTY revenue requirement of \$393.2 million and the  
4 annual level of operating revenues of \$334.7 million under existing rates. These figures  
5 are shown on line 13 of Schedule A-1 of UGI Gas Exhibit A (Fully Projected).

6

7 **B. RATE BASE**

8 **Q. With reference to UGI Gas Exhibit A (Fully Projected), please explain how UGI**  
9 **Gas's rate base was determined.**

10 A. UGI Gas's rate base presentation is shown in UGI Gas Exhibit A (Fully Projected),  
11 Schedule C-1. Schedule C-1 summarizes the UGI Gas rate base values for the FPFTY.  
12 Column 2 indicates the schedule upon which the calculation of each of the rate base  
13 elements is found. Columns 4-6 show the amounts at present and proposed rates,  
14 respectively. UGI Gas's total FPFTY rate base claim -- net of deductions for  
15 accumulated deferred income taxes, customer deposits, and customer advances -- is  
16 \$923.7 million. Except where otherwise noted, I will describe each of these rate base  
17 elements in greater detail below.

18

19 **1. Utility Plant in Service**

20 **Q. Please explain how UGI Gas determined its rate base value for plant in service.**

21 A. UGI Gas's claim for utility plant in service represents the sum of the closing plant  
22 balances as of September 30, 2015, and budgeted plant additions for the years ending

1 September 30, 2016 and September 30, 2017, less budgeted FTY and FPFTY plant  
2 retirements.

3  
4 **Q. Please describe Schedule C-2 to UGI Gas Exhibit A (Fully Projected).**

5 A. This schedule includes 9 pages and presents UGI Gas's FPFTY claim of \$1.65 billion for  
6 gas utility plant in service on page 2, column 2, line 64. Gas utility plant enables UGI  
7 Gas to provide gas service to its customers.

8  
9 **Q. How was the gas utility plant in service amount of \$1.65 billion, shown on Schedule  
10 C-2, page 2, column 2, line 64 determined?**

11 A. As noted above, this amount is based on the *pro forma* balance as of September 30, 2017.  
12 The amount includes: (1) utility plant in service as of September 30, 2015 and (2)  
13 budgeted capital expenditures expected to close to plant for the 12-month periods ending  
14 September 30, 2016 and 2017, less plant retirements during the same period.

15  
16 **Q. Please describe what information is shown on Schedule C-2, page 3.**

17 A. This information provides a summary of UGI Gas's *pro forma* claim for utility plant in  
18 service by service category. Column 2 shows the FPFTY ending balances based on the  
19 budget; column 3 shows the net effect of the various plant adjustments; and column 4  
20 provides the adjusted FPFTY plant in service.

21

1 **Q. What information is included on Schedule C-2, pages 4-7?**

2 A. Columns 2 and 3 on these pages show the gas plant in service balances for 2016 and 2017  
3 based on the budget, plus the amount of plant additions budgeted as of the end of the  
4 FPFTY. Column 4 represents various plant adjustments and column 5 provides the  
5 adjusted FPFTY plant balance.

6

7 **Q. Please explain the nature of the adjustments in column 4 on schedule C-2, pages 4-5.**

8 A. For budgeting purposes, all common plant is recorded on the records of UGI Gas.  
9 However, common plant is also used for UGI Electric, PNG and CPG. The adjustment  
10 reduces common plant assets by the amount allocated to affiliated companies.

11

12 **Q. Where is the information for FPFTY and FTY retirements shown?**

13 A. Pages 8-9 of Schedule C-2 provide actual and projected plant retirements. Retirements  
14 for most plant accounts were projected by plant account by applying the average  
15 retirement rate, as a percent of additions, for the five years 2010 through 2015, to the  
16 FPFTY and FTY plant additions. For certain General Plant accounts subject to  
17 amortization accounting, retirements are recorded when a vintage is fully amortized. For  
18 these accounts, all units are retired per books when the age of the vintage reaches the  
19 amortization period.

20

1                   **2.     Accumulated Depreciation**

2   **Q.     Please explain how UGI Gas determined its rate base value for accumulated**  
3       **depreciation.**

4   A.     UGI Gas started with accumulated depreciation as of September 30, 2015, added the  
5       budgeted level of depreciation expense for the FTY and FPFTY, and calculated the  
6       impact of the FTY and FPFTY plant retirements and a provision for net salvage as shown  
7       on Schedule C-3. The depreciation rates and test year expense levels are discussed in the  
8       direct testimony of John F. Weidmayer (UGI Gas Statement No. 5), with the underlying  
9       FPFTY depreciation analysis provided in UGI Gas Exhibit A (Fully Projected).

10  
11 **Q.     Please describe UGI Gas’s accumulated depreciation claim.**

12 A.     UGI Gas’s accumulated depreciation claim is shown on Schedule C-3 of UGI Gas  
13       Exhibit A (Fully Projected). This schedule, containing 11 pages, presents the  
14       accumulated provision for depreciation as of September 30, 2017, distributed among the  
15       various FERC accounts. The total amount for accumulated depreciation, \$448.7 million,  
16       is summarized on pages 1-2 to this schedule. That amount is reflected on line 2 of the  
17       measure of value summary on Schedule C-1.

18           Page 3 shows the *pro forma* FPFTY level of accumulated depreciation distributed  
19       to the various plant categories. Pages 4-5 show the details of the accumulated  
20       depreciation by FERC account for 2016 and 2017 based on budget plus adjustments to  
21       arrive at the FPFTY balance. Pages 8-9 show the negative net salvage amortization by  
22       FERC account. Pages 10-11 include the salvage amounts for the FPFTY. All of these  
23       amounts are included in the FPFTY accumulated depreciation calculations. The

1 amortization of negative net salvage was calculated using a 5-year amortization schedule  
2 in accordance with Commission precedent.

3  
4 **Q. Are there adjustments to the budgeted amounts for accumulated depreciation?**

5 A. Yes. Similar to the plant assets shown on Schedule C-2, the accumulated depreciation  
6 must also be reduced by the accumulated depreciation on common assets allocated to  
7 affiliated companies. These adjustments are shown in column 3 on Schedule C-3, page 3  
8 and column 4 on Schedule C-3, pages 4 and 5.

9  
10 **3. Cash Working Capital**

11 **Q. Please explain how UGI Gas determined its rate base value for cash working capital**  
12 **(“CWC”).**

13 A. CWC is the capital requirement arising from the difference between (1) the lag in the  
14 receipt of revenue for rendering service and (2) the lag in the payment of cash expenses  
15 incurred to provide that service, as shown in Schedule C-1. A detailed analysis of UGI  
16 Gas’s CWC requirements is provided in Schedule C-4.

17  
18 **Q. What data is shown on page 2 of Schedule C-4?**

19 A. Page 2 summarizes the derivation of UGI Gas’s revenue collection lag and overall  
20 expense payment lag. The revenue lag days are shown on line 1 and the expense lag days  
21 are shown for each component on lines 3-5. The net lag in the collection of revenue is  
22 25.48 days as shown on line 8. This number is then multiplied by the average daily  
23 operating expense balance on line 9 to arrive at a base CWC amount of \$15.723 million.  
24 The average daily expense balance of \$617,000 shown on line 9 is determined by

1 dividing the total *pro forma* annual operating expenses, excluding uncollectible accounts  
2 expenses of \$225.361 million, as shown on line 6 of column 2, by the number of days in  
3 a year, or 365. I will describe the other components of the CWC claim when I discuss the  
4 related schedules.

5  
6 **Q. Please describe the revenue lag calculation shown on Schedule C-4, page 3.**

7 A. The total revenue lag days (line 23) were determined by dividing the annual revenue  
8 billed during the year (line 18, column 3) by the average month-end accounts receivable  
9 balances for the thirteen months ended September 30, 2015 (line 17, column 2). This  
10 results in an accounts receivable turnover rate of 9.82 (line 19, column 4), which is  
11 equivalent to 37.17 lag days (line 20, column 5) (365 divided by 9.82 accounts receivable  
12 turnover rate). As shown on lines 20-23, the payment portion of the revenue lag is added  
13 to (1) the 2.69 day lag between the meter reading day and the day bills are sent out and  
14 recorded as revenue and accounts receivable by the Company and (2) the 15.21 day  
15 service lag, which is the time from the mid-point of the service period until the meter  
16 reading date. This calculation results in a total revenue lag of 55.07 days.

17  
18 **Q. How was the mid-point of the service period calculated?**

19 A. The mid-point of the service period is equal to the number of days in an average service  
20 month (365 days divided by 12, or 30.42 days) divided by two (15.21 days).

21

1 **Q. How are the payroll expense lags for the CWC claim calculated?**

2 A. This calculation is shown on page 4 of Schedule C-4, lines 1-6. The payroll amounts  
3 shown there reflect the payroll for the FPFTY, which is shown on Schedule D-7. The lag  
4 periods for union and non-union payroll are shown separately on page 4 of Schedule C-4,  
5 lines 1-2 with the same bi-weekly pay period.

6

7 **Q. How were the lag days associated with the purchased gas costs shown on Schedule**  
8 **C-4, page 4, line 8 calculated?**

9 A. This calculation is shown on page 6 of Schedule C-4, and is based on a review of gas  
10 purchases during the 12-month period of October 2014 through September 2015. The  
11 total dollar amount of gas purchased during this period was \$6.977 million, and the  
12 average payment lag equaled 36.71 days. The payment lag was determined using the  
13 midpoint of the service payment for each of the payments and the payment date for each,  
14 averaged over the 12-month study period.

15

16 **Q. How was the Other Expense payment lag, shown on Schedule C-4, page 4, line 14,**  
17 **calculated?**

18 A. The calculation of this lag is shown on page 5 of Schedule C-4. The average payment lag  
19 for all remaining expenses was derived from data over four months, as shown in more  
20 detail on page 5 of Schedule C-4. A list of all cash disbursements during each of these  
21 months was used in a format that shows the payee, the invoice date, the amount of the  
22 disbursement, the date the payment was made, the account to which the disbursement  
23 was charged and other data associated with the disbursements. As shown on page 5, lines

1 1-8, each month's listing contained numerous cash disbursements. Once the raw payment  
2 data was assembled, the dollar days were determined by multiplying the amount of the  
3 disbursement by either (i) the number of days from invoice date until bank clearance for  
4 wire payments, or (ii) the number of days from the invoice date until check date, plus  
5 seven days for payments made by check. Disbursements were eliminated if they were  
6 included in another calculation (*e.g.*, gas commodity purchases), capital items, and other  
7 non-expense amounts. After these adjustments, the average of the expense lag days for  
8 each month shown on Schedule C-4, page 5, column 4, line 9 resulted in a payment lag  
9 for general expenses of 27.44 days. The 27.44 day lag for Other Disbursements is then  
10 brought forward to Schedule C-4, page 4, line 14 and Schedule C-4, page 2, column 3,  
11 line 5.

12  
13 **Q. Please explain how the interest payment amount included on line 2 of Schedule C-4,**  
14 **page 1 was determined.**

15 A. The calculation of this amount is shown on Schedule C-4, page 7. This calculation  
16 measures the lag associated with the payment of interest on outstanding debt. The *pro*  
17 *forma* annual interest expense shown on line 4 is divided by 365 to obtain the daily  
18 interest expense of \$52,000 shown on line 5. That amount is then multiplied by the net  
19 payment lag, resulting in a reduction to the working capital allowance of \$1.871 million,  
20 as shown on line 9. This amount is then included on page 1, line 2 of Schedule C-4.

21

1 **Q. How was the working capital requirement for tax payments shown on line 3 of**  
2 **Schedule C-4, page 1 determined?**

3 A. This calculation is shown on page 8 to Schedule C-4. Separate calculations are made for  
4 federal income tax, state income tax, PA Property Tax and PURTA. Each of these  
5 calculations is based on anticipated FPFTY tax payments and an April 1 mid-point of  
6 annual service. The result for each of these components is shown and summed in column  
7 10 to derive the net working capital allowance for tax payments.

8

9 **Q. How was the working capital allowance for pre-payments derived?**

10 A. That amount is calculated on page 9 of Schedule C-4 and represents the thirteen-month  
11 average of actual pre-paid amounts for each month ended from September 2014 through  
12 September 2015.

13

14 **Q. What is the total amount of the Company's cash working capital claim?**

15 A. UGI Gas's claim for CWC is \$18.648 million. This amount is shown on Schedule C-4,  
16 page 1, line 5; Schedule C-1, line 4; and on Schedule A-1, column 4, line 4.

17

#### 18 **4. Gas Storage Inventory**

19 **Q. Please explain how the rate base value for gas storage inventory was determined.**

20 A. Gas stored underground represents gas volumes stored in facilities or in storage fields  
21 owned by interstate pipeline or storage companies with whom UGI Gas contracts for  
22 capacity. As is typical for most natural gas distribution systems, UGI Gas purchases  
23 storage gas throughout the year for use primarily during the winter heating season. UGI  
24 Gas's claim for gas storage inventory is based on a 13-month historical average book

1 value as shown on Schedule C-5. The average monthly gas inventory balance for the  
2 FPFTY is \$21.730 million, as shown on Schedule C-5, line 16, column 4. This amount is  
3 also used in Schedule C-1, line 5 and Schedule A-1, column 4, line 5.  
4

5 **5. Accumulated Deferred Income Taxes (ADIT)**

6 **Q. Please explain how the rate base value for ADIT was calculated.**

7 A. The Company's determination of its rate base value for ADIT is shown on Schedule C-6  
8 and is discussed in the direct testimony of Nicole McKinney (UGI Gas Statement No.  
9 10).

11 **6. Customer Deposits/Advances for Construction**

12 **Q. Please explain how the rate base value for customer deposits and advances for  
13 construction were determined.**

14 A. Customer deposits and advances for construction are customer-sourced funds that offset  
15 the need for UGI Gas to provide capital. UGI Gas's claim for customer deposits is based  
16 on the September 30, 2015 month-end balance as shown on Schedule C-7. Act 155 of  
17 2014 became effective December 22, 2014, and no longer permits the Company to collect  
18 deposits for customers who qualify for low income programs. As a result, the Company  
19 has experienced a declining balance in customer deposits. For this reason, the balance at  
20 the end of the FTY was used to determine the rate base offset for customer deposits.  
21

22 **Q. What is the rate base offset for customer deposits?**

23 A. The customer deposit offset is \$14.517 million as shown on Schedule C-1, line 7 and on  
24 Schedule A-1, line 7.

1 **Q. What is the rate base claim for Customer Advances In Aid of Construction?**

2 A. The offset claim for customer advances in aid of construction is \$0 since the Company  
3 did not have any such balances for the 13-month period ending September 30, 2015.

4

5 **7. Materials and Supplies Inventory**

6 **Q. What is the rate base claim for materials and supplies inventory?**

7 A. UGI Gas maintains various materials and supplies in inventory for use in its operations.  
8 Its claim for those items is \$4.212 million, as shown on Schedule C-1, line 8. This  
9 amount represents the balance at the end of the HTY as shown on Schedule C-8. This  
10 value is also shown on Schedule A-1, line 8.

11

12 **Q. Why is the HTY balance an appropriate measure of materials and supplies for the**  
13 **FPFTY?**

14 A. The balance at the end of the HTY is appropriate for two reasons. First, as a result of the  
15 2011 Management Audit, the Commission recommended that UGI Gas increase its levels  
16 of emergency stock. Second, the Company's increasing capital expenditure plans have  
17 increased the need to stock longer lead time items, such as certain sizes of pipe, to ensure  
18 it is on hand when needed. These two factors have contributed to an increasing amount  
19 of materials and supplies inventory, and is the reason for why a HTY-end balance is an  
20 appropriate basis for the claim.

21

1           **C.     REVENUES AND EXPENSES**

2   **Q.     How were revenues at present rates determined?**

3   A.     Revenues at present rates were determined by adjusting the budgeted revenues to reflect  
4           the anticipated change in the number of customers, the projected change in existing  
5           customer usage, changes in heating degree days from that used in the budget and other  
6           *pro forma* adjustments. The net effect of these adjustments is shown in UGI Gas Exhibit  
7           A (Fully Projected), Schedule D-5, and is discussed in the direct testimony of David E.  
8           Lahoff (UGI Gas Statement No. 6).

9  
10 **Q.     Please provide an overview of UGI Gas’s principal accounting exhibits relative to**  
11 **operating expense claims.**

12 A.     UGI Gas’s principal accounting exhibit is UGI Gas Exhibit A (Fully Projected), which  
13           includes a presentation for the FPFTY ending September 30, 2017. Section D of UGI  
14           Gas Exhibit A (Fully Projected) presents UGI Gas’s claims and necessary adjustments to  
15           budgeted levels of expense items and revenues. The *pro forma* adjustments related to  
16           expense are summarized in Schedules D-3 and D-6 through D-34. These expense  
17           adjustments are used, in part, to derive UGI Gas’s *pro forma* income at present and  
18           proposed rates as set forth in Schedule D-1.

19           UGI Gas Exhibits A (Historic) and A (Future) follow the format of UGI Gas  
20           Exhibit A (Fully Projected), but reflect data for the appropriate test years ending  
21           September 30, 2015 and 2016. This information is provided in an effort to comply with  
22           the Commission's filing requirements and provides a basis for comparing our FPFTY  
23           claims with prior results.

1                   **1. Summary**

2   **Q. Please describe Schedule D-1 of UGI Gas Exhibit A (Fully Projected).**

3   A. Schedule D-1 presents a summary income statement that includes UGI Gas's claimed gas  
4       revenues, expenses, and taxes at present and proposed rate levels. The direct testimony  
5       of David E. Lahoff (UGI Gas Statement No. 6) addresses the presentation of *pro forma*  
6       revenues, adjustments thereto, and the supporting schedules. Schedule D-1 also shows  
7       the proposed revenue increase of \$58.564 million on line 5 in column 2.

8  
9   **Q. What is the level of net income at proposed rates?**

10   A. As shown on column 3, line 20, this amount is \$75.467 million. This represents a  
11       \$33.692 million increase from the level under current rates (\$41.775 million), as shown  
12       on line 20 in column 1 of Schedule D-1.

13  
14   **Q. Please describe Schedule D-2.**

15   A. Schedule D-2 shows the development of the various line items found on Schedule D-1.  
16       Column 2 contains the Company's budgeted level of revenues and expenses for the 12  
17       month period ending September 30, 2017. Column 3 shows adjustments to the column 2  
18       figures, where applicable, to reflect various annualization and/or normalization  
19       adjustments. Column 4 is the sum of columns 2-3. The amount of the revenue increase  
20       and related expenses are shown in column 5 with the resulting revenues and expenses at  
21       proposed rates shown in column 6.

1 **Q. Are there schedules showing the derivation of the adjustments shown in Schedule D-**  
2 **2, column 3?**

3 A. Yes. The derivation of the various column 3 revenue adjustments are included in UGI  
4 Gas Exhibit A (Fully Projected) in summary fashion on Schedule D-3, page 1, lines 1-14,  
5 and then listed by individual adjustment on Schedule D-5. Customer charge and  
6 distribution rate revenue adjustments for each customer class are shown on lines 1-5.  
7 Gas Cost revenue adjustments for each customer class are shown on lines 6-10 and  
8 details of other revenue adjustments are shown on lines 11-14. Details for each revenue  
9 adjustment are shown in Schedules D-5 (including supporting schedules D-5a and D-5b)  
10 and D-6 and discussed in the direct testimony of witness David E. Lahoff (UGI Gas  
11 Statement No. 6). Regarding *pro forma* expenses, the derivation of the various  
12 adjustments are summarized individually on pages 1-2 of Schedule D-3, lines 17-55. The  
13 details for these adjustments are found in Schedules D-4 through D-31.

14

15 **2. Operating Expense**

16 **Q. How were the claimed operating expenses for the FPFTY determined?**

17 A. *Pro forma* FPFTY expenses are based on the budgeted level of expenses as a starting  
18 point. The budgeted data, by FERC account, was then adjusted in accordance with  
19 Commission precedent and generally accepted ratemaking principles to reflect a normal,  
20 ongoing level of operations. Schedules supporting those adjustments are found in UGI  
21 Gas Exhibit A (Fully Projected), Section D.

22

1 **Q. Does UGI Gas budget its operating expenses by FERC account?**

2 A. Yes, it does. UGI Gas budgets its operating expenses both by FERC account and by cost  
3 element, such as payroll, employee benefits, rent, etc. UGI Gas uses historic data as a  
4 basis for the distribution of expenses to each FERC account. This is shown in Schedule  
5 B-4 and is the starting point to determine the FPPTY adjusted operating expenses shown  
6 on Schedule D-3.

7  
8 **Q. Were each of the *pro forma* adjustments reflected on Schedule D also charged to an  
9 appropriate FERC account?**

10 A. Yes. Each *pro forma* adjustment was calculated based on the appropriate cost element  
11 and then distributed to FERC accounts directly or by using the ratio used to distribute the  
12 budgeted cost for that element.

13  
14 **Q. Does Schedule D-3 depict the *pro forma* expense adjustments using FERC accounts?**

15 A. These pro forma expense adjustments are presented by major FERC account category.  
16 These adjustments are also shown in the Section D summary schedules.

17  
18 **Q. Schedule D-3 to UGI Gas Exhibit A (Fully Projected) shows an adjustment to Gas  
19 Costs in column 2. Please discuss this adjustment.**

20 A. The detail for this adjustment is shown in Schedule D-6. This adjustment is designed to  
21 reduce purchased gas cost expense by the same amount of the gas cost revenue  
22 adjustment recommended in the direct testimony of David E. Lahoff (UGI Gas Statement  
23 No. 6) and as shown on Schedule D-5, column 3, lines 7-12. UGI Gas recovers its gas

1 costs on a dollar for dollar basis with no profit through an automatic adjustment clause  
2 mechanism pursuant to Section 1307(f) of the Public Utility Code. Therefore, the  
3 reduction in purchased gas costs of \$34.331 million equals the reduction in gas cost  
4 revenue as recommended by Mr. Lahoff. Thus, the purchased gas cost expense has no  
5 effect on net operating income.

6  
7 **Q. Please discuss the Company Use of Fuel adjustment shown on Schedule D-4.**

8 A. Schedule D-4 removes the cost of fuel used in operations. This consists of the cost of gas  
9 used in Company operations, including that used to heat buildings and operate city gate  
10 station heaters. This cost is being removed since it is recovered through Purchased Gas  
11 Cost rates and retainage rates charged to transportation customers.

12  
13 **Q. Please discuss the Salaries and Wages ("S&W") adjustment shown on Schedule D-  
14 7.**

15 A. Schedule D-7 shows a \$379,000 increase to budgeted salaries and wages to reflect end of  
16 FPFTY operating conditions. This adjustment annualizes payroll expense and is  
17 distributed among the various cost accounts. Page 2 shows the development of this  
18 adjustment.

19  
20 **Q. Please describe the annualization adjustment.**

21 A. This adjustment annualizes the effect of wage increases for unionized, exempt and non-  
22 exempt employees that will take place during the FPFTY. Schedule D-7, page 2, line 2  
23 reflects the increase percentages for each classification of employee. Lines 3 through 6

1 indicate the percentage of the year for which the salaries and wages increases are not  
2 reflected in the budget.

3  
4 **Q. How did you determine the split of the budgeted salaries among the various**  
5 **employee classifications shown on Schedule D-7?**

6 A. The split of the budgeted salaries among the various classifications shown on Schedule  
7 D-7, page 1 was determined using the allocations of labor for Operating and Maintenance  
8 expense in the budget. These employee groupings are the same groupings utilized in  
9 developing the labor budget. These categories were used in UGI Gas's budgeting process  
10 for the operating expense portion of salaries and wages.

11  
12 **Q. Please explain the Environmental expense adjustment shown on Schedule D-8.**

13 A. As explained in the direct testimony of Hans G. Bell (UGI Gas Statement No. 9), UGI  
14 Gas historically has accounted for its environmental remediation expenses associated  
15 with the remediation of Pennsylvania manufactured gas plants as a component of its  
16 annual cost of removal. As such, these expenses were recorded in UGI Gas's  
17 accumulated reserve for depreciation and reversed through the annual calculation of the  
18 amortization of net salvage. However, UGI Gas is now proposing to include such  
19 expenses in its projected expenses and remove them from its accumulated reserve for  
20 depreciation. Since the UGI Gas budget did not include this expense, an adjustment is  
21 necessary. This will align the recovery of such expenses with the method of cost  
22 recovery previously adopted for CPG and PNG and other Pennsylvania gas utilities.

23

1 **Q. How does UGI Gas propose to account for in-state manufactured gas plant**  
2 **remediation cost going forward?**

3 A. Since these costs can vary significantly from year-to-year, UGI Gas is requesting  
4 permission in this proceeding to record on its books the difference between the expense  
5 allowance for in-state manufactured gas plant remediation costs authorized in this  
6 proceeding, and actual expense incurred for this purpose, as a regulatory asset or liability,  
7 subject to recovery or refund in future base rate proceedings where the prudence of actual  
8 expenditures can be reviewed. This treatment should protect customers from over-  
9 recoveries and the Company from under-recoveries for this non-revenue producing and  
10 non-expense reducing category of expense.

11

12 **Q. Please discuss Schedule D-9, which shows an adjustment for additional employees.**

13 A. The adjustment for employee additions shown in Schedule D-9 is made up of four parts.  
14 The first is to add \$0.735 million representing the salaries for seventeen incremental  
15 positions in UGI's IT department to support UGI's new customer information system  
16 ("CIS") described in the direct testimony of Thomas N. Lord (UGI Gas Statement No. 8).  
17 The total salary for these positions was multiplied by the allocation factor attributable to  
18 UGI Gas using the Modified Wisconsin Formula as these positions will support the CIS  
19 for the gas and electric divisions of UGI Utilities, Inc., and its two gas utility subsidiaries.  
20 The second adjustment is to add \$0.696 million representing the salaries of ten new  
21 supervisors for UGI Gas. Based on a recent span of control analysis it was determined  
22 the ten new supervisor positions are required to appropriately support the field division.  
23 The third adjustment is to add \$170,000 to increase field wages due to increased

1 competition in UGI Gas's area for qualified utility field resources. The final adjustment  
2 in the amount of \$0.317 million is to add five additional security management resources  
3 and cyber security support positions. The salaries for these security resources were also  
4 multiplied by the UGI Gas allocation factor since these positions will support all of UGI  
5 Utilities, Inc. Each of these adjustments represents changes made since the FPFTY  
6 budget was completed.

7  
8 **Q. Please discuss Schedule D-10, which shows an adjustment to Rate Case Expense.**

9 A. Lines 1 through 3 show the total amount of the \$1.256 million rate case expense UGI Gas  
10 expects to incur in this case. That amount is then normalized over the anticipated two-  
11 year period between the filing of rate cases to establish a normal level of rate case  
12 expense of \$628,000. Since the rate case expense will be incurred in the FTY, no amount  
13 for rate case expense is included in the FPFTY budget. The FPFTY budget therefore was  
14 increased by \$628,000 to reflect a normal level of rate case expense. We believe that  
15 UGI will make regular rate case filings every two years going forward given the  
16 significant capital investments it has committed to make in accordance with its PUC-  
17 approved Long-Term Infrastructure Improvement Program.

18  
19 **Q. What is the nature of the adjustment being shown in Schedule D-11 for**  
20 **Uncollectible Accounts Expense?**

21 A. Schedule D-11 adjusts the budgeted uncollectible accounts expense. Lines 1 through 4 of  
22 Schedule D-11 develop this adjustment by showing a ratio that represents the three-year  
23 average rate of uncollectible accounts expense for the fiscal years 2013 to 2015. This

1 ratio is used to adjust the amount of uncollectible expense in the budget to conform to the  
2 three-year average for the charge-offs. The resulting 1.669% percent ratio shown on line  
3 4 in column 5 is applied on line 7 to the *pro forma* revenues at present rates to calculate  
4 the *pro forma* uncollectible accounts expense of \$5.561 million shown in column 4 on  
5 line 7. This results in a decrease in the level of uncollectibles for the FPFTY from the  
6 budgeted amount as shown on line 5. The 1.669% percent figure is then applied to  
7 determine the level of uncollectible accounts expense at *pro forma* proposed rates  
8 through the gross revenue conversion factor, as shown in column 3, line 2 of Schedule D-  
9 35.

10  
11 **Q. What is the adjustment for the UNITE Project that is shown on Schedule D-13**

12 **A.** The adjustments on Schedule D-13 relate to UGI's Next Information Technology  
13 Enterprise ("UNITE") system replacement project, as described in the direct testimony of  
14 Thomas N. Lord (UGI Gas Statement No. 8), and are broken into three parts. Part one on  
15 lines 1-5 represents preliminary-stage project costs and business and technology  
16 reengineering costs including internal labor, external consulting expense and other  
17 expenses related to the preparation of the vendor and system integrator requests for  
18 proposal, current state assessment, and costs to reengineer the business processes to adapt  
19 to the new system, as well as data conversion, migration and pre-implementation training  
20 costs. These costs have been recorded as expenses in accordance with US GAAP  
21 accounting standards, specifically ASC-350-40 '*Internal Use Software*'. However, under  
22 the FERC Uniform System of Accounts, these costs fit the definition of costs that should  
23 be capitalized once placed in service. The costs in lines 1-4 on Schedule D-13 represent

1 the costs related to these expenses that were included as expenses in the UGI Gas 2017  
2 budget. The company is proposing an adjustment to reduce expenses by \$1.040 million  
3 on line 5 of Schedule D-13 since these costs are included in the plant additions listed on  
4 Schedule C-2.

5  
6 **Q. Is the \$1.040 million adjustment calculated on Schedule D-13 the total amount of**  
7 **these types of costs that are included in Plant Additions?**

8 A. No, the \$1.040 million adjustment only represents the costs that were included in the  
9 2017 budget for UGI Gas. There are additional preliminary stage and business  
10 reengineering costs that were incurred in 2014 and 2015 and are expected to be incurred  
11 in 2016 that will also be included in plant additions. The total amount of these costs is  
12 \$6.7 million. Of this amount \$3.1 million is related to the Company's new CIS and the  
13 portion of these costs allocated to UGI Gas is included in plant additions.

14  
15 **Q. What is the second part of the adjustment on Schedule D-13?**

16 A. The second part of the adjustment related to the UNITE project reflects additional call  
17 center resources that will be required to maintain the Company's level of customer  
18 service during the conversion to UGI's new CIS. The amount of \$1.034 million in  
19 column 2 line 6 of Schedule D-13 represents the total cost to UGI Utilities, multiplied by  
20 the allocation factor to determine the costs attributable to UGI Gas. UGI Gas proposes to  
21 amortize and recover these costs over three years.

22

1 **Q. What is the third part of the adjustment on Schedule D-13?**

2 **A.** The third part of the adjustment on Schedule D-13 relates to the difference in annual  
3 licensing and maintenance fees for the new CIS system and the existing CIS systems.  
4 Line 7 of Schedule D-13 represents the portion of the estimated licensing and  
5 maintenance fees of the new CIS system based on vendor quotes that will be allocated to  
6 UGI Gas. The amount on line 8 is the projected maintenance fees for the existing CIS  
7 system which is included in the 2017 budget. The difference between these amounts,  
8 shown on line 9, is the adjustment to reflect the new CIS system licensing and  
9 maintenance costs.

10

11 **Q. Please explain the adjustment for Post-Retirement expense that is shown on**  
12 **Schedule D-14.**

13 **A.** As shown in Schedule D-14, this adjustment is made up of two components. The first  
14 part of the Other Post-Employment Benefits (“OPEB”) adjustment on lines 1-2 removes  
15 the current budgeted expenses for OPEB of \$2.374 million. This is the amount that UGI  
16 Gas is collecting in current rates. In accordance with regulatory accounting standards,  
17 this amount is reflected as an expense to eliminate any profit or loss resulting from the  
18 difference between OPEB expenditures and the amounts recovered in rates. The  
19 difference between the amount collected and the expense incurred is recorded as a  
20 regulatory asset or liability to later be collected from or returned to ratepayers. UGI Gas  
21 currently funds its OPEB expenditures through a voluntary employees’ beneficiary  
22 association (“VEBA”) trust that is in an overfunded status. Due to the overfunded status,  
23 no contributions are expected to be made and therefore the Company is not including any

1 amount of the OPEB expenditures in its claim. Since there is no claim for OPEB, the  
2 amount in the budget should be removed.

3  
4 **Q. What is the second component of the OPEB adjustment on Schedule D-14?**

5 A. The second component of the OPEB adjustment on lines 3-5 relates to the over collection  
6 of OPEB expenses since the last UGI Gas rate case. The Company has accumulated an  
7 over collection in the amount of \$10.399 million over the 22 years since its last rate case,  
8 net of the PUC-approved re-direction of certain OPEB funding to fund a portion of CAP  
9 program costs, as described in the direct testimony of Robert R. Stoyko (UGI Gas  
10 Statement No. 4). UGI Gas proposes to return this overcollection to customers over 20  
11 years, *i.e.*, to return \$0.520 million annually to customers over a similar time period that  
12 the current recovery mechanism has been in place.

13  
14 **Q. Why is 20 years an appropriate amount of time over which to refund these costs to  
15 the ratepayers?**

16 A. This refund period is consistent with the 20-year time period established in the  
17 Commission's Policy Statement at 52 Pa. Code § 69.351 regarding recovery of the OPEB  
18 costs that investor-owned utilities deferred after the adoption of Statement of Financial  
19 Account Standards (SFAS) No. 106.

20  
21 **Q. Please explain the adjustment to pension expense on Schedule D-14.**

22 A. This adjustment is needed to increase the pension expense from budgeted levels. The  
23 budgeted pension expense was determined on prior period estimates. The updated

1 estimate is based on a more recent actuarial calculation and reflects the cash to be  
2 contributed to the plan, reduced by the percentage of pension expenses that have  
3 historically been capitalized. The amounts reflected in the calculation for the pension  
4 adjustment include those directly attributable to the UGI Gas pension in addition to the  
5 portion of the UGI Corporate pension expense that is included in the corporate expenses  
6 allocated to UGI Gas.

7  
8 **Q. Please discuss the *pro forma* adjustment on Schedule D-15 for Injuries and**  
9 **Damages.**

10 A. The amount of expense incurred for injuries and damages in any one year can vary based  
11 on the quantity and severity of the claims. The budgeted amount for injuries and  
12 damages is shown on line 5 of Schedule D-15. This amount is compared to the three-  
13 year average injuries and damages expenses of \$2.821 million calculated on lines 1-4 to  
14 arrive at a reduction in injuries and damages expense of \$93,000 on line 6.

15  
16 **Q. Please discuss the *pro forma* adjustment on Schedule D-15 for Membership Fees.**

17 A. The Company budgeted the full amount of the anticipated expenses for the American Gas  
18 Association and the Energy Association of Pennsylvania in membership expenses. A  
19 portion of these expense relate to lobbying activities and should not be included in UGI  
20 Gas's membership expense claim. The amounts on lines 7 and 8 of Schedule D-15  
21 represent the percentage of expenses for lobbying activities based on the HTY applied to  
22 the budgeted expenses for each organization. Line 9 on Schedule D-15 shows the total  
23 adjustment to remove lobbying expenses in the amount of \$16,000.

22  
23

**Q. Please explain the adjustment for Licensing of New Software shown on Schedule D-15.**

A. Since the budget was developed for 2017, the Company has determined that there is a need for two new software systems to support the business. Both of these systems will be cloud-based and incur annual licensing fees. The first system is a contractor management system for \$350,000 per year and the second is a customer relationship management software for \$262,000 per year. These systems are expected to be implemented during the FTY and costs are based on vendor supplied quotes.

**Q. Please explain the adjustment for insurance premiums on Schedule D-15.**

A. Subsequent to preparation of the budget, UGI Corporation obtained cyber security insurance for all of its subsidiaries effective for the FTY. The \$83,000 shown on line 13 of Schedule D-15 is the portion of this insurance that is allocated to UGI Gas. It is anticipated that UGI Corporation will continue to procure this insurance each year beyond the FTY, so an adjustment to FPFTY expenses also is appropriate.

**Q. What adjustment is shown on Schedule D-15?**

A. The Company is in the process of implementing additional corrosion control activities at an annual cost of \$300,000, which was not included in the 2016 or 2017 budgets. These programs are necessary to ensure compliance with all regulations and to ensure proper system integrity is maintained. The adjustment on line 14 of Schedule D-15 will add these expenses to the FPFTY.

1 **Q. Please discuss the *pro forma* adjustment on Schedule D-16 for Universal Service**  
2 **expense.**

3 A. This adjustment is needed to reflect the expense related to UGI Gas's Universal Service  
4 programs previously subject to recovery through UGI Gas base rates, as described in the  
5 direct testimony of Robert R. Stoyko (UGI Gas Statement No. 7), but which will be  
6 recovered through UGI Gas's Universal Service Surcharge on a prospective basis,  
7 consistent with the recovery method for such expenses approved for PNG and CPG.

8  
9 **Q. Please explain the adjustment for Energy Efficiency and Conservation ("EE&C")**  
10 **Programs shown on Schedule D-19.**

11 A. This adjustment is needed to reflect the incremental expense related to the Company's  
12 EE&C Program, which is discussed in the direct testimony of Theodore M. Love (UGI  
13 Statement No. 11). The expenses are divided into two categories: rebate costs and the  
14 costs of administering the program. As the EE&C Program is dependent on receiving  
15 authorization from the PUC in this proceeding, it was not included in the FPFTY budget.  
16 As shown in Schedule D-19, the total for these two cost categories is \$2.659 million. The  
17 derivation of this amount is discussed in Mr. Love's direct testimony.

18

19 **3. Depreciation Expense**

20 **Q. How was the level of depreciation expense for the FPFTY determined?**

21 A. UGI Gas's depreciation study is set forth in UGI Gas Exhibit A (Fully Projected) and  
22 shows the determination of *pro forma* depreciation expense. This study uses the FPFTY  
23 ending September 30, 2017 plant in service and the applicable depreciation rates, service  
24 lives, and procedures. A summary of the budgeted depreciation expense and adjustments

1 thereto is found in UGI Gas Exhibit A (Fully Projected), Schedule D-21, and is further  
2 explained in the direct testimony of John F. Wiedmayer (UGI Gas Statement No. 5).

3  
4 **Q. Please describe the depreciation expense adjustments shown on Schedule D-21.**

5 A. UGI Gas witness Wiedmayer presents the depreciation analysis that serves as the  
6 foundation of the depreciation adjustment. The adjustment for depreciation expense of  
7 \$1.119 million set forth on Schedule D-21, page 2, column 3, is designed to annualize  
8 budgeted FPFTY depreciation expense in order to calculate an entire year's worth of  
9 depreciation on plant in service as of the end of the FPFTY, ending September 30, 2017.  
10 This schedule also shows an increase to the net negative salvage amortization of \$1.183  
11 million. The total annualized depreciation expense for the FPFTY, net of costs charged  
12 to clearing accounts and net salvage amortization, is \$43.190 million. The total  
13 adjustment for depreciation expense, net of the increase to the negative salvage  
14 amortization of \$1.674 million, is shown on Schedule D-3, page 2, column 10, line 54.

15  
16 **4. Payroll Taxes**

17 **Q. Please describe the taxes other than income adjustments shown on Schedule D-31.**

18 A. Schedule D-31 contains the details for taxes other than income adjustments. The  
19 adjustment on line 2 removes the capital stock tax in the amount of \$316,000 as the  
20 capital stock tax is set to phase out by the end of the FPFTY. The adjustments to the  
21 payroll tax expenses on lines 4-6 are calculated by multiplying the ratio of tax expense to  
22 payroll expense included in the FPFTY budget by the amount of the payroll adjustment  
23 derived in Schedule D-7 to produce an adjustment to the amount of social security,  
24 Federal Unemployment Tax (FUTA) and State Unemployment Tax (SUTA) expense in

1 the amount of \$178,000. The calculation of these adjustments is shown in more detail on  
2 Schedule D-32.

3

4 **Q. What is the purpose of Schedule D-35?**

5 A. Schedule D-35 shows the calculation of the Gross Revenue Conversion Factor used on  
6 Schedule A-1 to calculate the level of revenues required to achieve the net operating  
7 income required to generate the rate of return supported by the direct testimony of Paul  
8 R. Moul (UGI Gas Statement No. 3). These additional revenues are required to recognize  
9 that uncollectible accounts expense vary with the level of revenue, and to recognize the  
10 additional state and federal income taxes attributable to the proposed rate increase.

11

12 **Q. Does this conclude your direct testimony?**

13 A. Yes, it does.

**Q. Please state your name, occupation and business address.**

A. My name is Paul Ronald Moul. My business address is 251 Hopkins Road, Haddonfield, New Jersey 08033-3062. I am Managing Consultant at the firm P. Moul & Associates, an independent financial and regulatory consulting firm. My educational background, business experience and qualifications are provided in Appendix A, which follows my direct testimony.

**Q. What is the purpose of your testimony?**

A. My testimony presents evidence, analysis, and a recommendation concerning the appropriate cost of common equity and overall rate of return that the Pennsylvania Public Utility Commission ("PUC" or the "Commission") should recognize in the determination of the revenues that UGI Utilities, Inc.'s Gas Division ("UGI Gas" or the "Company") should be authorized as a result of this proceeding. My analysis and recommendation are supported by the detailed financial data contained in Exhibit B, which is a multi-page document divided into fourteen (14) schedules.

**Q. Based upon your analysis, what is your conclusion concerning the appropriate rate of return for the Company?**

A. My conclusion is that the Company should be afforded an opportunity to earn an 8.17% overall rate of return which includes an 11.00% rate of return on common equity. My 11.00% rate or return on common equity is established using capital market and financial data relied upon by investors when assessing the relative risk, and hence cost of capital for the Company.

My overall rate of return recommendation is determined by using the weighted average cost of capital. This approach provides a means to apportion the return to each class of investor. The calculation of the weighted average cost of capital requires the selection of appropriate capital structure ratios and a determination of the cost rate

## DIRECT TESTIMONY OF PAUL R. MOUL

1 for each capital component. The resulting overall cost of capital when applied to the  
2 Company's rate base will provide a level of return which will compensate investors for  
3 the use of their capital. My overall cost of capital recommendation is set forth below  
4 and is shown on page 1 of Schedule 1.

<u>Type of Capital</u>	<u>Ratios</u>	<u>Cost Rate</u>	<u>Weighted Cost Rate</u>
Long-Term Debt	40.30%	5.07%	2.04%
Short-Term Debt	5.15%	2.58%	0.13%
Common Equity	54.55%	11.00%	6.00%
Total	<u>100.00%</u>		<u>8.17%</u>

5 This overall rate of return is applicable to the September 30, 2017, fully projected future  
6 test year and the period that the Company's proposed rates will be effective.

7 **Q. What factors have you considered in the determination of the Company's cost of**  
8 **equity in this proceeding?**

9 A. The Company is a division of UGI Utilities, Inc., a wholly-owned subsidiary of UGI  
10 Corporation ("UGI" or the "Parent Company"). The Company provides natural gas  
11 distribution service to approximately 370,000 customers in fifteen eastern and south  
12 central Pennsylvania counties. Since its last rate case, the Company has added  
13 100,000, or 55 percent more new customers and during this time the Company's utility  
14 plant in service has more than doubled. The Company's service territory contains  
15 several production centers for basic industries involved in steel and aluminum  
16 manufacturing and fabrication chemicals, and food processing. Throughput to on-  
17 system customers in 2015 was represented by approximately 20% to residential  
18 customers, approximately 22% to commercial customers, and approximately 58% to  
19 industrial customers. The significant portion of the Company's throughput to industrial  
20 customers makes the Company a much higher risk utility as compared to the Gas

## DIRECT TESTIMONY OF PAUL R. MOUL

1 Group. In addition, average usage for residential heating customers has declined by  
2 more than 30 per cent since the Company's last base rate case in 1995. UGI Utilities  
3 obtains its natural gas supplies from producers and marketers and has transportation  
4 arrangements through connections to five interstate pipelines. The Company has  
5 storage arrangements for natural gas inventory. UGI Utilities, Inc. also provides electric  
6 delivery service, through its Electric Division, to approximately 62,000 customers in  
7 portions of Luzerne and Wyoming Counties. UGI Utilities, Inc. is also the parent  
8 company of two natural gas distribution utilities, UGI Penn Natural Gas, Inc. and UGI  
9 Central Penn Gas, Inc.

10 **Q. How have you determined the cost of equity in the case?**

11 A. The cost of common equity is established using capital market and financial data relied  
12 upon by investors to assess the relative risk, and hence, the cost of equity for a natural  
13 gas utility, such as the Company. In this regard, I have relied on four well recognized  
14 measures: the Discounted Cash Flow ("DCF") model, the Risk Premium analysis, the  
15 Capital Asset Pricing Model ("CAPM") and the Comparable Earnings approach. By  
16 considering the results of a variety of approaches, I determined that 11.00% represents  
17 a reasonable cost of equity, which is consistent with well recognized principles for  
18 determining a fair rate of return.

19 **Q. In your opinion, what factors should the Commission consider when setting the  
20 Company's cost of capital in this proceeding?**

21 A. The rate of return utilized by the Commission to set rates must be sufficient to cover the  
22 Company's interest and dividend payments, provide a reasonable level of earnings  
23 retention, produce an adequate level of internally generated funds to meet capital  
24 requirements, be commensurate with the risk to which the Company's capital is  
25 exposed, assure confidence in the financial integrity of the Company, support  
26 reasonable credit quality, and allow the Company to raise capital on reasonable terms.

## DIRECT TESTIMONY OF PAUL R. MOUL

1 The return that I propose fulfills these established standards of a fair rate of return set  
2 forth by the landmark Bluefield and Hope cases.<sup>1</sup> That is to say, my proposed rate of  
3 return is commensurate with returns available on investments having corresponding  
4 risks.

5 **Q. What approach have you used in measuring the cost of equity in this case?**

6 A. The models that I used to measure the cost of common equity for the Company were  
7 applied with market and financial data developed for my proxy group of eight (8) natural  
8 gas companies. The proxy group consists of natural gas companies that: (i) are  
9 engaged in the natural gas distribution business, (ii) have publicly-traded common  
10 stock, (iii) are contained in The Value Line Investment Survey, and (iv) are not currently  
11 the target of a merger or acquisition. From the natural gas utilities covered by the basic  
12 service of Value Line, I excluded four companies. The eliminations were: AGL  
13 Resources due to the announced acquisition of it by Southern Company, NiSource Inc.  
14 due to its sizable electric operations and recent separation of the former natural gas  
15 pipeline/storage operations, Piedmont Natural Gas due to the announced acquisition of  
16 it by Duke Energy Corp., and UGI Corp. due to its diversified businesses consisting of  
17 six reportable segments, including propane, two international LPG segments, natural  
18 gas utility, energy services, and electric generation. The companies in the proxy group  
19 are identified on page 2 of Schedule 3. I will refer to these companies as the “Gas  
20 Group” throughout my testimony.

21 **Q. How have you performed your cost of equity analysis with the market data for the**  
22 **Gas Group?**

23 A. I have applied the models/methods for estimating the cost of equity using the average  
24 data for the Gas Group. I have not measured separately the cost of equity for the

---

<sup>1</sup> Bluefield Water Works & Improvement Co. v. P.S.C. of West Virginia, 262 U.S. 679 (1923) and  
F.P.C. v. Hope Natural Gas Co., 320 U.S. 591 (1944).

## DIRECT TESTIMONY OF PAUL R. MOUL

1 individual companies within the Gas Group, because the determination of the cost of  
2 equity for an individual company has become increasingly problematic. The use of  
3 average data for a portfolio of companies reduces the effect that anomalous results for  
4 an individual company may have on the rate of return determination. By employing  
5 group average data, rather than individual companies' analysis, I have helped to  
6 minimize the effect of extraneous influences on the market data for an individual  
7 company.

8 **Q. Please summarize your cost of equity analysis.**

9 A. My cost of equity determination was derived from the results of the methods/models  
10 identified above. In general, the use of more than one method provides a superior  
11 foundation to arrive at the cost of equity. At any point in time, a single method can  
12 provide an incomplete measure of the cost of equity depending upon extraneous factors  
13 that may influence market sentiment. The specific application of these methods/models  
14 will be described later in my testimony. The following table provides a summary of the  
15 indicated costs of equity using each of these approaches, as shown on page 2 of  
16 Schedule 1.

DCF	10.40%
Risk Premium	11.50%
CAPM	11.37%
Comparable Earnings	11.65%

17 From these measures, I recommend a cost of equity of 11.00%. My recommendation is  
18 on the conservative side for UGI Gas because it is based on the Gas Group that does  
19 not have the Company's high risk attributes related to its high level of industrial  
20 throughput. It does provide recognition of the performance of the Company's  
21 management. Mr. Szykman's testimony in UGI Gas Statement No. 1 demonstrates that

## DIRECT TESTIMONY OF PAUL R. MOUL

1 the Company ranks high in customer service and management effectiveness. Indeed,  
2 UGI Utilities has had the lowest residential rates in Pennsylvania for several years and  
3 will continue to have lower than average rates even with the proposed rate levels. In  
4 recognition of its outstanding performance, the Company should be granted an  
5 opportunity to earn an 11.00% rate of return on common equity. The 11.00% rate of  
6 return on common equity provides recognition of the strong performance of the  
7 Company's management and is well within the range of the market-based measures  
8 (i.e., DCF, RP and CAPM) of the cost of equity and the Comparable Earnings book  
9 value method that extends up to 11.65%. To obtain new capital to support an  
10 expanded construction program and retain existing capital, the rate of return on  
11 common equity must be high enough to satisfy investors' requirements. Along these  
12 lines, the Company is spending considerable amounts of capital on main replacements  
13 and that this will put a strain on performance in the short run. In recognition of its  
14 performance, the Company should be granted an opportunity to earn an 11.00% rate of  
15 return on common equity. Such return will help promote natural gas usage in  
16 Pennsylvania and its associated positive economic and environmental effects. I note  
17 that my recommendation does not reflect any adjustment for the greater risk faced by  
18 UGI due to its higher than average sales to industrial customers.

### NATURAL GAS RISK FACTORS

20 **Q. What factors currently affect the business risk of the natural gas utilities?**

21 A. Gas utilities face risks arising from competition, economic regulation, the business  
22 cycle, and customer usage patterns. Today, they operate in a more complex  
23 environment with time frames for decision-making considerably shortened. Their  
24 business profile is influenced by market-oriented pricing for the commodity distributed to  
25 customers and open access for the transportation of natural gas for customers.

26 Natural gas utilities have focused increased attention on safety and reliability, the

## DIRECT TESTIMONY OF PAUL R. MOUL

1 expansion of shale gas induced price benefits and issues, and on conservation and  
2 energy efficiency. In order to address these issues and to comply with new and  
3 pending pipeline safety regulations, natural gas companies are now allocating more of  
4 their resources to addressing aging infrastructure issues and extension and expansion  
5 requests, which have led to increased external capital requirements.

6 **Q. Does the Company face competition in its natural gas business?**

7 A. Yes. The Company's close proximity to the Marcellus shale production area provides  
8 additional risk for it compared to the companies in the Gas Group. Natural gas  
9 generally faces significant competition from alternative energy sources. The Company  
10 faces direct competition from electricity, fuel oil, and propane in its service territory.  
11 Propane and fuel oil have an advantage because they are not inhibited by regulatory  
12 constraints when conducting their marketing activities. This situation is unlike that of  
13 UGI Utilities, where specific thresholds must be satisfied for system expansions, and  
14 where promotional activities are constrained. The Company also faces the risk  
15 associated with throughput to interruptible customers whose deliveries are influenced  
16 by global oil prices.

17 **Q. Are there specific factors influencing the Company's risk profile?**

18 A. Yes. The Company's risk profile is strongly influenced by throughput delivered to  
19 industrial customers. Industrial customers represent approximately 56% of throughput,  
20 but these customers represent only 0.4% of total customers. Moreover, the Company's  
21 top nine customers represent 45% of total throughput. Electric generation,  
22 manufacturing, chemicals, and food processing are among these customers. Steel and  
23 aluminum manufacturing and fabrication face a number of challenges including  
24 international competition, increased costs, and fluctuating demand for its products.  
25 Industrial sales are generally higher in risk than sales to other classes of customers.  
26 Success in this segment of the Company's market is subject to (i) the business cycle,

**DIRECT TESTIMONY OF PAUL R. MOUL**

1 (ii) the price of alternative energy sources, and (iii) pressures from alternative providers.  
 2 Moreover, external factors can also influence the Company's sales to these customers  
 3 which face competitive pressures on their own operations from other facilities outside  
 4 the Company's service territories.

5 **Q. Please indicate how the Company's risk profile is affected by its construction**  
 6 **program.**

7 A. With customer demand for the Company's service at high levels, the Company is faced  
 8 with the requirement to invest in new facilities to meet growth and to maintain and  
 9 upgrade existing facilities in its service territory. To maintain safe and reliable service to  
 10 existing customers, the Company must invest to upgrade existing facilities. The  
 11 Company has approximately 11% of its distribution mains constructed of unprotected  
 12 steel and cast iron pipe as of year-end 2014. The Company also has approximately 6%  
 13 of its services constructed of unprotected steel. The continuing costs for upgrading the  
 14 Company's pipe system will elevate the level of construction expenditures. In the  
 15 situation where additional capital investment is required to serve new customers,  
 16 supportive regulation represents a necessary prerequisite for the Company to actually  
 17 achieve a fair rate of return and attract new capital on reasonable terms.

18 For the future, the Company estimates that its construction expenditures will be:

	Capital Expenditures		
	Gas Division	Electric Division	Total
2016	\$ 194,100,000	\$ 12,500,000	\$ 206,600,000
2017	196,800,000	11,700,000	\$ 208,500,000
2018	124,500,000	9,600,000	\$ 134,100,000
2019	116,000,000	9,800,000	\$ 125,800,000
	<u>\$ 631,400,000</u>	<u>\$ 43,600,000</u>	<u>\$ 675,000,000</u>

19

## DIRECT TESTIMONY OF PAUL R. MOUL

1 During the 2016-2019 period, gross construction expenditures will represent an  
2 approximate 63% increase (65% for gas and 43% for electric) in net utility plant,  
3 including construction work in progress, from the level at September 30, 2015.

4 Q. Is the Company's risk also affected by the substantial decline in usage per customer?

5 A. Yes. Despite adding a substantial number of new customers, usage per residential  
6 heating customer has declined by more than 30 percent since the Company's last base  
7 rate case in 1995. Company analysis indicates that this decline will continue,  
8 particularly with the implementation of a new energy conservation plan. This plan will  
9 provide many benefits to customers and to the public, but can be expected to further  
10 reduce customer usage.

11 **Q. How should the Commission respond to the issues facing the natural gas  
12 business and in particular UGI Gas?**

13 A. The Commission should recognize the issues listed above when deciding the rate of  
14 return issue in this case. In particular, the Company has abnormal risks associated with  
15 its large throughput to industrial customers. It should also be recognized that base  
16 rates for the Company's gas customers have not been changed in twenty-one years.  
17 Another risk is declining usage per customer discussed in the testimony of Company  
18 witness Mr. David Lahoff (UGI Gas Statement No. 6).

## FUNDAMENTAL RISK ANALYSIS

20 **Q. Is it necessary to conduct a fundamental risk analysis to provide a framework for  
21 the determination of the cost of equity?**

22 A. Yes. It is necessary to establish a company's relative risk position within its industry  
23 through a fundamental analysis of various quantitative and qualitative factors which  
24 bear upon investors' assessment of overall risk. The qualitative factors that bear upon  
25 the Company's risk have already been discussed. The quantitative risk analysis  
26 follows. For this purpose, I have compared UGI Utilities to the S&P Public Utilities, an

## DIRECT TESTIMONY OF PAUL R. MOUL

1 industry-wide proxy consisting of all types of public utility endeavors, and the Gas  
2 Group.

3 **Q. What are the components of the S&P Public Utilities?**

4 A. The S&P Public Utilities is a widely recognized index comprised of electric power and  
5 natural gas companies. These companies are identified on page 3 of Schedule 4. I  
6 have used this group as a broad-based measure of all types of regulated public utility  
7 endeavors.

8 **Q. What companies comprise your Gas Group?**

9 A. My Gas Group obtained from the Value Line publication consists of the following  
10 companies: Atmos Energy Corp., Chesapeake Utilities Corp., Laclede Group, New  
11 Jersey Resources Corp., Northwest Natural Gas, South Jersey Industries, Inc.,  
12 Southwest Gas Corp., and WGL Holdings, Inc.

13 **Q. Is knowledge of a utility's bond rating an important factor in assessing its risk  
14 and cost of capital?**

15 A. Yes. Knowledge of a company's credit quality rating is an important determinant in  
16 analyzing a company's cost of equity because the cost of each type of capital is directly  
17 related to the associated risk of the firm. So while a company's credit quality risk is  
18 directly shown by the rating and yield on its bonds, these relative risk assessments also  
19 bear upon the cost of equity. This is because a firm's cost of equity is represented by  
20 its borrowing cost plus a premium to recognize the higher risk of an equity investment  
21 compared to debt.

22 **Q. How do the bond ratings compare for the Company, the Gas Group, and the S&P  
23 Public Utilities?**

24 A. Presently, the Company's Long Term ("LT") issuer rating is A2 from Moody's and A-  
25 from Fitch. The LT issuer rating by Moody's focuses upon the credit quality of the  
26 issuer of the debt, rather than upon the debt obligation itself. The Company's credit

## DIRECT TESTIMONY OF PAUL R. MOUL

1 quality is the same as the Gas Group, which has an average A2 and A- credit rating  
2 from Moody's and S&P, respectively. For the S&P Public Utilities, the average  
3 composite credit rating is A3 by Moody's and BBB+ by S&P. Many of the financial  
4 indicators which I will subsequently discuss are considered during the rating process.

5 **Q. How do the financial data compare for the Company, UGI Utilities, the Gas Group,  
6 and the S&P Public Utilities?**

7 A. The broad categories of financial data that I will discuss are shown on Schedule 2, 3  
8 and 4. The data cover the five-year period 2010-2014. I will highlight the important  
9 categories of relative risk may be summarized as follows:

10 Size. In terms of capitalization, UGI Utilities is smaller than the average size of  
11 the Gas Group. The S&P Public Utilities is very much larger than all the gas companies  
12 that I have considered. All other things being equal, a smaller company is riskier than a  
13 larger company, because a given change in revenue and expense has a proportionately  
14 greater impact on a small firm. As I will demonstrate later, the size of a firm can impact  
15 its cost of equity. This is the case for UGI Utilities and the Gas Group.

16 Market Ratios. Historical market-based financial ratios, such as price-earnings  
17 multiples and dividend yields, provide a partial measure of the investor-required cost of  
18 equity. If all other factors are equal, investors will require a higher rate of return for  
19 companies which exhibit greater risk, in order to compensate for that risk. That is to  
20 say, a firm that investors perceive to have higher risks will experience a lower price per  
21 share in relation to expected earnings.<sup>2</sup>

22 Since UGI Utilities' stock is not traded, there are no market ratios for the  
23 Company. The five-year average price-earnings multiple for the Gas Group was fairly  
24 similar to that of the S&P Public Utilities. The five-year average dividend yields were

---

<sup>2</sup> For example, two otherwise similarly situated firms each reporting \$1.00 in earnings per share would have different market prices at varying levels of risk (i.e., the firm with a higher level of risk will have a lower share value, while the firm with a lower risk profile will have a higher share value).

## DIRECT TESTIMONY OF PAUL R. MOUL

1 somewhat lower for the Gas Group as compared to the S&P Public Utilities. The  
2 average market-to-book ratios were somewhat higher for the Gas Group than the S&P  
3 Public Utilities.

4 Common Equity Ratio. The level of financial risk is measured by the proportion  
5 of long-term debt and other senior capital that is contained in a company's  
6 capitalization. Financial risk is also analyzed by comparing common equity ratios (the  
7 complement of the ratio of debt and other senior capital). That is to say, a firm with a  
8 high common equity ratio has low financial risk, while a firm with a low common equity  
9 ratio has high financial risk. The five-year average common equity ratios, based on  
10 permanent capital based on book value, were 54.9% for UGI Utilities, 57.6% for the Gas  
11 Group, and 45.3% for the S&P Public Utilities. This shows that the financial risk of UGI  
12 Utilities was slightly higher than that of the Gas Group.

13 Return on Book Equity. Greater variability (i.e., uncertainty) of a firm's earned  
14 returns signifies relative levels of risk, as shown by the coefficient of variation (standard  
15 deviation ÷ mean) of the rate of return on book common equity. The higher the  
16 coefficient of variation, the greater degree of variability. During the five-year period, the  
17 coefficients of variation were 0.105 (1.4% ÷ 13.3%) for UGI Utilities, 0.058 (0.6% ÷  
18 10.4%) for the Gas Group, and 0.102 (1.0% ÷ 9.8%) for the S&P Public Utilities. These  
19 comparisons show substantially higher earnings variability for the Company compared  
20 to the Gas Group and slightly higher earnings variability for the Company compared to  
21 the S&P Public Utilities, thus signifying higher risk.

22 Operating Ratios. I have also compared operating ratios (the percentage of  
23 revenues consumed by operating expense, depreciation and taxes other than income).<sup>3</sup>  
24 The five-year average operating ratios were 80.4% for UGI Utilities, 88.3% for the Gas

---

<sup>3</sup> The complement of the operating ratio is the operating margin which provides a measure of profitability. The higher the operating ratio, the lower the operating margin.

## DIRECT TESTIMONY OF PAUL R. MOUL

1 Group, and 81.3% for the S&P Public Utilities. The lower average operating ratio for  
2 UGI Utilities suggests somewhat lower risk.

3 Coverage. The level of fixed charge coverage (i.e., the multiple by which  
4 available earnings cover fixed charges, such as interest expense) provides an indication  
5 of the earnings protection for creditors. Higher levels of coverage, and hence earnings  
6 protection for fixed charges, are usually associated with superior grades of  
7 creditworthiness. The five-year average pre-tax interest coverage (excluding AFUDC)  
8 was 5.11 times for UGI Utilities, 4.90 times for the Gas Group, and 3.19 times for the  
9 S&P Public Utilities. The somewhat higher interest coverage for UGI Utilities suggests  
10 slightly lower credit risk.

11 Quality of Earnings. Measures of earnings quality are usually revealed by the  
12 percentage of AFUDC related to income available for common equity, the effective  
13 income tax rate, and other cost deferrals. These measures of earnings quality usually  
14 influence a firm's internally generated funds. Quality of earnings has not been a  
15 significant concern for UGI Utilities and the Gas Group.

16 Internally Generated Funds. Internally generated funds ("IGF") provide an  
17 important source of new investment capital for a utility and represent a key measure of  
18 credit strength. Historically, the five-year average percentage of IGF to construction  
19 expenditures was 117.4% for UGI Utilities, 90.0% for the Gas Group, and 87.5% for the  
20 S&P Public Utilities. The Company's levels of IGF have declined in recent years as its  
21 construction expenditures have increased. This indicates a changing risk profile for the  
22 Company that points to higher risk prospectively.

23 Betas. The financial data that I have been discussing relate primarily to  
24 company-specific risks. Market risk for firms with publicly-traded stock is measured by  
25 beta coefficients. Beta coefficients attempt to identify systematic risk, i.e., the risk  
26 associated with changes in the overall market for common equities. Value Line

## DIRECT TESTIMONY OF PAUL R. MOUL

1 publishes such a statistical measure of a stock's relative historical volatility to the rest of  
2 the market.<sup>3</sup> A comparison of market risk is shown by the Value Line betas of .78 as  
3 the average for the Gas Group provided on page 2 of Schedule 3 and .77 as the  
4 average for the S&P Public Utilities provided on page 3 of Schedule 4.

5 **Q. Please summarize your risk evaluation of UGI Utilities and the Gas Group.**

6 A. The investment risk of UGI Utilities parallels that of the Gas Group in certain respects.  
7 In certain regards, principally related to its small size, large throughput to industrial  
8 customers, slightly lower common equity ratio, and more variable earned returns, UGI  
9 Utilities has somewhat higher risk traits. UGI Utilities has lower risk as shown by its  
10 lower operating ratio and higher interest coverages. The Company's credit quality is  
11 comparable to the Gas Group. Its IGF to construction has been trending downward as  
12 construction expenditures have increased, which shows more risk prospectively. On  
13 balance, the cost of equity for the Gas Group would understate the Company's cost of  
14 equity for this case.

### **RECOMMENDED CAPITAL STRUCTURE RATIOS**

16 **Q. Please explain the selection of capital structure ratios for UGI Utilities in this**  
17 **case.**

18 A. In the situation where the operating public utility raises its own long-term debt directly in  
19 the capital markets, as is the case for UGI Utilities, it is proper to employ the capital  
20 structure ratios and senior capital cost rates of the regulated public utility for rate of  
21 return purposes. In that case, the property and earnings of the operating public utility  
22 forms the basis of the capital employed and the capital cost rates are directly  
23 identifiable. Since the Gas Division of UGI Utilities does not obtain its capital

---

<sup>3</sup> The procedure used to calculate the beta coefficient published by Value Line is described on page 3 of Schedule 14. A common stock that has a beta less than 1.0 is considered to have less systematic risk than the market as a whole and would be expected to rise and fall more slowly than the rest of the market. A stock with a beta above 1.0 would have more systematic risk.

## DIRECT TESTIMONY OF PAUL R. MOUL

1 independently, I have employed the consolidated capital structure ratios of the  
2 Company to calculate the rate of return for this case. Not only does UGI Utilities attract  
3 investor-provided capital for its gas and electric divisions, it also does that for its  
4 regulated gas distribution subsidiaries, UGI Penn Natural Gas, Inc. and UGI Central  
5 Penn Gas, Inc. The circumstances of UGI Utilities indicate that the capital structure  
6 ratios of the Company should be used for rate of return purposes for both its utility  
7 divisions and its subsidiaries.

8 **Q. Does Schedule 5 provide the capitalization and capital structure ratios you have**  
9 **considered?**

10 A. Yes. Schedule 5 presents UGI Utilities capitalization and related capital structure at  
11 September 30, 2015, the end of the historic test year. Also shown on Schedule 5 is the  
12 UGI Utilities capital structure estimated at September 30, 2016, the end of the future  
13 test year, and at September 30, 2017, the end of the fully forecast test year. The  
14 changes in the Company's capital structure consist of: (i) maturities of three series of  
15 debt consisting of \$247 million in the future test year (ii) one maturity of \$20 million in  
16 the fully forecast test year, (iii) the issuance of two series of long-term debt totaling \$300  
17 million in the future test year, (iv) the issuance of \$100 million of long-term debt in the  
18 fully forecast test year, and (v) the Company's projection of retained earnings at the end  
19 of the future and fully forecast test years.

20 **Q. Have you made adjustments to the Company's capitalization for ratesetting**  
21 **purposes?**

22 A. Yes. I have removed the accumulated other comprehensive income ("OCI") from the  
23 Company's common equity account.

24 **Q. Please explain the justification for removing the accumulated OCI?**

25 A. The accumulated OCI must be eliminated from the capital structure for rate setting  
26 purposes. OCI arises from a variety of sources, including: minimum pension liability

## DIRECT TESTIMONY OF PAUL R. MOUL

1 (“MPL”), foreign currency hedges, unrealized gains and losses on securities available  
2 for sale, interest rate swaps, and other cash flow hedges. The accumulated OCI for the  
3 Company has its roots in the MPL and interest rate hedges associated with the future  
4 issuance of long-term debt. A MPL entry must be recorded on the balance sheet when  
5 the present value of the pension benefit earned by employees exceeds the market  
6 value of trust fund assets. It should be noted that the Company records the change  
7 related to prior service cost and actuarial valuations as a regulatory asset for the portion  
8 of pension attributable to its retirees and employees that are part of its regulated utility  
9 operations. The amount in the accumulated OCI is just related to the portion  
10 attributable to employees of UGI Corporation and non-utility subsidiaries. That is to  
11 say, the accumulated OCI associated with MLP is not related to utility operations. The  
12 interest rate hedges, as they affect OCI, must also be removed because they have  
13 been reflected in the forecast of interest rates used to calculate the embedded cost of  
14 debt in the future and fully forecast test years.

15 **Q. What capital structure ratios do you recommend be adopted for rate of return**  
16 **purposes in this proceeding?**

17 A. Since ratemaking is prospective, the rate of return should reflect known conditions  
18 which will exist during the period of time the proposed rates are to be effective. I will  
19 adopt the Company's capital structure ratios at the end of the fully forecast test year of  
20 40.30% long-term debt, 5.15% short-term debt, and 54.55% common equity. These  
21 ratios are with the ranges indicated for the Gas Group. These capital structure ratios  
22 are the best approximation of the mix of capital the Company will employ to finance its  
23 rate base during the period new rates are in effect. For the purpose of calculating the  
24 short-term debt ratio, the Company uses a twelve-month average for ratesetting  
25 purposes. This approach conforms to the seasonal nature of short-term debt related to  
26 stored gas inventory. This procedure has been used by the Commission frequently for

## DIRECT TESTIMONY OF PAUL R. MOUL

1 gas distribution utilities when calculating capital structure ratios. I have removed from  
2 the short-term debt balances the bridge financing associated with long-term debt  
3 maturities that occurred prior to the refinancing of those amounts with subsequent  
4 issues of long-term debt. This process is necessary to avoid double-counting for  
5 interim debt used to meet maturities before they are refinanced.

### EMBEDDED COST OF DEBT

7 **Q. What cost rate have you assigned to the long-term debt portion of the capital  
8 structure?**

9 A. Consistency requires that the embedded senior capital cost rates of UGI Utilities must  
10 be used for developing a fair rate of return. It is essential that the cost rate of long-term  
11 debt is related to the same proportion of senior capital employed to arrive at the capital  
12 structure ratios. The determination of the long-term debt cost rate is essentially an  
13 arithmetic exercise. This is due to the fact that the Company has contracted for the use  
14 of this capital for a specific period of time at a specified cost rate. As shown on page 1  
15 of Schedule 6, I have computed the actual embedded cost rate of long-term debt at  
16 September 30, 2015. On page 2 of Schedule 6, I have shown the estimated embedded  
17 cost rate of long-term debt at September 30, 2016. And on page 3 of Schedule 6, the  
18 embedded cost of long-term debt is shown for the fully forecast test year. The  
19 development of the individual effective cost rates for each series of long-term debt,  
20 using the cost rate to maturity technique, is shown on page 4 of Schedule 6. The cost  
21 rate, or yield to maturity, is the rate of discount that equates the present value of all  
22 future interest and principal payments with the net proceeds of the bond.

23 I will adopt the 5.07% forecast embedded long-term debt cost rate at September  
24 30, 2017, as shown on page 3 of Schedule 6. This rate is related to the amount of long-  
25 term debt shown on Schedule 5 which provides the basis for the 40.30% long-term debt  
26 ratio.

## DIRECT TESTIMONY OF PAUL R. MOUL

1 **Q. What cost rate have you assigned to the short-term debt?**

2 A. The cost of short-term debt for UGI Utilities is comprised of two components. They  
3 consist of: (i) London Interbank Offered Rate (“LIBOR”) and (ii) a margin or spread to  
4 recognize the risk associated with UGI Utilities’ credit quality. For this case, I have used  
5 the Blue Chip Financial Forecasts that shows a forecast LIBOR rate of 1.7% in the first  
6 quarter of 2017. Blue Chip does not publish LIBOR forecasts for subsequent quarters  
7 of 2017. For the spread associated with UGI Utilities’ credit quality, the margin charged  
8 to UGI Utilities is 0.875%. In total, the cost of short-term debt is 2.575% (1.7% +  
9 0.875%) reflecting the two components listed above.

### COST OF EQUITY – GENERAL APPROACH

10  
11 **Q. Please describe the process you employed to determine the cost of equity for the**  
12 **Company.**

13 A. Although my fundamental financial analysis provides the required framework to  
14 establish the risk relationships among UGI Utilities, the Gas Group, and the S&P Public  
15 Utilities, the cost of equity must be measured by standard financial models that I  
16 identified above. Differences in risk traits, such as size, business diversification,  
17 geographical diversity, regulatory policy, financial leverage, and bond ratings must be  
18 considered when analyzing the cost of equity.

19 It is also important to reiterate that no one method or model of the cost of equity  
20 can be applied in an isolated manner. Rather, informed judgment must be used to take  
21 into consideration the relative risk traits of the firm. It is for this reason that I have used  
22 more than one method to measure the Company’s cost of equity. As I describe below,  
23 each of the methods used to measure the cost of equity contains certain incomplete  
24 and/or overly restrictive assumptions and constraints that are not optimal. Therefore, I  
25 favor considering the results from a variety of methods. In this regard, I applied each of

## DIRECT TESTIMONY OF PAUL R. MOUL

1 the methods with data taken from the Gas Group and arrived at a cost of equity of  
2 11.00% for the Company.

### DISCOUNTED CASH FLOW

3  
4 **Q. Please describe your use of the Discounted Cash Flow approach to determine the**  
5 **cost of equity.**

6 A. The DCF model seeks to explain the value of an asset as the present value of future  
7 expected cash flows discounted at the appropriate risk-adjusted rate of return. In its  
8 simplest form, the DCF return on common stock consists of a current cash (dividend)  
9 yield and future price appreciation (growth) of the investment. The dividend discount  
10 equation is the familiar DCF valuation model and assumes future dividends are  
11 systematically related to one another by a constant growth rate. The DCF formula is  
12 derived from the standard valuation model:  $P = D/(k-g)$ , where P = price, D = dividend,  
13 k = the cost of equity, and g = growth in cash flows. By rearranging the terms, we  
14 obtain the familiar DCF equation:  $k = D/P + g$ . All of the terms in the DCF equation  
15 represent investors' assessment of expected future cash flows that they will receive in  
16 relation to the value that they set for a share of stock (P). The DCF equation is  
17 sometimes referred to as the "Gordon" model.<sup>4</sup> My DCF results are provided on page  
18 2 of Schedule 1 for the Gas Group. The DCF return is 10.40%.

19 Among other limitations of the model, there is a certain element of circularity in  
20 the DCF method when applied in rate cases. This is because investors' expectations  
21 for the future depend upon regulatory decisions. In turn, when regulators depend upon  
22 the DCF model to set the cost of equity, they rely upon investor expectations that

---

<sup>4</sup> Although the popular application of the DCF model is often attributed to the work of Myron J. Gordon in the mid-1950's, J. B. Williams expounded the DCF model in its present form nearly two decades earlier.

## DIRECT TESTIMONY OF PAUL R. MOUL

1 include an assessment of how regulators will decide rate cases. Due to this circularity,  
2 the DCF model may not fully reflect the true risk of a utility.

3 **Q. Please explain the dividend yield component of a DCF analysis.**

4 A. The DCF methodology requires the use of an expected dividend yield to establish the  
5 investor-required cost of equity. For the twelve months ended October 2015, the  
6 monthly dividend yields are shown on Schedule 7 and reflect an adjustment to the  
7 month-end prices to reflect the buildup of the dividend in the price that has occurred  
8 since the last ex-dividend date (i.e., the date by which a shareholder must own the  
9 shares to be entitled to the dividend payment – usually about two to three weeks prior to  
10 the actual payment).

11 For the twelve months ended October 2015, the average dividend yield was  
12 3.18% for the Gas Group based upon a calculation using annualized dividend payments  
13 and adjusted month-end stock prices. The dividend yields for the more recent six- and  
14 three-month periods were 3.24% and 3.17%, respectively. I have used, for the purpose  
15 of the DCF model, the six-month average dividend yield of 3.24% for the Gas Group.  
16 The use of this dividend yield will reflect current capital costs, while avoiding spot yields.  
17 For the purpose of a DCF calculation, the average dividend yield must be adjusted to  
18 reflect the prospective nature of the dividend payments, i.e., the higher expected  
19 dividends for the future. Recall that the DCF is an expectational model that must reflect  
20 investor anticipated cash flows for the Gas Group. I have adjusted the six-month  
21 average dividend yield in three different, but generally accepted, manners and used the  
22 average of the three adjusted values as calculated in the lower panel of data presented  
23 on Schedule 7. This adjustment adds ten basis points to the six-month average  
24 historical yield, thus producing the 3.34% adjusted dividend yield for the Gas Group.

25 **Q. Please explain the underlying factors that influence investor's growth**  
26 **expectations.**

## DIRECT TESTIMONY OF PAUL R. MOUL

1 A. As noted previously, investors are interested principally in the future growth of their  
2 investment (i.e., the price per share of the stock). Future earnings per share growth  
3 represent the DCF model's primary focus because under the constant price-earnings  
4 multiple assumption of the model, the price per share of stock will grow at the same rate  
5 as earnings per share. In conducting a growth rate analysis, a wide variety of variables  
6 can be considered when reaching a consensus of prospective growth, including:  
7 earnings, dividends, book value, and cash flow stated on a per share basis. Historical  
8 values for these variables can be considered, as well as analysts' forecasts that are  
9 widely available to investors. A fundamental growth rate analysis is sometimes  
10 represented by the internal growth ( $b \times r$ ), where "r" represents the expected rate of  
11 return on common equity and "b" is the retention rate that consists of the fraction of  
12 earnings that are not paid out as dividends. To be complete, the internal growth rate  
13 should be modified to account for sales of new common stock -- this is called external  
14 growth ( $s \times v$ ), where "s" represents the new common shares expected to be issued by  
15 a firm and "v" represents the value that accrues to existing shareholders from selling  
16 stock at a price different from book value. Fundamental growth, which combines  
17 internal and external growth, provides an explanation of the factors that cause book  
18 value per share to grow over time.

19 Growth also can be expressed in multiple stages. This expression of growth  
20 consists of an initial "growth" stage where a firm enjoys rapidly expanding markets, high  
21 profit margins, and abnormally high growth in earnings per share. Thereafter, a firm  
22 enters a "transition" stage where fewer technological advances and increased product  
23 saturation begin to reduce the growth rate and profit margins come under pressure.  
24 During the "transition" phase, investment opportunities begin to mature, capital  
25 requirements decline, and a firm begins to pay out a larger percentage of earnings to  
26 shareholders. Finally, the mature or "steady-state" stage is reached when a firm's

## DIRECT TESTIMONY OF PAUL R. MOUL

1 earnings growth, payout ratio, and return on equity stabilizes at levels where they  
2 remain for the life of a firm. The three stages of growth assume a step-down of high  
3 initial growth to lower sustainable growth. Even if these three stages of growth can be  
4 envisioned for a firm, the third “steady-state” growth stage, which is assumed to remain  
5 fixed in perpetuity, represents an unrealistic expectation because the three stages of  
6 growth can be repeated. That is to say, the stages can be repeated where growth for a  
7 firm ramps-up and ramps-down in cycles over time.

8 **Q. Did you assume a non-constant growth rate in your analysis?**

9 A. No. I acknowledge that growth can also be expressed in multiple stages, but there is no  
10 need to do so in this case. As my subsequent analysis will reveal, my growth rate  
11 determination provides a constant growth rate that is sustainable given the  
12 fundamentals currently affecting the industry. For example, infrastructure rehabilitation  
13 adds to the growth of rate base that will provide the foundation for future growth that is  
14 consistent with the constant growth rate.

15 **Q. What investor-expected growth rate is appropriate in a DCF calculation?**

16 A. Investors consider both company-specific variables and overall market sentiment (i.e.,  
17 level of inflation rates, interest rates, economic conditions, etc.) when balancing their  
18 capital gains expectations with their dividend yield requirements. I follow an approach  
19 that is not rigidly formatted because investors are not influenced by a single set of  
20 company-specific variables weighted in a formulaic manner. In my opinion, all relevant  
21 growth rate indicators using a variety of techniques must be evaluated when formulating  
22 a judgment of investor-expected growth.

23 **Q. What company-specific data have you considered in your growth rate analysis?**

24 A. As presented on Schedules 8 and 9, I have considered both historical and projected  
25 growth rates in earnings per share, dividends per share, book value per share, and  
26 cash flow per share for the Gas Group. While analysts will review all measures of

## DIRECT TESTIMONY OF PAUL R. MOUL

1 growth as I have done, it is earnings per share growth that influences directly the  
2 expectations of investors for utility stocks.<sup>5</sup> Forecasts of earnings growth are required  
3 within the context of the DCF because the model is a forward-looking concept, and with  
4 a constant price-earnings multiple and payout ratio, all other measures of growth will  
5 mirror earnings growth. So with the assumptions underlying the DCF, all forward-  
6 looking projections should be similar with a constant price-earnings multiple, earned  
7 return, and payout ratio.

8 As to the issue of historical data, investors cannot purchase past earnings of a  
9 utility, rather they are only entitled to future earnings. In addition, assigning significant  
10 weight to historical performance results in double counting of the historical data. While  
11 history cannot be ignored, it is already factored into the analysts' forecasts of earnings  
12 growth. In developing a forecast of future earnings growth, an analyst would first  
13 apprise himself/herself of the historical performance of a company. Hence, there is no  
14 need to count historical growth rates a second time, because historical performance is  
15 already reflected in analysts' forecasts which reflect an assessment of how the future  
16 will diverge from historical performance.

17 Schedule 8 shows the historical growth rates in earnings per share, dividends  
18 per share, book value per share, and cash flow per share for the Gas Group. The  
19 historical growth rates were taken from the Value Line publication that provides these  
20 data. As shown on Schedule 8, the historical growth of earnings per share was in the  
21 range of 4.25% to 5.81% for the Gas Group.

22 **Q. What is presented in Schedule 9?**

23 A. Schedule 9 provides projected earnings per share growth rates taken from analysts'  
24 forecasts compiled by IBES/First Call, Reuters, Zacks, Morningstar, SNL, and Value

---

<sup>5</sup> Gordon, Gordon & Gould, "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management (Spring 1989).

## DIRECT TESTIMONY OF PAUL R. MOUL

1 Line. IBES/First Call, Reuters, Zacks, Morningstar, and SNL represent reliable  
2 authorities of projected growth upon which investors rely. The IBES/First Call, Reuters,  
3 Zacks, and SNL growth rates are consensus forecasts taken from a survey of analysts  
4 that make projections of growth for these companies. The IBES/First Call, Reuters,  
5 Zacks, Morningstar, and SNL estimates are obtained from the Internet and are widely  
6 available to investors. First Call probably is quoted most frequently in the financial  
7 press when reporting on earnings forecasts. The Value Line forecasts also are widely  
8 available to investors and can be obtained by subscription or free-of-charge at most  
9 public and collegiate libraries. The IBES/First Call, Reuters, Zacks, and Morningstar,  
10 and SNL forecasts are limited to earnings per share growth, while Value Line makes  
11 projections of other financial variables. The Value Line forecasts of dividends per  
12 share, book value per share, and cash flow per share have also been included on  
13 Schedule 9 for the Gas Group.

14 **Q. Is a five-year investment horizon associated with the analysts' forecasts**  
15 **consistent with the traditional DCF model?**

16 A. Yes. In fact, it illustrates that the infinite form of the DCF model contains an unrealistic  
17 assumption. Rather than viewing the DCF in the context of an endless stream of  
18 growing dividends (e.g., a century of cash flows), the growth in the share value (i.e.,  
19 capital appreciation, or capital gains yield) is most relevant to investors' total return  
20 expectations. Hence, the sale price of a stock can be viewed as a liquidating dividend  
21 that can be discounted along with the annual dividend receipts during the investment-  
22 holding period to arrive at the investor expected return. The growth in the price per  
23 share will equal the growth in earnings per share absent any change in price-earnings  
24 ("P-E") multiple -- a necessary assumption of the DCF. As such, my company-specific  
25 growth analysis, which focuses principally upon five-year forecasts of earnings per  
26 share growth, conforms with the type of analysis that influences the actual total return

## DIRECT TESTIMONY OF PAUL R. MOUL

1 expectation of investors. Moreover, academic research focuses on five-year growth  
2 rates as they influence stock prices. Indeed, if investors really required forecasts which  
3 extended beyond five years in order to properly value common stocks, then I am sure  
4 that some investment advisory service would begin publishing that information for  
5 individual stocks in order to meet the demands of investors. The absence of such a  
6 publication is proof that investors do not require infinite forecasts in order to purchase  
7 and sell stocks in the marketplace.

8 **Q. What does Schedule 9 show as the projected growth rates?**

9 A. As to the five-year forecast growth rates, Schedule 9 indicates that the projected  
10 earnings per share growth rates for the Gas Group are 5.12% by IBES/First Call, 6.11%  
11 by Reuters, 5.47% by Zacks, 4.80% by Morningstar, 5.28% by SNL, and 7.06% by  
12 Value Line. The Value Line projections indicate that earnings per share for the Gas  
13 Group will grow prospectively at a more rapid rate (i.e., 7.06%) than the dividends per  
14 share (i.e., 4.88%), which translates into a declining dividend payout ratio for the future.  
15 As noted earlier, with the constant price-earnings multiple assumption of the DCF  
16 model, growth for these companies will occur at the higher earnings per share growth  
17 rate, thus producing the capital gains yield expected by investors.

18 **Q. What conclusion have you drawn from these data regarding the applicable  
19 growth rate to be used in the DCF model?**

20 A. A variety of factors should be examined to reach a conclusion on the DCF growth rate.  
21 However, certain growth rate variables should be emphasized when reaching a  
22 conclusion on an appropriate growth rate. From the various alternative measures of  
23 growth identified above, earnings per share should receive greatest emphasis.  
24 Earnings per share growth are the primary determinant of investors' expectations  
25 regarding their total returns in the stock market. This is because the capital gains yield  
26 (i.e., price appreciation) will track earnings growth with a constant price earnings

## DIRECT TESTIMONY OF PAUL R. MOUL

1 multiple (a key assumption of the DCF model). Moreover, earnings per share (derived  
2 from net income) are the source of dividend payments and are the primary driver of  
3 retention growth and its surrogate, i.e., book value per share growth. As such, under  
4 these circumstances, greater emphasis must be placed upon projected earnings per  
5 share growth. In this regard, it is worthwhile to note that Professor Myron Gordon, the  
6 foremost proponent of the DCF model in rate cases, concluded that the best measure of  
7 growth in the DCF model is a forecast of earnings per share growth.<sup>6</sup> Hence, to follow  
8 Professor Gordon's findings, projections of earnings per share growth, such as those  
9 published by IBES/First Call, Zacks, Morningstar, and Value Line, represent a  
10 reasonable assessment of investor expectations.

11 The forecasts of earnings per share growth, as shown on Schedule 9, provide a  
12 range of average growth rates of 4.80% to 7.06%. Although the DCF growth rates  
13 cannot be established solely with a mathematical formulation, it is my opinion that an  
14 investor-expected growth rate of 6.25% is a reasonable estimate of investor expected  
15 growth within the array of earnings per share growth rates shown by the analysts'  
16 forecasts. As I indicated above, the fundamentals for UGI Utilities, including its  
17 significant new investment in infrastructure rehabilitation, point to a higher growth rate.

18 **Q. Are the dividend yield and growth components of the DCF adequate to explain**  
19 **the rate of return on common equity when it is used in the calculation of the**  
20 **weighted average cost of capital?**

21 A. Only if the capital structure ratios are measured with the market value of debt and  
22 equity. In the case of the Gas Group, those average capital structure ratios are 33.06%  
23 long-term debt, 0.12% preferred stock, and 66.82% common equity, as shown on

---

<sup>6</sup> Gordon, Gordon & Gould, "Choice Among Methods of Estimating Share Yield," The Journal of Portfolio Management (Spring 1989).

## DIRECT TESTIMONY OF PAUL R. MOUL

1 Schedule 10. If book values are used to compute the capital structure ratios, then an  
2 adjustment is required.

3 **Q. Please explain why.**

4 A. If regulators use the results of the DCF (which are based on the market price of the  
5 stock of the companies analyzed) to compute the weighted average cost of capital with  
6 a book value capital structure used for ratesetting purposes, those results will not reflect  
7 the higher level of financial risk associated with the book value capital structure.  
8 Where, as here, a stock's market price diverges from a utility's book value, the potential  
9 exists for a financial risk difference, because the capitalization of a utility measured at  
10 its market value contains more equity, less debt and therefore less risk than the  
11 capitalization measured at its book value.

12 This shortcoming of the DCF has persuaded the Commission to adjust the cost  
13 of equity upward to make the return consistent with the book value capital structure.

14 Provisions for this risk difference were made by the Commission in the following cases:

Date	Company	Docket Number	Basis Points
January 10, 2002	Pennsylvania-American Water Co.	Docket No. R-00016339	60 basis points
August 1, 2002	Philadelphia Suburban Water Co.	Docket No. R-00016750	80 basis points
January 29, 2004	Pennsylvania-American Water Co.	Docket No. R-00038304 (affirmed by the Commonwealth Court on November 8, 2004)	60 basis points
August 5, 2004	Aqua Pennsylvania, Inc.	Docket No. R-00038805	60 basis points
December 22, 2004	PPL Electric Utilities Corp.	Docket No. R-00049255	45 basis points
February 8, 2007	PPL Gas Utilities Corp.	Docket No. R-00061398	70 basis points

15 In order to make the DCF results relevant to the capitalization measured at book value  
16 (as is done for ratesetting purposes) the market-derived cost rate cannot be used  
17 without modification.

18 **Q. Please continue with your discussion of the calculation of the leverage  
19 adjustment.**

20 A. The only perspective that is important to investors is the return that they can realize on  
21 the market value of their investment. As I have measured the DCF, the simple yield

## DIRECT TESTIMONY OF PAUL R. MOUL

1 (D/P) plus growth (g) provides a return applicable strictly to the price (P) that an investor  
2 is willing to pay for a share of stock. The need for the leverage adjustment arises when  
3 the results of the DCF model (k) are to be applied to a capital structure that is different  
4 than indicated by the market price (P). From the market perspective, the financial risk  
5 of the Gas Group is accurately measured by the capital structure ratios calculated from  
6 the market capitalization of a firm. If the ratesetting process utilized the market  
7 capitalization ratios, then no additional analysis or adjustment would be required, and  
8 the simple yield (D/P) plus growth (g) components of the DCF would satisfy the financial  
9 risk associated with the market value of the equity capitalization. Because the  
10 ratesetting process uses a different set of ratios calculated from the book value  
11 capitalization, then further analysis is required to synchronize the financial risk of the  
12 book capitalization with the required return on the book value of the equity. This  
13 adjustment is developed through precise mathematical calculations, using well  
14 recognized analytical procedures that are widely accepted in the financial literature. To  
15 arrive at that return, the rate of return on common equity is the unleveraged cost of  
16 capital (or equity return at 100% equity) plus one or more terms reflecting the increase  
17 in financial risk resulting from the use of leverage in the capital structure. The  
18 calculations presented in the lower panel of data shown on Schedule 10, under the  
19 heading "M&M," provides a return of 8.30% when applicable to a capital structure with  
20 100% common equity.

21 **Q. Are there specific factors that influence market-to-book ratios that determine**  
22 **whether the leverage adjustment should be made?**

23 A. No. The leverage adjustment is not intended, nor was it designed, to address the  
24 reasons that stock prices vary from book value. Hence, any observations concerning  
25 market prices relative to book are not on point. The leverage adjustment deals with the  
26 issue of financial risk and does not transform the DCF result to a book value return

## DIRECT TESTIMONY OF PAUL R. MOUL

1 through a market-to-book adjustment. Again, the leverage adjustment that I propose is  
2 based on the fundamental financial precept that the cost of equity is equal to the rate of  
3 return for an unleveraged firm (i.e., where the overall rate of return equates to the cost  
4 of equity with a capital structure that contains 100% equity) plus the additional return  
5 required for introducing debt and/or preferred stock leverage into the capital structure.

6 Further, as noted previously, the relatively high market prices of utility stocks  
7 cannot be attributed solely to the notion that these companies are expected to earn a  
8 return on equity that differs from their cost of equity. Stock prices above book value are  
9 common for utility stocks, and indeed the stock prices of non-regulated companies  
10 exceed book values by even greater margins. In this regard, according to the Barron's  
11 issue of November 23, 2015, the major market indices' market-to-book ratios are well  
12 above unity. The Dow Jones Utility index traded at a multiple of 1.74 times book value,  
13 which is below the market multiple of other indices. For example, the S&P Industrial  
14 index was at 3.75 times book value, and the Dow Jones Industrial index was at 3.26  
15 times book value. It is difficult to accept that the vast majority of all firms operating in  
16 our economy are generating returns far in excess of their cost of capital. Certainly, in  
17 our free-market economy, competition should contain such "excesses" if they indeed  
18 exist.

19 Finally, the leverage adjustment adds stability to the final DCF cost rate. That is  
20 to say, as the market capitalization increases relative to its book value, the leverage  
21 adjustment increases while the simple yield (D/P) plus growth (g) result declines. The  
22 reverse is also true that when the market capitalization declines, the leverage  
23 adjustment also declines as the simple yield (D/P) plus growth (g) result increases.

24 **Q. Is the leverage adjustment that you propose designed to transform the market**  
25 **return into one that is designed to produce a particular market-to-book ratio?**

## DIRECT TESTIMONY OF PAUL R. MOUL

1 A. No, it is not. The adjustment that I label as a “leverage adjustment” is merely a  
2 convenient way of showing the amount that must be added to (or subtracted from) the  
3 result of the simple DCF model (i.e.,  $D/P + g$ ), in the context of a return that applies to  
4 the capital structure used in ratemaking, which is computed with book value weights  
5 rather than market value weights, in order to arrive at the utility’s total cost of equity. I  
6 specify a separate factor, which I call the leverage adjustment, but there is no need to  
7 do so other than providing identification for this factor. If I expressed my return solely in  
8 the context of the book value weights that we use to calculate the weighted average  
9 cost of capital, and ignore the familiar  $D/P + g$  expression entirely, then there would be  
10 no separate element to reflect the financial leverage change from market value to book  
11 value capitalization. As shown in the bottom panel of data on Schedule 10, the equity  
12 return applicable to the book value common equity ratio is equal to 8.30%, which is the  
13 return for the Gas Group applicable to its equity with no debt in its capital structure (i.e.,  
14 the cost of capital is equal to the cost of equity with a 100% equity ratio) plus 2.09%  
15 compensation for having a 44.61% debt ratio, plus 0.01% for having a 0.18% preferred  
16 stock ratio. The sum of the parts is 10.40% ( $8.30\% + 2.09\% + 0.01\%$ ) and there is no  
17 need to even address the cost of equity in terms of  $D/P + g$ . To express this same  
18 return in the context of the familiar DCF model, I summed the 3.34% dividend yield, the  
19 6.25% growth rate, and the 0.81% for the leverage adjustment in order to arrive at the  
20 same 10.40% ( $3.34\% + 6.25\% + 0.81\%$ ) return. I know of no means to mathematically  
21 solve for the 0.81% leverage adjustment by expressing it in the terms of any particular  
22 relationship of market price to book value. The 0.81% adjustment is merely a  
23 convenient way to compare the 10.40% return computed directly with the Modigliani &  
24 Miller formulas to the 9.59% return generated by the DCF model based on a market  
25 value capital structure. My point is that when we use a market-determined cost of  
26 equity developed from the DCF model, it reflects a level of financial risk that is different

## DIRECT TESTIMONY OF PAUL R. MOUL

1 (in this case, lower) from the capital structure stated at book value. This process has  
2 nothing to do with targeting any particular market-to-book ratio.

3 **Q. Please provide the DCF return based upon your preceding discussion of dividend**  
4 **yield, growth, and leverage.**

5 A. As explained previously, I have utilized a six-month average dividend yield (" $D_1/P_0$ ")  
6 adjusted in a forward-looking manner for my DCF calculation. This dividend yield is  
7 used in conjunction with the growth rate (" $g$ ") previously developed. The DCF also  
8 includes the leverage modification (" $lev.$ ") required when the book value equity ratio is  
9 used in determining the weighted average cost of capital in the ratesetting process  
10 rather than the market value equity ratio related to the price of stock. The resulting DCF  
11 cost rate is:

$$D_1/P_0 + g + lev. = k$$

$$\text{Gas Group } 3.34\% + 6.25\% + 0.81\% = 10.40\%$$

12 The DCF result shown above represents the simplified (i.e., Gordon) form of the model  
13 that contains a constant growth assumption. As described previously, the risk of UGI  
14 Gas exceeds that of the Gas Group due to the high proportion of throughput to the  
15 Company's industrial customers. As such, the DCF result for the Gas Group shown  
16 above would understate the required equity return for the Company. I should reiterate,  
17 however, that the DCF-indicated cost rate provides an explanation of the rate of return  
18 on common stock market prices without regard to the prospect of a change in the price-  
19 earnings multiple. An assumption that there will be no change in the price-earnings  
20 multiple is not supported by the realities of the equity market, because price-earnings  
21 multiples do not remain constant. This is one of the constraints of this model that makes  
22 it important to consider other model results when determining a company's cost of  
23 equity.

**DIRECT TESTIMONY OF PAUL R. MOUL**

**RISK PREMIUM ANALYSIS**

1

2 **Q. Please describe your use of the risk premium approach to determine the cost of**  
3 **equity.**

4 A. With the Risk Premium approach, the cost of equity capital is determined by corporate  
5 bond yields plus a premium to account for the fact that common equity is exposed to  
6 greater investment risk than debt capital. The result of my Risk Premium study is  
7 shown on page 2 of Schedule 1. That result is 11.50%. As with other models used to  
8 determine the cost of equity, the Risk Premium approach has its limitations, including  
9 potential imprecision in the assessment of the future cost of corporate debt and the  
10 measurement of the risk-adjusted common equity premium.

11 **Q. What long-term public utility debt cost rate did you use in your risk premium**  
12 **analysis?**

13 A. In my opinion, a 5.00% yield represents a reasonable estimate of the prospective yield  
14 on long-term A-rated public utility bonds.

15 **Q. What historical data is shown by the Moody's data?**

16 A. I have analyzed the historical yields on the Moody's index of long-term public utility debt  
17 as shown on page 1 of Schedule 11. For the twelve months ended October 2015, the  
18 average monthly yield on Moody's index of A-rated public utility bonds was 4.06%. For  
19 the six and three-month periods ended October 2014, the yields were 4.32% and  
20 4.31%, respectively. During the twelve-months ended October 2015, the range of the  
21 yields on A-rated public utility bonds was 3.58% to 4.40%. Page 2 of Schedule 12  
22 shows the long-run spread in yields between A-rated public utility bonds and long-term  
23 Treasury bonds. As shown on page 3 of Schedule 12, the yields on A-rated public  
24 utility bonds have exceeded those on Treasury bonds by 1.23% on a twelve-month  
25 average basis, 1.34% on a six-month average basis, and 1.41% on a the three-month

## DIRECT TESTIMONY OF PAUL R. MOUL

1 average basis. From these averages, 1.25% represents a reasonably conservative  
2 spread for the yield on A-rated public utility bonds over Treasury bonds.

3 **Q. What forecasts of interest rates have you considered in your analysis?**

4 A. I have determined the prospective yield on A-rated public utility debt by using the Blue  
5 Chip Financial Forecasts ("Blue Chip") along with the spread in the yields that I describe  
6 below. The Blue Chip is a reliable authority and contains consensus forecasts of a  
7 variety of interest rates compiled from a panel of banking, brokerage, and investment  
8 advisory services. In early 1999, Blue Chip stopped publishing forecasts of yields on A-  
9 rated public utility bonds because the Federal Reserve deleted these yields from its  
10 Statistical Release H.15. To independently project a forecast of the yields on A-rated  
11 public utility bonds, I have combined the forecast yields on long-term Treasury bonds  
12 published on November 1, 2015, and a yield spread of 1.25%, derived from historical  
13 data.

14 **Q. How have you used these data to project the yield on A-rated public utility bonds**  
15 **for the purpose of your Risk Premium analyses?**

16 A. Shown below is my calculation of the prospective yield on A-rated public utility bonds  
17 using the building blocks discussed above, i.e., the Blue Chip forecast of Treasury bond  
18 yields and the public utility bond yield spread. For comparative purposes, I also have  
19 shown the Blue Chip forecasts of Aaa-rated and Baa-rated corporate bonds. These  
20 forecasts are:

		Blue Chip Financial Forecasts			A-rated Public Utility	
Year	Quarter	Corporate		30-Year Treasury	Spread	Yield
		Aaa-rated	Baa-rated			
2015	Fourth	4.0%	5.2%	2.9%	1.25%	4.15%
2016	First	4.2%	5.3%	3.1%	1.25%	4.35%
2016	Second	4.4%	5.4%	3.3%	1.25%	4.55%
2016	Third	4.6%	5.6%	3.5%	1.25%	4.75%
2016	Fourth	4.7%	5.7%	3.6%	1.25%	4.85%
2017	First	4.9%	5.8%	3.8%	1.25%	5.05%

**DIRECT TESTIMONY OF PAUL R. MOUL**

1 **Q. Are there additional forecasts of interest rates that extend beyond those shown**  
2 **above?**

3 A. Yes. Twice yearly, Blue Chip provides long-term forecasts of interest rates. In its June  
4 1, 2015 publication, Blue Chip published longer-term forecasts of interest rates, which  
5 were reported to be:

Blue Chip Financial Forecasts				
		Corporate		30-Year
Averages	Aaa-rated	Baa-rated	Treasury	
2017-2021	5.9%	6.7%	4.8%	
2022-2026	6.1%	6.9%	5.0%	

6 The longer term forecasts by Blue Chip suggest that interest rates will move up from the  
7 levels revealed by the near term forecasts. By focusing more on the near term  
8 forecasts, a 5.00% yield on A-rated public utility bonds represents a conservative  
9 benchmark for measuring the cost of equity in this case.

10 **Q. What equity risk premium have you determined for public utilities?**

11 A. To develop an appropriate equity risk premium, I analyzed the results from Stocks,  
12 Bonds, Bills and Inflation ("SBBI") 2015 Classic Yearbook published by Ibbotson  
13 Associates that is part of Morningstar. My investigation reveals that the equity risk  
14 premium varies according to the level of interest rates. That is to say, the equity risk  
15 premium increases as interest rates decline and it declines as interest rates increase.  
16 This inverse relationship is revealed by the summary data presented below and shown  
17 on page 1 of Schedule 12.

**DIRECT TESTIMONY OF PAUL R. MOUL**

**Common Equity Risk Premiums**

Low Interest Rates	7.36%
Average Across All Interest Rates	5.69%
High Interest Rates	3.98%

1 Based on my analysis of the historical data, the equity risk premium was 7.36% when  
2 the marginal cost of long-term government bonds was low (i.e., 3.00%, which was the  
3 average yield during periods of low rates). Conversely, when the yield on long-term  
4 government bonds was high (i.e., 7.28% on average during periods of high interest  
5 rates) the spread narrowed to 3.98%. Over the entire spectrum of interest rates, the  
6 equity risk premium was 5.69% when the average government bond yield was 5.12%.  
7 With the forecast indicating an upward movement of interest rates that I described  
8 above from historically low levels, I have utilized a 6.50% equity risk premium. This  
9 equity risk premium is between the 7.36% premium related to periods of low interest  
10 rates and the 5.69% premium related to average interest rates across all levels.

11 **Q. What common equity cost rate did you determine based on your risk premium**  
12 **analysis?**

13 A. The cost of equity (i.e., “k”) is represented by the sum of the prospective yield for long-  
14 term public utility debt (i.e., “i”), and the equity risk premium (i.e., “RP”). The Risk  
15 Premium approach provides a cost of equity of:

$$i + RP = k$$

16 Gas Group 5.00% + 6.50% = 11.50%

## DIRECT TESTIMONY OF PAUL R. MOUL

### CAPITAL ASSET PRICING MODEL

1

2 **Q. What are the features of the CAPM as you have used it?**

3 A. The CAPM uses the yield on a risk-free interest bearing obligation plus a rate of return  
4 premium that is proportional to the systematic risk of an investment. As shown on page  
5 2 of Schedule 1, the result of the CAPM is 11.37%. To compute the cost of equity with  
6 the CAPM, three components are necessary: a risk-free rate of return ("Rf"), the beta  
7 measure of systematic risk ("β"), and the market risk premium ("Rm-Rf") derived from  
8 the total return on the market of equities reduced by the risk-free rate of return. The  
9 CAPM specifically accounts for differences in systematic risk (i.e., market risk as  
10 measured by the beta) between an individual firm or group of firms and the entire  
11 market of equities.

12 **Q. What betas have you considered in the CAPM?**

13 A. For my CAPM analysis, I initially considered the Value Line betas. As shown on page 2  
14 of Schedule 3, the average beta is 0.78 for the Gas Group.

15 **Q. What betas have you used in the CAPM determined cost of equity?**

16 A. The betas must be reflective of the financial risk associated with the ratesetting capital  
17 structure that is measured at book value. Therefore, Value Line betas cannot be used  
18 directly in the CAPM, unless the cost rate developed using those betas is applied to a  
19 capital structure measured with market values. To develop a CAPM cost rate  
20 applicable to a book-value capital structure, the Value Line (market value) betas have  
21 been unleveraged and releveraged for the book value common equity ratios using the  
22 Hamada formula,<sup>7</sup> as follows:

23

$$\beta l = \beta u [1 + (1 - t) D/E + P/E]$$

---

<sup>7</sup> Robert S. Hamada, "The Effects of the Firm's Capital Structure on the Systematic Risk of Common Stocks" *The Journal of Finance* Vol. 27, No. 2, Papers and Proceedings of the Thirtieth Annual Meeting of the American Finance Association, New Orleans, Louisiana, December 27-29, 1971. (May 1972), pp.435-452.

## DIRECT TESTIMONY OF PAUL R. MOUL

1 where  $\beta_l$  = the leveraged beta,  $\beta_u$  = the unleveraged beta,  $t$  = income tax rate,  $D$  = debt  
2 ratio,  $P$  = preferred stock ratio, and  $E$  = common equity ratio. The betas published by  
3 Value Line have been calculated with the market price of stock and are related to the  
4 market value capitalization. By using the formula shown above and the capital structure  
5 ratios measured at market value, the beta would become 0.59 for the Gas Group if it  
6 employed no leverage and was 100% equity financed. Those calculations are shown  
7 on Schedule 10 under the section labeled "Hamada" who is credited with developing  
8 those formulas. With the unleveraged beta as a base, I calculated the leveraged beta  
9 of 0.90 for the book value capital structure of the Gas Group. The book value leveraged  
10 beta that I will employ in the CAPM cost of equity is 0.90 for the Gas Group.

11 **Q. What risk-free rate have you used in the CAPM?**

12 A. As shown on page 1 of Schedule 13, I provided the historical yields on Treasury notes  
13 and bonds. For the twelve months ended October 2015, the average yield on 30-year  
14 Treasury bonds was 2.83%. For the six- and three-months ended October 2015, the  
15 yields on 30-year Treasury bonds were 2.97% and 2.90%, respectively. During the  
16 twelve-months ended October 2015, the range of the yields on 30-year Treasury bonds  
17 was 2.46% to 3.11%. The low yields that existed during recent periods can be traced to  
18 the financial crisis and its aftermath commonly referred to as the Great Recession. The  
19 resulting decline in the yields on Treasury obligations was attributed to a number of  
20 factors, including: the sovereign debt crisis in the euro zone, concern over a possible  
21 double dip recession, the potential for deflation, and the Federal Reserve's large  
22 balance sheet that was expanded through the purchase of Treasury obligations and  
23 mortgage-backed securities (also known as QEI, QEII, and QEIII), and the reinvestment  
24 of the proceeds from maturing obligations and the lengthening of the maturity of the  
25 Fed's bond portfolio through the sale of short-term Treasuries and the purchase of long-  
26 term Treasury obligations (also known as "operation twist"). Essentially, low interest

## DIRECT TESTIMONY OF PAUL R. MOUL

1 rates were the product of the policy of the FOMC in its attempt to deal with stagnant job  
2 growth, which is part of its dual mandate. The FOMC has ended its bond purchasing  
3 program. And, at its December 16, 2015 meeting, the Federal Open Market Committee  
4 increased the federal funds rate range by 0.25 percentage points. The prospect exists  
5 that future increases in the federal funds rate will likely occur.

6 As shown on page 2 of Schedule 13, forecasts published by Blue Chip on  
7 September 1, 2015 indicate that the yields on long-term Treasury bonds are expected  
8 to be in the range of 2.9% to 3.8% during the next six quarters. The longer term  
9 forecasts described previously show that the yields on 30-year Treasury bonds will  
10 average 4.8% from 2017 through 2021 and 5.0% from 2022 to 2026. For the reasons  
11 explained previously, forecasts of interest rates should be emphasized at this time in  
12 selecting the risk-free rate of return in CAPM. Hence, I have used a 3.75% risk-free  
13 rate of return for CAPM purposes, which considers not only the Blue Chip forecasts, but  
14 also the recent trend in the yields on long-term Treasury bonds.

15 **Q. What market premium have you used in the CAPM?**

16 A. As shown in the lower panel of data presented on page 2 of Schedule 13, the market  
17 premium is derived from historical data and the Value Line and S&P 500 returns. For  
18 the historically based market premium, I have used the arithmetic mean obtained from  
19 the data presented on page 1 of Schedule 12. On that schedule, the market return was  
20 12.21% on large stocks during periods of low interest rates. During those periods, the  
21 yield on long-term government bonds was 3.00% when interest rates were low. As I  
22 describe above, interest rates are forecast to trend upward in the future. To recognize  
23 that trend, I have given weight to the average returns and yields that existed across all  
24 interest rate levels. As such, I carried over to page 2 of Schedule 13 the average large  
25 common stock returns of 12.14% ( $12.21\% + 12.07\% = 24.28\% \div 2$ ) and the average  
26 yield on long-term government bonds of 4.06% ( $3.00\% + 5.12\% = 8.12\% \div 2$ ). These

## DIRECT TESTIMONY OF PAUL R. MOUL

1 financial returns rest between those experienced during periods of low interest rates  
2 and those experienced across all levels of interest rates. The resulting market premium  
3 is 8.08% (12.14% - 4.06%) based on historical data, as shown on page 2 of Schedule  
4 13. For the forecast returns, I calculated a 12.03% total market return from the Value  
5 Line data and a DCF return of 8.24% for the S&P 500. With the average forecast return  
6 of 10.14% (12.03% + 8.24% = 20.27% ÷ 2), I calculated a market premium of 6.39%  
7 (10.14% - 3.75%) using forecast data. The market premium applicable to the CAPM  
8 derived from these sources equals 7.24% (6.39% + 8.08% = 14.47% ÷ 2).

9 **Q. Are there adjustments to the CAPM that are necessary to fully reflect the rate of**  
10 **return on common equity?**

11 A. Yes. The technical literature supports an adjustment relating to the size of the company  
12 or portfolio for which the calculation is performed. As the size of a firm decreases, its  
13 risk and required return increases. Moreover, in his discussion of the cost of capital,  
14 Professor Brigham has indicated that smaller firms have higher capital costs than  
15 otherwise similar larger firms.<sup>8</sup> Also, the Fama/French study (see "The Cross-Section of  
16 Expected Stock Returns"; The Journal of Finance, June 1992) established that the size  
17 of a firm helps explain stock returns. In an October 15, 1995 article in Public Utility  
18 Fortnightly, entitled "Equity and the Small-Stock Effect," it was demonstrated that the  
19 CAPM could understate the cost of equity significantly according to a company's size.  
20 Indeed, it was demonstrated in the SBBI Yearbook that the returns for stocks in lower  
21 deciles (i.e., smaller stocks) were in excess of those shown by the simple CAPM. In  
22 this regard, the Gas Group has a market-based average equity capitalization of \$2,235  
23 million. The mid-cap adjustment of 1.10%, as revealed on page 3 of Schedule 13,  
24 would be warranted at a minimum.

---

**DIRECT TESTIMONY OF PAUL R. MOUL**

1 **Q. What CAPM result have you determined?**

2 A. Using the 3.75% risk-free rate of return, the leverage adjusted beta of 0.90 for the Gas  
 3 Group, the 7.24% market premium, and the 1.10% size adjustment, the following result  
 4 is indicated.

$$Rf + \beta \times ( Rm-Rf ) + size = k$$

Gas Group 3.75% + 0.90 x ( 7.24% ) + 1.10% = 11.37%

5 **COMPARABLE EARNINGS APPROACH**

6 **Q. How have you applied the Comparable Earnings approach in this case?**

7 A. The Comparable Earnings approach determines the equity return based upon results  
 8 from non-regulated companies. It is the oldest of all rate of return methods, having  
 9 been around for about one-century. Because regulation is a substitute for competitively  
 10 determined prices, the returns realized by non-regulated firms with comparable risks to  
 11 a public utility provide useful insight into a fair rate of return. In order to identify the  
 12 appropriate return, it is necessary to analyze returns earned (or realized) by other firms  
 13 within the context of the Comparable Earnings standard. The firms selected for the  
 14 Comparable Earnings approach should be companies whose prices are not subject to  
 15 cost-based price ceilings (i.e., non-regulated firms) so that circularity is avoided.

16 There are two avenues available to implement the Comparable Earnings  
 17 approach. One method involves the selection of another industry (or industries) with  
 18 comparable risks to the public utility in question, and the results for all companies within  
 19 that industry serve as a benchmark. The second approach requires the selection of  
 20 parameters that represent similar risk traits for the public utility and the comparable risk  
 21 companies. Using this approach, the business lines of the comparable companies  
 22 become unimportant. The latter approach is preferable with the further qualification that  
 23 the comparable risk companies exclude regulated firms in order to avoid the circular

## DIRECT TESTIMONY OF PAUL R. MOUL

1 reasoning implicit in the use of the achieved earnings/book ratios of other regulated  
2 firms. The United States Supreme Court has held that:

3 A public utility is entitled to such rates as will permit it to earn a  
4 return on the value of the property which it employs for the  
5 convenience of the public equal to that generally being made at  
6 the same time and in the same general part of the country on  
7 investments in other business undertakings which are attended  
8 by corresponding risks and uncertainties. The return should be  
9 reasonably sufficient to assure confidence in the financial  
10 soundness of the utility and should be adequate, under efficient  
11 and economical management, to maintain and support its credit  
12 and enable it to raise the money necessary for the proper  
13 discharge of its public duties. Bluefield Water Works vs. Public  
14 Service Board, 262 U.S. 668 (1923).  
15

16 It is important to identify the returns earned by firms that compete for capital with a  
17 public utility. This can be accomplished by analyzing the returns of non-regulated firms  
18 that are subject to the competitive forces of the marketplace.

19 **Q. How have you implemented the Comparable Earnings Approach?**

20 A. In order to implement the Comparable Earnings approach, non-regulated companies  
21 were selected from The Value Line Investment Survey for Windows that have six  
22 categories of comparability designed to reflect the risk of the Gas Group. These  
23 screening criteria were based upon the range as defined by the rankings of the  
24 companies in the Gas Group. The items considered were: Timeliness Rank, Safety  
25 Rank, Financial Strength, Price Stability, Value Line betas, and Technical Rank. The  
26 definition for these parameters is provided on page 3 of Schedule 14. The identities of  
27 the companies comprising the Comparable Earnings group and their associated  
28 rankings within the ranges are identified on page 1 of Schedule 14.

29 Value Line data was relied upon because it provides a comprehensive basis for  
30 evaluating the risks of the comparable firms. As to the returns calculated by Value Line  
31 for these companies, there is some downward bias in the figures shown on page 2 of  
32 Schedule 14, because Value Line computes the returns on year-end rather than

## DIRECT TESTIMONY OF PAUL R. MOUL

1 average book value. If average book values had been employed, the rates of return  
2 would have been slightly higher. Nevertheless, these are the returns considered by  
3 investors when taking positions in these stocks. Because many of the comparability  
4 factors, as well as the published returns, are used by investors in selecting stocks, and  
5 the fact that investors rely on the Value Line service to gauge returns, it is an  
6 appropriate database for measuring comparable return opportunities.

7 **Q. What data have you used in your Comparable Earnings analysis?**

8 A. I have used both historical realized returns and forecasted returns for non-utility  
9 companies. As noted previously, I have not used returns for utility companies in order  
10 to avoid the circularity that arises from using regulatory-influenced returns to determine  
11 a regulated return. It is appropriate to consider a relatively long measurement period in  
12 the Comparable Earnings approach in order to cover conditions over an entire business  
13 cycle. A ten-year period (five historical years and five projected years) is sufficient to  
14 cover an average business cycle. Unlike the DCF and CAPM, the results of the  
15 Comparable Earnings method can be applied directly to the book value capitalization.  
16 In other words, the Comparable Earnings approach does not contain the potential  
17 misspecification contained in market models when the market capitalization and book  
18 value capitalization diverge significantly. A point of demarcation was chosen to  
19 eliminate the results of highly profitable enterprises, which the Bluefield case stated  
20 were not the type of returns that a utility was entitled to earn. For this purpose, I used  
21 20% as the point where those returns could be viewed as highly profitable and should  
22 be excluded from the Comparable Earnings approach. The average historical rate of  
23 return on book common equity was 11.2% using only the returns that were less than  
24 20%, as shown on page 2 of Schedule 14. The average forecasted rate of return as  
25 published by Value Line is 12.1% also using values less than 20%, as provided on page

## DIRECT TESTIMONY OF PAUL R. MOUL

1 2 of Schedule 14. Using the average of these data my Comparable Earnings result is  
2 11.65%, as shown on page 2 of Schedule 1.

### CONCLUSION ON COST OF EQUITY

3  
4 **Q. What is your conclusion regarding the Company's cost of common equity?**

5 A. Based upon the application of a variety of methods and models described previously, it  
6 is my opinion that the rate of return on common equity is 11.00%. It is essential that the  
7 Commission employ a variety of techniques to measure the Company's cost of equity  
8 because of the limitations/infirmities that are inherent in each method. In conclusion,  
9 the Company is entitled to an 11.00% rate of return on common equity so that it can  
10 compete in the capital markets, be compensated for its risk profile, and be recognized  
11 for the outstanding performance of the Company's management. As I indicated  
12 previously, the range of the cost of equity derived from the results for the Gas Group is  
13 10.40% to 11.65%. Looking just to the market based methods (i.e., DCF, RP and  
14 CAPM), the midpoint of that range is 10.95% using DCF (i.e., 10.40%) as the bottom  
15 and RP (i.e., 11.50%) as the top. The 11.00% cost of equity that I am proposing  
16 provides minimal recognition for the Company's management effectiveness and does  
17 not reflect any adjustment for the higher risk associated with the Company's large  
18 throughput to its industrial customers.

19 **Q. Does this conclude your direct testimony at this time?**

20 A. Yes, it does.

## APPENDIX A TO DIRECT TESTIMONY OF PAUL R. MOUL

### EDUCATIONAL BACKGROUND, BUSINESS EXPERIENCE AND QUALIFICATIONS

1  
2  
3 I was awarded a degree of Bachelor of Science in Business Administration by Drexel  
4 University in 1971. While at Drexel, I participated in the Cooperative Education Program which  
5 included employment, for one year, with American Water Works Service Company, Inc., as an  
6 internal auditor, where I was involved in the audits of several operating water companies of the  
7 American Water Works System and participated in the preparation of annual reports to  
8 regulatory agencies and assisted in other general accounting matters.

9 Upon graduation from Drexel University, I was employed by American Water Works  
10 Service Company, Inc., in the Eastern Regional Treasury Department where my duties  
11 included preparation of rate case exhibits for submission to regulatory agencies, as well as  
12 responsibility for various treasury functions of the thirteen New England operating subsidiaries.

13 In 1973, I joined the Municipal Financial Services Department of Betz Environmental  
14 Engineers, a consulting engineering firm, where I specialized in financial studies for municipal  
15 water and wastewater systems.

16 In 1974, I joined Associated Utility Services, Inc., now known as AUS Consultants. I  
17 held various positions with the Utility Services Group of AUS Consultants, concluding my  
18 employment there as a Senior Vice President.

19 In 1994, I formed P. Moul & Associates, an independent financial and regulatory  
20 consulting firm. In my capacity as Managing Consultant and for the past forty-one years, I have  
21 continuously studied the rate of return requirements for cost of service-regulated firms. In this  
22 regard, I have supervised the preparation of rate of return studies, which were employed, in  
23 connection with my testimony and in the past for other individuals. I have presented direct  
24 testimony on the subject of fair rate of return, evaluated rate of return testimony of other  
25 witnesses, and presented rebuttal testimony.

## APPENDIX A TO DIRECT TESTIMONY OF PAUL R. MOUL

1 My studies and prepared direct testimony have been presented before thirty-seven (37)  
2 federal, state and municipal regulatory commissions, consisting of: the Federal Energy  
3 Regulatory Commission; state public utility commissions in Alabama, Alaska, California,  
4 Colorado, Connecticut, Delaware, Florida, Georgia, Hawaii, Illinois, Indiana, Iowa, Kentucky,  
5 Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire,  
6 New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South  
7 Carolina, Tennessee, Texas, Virginia, West Virginia, Wisconsin, and the Philadelphia Gas  
8 Commission, and the Texas Commission on Environmental Quality. My testimony has been  
9 offered in over 300 rate cases involving electric power, natural gas distribution and  
10 transmission, resource recovery, solid waste collection and disposal, telephone, wastewater,  
11 and water service utility companies. While my testimony has involved principally fair rate of  
12 return and financial matters, I have also testified on capital allocations, capital recovery, cash  
13 working capital, income taxes, factoring of accounts receivable, and take-or-pay expense  
14 recovery. My testimony has been offered on behalf of municipal and investor-owned public  
15 utilities and for the staff of a regulatory commission. I have also testified at an Executive  
16 Session of the State of New Jersey Commission of Investigation concerning the BPU regulation  
17 of solid waste collection and disposal.

18 I was a co-author of a verified statement submitted to the Interstate Commerce  
19 Commission concerning the 1983 Railroad Cost of Capital (Ex Parte No. 452). I was also co-  
20 author of comments submitted to the Federal Energy Regulatory Commission regarding the  
21 Generic Determination of Rate of Return on Common Equity for Public Utilities in 1985, 1986  
22 and 1987 (Docket Nos. RM85-19-000, RM86-12-000, RM87-35-000 and RM88-25-000).  
23 Further, I have been the consultant to the New York Chapter of the National Association of  
24 Water Companies, which represented the water utility group in the Proceeding on Motion of the  
25 Commission to Consider Financial Regulatory Policies for New York Utilities (Case 91-M-  
26 0509). I have also submitted comments to the Federal Energy Regulatory Commission in its

## **APPENDIX A TO DIRECT TESTIMONY OF PAUL R. MOUL**

1 Notice of Proposed Rulemaking (Docket No. RM99-2-000) concerning Regional Transmission  
2 Organizations and on behalf of the Edison Electric Institute in its intervention in the case of  
3 Southern California Edison Company (Docket No. ER97-2355-000). Also, I was a member of  
4 the panel of participants at the Technical Conference in Docket No. PL07-2 on the Composition  
5 of Proxy Groups for Determining Gas and Oil Pipeline Return on Equity.

6 In late 1978, I arranged for the private placement of bonds on behalf of an investor-  
7 owned public utility. I have assisted in the preparation of a report to the Delaware Public  
8 Service Commission relative to the operations of the Lincoln and Ellendale Electric Company. I  
9 was also engaged by the Delaware P.S.C. to review and report on the proposed financing and  
10 disposition of certain assets of Sussex Shores Water Company (P.S.C. Docket Nos. 24-79 and  
11 47-79). I was a co-author of a Report on Proposed Mandatory Solid Waste Collection  
12 Ordinance prepared for the Board of County Commissioners of Collier County, Florida.

13 I have been a consultant to the Bucks County Water and Sewer Authority concerning  
14 rates and charges for wholesale contract service with the City of Philadelphia. My municipal  
15 consulting experience also included an assignment for Baltimore County, Maryland, regarding  
16 the City/County Water Agreement for Metropolitan District customers (Circuit Court for  
17 Baltimore County in Case 34/153/87-CSP-2636).

**UGI GAS STATEMENT NO. 4 – PAUL R. HERBERT**

**BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Docket No. R-2015-2518438**

**UGI Utilities, Inc. – Gas Division**

**Statement No. 4**

**Direct Testimony of  
Paul R. Herbert**

**Topics Addressed:      Cost of Service Allocation**

Date: January 19, 2016

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION  
DOCKET NO. R-2015-2518438

RE: UGI UTILITIES, INC. - GAS DIVISION

DIRECT TESTIMONY OF PAUL R. HERBERT

Line  
No.

1 **Q. Please state your name and business address.**

2 A. My name is Paul R. Herbert. My business address is 207 Senate Avenue, Camp Hill,  
3 Pennsylvania.

4

5 **Q. By whom are you employed?**

6 A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC.

7

8 **Q. Please describe your position with Gannett Fleming Valuation and Rate  
9 Consultants, LLC., and briefly state your general duties and responsibilities.**

10 A. I am President. My duties and responsibilities include the preparation of accounting  
11 and financial data for revenue requirement and cash working capital claims, the  
12 allocation of cost of service to customer classifications, and the design of customer rates  
13 in support of public utility rate filings.

14

15 **Q. Have you presented testimony in rate proceedings before a regulatory agency?**

16 A. Yes. I have testified before the Pennsylvania Public Utility Commission, the New  
17 Jersey Board of Public Utilities, the Public Utilities Commission of Ohio, the Public  
18 Service Commission of West Virginia, the Kentucky Public Service Commission, the  
19 Iowa State Utilities Board, the Virginia State Corporation Commission, the Illinois  
20 Commerce Commission, the Tennessee Regulatory Authority, the California Public

1 Utilities Commission, New Mexico Public Regulation Commission, the Delaware  
2 Public Service Commission, Arizona Corporate Commission, the Connecticut  
3 Department of Public Utility Control, the Idaho Public Utilities Commission, the Hawaii  
4 Public Utilities Commission, and the Missouri Public Service Commission concerning  
5 revenue requirements, cost of service allocation, rate design and cash working capital  
6 claims. A list of the cases in which I have testified is provided at the end of my direct  
7 testimony.

8  
9 **Q. What is your educational background?**

10 A. I have a Bachelor of Science Degree in Finance from the Pennsylvania State University,  
11 University Park, Pennsylvania.

12  
13 **Q. Would you please describe your professional affiliations?**

14 A. I am a member of the American Water Works Association and serve as a member of the  
15 Management Committee for the Pennsylvania Section. I am also a member of the  
16 Pennsylvania Municipal Authorities Association. In 1998, I became a member of the  
17 National Association of Water Companies as well as a member of its Rates and Revenue  
18 Committee.

19  
20 **Q. Briefly describe your work experience.**

21 A. I joined the Valuation Division of Gannett Fleming Corrdry and Carpenter, Inc.,  
22 predecessor to Gannett Fleming Valuation and Rate Consultants, LLC, in September  
23 1977, as a Junior Rate Analyst. Since then, I have advanced through several positions  
24 and was assigned the position of Manager of Rate Studies on July 1, 1990. On June 1,

1 1994, I was promoted to Vice President and on November 1, 2003, I was promoted to  
2 Senior Vice President. On July 1, 2007, I was promoted to my current position as  
3 President.

4 While attending Penn State, I was employed during the summers of 1972, 1973  
5 and 1974 by the United Telephone System - Eastern Group in its accounting department.  
6 Upon graduation from college in 1975, I was employed by Herbert Associates, Inc.,  
7 Consulting Engineers (now Herbert Rowland and Grubic, Inc.), as a field office  
8 manager until September 1977.

9  
10 **Q. What is the purpose of your testimony?**

11 A. I am providing testimony on behalf of UGI Utilities, Inc. - Gas Division (“UGI Gas” or  
12 the “Company”). I will explain the cost of service allocation study  
13

14 **COST OF SERVICE ALLOCATION STUDY**

15 **Q. What is the purpose of the cost of service allocation study?**

16 A. The purpose of the study is to allocate the total cost of service to the several service  
17 classifications. I have prepared two cost of service studies that I will describe later as  
18 well as summary schedules that present a simple average of the two studies. The studies  
19 provide a basis for determining the extent to which the revenues to be derived from each  
20 classification are commensurate with the cost of serving that classification.  
21

22 **Q. Have you prepared a cost of service study for UGI Utilities, Inc. in a prior case?**

23 A. No. However, I prepared the cost of service studies in the UGI Penn Natural Gas, Inc.  
24 rate case at Docket No. R-2008-2079660 and the UGI Central Penn Gas, Inc. rate cases

1 at Docket Nos. R-2008-2079675 and R-2010-2214415. In 2006, at Docket No. R-  
2 00061398, I prepared the cost of service study for PPL Gas Utilities Corporation, the  
3 predecessor of UGI Central Penn Gas, Inc.

4  
5 **Q. What method of cost allocation was used in the studies?**

6 A. I used the Average and Extra Demand Method (Average/Excess), which is described in  
7 UGI Gas Exhibit D and in the text, "Gas Rate Fundamentals", published by the  
8 American Gas Association's Rate Committee.

9  
10 **Q. Please describe the difference in the two cost of service studies presented for this**  
11 **proceeding.**

12 A. The first study presented in Exhibit D, allocates mains investment to the interruptible  
13 class on the basis of average daily volumes (excluding excess capacity). The second  
14 study presented in Exhibit D-1, does not allocate any mains investment (except for  
15 directly assigned mains for one customer) to the interruptible class. Exhibit D-2  
16 presents the simple average of the two studies in the summary Schedule A-2 as well as  
17 the rate of return schedules under present and proposed rates in Schedules B-2 and C-2,  
18 respectively.

19  
20 **Q. Please describe UGI Gas Exhibit D.**

21 A. UGI Gas Exhibit D titled, "Cost of Service Allocation Study as of September 30, 2017,"  
22 is the first cost of service allocation study prepared for UGI Gas in support of its claims  
23 in this proceeding. It sets forth the results of the study based on the projected costs and  
24 conditions for the fully projected future test year for the twelve months ending

1 September 30, 2017 (“FPFTY”). The data in the exhibit include a description of the  
2 methods and procedures used in the study, the allocations of cost of service and measure  
3 of value, the factors on which the allocations were based and an analysis of customer  
4 costs.

5  
6 **Q. Please outline the procedure that you followed in the first cost allocation study.**

7 A. The detailed allocation of costs to cost functions and service classifications is presented  
8 in Schedule E, pages 10 through 13, of UGI Gas Exhibit D. Gas costs are excluded  
9 from the amounts in Schedule E in order to develop costs by function and classification  
10 related to the delivery of gas.

11 In the detailed allocation, the items of cost, which include operating expenses,  
12 depreciation expense, taxes, and income available for return, are identified in column 1  
13 of Schedule E. The cost of each item, shown in column 3, is allocated to the several  
14 service classifications: Residential (R and RT), Non-Residential (N and NT), Delivery  
15 Service (DS), Large Firm Delivery Service (LFD), Extended Large Firm Delivery  
16 Service (XD), and Interruptible Service (XD-I, IS and IL).

17 The allocation factor codes entered in column 2 enable one to determine the  
18 specific basis for the allocation of each item. The factor codes refer to the information  
19 presented in Schedule F, beginning on page 14, of the exhibit.

20  
21 **Q. Please explain the allocation of some of the large cost items in the study.**

22 A. Referring to some of the larger delivery cost items, transmission costs and costs  
23 associated with measuring and regulating stations were allocated partly on the basis of

1 average daily volumes and partly on the basis of demand in excess of average, or extra  
2 demand, inasmuch as the function of these facilities is to meet peak requirements.

3 The costs related to distribution mains were first directly assigned to XD-Firm  
4 and XD-Interruptible customers based on an analysis of the mains and the proportion  
5 thereof serving each individual XD customer. The methods and procedures used to  
6 determine the portion of mains directly assigned to XD customers were provided by  
7 Company personnel. The remaining cost of mains was separated into small mains (2-  
8 inch and smaller) and large mains (over 2-inch). Small mains were allocated to the Rate  
9 R, N, DS, a portion of LFD, and small Interruptible (IS) classes based on the average  
10 and extra capacity demand for each classification. Only 19% of the LFD consumption  
11 was used for the allocation of small mains, inasmuch as only 19% of the customers  
12 utilize mains that are 2-inch and smaller. Large mains were allocated in the same  
13 manner except only the volumes for XD-Firm and XD-I customers were excluded.

14 Customers under Rate XD were excluded from the allocation of small and large  
15 distribution mains since XD customers were directly assigned the cost of mains serving  
16 them, as explained above. Interruptible volumes were removed from the extra capacity  
17 calculations as these volumes can be curtailed during periods of peak demand.

18 Costs related to service lines in Account 380 were allocated to classes, after a  
19 direct assignment to each of the XD customers, based on the cost of service lines by size  
20 and the number of customers in each class. Costs related to meters in Account 381 and  
21 the associated house regulators were allocated to the R, N, DS, and Interruptible service  
22 classifications on the basis of the cost of meters for each class and the number of  
23 customers. Costs related to industrial measuring and regulating in Account 385, after a  
24 direct assignment to XD customers, were allocated to the N, LFD and Interruptible

1 Service classes based on the cost of measuring and regulating equipment assigned to  
2 each class.

3  
4 **Q. Please explain the allocation of uncollectible accounts and customer assistance**  
5 **expenses.**

6 A. Uncollectible accounts associated with the gas cost portion are allocated consistent with  
7 the recovery of such costs through the Merchant Function Charge (Rider D). The  
8 remaining uncollectible account cost is recovered based on an analysis of write-offs.  
9 Costs associated with customer assistance programs are allocated directly to the  
10 residential class.

11  
12 **Q. Please describe the allocation of customer accounting costs and the remaining cost**  
13 **of service elements.**

14 A. Customer accounting costs were allocated to service classifications on the basis of the  
15 number of customers. Administrative and general costs were allocated on the basis of  
16 the allocated direct operation and maintenance costs, excluding gas production expenses  
17 those costs being allocated.

18 Annual depreciation accruals were allocated on the basis of the function of the  
19 facilities represented by the depreciation expense for each depreciable plant account.  
20 Similarly, certain taxes other than income taxes, income taxes and income available for  
21 return were allocated on the basis of allocated rate base, including the original cost less  
22 accrued depreciation of utility plant in service and other rate base elements.

23  
24 **Q. What are the results of the cost of service allocation study?**

1 A. The results of the cost of service allocation set forth in Schedule E are brought forward  
2 and summarized in Schedule D. The total cost of service by classification in Schedule  
3 D is then brought forward to Schedule A (without gas costs), columns 2 and 3, where  
4 these results are compared to the *pro forma* revenues under present rates (columns 4 and  
5 5) and proposed rates (columns 6 and 7). The proposed change in revenue under  
6 proposed rates and the percent change are shown in columns 8 and 9 of Schedule A.  
7 Please refer to the direct testimony of Paul Szykman (UGI Gas Statement No. 1) and  
8 the direct testimony David Lahoff (UGI Gas Statement No. 6) for an explanation of the  
9 proposed rate design and revenue distribution.

10

11 **Q. Did you prepare a schedule showing the rate of return by classification?**

12 A. Yes. Schedule B sets forth the rate of return by classification under present rates, and  
13 Schedule C shows the rate of return by classification under proposed rates.

14

15 **Q. Did you prepare an analysis of customer costs?**

16 A. Yes. I prepared a fully allocated customer cost analysis and a direct customer cost  
17 analysis. Both analyses of customer costs are presented in Schedule G of UGI Gas  
18 Exhibit D.

19

20 **Q. Please explain the analysis of customer costs as set forth in UGI Gas Exhibit D.**

21 A. The customer costs were determined by allocating the cost of service to cost functions  
22 and to service classifications. The volumetric and customer functional costs were  
23 determined by an allocation of the total cost of service to these functions in Schedule E  
24 of UGI Gas Exhibit D. The customer costs were further allocated to the R, N, DS, LFD,

1 XD, and Interruptible Service classifications in the same schedule. The factors that were  
2 the bases for the allocation to cost functions and the allocation of customer costs to  
3 classifications are presented in Schedule F. A summary of the customer costs and the  
4 development of the costs per customer per month are presented in Schedule G.

5  
6 **Q. Did you prepare an analysis of costs related to the demand charge for rate LFD  
7 and XD Service?**

8 A. Yes. The analysis of costs related to the demand charges for LFD and XD Service is  
9 presented in Schedule H of UGI Gas Exhibit D.

10  
11 **Q. Please explain the analysis of the LFD and XD Service costs related to demand  
12 charges as set forth in UGI Gas Exhibit D.**

13 A. The costs related to LFD and XD Service demand charges were determined by the  
14 allocation of certain fixed costs, depreciation, taxes and return to these classifications.  
15 The allocation was performed in Schedule E. A summary of the allocated costs and the  
16 development of the unit demand costs are presented in Schedule H.

17  
18 **Q. Please describe the second cost of service study in Exhibit D-1.**

19 A. The second cost of service study presented in Exhibit D-1 is the same as the first study  
20 except for the allocation of mains investment. The second study does not allocate any  
21 mains investment to the interruptible class except for the directly assigned mains  
22 identified for the large XD-Interruptible customer. As a result of this change in  
23 allocation of mains investment, composite allocation factors also change.

24

1 **Q. What is the rationale for not allocating any mains investment to the interruptible**  
2 **class?**

3 A. The rationale for not allocating mains investment to interruptible customers is based on  
4 the cost allocation premise that costs should be allocated based on the design of the  
5 system facilities. The distribution system was designed to meet peak day requirements  
6 for firm customers only. Interruptible customers would have no usage on the design  
7 peak day as their volumes would be curtailed. The Company's investment in mains  
8 would be the same whether or not there were interruptible customers on the system.  
9 Therefore, allocating all mains investment to firm customers is reasonable.

10

11 **Q. Please summarize the results of the second cost of service study.**

12 A. The results of the second cost of service allocation (Exhibit D-1) set forth in Schedule  
13 E-1 are brought forward and summarized in Schedule D-1. The total cost of service by  
14 classification in Schedule D-1 is then brought forward to Schedule A-1 (without gas  
15 costs), columns 2 and 3, where these results are compared to the pro forma revenues  
16 under present rates (columns 4 and 5) and proposed rates (columns 6 and 7). The  
17 proposed change in revenue under proposed rates and the percent change are shown in  
18 columns 8 and 9 of Schedule A-1. Schedule B-1 and Schedule C-1 present the rate of  
19 return by classification under present rates and proposed rates, respectively.

20

21 **Q. Please explain Exhibit D-2.**

22 A. Exhibit D-2 presents the simple average of the cost allocation studies from Exhibits D  
23 and D-1. Exhibit D-2 sets forth the summary of the average cost or service by  
24 classification in Schedule A-2 (columns 2 and 3) compared to revenues under present

1 and proposed rates, as well as the rate of return based on the average cost of service  
2 allocation under present rates in Schedule B-2 and under proposed rates in Schedule C-  
3 2.

4

5 **Q. Does that conclude your direct testimony?**

6 **A. Yes, it does.**

## LIST OF CASES IN WHICH PAUL R. HERBERT TESTIFIED

1 DIRECT TESTIMONY OF

2 JOHN F. WIEDMAYER

3 DOCKET NO. R-2015-2518438

4 **I. INTRODUCTION**

5 **Q. Please state your name and address.**

6 A. My name is John F. Wiedmayer. My business address is 1010 Adams Avenue,  
7 Audubon, Pennsylvania 19403.

8  
9 **Q. Are you associated with any firm and in what capacity?**

10 A. Yes. I am associated with the firm of Gannett Fleming Valuation and Rate  
11 Consultants, LLC ("Gannett Fleming") as Project Manager, Depreciation and  
12 Valuation Studies.

13  
14 **Q. How long have you been associated with Gannett Fleming?**

15 A. I have been associated with the firm since I graduated from college in June  
16 1986.

17  
18 **Q. What is your educational background?**

19 A. I have a Bachelor of Arts degree in Engineering from Lafayette College and a  
20 Master of Business Administration from the Pennsylvania State University.

21  
22 **Q. Do you belong to any professional societies?**

23 A. Yes. I am a member of the National and Pennsylvania Societies of Professional  
24 Engineers and the Society of Depreciation Professionals ("SDP"). In 2005, I

1 served as President of the SDP and was a member of the SDP's Executive  
2 Board for the years 2003 through 2007.

3  
4 **Q. Do you hold any special certification as a depreciation expert?**

5 A. Yes. The SDP has established national standards for depreciation  
6 professionals. The SDP administers an examination to become certified in this  
7 field. I passed the certification exam in September 1997 and have fulfilled the  
8 requirements necessary to remain a Certified Depreciation Professional.

9  
10 **Q. Please outline your experience in the field of depreciation.**

11 A. I have over 29 years of depreciation experience, which includes expert  
12 testimony in numerous cases before 12 regulatory commissions, including this  
13 Commission.

14 In June 1986, I was employed by Gannett Fleming as a Depreciation  
15 Engineer. I held that position from June 1986 through December 1995. In  
16 January 1996, I was assigned to the position of Supervisor of Depreciation  
17 Studies. In August 2004, I was promoted to my present position as Project  
18 Manager of Depreciation Studies. I am responsible for conducting depreciation  
19 and valuation studies, including the preparation of testimony, exhibits, and  
20 responses to data requests for submission to the appropriate regulatory bodies.  
21 My additional duties include determining final life and salvage estimates,  
22 conducting field reviews, presenting recommended depreciation rates to  
23 management for its consideration and supporting such rates before regulatory  
24 bodies.

1           During the course of my employment with Gannett Fleming I have  
2 assisted in the preparation of numerous depreciation studies for utility  
3 companies in various industries. I assisted in the preparation of depreciation  
4 studies for the following telephone companies: Alberta Government Telephone,  
5 Commonwealth Telephone Company, Telus, United Telephone Company of  
6 New Jersey and United Telephone of Pennsylvania. I assisted in the  
7 preparation of depreciation studies for the following companies in the railroad  
8 industry: CSX Transportation, Union Pacific Railroad, Burlington Northern  
9 Railroad, Burlington Northern Santa Fe Railway, Amtrak, Kansas City Southern  
10 Railroad, Norfolk & Western, Southern Railway, and Norfolk Southern  
11 Corporation.

12           I assisted in the preparation of depreciation studies for the following  
13 organizations in the electric industry: AmerenUE, Arizona Public Service  
14 Company, UGI Utilities, Inc. - Electric Division, Penelec, Metropolitan Edison,  
15 the City of Red Deer, Nova Scotia Power, Newfoundland Power, Owen Electric  
16 Cooperative, Bangor Hydro Electric Company, Maine Public Service Company,  
17 Michigan Electric Transmission Company, PECO, Jackson Electric Cooperative  
18 Corporation, Houston Lighting and Power, TXU, Maritime Electric, Nolin Rural  
19 Electric Cooperative, AmerenCIPS, AmerenCILCO, AmerenIP, and the City of  
20 Calgary - Electric System.

21           I assisted in the preparation of depreciation studies for the following gas  
22 companies: BGE, PECO, UGI Utilities, Inc., North Penn Gas, PFG Gas, UGI  
23 Central Penn Gas, Inc., Equitable Gas, Centra Gas Alberta, Questar Gas,

1 Orange and Rockland, Con Edison, Dominion East Ohio, AmerenUE,  
2 AmerenCILCO, AmerenCIPS, and AmerenIP.

3 In each of the above studies, I assembled and analyzed historical and  
4 simulated data, performed field reviews, developed preliminary estimates of  
5 service lives and net salvage, calculated annual depreciation, and prepared  
6 reports for submission to state public utility commissions or federal regulatory  
7 agencies.

8  
9 **Q. Have you previously testified on the subject of utility plant depreciation?**

10 A. Yes. I have submitted testimony to the Kentucky Public Service Commission,  
11 the Newfoundland and Labrador Board of Commissioners of Public Utilities, the  
12 Nova Scotia Utility and Review Board, the Federal Energy Regulatory  
13 Commission, the Utah Public Service Commission, the Arizona Corporation  
14 Commission, the Missouri Public Service Commission, the Illinois Commerce  
15 Commission, the Maine Public Utilities Commission, the Maryland Public  
16 Service Commission, the New York Public Service Commission and the  
17 Pennsylvania Public Utility Commission.

18  
19 **Q. Have you received any additional education relating to utility plant  
20 depreciation?**

21 A. Yes. I have completed the following courses conducted by Depreciation  
22 Programs, Inc.: "Techniques of Life Analysis," "Techniques of Salvage and  
23 Depreciation Analysis," "Forecasting Life and Salvage," "Modeling and Life  
24 Analysis Using Simulation" and "Managing a Depreciation Study." In 2000, I

1 became an instructor at the SDP's annual conference lecturing on "Salvage  
2 Concepts," "Depreciation Models," "Analyzing the Life of Real-World Utility  
3 Property – Actuarial Analysis," "Theoretical Reserve" and "Data Requirements  
4 for a Depreciation Study."

5  
6 **II. PURPOSE OF TESTIMONY**

7 **Q. What is the purpose of your testimony?**

8 A. My testimony is in support of the depreciation studies conducted under my  
9 direction and supervision for the gas plant of UGI Utilities, Inc. – Gas Division  
10 ("UGI Gas" or the "Company"). I have been retained by the Company as a  
11 depreciation consultant. UGI Gas retained me to determine the book  
12 depreciation reserve as of September 30, 2017, to determine the annual  
13 depreciation expense to be included as an element of the cost of service, and  
14 to testify in support of those two determinations in this proceeding.

15 I am also a sponsoring witness for UGI Gas's depreciated original cost  
16 of gas plant in service included in rate base. My testimony will address my  
17 depreciation study, the appropriate depreciation reserve for ratemaking  
18 purposes, the original cost measure of value, and the appropriate annual  
19 depreciation expense to be included in the ratemaking cost of service as of  
20 September 30, 2017.

21  
22 **Q. Were you responsible for the preparation of any of the Company's**  
23 **responses to the Commission's filing regulations that were filed in**  
24 **support of the Company's general rate filing?**

1 A. Yes. I am the responsible witness for the following items in UGI Gas Exhibit I:

2	<u>Item No.</u>	<u>Subject</u>
3	I-A-3	Description of Depreciation Methods and Factors
4		Considered in Arriving at Estimates of Service Life and
5		Dispersion by Account
6		
7	I-A-4	Survivor Curves and Surviving Original Cost Including
8		Related Annual and Accrued Depreciation
9		
10	I-A-5	Comparison of Calculated Reserve vs. Book Reserve
11		
12	I-A-6	Survivor Curves and Annual Accrual Rates
13		
14	I-A-7	Cumulative Depreciated Original Cost by Vintage Year
15		
16	I-A-17	Net Salvage
17		

18 **Q. Have you previously prepared comparable studies for UGI Gas?**

19 A. Yes. I provided testimony on depreciation matters for the Company in a prior  
20 UGI Penn Natural Gas (“PNG”) base rate case at Docket No. R-2008-2079660  
21 and the prior two UGI Central Penn Gas (“CPG”) base rate cases at Docket No.  
22 R-2010-2214415 and Docket No. R-2008-2079675. Prior to those rate filings, I  
23 prepared exhibits for the depreciation study in UGI Gas’s previous base rate  
24 case filed in 1995 at Docket No. R-00953297.

25

26 **III. OUTLINE OF EXHIBITS C (FULLY PROJECTED), C (FUTURE) AND C**  
27 **(HISTORIC)**

28 **Q. Will you be sponsoring any exhibits with your direct testimony?**

29 A. Yes, I am attaching and sponsoring the following exhibits: UGI Gas Exhibit C  
30 (Fully Projected), UGI Gas Exhibit C (Future) and UGI Gas Exhibit C (Historic).  
31 UGI Gas Exhibit C (Fully Projected) presents the summarized depreciation  
32 calculations and supporting tables related to the fully projected future test year

1 ending September 30, 2017 (“FPFTY”). UGI Gas Exhibit C (Future) presents  
2 summarized depreciation calculations and supporting charts and tables related  
3 to the depreciation study for the future test year ending September 30, 2016  
4 (“FTY”). UGI Gas Exhibit C (Historic) presents the summarized depreciation  
5 calculations and supporting tables related to the historic test year ended  
6 September 30, 2015 (“FTY”). Each of the three exhibits is organized in a similar  
7 manner and each contains information and schedules supporting the amounts  
8 applicable to each test year period. UGI Gas Exhibit C (Future) contains  
9 additional information including the supporting charts and life tables related to  
10 the service life estimates.

11  
12 **Q. Does UGI Gas Exhibit C (Fully Projected) accurately portray the results of**  
13 **your depreciation study as of September 30, 2017?**

14 A. Yes.

15  
16 **Q. In preparing the depreciation study, did you follow generally accepted**  
17 **practices in the field of depreciation?**

18 A. Yes.

19  
20 **Q. Please describe the contents of the depreciation study report, UGI Gas**  
21 **Exhibit C (Future) and UGI Gas Exhibit C (Fully Projected).**

22 A. The depreciation study report in UGI Gas Exhibit C (Future) consists of eight  
23 parts including charts and tables filed in the Company’s most recent service life  
24 study report submitted in 2012. Part I, Introduction, includes statements related

1 to the scope of and basis for the depreciation study. Part II, Estimation of  
2 Survivor Curves, presents detailed discussions of: (1) survivor curves; and (2)  
3 methods of life analysis including an example of the retirement rate method.  
4 Part III, Service Life Considerations, presents the relevant factors considered  
5 for estimating service lives. Part IV, Calculation of Annual and Accrued  
6 Depreciation, sets forth a description of: (1) the group procedures used for  
7 calculating annual and accrued depreciation; and (2) an explanation of the  
8 manner in which net salvage was incorporated in the calculations. Part V,  
9 Results of Study, includes a description of the results and summaries of the  
10 detailed depreciation calculations as of September 30, 2016. Part VI, Service  
11 Life Statistics, presents the results of the retirement rate analyses prepared as  
12 the historical bases for the service life estimates. Part VII, sets forth the detailed  
13 depreciation calculations related to surviving original cost as of September 30,  
14 2016. The detailed depreciation calculations present the annual and accrued  
15 depreciation amounts by account and vintage year. The remaining life annual  
16 accrual rate is also set forth in the tables of Part VII. Part VIII, Experienced and  
17 Estimated Net Salvage, contains the net salvage amortization of experienced  
18 and estimated net salvage for the years 2012 through 2016.

19 UGI Gas Exhibit C (Fully Projected) includes: a description of the scope,  
20 basis and results of the studies; summaries of the depreciation calculations; and  
21 the detailed depreciation calculations as of September 30, 2017. The  
22 descriptions and explanations presented in UGI Gas Exhibit C (Future) are also  
23 applicable to the depreciation calculations presented in UGI Gas Exhibit C (Fully  
24 Projected). The graphs and tables related to service life presented in UGI Gas

1 Exhibit C (Future) also support the service life estimates used in UGI Gas  
2 Exhibit C (Fully Projected) and UGI Gas Exhibit C (Historic), inasmuch as the  
3 estimates are the same for all three test years.

4 The results of the study are set forth in Part II in UGI Gas Exhibit C (Fully  
5 Projected). Table 1, pages II-3 through II-4 of UGI Gas Exhibit C (Fully  
6 Projected), presents the estimated survivor curve, the original cost and  
7 depreciation reserve at September 30, 2017, and the calculated annual  
8 depreciation rate and amount for each account or subaccount of Gas Plant in  
9 Service. Table 2, pages II-5 through II-6 of UGI Gas Exhibit C (Fully Projected),  
10 presents the bringforward to September 30, 2017, of the depreciation reserve  
11 as of September 30, 2016. Table 3, pages II-7 through II-8 of UGI Gas Exhibit  
12 C (Fully Projected), presents the calculation of the book depreciation amounts  
13 for the FPFTY. Table 4, pages II-9 through II-10 of UGI Gas Exhibit C (Fully  
14 Projected), presents the experienced and estimated net salvage for fiscal years  
15 2013 through 2017. The amortization of net salvage is based on experienced  
16 and estimated net salvage during the period October 1, 2012 through  
17 September 30, 2017. The summary tables and detailed depreciation  
18 calculations set forth in UGI Gas Exhibit C (Fully Projected) as of September  
19 30, 2017, are organized and presented in the same manner as those presented  
20 in UGI Gas Exhibit C (Future) as of September 30, 2016.

21  
22 **Q. Please outline the contents of Exhibit C (Historic).**

23 A. UGI Gas Exhibit C (Historic) is organized similar to UGI Gas Exhibit C (Fully  
24 Projected). UGI Gas Exhibit C (Historic) includes: a description of the scope,

1 basis and results of the studies; summaries of the depreciation calculations; and  
2 the detailed depreciation calculations as of September 30, 2015. The  
3 descriptions and explanations presented in UGI Gas Exhibit C (Future) are also  
4 applicable to the depreciation calculations presented in UGI Gas Exhibit C  
5 (Historic). The same depreciation methods and procedures used to calculate  
6 depreciation were used in all three test year periods. The summary tables and  
7 detailed depreciation calculations as of September 30, 2015, are organized and  
8 presented in the same manner as those as of September 30, 2017 with two  
9 exceptions. Tables 2 and 3 presented in UGI Gas Exhibit C (Fully Projected)  
10 are not necessary and, therefore, are not presented in UGI Gas Exhibit C  
11 (Historic).

12  
13 **IV. THE DEPRECIATION STUDY - OVERVIEW**

14 **Q. Please describe what you mean by the term "depreciation".**

15 A. My use of the term "depreciation" is in accord with the definition set forth in the  
16 Uniform System of Accounts prescribed for Class A and Class B Natural Gas  
17 Companies. "Depreciation" refers to the loss in service value not restored by  
18 current maintenance, incurred in connection with the consumption or  
19 prospective retirement of gas plant in the course of service from causes which  
20 are known to be in current operation, against which the company is not  
21 protected by insurance. Among the causes to be given consideration are wear  
22 and tear, decay, action of the elements, inadequacy, obsolescence, changes  
23 in the art, changes in demand, requirements of public authorities and the  
24 exhaustion of natural resources.

1           In the study that I performed, which is the basis for my testimony, I used  
2           the straight line remaining life method of depreciation, with the average service  
3           life and equal life group procedures. The annual depreciation is based on a  
4           system of depreciation accounting that aims to distribute the unrecovered cost  
5           of fixed capital assets over the estimated remaining useful life of the unit, or  
6           group of assets, in a systematic and rational manner.

7  
8     **Q. Is the Company's claim for annual depreciation in the current proceeding**  
9     **based on the same methods of depreciation as were used in its most**  
10    **recent Annual Depreciation Report filed in March 2015 and service life**  
11    **study filed in March 2012?**

12    A. Yes, it is. For most plant accounts, the current claim for annual depreciation is  
13    based on the straight line remaining life method of depreciation, which has  
14    been used by the Company for over thirty years. The depreciation methods  
15    and procedures are described further in Part II of UGI Gas Exhibit C (Future).

16           For General Plant Accounts 391, 393, 394, 395, 397 and 398, I used the  
17    straight line remaining life method of amortization. The annual amortization is  
18    based on amortization accounting, which distributes the unrecovered cost of  
19    fixed capital assets over the remaining amortization period selected for each  
20    account.

21  
22    **V. ORIGINAL COST MEASURE OF VALUE**

23    **Q. What is the original cost of gas plant to be included in rate base in this**  
24    **proceeding?**

1 A. As of September 30, 2017, the original cost of gas plant in service is  
2 \$1,649,567,804 as shown in column 3 of Table 1 on pages II-3 through II-4 of  
3 UGI Gas Exhibit C (Fully Projected). This amount includes \$1,591,515,234 of  
4 Gas Plant and \$58,052,570 of Other Utility Plant allocated to Gas Division.  
5 Other Utility Plant is primarily comprised of plant assets included in Common  
6 Plant and Information Services ("IS"). The assets included in Common Plant  
7 and IS are assets that are shared and jointly used among the divisions at UGI  
8 Corporation including UGI Gas. The costs related to Common Plant and IS are  
9 allocated to Gas Division at 15.36 percent and 48.83 percent, respectively. In  
10 addition, the building that houses most of the IS assets, *i.e.*, the Reading Office  
11 and Service Center located on 225 Morgantown Road, is included in Account  
12 390.1, Structures and Improvements in Gas Division. Since a portion of the  
13 building relates to IS, a portion of the cost attributable to the other three utility  
14 divisions was deducted from the Reading Office and Service Building.

15

16 **VI. THE ACCRUED DEPRECIATION CLAIM**

17 **Q. Have you determined UGI Gas's accrued depreciation for ratemaking**  
18 **purposes as of September 30, 2017?**

19 A. Yes. I have determined the allocated book depreciation reserve as of  
20 September 30, 2017, to be \$448,735,746.

21

22 **Q. Is the Company's claim for accrued depreciation in the current proceeding**  
23 **made on the same basis as has been used for over thirty years?**

24 A. Yes. The current claim for accrued depreciation is the book reserve brought

1 forward from the book reserve approved by the Commission in the last  
2 proceeding.

3  
4 **Q. How did you determine UGI Gas's allocated book depreciation reserve as  
5 of September 30, 2016?**

6 A. The book depreciation reserve allocated to Gas Division as of September 30,  
7 2016, is set forth in column 4 of Table 1 of UGI Gas Exhibit C (Future). Table 2  
8 of UGI Gas Exhibit C (Future) is an annual bringforward of the book depreciation  
9 reserve as of September 30, 2015, using estimated accruals, retirements,  
10 salvage and cost of removal for the twelve months October 2015 through  
11 September 2016. The table sets forth, by plant account, the beginning book  
12 reserve balance as of September 30, 2015, the estimated reserve activity, and  
13 the ending reserve balance as of September 30, 2016. The estimated reserve  
14 activity consists of depreciation accruals (column 3), amortization of net salvage  
15 (column 4), projected retirements (column 5), projected salvage (column 6) and  
16 projected cost of removal (column 7). Table 3 of UGI Gas Exhibit C (Future)  
17 sets forth the calculation of the estimated depreciation accruals by plant  
18 account, which is carried forward to column 3 of Table 2. The book reserve as  
19 of September 30, 2015, by plant account, shown in column 2 of Table 2 was  
20 obtained from UGI Gas's books and records.

21  
22 **Q. Please explain the manner in which you projected the depreciation  
23 accruals for the twelve months ended September 30, 2016.**

24 A. The depreciation accruals for the twelve months ended September 30, 2016, by

1 plant account, were estimated by applying the annual depreciation accrual rates  
2 calculated as of September 30, 2015, to the projected average 2016 plant  
3 balance. The average balance for the twelve months ended September 30,  
4 2016, is computed in columns 2 through 6 of Table 3 and is based on the  
5 projected additions and retirements in columns 3 and 4.

6  
7 **Q. With reference to Table 2, column 4, please explain what you mean by "the**  
8 **amortization of net salvage" and explain the manner in which you**  
9 **projected it.**

10 A. The amortization of net salvage is the annual provision for recovering  
11 experienced negative net salvage. This process for recognizing net salvage in  
12 the cost of service is in accordance with Pennsylvania ratemaking practice. The  
13 amortization of net salvage is based on experienced net salvage during the  
14 preceding five-year period, October 1, 2010 through September 30, 2015.

15  
16 **Q. Please explain the manner in which you projected retirements, salvage**  
17 **and removal costs that are shown in columns 4, 5 and 6 of Table 2.**

18 A. Retirements were projected by plant account by applying the average retirement  
19 ratio, expressed as a percent of additions, for the five years 2011 through 2015,  
20 to FTY and FPFTY additions for most plant accounts. For certain General Plant  
21 accounts subject to amortization accounting, retirements are recorded when a  
22 vintage is fully amortized. All units are retired per books when the age of the  
23 vintage reaches the amortization period. Therefore, all vintages that reached  
24 or exceeded the amortization period were retired during the FTY for certain

1 General Plant accounts subject to amortization accounting. Salvage and  
2 removal costs were projected by plant account by applying the average salvage  
3 and cost of removal, as a percent of retirement amounts, for the five years 2011  
4 through 2015, to the projected retirement amounts.

5  
6 **Q. Was the book reserve at September 30, 2017, estimated using the same**  
7 **methodology?**

8 A. Yes, it was essentially the same methodology with one minor exception. The  
9 book depreciation accruals calculated for fiscal year 2017 were based on  
10 applying the depreciation rate to average monthly plant balances for purposes  
11 of calculating the book reserve as of September 30, 2017.

12  
13 **VII. THE ANNUAL DEPRECIATION EXPENSE CLAIM**

14 **Q. Have you determined UGI Gas's annual depreciation expense to be**  
15 **included as an element in the cost of service for purposes of this**  
16 **proceeding?**

17 A. Yes, I have. The annual depreciation expense is \$43,825,948 and consists of  
18 \$38,830,444 of annual accruals to recover original cost and \$4,995,504 of net  
19 salvage amortization. These amounts are set forth in column 6 of Table 1 in  
20 UGI Gas Exhibit C (Fully Projected).

21  
22 **Q. How did you determine the annual accruals of \$38,830,444?**

23 A. The determination of annual depreciation accruals consists of two phases. In  
24 the first phase, survivor curves are estimated for each plant account or

1 subaccount. In the second phase, the composite remaining lives and annual  
2 depreciation accruals are calculated based on the service life estimates  
3 determined in the first phase.

4 The determination of annual amortization amounts consists of the  
5 selection of amortization periods and the calculation of amortization amounts  
6 based on the remaining amortization period and the unrecovered cost for each  
7 vintage.

8  
9 **Q. Please describe the manner in which you estimated the service life**  
10 **characteristics for each depreciable group in the first phase of the study.**

11 A. The service life study consisted of: compiling historical data from records  
12 related to UGI Gas's gas plant; analyzing these data to obtain historical trends  
13 of survivor characteristics; obtaining supplementary information from  
14 management and operating personnel concerning UGI Gas's practices and  
15 plans as they relate to plant operations; and interpreting the above data to form  
16 judgments of average service life characteristics.

17  
18 **Q. What historical data did you analyze for the purpose of estimating the**  
19 **service life characteristics of UGI Gas's gas plant?**

20 A. The data consisted of the entries made by UGI Gas to record gas plant  
21 transactions during the period 1960 through 2011. The transactions included  
22 additions, retirements, transfers, acquisitions, and the related balances. I  
23 classified the data by depreciable group, type of transaction, the year in which  
24 the transaction took place, and the year in which the plant was installed.

23  
24

**Q. What method did you use to analyze these service life data?**

A. I used the retirement rate method of life analysis. The retirement rate method is the most appropriate when aged retirement data are available because it develops the average rates of retirement actually experienced during the period of study. Other methods of life analysis infer the rates of retirement based on a selected type survivor curve.

**Q. Please describe the results of your use of the retirement rate method.**

A. Each retirement rate analysis resulted in a life table, which, when plotted, formed an original survivor curve. Each original survivor curve, as plotted from the life table, represents the average survivor pattern experienced by the several vintage groups during the experience band studied. Inasmuch as this survivor pattern does not necessarily describe the life characteristics of the property group, interpretation of the original curves is required in order to use them as valid considerations in service life estimation. Iowa type survivor curves were used in these interpretations. The results of the retirement rate analyses are presented in Part VI of UGI Gas Exhibit C (Future).

**Q. Please explain briefly what an "Iowa type survivor curve" is and how you use it in estimating service life characteristics for each depreciable group.**

A. The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor

1 curves known as the Iowa type survivor curves. The Iowa curves were  
2 developed at the Iowa State College Engineering Experiment Station through  
3 an extensive process of observation and classification of the ages at which  
4 industrial property had been retired. Iowa curves are the accepted survivor  
5 curves for Pennsylvania, and the remaining 49 other states, and have been for  
6 many years.

7 Iowa type curves are used to smooth and extrapolate original survivor  
8 curves determined by the retirement rate method. The Iowa curves were used  
9 in this study to describe the forecasted rates of retirement based on the  
10 observed rates of retirement and the qualitative outlook for future retirements.

11 The estimated survivor curve designations for each depreciable group  
12 indicate the average service life, the family within the Iowa system and the  
13 relative height of the mode. For example, the Iowa 35-R2 curve indicates an  
14 average service life of thirty-five years; a Right-skewed, or R, type curve (the  
15 mode occurs after average life for right modal curves); and a relatively low  
16 height, 2, for the mode (possible modes for R type curves range from 0.5 to 5).

17  
18 **Q. Did you physically observe plant and equipment in the field?**

19 A. Yes. Field trips are conducted periodically in order to be familiar with the  
20 operation of the company and observe representative portions of the plant.  
21 Field trips are conducted each time a service life study is performed. Service  
22 life study reports are submitted to the Pennsylvania Public Utility Commission  
23 (“PA PUC”) every five years, at minimum. UGI Gas’s most recent service life  
24 study report was submitted in March 2012. Facilities visited during field trips,

1 generally include representative city gate stations, district regulating stations,  
2 service centers, etc. The most recent field trip was conducted over 3 days in  
3 December 2011. The specific dates and locations visited during recent field  
4 trips are listed in Exhibit C (Future) in Part III. A general understanding of the  
5 function of the plant and information with respect to the reasons for past  
6 retirements and expected causes of retirements are obtained during these field  
7 trips. This knowledge and information was incorporated in the interpretation  
8 and extrapolation of the statistical analyses.

9  
10 **Q. Please describe the second phase of the process that you used in order**  
11 **to determine annual depreciation for ratemaking purposes.**

12 A. After I estimated the service life characteristics for each depreciable group, I  
13 calculated annual depreciation accruals for each group in accordance with the  
14 straight line remaining life method, using remaining lives consistent with the  
15 average service life procedure for plant installed prior to 1982 and remaining  
16 lives consistent with the equal life group procedure for plant installed in 1982  
17 and subsequent years. Summary tabulations of the survivor curve estimates  
18 and the annual accrual rates and amounts are set forth on Table 1 of UGI Gas  
19 Exhibit C (Historic), UGI Gas Exhibit C (Future) and UGI Gas Exhibit C (Fully  
20 Projected). The detailed tabulations of the depreciation calculations are  
21 presented in Part III of UGI Gas Exhibit C (Historic) and UGI Gas Exhibit C  
22 (Fully Projected) and Part VII of UGI Gas Exhibit C (Future).

23  
24 **Q. Please describe briefly the straight line remaining life method of**

1           **depreciation that you used for depreciable property.**

2    A.     The straight line remaining life method of depreciation allocates the original  
3           cost less accumulated depreciation in equal amounts to each year of remaining  
4           service life.

5  
6    **Q.     Please describe briefly the average service life procedure that you used**  
7           **in conjunction with the straight line remaining life method for plant**  
8           **installed prior to 1982.**

9    A.     In the average service life procedure, the remaining life annual accrual for each  
10          vintage is determined by dividing future book accruals (original cost less book  
11          reserve) by the average remaining life of the vintage. The average remaining  
12          life is a directly weighted average derived from the estimated survivor curve.

13  
14   **Q.     Please describe briefly the equal life group procedure that you used in**  
15          **conjunction with the straight line remaining life method for plant installed**  
16          **in 1982 and in later years.**

17   A.     In the equal life group procedure, the remaining life annual accrual for each  
18          vintage is determined by dividing future book accruals (original cost less book  
19          reserve) by the composite remaining life for the surviving original cost of that  
20          vintage. The composite remaining life for the vintage is derived by weighting  
21          the individual equal life group remaining lives. In the equal life group  
22          procedure, the property group is subdivided according to service life. That is,  
23          each equal life group includes the portion of the property that experiences the  
24          life of that specific group. The relative size of each equal life group is

1 determined from the property's life dispersion curve.

2  
3 **Q. Please describe briefly the amortization of certain General Plant accounts.**

4 A. General Plant Accounts 391, 393, 394, 395, 397 and 398 include a very large  
5 number of units, but represent a very small percent of depreciable gas plant.  
6 Depreciation accounting is difficult for these assets, inasmuch as periodic  
7 inventories are required to properly reflect plant in service. Many utilities have  
8 changed to amortization accounting for general plant as a practical and  
9 reasonable solution that avoids significant accounting expenditures for such a  
10 small percent of plant.

11 In amortization accounting, units of property are capitalized in the same  
12 manner as they are in depreciation accounting. However, retirements are  
13 recorded when a vintage is fully amortized, rather than as the units are removed  
14 from service. That is, there is no dispersion of retirement. All units are retired  
15 per books when the age of the vintage reaches the amortization period.

16  
17 **VIII. ILLUSTRATION OF DEPRECIATION STUDY PROCEDURE**

18 **Q. Please illustrate the procedure followed in your depreciation study and**  
19 **the manner in which it is presented in UGI Gas Exhibit C (Future) using**  
20 **an account as an example.**

21 A. I will use Account 376.1, Mains – Primarily Steel, to illustrate the manner in  
22 which the study was conducted. Account 376.1 represents 14 percent of the  
23 total depreciable gas plant. As the initial step of the service life study phase,  
24 aged plant accounting data were compiled for the years 1960 through 2011.

1 These data have been coded in the course of UGI Gas's normal recordkeeping  
2 according to account or property group, type of transaction, year in which the  
3 transaction took place, and year in which the gas plant was placed in service.  
4 The plant additions, retirements, and other plant transactions were analyzed by  
5 the retirement rate method of life analysis.

6 This account includes primarily cathodically-protected, steel mains,  
7 although some bare steel mains are still in service. The Iowa 72-R2.5 survivor  
8 curve was judged most appropriate for this account and is the survivor curve  
9 used for this filing. The survivor curve estimate used in the previous service  
10 life study was also the Iowa 72-R2.5 survivor curve. The Iowa 72-R2.5 survivor  
11 curve is an excellent fit for the original curve based on the company's retirement  
12 experience for the period 1960-2011. The proposed 72-R2.5 survivor curve is  
13 within the range of estimates used by other gas companies and is consistent  
14 with the outlook of company management. The original and smooth survivor  
15 curves are plotted in Part VI on page VI-7 of UGI Gas Exhibit C (Future). The  
16 original life table for the 1960-2011 experience band is set forth on pages VI-8  
17 through VI-10.

18 The calculation of annual depreciation, the second phase, for the original  
19 cost of steel mains in service at September 30, 2016, is presented by vintage in  
20 Part VII on pages VII-19 through VII-21 of UGI Gas Exhibit C (Future) for Gas  
21 Plant in Service. The detailed depreciation calculations at September 30, 2017  
22 are presented in Part III of Exhibit C (Fully Projected). The tabular presentations  
23 of the detailed depreciation calculations in Part VII of Exhibit C (Future) are  
24 similar in kind to those set forth in Part III of Exhibit C (Fully Projected). The

1           expectancy and average life derived from the estimated survivor curve for each  
2           vintage were used to calculate the accrued depreciation by the average service  
3           life procedure for 1981 and prior vintages.

4           The accrued depreciation for vintages subsequent to 1981 was  
5           calculated by the equal life group procedure using the Iowa 72-R2.5 survivor  
6           curve. In the calculation, the surviving cost in each vintage was further  
7           subdivided, through the use of a computer program, into depreciable groups  
8           according to the expected service lives as defined by the Iowa 72-R2.5 survivor  
9           curve. The accrued depreciation was derived for each equal life group, based  
10          on its service life, and the totals shown for the vintages are the summations of  
11          the individually derived amounts.

12          The book reserve was allocated to vintages based on the calculated  
13          accrued depreciation. The remaining lives of the vintages were based on the  
14          Iowa 72-R2.5 survivor curve, the attained age, and the same group procedures  
15          as were used to calculate accrued depreciation. The future book accruals  
16          (original cost less allocated book reserve) were divided by the remaining lives  
17          to derive the annual depreciation accruals by vintage.

18          The total depreciation accrual on page VII-21 of UGI Gas Exhibit C  
19          (Future) was brought forward to column 7 of Table 1 on page V-4 of the exhibit  
20          and divided by the total original cost in column 3 in order to calculate the annual  
21          depreciation accrual rate in column 6. A similar process was used for the  
22          FPFTY.

23  
24      **Q.    Is the procedure you described for Account 376.1 typical of that followed**

1 **for most of the plant investment?**

2 A. Yes, it is, inasmuch as the straight line method and the average service life and  
3 the equal life group procedures were used for most of the depreciable plant.

4  
5 **Q. Please illustrate the procedure followed for the amortization of certain**  
6 **General Plant accounts and the manner in which it is presented in UGI**  
7 **Gas Exhibit C (Future) using an account as an example.**

8 A. I will use Account 394, Tools, Shop and Garage Equipment, to illustrate the  
9 amortization procedure. As the initial step of the amortization procedure, an  
10 amortization period of 20 years was selected based on the period during which  
11 such equipment renders most of its service, the amortization periods used by  
12 other utilities, and the service life estimate previously used for depreciation  
13 accounting.

14 The calculation of the annual amortization as of September 30, 2016, is  
15 presented by vintage in Part VII on page VII-72 of UGI Gas Exhibit C (Future).  
16 The calculated accrued amortization is based on the ratio of the vintage's age  
17 to the amortization period. The book reserve for vintages older than the  
18 amortization period was set equal to the original cost. The remaining book  
19 reserve was allocated to vintages based on the calculated accrued  
20 depreciation. The future book accruals or amortizations (original cost less  
21 assigned or allocated book reserve) were divided by the remaining amortization  
22 period to derive the annual amortizations by vintage.

23 The total amortization on page VII-72 of UGI Gas Exhibit C (Future) was  
24 brought forward to column 7 of Table 1 on page V-4 of UGI Gas Exhibit C

1 (Future). A similar process was performed for UGI Gas Exhibit C (Fully  
2 Projected) and UGI Gas Exhibit C (Historic). That is, the calculation of the  
3 annual amortization related to the original cost of Tools, Shop and Garage  
4 Equipment in service at September 30, 2017, is presented by vintage on page  
5 III-72 of UGI Gas Exhibit C (Fully Projected) and summarized in Table 1 on page  
6 II-3.

7  
8 **Q. Briefly explain the methods used for the remaining portion of the**  
9 **depreciable plant.**

10 A. The life span procedure was applied to major structures in Account 390. The  
11 life span procedure was used for groups such as buildings in which concurrent  
12 retirement of all property in the group is expected. The life span of both the  
13 original installation and subsequent additions is the number of years between  
14 installation and final retirement of the group. The complete details, by vintage,  
15 of the accrued depreciation and remaining life accrual calculations are set forth  
16 for each structure in Part III of UGI Gas Exhibit C (Historic) and UGI Gas Exhibit  
17 C (Fully Projected) and in Part VII of UGI Gas Exhibit C (Future).

18  
19 **IX. THE NET SALVAGE AMORTIZATION CLAIM**

20 **Q. Please briefly describe the accounting treatment regarding net salvage**  
21 **for public utilities operating in Pennsylvania.**

22 A. In accordance with the Uniform System of Accounts and the rules for recovery  
23 of net salvage established by the Pennsylvania Superior Court in *Penn*  
24 *Sheraton Hotel v. Pa. P.U.C.*, 198 Pa. Super. 618, 184 A.2d 324 (1962) (“*Penn*

1       *Sheraton*”), net salvage is charged to the depreciation reserve and is amortized  
2       over a five-year period beginning with the year after net salvage is actually  
3       incurred. These accounting procedures were affirmed by the Commission in  
4       PPL Gas Utilities Corporation’s (“PPL Gas”) most recent rate filing (Docket No.  
5       R-00061398). This procedure is consistent with how other Pennsylvania public  
6       utilities account for net salvage and is the method used in preparing the  
7       company’s Annual Depreciation Reports submitted each year to the  
8       Commission.

9  
10   **Q.   Earlier in your testimony you indicated that UGI Gas’s annual**  
11   **depreciation expense consists, in part, of \$4,995,504 of net salvage**  
12   **amortization. How did you determine that amount?**

13   A.   The \$4,995,504 is the result of determining the five-year average of net salvage  
14   experienced and estimated during the period of October 1, 2012 through  
15   September 30, 2017. Net salvage is defined in the Uniform System of Accounts  
16   as gross salvage less cost of removal. For most gas utilities, including UGI  
17   Gas, cost of removal exceeds gross salvage resulting in negative net salvage.  
18   Negative net salvage is recorded to the depreciation reserve as a debit, which  
19   reduces the depreciation reserve. Charges related to the negative net salvage  
20   amortization are recorded to the depreciation reserve as a credit in the five  
21   years subsequent to the initial recording of the negative net salvage amount.  
22   Therefore, the negative net salvage amount will have been fully amortized after  
23   five years and the net effect on the depreciation reserve is zero. Detailed data  
24   related to the experienced and estimated cost of removal and salvage are

1 presented in Part VIII of UGI Gas Exhibit C (Future) and Part IV of UGI Gas  
2 Exhibit C (Fully Projected).

3  
4 **Q. Do you have any other comments on the other items which you are**  
5 **sponsoring in this proceeding?**

6 A. Yes. The above testimony does not describe the responses to filing  
7 requirements set forth in Items I-A-5, I-A-6, and I-A-7. In general, these  
8 responses are self-explanatory. The response to I-A-5 is a comparison of the  
9 actual and projected book depreciation reserve with the calculated accrued  
10 depreciation as of the end of the historic and future test years. The response  
11 to I-A-6 presents the survivor curves used in the most recent prior general rate  
12 proceeding and the annual accrual rates that resulted from the use of these  
13 curves. The response to I-A-7 is the cumulative depreciated original cost by  
14 installation year as of the end of the test years. The amounts requested in  
15 response to I-A-7 are set forth in UGI Gas Exhibit C (Historic) and UGI Gas  
16 Exhibit C (Future) in the section titled "Cumulative Depreciated Original Cost".

17  
18 **Q. Does this conclude your direct testimony?**

19 A. Yes, it does.

**UGI GAS STATEMENT NO. 6 – DAVID E. LAHOFF**

**BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Docket No. R-2015-2518438**

**UGI Utilities, Inc. – Gas Division**

**Statement No. 6**

**Direct Testimony of  
David E. Lahoff**

**Topics Addressed:**

- Test Years Sales/Revenues**
- Rate Structure**
- EE&C Rider**
- USP Rider**
- Revenue Allocation and Rate Design**
- GET Gas Reporting**
- Tariff Changes**

Dated: January 19, 2016

1 **I. INTRODUCTION**

2 **Q. Please state your name and business address.**

3 A. My name is David E. Lahoff. My current business address is 2525 N. 12th Street, Suite  
4 360, Reading, Pennsylvania 19612.

5

6 **Q. By whom are you employed and in what capacity?**

7 A. I am employed by UGI Utilities, Inc. (“UGI”) as Manager, Tariff & Supplier  
8 Administration.

9

10 **Q. Please provide your educational background.**

11 A. I received an undergraduate degree in business from The Pennsylvania State University  
12 and a Masters Degree in Business Administration from The University of Connecticut.

13

14 **Q. Please provide your professional experience.**

15 A. In 2002, I was named Manager, Special Projects for UGI. In 2003, I became Manager,  
16 Customer Accounting Services for UGI, where my responsibilities included the  
17 administration of all customer accounting functions. Beginning in 2007, I returned to the  
18 position of Manager, Special Projects to oversee a customer information system conversion  
19 project. Following the completion of that project, in 2009, I was named Manager of Rates.  
20 In 2014, I assumed the position of Manager, Tariff & Supplier Administration.

21

22 **Q. What are your current areas of responsibility?**

1 A. My current responsibilities include (1) all aspects of tariff and rate administration,  
2 including interactions with natural gas suppliers under our natural gas supplier tariffs, (2)  
3 revenue planning and (3) oversight of UGI's gas management system.

4

5 **Q. Have you previously testified as a witness before the Pennsylvania Public Utility**  
6 **Commission?**

7 A. Yes, I have testified in the following dockets: UGI Central Penn Gas, Inc. ("CPG") 2009  
8 Base Rate Case, Docket No. R-2008-2079675; UGI Penn Natural Gas, Inc. ("PNG") 2009  
9 Base Rate Case, Docket No. R-2008-2079660; UGI Utilities, Inc. – Gas Division ("UGI  
10 Gas" or the "Company") 2009 Annual Gas Cost Filing, Docket No. R- 2009-2105911; UGI  
11 Gas Petition to Implement a Purchase of Receivables Program and Merchant Function  
12 Charge, Docket No. P-2009-2145498; CPG 2011 Base Rate Case, Docket No. R-2010-  
13 2214415; UGI Gas Procurement Charge Filing, Docket No. R-2012-2314235; PNG Gas  
14 Procurement Charge Filing, Docket No. R-2012-2314224; CPG Gas Procurement Charge  
15 Filing, Docket No. R-2012-2314247; UGI Gas, PNG and CPG Growth Extension Tariff  
16 ("GET Gas") Filing, Docket No. P-2013-2356232; and UGI Utilities, Inc. - Electric  
17 Division Default Service Filing, Docket No. P-2013-2357013.

18

19 **Q. Please describe the purpose of your testimony.**

20 A. I will address: (1) development of the historic test year ended September 30, 2015  
21 ("HTY"), future test year ending September 30, 2016 ("FTY"), and fully projected future  
22 test year ending September 30, 2017 ("FPFTY"), sales and revenues, including use per  
23 customer adjustments due to energy savings from the proposed Energy Efficiency and

1 Conservation (“EE&C”) Plan; (2) rate structure, including elimination of certain rate  
2 schedules, and the new EE&C Rider and Universal Service Program (“USP”) Rider; (3)  
3 revenue allocation and rate design; (4) update to the GET Gas Pilot Program; and (5) other  
4 proposed tariff modifications.

5  
6 **Q. Are you sponsoring any exhibits or filing requirements in this proceeding?**

7 A. Yes, I am sponsoring the following Exhibits: UGI Gas Exhibit DEL-1 (15 year normal  
8 heating degree days); UGI Gas Exhibit DEL-2 (Multi-year Normal Trend of use per  
9 customer – residential and non-residential); UGI Gas Exhibit DEL-3 (FPFTY Sales and  
10 Revenue Adjustments); UGI Gas Exhibit DEL-4 (FTY Sales and Revenue Adjustments);  
11 UGI Gas Exhibit DEL-5 (HTY Sales and Revenue Adjustments); UGI Gas Exhibit DEL-  
12 6 (Detail of Usage per Customer by Class as shown on UGI Gas Exhibit DEL-3); UGI Gas  
13 Exhibit DEL-7 (Calculation of EE&C Rider); UGI Gas DEL-8 (Calculation of the USP  
14 Rider and the Adjustment to Annual USP Reconciliation); UGI Gas Exhibit DEL-9 (Rate  
15 NNS calculation); UGI Gas Exhibit DEL-10 (Rate MBS calculation); UGI Gas Exhibit  
16 DEL-11 (Recalculation of GPC); UGI Gas Exhibit DEL-12 (Recalculation of MFC  
17 percentages); UGI Gas Exhibit DEL-13 (Recalculation of GET Surcharge); UGI Gas  
18 Exhibit DEL-14 (Calculation of GET Gas Revenues); and Schedules D-5A and D-5B of  
19 UGI Gas Exhibit A. I am also sponsoring those responses to the Commission’s filing  
20 requirements and standard data requests where my name is indicated as the sponsoring  
21 witness.

1 **II. SALES AND REVENUES**

2 **A. Development of FPFTY Sales and Revenues**

3 **Q. Please explain how the Company's FPFTY sales and revenues were developed.**

4 A. FPFTY sales and revenues were developed by annualizing and normalizing the Company's  
5 2017 fiscal year planned sales and revenue budget, adjusted to reflect the most recently  
6 available growth forecast. Annualized sales were determined by developing sales and  
7 revenue adjustments reflective of projected customer counts and annual expected use per  
8 customer as of September 30, 2017 for a full twelve- month period by reviewing historic  
9 usage data and applying regression analysis techniques. Both the Company's 2017 fiscal  
10 year planned sales and revenue budget and the Company's FPFTY reflect normal heating  
11 degree days of 5,214 based upon an average over a fifteen year period ending December  
12 31, 2014. UGI Gas Exhibit DEL-1 provides the supporting calculation of the normal  
13 degree days utilized.

14

15 **Q. Is the use of average temperature data for a fifteen-year period consistent with the**  
16 **methodology used by PNG and CPG for calculating normal heating degree days in**  
17 **previous base rate cases?**

18 A. Yes. PNG used a fifteen-year period to develop normal heating degree days in its 2009  
19 base rate case, and CPG used this methodology in its 2009 and 2011 base rate cases.

20

21 **Q. Please explain the process for developing the Company's fiscal year 2017 planned**  
22 **sales and revenue budget.**

23 A. The planned sales and revenue budget is a joint effort of the Marketing and Rates  
24 Departments, with Marketing providing customer growth and attrition information by

1 customer class along with specific large commercial and industrial sales and revenue  
2 budget projections. The Rates Department develops normalized usage per customer for  
3 core customer classes, annualized sales and total revenues. The budget process is described  
4 in the direct testimony of Company witness Ann P. Kelly (UGI Gas Statement No. 2).

5 In developing sales and revenues, the Vice President, Marketing and Customer  
6 Relations, with input and assistance from other marketing employees, budgets the number  
7 of customers by class. Various factors are considered in developing customer budgets,  
8 including: the trend in losses and conversions to and from other energy sources; the level  
9 of applications and inquiries for service, new construction activity; current and projected  
10 economic factors; and the costs of competing fuels. The usage per customer reflected in  
11 the planned 2017 budget was developed by carrying forward the same levels of usage per  
12 customer derived for the fiscal year 2016 budget, which were developed using normalized  
13 twelve-month trends for the period ending March 2015 incorporating historic actual  
14 weather and actual usage per customer class, to develop projected customer usage under  
15 normal weather conditions. Planned budgeted numbers of customers and usage per  
16 customer for these customer classes are then combined to produce planned budgeted sales.  
17 Sales are allocated by month, and appropriate rates or rate blocking are applied to derive  
18 planned budgeted revenues. Sales and revenues related to large contract customer classes  
19 are developed by the Marketing Department on a customer specific basis using customer  
20 input where appropriate.

21 The derivation of the 2017 planned budget reflects a preliminary forecast which  
22 will be subsequently updated during 2016 as part of the normal budget process, which is  
23 conducted several months prior to the start of the new fiscal year. The methodology applied

1 to develop normalized FPFTY use per customer, FTY use per customer, and HTY use per  
2 customer is the same for all three periods. In particular, the methodology used is  
3 appropriate for ratemaking purposes given the longer term period over which new rates are  
4 likely to be in effect as compared to the Company's typical budget, which is shorter term  
5 in nature.

6  
7 **Q. Please describe the adjustments made to FPFTY year sales and revenues for the**  
8 **twelve months ending September 30, 2017.**

9 A. A summary of all adjustments made to the 2017 planned budget in order to develop FPFTY  
10 sales is shown on UGI Gas Exhibit DEL-3(a). In total, these adjustments reflect a reduction  
11 to sales of 5,606 MMcf and a reduction to revenue of \$68.5 million.

12  
13 **Q. Please explain the "Adjustment for Customer Changes" shown on UGI Gas Exhibit**  
14 **DEL-3(b).**

15 A. The "Adjustment for Customer Changes" annualizes customer counts to anticipated end of  
16 test year levels based on the Company's most recent forecast for the FPFTY. In particular,  
17 this adjustment includes a net increase of 977 residential heating customers and a net  
18 increase of 161 non-residential heating customers.

19  
20 **Q. How is this adjustment quantified?**

21 A. UGI Gas Exhibit DEL-3(b) provides the calculation of the associated sales and revenue  
22 adjustments for the stated customer count increases. In total, as reflected on UGI Gas  
23 Exhibit DEL-3(a), this adjustment increases sales by 0.093 MMcf and increases projected

1 revenues by \$0.8 million, inclusive of revenues for recovery of purchased gas costs  
2 (“PGC”) and exclusive of transportation customer adjustments discussed separately below.

3  
4 **Q. Please explain your next adjustment, “Adjustment for Annualized Use/Customer.”**

5 A. The “Adjustment for Annualized Use/Customer” annualizes usage per customer to  
6 projected end of year test levels based on a twenty-one year regression analysis of actual  
7 usage and degree day information for the period from January 1995 through September  
8 2015, and forecasts end of FPFTY use per customer conditions using the regression results  
9 along with normal heating degree days. The results can be seen in UGI Gas Exhibit DEL-  
10 3(c), resulting in a net sales decrease of 4.34 MMcf and a net revenue decrease of \$33.1  
11 million, inclusive of revenues for recovery of PGC and exclusive of transportation  
12 customer adjustments discussed separately below.

13  
14 **Q. Why did UGI Gas utilize a regression period of twenty one years?**

15 A. Utilizing this approach provides a large enough sample set of data to smooth out short-term  
16 variations and capture the underlying long-term use per customer trend in order to more  
17 accurately project usage per customer during the period rates are likely to be in effect.  
18 Please see UGI Gas Exhibits DEL-2(a) and DEL-2(b), which contain graphs that illustrate  
19 the long-term usage trend for the Company’s core residential and commercial heating  
20 customers, and clearly show that, although there are short-term fluctuations which occur  
21 in certain periods, the values consistently revert to the long-term trend observed over this  
22 twenty-one period. In developing the data, the Company utilized an econometric  
23 regression model that incorporates four independent variables: use per customer, heating

1 degree days, lagged heating degree days and time trend. While use per customer and  
2 heating degree days capture annualized usage factors based on projected annualized  
3 customer changes and weather defined by a normal standard, the time trend variable of this  
4 regression captures trends underlying changes in usage per customer over time. These  
5 trends can be varied, but as a comprehensive variable, “trend” will capture the impacts of  
6 conservation items and measures, including, but not limited to: (1) regular appliance  
7 replacements; (2) accelerated appliance replacements; (3) high-efficiency appliance  
8 installations; (4) setback thermostat installations; (5) modifications to new and existing  
9 buildings that are designed to decrease energy consumption; and (6) changes in consumer  
10 usage behavior due to other economic influences. Given the number of variables that can  
11 influence customer usage over time, and the difficulty in identifying, quantifying and  
12 tracking all variables over time, the use of a trend variable can be used to provide a  
13 comprehensive indicator of usages trends, which can then be used to forecast for a future  
14 period.

15  
16 **Q. Is the econometric model you described the same as the model utilized in the 2009**  
17 **PNG, and 2009 and 2011 CPG base rate cases?**

18 A. The econometric model uses the same set of variables, but uses twenty one years of data,  
19 as opposed to five years of data. In their base rate cases, CPG and PNG did not have access  
20 to as much historical data as the Company has in this proceeding. Therefore, CPG and  
21 PNG had to use a more abbreviated historical period. The twenty-one years of history are  
22 useful in identifying clear trends which should be evaluated for rate making purposes.

23

1 **Q. Do the adjustments to use per customer for the FPFTY include the impact of**  
2 **Company’s proposed EE&C Plan?**

3 A. Yes. As part of its base rate filing, the Company is proposing to implement an EE&C Plan.  
4 The energy savings associated with the program will primarily occur in residential and  
5 small commercial customer usages. UGI Gas Exhibit DEL-3(m) shows the summary  
6 energy savings by Rates R, RT, N and NT, based on the five-year average annual savings  
7 for the program. The exhibit also contains the energy savings impact on a use per customer  
8 basis. The incremental impact on use per customer for Rates R and RT is 0.5 Mcf, and the  
9 incremental impact on use per customer for Rates N and NT is 1.5 Mcf. These incremental  
10 reductions in use per customer are included in the calculation of adjusted use per customer  
11 for the FPFTY. The buildup for the overall energy savings is addressed in the direct  
12 testimony of Company witness Theodore M. Love (UGI Gas Statement No. 11). This  
13 adjustment decreases total sales by 0.22 MMcf and reduces revenue by \$1.5 million.

14  
15 **Q. Please explain the adjustment titled “Adjustment for Transport Changes” as shown**  
16 **on UGI Gas Exhibit DEL-3(a), 3(b), 3(b)1, 3(c), and 3(c)1.**

17 A. The “Adjustment for Transport Changes” is the summation of several adjustments made  
18 for the Company’s transportation customers for the FPFTY. This adjustment reduces  
19 projected sales by 1.1 MMcf and decreases revenues by \$2.35 million, as shown in  
20 summary on UGI Gas Exhibit DEL-3(a) and detailed on UGI Gas Exhibits DEL-3(b),  
21 3(b)1, 3(c) and 3(c)1. The adjustment for large transportation customers was developed by  
22 UGI Gas marketing personnel following their review of individual large customer accounts  
23 and market segments. It reflects anticipated increases or reductions from original fiscal

1 year 2017 planned budget levels in the sales and revenues for these accounts. Changes in  
2 customer counts for small transportation customer classes have been developed from UGI  
3 Gas marketing forecasts for counts at the end of the FPFTY, and associated usage per  
4 customer for the small transportation customer groups were included within the 21-year  
5 regression analysis. See UGI Gas Exhibit DEL-6 for details on use per customer by class.  
6

7 **Q. Please explain the “Adjustment for PGC” shown on UGI Gas Exhibit DEL-3(a).**

8 A. The “Adjustment for PGC” shown in summary on UGI Gas Exhibit DEL-3(a) represents  
9 an annualization of the FPFTY PGC revenues using the PGC rate in effect as of December  
10 1, 2015 for the FPFTY period. UGI Gas Exhibit DEL-3(d) provides the calculations for  
11 this adjustment. This adjustment decreases PGC revenues for the FPFTY by \$11.32  
12 million.  
13

14 **Q. Please explain the three adjustments “Adjustment for MFC,” “Adjustment for  
15 LISHP,” and “Adjustment for GPC” shown in summary on UGI Gas Exhibit DEL-  
16 3(a).**

17 A. The “Adjustment for MFC” annualizes Company’s Merchant Function Charge (“MFC”)  
18 revenues for the FPFTY based on the MFC surcharge rate in effect as of December 1, 2015.  
19 The “Adjustment for LISHP” annualizes Company’s USP surcharge revenues for the  
20 FPFTY based on the Low Income Self Help Program (“LISHP”) Rider rate in effect as of  
21 December 1, 2015. The “Adjustment for GPC” annualizes the Gas Procurement Cost  
22 (“GPC”) revenues to reflect the volume variance to the original fiscal year 2017 planned  
23 budget. The MFC Adjustment decreases projected revenues by \$184,000; the LISHP

1 adjustment increases revenues by \$2.0 million; and the GPC adjustment decreases revenues  
2 by \$171,000. Additional details for these three adjustments are provided on UGI Gas  
3 Exhibits DEL-3(e), 3(f) and 3(g).

4  
5 **Q Please explain the “Adjustment for Interruptible.”**

6 A. The “Adjustment for Interruptible” annualizes the Company’s interruptible revenues for  
7 the FPFTY at the level of revenue based on a proxy cost of service of \$4.9 million. The  
8 methodology for this proxy cost of service is discussed by UGI Gas witnesses Paul J.  
9 Szykman (UGI Gas Statement No. 1) and Paul R. Herbert (UGI Gas Statement No. 4). In  
10 total, the Interruptible Adjustment decreases revenues by \$15.7 million.

11  
12 **Q. Please explain the three adjustments shown on UGI Gas Exhibit DEL-3(a):**  
13 **“Adjustment for Transportation Service Revenues,” “Adjustment for Excess Take”**  
14 **and “Adjustment for Rate N Minimum.”**

15 A. The “Adjustment for Transportation Service Revenues,” detailed in UGI Gas Exhibit DEL-  
16 3(i), reflects the proposed elimination of the following capacity release and transportation  
17 service related fees: Pooling Fees, System Access Fees and Information Service Fees. It  
18 also assumes a zero level for Supply Transfer Fees given the very low level of transfer  
19 activity in prior years and the proposal to move a transaction base fee, rather than a  
20 volumetric based fee. The adjustments for transportation service revenues reduce revenue  
21 by \$6.7 million. The “Adjustment for Excess Take,” detailed in UGI Gas Exhibit DEL-  
22 3(j), reflects the assumption that customers will evaluate new service elections as part of  
23 the implementation of new tariff rates, and will make the necessary adjustments to avoid

1 Excess Take penalties in the FPFTY year. The Excess Take adjustment reduces revenue  
2 by \$600,000.

3 The “Adjustment for Rate N Minimums,” detailed in UGI Gas Exhibit DEL-3(l),  
4 reflects the proposed elimination of Rate N minimum bill requirements. The Rate N  
5 minimum adjustment reduces revenue by \$1.3 million.

6  
7 **Q Please explain the adjustment on UGI Gas Exhibit DEL-3(k) “Adjustment for STAS.”**

8 A. The “Adjustment for STAS” zeros out the current UGI Gas State Tax Adjustment  
9 Surcharge (“STAS”) from its current level of (0.55%). The STAS adjustment increases  
10 projected revenues by \$1.8 million.

11  
12 **Q Please explain the adjustment on UGI Gas Exhibit DEL-3(n) “Adjustment for GET  
13 Gas.”**

14 A. The “Adjustment for GET Gas” reflects a reduction in GET Gas revenues primarily due to  
15 the higher than forecasted number of customers that are choosing to pay the GET Gas  
16 charge upfront as a lump sum instead of monthly, which eliminates the revenue from the  
17 return on investment portion of the monthly GET Gas charge. The revised revenues were  
18 developed by annualizing the projected payments in September 2017. This adjustment  
19 reduced revenues by \$238,000.

20  
21 **Q. Do the adjusted FPFTY revenues exclude revenues related to off-system sales?**

22 A. Yes.

23

1 **Q. Do the FPFTY revenues exclude revenues associated with the proposed discontinued**  
2 **tariff fees?**

3 A. Yes. As discussed in the section on Tariff Changes, the Company is proposing to eliminate  
4 a number of tariff fees to improve customer satisfaction and simplify its tariff  
5 administration, and has adjusted “Other Gas Revenues” by the amount of the fees  
6 associated with the elimination of the tariff charges. This adjustment of Other Gas  
7 Revenues reduces Other Gas Revenues by \$3.3 million, as shown on UGI Gas Exhibit A  
8 (Fully Projected), Schedule D-5B.

9

10 **B. Development of Sales and Revenue for the FTY and HTY**

11 **Q. How were annualized and normalized sales and revenue determined for the FTY**  
12 **ending September 30, 2016?**

13 A. Budgeted sales and revenues serve as the starting point for the development of the  
14 annualized and normalized FTY sales and revenues shown in UGI Gas Exhibit DEL-4(a).  
15 All of the adjustments that were made in the development of the FPFTY, with the exception  
16 of the adjustment related to the proposed EE&C program, were also made in the  
17 development of the FTY.

18

19 **Q. How were annualized and normalized sales and revenue determined for the HTY**  
20 **ended September 30, 2015?**

21 A. Historic sales and revenues serve as the starting point for the development of the annualized  
22 and normalized HTY sales and revenues shown in UGI Gas Exhibit DEL-5(a). The

1 adjustments that were made in the development of the HTY were substantially the same as  
2 the adjustments made in the development of the FTY.

3  
4 **III. RATE STRUCTURE**

5 **Q. Please describe the changes in rate structure proposed by the Company in this**  
6 **proceeding.**

7 A. The Company has not had a base rate proceeding in over twenty years. In general, the  
8 Company seeks to update and more closely align its tariff and rate schedules with those of  
9 PNG and CPG, who have had more recent base rate proceedings, and to simplify its rate  
10 design by eliminating a number of existing rate schedules that are no longer necessary or  
11 appropriate.

12  
13 **Q. Please identify the rate schedules and rates the Company is proposing to eliminate**  
14 **and its basis for doing so.**

15 A. The Company is proposing to eliminate the following rate schedules and PGC rates:

- 16 • Rate BD (Business Development Rate) – This is a retail (*i.e.*, a non-transportation)  
17 rate schedule designed for higher volume customers willing to execute a service  
18 agreement with the Company for a Daily Contract Requirement of not less than 50  
19 Mcf. Rate BD customers also qualify for a PGC (“PGC 2”) rate that has separate  
20 demand and commodity components, which was initiated by the Company in 1993  
21 to make PGC retail service more attractive to higher volume customers. As the  
22 retail natural gas market has matured, however, all of the Company’s Rate BD  
23 customers have migrated to transportation rate schedules, so the Company is

1 proposing to eliminate this rate. Also, there is no comparable rate schedule in the  
2 tariffs of PNG and CPG.

- 3 • Rate PV (Propane Vaporization Service) – Under this rate, the Company would  
4 vaporize propane as an agent for any Commercial or Industrial customer of the  
5 Company served under other rate schedules, where the customer provided suitable  
6 commercial grade propane fuel to the Company for vaporization. The Company is  
7 proposing to eliminate this rate because there are no customers currently using it  
8 and there is no prospect of any future use. Also, there is no comparable rate  
9 schedule in the tariffs of PNG and CPG.

- 10 • Rate SS (Storage Service) – Under this rate schedule, the Company would provide  
11 storage capacity on an agency basis when suitable gas or other fuel is supplied by  
12 the customer. This rate schedule was developed and implemented before the  
13 Federal Energy Regulatory Commission (“FERC”) established the capacity release  
14 mechanism as the sole means, with certain limited exceptions, for making FERC-  
15 jurisdictional pipeline and storage capacity available to third parties. The Company  
16 is proposing to eliminate this rate because there currently are no customers served  
17 under this rate, and it is not clear whether this service could be provided in any  
18 event under current FERC rules. Also, there is no comparable rate schedule in the  
19 tariffs of PNG and CPG.

- 20 • Rates IL (Interruptible Service – Large Volume) and IS (Interruptible Service –  
21 Small Volume) – The Company is proposing to merge these two rate schedules into  
22 a new Rate IS (Interruptible Service). Since interruptible service is priced against  
23 the cost of alternative fuel options, there is little difference between these two rate

1 schedules other than minimum bill requirements, which will be combined into a  
2 new unified minimum bill requirement under the Company's proposed new Rate  
3 IS, along with applicable retainage requirements. The proposed Rate IS is also  
4 consistent with the Rate IS rate schedules in the tariffs of PNG and CPG.

- 5 • Rate CIAC (General Service – Commercial and Industrial Air Conditioning) – This  
6 is a retail rate available to commercial or industrial customers using gas for air  
7 conditioning purposes. PGC 2 rates apply to Rate CIAC usage. The Company is  
8 proposing to eliminate this rate, which was adopted at a time when it was thought  
9 that gas air-conditioning would develop into a significant market and when there  
10 were more significant differences in costs between PG 1 and PGC 2. As there  
11 currently are only 17 customers on this rate, these customers will be migrated to  
12 full year service under Rates N (General Service – Non-Residential) or NT (General  
13 Service – Non-Residential – Transportation). While PNG and CPG have a  
14 comparable rate schedule in their tariffs, the Company anticipates that they will  
15 seek to eliminate these rate schedules in the future.

- 16 • Rate CT (General Service – Commercial and Industrial Air Conditioning –  
17 Transportation) – This is the comparable transportation rate for commercial or  
18 industrial customers using gas for air conditioning purposes. The Company is also  
19 proposing to eliminate this rate schedule because there are only four customers  
20 served under the rate schedule, all of whom will now be served under Rate NT  
21 (General Service – Non-Residential - Transportation). While PNG and CPG have  
22 a comparable rate schedule in their tariffs, the Company anticipates that they will  
23 seek to eliminate these rate schedules in the future.

- 1           • PGC 2 – Given the proposed elimination of Rate Schedules BD and CIAC, the only  
2           Rate Schedules to which its PGC 2 rate is applicable, the Company is also  
3           proposing to eliminate its PGC 2 rate and serve all retail customers subject to its  
4           PGC rates under a single PGC rate.
- 5           • Rate EC (Environmental Conversion Rider) – This rider permits a discount to  
6           customers converting from an alternate fuel where the customer (1) permanently  
7           retires storage tanks or other equipment for the utilization of alternative energy  
8           supplies and (2) incurs a “demonstrated economic penalty” because of its  
9           conversion to gas. The Company proposes to eliminate this rider because the  
10          Company anticipates that it will not have any customers utilizing this rider at the  
11          time the proposed tariff changes become effective and future considerations for  
12          customers may now be made under the proposed Technology and Economic  
13          Development (“TED”) Rider.
- 14          • Rate CDS (Cogeneration Delivery Service) – This Rate is available to customers  
15          who wish to use gas to; (a) generate electricity and/or (b) produce a combination of  
16          mechanical and heat energy where mechanical energy production represents no less  
17          than 25% of total energy output. A customer must have an indicated gas usage of  
18          at least 3,000 Mcf per year. The Company is proposing to eliminate this rate due  
19          to the minimal number of customers on this rate. There are only 2 customers  
20          currently on this rate. In addition, there is no comparable rate at PNG or CPG. The  
21          Company proposes to move these customers to Rate LFD, which would be the most  
22          appropriate rate schedule given their size and load profile, and to the extent

1 required, utilize the proposed TED Rider to preserve the economic substance of the  
2 existing service agreements currently available under Rate CDS.

3  
4 **Q. How does the Company propose to effectuate the changes resulting from these rate  
5 eliminations?**

6 A. If the Company's proposed rate schedule and PGC 2 rate deletions are approved by the  
7 Commission, the Company will: (1) tender new Rate IS service agreements to existing  
8 Rate IS and IL customers that, to the extent possible under the Commission's ruling, will  
9 preserve the economic substance of the existing service agreements for their remaining  
10 term; (2) contact each existing Rate CIAC and CT customer to help them select an  
11 alternative rate schedule, and if no decision is made, move the customer to Rate N (the  
12 Company cannot automatically move a customer to Rate NT since the customer must select  
13 an alternate supplier in order to receive service under Rate NT); (3) contact the two Rate  
14 CDS customers and provide them with their comparative rate information in order to help  
15 them select an alternative rate schedule; (4) move all existing PGC 2 customers to the new  
16 unified PGC rate; and (5) roll any remaining PGC 2 rate over/under collection, which is  
17 anticipated to be very small, into the new unified PGC rate E-factor.

18  
19 **Q. Is the Company proposing any additional rates or riders?**

20 A Yes, the Company is proposing a new rider to recover the costs associated with the  
21 implementation of its proposed EE&C Plan. In addition, the Company is proposing to  
22 replace its current LISHP Rider with a USP Rider. Finally, the Company is proposing a

1 new TED Rider , which is discussed in the direct testimony of Robert R. Stoyko (UGI Gas  
2 Statement No. 7).

3  
4 **Q. Please describe the calculation of the proposed EE&C Rider.**

5 A. The Company is proposing to establish an EE&C Rider, which will appear as a separate  
6 line item on customer bills, to recover program costs related to the Company's proposed  
7 EE&C Plan for fiscal years 2017-2021, as described in the testimony of Company witness  
8 Theodore M. Love (UGI Gas Statement No. 11). The EE&C Rider will be computed  
9 separately for each of the following two customer classes: (i) Residential customers served  
10 under Rate Schedules R and RT (ii) Non-Residential customers served under Rate  
11 Schedules N, NT, DS, and LFD. The initial proposed EE&C Rider rates, as developed in  
12 UGI Gas Exhibit DEL-7 are:

- 13 • Residential Rates R and RT: \$0.0778/Mcf.
- 14 • Non-Residential Rates N, NT, DS, LFD: \$0.0278/Mcf.

15 The EE&C Rider will apply to all customers served under the rate schedules identified  
16 above and the EE&C Rider revenues shall be subject to the STAS.

17  
18 **Q. Please describe the calculation of the proposed USP Rider.**

19 A. The Company is not proposing any policy or procedural changes to its current, recently-  
20 approved Universal Service and Energy Conservation Plan. The Company is, however,  
21 proposing to modify its recovery mechanism of USP costs to mirror the Commission-  
22 approved reconcilable riders currently in place at CPG and PNG. As a result, the  
23 Company's LISHP Rider will be replaced by the proposed USP Rider. The initial proposed

1 USP Rider surcharge is \$0.2927 per Mcf, as calculated in UGI Gas Exhibit DEL-8. In  
2 conjunction with the proposed USP Rider, the Company is also proposing to modify the  
3 tariff section for the annual reconciliation of the proposed USP Rider to include an  
4 adjustment for amounts granted to the number of participants receiving Customer  
5 Assistance Program (“CAP”) credits and preprogram arrearage in excess of 10,000. The  
6 adjustment related to CAP credits and preprogram arrearage will be equal to 8.48%. The  
7 adjustment is based on the 3-year average of the difference between the gross write-off  
8 percentage for low-income customers identified by UGI Gas’s system and the gross write  
9 off percentage for all other residential customers, adjusted for write-off recoveries. See  
10 UGI Gas Exhibit DEL-8 for the calculation of this adjustment. See UGI Gas Exhibit F –  
11 Proposed Tariff for the proposed modifications to the USP Rider section of the tariff.  
12 Further, see the direct testimony of Company witness Robert R. Stoyko (UGI Gas  
13 Statement No. 7) for the participation levels.

14  
15 **IV. REVENUE ALLOCATION AND RATE DESIGN**

16 **Q. Please summarize the Company’s rate design and allocation of the revenue increase**  
17 **ratemaking philosophy.**

18 A. The Company’s ratemaking goal is to implement reasonable rates that recover its cost of  
19 doing business. Rate schedules are generally designed to reflect movement toward class  
20 cost of service and to be competitive with prices of alternate energy sources, including  
21 bypass. Our rates and rate design seek to achieve efficient utilization of the Company’s  
22 facilities and natural gas supplies.

23  
24 **Q. What factors has the Company considered in establishing its rate structure?**

1 A. The Company considered both cost of service and value of service as the primary factors  
2 in determining revenue allocation and rate design. Other factors that were considered  
3 include competition, historic rate patterns, supply conditions, impacts upon customers, the  
4 local economy, the nature of our territory, the needs of our customers, utilization of  
5 facilities, and public acceptance of rate forms and changes.

6

7 **Q. Did the Company consider customer migration between rate classes in allocating the**  
8 **proposed rate increase?**

9 A. Yes. The Company has conducted an analysis of customers in Rate Schedules N and NT  
10 with annual volumes of 3,000 Mcf or more, and all Rate Schedule DS customers to  
11 determine which rate schedule would be the most economical under proposed rates, and  
12 has assigned these customers to their most economical rate schedule based on proposed  
13 rates for the purposes of projecting anticipated revenues.

14

15 **Q. Please summarize how the proposed distribution revenue increase was allocated**  
16 **among the customer classes.**

17 A Except for Rates XD and IS, whose rates are negotiated and established under their current  
18 service agreements, overall UGI Gas is proposing to move applicable rate classes above  
19 the system average rate of return at present rates approximately halfway toward cost of  
20 service, subject to the following conditions: (1) rate classes that are above the system  
21 average rate of return at present rates will receive an increase less than the system average  
22 distribution increase; and (2) the rate increase for rates classes that are below the system  
23 average rate of return at present rates will not exceed 150% of the system average increase.

1 In measuring cost of service, the Company relied on the cost of service studies prepared by  
 2 Company witness Paul R. Herbert (UGI Gas Statement No. 4). In developing the  
 3 allocations for interruptible service, Mr. Herbert presented two cost of service studies to  
 4 establish a range of reasonableness. One study included an allocation of distribution main  
 5 costs to the interruptible rate class, and a second study did not allocate any distribution  
 6 main costs to the interruptible rate class. The Company then used an average of these two  
 7 methods as the basis for allocating the proposed revenue increase. Table 1 below provides  
 8 a summary of the proposed allocation of the increase and the relative class rates of return  
 9 at present and proposed rates.

10  
 11  
 12 Table 1 COMPARISON OF RELATIVE RATES OF RETURN

Rate	% Increase (without gas costs)	Relative ROR- present rates	Relative ROR- proposed rates	Change in relative ROR	% change in relative ROR
R	39.90%	0.16	0.61	0.45	54%
N	22.70%	1.3	1.09	-0.21	-70%
DS	9.30%	3.28	2.14	-1.14	-50%
LFD	7.00%	6.4	3.7	-2.7	-50%
Total	26.60%	1.00	1.00	0	

12 **Q. Please describe the revenue allocation and rate design for the residential Rate R**  
 13 **customer group.**

14 A. As evidenced by the cost of service study presented by Mr. Herbert, under present rates,  
 15 the residential Rate R customer group (Rates R and RT) is producing a return of 0.71%, as  
 16 compared to a system average return of 4.52%. This translates to a relative rate of return  
 17 of 0.16 compared to the system average. In allocating revenues, the Company proposes to  
 18 allocate \$43.3 million of the revenue increase to the Rate R customer group in order to  
 19 move it closer toward cost of service. This increase will result in an overall return of 5.01%

1 for the Rate R customer group, compared to the proposed system average of 8.17%, and a  
2 relative rate of return of 0.61.

3 As to rate design, the Company is proposing a Rate R customer group customer  
4 charge of \$17.50 per month, as compared to the current charge of \$8.55 per month, to better  
5 reflect the customer component of customer service. The Company also is proposing to  
6 replace the current declining block structure with a single block volumetric charge of  
7 \$3.0123 per Mcf.

8  
9 **Q. Please describe the revenue allocation and rate design for the small commercial Rate**  
10 **N customer group.**

11 A. For the small commercial Rate N customer group (Rates N and NT), current rates are  
12 producing a return of 5.89% with a relative rate of return 1.30. UGI Gas proposes to  
13 allocate \$12.5 million of the revenue increase to the Rate N customer group in order to  
14 move the Rate N customer group closer toward cost of service. This increase will result in  
15 an overall return of 8.93% or a relative rate of return of 1.09.

16 As to rate design, the Company is proposing a Rate N customer group customer  
17 charge of \$32.00 per month, as compared to the current charge of \$8.55 per month, to better  
18 reflect the customer component of customer service. The Company also is proposing to  
19 replace the current declining block structure with a single block volumetric charge of  
20 \$3.6932 per Mcf.

21  
22 **Q. Please describe the revenue allocation and rate design for the Rate DS.**

1 A. For Rate DS, the applicable transportation rate for small to medium sized customers,  
2 current rates are producing a return of 14.86%, with a relative rate of return of 3.28. The  
3 Company proposes to allocate approximately \$982,000 of the revenue increase to the Rate  
4 DS customers in order to move the Rate DS class closer toward cost of service. This  
5 increase will result in an overall class return of 17.48% or a relative rate of return of 2.14,  
6 by moving Rate DS by 50% toward a unity relative rate of return value.

7 As to rate design, the Company is proposing to maintain the current Rate DS  
8 monthly customer charge of \$290.00 per month. The Company also is proposing to replace  
9 the current declining block structure with a single block volumetric charge of \$2.9121 per  
10 Mcf.

11  
12 **Q. Please describe the revenue allocation and rate design for the Rate LFD.**

13 A. For Rate LFD, the applicable transportation rate for medium to large sized customers,  
14 current rates are producing a return of 28.96%, with a relative rate of return of 6.40. The  
15 Company proposes to allocate approximately \$1.75 million of the proposed revenue  
16 increase to the Rate LFD customers in order to move this customer class toward cost of  
17 service. This increase will result in an overall return of 30.22% or a relative rate of return  
18 of 3.70, by moving Rate LFD by 50% toward a unity relative rate of return.

19 As to rate design, the Company is proposing to maintain the current Rate LFD  
20 monthly customer charge of \$700 per month. The Company also is proposing to replace  
21 the current declining block structure with a single block volumetric charge of \$1.2133 per  
22 Mcf. The Company also is proposing a demand charge of \$5.45/Mcfd to assist with system  
23 planning.

**Q. Please describe the revenue allocation and rate design for the Rate XD.**

A. For Rate XD, the rates for this class are based on current contracts as negotiated between the Customer and the Company given competitive considerations, the Company is not proposing any change to present rates.

**Q. Please describe the revenue allocation and rate design for the Rate IS.**

A. Rate IS, the applicable interruptible rate schedule for commercial and industrial customers, is an opportunistic rate schedule that is based on the relative price of natural gas versus alternative fuels or other customer alternatives. As such, the Company is at risk for those revenues if circumstances change, and there is no guarantee that current revenue levels will be achieved in the future, particularly considering the recent changes in the interruptible market over the past few years, such as declining price spreads and an increase in the number of interruptions in the winter season. These changes, if they continue, could lead to a substantial decline in interruptible revenue for the Company. For example, the NYMEX price for crude oil has declined from approximately \$65 per barrel to under \$40 as of December 2015. As a result, the NYMEX futures price spread between natural gas and number 2 heating oil has dropped from \$18.08/MMBTU as recently as February 2014 to \$7.43/MMBTU as of December 2015, a 59% decline. Since interruptible rates are based on prices for alternate fuels, the decline in price spreads could impact future contract negotiations and potentially lead to a decline in interruptible revenues. In addition to changes in price spreads, there has also been an escalation in the number of actual interruptions experienced by the interruptible rate class, due to weather and system

1 constraints, that could change perceptions of the relative reliability of interruptible service  
2 and lead to customers taking additional actions. For example, customers could lock in  
3 heating oil inventories to ensure a continuation of operations during potential gas  
4 interruptions and then use that inventory of oil during the heating season instead of gas,  
5 even during periods when there is no interruption simply because the customer owns the  
6 oil.

7 As a result of the at-risk nature of the interruptible revenues and the market changes  
8 discussed above, the Company is reflecting, as a proxy, a level of interruptible revenue in  
9 its revenue allocation that is based on a cost of service allocation methodology, or \$4.9  
10 million. The Company assigned to the interruptible class an amount based approximately  
11 on the midpoint of the calculated results from two separate cost of service studies, one  
12 which allocated a portion of distribution mains to interruptible customers and one which  
13 did not allocate any mains costs to interruptible customers. The implied overall rate of  
14 return under these assumptions is 7.93% or a relative rate of return of 0.97. Please see the  
15 direct testimony of Paul J. Szykman (UGI Gas Statement No. 1) for additional detail on  
16 the Company's proposal on value of service pricing to the interruptible market and the  
17 treatment of revenues received under its Interruptible Service rates. Also see the direct  
18 testimony of Paul R. Herbert (UGI Gas Statement No. 4) for additional discussion of the  
19 cost of service allocation methodology.

20  
21 **Q. Please describe Rate NNS (No Notice Service) and any changes to this rate that the**  
22 **Company is proposing.**

1 A. Rate NNS is a daily balancing service offered by the Company that is patterned after Rate  
2 NNS as offered at PNG and CPG. It provides an alternate election of a daily balancing  
3 tolerance for transportation customers, allowing a customer to optionally elect a balancing  
4 tolerance greater than the standard basic balancing provided by the Company. A customer  
5 is able to make a Rate NNS election up to its DFR (Daily Firm Requirement) contract  
6 demand level and pay only for the level chosen. The Company is proposing to update the  
7 tariffed NNS rate to reflect current conditions, while retaining the methodology used to  
8 develop the current rate.

9

10 **Q. How were the proposed NNS rates developed?**

11 A. The charge for providing service under Rate NNS is a monthly charge established using  
12 the Company's cost of interstate storage that can be utilized for balancing excess or  
13 shortfall requirements on the Company system, Columbia FSS storage. UGI Gas Exhibit  
14 DEL-9 shows the calculation of the Rate NNS charges, which were developed based on  
15 the same methodology used in the Company's last base rate case, as well as the  
16 methodology utilized by CPG and PNG in their respective last base rate cases, updated to  
17 reflect current costs and conditions. The proposed rate for unit rate for NNS is \$0.0066  
18 per Mcf compared to the current rate of \$0.025 per Mcf, and the proposed NNS service per  
19 unit cost of demand is \$0.1320/Mcf of demand ("Mcf") compared to the current \$0.050  
20 per Mcf per day of elected Rate NNS.

21

22 **Q. Are the revenues received from Rate NNS proposed to be credited to PGC Rates?**

23 A. Yes, revenues from these rate schedules are proposed to be credited to the PGC Rates.

**Q. Please describe Rate MBS (Monthly Balancing Service).**

A. Rate MBS is a monthly balancing service offered by the Company that mirrors Rate MBS as offered at PNG and CPG. Service under Rate MBS allows transportation imbalances of up to 10% for the month to be carried forward in the customer’s MBS account for excess deliveries of or receipt of shortfalls in subsequent months.

**Q. How were the proposed MBS rates developed?**

A. UGI Gas Exhibit DEL-10 provides the basis for the Rate MBS calculations, as well as the proposed MBS rates under Rates DS, LFD, and XD. These rates were developed based upon the Company’s costs to provide Rate MBS service and follow the same rate design methodology utilized by CPG and PNG in their respective most recent base rate cases, updated for current costs and conditions. The proposed rates by rate class are as follows: Rate DS - \$0.0050/Mcf, Rate LFD - \$0.0034/Mcf, and Rate XD - \$0.0031/Mcf. These rates would replace the existing rates which currently are based on the following monthly transportation volumes:

- Under 1,500 Mcf                      \$0.075/Mcf x Transported Volumes
- 1,500 – 20,000 Mcf                      \$0.035/Mcf x Transported Volumes
- 20,000 – 50,000 Mcf                      \$0.015/Mcf x Transported Volumes
- Over 50,000                              \$0.005/Mcf x Transported Volumes

**Q. Are the revenues received from Rate MBS proposed to be credited to PGC Rates?**

A. Yes, revenues from these rate schedules are proposed to be credited to the PGC.

**Q Is the Company proposing to update its GPC in this proceeding?**

A. Yes. The Company is proposing to revise its GPC to reflect current labor and information technology costs associated with the procurement function. The current GPC rates is \$0.04/Mcf, the proposed GPC is \$0.0146/Mcf. Please see UGI Gas Exhibit DEL-11 for additional details on the calculation of this rate

**Q Is the Company proposing to update its MFC in this proceeding?**

A. Yes. The Company is updating the percentages for the MFCs to reflect the actual uncollectible expense for the last three years. Based on this updated data, the residential MFC will remain at 2.19%, and the MFC for the commercial class will increase slightly from 0.36% to 0.47%. Please see UGI Gas Exhibit DEL-12 for additional details.

**V. GET GAS PILOT PROGRAM**

**Q. Please briefly describe the Company’s GET Gas Pilot Program.**

A. The Get Gas pilot is designed to help expand natural gas distribution facilities into under-served and unserved areas of the Commonwealth by permitting customers connecting to extended facilities to pay a surcharge on their rates for a defined period of time. It was approved in a Commission Order entered on February 20, 2014, at Docket No. P-2013-2356232.

**Q. Did the Commission’s Order approve a comprehensive settlement that was reached in this docket?**

A. Yes.

23  
24

**Q. Did this settlement contain any provisions addressing future base rate proceedings?**

A. Yes, the GET Gas settlement provides, in pertinent part:

*In the event that any of the UGI Companies files a general base rate case during the term of the pilot, such Company will provide information, as part of its initial filing, showing how the GET Gas surcharge rates would be adjusted to reflect changes in the following items: revenue from a base rate increase, annual sales volumes, average usage per customer for GET Gas customers, depreciation rates, weighted cost of debt, return on equity, tax rates, CAP component and Uncollectibles component. Such UGI Company further agrees that if adjustments for these items would result in a decrease in GET Gas surcharge amounts, it will propose to implement such decreased surcharge rates prospectively for both new GET Gas customers and to any remaining term of the GET Gas surcharge payment for existing GET Gas customers. In the event the adjustment would suggest an increase in GET Gas surcharges, the Signatory Parties agree not to propose any prospective increase in GET Gas surcharges. In addition, and notwithstanding any update of the GET Gas surcharge, the Signatory Parties agree not to oppose the UGI Companies' full and timely recovery of and a return on reasonably incurred capital investments in GET Gas facilities that are made consistent with the terms of the pilot program approved in this proceeding or any future modifications to the program approved by the Commission. Any Signatory Party shall be free to propose how such recovery shall occur, and shall be free to propose potential recovery, in part, from non-GET Gas customers.*

**Q. Has the Company presented the specified information concerning potential adjustments to GET Gas Surcharge amounts?**

A. Yes, this information is shown in UGI Gas Exhibit DEL-13.

**Q. Does the updated information suggest a decrease in previously approved GET Gas surcharge amounts?**

A. No.

**Q. Is the Company proposing any adjustments to GET Gas surcharge levels?**

1 A. No. The Company's GET Gas Pilot Program is still relatively new and, given the small  
2 number of actual projects to date, additional information needs to be gathered over time  
3 before adjustments to the approved surcharge rates should be made.  
4

5 **Q Has the Company included GET Gas related investment and GET Gas revenues in**  
6 **its base rate claim?**

7 A. Yes. The Company has included GET Gas related investment in rate base, less deductions  
8 for depreciation and the applicable principal portion of the GET Gas surcharge. The  
9 Company is also including the annualized revenue associated with the return on investment  
10 ("ROI") portion of the GET Gas surcharge and the adder for uncollectible and CAP  
11 expenses. This amount was calculated by annualizing the projected ROI portion and adder  
12 portion of the GET Gas surcharge payments for September 30, 2017, plus the adder portion  
13 associated with those GET Gas customers who elected to pay the up-front amount of the  
14 GET Gas contribution. The total annualized amount included as revenue from the GET  
15 Gas surcharge is \$198,099 and is reflected on UGI Gas Exhibit DEL-14.  
16

17 **VI. OTHER TARIFF MODIFICATIONS**

18 **Q. Apart from the proposed rate schedule and PGC 2 rate eliminations discussed above,**  
19 **has the Company proposed any other changes to its tariff in this proceeding?**

20 A. Yes, a complete list of tariff modifications can be found in the List of Changes section in  
21 UGI Gas Exhibit F – Proposed Tariff. As noted earlier in my testimony, the primary  
22 intent of the proposed changes to the UGI Gas tariff is to standardize and harmonize, where  
23 applicable, its tariff provisions with those contained in the CPG and PNG tariffs, reflect  
24 best practices, add clarify, as well as update the UGI tariff to reflect certain proposed

1 changes to the Company's business practices. Some of the more significant changes to the  
2 current UGI Gas Tariff No. 5 are:

- 3 • **Section 3 Guarantee of Payment.** This section has been modified to align it,  
4 where applicable, with the CPG and PNG tariffs including language changes  
5 regarding minimum deposit requirements for non-residential customers.
- 6 • **Section 5 Extension Regulation.** The Extension Regulation tariff section has been  
7 modified to align it, where applicable, with the current CPG and PNG Extension  
8 Regulation tariff sections, update the methodology used to determine allowable  
9 extension investments, and clarify language regarding cost estimates, restoration  
10 obligations and daily metering obligations.
- 11 • **Section 8 Meter Reading.** This section was updated to align it, where applicable,  
12 with the PNG and CPG tariffs except for the Heating Value Correction, which will  
13 not be included in the UGI Gas proposed Tariff No. 6.
- 14 • **Section 9 Billing and Payment.** The Company is proposing to eliminate several  
15 tariff charges as part of the effort of standardizing the tariff provisions of UGI Gas,  
16 PNG and CPG. The revenues associated with these charges have been removed  
17 from the FPFTY. The CPG tariff does not contain these charges and although the  
18 PNG tariff contains some of these charges, it is the Company's intent to eliminate  
19 them in PNG's next rate case. The charges being eliminated include:  
20 Payment to Collector Charge, Bill History Charge, Landlord If Shut Off (LIFSO)  
21 Charge, Turn On Charge, Shut Off Charge, Set Meter Charge, and Change of  
22 Customer Charge. Additionally, the Company is proposing to increase Returned  
23 Check Fee from \$20 to \$35

- 1           • **Section 11 Termination or Discontinuance of Service.** This section was updated  
2           to align it, where applicable, with the CPG and PNG tariffs and to update the  
3           Reconnection Charge to \$73.00, which is equivalent to the current ½ hour charge  
4           contained in the UGI Gas Tariff No. 5 and is the charge that the Company currently  
5           is applying for reconnections.
- 6           • **Section 13 1307(f) Purchased Gas Cost.** This section was updated to align it,  
7           where applicable, with the CPG and PNG tariffs, including the elimination of  
8           PGC(2), PGC credits related to transportation customer capacity releases or  
9           assignments, and the elimination of the IRC. The Company’s tariff currently  
10          provides for a credit to PGC equal to the margin realized from interruptible  
11          transportation customers utilizing pipeline capacity reflected in rates established  
12          under 1307(f). This mechanism was established in October 2000, when the  
13          restructuring occurred and Choice was implemented in Pennsylvania. The  
14          Company is proposing the elimination of the Interruptible Revenue Credit (“IRC”)  
15          to reflect the results of its cost of service methodology for the interruptible group,  
16          and to simplify the administration of tariffed rates for the interruptible rate  
17          schedule.
- 18          • **Section 17 General Terms for Delivery Service for Rates DS, LFD, CDS, XD  
19          And The Delivery Service Option Of IS and IL.** This section has been modified  
20          to update it for current conditions and align it, where applicable, with the current  
21          CPG and PNG General Terms for Delivery Service tariff sections. This includes:  
22          the addition of clarifying language to address a number of balancing provisions,  
23          updates and modifications to remedy language related to default or misuse of

1 balancing provisions, the elimination of Information Service Fees and Pooling  
2 Fees, and the modification of Supply Transfer fees that are applied on a  
3 transactional basis rather than volumetric basis.

- 4 • **Elimination of the System Access Fee From Applicable Transportation Rate**  
5 **Schedules.** Due to the changes in FERC rules related to capacity releases, UGI  
6 Gas is proposing to eliminate the System Access Fee. When the System Access  
7 Fee was originally adopted in 1995, FERC rules capped the rate at which capacity  
8 could be released. The System Access Fee represented the difference between the  
9 Company’s weighted average cost of demand (“WACOD”) and the maximum rate  
10 at which the capacity could be released, and the System Access Fee was charged to  
11 those applicable transportation rate schedules to ensure PGC customers were not a  
12 higher cost of capacity than the applicable transportation customers. FERC rules  
13 have now changed, and the Company is able to and will release capacity at its  
14 WACOD, which eliminates the need for the System Access Fee.

- 15 • **Elimination of the Total Space Conditioning (“TSC”) option for Rate**  
16 **Schedules R & N.** TSC is available only to customers who (1) utilize natural gas  
17 as the primary energy source for space conditioning requirements – heating and  
18 cooling, (2) utilize natural gas for water heating purposes, and (3) maintain one or  
19 more additional gas appliances (range, dryer, cooktop or oven). There are relatively  
20 few customers who are receiving the discount (103 residential customers and 10  
21 commercial customers), and the total annual discount for all applicable customers  
22 in fiscal year 2015 was only \$2,039. In addition, the PNG and CPG tariffs contain  
23 no comparable rate option. Given the minimal financial impact of the TSC option

1 and as part of the simplification and standardization of tariffs and rate schedules,  
2 UGI Gas is proposing to eliminate the TSC option.

- 3 • **Elimination of the Standby Charge for Rate Schedules R, RT.N and NT.** The  
4 Standby Charge applies to any customer receiving service under Rates R, RT, N,  
5 or NT who utilizes natural gas as a backup, auxiliary or temporary fuel. Given the  
6 relative popularity of natural gas as a heating fuel, the vast majority of customers  
7 who use natural gas for heating do so as their primary heating fuel. So, there are  
8 very few customers utilizing natural gas as a backup fuel. As part of the  
9 simplification and standardization of tariffs and rate schedules, the Company is  
10 proposing to eliminate the Standby Charge from all applicable rate schedules.  
11 Although the CPG and PNG tariffs currently contain provisions for a standby  
12 charge, it is the Company's intent to eliminate those provisions in future base rate  
13 proceedings.
- 14 • **Elimination of Minimum Bills for Rate Schedules N & NT.** The minimum bill  
15 provision under Rates N and NT establish a minimum bill based on 3% of the  
16 average monthly use during January, February and March billing periods,  
17 regardless of actual usage. The Company is proposing to eliminate this provision  
18 to minimize customer confusion as well as standardize tariff provisions among UGI  
19 Gas, PNG and CPG to facilitate tariff administration, as the PNG and CPG tariffs  
20 do not contain a similar minimum bill provisions.
- 21 • **Modification of Rate Schedule GL.** As part of the simplification and  
22 standardization of tariffs and rate schedules, UGI Gas is proposing to modify its  
23 current gas light rate, Rate GL, to standardize it with the current CPG gas light rate.

1 This includes the elimination of the optional monthly maintenance charge by UGI  
2 Gas. Currently, there are no customers that have selected the optional monthly  
3 maintenance option.  
4

5 **Q. Is the Company proposing any changes to its Choice Supplier Tariff?**

6 A. Yes. The proposed changes to the Company's Choice Supplier Tariff have been  
7 incorporated into the *pro forma* tariff, Tariff No. 6, as Tariff No. 6-S. See UGI Gas Exhibit  
8 F. The proposed modifications to the Choice Supplier Tariff are summarized below.

- 9 • **Section 4 Choice Supplier Obligations.** As noted earlier, the Company is  
10 proposing to update its MFC percentages to reflect the most recent update of its  
11 uncollectible expense as a percent of revenue. As a result, the Company is also  
12 proposing to update its discount on the purchase of receivables ("POR") in  
13 conjunction with its POR Program. The uncollectible component of the residential  
14 POR discount will remain at 2.19%, and the uncollectible component of the  
15 commercial POR discount will increase slightly from 0.36% to 0.47%. The  
16 Company is proposing no change to its administrative adder for the POR Program  
17 in this proceeding, and it will remain at 0.14%. As a result, for purchased  
18 receivables, the Company shall pay participating Choice Suppliers an amount  
19 equal to 97.67% for residential amounts billed (inclusive of associated taxes) and  
20 99.39% for non-residential amounts billed (also inclusive of taxes).

- 21 • **Section 8 Financial Security.** The reference to Call Options has been eliminated  
22 primarily because it has never been used as a financial security alternative. The  
23 Security Agreement required for suppliers who wish to utilize receivables

1 associated with the Company's POR Program as a partial offset to their security  
2 requirements to operate as Choice Suppliers on the Company's system has also  
3 been removed from the tariff, but will still be available as an option for Choice  
4 Suppliers.

5 • **Section 9 Enrollment of Customers into Rate Schedules RT and NT.** The  
6 number of days the customer has to respond to the letter of confirmation it receives  
7 from the Company was updated from 10 days to 5 days to reflect current  
8 regulations and current Company practice. Language on multiple enrollments that  
9 was not consistent with current regulations was removed.

10 • **Rate AG.** The Company proposes to eliminate the difference in the calculation of  
11 balancing fees between Choice Suppliers using UGI Gas capacity and Choice  
12 Suppliers using third party capacity because it is no longer applicable. The time  
13 frame for billing rate information submission was changed from 10 days to 15  
14 days. Redundant definition language was also removed.

15 • **Aggregation Agreement (Pro Forma).** Redundant definitions found elsewhere  
16 in the tariff were removed. Contact information for notices and correspondence  
17 was updated. Selected sections of the Aggregation Agreement that were no longer  
18 relevant were removed.

19  
20 **Q. Does this conclude your testimony?**

21 **A. Yes.**

**UGI GAS EXHIBIT DEL-9**

UGI Gas

Rate NNS Calculation:

Assumptions:

1. Customer deliveries are assumed at a level daily rate.
2. A \$0.11/Mcf average storage trip cost for Columbia FSS is used as a proxy.
3. A \$2.54/Mcf gas cost assumption is used for the calculation of fuel costs associated with the storage trip.
4. A 14.2% load reduction on weekends is assumed, based on fiscal year 2015 actual usage for DS, LFD, and XD. (Note: Weekend Reduction Factor for DS uses 2015 actual usage from UGI Penn Natural and UGI Central Penn as a proxy since the majority of UGI Gas Rate DS customers are monthly read.

Calculation:

WD = weekday use

WE = weekend use

$$(5 \times \text{WD} + 2 \times \text{WE}) / 7 = \text{average}$$

$$\text{WE} = \text{WD} \times (1 - 0.142)$$

$$\text{WD} = 1.17 \times \text{WE}$$

$$(5 \times (1.17 \times \text{WE}) + 2 \times \text{WE}) / 7 = \text{average}$$

$$(7.85 \times \text{WE}) / 7 = \text{average}$$

$$0.89 \times \text{average} = \text{WE}$$

Therefore:

$$\begin{aligned} \text{Imbalance} &= 5 \times (\text{WD} - \text{average}) + 2 \times (\text{average} - \text{WE}) \\ &= (5 \times \text{WD}) - (3 \times \text{average}) - (2 \times \text{WE}) \\ &= 5 \times (1.17 \times \text{WE}) - (3 \times \text{average}) - (2 \times \text{WE}) \\ &= 3.85 \times \text{WE} - 3 \times \text{average} \\ &= 3.85 \times (0.89 \times \text{average}) - 3 \times \text{average} \\ &= 0.43 \times \text{average} \end{aligned}$$

Unit Cost Calculation

$$\begin{aligned} &= [(0.43 \times \text{average}) / (7 \times \text{average})] \times \text{storage trip cost} \\ &= (0.43) \times (1/7) \times \text{storage trip cost} \\ &= 0.06 \times \text{storage trip cost} = \\ &= 0.06 \times \$0.11/\text{Mcf} \\ &= \$0.0066/\text{Mcf} \end{aligned}$$

Per Unit of Demand Calculation

$$= \$0.0066/\text{Mcf} \times 20 = \$0.1320/\text{Mcf}$$

**UGI GAS EXHIBIT DEL-10**

UGI Gas

Rate MBS Calculation:

Assumptions:

1. The average capacity charge for Columbia FSS is used as a proxy.
2. System average transportation load factor is based on 2017 Fully Projected Future Test Year usage (Rates DS, LFD, XD) divided by peak day capacity, exclusive of large power generation customers.
3. Anticipated average monthly imbalance percentage based on calculated imbalance of FY 2015 actual usage and deliveries.
4. Storage use will vary with load factor, that is, 100% load factor uses 0% storage.

Calculation:

Average capacity charge for storage: \$0.3456/Dth

Average capacity charge for storage: \$0.3615/Mcf  
 (@ 1.046 Btu/mcf)

System average transportation load factor: 52.6%

Anticipated average monthly imbalance percentage: 1.1%

Rate allocation formula by Load Factor:

$$[(\$0.3615/0.526) - (\$0.3615/0.526 \times \text{Load Factor})] \times 0.011$$

Accordingly:

<u>Rate Schedule</u>	<u>Load Factor</u>	<u>MBS Rate</u>
Rate DS	33.6%	\$0.0050/Mcf
Rate LFD	54.4%	\$0.0034/Mcf
Rate XD	58.8%	\$0.0031/Mcf

Universal Service  
Customer Service  
Energy Efficiency & Conservation Plan**

Dated: January 19, 2016

1 **I. INTRODUCTION**

2 **Q. Please state your name and business address.**

3 A. My name is Robert R. Stoyko and my business address is 2525 North 12th Street,  
4 Reading, PA 19612-2677.

5  
6 **Q. By whom are you employed and in what capacity?**

7 A. I am employed by UGI Utilities, Inc., (“UGI”) as Vice President – Marketing and  
8 Customer Relations. UGI has two separate operating divisions: UGI Utilities, Inc. - Gas  
9 Division (“UGI Gas” or the “Company”), a natural gas distribution company (“NGDC”),  
10 and UGI Utilities, Inc. - Electric Division (“UGI Electric”), an electric distribution  
11 company (“EDC”).

12  
13 **Q. What are your responsibilities as Vice President – Marketing and Customer  
14 Relations?**

15 A. In this position, I have overall responsibility for Marketing, Sales and Customer Service  
16 for UGI, including UGI Gas and UGI Electric, and its wholly-owned NGDC subsidiaries,  
17 UGI Penn Natural Gas, Inc. (“PNG”) and UGI Central Penn Gas, Inc. (“CPG”). In my  
18 testimony, UGI Gas, UGI Electric, PNG, and CPG will be referred to collectively as the  
19 “UGI Distribution Companies.”

20  
21 **Q. Please describe your educational background and work experience.**

22 A. They are set forth in my resume attached as UGI Gas Exhibit RRS-1 to my testimony.

23

1 **Q. Have you presented testimony in proceedings before a regulatory agency?**

2 A. Yes. In 2013, I presented testimony in a proceeding before the Pennsylvania Public  
3 Utility Commission (“Commission) in support of the Joint Petition of the UGI  
4 Distribution Companies for approval to implement the Growth Extension Tariff (“GET  
5 Gas”) Pilot Programs, at Docket No. P-2013-2356232.

6

7 **Q. What is the purpose of your testimony?**

8 A. In my testimony, I will address UGI Gas’s (1) proposed Technology and Economic  
9 Development (“TED”) Rider, (2) changes to its Large Customer/Industrial Sales Budget,  
10 (3) adoption of the universal service program recovery mechanism of CPG and PNG, (4)  
11 customer service performance, and (5) the implementation of its Energy Efficiency and  
12 Conservation (“EE&C”) Plan, which is proposed with this filing.

13

14 **Q. Are you sponsoring any exhibits in this proceeding?**

15 A. Yes, I am sponsoring the following exhibits: UGI Gas Exhibit RRS-1, UGI Gas Exhibit  
16 RRS-2, and UGI Gas Exhibit RRS-3. I am also sponsoring certain responses to the  
17 Commission’s standard filing requirements as indicated on the master list accompanying  
18 this filing.

19

20 **Q. Were these exhibits and filing requirements prepared by you or by persons under  
21 your direct supervision or control?**

22 A. Yes.

23

1 **Q. Are they true and correct to the best of your information and belief?**

2 A. Yes.

3

4 **II. TECHNOLOGY AND ECONOMIC DEVELOPMENT RIDER**

5 **Q. What is the core function of UGI Gas's distribution system?**

6 A. The core function is to transport and distribute natural gas from sources of supply to end-  
7 use customers. In the case of UGI Gas, these sources of supply have primarily been  
8 delivery points, or the so-called "city gates", of interstate pipeline systems that connect  
9 UGI Gas's distribution system to upstream sources of supply, such as gathering systems  
10 connecting gas wells to interstate pipeline systems or gas storage facilities. Other sources  
11 of supply include liquefied natural gas and propane air peaking facilities connected to  
12 UGI Gas's system. Certain natural gas pipeline systems are or may be constructed  
13 through or in close proximity to the UGI Gas distribution system and may also be  
14 potential sources of future supply. These sources of supply can also serve as sources of  
15 supply to current or potential UGI customers who may elect to bypass UGI's distribution  
16 system and receive gas directly from these sources.

17

18 **Q. What are some of the core characteristics of the natural gas distribution business?**

19 A. Two important features of the business are (1) it is very capital intensive, which is to say  
20 that it requires substantial capital to extend natural gas distribution facilities to connect  
21 new customers, and (2) unlike some other utility services, there are no uses for natural  
22 gas for which there are not alternative substitute forms of energy.

23

1 **Q. What are some of the consequences of these characteristics?**

2 A. As a result of the capital intensive nature of the business, it has been recognized since the  
3 early days of the industry that the public interest is often best served if NGDCs are  
4 granted exclusive service territories so that system costs can be shared by the widest  
5 possible customer base in a geographic area. In return for being the sole service provider  
6 within a geographic area, however, NGDC rates are subject to rate regulation by the  
7 Commission.

8 Also, as a result of the capital intensive nature of the business, as well as the  
9 general nature of rate regulation, Pennsylvania NGDCs, in accordance with Commission  
10 policies, have established provisions in their tariffs incorporating economic tests for the  
11 extension of NGDC facilities. Under these tariff provisions, applicants for utility service  
12 must pay for the costs of line extensions deemed not to be economic primarily to prevent  
13 undue cost shifting to existing customers under traditional ratemaking policies. For some  
14 customers, these line extension rules may result in a requirement to make a large up-front  
15 payment, or a contribution in aid of construction (“CIAC”), for the extension of facilities.  
16 Since some customers may not be willing or able to pay large up-front contributions in  
17 return for potential long-term savings, this could create a barrier to the expansion of  
18 NGDC systems. UGI Gas’s GET Gas pilot program was designed to try to address this  
19 problem for some of the applicants for UGI Gas distribution service while protecting the  
20 interests of existing customers.

21

22

1 **Q. Does the fact that UGI Gas is the sole entity authorized by the Commission to**  
2 **provide natural gas distribution service in most of its service territories mean that it**  
3 **can dictate the costs under which it will extend its facilities or provide distribution**  
4 **service to all customers?**

5 A. No. UGI Gas is subject to Commission oversight and regulation as well as competitive  
6 market forces to a larger degree than other public utilities, such as water or electric  
7 utilities. NGDC must recognize that applicants and customers have alternative options to  
8 natural gas. Businesses may choose to locate new or expanding operations elsewhere if  
9 the energy costs are attractive enough. Customer characteristics and circumstances, such  
10 as tolerance for large up-front contributions, can also vary considerably. UGI Gas will  
11 lose the applicant's or customer's business and the potential for long-term contributions  
12 towards system fixed costs if it does not have the flexibility to adjust contribution and/or  
13 distribution rates to reflect the applicant's or customer's competitive alternatives.

14  
15 **Q. How has the Commission historically recognized and made provision in its rate-**  
16 **making policies for the competitive forces UGI Gas faces?**

17 A. The Commission has, amongst other things, afforded UGI Gas substantial latitude in  
18 negotiating contributions for extensions costing over \$10,000 for non-residential  
19 applicants and customers, and has permitted the negotiating of firm XD and LFD rates  
20 and all interruptible rates within certain parameters. However, UGI Gas does not  
21 currently have such rate flexibility for firm DS and NT rates.

22

1 **Q. Has such rate flexibility served the public interest and the interests of UGI Gas’s**  
2 **customers?**

3 A. Yes. UGI Gas has had an excellent track record of customer growth. This growth is  
4 attributable in part to UGI Gas’s ability to adjust its rates within tariff-specified  
5 boundaries to meet changing competitive conditions and customer preferences. This  
6 flexibility has contributed to the expansion of UGI Gas’s distribution system and the  
7 recovery of fixed costs from a larger customer base. The expansion of UGI Gas’s  
8 distribution system also benefits the environment since customer conversion to natural  
9 gas generally displaces the use of less environmentally friendly energy sources.

10  
11 **Q. Looking forward, do you see the need for additional rate flexibility to attract new**  
12 **customers?**

13 A. Yes. For example, UGI Gas is beginning to see an increased demand for service to  
14 compressed natural gas (“CNG”) vehicle refueling stations. These stations may start out  
15 as low volume customers, but carry the prospect for steady incremental growth as  
16 vehicles are replaced. Often, the applicant or customer will be making a significant  
17 capital investment in vehicles and refueling equipment, and may have a low tolerance for  
18 large up-front contributions for line extensions, but would be willing to pay a higher  
19 distribution rate over time. It is also possible that UGI Gas will see the spread of smaller  
20 scale fuel cell, cogeneration facilities or gas-fired heat pump technologies that will  
21 require rate flexibility to meet competitive conditions.

22

1 **Q. How does UGI Gas propose to provide this flexibility?**

2 A. UGI Gas is proposing (1) a new rate mechanism, the “Technology & Economic  
3 Development” or “TED” Rider and (2) changes to its line extension rules for smaller  
4 volume commercial and industrial customers.

5  
6 **Q. Please describe the TED Rider and associated line extension rule changes.**

7 A. The TED Rider would permit UGI Gas and an applicant or customer to negotiate a  
8 mutually acceptable rider, which could either be (1) an incremental rate over the  
9 otherwise applicable NT or DS firm service rates or an incremental rate to LFD  
10 maximum rates, or (2) a rate discount from otherwise applicable NT, DS firm service or  
11 maximum LFD rates. The flexibility within the TED Rider will allow for either (i) a  
12 larger up-front customer contribution combined with lower negotiated rates, or (ii) a  
13 lower up-front customer contribution combined with higher negotiated rates. UGI Gas  
14 also proposes to revise its line extension rules to permit the negotiation of line extension  
15 terms for all non-residential customers.

16  
17 **Q. Can you provide an example of how the TED Rider might be applied?**

18 A. Yes. Say a company plans to convert its fleet of vehicles to CNG vehicles over time but  
19 initially only plans to install compression facilities sufficient to serve a small number of  
20 vehicles. This service location initially would be best served under rate NT, which does  
21 not offer rate flexibility. If the company wants a line extension constructed that will be  
22 capable of serving its future needs but does not have the budget to make a large up-front  
23 payment for the line extension, the project may not proceed. Under the proposed TED

1 Rider, UGI Gas and the applicant could agree to an incremental rate on top of the NT rate  
2 and a reduced CIAC to accommodate the applicant's planned CNG project.

3 In another instance, a transit agency contemplating a conversion to a CNG fleet  
4 might receive a grant that can cover any required CIAC and would qualify for service  
5 under Rate DS, but might need a discount off of the DS rate to make the project  
6 economically viable. Under the proposed TED rider, UGI Gas and the applicant could  
7 agree to a higher CIAC and an incremental rate reduction of the DS rate to accommodate  
8 the applicant's planned CNG project.

9  
10 **Q. Would the TED Rider be used to make un-economic investments?**

11 A. No. The TED Rider will be determined and applied using an economic test consistent  
12 with UGI Gas's new business extension tariff.

13  
14 **Q. Are there any limits on the TED Rider?**

15 A. Yes. The TED Rider will be applicable by request of the applicant and with approval by  
16 the company, and would be subject to the following criteria:

17 1. The Rider is applicable to usage associated with new gas load at competitive  
18 risk only.

19 2. The Rider will be applicable for a defined period outlined in the customer's  
20 TED Rider service agreement.

21 3. The Rider will be determined and applied using an economic test consistent  
22 with UGI Gas's new business extension tariff.

23

1 **Q. Are TED Rider customers included in the fully projected test year revenue**  
2 **calculations?**

3 A. No. However, due to the elimination of Rate CDS, there are two customers who will be  
4 assigned a TED Rider adjustment consistent with the rates and terms of their existing  
5 Rate CDS service agreements.

6

7 **III. LARGE CUSTOMER BUDGET ADJUSTMENTS**

8 **Q. Has UGI Gas made any adjustments to its large customer budget numbers in**  
9 **developing its revenue requirement in this proceeding?**

10 A. Yes, the budgeted revenue numbers have been adjusted to reflect the annualization of  
11 midyear customer additions and deletions, as well as customer data unknown at the time  
12 the 2017 budget was prepared. These adjustments are reflected in the sales and revenue  
13 exhibits included in the direct testimony of David E. Lahoff (UGI Gas Statement No. 6).

14

15 **IV. UNIVERSAL SERVICE PROGRAM RECOVERY MECHANISM**

16 **A. OVERVIEW OF UNIVERSAL SERVICE PROGRAMS**

17 **Q. What universal service and low-income energy conservation programs does UGI**  
18 **Gas currently offer to its customers?**

19 A. UGI Gas offers the following universal service programs: (1) the Customer Assistance  
20 Program (“CAP”), (2) the Low-Income Usage Reduction Program (“LIURP”), (3)  
21 Operation Share Energy Fund (hardship fund), and (4) the Customer Assistance and  
22 Referral Evaluation Services (“CARES”) program, which includes outreach for the Low  
23 Income Home Energy Assistance Program (“LIHEAP”).

24

1 **Q. Has UGI Gas’s universal service and low-income energy conservation plan been**  
2 **approved by the Commission?**

3 A. Yes. The UGI Distribution Companies jointly filed a Universal Service and Energy  
4 Conservation Plan (“USECP”) for the Three-Year Period of January 1, 2014 through  
5 December 31, 2016 at Docket No. M-2013-2371824. The USECP was approved by the  
6 Commission by three related orders entered on January 15, 2015, June 11, 2015, and  
7 September 3, 2015.

8  
9 **Q. Is UGI Gas proposing any changes to its Commission-approved Universal Services**  
10 **Programs?**

11 A. No. UGI Gas is not proposing any changes to any of its Commission-approved universal  
12 service programs. As explained below, UGI Gas is only proposing to modify the  
13 recovery mechanism for these universal service programs.

14  
15 **Q. How are UGI Gas CAP costs currently recovered?**

16 A. The Commission-approved settlement of UGI Gas’s last base rate case at Docket No. R-  
17 00953297 provided, in pertinent part:

18 [t]he revenue allowance includes \$315,000 in administrative costs and  
19 approximately \$400,000 current bill shortfall associated with the Company’s pilot  
20 Low Income Self Help Program (“LISHP”). UGI shall be permitted to include  
21 arrearages forgiven and written off under the LISHP pilot in developing its  
22 uncollectible accounts expense in future proceedings if such write-offs fall within  
23 the period used to develop uncollectible accounts expense.

1           Thereafter, in a Commission-approved Stipulation in Settlement (the “Universal Service  
2           Restructuring Settlement”) in UGI Gas’s restructuring proceeding at Docket No. R-  
3           00994786 (Order entered March 14, 2001), UGI Gas agreed to ramp-up its targeted CAP  
4           participation level to 4,000 participants, and was authorized to recover \$1.5 million per  
5           year in addition to its base rate allowance through a combination of available Other Post-  
6           Employment Benefits (“OPEB”) funding and, if necessary, base rate increases, to cover  
7           incremental costs, subject to certain specified reductions if CAP targets were not met.

8           Thereafter, in an Order at Docket No. P-00052190 entered on December 1, 2005,  
9           the Commission authorized UGI Gas to increase its LISHP participation cap to 8,000  
10          customers, to increase its LISHP discount limit from \$840 to \$1,146, and to establish its  
11          current LISHP Rider. As the Commission explained in its December 1, 2005 Order, CAP  
12          costs for the first 4,000 CAP participants will first be funded through the redirection of all  
13          available OPEB and LIHEAP funding, and thereafter through a LISHP tariff rider. For  
14          the initial 4,000 participants, the LISHP Rider only recovers (1) the difference between  
15          \$1.5 million and available OPEB funding, to the extent available OPEB funding is less  
16          than \$1.5 million, and (2) the difference between the residential sales service rate  
17          (excluding CAP customer GET Gas charges) and the LISHP rate that is in excess of \$752  
18          per CAP participant. The amount of \$752 per CAP participant is a fixed amount that  
19          represents the average discount of all CAP participants at the time the LISHP Rider was  
20          implemented. For all CAP participants over 4,000, the LISHP Rider only recovers the  
21          discounts granted to CAP participants and external agency application fees for these  
22          additional participants.

1 **Q. Please explain how LIURP costs are recovered by UGI Gas.**

2 A. Pursuant to the Commission's Order entered June 11, 2015, at Docket No. M-2013-  
3 2371824, the UGI Gas annual LIURP budget was increased, as of January 1, 2016, from  
4 the proposed \$650,000, based on 0.2 percent of jurisdictional revenues for UGI Gas, to a  
5 fixed \$1.1 million. UGI Gas is precluded from recovering LIURP spending at or below  
6 \$600,000 via its LISHP Rider, and is permitted to recover 50% of LIURP expenditures in  
7 excess of \$600,000 up to 0.2 percent of jurisdictional revenue. However, UGI Gas is  
8 permitted to recover – subject to the \$600,000 floor - all LIURP expenditures in excess of  
9 0.2 percent of jurisdictional revenue up to the new \$1.1 million budget cap.

10

11 **Q. How does UGI Gas fund and recover costs associated with the Operation Share  
12 Energy Fund?**

13 A. Most of Operation Share's funding comes from sources external to UGI Gas. However,  
14 as set forth in the 2014-2017 USECP, UGI Gas is making an annual contribution of  
15 \$38,500 to the Operation Share Energy Fund and is making available another \$38,500 in  
16 matching funds, whereby UGI Gas will contribute one dollar for every two dollars  
17 donated by a customer, employee, or outside source. Currently, the administrative costs  
18 of the UGI Gas Operation Share Energy Fund are included in the UGI Gas general  
19 operating budget. There currently is no reconcilable cost recovery mechanism in place.

20

21 **Q. Briefly explain the CARES program, including funding of the program.**

22 A. UGI also manages a CARES program. This program evaluates customers who are either  
23 participating or are being evaluated for participation in any one of our Low Income

1 Programs to identify customers in need of additional services, including services not  
2 offered by UGI Gas. Those customers identified are referred to other programs that  
3 could be beneficial to the customer. In addition to UGI Gas's CAP program, the CARES  
4 program ensures we are equipped to refer to external agencies, such as the Office of  
5 Aging and Department of Human Services when that need is identified.

6  
7 **B. UNIVERSAL SERVICE PROGRAM RECOVERY MECHANISM**

8 **Q. Is UGI Gas proposing any changes to the way it recovers the costs of its universal**  
9 **service programs?**

10 A. Yes. UGI Gas is proposing to adopt a Universal Service Plan ("USP") Rider similar to  
11 that approved by the Commission in the most recent PNG and CPG base rate  
12 proceedings. The USP Rider would address UGI Gas's cost recovery for its CAP,  
13 LIURP, and the Operation Share Energy Fund.

14  
15 **Q. Please explain how the PNG and CPG USP Riders recover the costs of those**  
16 **companies' universal service programs.**

17 A. Pursuant to the Commission-approved settlement in PNG's last base rate proceeding at  
18 Docket No. R-2008-2079660, PNG is permitted to recover costs for the following  
19 programs under its USP Rider with an annual reconciliation for costs and recoveries: (1)  
20 CAP shortfall, pre-program arrearages and external administrative costs; (2) LIURP in an  
21 annual amount of \$850,000; and (3) Hardship funds in an annual amount of \$5,000 (for  
22 administrative costs).

23 Pursuant to the Commission-approved settlement in CPG's last base rate  
24 proceeding, at Docket No. R-2008-2079675, CPG is permitted to recover costs for the

1 following programs under its USP Rider with an annual reconciliation for costs and  
2 recoveries: (1) CAP shortfall, pre-program arrearages and external administrative costs;  
3 (2) LIURP in an annual amount of \$500,000; and (3) Hardship funds in an annual amount  
4 of \$3,000 (for administrative costs).

5 For both CPG and PNG there is an offset for CAP credits and pre-program  
6 arrearages for customers receiving shortfall credits above the enrollment projected in  
7 each of those base rate cases.

8  
9 **Q. Would any of UGI Gas's funding of its universal service programs change from its**  
10 **recently-approved 2014-2017 USECP?**

11 A. No. UGI Gas's funding of its universal service programs would be unchanged from its  
12 recently-approved USECP. Only the recovery mechanism would change, so that each  
13 UGI Gas, CPG, and PNG would each have the same USP Rider and surcharge  
14 mechanism, with the only variations being the differing funding levels for each NDGC  
15 set by the Commission in the USECP.

16  
17 **Q. Do you have a projection for UGI Gas's CAP enrollment for the end of the fully-**  
18 **projected future test year?**

19 A. Yes. I project that UGI Gas's CAP enrollment at September 30, 2017 will be 10,000.  
20 This projection is based on a steady increase in enrollment that we have observed since  
21 the CAP program change in September 2014 provided customers with the option to set  
22 their CAP payment at their average bill in lieu of a percentage of income.

23

1 **Q. Is UGI Gas proposing an offset to CAP credits and pre-program arrearages for**  
2 **customers receiving shortfall credits above the projected enrollment of 10,000?**

3 A. Yes. UGI Gas is proposing to calculate an offset to CAP credits and pre-program  
4 arrearages in the same manner as CPG and PNG.

5  
6 **Q. What are the projected costs of the UGI Gas’s USECP at the end of the FPFTY that**  
7 **must be accounted for in the USP Rider surcharge?**

8 A. These are reflected in UGI Gas Exhibit RRS-2. The direct testimony of David E. Lahoff  
9 (UGI Gas Statement No. 6) explains in greater detail how these costs will be incorporated  
10 in the surcharge applicable to non-CAP customers through the USP Rider.

11  
12 **V. QUALITY OF SERVICE PERFORMANCE**

13 **Q. How does UGI Gas evaluate its customer service performance?**

14 A. There are several ways that UGI Gas evaluates its customer service performance. One  
15 way is through the collection of data on performance goals set by the Commission’s  
16 Bureau of Consumer Services (“BCS”), which are reported annually to the Commission  
17 and published in a comprehensive report. Based on these metrics, over the past three  
18 years UGI Gas’s quality of customer service has met or exceeded the Commission’s  
19 requirements and, based on our information to date, 2015 metrics are also expected to  
20 meet or exceed the Commission’s requirements.

21

1 **Q. Are there any surveys by which UGI Gas measures its customer service**  
2 **performance?**

3 A. Yes. UGI Gas participates in the JD Power Gas Utility Residential Customer Satisfaction  
4 Study.

5  
6 **Q. Please explain the Gas Utility Residential Customer Satisfaction Study.**

7 A. JD Power is a global market research company. 2015 marks the fourteenth year of its  
8 Gas Utility Residential Customer Satisfaction Study, an online survey that measures  
9 residential customer satisfaction with gas utility brands across the following six factors,  
10 in order of importance: billing and payment; price; corporate citizenship;  
11 communications; customer service; and field service. Satisfaction is calculated on a  
12 1,000-point scale.

13  
14 **Q. How does JD Power evaluate customer satisfaction with gas utility brands?**

15 A. JD Power contracts with several consumer survey panels to complete the survey, with  
16 online interviews conducted for 83 gas utilities across four quarterly fielding periods for  
17 four US regions (East, Midwest, South and West), each consisting of large and mid-sized  
18 utility categories. UGI Gas is in the “Large East” region for the study. This region  
19 consists of 11 gas utilities with more than 400,000 households.

20  
21 **Q. How is UGI Gas judged in comparison to similarly-situated gas utilities?**

22 A. UGI Gas is considered together with its affiliate NGDCs CPG and PNG so customer  
23 satisfaction is reported on a collective basis. The collective UGI NGDCs were the

1 highest ranked in their region in 2013 and 2014 and were named the JD Power Award  
2 winner for this study. The UGI NGDCs came in second place in 2015. UGI Gas Exhibit  
3 RRS-3 consists of charts that depict the 2013, 2014, and 2015 customer satisfaction  
4 rankings for the 11 natural gas utilities that make up the Large East region.

5  
6 **Q. Are there any other ways that UGI Gas evaluates its customer service performance?**

7 A. Yes. UGI Gas is required to report to the Commission the results of telephone  
8 transaction surveys of residential and small business customers that have recently  
9 contacted the company. The purpose of these surveys is to assess the customer's  
10 perception of the interaction with UGI Gas and fulfill reporting requirements for quality  
11 of service benchmarks and standards pursuant to Commission regulations. All EDCs and  
12 major NGDCs utilize a common survey which was developed collaboratively with the  
13 Commission. Metrix Matrix, a research firm used by all EDCs and major NGDCs for  
14 this purpose, contacts individual consumers until it meets a monthly quota of completed  
15 surveys for each company. Each year Metrix Matrix completes approximately 700  
16 surveys for each participating utility, including UGI Gas.

17 In addition, each month UGI Gas randomly selects a sample of transaction  
18 records for consumers who have contacted them within the past 30 days. The following  
19 chart represents UGI Gas survey results since 2012, using a scale of 1 to 10:

1

	Customer Satisfaction Survey Results		
Calendar Year	Overall Satisfaction	Call Rep Satisfaction	Field Rep Satisfaction
2012	8.89	9.35	9.48
2013	8.95	9.37	9.57
2014	8.82	9.38	9.48
2015 to date	8.93	9.38	9.5

2

3 Our customer satisfaction survey results demonstrate excellent performance on the part of  
4 our call center staff, which is consistent with our high marks from JD Power.

5

6 **Q. Is UGI Gas engaged in any programs anticipated to further improve its customer  
7 service performance?**

8 A. Yes. UGI has undertaken UGI’s Next Information Technology Enterprise (“UNITE”)  
9 Project. The UNITE Project is a multi-year, multi-phased information system  
10 modernization project. Phase 1 of the Project entails the development and  
11 implementation of a new customer information system (“CIS”) to replace our two legacy  
12 mainframe CIS systems. This new CIS will harmonize the two systems and provide  
13 increased functionality and improved customer service. The development and  
14 implementation of this plan is discussed in the direct testimony of Thomas N. Lord (UGI  
15 Gas Statement No. 8).

16

1 **VI. ENERGY EFFICIENCY AND CONSERVATION PLAN IMPLEMENTATION**

2 **Q. Has UGI Gas proposed an Energy Efficiency and Conservation (“EE&C”) Plan in**  
3 **this filing?**

4 A. Yes.

5  
6 **Q. Please describe the Plan.**

7 A. The full contents of the EE&C Plan are described in detail in the direct testimony of  
8 Theodore M. Love (UGI Gas Statement No. 11), senior analyst with Green Energy  
9 Economics Group, Inc. The EE&C Plan is a comprehensive portfolio of energy  
10 efficiency and conservation programs that was designed to assist customers save energy  
11 through various cost- effective measures. The EE&C Plan Rider is discussed in the direct  
12 testimony of David E. Lahoff (UGI Statement No. 6).

13 The following six natural gas energy efficiency programs are proposed for the  
14 five-year timeframe that will run from Fiscal Year 2017 through Fiscal Year 2021:

- 15 • Residential Prescriptive (RP)
- 16 • Nonresidential Prescriptive (NP)
- 17 • New Construction (NC)
- 18 • Residential Retrofit (RR)
- 19 • Nonresidential Retrofit (NR)
- 20 • Behavior and Education (BE)

21 An additional Combined Heat and Power (“CHP”) program is also being proposed as a  
22 separate fuel-switching program in addition to the six programs that comprise the EE&C  
23 Plan.

1 **Q. How will the EE&C Plan be marketed to customers?**

2 A. The EE&C Plan will be marketed to current and prospective customers with the intent of  
3 providing relevant, cost-effective communications that will drive awareness and  
4 education regarding the UGI Gas EE&C Plan. The marketing efforts will be  
5 implemented and managed by both UGI Gas Staff and qualified Conservation Service  
6 Providers (“CSPs”). The EE&C Plan will be marketed in various ways, which may  
7 include the following:

8 1) Company website - Utilize UGI.com to inform customers of energy efficiency  
9 and conservation tips, along with applicable programs and associated customer  
10 rebates. In addition to web content, UGI may decide to leverage “how to” videos  
11 through mediums such as YouTube, etc.

12 2) Social media - Leverage social media (e.g. Twitter, Facebook, etc.) to  
13 communicate energy efficiency and conservation messages.

14 3) Media advertising - Broadcast within the UGI Gas service territory to inform  
15 customers of the benefits of energy efficiency and conservation. Advertising may  
16 include the following tactics:

17 a. Television

18 b. Radio

19 c. Newspaper/Billboards

20 d. Event sponsorship and trade shows

21 4) Bill inserts/Newsletters - Distribute energy efficiency and conservation tips to  
22 customers at a minimum on a quarterly basis. Topics may include:

23 a. Seasonal energy conservation tips

- 1                   b. Information on low-income assistance programs
- 2                   c. Specific rebates available to Residential, Commercial, and Industrial
- 3                   customers

4           5) CSPs - Once the request for proposal (“RFP”) process is finalized, UGI will  
5           partner with hired CSPs that specialize in promoting and administering energy  
6           efficiency programs. The CSPs will help identify market opportunities, promote  
7           applicable customer programs and rebates, and assist with developing  
8           relationships with various trade allies.

9

10 **Q. Does that conclude your testimony?**

11 A. Yes, it does.

12

**UGI GAS STATEMENT NO. 8 – THOMAS N. LORD**

**BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Docket No. R-2015-2518438**

**UGI Utilities, Inc. – Gas Division**

**Statement No. 8**

**Direct Testimony of  
Thomas N. Lord**

**Topics Addressed:      UGI's Next Information Technology  
Enterprise (UNITE Program)**

Dated: January 19, 2016

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your full name and business address.**

3 A. My name is Thomas N. Lord. My business address is 2525 North 12th Street, Suite 360,  
4 Reading, PA, 19612-2677.

5  
6 **Q. By whom are you employed and in what capacity?**

7 A. I am employed by UGI Utilities, Inc. (“UGI”) as Vice President and Chief Information  
8 Officer. UGI is a subsidiary of UGI Corporation (“UGI Corp.”). UGI has two separate  
9 operating divisions: UGI Utilities, Inc. - Gas Division (“UGI Gas” or the “Company”) and UGI Utilities, Inc. - Electric Division.

10  
11  
12 **Q. What are your principal duties and responsibilities as Vice President and Chief  
13 Information Officer?**

14 A. I am responsible for the strategic direction and overall management of all UGI  
15 technology functions including defining, delivering, and supporting business enabling  
16 Information Technology (“IT”) solutions.

17  
18 **Q. What is your educational background?**

19 A. I have a Bachelor of Science, Computer Science – Queen Mary College, University of  
20 London, United Kingdom.

21  
22 **Q. Please describe your professional experience.**

23 A. I am an IT professional with over 30 years’ experience in defining, delivering, managing,  
24 and supporting IT solutions. Most recently, I held the position of Director, Enterprise

1 Architecture and Information Systems at TECO Energy, Tampa, Florida. Previously, I  
2 held senior information technology positions at Lucent Technologies, British Telecom,  
3 and Special Data Processing Corporation. My curriculum vitae is attached to this  
4 testimony as UGI Gas Exhibit TNL-1.

5  
6 **Q. Please describe the purpose of your testimony.**

7 A. I am providing testimony on behalf of UGI Gas. The primary purpose of my testimony is  
8 to discuss UGI's Next Information Technology Enterprise ("UNITE") Program. I will  
9 present an overview of the UNITE Program, describe its costs and benefits, and discuss  
10 the program's schedule. As this is a multi-year, multi-phased program, I will also discuss  
11 the components of the program that will be placed into service during the fully projected  
12 future test year ending September 30, 2017 ("FPFTY"), the related capital costs, and the  
13 associated cost reductions that will occur after the UNITE Program is implemented and  
14 the existing systems are retired from service. Additionally, I will described other pending  
15 IS projects that UGI is planning to implement by the end of the FPFTY.

16  
17 **Q. Mr. Lord, are you sponsoring any exhibits in this proceeding?**

18 A. Yes. I am sponsoring the following exhibits attached to this testimony: UGI Gas Exhibit  
19 TNL-1, and UGI Gas Exhibit TNL-2.

1 **II. UNITE PROGRAM**

2 **A. OVERVIEW**

3 **Q. Mr. Lord, please provide an overview of the UNITE Program.**

4 A. As part of the UGI-1 initiative described in the direct testimony of Paul J. Szykman (UGI  
5 Gas Statement No. 1), the UNITE Program is a multi-year, multi-phased information  
6 system modernization program. Phase 1 of the Program entails the development and  
7 implementation of a new customer information system (CIS) to replace our two legacy  
8 mainframe CIS systems. Currently, UGI's 40-year old system serves the customers of  
9 UGI (both UGI Gas and UGI Electric) and UGI Penn Natural Gas, Inc., while a separate  
10 20-year old system is used to serve the customers of UGI Central Penn Gas, Inc., with  
11 both systems operating in a legacy mainframe environment.

12 Phase 2 represents the modernization of our enterprise asset/work management  
13 system, which will allow for improved management of our assets, long-cycle  
14 maintenance work, mobile workforce, and contractors, as well as improvements and  
15 consolidation of our Geospatial Information System ("GIS"). Phase 3 of the UNITE  
16 Program will help us improve how we manage gas outages, engage in supply chain  
17 activities, and account for our plant investment.

18 Phase 1 of the UNITE Program will be implemented and in service before the end  
19 of the FPFTY. Phases 2 and 3 of the UNITE Program will not be placed in service until  
20 after the FPFTY. Accordingly, my testimony addresses only the issues pertaining to  
21 Phase 1 of the UNITE Program.

22

1 **Q. Please discuss the specific activities that will be affected by the Phase 1**  
2 **implementation.**

3 A. The new CIS will transform the Company's ability to manage several aspects of its utility  
4 systems, including Contact Center (call center) Operations, scheduling service orders,  
5 and provide broader customer self-service options. In addition, the Company will have a  
6 more flexible tool that will enhance its billing functionality in order to adapt to changes  
7 in rates more readily, allow for more flexible online payment and account management  
8 features for customers, and allow the Company to better manage and track its credit and  
9 collections processes. With respect to the service orders, the new CIS will enable the  
10 Company to more efficiently and effectively communicate short-cycle service orders to  
11 field personnel. This more effective communication will both enable the field work to be  
12 performed more efficiently and allow the Company to more efficiently track the entire  
13 lifecycle of utility meters and meter-related devices from requisition, through operation  
14 and maintenance cycles, and to retirement. Further, the added functionality provided by  
15 the new CIS will enable the Company to access and validate data more efficiently, which  
16 will allow the Company to create, modify, and run business reports better than the current  
17 system allows. Finally, a new CIS is a key for the Company's data governance model in  
18 terms of ensuring appropriate retention of information required under regulatory and  
19 corporate data management models. Altogether, these changes will transform how more  
20 than 1,200 of our employees serve all 700,000 of our customers. In summary, the new  
21 CIS will allow the Company to more efficiently manage its entire meter-to-cash process,  
22 enable the Company to measure its performance more effectively, and significantly  
23 improve the service experience for customers.

1 **Q. Why has UGI decided to undergo this CIS transformation now?**

2 A. There are four primary reasons. First, the current CIS system presents significant  
3 business continuity concerns. Maintaining a workforce proficient in the legacy system  
4 has become increasingly challenging, with the average age of UGI-employed software  
5 developers being 57 years old. Having roots dating back to 1975, UGI's legacy  
6 mainframe system utilizes a technology that is no longer included in formal education  
7 programs and has not been for some time. With no replacement workforce being  
8 educated in the language and other technology used by the system, it is quickly becoming  
9 obsolete.

10 Second, while the Company currently provides excellent customer service, we  
11 believe that modernization of the CIS program will provide improved service to  
12 customers. This improvement will primarily be the result of the state-of-the-art  
13 technology that will enable customers to seek out and obtain information more quickly  
14 and efficiently, as well as enable service providers to do the same to provide better  
15 service to customers. Self-service for utility customer information now represents a key  
16 determinant of customer satisfaction. Indeed, customers now prefer low-touch, web  
17 portal, email, social media, and other means available only through modern technology.  
18 The new CIS will provide more effective and efficient technology solutions for our  
19 business processes, including processes that manage emergency situations, such as  
20 contact center, dispatch and field operations.

21 Third, UGI's workforce spends an inordinate amount of time completing manual  
22 tasks that can be automated with up-to-date systems. The newly automated systems will  
23 reduce the number of tasks required to be done manually. The reduction of manual tasks

1 will improve the efficiency of the workforce to perform certain emergency, asset  
2 management, and record keeping tasks.

3 Fourth, the topic of CIS modernization was addressed in the most recent  
4 management audit conducted by the Bureau of Audits Pennsylvania Public Utility  
5 Commission (“PA PUC”) in 2012.<sup>1</sup> In that report, the Bureau found the following:

6 Standardization of the CIS would enable all call centers to operate  
7 in a more cost efficient manner eliminating dual processes and  
8 maintenance of two systems. Additionally, call center personnel  
9 utilization would improve with the ability to cross train personnel  
10 to handle customer service calls from any call center. Finally, if all  
11 call centers utilize one system, the UGI Utility Group will be in a  
12 position to evaluate the benefits for further consolidation of the call  
13 centers and develop one set of metrics/goals for evaluation  
14 purposes.

15  
16 For all of these reasons, the Company has decided to pursue the UNITE Program.

17  
18 **Q. What is the total cost of the UNITE Program?**

19 A. The total UNITE Program capital investment will be \$130-\$150 million. UGI Gas will  
20 be allocated \$63-\$73 million of the total capital costs for the UNITE Program.

21  
22 **Q. What is the total cost of Phase 1 of the UNITE Program?**

23 A. As I further explain below, Phase 1 of the UNITE Program will be implemented and in  
24 service before the end of the FPFTY. The total capital cost for Phase 1 of the UNITE  
25 Program will be \$88.1 million. UGI Gas will be allocated \$43.0 of these Phase 1 capital  
26 costs.

---

<sup>1</sup> See Focused Management and Operations Report of UGI Utilities, Inc. UGI Central Penn Gas, Inc. and UGI Penn Natural Gas, Inc., Pennsylvania Public Utility Commission, Bureau of Audits, April 2012

1 **Q. What are the expected annual maintenance costs for the new CIS system?**

2 A. The annual cost of maintaining the new CIS system with the improved features I  
3 previously described will be \$1.76 million per year. UGI Gas will be allocated \$859,000  
4 of these annual maintenance costs. The calculation of the annual operating expense  
5 adjustments is discussed in the testimony of UGI Gas witness Ann P. Kelly (UGI Gas  
6 Statement No. 2) and shown in UGI Gas Exhibit A (Fully Projected), Schedule D-13.

7  
8 **Q. Are there viable alternatives to replacing the existing CIS systems?**

9 A. No. Like many system improvements, an important consideration other than the direct  
10 economic cost must be the implication of not making the investment. As discussed  
11 previously, one critical consideration is that the current CIS systems are bordering on  
12 technological obsolescence. Assuming that the old systems are not replaced, UGI would  
13 eventually no longer have a workforce capable of performing the tasks necessary to  
14 maintain the system. Without essential maintenance, the system will begin to degrade,  
15 and more manual processes and workarounds will be needed, which could seriously  
16 impact the performance of the Contact Center and customer service received by  
17 customers. Declining customer service would result in increased numbers of informal  
18 and formal complaints to the Commission, or worse. That situation, while not directly  
19 measurable in dollars and cents, would be costly to customers and present an untenable  
20 situation for the Company, the Commission, and other constituents.

21

1           **B.       UNITE PROGRAM PHASE 1 PROJECT SCHEDULE**

2   **Q.       Please discuss the schedule that has been developed for the Phase 1 project.**

3   A.       The Company has already conducted much of the necessary preliminary work by  
4           mapping out the project, confirming essential data, developing requests for proposals, and  
5           selecting software and system integration vendors. The remaining steps include  
6           developing a complete project plan, creating the business blueprint, building the  
7           functionality, testing the functionality, and then preparing for the Go-live date and  
8           deployment. The project schedule for Phase 1 contemplates an in-service, Go-live date  
9           of September 5, 2017, at which point customers will be fully served by the new CIS  
10          system. There also will be a phase to stabilize the new CIS system with the Company's  
11          other systems. A high level chart showing the duration of each step of the project is  
12          provided in UGI Gas Exhibit TNL-2.

13  
14   **Q.       Please explain how operations will be transitioned to the new CIS systems?**

15   A.       The Company recognizes that its employees will need to transition from the old CIS  
16          systems to the new ones over a period of time. During this transition period, we plan to  
17          bring on additional call center and other resources to provide additional call center and  
18          other coverage to help manage customer call flow during the first several months after the  
19          new CIS is placed into service. This is reasonably necessary to avoid a drop off in  
20          customer of service during the interim transition period. The anticipated cost of these  
21          additional resources required during the transition period are discussed in the testimony  
22          of UGI Gas witness Ann P. Kelly (UGI Gas Statement No. 2) and shown in UGI Gas  
23          Exhibit A (Fully Projected), Schedule D-13.

1 **Q. Please describe the activities contemplated for each step of the Phase 1 project**  
2 **timeline.**

3 A. A brief description of each of the Phase 1 project steps is described below:

- 4 • **Project Planning** includes defining of goals, objectives, and high level  
5 requirements; performing data cleansing; and defining the delivery strategy.
- 6 • **Business Blueprint** includes gathering functional requirements; creating business  
7 process blueprint; performing solution fit/gap analysis; defining application and  
8 technical architecture; analyzing training and communication needs; and  
9 continuing data cleansing.
- 10 • **Building the Functionality (Realization – Build)** contemplates creating  
11 functional and technical specifications; configuring the system; designing,  
12 building, and installing development, testing and production environments; and  
13 designing and developing a training and communications plan.
- 14 • **Testing the Functionality (Realization – Test)** consists of executing product and  
15 user tests; performing mock conversions; executing technical and performance  
16 tests; testing and piloting of training materials; and assessing business readiness.
- 17 • **Go-Live Preparation and Deployment** includes performing data conversions;  
18 and deploying applications into UGI’s business functions.
- 19 • **Post Go-Live Support** stabilization of new CIS with the Company’s other  
20 systems.

21

22 **Q. You mentioned that UGI had already selected the vendors for the software and**  
23 **software integration process. When did that occur?**

24 A. The preliminary analysis and vendor selection process for the UNITE Program began in  
25 the fall of 2014. The Company studied the experience of several other utility companies  
26 to gain an understanding of the resource requirements, cost magnitudes, and processes for  
27 developing and implementing a new customer information system. CIS vendor selection  
28 began in the Spring of 2015, with a request for proposal process, interviews, and on-site  
29 demonstrations by the two vendor finalists in July 2015. The SAP Customer

1 Relationship and Billing (“CRB”) solution was selected due to the scoring of the SAP  
2 system against the other finalist, in terms of pricing and total cost of ownership, an  
3 evaluation of how the system satisfied various business needs (Business Evaluation), the  
4 ease in managing the system (Technical Evaluation), and how the solution met our  
5 strategic needs (Industry Strategy). Factors considered by our subject matter experts  
6 included customer management, service premise management, rates, usage, billing,  
7 account management, credit and collections, service order management, inventory  
8 management, and analytics.

9 In terms of selecting the system integrator, UGI also held an RFP process in  
10 which 8 vendors submitted bids. Pricing considerations and qualifications eliminated all  
11 but three of the vendors, and the three shortlisted vendors were interviewed extensively  
12 as to their proposed solutions, project approach, timeline, resource plan, and pricing. As  
13 a result of this process, Deloitte Consulting was chosen for the project.

### 14 15 **III. OTHER IS PROJECTS**

16 **Q. Mr. Lord, are there other pending IS projects that UGI is planning to implement by**  
17 **the end of the FPFTY ending September 30, 2017?**

18 A. Yes. UGI is planning to implement the following IS projects by September 30, 2017.

19 Workstation Refresh - the replacement of obsolete workstation equipment, which  
20 will include standardization of equipment and workstation administration. The refresh of  
21 UGI’s workstations will address a number of operational and cyber security related items.  
22 Standard operating system images will be established for a greatly reduced variety of  
23 workstation equipment thereby significantly simplifying the support of the environment  
24 and its end users. In addition, the refresh will eliminate certain current cyber security

1 gaps by removing workstation administrative privileges, implementing data at rest  
2 encryption, and enhancing remote connection capabilities.

3 Network Redesign - a comprehensive assessment and redesign of UGI's  
4 data/voice network to address current deficiencies and add capabilities for UNITE and  
5 other initiatives. The last comprehensive assessment/redesign was performed over five  
6 years ago. The UGI Local and Wide Area Network (LAN/WAN) redesign and upgrade  
7 will increase network capacity and resiliency. Additional bandwidth will be provided to  
8 UGI offices and remote sites to improve information systems performance and reliability.  
9 All sites with have at least a primary and backup connection to the UGI WAN. Offices  
10 critical to Customer Service and Safety (including Call Centers, Electric Division  
11 Systems Operations, and Gas Control) will have redundant physical network access paths  
12 provided by independent telecommunications vendor facilities. The new network design  
13 and equipment upgrade will ensure the UGI WAN can support planned information  
14 system enhancements.

15 Cyber Security Enhancements - UGI is further enhancing its cyber security  
16 capabilities. UGI will continue to deploy cyber security policies, procedures, and tools to  
17 protect utility/customer information and assets from loss, corruption, unauthorized  
18 access, use, and disclosure. Planned cyber security tools include Security Information  
19 and Event Management (SIEM), Network Access Control (NAC), End point security  
20 control, Data Loss Prevention (DLP), and host based Intrusion Detection and Prevention  
21 (IDS/IPS) solution. The enhanced security posture provided by the continued  
22 enhancement of UGI cyber security will reduce the risk of utility assets being  
23 compromised, systems degraded, or unauthorized information accessed. The procedures

1 and tools will enable UGI to detect, contain, and quickly respond to cyber security  
2 incidents.

3 Telephony System Replacement - the current system is technically obsolete and  
4 will be replaced, including handsets. The current obsolete private branch exchange  
5 (PBX) voice system and handsets will be replaced. The replacement system will improve  
6 phone system reliability and call quality. The new phone system will be deployed using  
7 the enhanced UGI LAN/WAN to reduce the risk of interruption to customer calls and to  
8 reduce the possibility of the system not performing during an emergency. The new  
9 phone system will simplify deployment and management enabling problems to be  
10 quickly resolved using centralized troubleshooting.

11

12 **Q. Does this conclude your direct testimony?**

13 A. Yes, it does.

## THOMAS N. LORD

### SUMMARY

An Information Technology (IT) executive with strong business and technical expertise acquired from over thirty (30) years of successfully defining and executing business strategies coupled with the creation and deployment of IT solutions that align with business goals, objectives, and investments.

### PROFESSIONAL EXPERIENCE

#### **UGI UTILITIES**

**2015 –**

A multi-million dollar utility company, providing natural gas service throughout Pennsylvania and electric service to a number of Pennsylvania counties.

#### *Vice President; Chief Information Officer*

Responsible for the strategic direction and overall management of all UGI Utilities IT functions including the definition, delivery, and support of business enabling IT solutions, ensuring alignment with the company's strategies.

- Establish and guide the company's technology strategy and ensure the provision of information technology solutions that are delivered so as to maximize the strategy in a manner consistent with the company's culture.
- Develop, coordinate, guide, and maintain strategic and operational IT plans in support of the overall mission and business strategy. These plans define a vision for meeting current and future information technology needs, while ensuring alignment and integration of IT with the overall vision, mission, and values of the company.
- Provide vision, strategy, tactical planning, development evaluation, and coordination of the information technology systems and solutions.
- Maintain enterprise systems architecture, defining standards and protocols for data exchange, communication, software, and interconnection of network information systems to ensure optimal performance, availability, and resilience.
- Develop, implement and test on a regular basis disaster and cyber incident recovery processes, ensuring alignment with UGI Utilities business priorities.
- Participate in the full lifecycle of IS staff development including recruitment, hiring, training, managing, coaching and terminating when appropriate. Foster a culture that promotes employee development, engagement and teamwork.

#### **TECO ENERGY**

**2008 – 2015**

A multi-billion dollar utility company, providing electric service in West Central Florida, natural gas service throughout Florida and New Mexico, and coal mining operations in Kentucky and Virginia.

#### *Director; Enterprise Architecture and Information Systems*

Responsible for managing a multi-million dollar annual budget and for defining, evolving, and supporting TECO's IT solutions and ensuring alignment with the company's business strategies.

- Established a company-wide, 3-tier IT Governance Model that includes a top-tier Executive Steering Committee and uses a Portfolio Management approach to evaluating and prioritizing IT investments.
- Defined a multi-year technology consolidation and rationalization plan that is aimed at significantly reducing the number of applications and the variety of technology platforms in TECO's application portfolio.
- Led a cross-company team through the definition, selection, and Board of Director approval of SAP as TECO's Enterprise Resource Planning (ERP) platform, providing Finance and Control, Human Capital, and Supply Chain Management business capabilities.
- As the IT Program Director, managed the 18-month implementation of the ERP platform, completing on time and the overall project being under budget. The implementation won SAP's Utility Project of the year 2012.
- Participating in the definition and refinement of the company's business strategies, providing particular guidance in areas where IT can be used as a key enabler.
- Established a Business Relationship Management function that is the liaison between IT and TECO's business areas, with responsibility for being the primary point-of-contact for all IT activities.
- Guided the approach to analyze, select, acquire, and implement the trouble-tracking and resolution platform for TECO's Tampa Electric and Peoples Gas' businesses with this being one of the first cross-company solutions.
- Led the definition and implementation of a Systems Development Life-Cycle (SDLC) methodology that is used to guide and direct IT projects. A strong emphasis is placed on business process analysis to ensure full business context is captured and used to frame functionality requirements.

**SPECIAL DATA PROCESSING CORPORATION****2003 – 2007**

A multi-million dollar direct marketing company specializing in optimizing clients' customer acquisition and sales opportunities.

*Vice President; Chief Information Officer*

Responsible for managing a multi-million dollar annual budget and for defining, evolving, and operating all aspects of Special Data Processing's IT solutions and ensuring alignment with business strategies.

- Participated in the definition and refinement of the company's business strategies, providing particular guidance in areas where IT could be a competitive differentiator and key enabler.
- Delivered business functionality in support of a single site 1,200 seat Sales Contact Center, with an additional 300 home-based sales associates. On a weekly basis the Center handled 220K inbound sales inquiries, 60K outbound sales attempts (to existing customers), and 25K Customer Service inquiries.
- Defined and created an innovate approach for processing consumer information resulting in \$2+M annual savings.
- Analyzed, designed, and managed the development of functionality that established a single, consistent and consolidated, cross-enterprise view of our 100+ million consumers. Reprocessed 13 years of customer contact and sales data and established a baseline view of customer activity.
- Defined, negotiated, and contracted for an IP PBX (Cisco Call Manager), with associated voice-mail and e-mail integration, as a replacement for an existing analog PBX.
- Evaluated and conducted an initial deployment of a "thin client" desktop environment for sales associates, which would deliver a 70% reduction in equipment refresh costs.
- Created and managed a Program Management Office (PMO) that established IT request and prioritization processes and procedures to ensure appropriate focus and utilization of IT personnel and systems.
- Established an Enterprise Architecture, which included the IT Operating Model and IT personnel roles and responsibilities that were mapped to the IT methodology, encompassing the entire SDLC from Analysis through Implementation, including Maintenance.
- Created IT Application Architecture road-map that forms the basis for evolving the existing applications technology and applications and guiding new technology decisions.
- Evaluated IT operating financials and reduced annual expenditures on existing technology by 30% (\$750k) while achieving technology upgrades, which included a ten-fold increase in data storage capacity and the introduction and use of "blade" servers and VMWare virtualization products.
- Reviewed and rebuilt the IT Operations group applying focus on automated system alerts that allowed greater resource availability for an enhanced Service Desk team.
- Established and executed a 90 day infrastructure stabilization plan that eliminated frequent server downtime and drastically reduced system recovery time.

**LUCENT TECHNOLOGIES, INC.****1998 – 2003**

A multi-billion dollar, multi-national company specializing in the manufacture of telecommunications equipment and the delivery of associated technical services.

*Director; IT Customer Relationship Solutions (2001 – 2003)*

Responsible for managing a multi-million dollar annual budget allocated for the delivery of all functionality for Lucent's Customer Relationship Management (CRM) and associated Customer focused solutions.

- Led and guided the definition and evolution of Lucent's approach on Customer Relationship Management (CRM), including process and procedure definition and systems analysis, design, remote development, and global deployment.
- Delivered Sales Force Automation functionality through the implementation of Siebel Sales Enterprise software, providing business support for Account Planning, Target Account Selling, Opportunity Management, and Revenue Forecasting.
- Led the redesign of Lucent's Sales Revenue and Manufacturing Demand Forecasting processes and procedures.
- Led the rationalization of existing systems – including multiple Siebel implementations – removing functionality overlap, and consolidating systems resulting in \$5M reduction in annual operating costs.

*Director; IT Business Services (2000 – 2001)*

Responsible for providing all IT services and solutions to Lucent's Technical Support Services business division, a multi-million dollar (\$700M in fiscal year 2002) business unit that delivers technical support for all equipment

manufactured by the company, which accounts for all warranty and post-warranty maintenance and management services.

- Redesigned Lucent's Technical Support Services processes and procedures, delivered systems enhancements, and implemented related business policies.
- Conducted the integration of multiple Customer Service systems into a single, globally deployed system supporting over 10,000 end-users.

*Sr. Manager; IT Strategy, Architecture, & Application Development (1998 – 2000)*

Responsible for defining the IT strategy and architecture and implementing essential systems and networking solutions in support of Lucent's multi-million dollar Managed Network Services business.

- Evaluated, selected, and implemented Clarify's Customer Service and Contract Management solution thereby establishing the business' 1<sup>st</sup> integrated CRM platform. The \$6.5M implementation was completed in 6 months, globally to over 800 end-users, with supporting Interactive Voice Response (IVR), Computer Telephony Integration (CTI), and Web capabilities.
- Services business IT representative on Lucent's Mergers and Acquisition team; participated in the evaluation and integration of a multiple data equipment companies including, Ascend Communication, Livingstone, Prominet Corporation, and Yurie Systems.
- Implemented the Customer and Network Operations Center in Tampa, FL, in support of the service offers, including the design and build of the Operations facility and supporting systems, network infrastructure, and business continuity environment.
- Defined and built the data-centric IT systems architecture, including full integration to Lucent's legacy systems environment. Redefined and implemented the systems and network architecture and infrastructure supporting the Remote Managed Network Service.
- Defined and implemented the IT Operating Model, Methodology, Architecture, and Strategy. An adaptation of EDS' STRADIS® SDLC methodology was created and used to guide and direct IT projects and operational activities.

**PRIOR EXPERIENCE**

**1980 – 1998**

- DMR Trecom, Inc.; IT Consulting Company (Tampa, FL); evaluated, hired, and managed IT consulting personnel and delivered a variety of IT client projects, including; data center design and build, network separation, network conversion, business continuity, IT organization definition, billing redesign, and Y2K compliance.
- British Telecom (BT); Syncordia, Global Telecommunications Outsourcing (Atlanta, GA); defined Syncordia's Service Offers. Implemented and managed the delivery of IT solutions in support of the global operating model, including operational procedures, data center design and build, network, and systems infrastructure. Telefónica de España, Network Traffic Management (Madrid, Spain); managed the design and build of Telefónica's Network Operations Centre and associated data center. Implemented modifications to BT's Network Traffic Management systems to align with Telefónica's requirements. National Network Traffic Management (Oswestry, UK); designed, developed, and implemented systems and related operational procedures and approaches for managing BT's entire UK national communications network, utilizing local and off-shore resources. Designed and built data centers for two of BT's management districts.
- Wellingham Computer Services; Accounting and Stock control system; designed and provided programming expertise, and for the production of the tax calculation and handling module of the system.
- Her Majesty's Civil Service; Census Systems; Systems Programmer responsible for providing operational support for a suite of mainframe computers and associated communications processors and networks.

**EDUCATION**

**B.Sc., Computer Science (Honors), Queen Mary College, University of London**

TECHNICAL SKILLS

Design, Support Techniques	STRADIS, Structured Design Methodology (SDM), Flow Charting, ITIL v3 Certified
Databases	SQLServer, Oracle, Informix, Reliance, Sybase
Hardware	various, including; Hewlett Packard 9000 series, NetFrame, IBM Compatible PCs, Sun Microsystems, Tektronix workstations, Bay Networks (Nortel) LAN/WAN equipment, Cisco Systems LAN/WAN equipment, Lucent Technologies LAN/WAN equipment, SynOptics Hub, Newbridge Routers, Wellfleet Routers
Software	various, including; Clarify, Oracle, Siebel, SAP, Remedy, Cognos, BusinessObjects, Informatica, Oracle*CASE, Oracle Discoverer, Oracle JDeveloper, Oracle 10G AS Portal, ADW, IEF, BPWin, ERWin, MS Office Suite
Languages	various, including; C, C++, COBOL, Fortran77, Lisp, Pascal, Pro*C, PL/SQL, SQL, SmallTalk
Operating Environments	UNIX (HP, Sun), MS Windows NT/2000/XP/W7, OS/32, GEORGE3, VME2900

# UGI UNITE Phase 1 Project Timeline

Project Kick-Off – Early-Mid February 2016 (TBD)  
 Blueprint – Start 2/29/16 – End 8/26/16  
 Realization – Start 6/27/16 – End 6/24/17  
 Go-Live – 9/5/2017

**UGI GAS STATEMENT NO. 9 – HANS G. BELL**

**BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Docket No. R-2015-2518438**

**UGI Utilities, Inc. – Gas Division**

**Statement No. 9**

**Direct Testimony of  
Hans G. Bell**

**Topics Addressed:   System Operations  
                          Capital Planning  
                          System Reliability and Safety  
                          Environmental Program and  
                          Remediation Costs**

Dated January 19, 2016

1 **I. INTRODUCTION**

2 **Q. Please state your name and business address.**

3 A. My name is Hans G. Bell. My business address is 2525 N. 12th Street, Reading,  
4 Pennsylvania, 19612.

5

6 **Q. By whom are you employed and in what capacity?**

7 A. I am employed by UGI Utilities, Inc. (“UGI”) as Vice President of Engineering and  
8 Operations Support.

9

10 **Q. What are your responsibilities as Vice President of Engineering and Operations**  
11 **Support?**

12 A. As Vice President of Engineering and Operations Support, I am UGI’s senior executive  
13 accountable for providing technical leadership and strategic direction to all gas utility  
14 engineering and gas technical services functions for UGI and its wholly-owned  
15 subsidiaries UGI Penn Natural Gas, Inc. (“PNG”) and UGI Central Penn Gas, Inc.  
16 (“CPG”), each of which is a certificated natural gas distribution company (“NGDC”).  
17 UGI has both a Gas Division (“UGI Gas”), which is a certificated NGDC, and an Electric  
18 Division (“UGI Electric”), a certificated electric distribution company (“EDC”)  
19 (collectively the “UGI Distribution Companies”). For UGI Gas, CPG, and PNG  
20 (collectively the “UGI NDGCs”), I am responsible for establishing long-term strategic  
21 infrastructure investment plans. For all of the UGI Distribution Companies I am  
22 responsible for developing and managing corresponding annual capital budgets. Under  
23 my direction is the engineering staff, which is accountable for engineering design,  
24 engineering standards, corrosion control, Distribution Integrity Management Program

1 (“DIMP”), Transmission Integrity Management Program (“TIMP”), leak survey,  
2 mapping & records, safety, damage prevention, operator qualification, training, and  
3 environmental programs.

4  
5 **Q. Please describe your educational background and work experience.**

6 A. They are set forth in my resume attached as UGI Gas Exhibit HGB-1 to my testimony.

7  
8 **Q. Have you presented testimony in proceedings before a regulatory agency?**

9 A. Yes, I presented testimony in two proceedings before the Pennsylvania Public Utility  
10 Commission (“Commission”) to support the petitions for approval of a Distribution  
11 System Improvement Charge (“DSIC”) for PNG and CPG, at Docket Nos. P-2013-  
12 2397056 and P-2013-2398835, respectively.

13  
14 **Q. What is the purpose of your testimony?**

15 A. I am providing testimony on behalf of UGI Gas. In my testimony I will address the  
16 following topics: (1) UGI Gas’s system operations; (2) UGI Gas’s system reliability and  
17 safety record; and (3) UGI Gas’s environmental program and associated environmental  
18 costs incurred by UGI Gas to address historical environmental liabilities.

19  
20 **Q. Are you sponsoring any exhibits in this proceeding?**

21 A. Yes, I am sponsoring the following UGI Gas Exhibits: HGB-1 and HGB-2. I am also  
22 sponsoring certain responses to the Commission’s standard filing requirements as  
23 indicated on the master list accompanying this filing.

1 **II. SYSTEM OPERATIONS**

2 **Q. Please provide an overview of UGI Gas’s operations.**

3 A. UGI Gas provides natural gas service to approximately 377,000 customers in eastern and  
4 central Pennsylvania through a system consisting of approximately 5,525 miles of gas  
5 distribution mains and 117 miles of natural gas transmission mains as of December 31,  
6 2014.<sup>1</sup> The UGI Gas service territory is split into two non-contiguous regions: a primary  
7 and secondary region. The primary region spans twelve counties: Franklin, Cumberland,  
8 York, Dauphin, Lebanon, Lancaster, Berks, Chester, Montgomery, Lehigh, Bucks, and  
9 Northampton and includes five of Pennsylvania’s ten largest cities: Allentown,  
10 Bethlehem, Harrisburg, Lancaster and Reading; along with the suburban communities  
11 surrounding them. The secondary region spans four counties: Schuylkill, Luzerne,  
12 Carbon, and Monroe and is largely made up of rural communities with Hazleton as the  
13 largest city in that area.

14  
15 **Q. Is the UGI Gas service territory supplied by an interstate pipeline?**

16 A. Yes. The primary region is supplied by the Transco pipeline (Leidy and Gulf), as well as  
17 Columbia, and Texas Eastern. The secondary region is only supplied by Transco (Leidy).

18  
19 **Q. How many operations centers support the UGI Gas service territory?**

20 A. UGI Gas maintains operations centers in Bethlehem, Hazleton, Middletown, Lancaster,  
21 and Reading.

22

---

<sup>1</sup> Per 2014 U.S. Department of Transportation Report reflecting mileage on December 31, 2014.

1 **Q. How does UGI Gas staff its operations?**

2 A. UGI Gas is a business division of UGI. As of December 15, 2015, UGI Gas had a total  
3 of 1048 full-time employees, including: 66 at UGI Electric, 832 at UGI Gas, and 140 at  
4 UGI headquarters (Information Systems, Finance, Human Resources, etc.). More than  
5 half of these employees are involved in the physical operation and maintenance of the  
6 transmission and distribution facilities, which includes the construction, operations and  
7 maintenance of mains, services and other facilities, damage prevention and safety, and  
8 pipeline regulatory compliance. A smaller number of employees work primarily to  
9 support UGI Electric operations. The remaining employees are responsible for  
10 administrative duties, marketing, customer service, and credit and collections. UGI  
11 provides various management and support services to its wholly-owned NGDC  
12 subsidiaries, CPG and PNG (*e.g.*, finance and accounting, payroll, gas supply,  
13 engineering, rates, purchasing, fleet, and information technology). UGI and its  
14 subsidiaries also benefit from management and support services provided by the parent  
15 company of UGI Corporation (*e.g.*, insurance, legal, treasury operations, and corporate  
16 governance).

17

18 **III. CAPITAL PLANNING**

19 **Q. Please describe the categories of projects included in capital budget for UGI Gas.**

20 A. The main areas for which UGI Gas develops capital budgets are: (1) replacement and  
21 betterment infrastructure; (2) new business; (3) facilities; (4) Information Technology;  
22 and (5) Supply. The budgeting process is further described in the direct testimony of Ann  
23 P. Kelly (UGI Gas Statement No. 2).

24

1 **Q. How are projects chosen for inclusion in UGI Gas’s capital budget?**

2 A. Replacement and betterment infrastructure is chosen for inclusion in the capital budget  
3 using a risk-based prioritization process. New business projects are chosen based on  
4 projections that in turn are informed by large known customers, and forecasts of new  
5 business, customer conversions, customer counts, and construction and development in  
6 the service territory. Facilities projects are a prioritized set of building-related projects.  
7 Information Technology (“IT”) projects are selected based on need for investment in new  
8 systems and hardware and replacement of old systems and hardware. Supply projects are  
9 selected for inclusion in capital planning based on their ability to maximize the utilization  
10 of upstream interstate supply capacity and react to cost of supply, one example of which  
11 is our attempt to optimize low-cost Marcellus supply.

12  
13 **Q. Please describe the risk-based prioritization process used to evaluate replacement  
14 and betterment infrastructure projects.**

15 A. UGI Gas’s risk-based prioritization process prioritizes the replacement of cast iron and  
16 bare steel pipe, which are most susceptible to failure from corrosion, cracks and leakage.  
17 Where other facilities that are located near projects are determined to be prone to failure,  
18 they will also be prioritized for replacement. As part of its infrastructure upgrade, UGI  
19 Gas replaces associated distribution equipment and installs additional safety and  
20 monitoring equipment that is compatible with the upgraded design. UGI Gas installs  
21 excess flow valves, will replace and potentially relocate meters, and replaces risers, meter  
22 bars, regulator stations and service regulators. UGI Gas’s prioritization of projects for its  
23 capital budgets is consistent with its Long Term Infrastructure Improvement Plan

1 (“LTIP”) for 2014-2019, approved by the Commission at Docket No. P-2013-2398833  
2 (Opinion and Order entered July 31, 2014).

3  
4 **Q. How does UGI Gas’s actual capital spend compare to budgeted capital spend?**

5 A. In 2013 and 2014, UGI Gas has slightly outspent its budgeted capital. In 2015, the  
6 capital spend was in alignment with the budget as shown on UGI Gas Exhibit HGB-2.

7  
8 **IV. SYSTEM RELIABILITY AND SAFETY**

9 **Q. Please describe the physical composition of UGI Gas’s distribution system.**

10 A. Due to its long operation, the UGI Gas distribution system is comprised of pipeline  
11 facilities composed of a mixture of materials indicative of the industry’s technological  
12 advancement over time. Cast iron mains can be found in the oldest parts of the system.  
13 The industry then transitioned to bare steel and wrought iron piping, which were  
14 prevalent until the 1960s. The first generation of plastic piping was introduced in the  
15 early 1970s. Materials installed since the 1970s include polyethylene (PE) and coated  
16 steel piping. Overall, the UGI distribution is composed of approximately 86.4%  
17 contemporary, post-1970s, materials. This ratio is among the highest of local distribution  
18 companies in Pennsylvania.

19  
20 **Q. Please discuss UGI Gas’s main replacement program.**

21 A. UGI Gas’s main replacement program constitutes a large part of its capital budget. UGI  
22 Gas has been identifying and repairing, improving, or replacing its distribution  
23 infrastructure on an accelerated basis. As I stated above, UGI Gas has a Commission-  
24 approved LTIP. The LTIP commits UGI Gas to the replacement of all of its

1 approximately 347 miles of cast iron pipelines over a 13-year period ending in February  
2 2027, and all of its approximately 392 miles of bare steel and wrought iron pipelines over  
3 a 28-year period ending September 2041. UGI Gas also committed to replacing gas  
4 service lines and moving inside regulators to outside on a planned basis in conjunction  
5 with the replacement of the mains to which they are connected. These projects are  
6 “DSIC-eligible,” meaning that they meet the requirements for recovery in a DSIC. As of  
7 December 31, 2014, the remaining mileage of UGI Gas cast iron main declined to 279  
8 miles, and bare steel and wrought iron main declined to 362.5 miles. The 2015 Calendar  
9 year figures will be available February 28, 2016 in UGI Gas’s annual distribution report.

10  
11 **Q. Does UGI Gas track capital investment associated with these DSIC-eligible main**  
12 **replacements?**

13 A. Yes. Though UGI Gas does not currently have a Commission-approved DSIC, UGI Gas  
14 has been tracking DSIC-eligible capital placed in service per calendar year and reporting  
15 that information to the Commission on a voluntary basis in its Annual Asset Optimization  
16 Plan (“AAOP”).

17  
18 **Q. Has UGI Gas so far met its main replacement goals set by its LTIIP?**

19 A. Yes. The UGI Gas replacement plan included replacement of approximately 33 miles of  
20 combined cast iron and bare steel mains for 2014, with a combined total goal of 62 miles  
21 of cast iron and bare steel replacement for all of the UGI NGDCs. As stated in the UGI  
22 Gas AAOP, approved by the Commission’s Bureau of Technical Utility Services  
23 (“TUS”) on April 1, 2015 at Docket No. M-2015-2469626, the UGI NGDCs exceeded

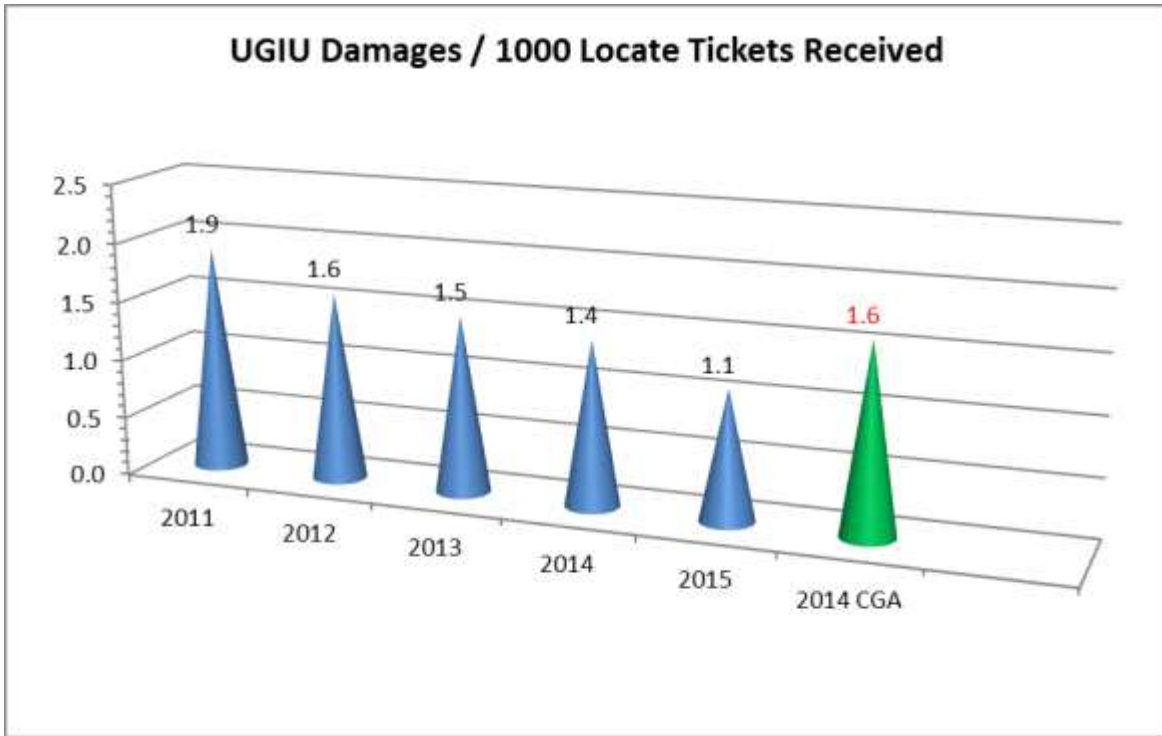

1 their combined total 2014 goal by replacing 62.6 miles of cast iron, bare steel, and  
2 wrought iron mains. UGI Gas in particular exceeded its goal by replacing 40.4 miles of  
3 cast iron, bare steel, and wrought iron mains in 2014. For calendar year 2015, the UGI  
4 NGDCs expect to meet or exceed the total main replacement quantities as set forth in the  
5 current AAOP.

6  
7 **Q. What is UGI Gas's capital investment associated with these main replacements for**  
8 **2014 and 2015?**

9 A. In calendar year 2014, DSIC-eligible capital investment for UGI Gas was \$59 million,  
10 which significantly exceeded UGI Gas's minimum target of \$51.2 million. In 2015, UGI  
11 Gas again anticipates exceeding the minimum target as set forth in the AAOP. Actual  
12 2015 investment placed into service will be provided in the annual update to the AAOP.

13  
14 **Q. Please discuss UGI Gas's efforts to reduce the level of damage to its pipeline**  
15 **facilities that is caused by third parties.**

16 A. UGI Gas directs significant resources towards damage prevention programs and achieves  
17 very favorable results. For the fiscal year ended September 30, 2015, UGI Gas posted an  
18 excavation damage rate of 1.1 damages per 1,000 locates received, a rate significantly  
19 below industry averages and among the lowest in Pennsylvania. UGI Gas has  
20 consistently demonstrated favorable performance in minimizing third party damages as  
21 shown below:

\* The 2014 CGA is the national damage rate taken from the Common Ground Alliance DIRT Report for 2014, which is available at: [www.cga-dirt.com](http://www.cga-dirt.com).

Notably, this rate represents a 21% improvement over the prior year during a period in which the number of locate tickets increased by nearly 9%. Efforts contributing to the damage prevention metrics are a robust public awareness program, systematic outreach to project owners and excavators, and root cause analysis of instances of excavation damage. Additionally, UGI is an active participant in the Pennsylvania One Call System where UGI Gas employee Eric Swartley serves on the board of directors.

**Q. How are leaks classified on the UGI Gas System?**

A. UGI Gas classifies underground leaks as “A”, “B”, and “C”, with “C” being the most severe. An “A” leak is an underground leak that is non-hazardous at the time of detection and can be reasonably expected to remain non-hazardous. “B” leaks are underground leaks that are recognized as being non-hazardous at the time of detection, but justify a

1 scheduled repair based on a probable hazard. “C” leaks are underground leaks that  
2 represent an existing or probable hazard to persons or property, and require immediate  
3 repair or continuous action until the conditions are no longer hazardous.  
4

5 **Q. Has UGI Gas undertaken efforts to reduce leaks on its system?**

6 A. Yes.  
7

8 **Q. Please discuss UGI Gas’s efforts to reduce system leaks.**

9 A. UGI Gas has developed consistent specifications for standardized leak classification  
10 criteria based on ANSI Z380.1, the Guide for Gas Transmission, Distribution and  
11 Gathering Piping Systems, produced by the Accredited Standards Committee (“ASC”)  
12 Z380 Gas Piping Technology Committee (“GPTC”). The adoption of the GPTC based  
13 leak standard made classification criteria more stringent and resulted in an increase in the  
14 number of leaks repaired. As of October 31, 2015, the total number of pending leaks on  
15 the UGI Gas system has decreased by 11% as compared to the prior prior-year period.  
16 Over a five-year time period, which aligns with the leak survey frequency of the full  
17 distribution system, the inventory of pending leaks has decreased by more than 43%.  
18 Given the severe colder than normal winters of 2013-2014 and 2014-2015, the reductions  
19 in leak inventory over this time period is a significant accomplishment. By having a  
20 stricter leak standard and fewer leaks, overall system safety has improved.

21 Another metric indicative of UGI Gas’s system integrity is the number of repaired  
22 leaks per mile of distribution main. UGI Gas had 0.3 repaired leaks per mile of

1 distribution main in 2014. Only National Fuel Gas and wholly-owned subsidiaries UGI  
2 PNG and UGI CPG ranked lower for this metric.

3 As a part of the DIMP, UGI Gas will regularly re-assess all system risks and  
4 leakage trends to determine if additional or accelerated actions are required to further  
5 reduce system leaks.

6  
7 **Q. How is UGI Gas's performance in the area of gas odor response rate?**

8 A. UGI Gas performs very well in the timeliness of emergency response to gas odor  
9 complaints. For the year ended September 30, 2015, UGI Gas posted an emergency  
10 response rate where 96.79% of the time a first responder arrived on premise within 45  
11 minutes of receipt of an odor call. This performance is better than industry averages and  
12 is attributable to factors such as staffing levels and after-hours coverage. It should be  
13 noted that UGI Gas sets performance goals on a 45 minute response whereas most other  
14 distribution companies' goals are based on a one hour response target.

15  
16 **Q. In your opinion does UGI Gas have a good history of employee safety?**

17 A. Yes. The UGI Distribution Companies have a collectively-managed safety program  
18 whose safety statistics are reported on a combined basis. The UGI Distribution  
19 Companies have made some recent improvements in employee safety as measured by  
20 recordable injury rates and motor vehicle accident rates. For the fiscal year ended  
21 September 30, 2015, the companies posted an OSHA recordable incident rate of 2.89, a  
22 31% reduction over the prior year, approximately 12% better than the 2014 industry  
23 average rate of 3.27. In terms of motor vehicle accident rates, the companies posted a

1 rate of 7.66 accidents per million miles driven, a 15% reduction over the prior year, but  
2 approximately comparable to the 2014 industry average rate of 7.70 accidents per million  
3 mile driven.

4  
5 **Q. What actions has UGI undertaken to improve employee safety?**

6 A. The UGI Distribution Companies have undertaken significant efforts to build a safety-  
7 centric culture to better support and enhance employee safety. Encouraging a safety  
8 culture is fundamental to driving safety performance. Some of the strategies  
9 implemented to build safety culture include performing detailed accident reviews,  
10 holding an Employee Safety Summit and implementing enhancements to the employee  
11 safety incentive program.

12  
13 **Q. Please describe the UGI Distribution Companies' accident review process.**

14 A. Supervisory engagement in post-accident reviews ensures consistency in assessing causal  
15 factor trends and in implementing enterprise wide process improvements. Following  
16 each accident or injury, supervisors review and document the circumstances of the  
17 accident with the employee noting any contributing factors. On a monthly basis,  
18 supervisors of employees involved in an accident or personal injury participate in a  
19 conference call to review the circumstances surrounding each instance. The calls help  
20 drive supervisor accountability for safety performance and provide visibility to any  
21 underlying trends. Additionally, metrics on work group safety performance are  
22 incorporated into each supervisor's annual performance review.

23

1 **Q. Please discuss the UGI Employee Safety Summit.**

2 A. In April 2015, just prior to the seasonal ramp up in construction activity, a broad cross-  
3 functional group of over 450 employees participated in the first ever full day safety  
4 summit. The event included a wide variety of safety education sessions covering topics  
5 such as dog bite prevention, electrical safety, and distracted driving. Employee feedback  
6 was overwhelmingly positive. Building upon the success of the initial event, in fiscal  
7 years 2016 and 2017 new groups of employees will be invited to extend attendance to the  
8 full employee population over a 3 year period. Going forward, additional employee-  
9 developed content will be emphasized to further cultivate employee ownership of and  
10 responsibility for safety.

11

12 **Q. Please describe the UGI Safety Incentive Program.**

13 A. In 2015, the employee safety incentive program was re-designed to emphasize individual  
14 employee engagement in safety. Known as “Making a Difference,” the enhanced  
15 program rewards employees for supporting safety culture through actions such as  
16 demonstrating positive safety behaviors, leading safety meetings, reporting safety issues,  
17 or participating in safety education. In fiscal year 2015, 5,490 individual recognition  
18 cards were redeemed along with 406 peer-nominated safety award nominations.  
19 Advantages of the program include simplicity of administration, customization of reward  
20 redemptions, visibility of acknowledgement, and creation of constructive competition  
21 around advancing safety.

22

1 **V. ENVIRONMENTAL**

2 **Q. Please discuss the environmental program at UGI Gas.**

3 A. The environmental group at UGI Gas is focused on both environmental compliance  
4 programs for current operations and on addressing historical environmental liabilities.  
5 With respect to ongoing compliance activities, UGI Gas has a mercury regulator removal  
6 program in its primary service area. Service locations with mercury regulators are  
7 identified through canvass, and by training meter read and service personnel to recognize  
8 mercury regulators when encountered. The mercury regulators are removed and replaced  
9 with spring-loaded regulators. The program has already completed its activities in the  
10 service area surrounding Lehigh, and is ongoing in Reading, Harrisburg, and Lancaster.  
11 UGI Gas also has a program that changes out heater fluid from ethylene glycol to an  
12 environmentally-friendly, biodegradable propylene glycol. UGI Gas has also been a  
13 partner in the United States Environmental Protection Agency's ("EPA") voluntary  
14 Natural Gas STAR program since the program's inception in 1993. Natural Gas STAR  
15 provides a framework to encourage partner companies to implement methane emissions  
16 reducing technologies and practices, and document their voluntary emission reduction  
17 activities. As discussed earlier in my testimony, UGI Gas places significant emphasis on  
18 reducing system leaks for both safety and environmental reasons.

19

20 **Q. Are there any other significant environmental programs at UGI Gas?**

21 A. Yes, there is also our manufactured gas plant ("MGP") program. As a company with a  
22 history of providing gas service for more than 100 years, UGI Gas has some sites in its  
23 service territory that were formerly used for the purpose of producing manufactured gas  
24 from coal for distribution to utility customers. UGI Gas works to remediate these MGP

1 sites to address any environmental site conditions due to the former manufactured gas  
2 operations.

3  
4 **Q. What types of costs does UGI Gas incur with respect to addressing MGP site**  
5 **conditions?**

6 A. UGI Gas incurs costs attributed to site investigations, remediation, and site restoration.  
7 There also may be costs incurred to obtain an environmental covenant at the site to  
8 prevent certain uses of the site, and miscellaneous costs, as applicable, associated with  
9 transferring the site to a third party (such as with a dedication for public use) once the site  
10 has been restored.

11  
12 **Q. What is UGI Gas's projected spending on the MGP program?**

13 A. UGI Gas has developed a plan to spend \$3-5 million per year as of the end of the fully  
14 projected future test year ending September 30, 2017 ("FPFTY"). This plan is predicated  
15 on a significant increase to UGI Gas's historic level of investigation and remedial activity  
16 to address environmental concerns at former MGP sites. UGI Gas's plans will be  
17 conducted in a manner that is consistent with Pennsylvania Department of Environmental  
18 Protection ("PA DEP") and EPA regulations and requirements.

19  
20 **Q. Please describe UGI Gas's accounting for MGP costs.**

21 A. Historically, UGI Gas has accounted for its environmental remediation expenses as a  
22 component of its annual cost of removal. As such, these expenses were recorded in UGI

1 Gas's accumulated reserve for depreciation and reversed through the annual calculation  
2 of the amortization of net salvage.

3  
4 **Q. Is UGI Gas proposing an alternative treatment for MGP costs in the future?**

5 A. Yes. The treatment of MGP costs is addressed in the direct testimony of Ann P. Kelly  
6 (UGI Gas Statement No. 2).

7  
8 **Q. For which sites is UGI Gas currently incurring costs to address its liability for  
9 historical MGP operations?**

10 A. There are three UGI Gas MGP sites for which the Company is currently incurring costs.  
11 These sites include the former Columbia MGP Site in Columbia, Pennsylvania, the  
12 former Allentown MGP Site in Allentown, Pennsylvania, and the former Mount Joy  
13 MGP Site in Mount Joy, Pennsylvania.

14  
15 **Q. What is UGI Gas's goal for restoration of the MGP sites?**

16 A. UGI Gas strives to restore each site so that it constitutes a beneficial reuse and becomes  
17 an asset to the community. With respect to the Mount Joy MGP Site, for example, we  
18 have proposed to develop a portion of the restored site as a public park for use by the  
19 residents of Mount Joy Borough.

20  
21 **Q. What future activities has UGI Gas planned to address MGP impacts?**

22 A. UGI Gas plans to take an approach that is consistent with the approach historically  
23 embraced by its subsidiary utilities CPG and PNG. CPG and PNG each have a multi-site

1 Consent Order and Agreement (“COA”) with PA DEP that govern remedial activities on  
2 the former MGP sites listed in the COAs. CPG and PNGs activities under the COA are  
3 closely monitored by the PA DEP. A total of 33 sites are listed under the two COAs – 22  
4 under the CPG COA and 11 under the PNG COA. In accordance with the COAs, CPG  
5 and PNG are each required to either obtain a certain number of points per calendar year  
6 based on defined eligible remedial activities or make expenditures in an amount equal to  
7 an annual environmental cost cap of \$1.75 million for CPG and \$1.1 million for PNG.

8 UGI Gas has identified a number of former MGP sites that were previously used  
9 to render gas service to customers in Pennsylvania. UGI Gas, while currently not under a  
10 COA approved by the PA DEP, has developed a remedial plan for its former MGP sites  
11 that contemplates an expenditure of approximately \$3-5 million per year over the next  
12 several years on PA DEP monitored activities.

13  
14 **Q. Has UGI Gas been recognized for its environmental stewardship?**

15 A. Yes. A 2015 survey by Cogent Reports™, a division of Market Strategies International,  
16 included UGI among 36 utility companies nationwide that were named “Environmental  
17 Champions.” Cogent surveyed more than 25,000 residential electric, natural gas, and  
18 combination utility customers of the 125 largest U.S. companies. Our high ranking in  
19 this survey demonstrates that our customers recognize our commitment to the  
20 environment.

21 Additionally, in 2012, UGI, and UGI Gas’s current Environmental Manager  
22 Anthony Rymar received the Pennsylvania Environmental Council’s Governor’s Award  
23 for Environmental Excellence. We were nominated for the award by PA DEP staff. In

1           bestowing the award, the Pennsylvania Environmental Council recognized Mr. Rymar  
2           and UGI as consistently exhibiting a management philosophy that assures former  
3           manufactured gas plants are remediated to a level that protects human health and the  
4           environment while ensuring sites are beneficially re-used.

5

6   **Q.    Does this conclude your direct testimony?**

7   A.    Yes, it does.

**UGI GAS EXHIBIT HGB-1**

**Hans G. Bell, P.E.**  
hbell@ugi.com

**Summary**

Engineering executive with 20 years of broad experience in gas transmission and distribution operations including engineering design, asset integrity management, regulatory compliance, capital budgeting, and project management.

**Education**

**Keller Graduate School of Management, Chicago, Illinois**

*Masters of Business Administration, Graduated with Distinction, 2000*  
Concentration in Finance

**University of Illinois, Champaign, Illinois**

*Bachelor of Science in Civil Engineering, 1996*  
Concentration in Construction Management

**Experience**

**UGI Utilities, Reading, Pennsylvania**

*Vice President, Engineering and Operations Support*                      2013- Present

Senior engineering leader responsible for establishing technical strategy and executing infrastructure programs to ensure safe, reliable, and cost effective natural gas service for a utility serving more than 600,000 customers in Pennsylvania and Maryland.

- Accountable for accelerated infrastructure replacement programs, capital budgeting (~\$300M), contractor management, corrosion control, damage prevention, employee safety, engineering design, transmission & distribution integrity, regulatory compliance, training, and all related technical support functions
- Accountable for planning and execution of annual cast iron / bare steel replacement program covering > 62 miles per year
- Primary regulatory witness and author for Long Term Infrastructure Improvement Plans
- Responsible for management and development of professional and technical support staff of over 110 employees

**AGL Resources, Naperville, Illinois**

Over 17 years at AGL Resources (Nicor Gas) I advanced through positions of increasing responsibility beginning at entry level and concluding as Managing Director of Engineering.

***Managing Director, Engineering***

2012-2013

- Accountable for Engineering Design, Land Management, and System Planning supporting gas transmission, storage, and distribution operations spanning 11 states serving over 4.5 million customers
- Managed capital budgets of >\$200M including budget development, variance reporting, and project prioritization
- Accountable for oversight of right of way acquisitions in advance of major pipeline projects
- Developed long term investment plans for infrastructure replacement, optimization, and growth

***Assistant Vice President Engineering & Chief Engineer***                      2011- 2012

- Accountable for all gas utility engineering support departments with over 50 professional and technical staff including Engineering Design, Transmission Integrity, Distribution Integrity, System Planning, Geographic Information Systems, Measurement, and Technical Services (Lab)
- Accountable for Transmission & Distribution Integrity Management compliance, audits, plans, program management, and project portfolio optimization

- Accountable for Engineering Design and project management for distribution, storage, and transmission projects from initial scope, detailed design, cost estimates, sourcing, and contract negotiation
- Managed multiple interdisciplinary project teams executing complex multi-million dollar storage and transmission projects
- Managed regulatory relationships with State (ICC) and Federal Pipeline Safety Agencies (PHMSA). Provided technical support to incident investigations
- Developed strategic approaches to addressing pipeline safety legislation including MAOP affirmation
- Developed engineering integration plans for AGL Resources– Nicor Gas merger including, organizational design, critical process mapping, accountabilities, budgeting, and staffing

*General Manager System Integrity & Chief Engineer* 2007 - 2011

- Responsible for management of multiple departments including Engineering, Transmission Integrity, Distribution Integrity, System Planning, and Geographic Information Systems
- Responsible for development and management of infrastructure capital budgets of approximately \$65 million
- Managed contracts with engineering consulting firms for pipeline design, construction, survey, and professional services
- Implemented a Distribution Geographic Information System including database design, data conversion of over 34,000 miles of distribution pipe, and deployment of a mobile GIS application to all front line workers

*Manager Engineering Design* 2004- 2007

- Responsible for managing departmental capital budget in excess of \$20 million annually
- Provided project management oversight to pipeline projects from concept, feasibility, budgeting, approval, planning, design and implementation
- Maintained engineering consultant relationships and negotiated service contracts
- Implemented process improvements including development of Geographic Information System (GIS) based map distribution application
- Managed pipeline construction projects, negotiated construction contracts, resolved permitting issues, and delivered project approval presentations

*Project Manager – Transmission Pipeline Integrity* 2003 –2004

- Responsible for development and implementation of pipeline integrity management program to maintain regulatory compliance with the Pipeline Safety Act of 2002
- Managed GIS conversion project for 1150 mile natural gas transmission system
- Developed risk management program for prioritization of pipeline integrity assessments in high consequence areas
- Determined pipeline assessment project schedules including long term operating expense and capital budgets

*Region Manager – Distribution* 2001 – 2003

- Manager responsible for construction and maintenance activities of gas distribution utility
- Managed projects involving main installations, service installations, and leak repairs
- Measured and tracked performance of 50 personnel against productivity and safety benchmarks
- Coordinated response to emergencies including gas leaks and pipeline breaks

*Supervisor of Distribution Planning* 2000 - 2001

- Supervised staff of six engineers in distribution planning department
- Coordinated hydraulic modeling studies of 34,000 mile natural gas distribution system serving over 2 million customers
- Recommended capital improvement projects required to maintain uninterrupted reliable peak day service throughout entire natural gas distribution network
- Coordinated long range planning studies and forecasts used to develop capital budgets

*Project Engineer* 1996 –2000

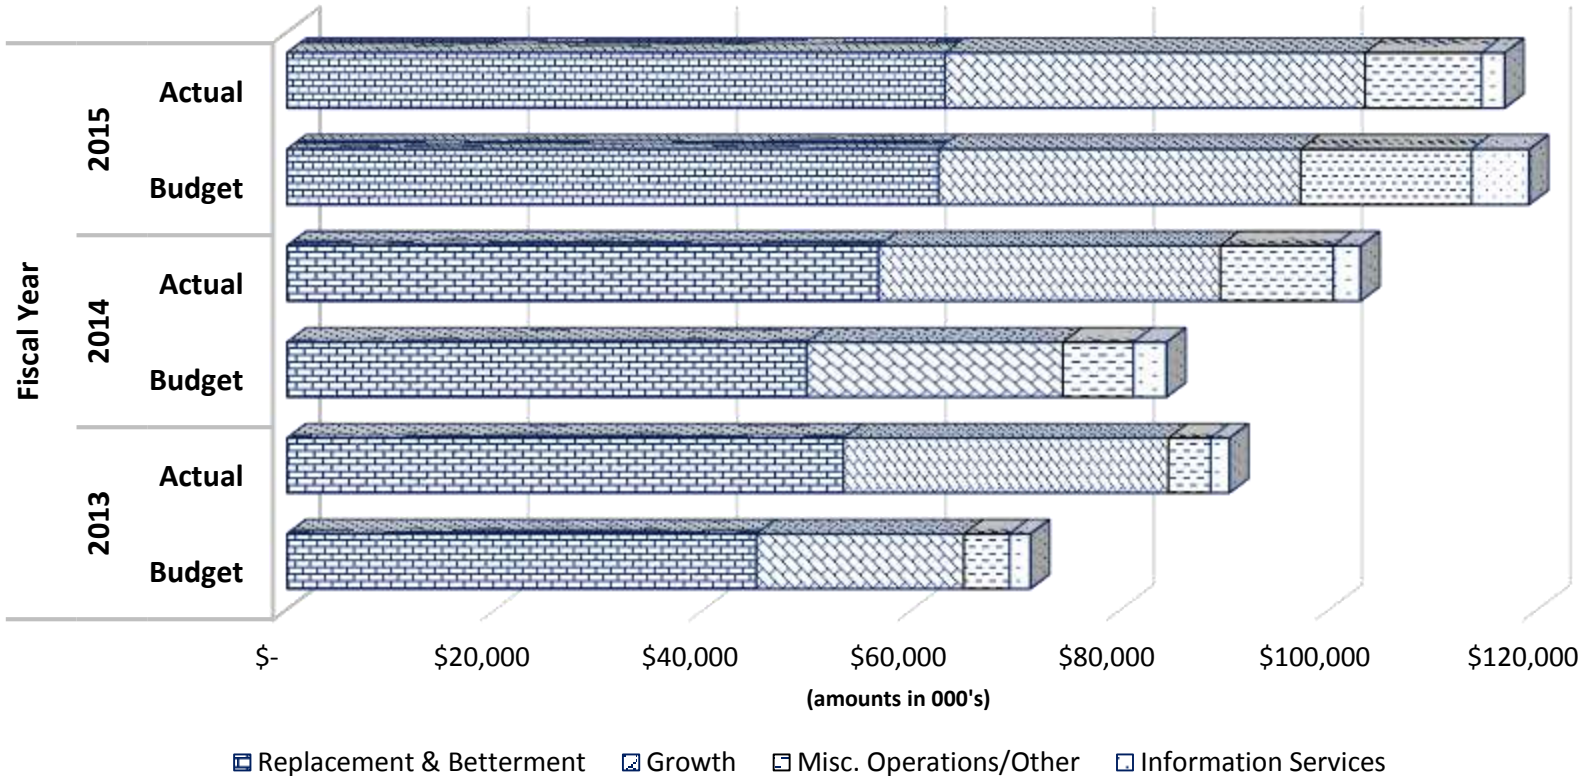

- Managed pipeline construction and maintenance projects, supervised inspectors and company maintenance crews
- Designed plans for installation and revision of gas distribution facilities
- Reviewed highway improvement plans and worked with state transportation engineers to resolve utility conflicts

**Professional Affiliations**

- Licensed Professional Engineer, State of Illinois, License # 62054443
- Member Society of Gas Operators – 2015 to present
- American Gas Association Bronze Award of Merit 2012
- Member American Gas Association Leadership Council
- Chair American Gas Association Distribution & Transmission Engineering Committee 2012 - 2013
- Speaker at PHMSA Distribution Integrity Management Workshop 2011
- Co-chair of Southern Gas Association Distribution Engineering Committee 2007-2010

**UGI GAS EXHIBIT HGB-2**

### UGI GAS 2013-2015 CAPITAL HISTORY

**UGI GAS STATEMENT NO. 10 – NICOLE M. MCKINNEY**

**BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Docket No. R-2015-2518438**

**UGI Utilities, Inc. – Gas Division**

**Statement No. 10**

**Direct Testimony of  
Nicole M. McKinney**

**Topics Addressed:      Taxes and Tax Adjustments**

Dated: January 19, 2016

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. Please state your full name and business address.**

3 A. My name is Nicole M. McKinney. My business address is 2525 North 12th Street,  
4 Suite 360, Reading, PA, 19612-2677.

5  
6 **Q. By whom are you employed and in what capacity?**

7 A. I am employed by UGI Utilities, Inc. (“UGI”) as Principal Tax Analyst. UGI is a  
8 subsidiary of UGI Corporation (“UGI Corp.”). UGI has two separate operating  
9 divisions: UGI Utilities, Inc. – Gas Division (“UGI Gas” or the “Company”) and  
10 UGI Utilities, Inc. – Electric Division.

11

12 **Q. What are your principal duties and responsibilities as Principal Tax  
13 Analyst?**

14 A. My primary duties as the Principal Tax Analyst include the preparation of tax data  
15 to be reported in UGI’s various United States Securities and Exchange  
16 Commission and regulatory filings, as well as its various federal and state income  
17 and non-income tax return related filings. Additionally, I maintain the current and  
18 deferred income tax accrual and expense accounts, perform tax research, and  
19 assist UGI with tax matters as they arise.

20

21 **Q. What is your educational background?**

22 A. I received a Bachelor of Business Administration in International Business and  
23 Management with a minor in Accounting from Villanova University in 2006. In

1 2007, I completed a Master's Degree of Accountancy from Villanova University. I  
2 am also a Certified Public Accountant.

3  
4 **Q. Please describe your professional experience.**

5 A. I began my career with Andersen Tax (formerly known as WTAS, LLC) in 2006.  
6 In 2010, I joined Baker Tilly Virchow Krause, LLP (formerly known as  
7 ParenteBeard, LLC) as a manager in their middle-market tax practice where I  
8 managed tax compliance engagements, and international and special tax  
9 projects. From 2012-14, I worked as the Federal Domestic Tax Manager for  
10 Dentsply International Inc., overseeing the U.S. federal tax compliance and  
11 income tax accounting processes. In March of 2015, I began working as the  
12 Principal Tax Analyst for UGI.

13  
14 **Q. Please describe the purpose of your testimony.**

15 A. I am providing testimony on behalf of UGI Gas. I will explain the Company's pro  
16 forma tax adjustments to its principal accounting exhibits for the fully projected  
17 future test year ending September 30, 2017 ("FPFTY"). I will also explain the tax  
18 adjustments made to the results of UGI Gas's historic test year ended September  
19 30, 2015 ("HTY") and future test year ending September 30, 2016 ("FTY").

20  
21 **Q. Ms. McKinney, are you sponsoring any exhibits in this proceeding?**

22 A. Yes. Together with other Company witnesses, I am sponsoring portions of UGI  
23 Gas Exhibit A (Fully Projected), UGI Gas Exhibit A (Future) and UGI Gas Exhibit

1 A (Historic) that pertain to tax-related issues. These exhibits comprise UGI Gas's  
2 principal accounting exhibits for the HTY, FTY, and FPFTY. I am also  
3 sponsoring certain responses to the Commission's filing requirements and  
4 standard data requests. Each response identifies the witness sponsoring it.

5  
6 **II. TAX ADJUSTMENTS**

7 **Q. Please provide an overview of UGI Gas's principal accounting exhibits**  
8 **relative to the proposed tax adjustments.**

9 A. As explained in the direct testimony of Ann P. Kelly (UGI Gas Statement No. 2),  
10 UGI Gas's principal accounting exhibit is UGI Gas Exhibit A (Fully Projected),  
11 which includes a presentation for the FPFTY ending September 30, 2017.  
12 Section D of UGI Gas Exhibit A (Fully Projected) presents necessary  
13 adjustments to budgeted levels of expense items and revenues. The pro forma  
14 adjustments related to taxes are summarized in Schedules D-31 through D-34.  
15 These tax adjustments are used to derive UGI Gas's pro forma income at  
16 present and proposed rates as set forth in Schedule A-1 of the same exhibit.

17 UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Historic) follow the  
18 format of UGI Gas Exhibit A (Fully Projected), but reflect data for the HTY ended  
19 September 30, 2015, and the FTY ending September 30, 2016. This information  
20 is provided in an effort to comply with the Commission's filing requirements and  
21 provides a basis for comparing UGI Gas's FPFTY claims with actual book results  
22 from the HTY and adjusted FTY results. Section D to UGI Gas Exhibit A  
23 (Historic), Schedule D-31, and UGI Gas Exhibit A (Future), Schedule D-31

1 include adjustments that share the same methodology as used in Schedule D-31  
2 of UGI Gas Exhibit A (Fully Projected).

3  
4 **A. TAXES OTHER THAN INCOME TAXES**

5 **Q. How was the provision for taxes-other-than-income taxes ("TOTI")**  
6 **determined for the FPFTY?**

7 A. TOTI amounts were based on the plan year budget, as adjusted for reasonably  
8 known and measurable changes to various payroll and other taxes, as well as  
9 other changes due to changes in headcount as supported by the direct testimony  
10 of Ann P. Kelly (UGI Gas Statement No. 2). Specifically, TOTI includes an  
11 adjustment for the planned phase out of the capital stock tax in the 2016 tax  
12 year. These adjustments are shown on UGI Gas Exhibit A (Fully Projected),  
13 Schedule D-31. The net adjustment of (\$138,000) is brought forward to  
14 Schedule D-3, page 2.

15  
16 **B. INCOME TAXES**

17 **Q. Please discuss the Company's claim for income taxes.**

18 A. Income tax expense for the FPFTY at present and proposed rates is set forth in  
19 UGI Gas Exhibit A (Fully Projected), Schedule D-33. Income taxes are  
20 calculated using the procedures normally followed by the Commission, including  
21 the use of debt interest synchronization, the normalization method for  
22 accelerated depreciation used in the calculation of Federal income taxes, and the  
23 flow through of accelerated depreciation benefits for state tax purposes. UGI  
24 Gas is also proposing to normalize the tax repairs expense deduction for both

1 federal and state tax purposes. The fully adjusted claim for the FPFTY income  
2 tax expenses is shown on UGI Gas Exhibit A (Fully Projected), Schedule D-1.

3  
4 **Q. Please describe the claim for income taxes shown on Schedule D-1, lines**  
5 **18 and 19.**

6 A. The calculation of federal and state income taxes can be found on Schedule D-  
7 33. Schedule D-33 shows the calculation of pro forma income taxes for the  
8 FPFTY at present and proposed rates. Line 1 shows the revenue at present and  
9 proposed rates, while line 2 shows the operating expenses at present and  
10 proposed rates from Schedule D-1. Line 3 reflects operating income before debt  
11 interest is deducted, by netting line 1 from line 2. Debt interest expense is  
12 synchronized using the rate base claim from Schedule C-1, with the cost of debt  
13 and the debt component of UGI Gas's capital structure recommended in the  
14 direct testimony of Paul R. Moul (UGI Gas Statement No. 3) and shown on  
15 Schedule B-7. The resulting interest expense on line 6 is subtracted from net  
16 income before debt interest to calculate base taxable income on line 7.

17 In accordance with established Commission practice, lines 8 through 11 of  
18 Schedule D-33 reduce the base taxable income, for state tax purposes, by the  
19 total difference between accelerated tax depreciation shown on line 8 and the pro  
20 forma book depreciation shown on line 9. The statutory state corporate net  
21 income tax rate (9.99%) was then applied to determine the pro forma state  
22 income tax expenses shown on line 13. Lines 14 through 19 show the federal  
23 income tax expense calculation at current and proposed rates, while line 20

1 sums the state and federal tax expense amounts before application of Deferred  
2 Federal and State Income Taxes. At lines 21 through 28, Deferred Federal and  
3 State Income Taxes are used to increase the pro forma income tax expense at  
4 present and proposed rates with the total calculated amount for income taxes  
5 before the application of other adjustments shown on line 29. Line 30 reflects a  
6 decrease to total tax expense for the amortization of the Company's Investment  
7 Tax Credit, while line 31 reflects the total combined income tax expense after this  
8 adjustment. The amounts of accelerated depreciation cost of removal, repairs  
9 tax deduction, tax basis adjustments to plant, straight line depreciation and book  
10 depreciation used in the determination of income taxes used in this calculation  
11 are summarized on Schedule D-34.

12  
13 **Q. Has the Company reduced federal income tax expense through application**  
14 **of a consolidated tax expense adjustment?**

15 A. No. The company does not believe that such an adjustment is appropriate.  
16 However, in the event a consolidated tax adjustment is adopted by the  
17 Commission, we have included a calculation of such an adjustment using the  
18 modified effective tax rate methodology traditionally used by the Commission in  
19 the response to filing requirement II-A-26.

20

1 **Q. Why did the Company not include a consolidated tax adjustment in the**  
2 **calculation of its income tax expense shown in UGI Gas Exhibit A (Fully**  
3 **Projected)?**

4 A. The Company did not include a consolidated tax adjustment in UGI Gas Exhibit A  
5 (Fully Projected) primarily due to two reasons. First, while the Company  
6 recognizes the legal precedent requiring a utility to reduce its income tax  
7 expense by a proportionate share of certain tax losses experienced by non-utility  
8 members of a consolidated tax group, we do not believe that it is appropriate to  
9 do so as a matter of sound ratemaking policy considering the overwhelming  
10 precedent that holds that utilities may not establish their ratemaking revenue  
11 requirements by including the costs of their unregulated affiliates in utility rates.  
12 As the Company has no expectation that its customers should bear the income  
13 requirement of its non-utility affiliates as an increase to our utility revenue  
14 requirement, our customers should have no expectation that our rates should be  
15 reduced by tax losses generated from the income of our non-utility affiliated  
16 business enterprises. Second, I note that there is legislation pending that would  
17 effectively eliminate the consolidated tax savings adjustment that may be  
18 enacted by the end of the FPFTY.

19  
20 **Q. Please describe the consolidated tax adjustment calculation shown in the**  
21 **response to filing requirement II-A-26.**

22 A. The consolidated tax adjustment shown in the response to filing requirement II-A-  
23 26 is calculated in accordance with Commission practice using the modified

1 effective tax rate method. Under this method, tax losses for existing non-  
2 regulated companies in the consolidated group are aggregated with and  
3 allocated to the companies (both regulated and non-regulated) with taxable  
4 income in proportion to their taxable income.

5 The consolidated tax adjustment shown in the response to filing  
6 requirement II-A-26 was calculated using a three-year average of UGI's income  
7 and the UGI Corp. consolidated group's taxable income that encompasses the  
8 years 2012 to 2014. Companies that are no longer part of the consolidated  
9 group, that are not expected to have recurring losses, or that will exit the  
10 consolidated group during the test year were eliminated from this calculation.  
11 For each of the three years, the adjusted tax losses of non-regulated  
12 corporations in the UGI Corp. consolidated group were summed, and a portion  
13 was allocated to UGI's operations based on the proportion of the UGI taxable  
14 income to all corporations (regulated and non-regulated) with positive taxable  
15 income. Once the allocation percentage was determined, it was applied to the  
16 losses of the consolidated loss companies, and from that figure UGI's percentage  
17 of the consolidated taxable income was used to derive the loss allocable to UGI  
18 for each of the three years in the analysis. The average of these losses was then  
19 allocated between UGI Gas and UGI Electric based on the proportionate share of  
20 each entity's taxable income from the most recently filed federal income tax  
21 return, fiscal year ended September 30, 2014. The allocation to UGI Gas is  
22 \$181,000.

23

1 **Q. What is the total FPFTY income tax expense for UGI Gas?**

2 A. As shown on Schedule D-33 at line 31, the pro forma tax expense at present  
3 rates is \$13.962 million and the pro forma tax expense at proposed rates for the  
4 FPFTY is \$37.856 million. Again, this figure is not reduced by a consolidated  
5 income tax adjustment.

6

7 **C. ACCUMULATED DEFERRED INCOME TAXES**

8 **Q. How are Accumulated Deferred Income Taxes (“ADIT”) calculated?**

9 A. Schedule C-6 shows the FPFTY ending balance for federal ADIT at September  
10 30, 2017. This amount is deducted from rate base. The total shown on line 7  
11 reflects the difference in income tax expense for book and tax purposes  
12 attributable to the difference between the accelerated tax depreciation, inclusive  
13 of bonus depreciation, and straight line book depreciation on test year plant  
14 balances, net of offsets associated with contributions in aid of construction. Rate  
15 base has been further reduced by the state regulatory liability associated with our  
16 repairs tax method shown on line 8. As the state tax consequence of  
17 accelerated depreciation is flowed through, there is no associated state ADIT  
18 balance.

19

20 **Q. What is the amount of the ADIT offset to rate base?**

21 A. As shown on line 9 of Schedule C-6 and on line 6 of Schedule A-1, the ADIT  
22 offset is \$307.196 million, which includes an amount related to the repairs tax  
23 method explained below.

24

1           **D.     REPAIRS TAX METHOD**

2   **Q.     Please explain UGI's accounting treatment of the Repairs Tax Method.**

3   A.     In its tax return for the year ended September 30, 2009, UGI adopted a tax  
4     accounting method to expense as repairs certain items capitalized for book  
5     purposes in accordance with federal tax regulations. As a result of adopting this  
6     method, UGI's (both UGI Gas and UGI Electric operating divisions) federal tax  
7     expense for the year ended September 30, 2009, was reduced by \$25,463,817.

8           UGI has chosen to calculate its federal income tax expense claim,  
9     inclusive of the repairs tax deduction, consistent with normalization. As a result,  
10    the difference between using accelerated tax depreciation versus book  
11    depreciation in the calculation of federal tax expense creates accumulated  
12    deferred income tax. For state income tax purposes, solely with respect to the  
13    repairs tax deduction, UGI has also chosen to calculate its state income tax  
14    expense consistent with normalization. The state ADIT balance associated with  
15    the repairs tax deduction is classified as a regulatory liability. In both the federal  
16    and state instances, the ADIT balance amortizes or unwinds over the remaining  
17    life of the asset. By accounting for the Repairs Tax Method in this way, the  
18    repairs tax deduction flows through to ratepayers over the same period that the  
19    related assets would have been capitalized and depreciated for tax purposes.

20           As noted previously, the Company reduces rate base by the sum of the  
21    federal ADIT balance and the state repair regulatory liability.

22  
23   **Q.     Does this conclude your direct testimony?**

24   A.     Yes, it does.

**UGI GAS STATEMENT NO. 11 – THEODORE M. LOVE**

**BEFORE THE  
PENNSYLVANIA PUBLIC UTILITY COMMISSION**

**Docket No. R-2015-2518438**

**UGI Utilities, Inc. – Gas Division**

**Statement No. 11**

**Direct Testimony of  
Theodore M. Love  
(Green Energy Economics Group, Inc.)**

**Topics Addressed:      Energy Efficiency & Conservation Plan and  
Total Resource Cost Implementation**

Dated: January 19, 2016

1 **I. INTRODUCTION**

2 **Q. Please state your name, occupation, and business address.**

3 A. My name is Theodore M. Love, and I am the Senior Analyst and Data Scientist at Green  
4 Energy Economics Group, Inc. (“GEEG”), an energy consulting firm founded in 2005.  
5 My office address is 147 South Oxford Street, Brooklyn, New York.

6

7 **Q. On whose behalf are you testifying in this proceeding?**

8 A. My testimony is submitted on behalf of UGI Utilities, Inc. – Gas Division (“UGI Gas”).

9

10 **Q. Please briefly describe your qualifications.**

11 A. I have been involved in the review and preparation of both gas and electric energy  
12 efficiency plans, as well as potential studies and cost-effectiveness analysis, in nearly a  
13 dozen states, two Canadian Provinces, and China, since I began working with GEEG in  
14 2007. Most relevant to this proceeding, I have been advising Philadelphia Gas Works  
15 (“PGW”) on their energy efficiency activities since August 2008. My full resume is  
16 attached as UGI Gas Exhibit TML-1.

17

18 **Q. Have you presented testimony in rate proceedings before a regulatory agency?**

19 A. Yes. In 2015, I presented testimony on behalf of PGW in support of the continuation of  
20 their demand-side management (“DSM”) gas programs for a second five-year phase  
21 under Docket No. P-2014-2459362.

22

23 **Q. What is the purpose of your testimony?**

1 A. I will describe the development of the UGI Gas Energy Efficiency and Conservation  
2 Plan (“EE&C Plan” or “the Plan”), provide an overview of the programs proposed under  
3 the Plan, and provide details on the Plan’s benefits and costs.

4  
5 **Q. Are you sponsoring any exhibits in this proceeding?**

6 A. Yes, I am sponsoring the following exhibits:

- 7 • UGI Gas Exhibit TML-1 – Resume of Theodore M. Love; and
- 8 • UGI Gas Exhibit TML-2 – UGI Gas’s Five Year Energy Efficiency &  
9 Conservation Plan.

10  
11 **Q. Please summarize your testimony.**

12 A. In Section II, I explain why it is appropriate and important for UGI Gas to implement  
13 natural gas energy efficiency and conservation programs. I also give an overview of the  
14 proposed programs and how they were developed. In Section III, I discuss the benefits,  
15 costs and staging of the proposed portfolio of programs. Section IV provides a summary  
16 of each of the proposed programs. Finally, I provide my conclusions and  
17 recommendations in Section V.

18 UGI Gas proposes to invest \$24.8 million in real 2015 dollars in energy efficiency  
19 programs over the next five years and, if implemented, expects to reduce natural gas  
20 consumption by 7,385 Billion British thermal units (“BBtus”) over the lifetime of the  
21 installed measures. The energy efficiency programs provide UGI Gas customers with  
22 present value of total resource benefits of \$53.9 million at cost of \$30.6 million,  
23 including participant investments, for a net benefit to customers of \$23.2 million with a

1 Total Resource Cost (“TRC”) benefit-cost ratio (“BCR”) of 1.76. The proposed  
2 Combined Heat and Power (“CHP”) Program is projected to cost \$2.8 million in real  
3 2015 dollars over the five-year period. This investment would lead to a 25,591 BBtu  
4 reduction in net primary energy usage over the lifetime of the installed CHP units, and  
5 avoid the emission of approximately 101,000 tons of carbon dioxide per year by the end  
6 of the five-year period. The CHP program provides \$44.6 million in net total resource  
7 benefits with a BCR of 1.60. Combined, the energy efficiency programs and CHP  
8 Program provide \$67.9 million in net total resource benefits with an overall TRC BCR of  
9 1.65.

## 11 **II. OVERVIEW AND BACKGROUND**

### 12 **Q. Why is it appropriate for UGI Gas to implement energy efficiency and conservation 13 programs?**

14 A. Improving efficiency and addressing climate change in all end uses of our energy  
15 resources is an increasingly important part of this nation’s energy, economic, and  
16 environmental policy goals. Over the past decade numerous nationwide initiatives have  
17 focused on improving efficiency, including large portions of funding from the American  
18 Recovery and Reinvestment Act of 2009 (“ARRA”) to the Clean Power Plan (“CPP”)  
19 ruling recently issued by the United States Environmental Protection Agency (“US  
20 EPA”). In Pennsylvania, the General Assembly has embraced this view by the passage of  
21 Act 129, of 2008<sup>1</sup> (“Act 129”) that mandates, among other things, the implementation of  
22 electric distribution company (“EDC”) programs, funded by ratepayers, to promote

---

<sup>1</sup> Act 129 of 2008, P.L. 1592, 66 Pa.C.S §§ 2806.1 and 2806.2.

1 electric energy conservation and efficiency improvements. Phase II of Act 129 was  
2 approved in 2012, and Phase III of Act 129 was approved in June of 2015, central to  
3 which is the continuation of mandatory electric efficiency programs. This reaffirmation  
4 of support for Act 129 confirms the value that utility-facilitated electric efficiency  
5 provides to the residents of Pennsylvania. A similar undertaking by natural gas  
6 distribution companies (“NGDCs”) is expected to have similar beneficial impacts.

7 Furthermore, PGW has been successfully operating a voluntary portfolio of  
8 natural gas energy efficiency programs for the past five years. These programs have  
9 resulted in over 260 BBtus in incremental annual gas savings and a present value of TRC  
10 net benefits of \$5.7 million from inception through August 31, 2014. PECO also offers  
11 customers rebates for energy efficiency furnaces through their Smart Gas Efficiency  
12 Upgrade program, and Peoples Natural Gas has committed to the preparation of an  
13 EE&C Plan by the end of 2016.<sup>2</sup>

14 Altogether, over 30 years of program experience across North America, as well as  
15 many years of activity in Pennsylvania, proves that large-scale energy efficiency and  
16 conservation investment portfolios can be effectively and cost-effectively administered  
17 by the distribution utilities responsible for delivering energy service.

18  
19 **Q. Will the Plan, if implemented, benefit UGI Gas’s customers?**

20 A. Yes, it will. Section 1.3 of the EE&C Plan (UGI Gas Exhibit TML-2) describes the goals  
21 of the portfolio as the following:

---

<sup>2</sup> Settlement in Docket Nos. A-2013-2353647, A-2013-2353649, A-2013-2353651 before the Pennsylvania Public Utility Commission.

- 1                   • Help customers save energy cost-effectively through a holistic approach to
- 2                   energy efficiency and conservation.
- 3                   • Avoid lost opportunities and provide deep levels of savings.
- 4                   • Provide a wide range of services for UGI Gas’s diverse customer base.
- 5                   • Contribute to the economic welfare of its customers and Pennsylvania.

6                   UGI Gas is proposing to spend \$24.8 million in real 2015 dollars towards energy  
7                   efficiency programs, an investment that will return a present value of total resource net  
8                   benefits of \$23.2 million and save customers 7,385 BBtus of gas over the lifetime of  
9                   measures installed. For the CHP program, an investment of \$2.8 million in real 2015  
10                  dollars is projected to return present value total resource benefits of \$44.6 million.  
11                  Furthermore, the program should avoid approximately 101,000 tons of carbon dioxide  
12                  emissions per year by the end of the five-year period, which I expect to be countable  
13                  towards Pennsylvania’s CPP goals.

14

15   **Q.    How was the Plan developed?**

16   A.    As described in Section 1.4 of UGI Gas Exhibit TML-2, the Plan was developed in three  
17   stages. The first stage involved the characterization of measure costs, savings, and cost-  
18   effectiveness of eligible measures. An achievable scenario was developed for each of the  
19   cost-effective measures for the second stage. Finally, the programs were designed and  
20   staged to meet budget goals and follow best practices in program and portfolio design.

21

22   **Q.    What kinds of efficiency opportunities does UGI Gas’s EE&C Plan target?**

1 A. UGI Gas plans to implement a comprehensive portfolio of six natural gas efficiency  
2 programs and a CHP program to capture energy efficiency and conservation  
3 opportunities available through four distinct types of market transactions. The first  
4 source of savings is to upgrade the efficiency of new gas-using appliances and equipment  
5 when those appliances and equipment require replacement. This market opportunity is  
6 called “natural replacement.” The second opportunity to improve efficiency is before a  
7 building or renovation is designed and constructed, otherwise known as the new  
8 construction and gut renovation market. The third source of gas savings is to increase  
9 energy efficiency of existing buildings by retrofitting them with supplemental measures  
10 (like attic insulation) and with early replacement of inefficient equipment with high-  
11 efficiency models (like boilers and furnaces). The retrofit market also includes some  
12 larger opportunities to reduce overall net energy usage through fuel-switching measures,  
13 such as CHP plants. The final source of gas savings is to change customer behavior to  
14 use less energy without necessarily installing new equipment, a relatively new, but  
15 quickly growing sector of the efficiency market. UGI Gas’s EE&C portfolio is explicitly  
16 designed and planned to achieve cost-effective savings through all four types of market  
17 transactions among residential and nonresidential customers by introducing programs to  
18 address each in the four-stage sequence.

19

20 **Q. What are the programs proposed for inclusion in the Plan?**

21 A. The following six natural gas energy efficiency programs are proposed for the five-year  
22 portfolio:

- 23 • Residential Prescriptive (RP)

- 1 • Nonresidential Prescriptive (NP)
- 2 • New Construction (NC)
- 3 • Residential Retrofit (RR)
- 4 • Nonresidential Retrofit (NR)
- 5 • Behavior and Education (BE)

6 The Plan also includes a CHP program that is proposed as a separate fuel-switching  
7 program, and a crosscutting budget for portfolio-wide administrative costs. These  
8 programs will be discussed in more detail later in my testimony.

9

10 **Q. Has UGI Gas provided detailed plans for the proposed programs?**

11 A. Yes, Section 2 of UGI Gas Exhibit TML-2 provides a detailed plan for each of the  
12 programs, including annual budgets, savings, and participation projections along with  
13 more information on program design, eligible rate classes, target markets, incentive  
14 approach, marketing, evaluation, measurement, and verification (“EM&V”), as well as  
15 implementation.

16

17 **Q. Is UGI Gas’s EE&C Plan modeled on successful efforts elsewhere?**

18 A. Yes. UGI Gas’s proposed portfolio incorporates many of the strategies proven effective  
19 around the country, by program administrators like National Grid in Massachusetts  
20 (“NGrid”), as well as by natural gas program administrators in Pennsylvania, such as  
21 PGW.

22

23 **Q. What best practices in program and portfolio design are incorporated in the Plan?**

1 A. Providing incentives to defray the efficiency cost premium for the purchase of new high-  
2 efficiency new equipment has been the cornerstone of gas energy efficiency efforts across  
3 the country for decades. Best practices included making sure that UGI Gas has the  
4 flexibility to address changing market conditions as new technologies enter the  
5 marketplace and as codes and standards are adopted that eliminate the least-efficient  
6 equipment. UGI Gas’s minimum efficiency requirements will be updated to meet  
7 increasingly strict federal standards and to align with minimum requirements established  
8 in other leading efforts from utilities such as NGrid and PGW. These programs will also  
9 aggressively target market participants throughout the supply chain.

10 The most successful new construction programs take an integrated approach to  
11 building efficiency. These programs coordinate the multiple functions and stages  
12 associated with building construction with the array of efficiency opportunities across  
13 building energy sources and end uses. Financial incentives typically defray most or all of  
14 the incremental cost of high-efficiency design, equipment, and construction over and  
15 above standard market practice.

16 In the residential retrofit market, UGI Gas’s program will target high-use  
17 customers while also allowing self-selected participation. Low cost audits will require  
18 blower-door tests in order to facilitate advanced air-sealing and insulation practices, as  
19 well as heating system retrofits. Nonresidential retrofits will be sold to customers as  
20 financial investments and technical assistance will be provided to ensure that all options  
21 are explored and that a given project goes as deep as cost-effectively possible.

22 UGI Gas will also launch a behavior program targeted at high usage residential  
23 heating customers, based on successful programs from Massachusetts. These types of

1 behavior programs have proven effective at convincing large groups of customers to save  
2 small amounts of energy, which adds up to a large pool of savings that traditional  
3 programs have not captured. Similar programs have been adopted by Act 129 electric  
4 utilities and make up a significant portion of these utilities' annual savings.

5 Finally, UGI Gas will be providing opportunities for medium to large commercial  
6 and industrial customers to participate in a CHP program. Any potential CHP project  
7 will need to pass the TRC test, and resulting electric generation reductions should be  
8 directly applicable to statewide emission reduction goals tied to the CPP.

9  
10 **Q. How are low-income customers addressed by the Plan?**

11 A. Low-income customers are allowed to participate in any of the programs open to  
12 residential customers. Although no program in the proposed EE&C portfolio specifically  
13 targets this market segment, UGI Gas already has a Low Income Usage Reduction  
14 Program (“LIURP”) as discussed in the direct testimony of Robert R. Stoyko (UGI Gas  
15 Statement No. 7).

16  
17 **III. BENEFITS, COSTS, AND STAGING OF PROPOSED PLAN PORTFOLIO**

18 **Q. How did you assess the benefits and costs of UGI Gas’s proposed portfolio?**

19 A. Costs and benefits were compared from two perspectives: a total resource perspective  
20 and the gas system administrator perspective. The primary test for the UGI Gas EE&C  
21 Plan is the TRC test, which is most comparable to the test proposed by PGW for its Phase  
22 II plan and similar to the test used by the Commission for Act 129. This test compares  
23 the avoided cost of resources, including natural gas, electricity, and water, against the

1 incremental cost of pursuing efficiency measures and any administration costs incurred  
2 under the programs.

3 The Gas Administrator Cost test only counts those costs and benefits within the  
4 sphere of costs paid by gas ratepayers. In this case, it means all the costs paid by UGI  
5 Gas for providing incentives and administering the proposed EE&C portfolio, ignoring  
6 any additional costs paid by participants. The benefits in the Gas Administrator Cost test  
7 are only the avoided costs of natural gas.

8  
9 **Q. What avoided cost values were used in the development of the UGI Gas EE&C  
10 Plan?**

11 A. UGI Gas Exhibit TML-2 provides an overview of the avoided cost methodology in  
12 Section 1.8.2 and a table of projected values in Section 3.1.

13  
14 **Q. How does the assessment of the CHP Program differ from that of the energy  
15 efficiency programs?**

16 A. The CHP Program will need to meet the same TRC cost-effectiveness criteria as the  
17 energy-efficiency programs, but will also need to demonstrate that the fuel-switching  
18 projects result in overall net primary energy reduction. These reductions will be tracked  
19 separately because the fuel-switching program will result in an increase in gas usage that  
20 should not be conflated with the savings from the energy efficiency programs.

21  
22 **Q. What are the lifetime costs and benefits you estimate from implementing UGI Gas's  
23 EE&C Plan?**

1 A. The table below (Table 18 from UGI Gas Exhibit TML-2) shows the cost-effectiveness  
 2 summary for UGI Gas’s proposed portfolio of natural gas energy efficiency programs.  
 3 The energy efficiency programs provide UGI Gas customers with present value of total  
 4 resource benefits of \$53.9 million at cost of \$30.6 million, including the participant  
 5 investments, for a net benefit to customers of \$23.2 million with a BCR of 1.76. The  
 6 CHP program provides \$44.6 million in net total resource benefits with a BCR of 1.60.  
 7 The entire EE&C Plan provides \$67.9 million in net total resource benefits with a TRC  
 8 BCR of 1.65.

<b>Program</b>	<b>Total Resource PV Benefits</b>	<b>Total Resource PV Costs</b>	<b>Total Resource PV Net Benefits</b>	<b>Total Resource BCR</b>
<b>EE&amp;C Total</b>	<b>\$172,528,340</b>	<b>\$104,668,959</b>	<b>\$67,859,381</b>	<b>1.65</b>
Residential Prescriptive (RP)	\$31,130,604	\$14,907,355	\$16,223,249	2.09
Nonresidential Prescriptive (NP)	\$8,708,345	\$3,813,860	\$4,894,485	2.28
Residential Retrofit (RR)	\$4,816,226	\$3,509,802	\$1,306,423	1.37
Nonresidential Retrofit (NR)	\$3,347,061	\$1,739,899	\$1,607,162	1.92
New Construction (NC)	\$3,671,531	\$1,919,760	\$1,751,772	1.91
Behavior and Education (BE)	\$2,178,476	\$1,624,141	\$554,335	1.34
Portfolio-wide Costs	\$-	\$3,108,352	\$(3,108,352)	-
<b>EE Programs</b>	<b>\$53,852,243</b>	<b>\$30,623,169</b>	<b>\$23,229,074</b>	<b>1.76</b>
CHP Program	\$118,676,097	\$74,045,790	\$44,630,307	1.60

9

10 **Q. Will these net benefits stimulate economic activity?**

11 A. Yes. The present worth of TRC net benefits represents a long-term injection of wealth  
 12 into the economy. For residential customers, the reduction in the total costs of gas  
 13 service translates to after-tax disposable income, which can be saved or spent. Likewise,  
 14 lower gas bills for business customers means some combination of increased profit  
 15 margins and more competitive product and service pricing. Businesses will re-invest the  
 16 resulting extra profits, or distribute them to owners, or some combination of the two.  
 17 Either way, the TRC savings will stimulate additional business activity.

1           Moreover, the amount of additional economic activity stimulated by the  
 2 efficiency investment will end up being several times the net benefits due to re-spending  
 3 within the local, state, and regional economies. While there is doubtless some “leakage”  
 4 as some spending takes place outside Pennsylvania, the majority of the economic benefits  
 5 stay at the state and local levels.

6           This economic activity generated by the net economic benefits of efficiency  
 7 investment is in addition to the economic activity generated directly by expenditures on  
 8 the part of both UGI Gas and program participants to install the efficiency measures.

9  
 10 **Q. How much natural gas will UGI Gas’s customers save due to the energy efficiency**  
 11 **programs?**

12 A. The natural gas efficiency programs will save UGI Gas customers 7,385 BBtus over the  
 13 lifetime of all measures installed. The table below (Table 4 from UGI Gas Exhibit TML-  
 14 2) shows the first year and lifetime gas savings associated with each sector over the five  
 15 years of the proposed portfolio of natural gas efficiency programs.

Sector	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY ‘17 - ‘21
<b>First Year Gas Savings</b>	<b>14,769</b>	<b>54,316</b>	<b>151,025</b>	<b>208,869</b>	<b>218,428</b>	<b>647,407</b>
Residential (R/RT)	11,969	40,845	123,315	170,574	175,764	<b>522,468</b>
Nonresidential (N/NT)	2,800	13,471	27,709	38,295	42,664	<b>124,938</b>
<b>Lifetime Gas Savings</b>	<b>268,207</b>	<b>1,003,368</b>	<b>1,651,083</b>	<b>2,141,624</b>	<b>2,320,709</b>	<b>7,384,990</b>
Residential (R/RT)	222,047	781,454	1,199,174	1,524,193	1,646,485	<b>5,373,353</b>
Nonresidential (N/NT)	46,161	221,914	451,909	617,430	674,223	<b>2,011,636</b>

16  
 17 **Q. What additional benefits do you project for UGI Gas customers from the energy**  
 18 **efficiency portion of the EE&C Plan?**

19 A. I estimate the proposed programs will save UGI Gas customers 92,460 MWh of  
 20 electricity, 249 million gallons of water, and avoid the emission of 510,000 tons of CO<sub>2</sub> --

1 the equivalent of removing over 19,400 cars from the road for five years. Section 1.5 of  
2 UGI Gas Exhibit TML-2 contains a more detailed breakdown of additional savings due to  
3 the proposed portfolio.

4  
5 **Q. What benefits do you project for UGI Gas customers from the CHP program?**

6 A. I estimate the CHP program will reduce net primary energy consumed by 25,591 BBtus  
7 over the lifetime of the installed plants.

8  
9 **Q. Will the CHP program help Pennsylvania meet its Clean Power Plan goals?**

10 A. Yes. Any efficiency or conservation measures that reduce the output of CO<sub>2</sub> from fossil-  
11 fuel fired electric generating units (“EGUs”), that are installed after 2012, and that are  
12 operational during the years covered by the CPP could be incorporated into a state  
13 implementation plan (“SIP”) to assist Pennsylvania achieve its CPP goals. I project that  
14 UGI Gas’s CHP program will reduce net generation emissions by 101,000 tons of CO<sub>2</sub>  
15 per year by the end of the five-year plan, which is equivalent to taking 3,800 cars off the  
16 road for five years. These savings should persist through 2030, which should make them  
17 countable towards CPP goals. While Pennsylvania has yet to release its draft SIP,  
18 anticipated in spring of 2016, based on Pennsylvania’s goal of prioritizing indigenous  
19 resources in its SIP and the clear benefits of CHP in reducing EGU CO<sub>2</sub> emissions, it is  
20 reasonable to assume that a Pennsylvania SIP will incorporate savings from CHP.

21  
22 **Q. How much additional employment do you estimate that the Plan will generate?**

1 A. The Plan will generate between 222 and 369 additional new jobs over the lifetime of the  
2 efficiency measures installed. The majority of these jobs will stay close to where savings  
3 occurred due to most of the job creation being a product of the economic “multiplier”  
4 effect through the cycle of re-spending energy savings, and the shift away from spending  
5 in the less-labor intensive energy sector towards more job-intensive sectors such as food  
6 service and production, as discussed in Section 1.5.5 of UGI Gas Exhibit TML-2.

7  
8 **Q. How much will it cost to achieve these results?**

9 A. For the natural gas energy efficiency programs, UGI Gas projects an investment of \$24.8  
10 million in real, 2015, dollar terms, or approximately \$5.0 million per year.<sup>3</sup> For the CHP  
11 program, UGI Gas projects an investment of \$2.8 million in real, 2015, dollar terms, or  
12 approximately \$555,000 per year. For the combined portfolio, this would be an  
13 investment of \$27.6 million over five years (\$5.5 million per year) in real, 2015, dollars,  
14 or a nominal investment of \$30.6 million (\$6.1 million per year).

15  
16 **Q. How will these programs be staged to achieve the results you have identified?**

17 A. Once final approval has been granted for the EE&C Plan, the Residential Prescriptive and  
18 Nonresidential Prescriptive programs will be the first programs fully developed and  
19 launched in fiscal year 2017. The New Construction, Residential Retrofit, and  
20 Nonresidential Retrofit programs will be developed throughout fiscal year 2017 and then  
21 launched in fiscal year 2018. The final program to launch will be the Behavior and  
22 Education program in coordination with planned updates to UGI Gas’s customer

---

<sup>3</sup> The real dollar figure adjusts future spending to account for inflation. An inflation rate of 2% was used for this analysis.

1 information system. All the programs will ramp up over the three to four years until the  
 2 portfolio reaches its full level of annual investment in the final year of the five-year  
 3 portfolio. The CHP program would be open to customers in fiscal year 2017. The table  
 4 below shows the projected annual nominal dollar investment by program.

Program	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY 17 - FY 21
<b>EE&amp;C Total</b>	<b>\$2,769,500</b>	<b>\$4,556,650</b>	<b>\$6,621,825</b>	<b>\$7,945,412</b>	<b>\$8,746,821</b>	<b>\$30,640,208</b>
Residential Prescriptive (RP)	716,000	1,731,000	2,307,000	2,755,000	2,815,000	10,324,000
Nonresidential Prescriptive (NP)	250,000	331,000	587,000	663,000	713,000	2,544,000
Residential Retrofit (RR)	200,000	520,000	800,000	1,000,000	1,200,000	3,720,000
Nonresidential Retrofit (NR)	100,000	216,000	306,000	432,000	654,000	1,708,000
New Construction (NC)	135,000	273,000	479,000	638,000	782,000	2,307,000
Behavior and Education (BE)	-	320,000	510,000	735,000	735,000	2,300,000
Portfolio wide Costs	950,000	730,000	780,000	800,000	850,000	4,110,000
<b>EE Total</b>	<b>2,351,000</b>	<b>4,121,000</b>	<b>5,769,000</b>	<b>7,023,000</b>	<b>7,749,000</b>	<b>27,013,000</b>
CHP Program	418,500	435,650	852,825	922,412	997,821	3,627,208

5 The table below shows projected budgets, in real 2015 dollars, for the entire portfolio,  
 6 including CHP, for fiscal year 2017, both by program category and broken out between  
 7 residential (R/RT) and non-residential classes.

Program Category	R/RT	Non-Residential	Total
Customer Incentives	\$ 471,396	\$ 310,856	\$ 782,252
Administration	\$ 1,108,417	\$ 339,349	\$ 1,447,765
Marketing	\$ 172,955	\$ 209,851	\$ 382,806
Inspections	\$ 16,422	\$ 9,262	\$ 25,683
Evaluation	\$ -	\$ 20,000	\$ 20,000
<b>Total Expenses</b>	<b>\$ 1,769,189</b>	<b>\$ 889,317</b>	<b>\$ 2,658,506</b>

8  
 9 Please see Section 1.9.1 of UGI Gas Exhibit TML-2 for additional details regarding the  
 10 proposed program staging, as well as Section 2 for individual program descriptions.

11

12 **Q. Is UGI Gas proposing a set annual budget for these programs?**

1 A. No. The proposal is for a real dollar investment in energy efficiency over five years of  
2 approximately \$5.0 million dollars per year. The previously described staging and  
3 budget levels represent anticipated funding levels, but the utility should be allowed to  
4 move budget dollars between years and programs depending on market conditions and  
5 adoption rates, as long as program and portfolio cost-effectiveness and the overall five-  
6 year investment amount is met.

7  
8 **Q. Why is this flexibility important?**

9 A. The ability to allocate funding effectively is crucial for a portfolio administrator, and  
10 especially so for a portfolio that is just starting up. The uncertainty inherent in launching  
11 and ramping up a new program or portfolio means that there can be faster or slower  
12 adoptions of efficiency measures. The ability to move budgets makes sure that unspent  
13 funds from one lower demand area can be used to address the higher demands in other  
14 areas, and helps provide continuity for customers, contractors, and suppliers. This  
15 flexibility must also extend to program design and implementation, such as increasing or  
16 decreasing incentives based on market conditions. As discussed in Section 1.9.5 of the  
17 EE&C Plan (UGI Gas Exhibit TML-2), UGI Gas would have flexibility within the  
18 existing proposed five-year budgets and programs, but would file a revised  
19 implementation plan if a program was added or removed, additional funds over and  
20 beyond the five year goal were required, or material changes were expected for portfolio-  
21 level cost-effectiveness projections.

22  
23 **Q. How will UGI Gas report results?**

1 A. As described in Section 1.9.4 of UGI Gas Exhibit TML-2, UGI Gas will provide an  
2 annual report every January, three months after the close of the program year, that will  
3 provide verified savings and participation, costs committed to this activity, and the  
4 resulting cost-effectiveness. Results for the previous year and progress towards the five-  
5 year goal will be included. The annual report will also include highlights of program  
6 activity and any significant improvements made to program delivery and design.

7

8 **Q. Please describe UGI Gas’s evaluation, measurement, and verification plans for the**  
9 **portfolio?**

10 A. UGI Gas Exhibit TML-2 provides an overview of the EM&V planned for the EE&C Plan  
11 (UGI Gas Exhibit TML-2, Section 1.10) as well as plans for each individual program.  
12 Measures will require proof of purchase and must be tied to a valid UGI Gas account.  
13 Third-party inspections will be performed on all complex projects and a subset of  
14 prescriptive rebates, to make sure the correct equipment is installed and solicit customer  
15 feedback. Savings are calculated using a technical reference manual (“TRM”) that is  
16 based on PGW’s FY 2016 TRM and calibrated to UGI Gas’s territory. UGI Gas will  
17 develop a tracking system to store and analyze program activity, spending, and inspection  
18 data. Finally, each program will undergo regular impact and process evaluations  
19 approximately every two years.

20

21 **IV. SUMMARY OF PROPOSED PROGRAMS**

22 **A. RESIDENTIAL PRESCRIPTIVE PROGRAM**

23 **Q. Please describe the Residential Prescriptive Program.**

1 A. The Residential Prescriptive (“RP”) Program offers cash incentives for high-efficiency,  
2 natural gas powered, residential-sized space and water heating equipment, which is the  
3 largest lost opportunity market in UGI Gas’s territory. The program is expected to cost  
4 \$10.3 million in nominal dollars over five years and save 4,094 BBtus of natural gas over  
5 the lifetime of measures installed. The program is projected to provide present value  
6 TRC net benefits of \$16.2 million with a BCR of 2.09.

7 The RP program specifically targets high efficiency furnaces, boilers, combi-  
8 boilers, tankless water heaters and Wi-Fi-enabled thermostats. The rebates for this  
9 equipment were designed to be in line with other gas energy efficiency administrators in  
10 the region, such as PGW, and cover approximately two-thirds of the measures’  
11 incremental costs. A list of the proposed measures and corresponding incentives can be  
12 found in the RP Program Description Section on Financial Incentives in UGI Gas Exhibit  
13 TML-2.

14

15 **Q. How were the efficiency levels for the program chosen?**

16 A. In line with the general principles for the portfolio, the RP program targets the highest  
17 efficiency levels for the more traditional types of equipment, such as furnaces and  
18 boilers. It also seeks to promote market adoption of newer technology, such as tankless  
19 water heaters, and in doing so offers more efficiency level options.

20

21 **Q. Please describe the roll of Wi-Fi thermostats in the program.**

22 A. Wi-Fi thermostats provide the promise of customers more fully engaging with setting the  
23 comfort levels in their homes. Many models have additional capabilities that help

1 customers fine tune temperature settings, or that adjust more intelligently to fit customer  
2 behavior. This next generation of thermostat technology is poised to potentially address  
3 the behavioral aspects of energy usage more effectively than traditional methods. The RP  
4 program will offer \$100 incentives for these types of thermostats. In order to get an  
5 accurate picture of how this equipment affects space-heating usage, the program will  
6 include a rigorous evaluation schedule to proactively track results for this measure and  
7 inform long-term decision-making regarding the measure's place in the program. One  
8 possibility, if the measure proves to be effective at saving energy, is to move the rebate  
9 from a cash rebate to an upstream, point of sale incentive.

10  
11 **Q. Are there any key risk factors for the RP program?**

12 A. A key aspect of future program uncertainty involves the potential shift in baseline  
13 efficiency levels for natural gas furnaces. Federal Standards are potentially moving  
14 towards requiring condensing units with annual fuel utilization efficiencies (“AFUEs”) of  
15 90 percent or more for the Northern region of the United States, which includes  
16 Pennsylvania. While the current efficient condition for natural gas furnace incentives of  
17 an ENERGY STAR® rating would still exceed an anticipated baseline shift, savings and  
18 incentive levels would be adjusted downwards, and savings and/or spending goals may  
19 need to be adjusted accordingly.

20  
21 **B. NONRESIDENTIAL PRESCRIPTIVE PROGRAM**

22 **Q. Please describe the Nonresidential Prescriptive Program.**

23 A. The Nonresidential Prescriptive (“NP”) Program offers incentives for a variety of natural  
24 gas powered equipment used by UGI Gas’s small business and commercial customers.

1 The program is expected to cost \$2.5 million in nominal dollars over five years and save  
2 1,358 BBtus of natural gas over the lifetime of measures installed. The program is  
3 projected to provide present value TRC net benefits of \$4.9 million with a BCR of 2.28.

4 The program targets commercial sized boilers, unit heaters, steam traps, water  
5 heaters, and a few types of commercial kitchen equipment. Incentives for these measures  
6 have been designed to be in line with other jurisdictions and cover approximately two-  
7 thirds of the incremental cost of the measure. A custom incentive track is also offered for  
8 measures that are not currently covered by the prescriptive list, such as custom control  
9 and heat recovery systems. A list of the proposed measures and corresponding incentives  
10 can be found in the RP Program Description Section on Financial Incentives in UGI Gas  
11 Exhibit TML-2. Delivery of the program is nearly the same as the RP program and may  
12 have the same rebate processor to improve operation efficiency.

13  
14 **Q. How does implementation of the NP program differ from the RP program?**

15 A. While the main processes used to implement the NP and RP programs are very similar,  
16 and will probably share much of the same infrastructure, the main difference comes in  
17 how the customers are funneled towards the respective measures. The RP will be driven  
18 more by the general portfolio awareness push due to the larger target audience and  
19 streamlined messaging of a smaller measure list. The NP, on the other hand, requires a  
20 more targeted outreach based approach, pulling participants into the program by working  
21 closely with contractors, suppliers, and community organizations. Most small businesses  
22 have trusted go-to contractors that service their equipment. When equipment is in need  
23 of repair or replacement, it should be easy for the contractor to understand the

1 opportunity and easy for the business owner to participate. Reaching the contractor will  
2 be crucial, since the contractor will need to file paperwork and present the rebate to the  
3 business owner, who will therefore be placing trust in the contractor to take full  
4 advantage of the program. UGI Gas will also explore options to pay rebates directly to  
5 contractors to reduce the amount of the customer's invoice.

### 6 7 **C. NEW CONSTRUCTION PROGRAM**

#### 8 **Q. Please describe the New Construction Program.**

9 A. The New Construction ("NC") program aims to address natural gas efficiency in new  
10 construction and gut rehabilitation projects. The program targets both the residential and  
11 nonresidential sectors by providing incentives for going beyond code. The program is  
12 performance based and will provide participants with a greater incentive for combining  
13 measures and going deeper than they would by upgrading just the space or water heating  
14 system through the RP or NP programs.

15 The program is expected to cost \$2.3 million in nominal dollars over five years  
16 and save 519 BBtus of natural gas over the lifetime of measures installed. The program  
17 is projected to provide present value TRC net benefits of \$1.8 million with a BCR of  
18 1.91.

#### 19 20 **Q. How does the NC program address residential projects?**

21 A. The program will provide a streamlined prescriptive rebate for customers who save at  
22 least 20% in gas usage compared to a baseline house just meeting code. The incentive  
23 will be designed to cover approximately 80% of the incremental costs.

24

1 **Q. How does the NC program address nonresidential projects?**

2 A. Since the NC projects tend to be more complicated, the program will focus first on  
3 providing technical assistance to potential projects in order to help include efficiency in  
4 the initial design process. Nonresidential projects will then be eligible for an incentive  
5 that gets larger as the savings increase. The program will have three tiers: at least 15%  
6 but less than 20%, at least 20% but less than 30%, and 30% or greater.

7

8 **D. RESIDENTIAL RETROFIT PROGRAM**

9 **Q. Please describe the Residential Retrofit Program.**

10 A. The Residential Retrofit (“RR”) program is designed to overcome market barriers for  
11 existing residential customers to do comprehensive natural gas efficiency projects that  
12 save money and increase comfort. The program specifically addresses the space and  
13 water heating system, as well as improvements to the thermal envelope. The program is  
14 expected to cost \$3.7 million in nominal dollars over five years and save 744 BBtus of  
15 natural gas over the lifetime of measures installed. The program is projected to provide  
16 present value TRC net benefits of \$1.3 million with a BCR of 1.37.

17 Interested customers will receive an energy audit from a qualified contractor that  
18 includes a blower door test. The contractor will provide the customer with a list of  
19 recommended actions based on the audit. The customer will then receive an incentive of  
20 \$60 per first year MMBtus savings based on the measures installed by a qualified  
21 contractor. The incentive is designed to offset most of the incremental cost of the higher  
22 efficiency equipment and to provide a significant contribution to the cost of qualifying  
23 thermal envelope improvements.

24

1 **Q. How will customer participation in the program be encouraged?**

2 A. The general awareness campaign for the entire portfolio will be the foundation for  
3 driving participation in the program. This will drive traffic to an online site that can help  
4 customers assess the energy savings potential in their homes and contact a qualified  
5 contractor for an in-home audit. Qualified contractors will also be able to generate leads  
6 through co-branding and direct marketing campaigns that help the contractor get more  
7 work and close larger projects.

8

9 **Q. What does it mean to be a “qualified contractor”?**

10 A. The cornerstone of the RR program will be the approved contractor network. In order to  
11 become part of the network, a contractor will be required to have certification from the  
12 Building Performance Institute (“BPI”) and be trained in program protocols to ensure  
13 quality business practices. Approved contractors must also employ site technicians and  
14 site supervisors with BPI professional certifications appropriate to their duties. Once a  
15 contractor passes initial approval, the first three projects performed by that contractor will  
16 require confirmation of quality installation by an approved third party inspector before  
17 the contractor moves from probationary status to full certification. Subsequent contractor  
18 work will be sampled up to 10% of projects submitted. Protocols will also be put in place  
19 to remove a contractor from the program for poor performance.

20 UGI Gas already has a contractor portal for sharing leads for customers who are  
21 interested in switching to natural gas. UGI Gas will look for ways to use this platform to  
22 launch and manage a more comprehensive network of contractors focused on serving the  
23 RR program.

16  
17  
18  
19  
20  
21  
22  
23  
24

**Q. Why would a contractor want to participate in the RR program?**

A. Customers will only receive an incentive if they use an approved contractor. This gives qualified contractors an additional edge not just in selling a project, but also expanding the scope to include more measures. The quality assurance and inspections provided by UGI Gas give customers an added level of service, help ease customer uncertainty in an unfamiliar process, and help contractors close more jobs. Furthermore, UGI Gas will examine ways to get contractors to encourage deeper savings by potentially offering contractors a performance bonus for meeting heightened goals.

**E. NONRESIDENTIAL RETROFIT PROGRAM**

**Q. Please describe the Nonresidential Retrofit Program?**

A. The Nonresidential Retrofit (“NR”) Program will provide incentives for overcoming market barriers for natural gas efficiency retrofits in existing commercial and multi-family buildings; it also will be open to agricultural and small industrial applications. Any measure that saves natural gas is eligible, with space heating, water heating, and process heating expected to be the largest opportunities. The program specifically addresses the space and water heating system, as well as improvements to the thermal envelope. The program is expected to cost \$1.7 million in nominal dollars over five years and save 410 BBtus of natural gas over the lifetime of measures installed. The program is projected to provide present value TRC net benefits of \$1.6 million with a BCR of 1.92.

**Q. Why are multifamily projects included in this program?**

1 A. Multi-family buildings technically are any housing other than single-family detached  
2 structures, including duplexes and townhouses, as well as apartments. They must have at  
3 least one surface defining a given housing unit that is shared by another unit within the  
4 building and space or water heating equipment that can service more than one unit.  
5 These considerations make multi-family structures difficult to administer within the RR  
6 program, which is geared for stand-alone residential units.

7

8 **F. BEHAVIOR AND EDUCATION PROGRAM**

9 **Q. Please describe the Behavior and Education Program.**

10 A. The Behavior and Education (“BE”) program is designed to motivate a large group of  
11 residential customers to save small amounts of energy by changing behavior through  
12 education, outreach, and energy monitoring. The premise is that the delivery of timely,  
13 salient, and personalized information allows for informed decision-making. The program  
14 combines behavioral science with data analytics to provide clearly defined and actionable  
15 information that motivates customers to lower their energy use. The program is expected  
16 to cost \$2.3 million in nominal dollars over five years and save 260 BBTus of natural gas  
17 over the lifetime of measures installed. The program is projected to provide present  
18 value TRC net benefits of \$554,000 with a BCR of 1.34.

19

20 **Q. How will savings be verified for this program?**

21 A. A solid evaluation is crucial for the success of this program. UGI Gas will engage an  
22 evaluator to begin collecting data on the program as soon as it starts to be able to get as  
23 much real time feedback as possible regarding the size and persistence of savings and  
24 make sure that any early issues are caught quickly and addressed.

23

**G. COMBINED HEAT AND POWER PROGRAM**

**Q. Please describe the CHP Program.**

A. The CHP program provides incentives for CHP plants that have net-primary-energy savings and are cost-effective under the TRC test. The program also seeks to promote projects that would contribute CO<sub>2</sub> emission reductions that may be counted toward Pennsylvania’s CPP goals. The program would offer an incentive of \$750 per kW, with a cap of \$250,000 per project. Over the five years of the portfolio, the CHP program is projected to cost \$3.6 million, in nominal terms, and provide 25,591 BBTus in net-primary-energy savings as well as reduce net CO<sub>2</sub> emissions by 101,000 tons per year by the end of the five-year plan. The program is expected to have a present value of TRC net benefits of \$44.6 million with a BCR of 1.60.

**Q. What types of CHP projects will the program incentivize?**

A. The program will target large commercial and industrial customers with high thermal and electric loads, such as hospitals, college campuses and multi-shift industrial customers. Due to the current state of avoided costs, UGI Gas anticipates that it will be difficult to find cost-effective projects that are much under 1,000 kW. However, UGI Gas will continue to monitor both the energy market and customer opportunities to address as wide a range of CHP technology types and sizes as possible.

**H. PORTFOLIO-WIDE COSTS**

**Q. What do the portfolio-wide costs cover?**

1 A. The portfolio-wide costs cover development, design, tracking, reporting, and  
2 administrative overhead that cuts across all the programs in the portfolio. The majority  
3 of development costs for the portfolio occur in the first year as programs are designed  
4 and reporting infrastructure is put in place. Costs then fall sharply in the second year  
5 before climbing as the portfolio grows. Over the five-year period, they represent 15% of  
6 the portfolio's expenditures.

7  
8 **V. CONCLUSIONS AND RECOMMENDATIONS**

9 **Q. What conclusions do you reach?**

10 A. I conclude that UGI Gas's proposed portfolio of energy efficiency programs and CHP  
11 program will be cost-effective and economically beneficial to UGI Gas's ratepayers and  
12 the economy of the UGI Gas territory and Pennsylvania.

13

14 **Q. On the basis of these conclusions, what are your recommendations to the**  
15 **Commission?**

16 A. I strongly recommend that the Commission order implementation of UGI Gas's five-year  
17 EE&C Plan. Any delay in implementation represents delay of the benefits that will  
18 occur.

19

20 **Q. Does this conclude your direct testimony?**

21 A. Yes, it does.

## Professional Experience

---

**Green Energy Economics Group, Inc.** – Cuttingsville, VT 2007 to Present  
*Senior Analyst and Data Scientist*

Providing research and technical assistance relating to the design, analysis, and implementation of energy utility demand-side management (DSM) programs for electric and natural gas service providers around the world; including ten states, two Canadian provinces, and China. Currently focusing on building scalable tools to analyze everything from individual projects to programs to portfolios.

**Alter & Rosen, LLP** – New York, NY 2007 to 2010  
*Consultant*

Managed the development of an online database management system for musical copyrights and brought on board paying beta users. Managed data entry, reporting, termination and reversion issues for transactions involving musical copyright catalogues valued at over \$100 million.

**AllianceBernstein LP** – White Plains, NY 2006 to 2007  
*Client Reporting Analyst*

Oversaw the monthly and quarterly report process for clients domiciled outside the United States. Increased by 150% the amount of accounts that met a fifth business day deadline. Transferred firm's quarterly reporting process to new system.

**Complex Integrated Systems, Inc. LP** – Framingham, MA 2005 to 2006  
*Database Systems Consultant*

Designed and implemented custom modules for metal fabrication and finishing business management software. Recruited and trained a team of developers to aid in Complex Integrated System's growth.

## Education

---

**Clark University** – Worcester, MA  
B.A., Magna cum Laude, *Mathematics and Computer Science*, 2006.

**Kansai Gaidai University**: Hirakata City, Osaka Japan.  
Spring Semester 2005

**General Assembly**: New York City, NY  
Data Science Intensive Course, 2015

---

---

## Recent Project Experience

---

### Research on Leading Energy Efficiency Portfolios

*Green Energy Economics Group*

*(November 2007 – Present)*

- Maintain research and proprietary analysis on actual and projected results from over a dozen electric and natural gas demand side management (DSM) portfolios throughout North America;
- Published paper for the 2012 ACEEE Summer Study on Energy Efficiency in Buildings.

### Development of Energy Efficiency and Conservation Plan

*UGI Utilities, Inc. – Gas Division (“UGI Gas”)*

*(June 2015 – Present)*

*Reading, Pennsylvania*

Assist UGI Gas with the development of five year Energy Efficiency and Conservation (EE&C) Plan including:

- Developing an achievable efficiency scenario
- Designing six energy efficiency programs and one combined heat and power (CHP) program
- Preparing testimony before the Pennsylvania PUC

### Strategic Planning and Implementation of Five-year DSM Portfolio

*Philadelphia Gas Works (“PGW”)*

*(August 2008 – Present)*

*Philadelphia, Pennsylvania*

- Member of lead consulting team that aided in the design and approval of PGW’s five-year, \$54 million portfolio of DSM programs;
- Providing ongoing technical assistance in the development of PGW’s \$35 million Phase II five year plan.
- Providing ongoing technical support in program design and implementation, including the roll-out of six programs that, combined since inception, have saved 120,000 MMBtus at a cost of approximately \$17 million;
- Developed specifications for and currently collaborating with internal PGW staff on database system to track weatherization projects, rebate applications, and other information pertaining to PGW’s DSM portfolio;
- Developed multiple Excel-based tools used by contractors to perform field audits, provide QA/QC, and track ongoing progress for contractors, programs, and the portfolio as a whole;
- Provided research and analysis support for multiple rounds of expert testimony before the Pennsylvania Public Utility Commission (Docket R-2009—2149884);
- Aided in the issuance of RFPs and selection of candidates for over \$40 million in contracts;
- Major contributor to PGW’s ongoing formal reporting and evaluation process, including the issuance of five implementation plans, three annual reports, and two impact evaluations.

### **Technical Assistance for Energy Efficiency Program Planning**

Green Mountain Power

*(August 2012 – Present)*

*Vermont*

- Developed multivariable regression model and framework to estimate the cost per kW to address a reliability gap in the St. Albans region with targeted energy efficiency.
- Reviewed and analyzed program proposals for the \$20 million Community Energy & Efficiency Development Fund (CEED Fund), including the development of scoring and rebalancing mechanisms;
- Analyzed dataset of 5,000 custom business projects to establish models used for future planning exercises.
- Prepared report on uncounted benefits of renewable generation sources for Vermont.

### **Analysis of Energy Efficiency in British Columbia**

BC Sustainable Energy Association & Sierra Club BC

*(May 2011 – Present)*

*British Columbia, Canada*

- Provided comments and energy efficiency opportunities report for proceedings on FortisBC Gas and Electric's long-term DSM plans in December of 2013.
- Assisted on research for direct testimony on reasonableness of gas DSM Plan by Fortis Energy Utilities before the British Columbia Utilities Commission, BCUC Project No. 3698627;
- Technical support on assessment of FortisBC Electric's long-term DSM plan and corresponding expert testimony;
- Assistance with direct testimony and technical support on assessment of BC Hydro's long-term DSM plan, before the BCUC.

### **Technical Assistance for Energy Efficiency Programs**

Focus on Energy

*(June 2011 – Present)*

*Wisconsin*

- Developed and customized cost-effectiveness calculators for Wisconsin's Focus on Energy portfolio of energy efficiency programs;
- Trained staff and other consultants on usage of tools and general economic analysis of energy efficiency programs;
- Provided QA/QC on cost-effectiveness analysis of 14 programs spending over \$160 million in two years.

### **Chicagoland Energy Efficiency Portfolio**

People's Gas

*(September 2008 – January 2013)*

*Chicago, Illinois*

- Providing ongoing regulatory support;
- Provided cost-benefit analysis of various program scenarios and aided in the analysis of contractor bids;
- Customized excel-based portfolio and project cost-effectiveness tools to client's specifications.

### **Energy Efficiency Potential in Oklahoma**

Sierra Club *(April 2011 – November 2011, December 2013 – January 2014)*  
*Oklahoma*

- Provided updated report for energy efficiency in Oklahoma and additional comments on PUC rulemaking for electric and gas utility programs.
- Preparation of report on energy efficiency potential for Oklahoma;
- Assistance with research and drafting comments on the US regional haze Federal Implementation Plan for the State of Oklahoma;
- Research and formulation of energy efficiency potential projections provided as part of expert testimony for Oklahoma Gas & Electric's rate case before the Corporation Commission of Oklahoma, Cause No. PUD 201100087.

### **Testimony Support for Expanding Gas Energy Efficiency in Pennsylvania**

Citizens for Pennsylvania's Future, *Pennsylvania* *(July 2013 – September 2013)*

- Provided support on preparation of testimony regarding Peoples Gas of Pennsylvania's DSM plans, including preparation of benchmarking report and alternative scenario projections.

### **Energy Efficiency Potential in Texas**

Sierra Club, *Texas* *(May 2012 – August 2012)*

- Research and development of alternative energy efficiency potential scenarios for the ten investor owned utilities (IOUs) in Texas;
- Development of comments for the Public Utility Commission of Texas;
- Development of presentation before the Energy Efficiency Incentive Program Committee.

### **Austin Energy's Energy Efficiency Potential**

Austin City Council Consumer Advocate *(April 2012)*  
*Austin, Texas*

- Research and development of alternative energy efficiency potential scenarios for Austin Energy.

### **Nevada Power's Energy Efficiency Potential**

Sierra Club *(November 2011 – June 2012)*  
*Nevada*

- Research on Nevada Power's Integrated Resource Plan (IRP) and development of alternative energy efficiency potential projections.

### **Comments on EmPower Maryland Programs**

Sierra Club *(September 2011 – October 2011)*  
*Maryland*

- Research for and development of comments on EmPower Maryland's energy efficiency programs, including the development of alternative energy efficiency potential projections.

### **Ontario Power Authority Field Audit Support Tool**

Green Communities Canada

*(January 2011 – May 2011)*

*Ontario, Canada*

- Collected and implemented specifications for updating the tool used by Ontario Power Authority's low-income program field agents to collect data and determine project net present values;
- Added custom features including customer input forms, saving and closing routines, and database file importing.

### **Energy Efficiency Potential in Arkansas**

Sierra Club/Audubon Society

*(September 2009 – March 2010)*

*Arkansas*

- Research and drafting assistance for expert testimony on energy efficiency' as an alternative to the White Bluff Steam Electric Station before the Public Service Commission of Arkansas, Docket No. 09-024-U.

### **Training for NGOs Working on Energy Efficiency Projects in China**

ISC and NRDC

*(August 2008 – September 2010)*

*United States and China*

- Developed training materials and provided remote and in-person training sessions on the economic and financial analysis of industrial retrofit projects for structuring and negotiating financial incentive offers to customers;
  - o Worked with the Institute for Sustainable Communities (ISC) to aid its efforts to promote energy efficiency in the Guangdong and Jiangsu Provinces (February 2009 – September 2010);
  - o Worked with the National Resource Defense Council (NRDC) to aid in its efforts in China, especially in conjunction with a \$100 million revolving loan fund from the Asia Development Bank (August 2008- January 2009).

### **Incentive Calculations for the Project Cost-effectiveness Analysis Tool (CAT)**

Efficiency Vermont

*(November 2008 – June 2010)*

*Burlington, Vermont*

- Aided in the design of a new approach to calculating incentives for custom energy efficiency projects based on financing and reaching a desired rate of return;
- Modified CAT's cash-flow projection engine, an Excel VBA system, to accommodate the new approach to incentives.

### **Vermont's 20-year Forecast of Electricity Savings from Sustained Investment**

Efficiency Vermont

*(December 2008 – October 2009)*

*Burlington, Vermont*

- Provided components of final report relating to long-term trends for the environment (climate change, land-use, and water-use), population growth, and governmental regulation;
- Provided additional technical support on electric demand-side savings potential.

#### **Connecticut's Long Term Acquisition Plan**

*Connecticut Office of the Consumer Council  
Connecticut*

*(August – October 2008)*

- Provided research and support for expert testimony regarding long-range energy-efficiency procurement plan of the Energy Conservation Management Board, on behalf of the Connecticut Office of Consumer Counsel.

#### **Energy Efficiency Plans of BC Hydro and Terasen Gas**

*BC Sustainable Energy Association and The Sierra Club  
British Columbia, Canada*

*(October 2008 – March 2009)*

- Provided research and support for expert testimony and technical support on assessment of BC Hydro's long-term DSM plan, before the BCUC, on behalf of the BC Sustainable Energy Association and Sierra Club Canada (November 2008 – March 2009);
- Provided research and support for expert testimony on assessment of Terasen Gas conservation plans before the BCUC, on behalf of the BC Sustainable Energy Association and Sierra Club Canada (October 2008).

# 1 Introduction and Background

## 1.1 Plan Overview

This plan provides a detailed description of the design and implementation of the energy efficiency and conservation portfolio (EE&C Portfolio or Portfolio) that UGI Utilities, Inc. – Gas Division (UGI Gas) is proposing to offer in its energy efficiency and conservation plan (EE&C Plan or Plan). The Plan will have a five-year duration, beginning in UGI Gas’s fiscal year (FY) 2017 through FY 2021,<sup>1</sup> and will include both energy efficiency (EE) programs and a combined heat and power (CHP) program. Though UGI Gas is not mandated to enact an EE&C Plan under Act 129, UGI Gas’s voluntary EE&C Plan was developed using the guiding principles of the Commission’s 2015 Act 129 Phase III Implementation Order.<sup>2</sup> As discussed in more detail below, the Plan portfolio has been evaluated using a Total Resource Cost (TRC) test which is most comparable to the test proposed by PGW for its Phase II plan and similar to the test used by the Commission for Act 129. To estimate the resource savings from standard energy efficiency measures, UGI Gas developed a Technical Reference Manual (TRM) that builds upon the TRM used for PGW’s FY 2016 TRM and calibrates it to UGI Gas’s territory.

Over the five years of the EE&C Plan, UGI Gas plans to spend \$24.8 million in real 2015 dollars on six energy efficiency (EE) programs. The energy efficiency programs are projected to save 647 BBtus of natural gas during the first five years of the Plan, and 7,385 BBtus of natural gas over the lifetime of the measures installed. From a total resource perspective, the present value of benefits is \$53.9 million, with \$30.6 million in present value of costs, leading to a present value of net benefits of \$23.2 million and a TRC benefit-cost ratio of 1.76. Furthermore, the energy efficiency programs are expected to save 92,460 MWh of electricity, 248 million gallons of water, create between 222 and 369 jobs, and

---

<sup>1</sup> UGI Gas’s fiscal year runs October 1st to September 30th.

<sup>2</sup> Implementation Order, Docket No. M-2014-2424864 (entered June 19, 2015)

avoid the emission of CO<sub>2</sub> equivalent to over 19,400 cars being removed from the road for 5 years.

UGI Gas is also proposing the investment of \$2.8 million in real 2015 dollars over five years for a CHP program. This program would provide net energy savings to customers over the five years of the Plan of 1,706 BBtus, and 25,591 BBtus over the lifetime of the CHP projects installed. The CHP program will provide present value of net benefits of \$44.6 million from a total resource perspective, with a TRC benefit-cost ratio of 1.60.

Altogether, the EE&C Portfolio is very cost-effective, providing \$67.9 million in net resource benefits with a TRC benefit-cost ratio of 1.65, greatly increasing the economic wellbeing of UGI Gas's customers.

## 1.2 Natural Gas and Energy Efficiency

Natural gas is an abundant resource and an important component of the Pennsylvania economy. In 2014, Pennsylvania had the most shale gas proven reserves in the country, driven by the development of the Marcellus Shale,<sup>3</sup> and over 80 percent of the natural gas UGI Gas delivers to its customers comes from the Marcellus Shale. As a result of this reliable, local supply, UGI Gas customers have seen bills decrease substantially since 2008.

Natural gas also has many important advantages as an end-use fuel source. When compared to the use of electricity generated from natural gas or most other fuels, the direct end-use of natural gas is more efficient and environmentally preferable. Natural gas has a source-to-site efficiency of 92 percent, meaning the vast majority of the energy from natural gas is associated with on-site consumption. Electricity on the other hand, only has a source-to-site efficiency of 32 percent, meaning that less than one third of electric energy is used at the site.<sup>4</sup>

---

<sup>3</sup> <http://marcelluscoalition.org/2015/11/pa-drives-increase-in-u-s-natural-gas-abundance/>

<sup>4</sup> Meyer, Richard. Dispatching Direct Use: *Achieving Greenhouse Gas Reductions with Natural Gas in Homes and Businesses*. American Gas Association: Washington, DC. November 11, 2015, p. 5.

As natural gas has continued to grow in importance as a fuel source, natural gas energy-efficiency programs have also shown steady growth activity. The American Council for an Energy Efficient Economy (ACEEE) State Energy Scorecard shows that spending on natural gas energy-efficiency programs has grown both nationally and in the states surrounding Pennsylvania. Nationally, the spending on natural gas energy-efficiency programs has increased by more than five times to \$1.4 billion in 2014 from 2006 levels.<sup>5</sup> For states close to Pennsylvania, the rise has been even greater, with New York more than tripling budgets to \$175 million between 2009 and 2013 and Maryland going from a few hundred thousand dollars a year in 2009 to \$15 million per year in 2013. Within Pennsylvania, a number of gas utilities have undertaken voluntary energy efficiency programs, including Columbia Gas and Philadelphia Gas Works (PGW), which is currently seeking approval for its second five-year gas efficiency portfolio. The trend towards gas efficiency has also spread throughout the United States, as shown in Figure 1.

Figure 1. Spread of Natural Gas Energy Efficiency Programs<sup>6</sup>

As the energy market is becoming increasingly customer driven, utilities around the country are recognizing the opportunity to drive economic growth and an efficient economy by sponsoring energy efficiency and conservation programs. For natural gas utilities, the opportunity to invest in helping customers save money, increase comfort, and reduce the impact they have on the environment is now a crucial component of joining the next generation of energy utilities and benefiting the communities that they serve.

### 1.3 Goals

UGI Gas has the following core goals:

- Help customers save energy cost-effectively through a holistic approach to energy efficiency and conservation;
- Avoid lost opportunities and provide deep levels of savings ;
- Provide a wide range of services for UGI Gas’s diverse customer base; and
- Contribute to the economic welfare of its customers and Pennsylvania.

In order to reach these goals, UGI Gas will utilize energy efficiency programs and a CHP program. For its energy efficiency programs, UGI Gas plans to invest approximately \$24.8 million in 2015 dollars (\$27.0 million nominal) over five years with the goal of returning \$23.2 million dollars in present value of total resource net benefits to customers. As a secondary goal for efficiency programs, UGI Gas expects to save customers 7,385 BBtus of natural gas and 510,000 tons of CO<sub>2</sub> emissions over the lifetime of installed measures during the five-year portfolio.

For the CHP program, UGI Gas also plans to invest approximately \$2.8 million in 2015 dollars (\$3.6 million nominal) over five years with the goal of returning \$44.7 million dollars in present value of total resource net benefits to customers.

### 1.4 Plan Development

Figure 2. Plan Development Process

The UGI Gas EE&C Plan was developed in three stages, as shown Figure 2. The first stage involved the characterization of a wide range of natural gas efficiency measures and project energy savings and costs. Avoided costs for

natural gas and electricity were calculated and combined with the measure and project characterizations for cost-effectiveness screening using the TRC test. The cost-effective measures and projects were then correlated with demographic, building stock, and equipment market characteristics for UGI Gas’s territory to calculate achievable savings and participation levels.

Four types of market actions were then identified for inclusion in the portfolio. The first intervention is at the time of “natural replacement”, which means helping customers replace broken equipment with equipment that has a higher efficiency than the market baseline. The second intervention is in the new construction and gut rehabilitation market, to make sure that new buildings go above code requirements to save energy. The third intervention is in the retrofit market of existing buildings to make existing buildings more energy efficient. The final intervention is in the behavioral side of energy consumption, through outreach and education. The natural replacement and retrofit markets were divided between residential and nonresidential programs in order to provide more effective program messaging, resulting in six separate energy efficiency programs. A stand-alone CHP program was established based on the program’s unique market and reporting requirements. The seven resulting programs are set forth in the following table.

**Table 1. Planned Programs**

<b>Abbreviation</b>	<b>Program Name</b>	<b>Market Intervention</b>
<b>RP</b>	Residential Prescriptive	Natural Replacement
<b>NP</b>	Nonresidential Prescriptive	Natural Replacement
<b>NC</b>	New Construction	New Construction
<b>RR</b>	Residential Retrofit	Retrofit
<b>NR</b>	Nonresidential Retrofit	Retrofit
<b>BE</b>	Behavior and Education	Behavior
<b>CHP</b>	Combined Heat and Power	Retrofit

Incentive levels were established for each program. Next, non-incentive budgets were developed to address fixed and variable costs associated with

each program and the portfolio as a whole. A target annual investment level was determined, and the programs were weighted to maximize net benefits and avoid lost opportunities. The programs were then staged to reach the target year given operational constraints, and program and portfolio level metrics were checked to make sure they lined up with similar programs and portfolios. Finally, details regarding the implementation of the EE&C Portfolio were developed based on best practices in program design from portfolio administrators in Pennsylvania, such as PGW, and the broader United States, such as National Grid.

## 1.5 Efficiency Program Benefits

### 1.5.1 Natural Gas Savings

The following tables provide projected natural gas savings by program and sector for the energy efficiency programs in the EE&C Portfolio.

**Table 2. Projected First Year Gas Savings by Program (MMBtus)**

Program	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY '17 - '21
<b>Portfolio Total</b>	<b>14,769</b>	<b>54,316</b>	<b>151,025</b>	<b>208,869</b>	<b>218,428</b>	<b>647,407</b>

### 1.5.2 Electric Savings

The following table shows electric savings for measures installed under the energy efficiency programs in the EE&C Portfolio. The electric savings are secondary savings from measures that primarily save natural gas, such as efficient natural gas furnaces with brushless fan motors and air-conditioning savings from higher insulation.

**Table 5. Projected Electric Savings by Sector**

Sector	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY '17 - '21
<b>First Year Energy (MWh)</b>	<b>248.3</b>	<b>775.9</b>	<b>1,048.6</b>	<b>1,311.7</b>	<b>1,337.9</b>	<b>4,722.6</b>

### 1.5.4 Emission Reductions

This section contains projections for CO<sub>2</sub> emission reductions due to the energy efficiency programs in the EE&C Portfolio. The total savings of 510,000 tons of CO<sub>2</sub> is equivalent to removing 19,463 cars off the road for 5 years. The following table breaks out the emission reductions due to gas savings and electric savings.

**Table 7. Projected CO<sub>2</sub> Emission Reductions by Energy Source (Short Tons)**

Sector	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY '17 - '21
<b>First Year Reductions</b>	<b>1,072</b>	<b>3,828</b>	<b>9,714</b>	<b>13,319</b>	<b>13,900</b>	<b>41,833</b>
From Gas Savings	864	3,177	8,835	12,219	12,778	<b>37,873</b>
From Electric Savings	208	651	879	1,100	1,122	<b>3,960</b>
<b>Lifetime Reductions</b>	<b>19,731</b>	<b>71,384</b>	<b>113,779</b>	<b>146,840</b>	<b>157,816</b>	<b>509,549</b>
From Gas Savings	15,690	58,697	96,588	125,285	135,761	<b>432,022</b>
From Electric Savings	4,041	12,687	17,191	21,555	22,054	<b>77,528</b>

### 1.5.5 Job Creation

Investing in cost-effective energy-efficiency creates jobs in two ways, one direct and the other indirect, as discussed in a 2012 white paper from the ACEEE.<sup>7</sup> Direct job creation results from hiring related to implementing the programs. Indirect job creation results from the substitution capital spent on natural gas with local capital spent in the local economy. Several times more jobs are created by the indirect or income effect from cost-effective energy-efficiency investment. Further, the net economic benefits from efficiency investment reduce household and business gas bills and raise household disposable incomes and business profitability. Customers will tend to spend most of this additional money and save the rest. This additional spending creates a “multiplier” effect through the cycle of re-spending of the initial cost savings, which stimulates aggregate demand for goods and services. Satisfying increased demand for goods and services requires more labor. While some of the jobs created leak into the broader U.S. and global economy, a good portion

<sup>7</sup> “Energy Efficiency Job Creation: Real World Experiences” Bell, Casey J. American Council for an Energy-Efficiency Economy. October 2012.

(possibly higher than 80%) of jobs created due to energy efficiency stay within the Commonwealth. The approach of looking at net job creation through both direct means and with economic multiplier effects is endorsed in the 2012 white paper from ACEEE.

The number of jobs created from investments in energy efficiency directly relates to the total resource value of the energy that these measures save. Studies of employment impacts of DSM use energy savings as a surrogate for total resource value. A recent meta-study of U.S. data found that estimates for the number of jobs created had a wide range, but that most studies estimate that between 30 and 60 net jobs are created by saving one TBtu.<sup>8</sup> In New York, New Jersey, and Pennsylvania, the ACEEE projected that 164,320 jobs, or 59 for every TBtu saved, could be attributed to EE in 1997 through 2010.<sup>9</sup>

As shown in the following table, UGI Gas estimates that its gas energy efficiency programs portfolio will generate between 222 and 369 net additional jobs over the lifetime of the efficiency measures installed over the next five-years. This range is based on assuming that each TBtu of gas savings creates between 30 and 50 full-time equivalent jobs in Pennsylvania.

## 1.6 Efficiency Program Costs

The following table provides an overview of the spending by year and by sector on energy efficiency (EE) programs. The EE programs will cost approximately \$5.0 million per year over the five years in 2015 dollars (\$5.4 million in nominal dollars). The most spent in a single year is the final year, FY 2021, with a \$6.9 million budget in 2015 dollars, which is approximately two percent (2%) of UGI Gas’s 2015 revenues. This level is similar to the cap that Act 129 imposes on electric efficiency programs in Pennsylvania.<sup>10</sup>

<sup>10</sup> See 66 Pa. C.S. § 2806.1(g) (limiting the total cost of an EDC’s EE&C Plan to 2% of the EDC’s total annual revenue as of December 31, 2006).

**Table 9. Projected Efficiency Portfolio by Budgets by Sector**

Sector	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY '17 - '21
<b>Nominal</b>	<b>\$2,351,000</b>	<b>\$4,121,000</b>	<b>\$5,769,000</b>	<b>\$7,023,000</b>	<b>\$7,749,000</b>	<b>\$27,013,000</b>

**Table 11. Projected Efficiency Portfolio Budgets by Program (2015\$)**

Program	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY '17 - '21
<b>EE Total</b>	<b>\$2,271,006</b>	<b>\$3,902,727</b>	<b>\$5,356,313</b>	<b>\$6,392,752</b>	<b>\$6,915,295</b>	<b>\$24,838,093</b>
Residential Prescriptive (RP)	691,638	1,639,316	2,141,968	2,507,765	2,512,138	9,492,824
Nonresidential Prescriptive (NP)	241,494	313,468	545,009	603,502	636,289	2,339,762
Residential Retrofit (RR)	193,195	492,458	742,772	910,259	1,070,893	3,409,577
Nonresidential Retrofit (NR)	96,597	204,559	284,110	393,232	583,637	1,562,136
New Construction (NC)	130,407	258,540	444,735	580,746	697,866	2,112,293
Behavior and Education (BE)	-	303,051	473,517	669,041	655,922	2,101,531
Portfolio-wide Costs	917,676	691,335	724,202	728,208	758,550	3,819,970

The portfolio-wide cost lines from the previous two tables are costs that apply to all programs in the EE portfolio. They are costs incurred at the portfolio level for program development, design, tracking, reporting, and administrative overhead. Development costs for the portfolio occur in the first year as programs are designed and reporting infrastructure is put in place. Costs then fall sharply in the second year before climbing as the portfolio grows. In the final year, the

portfolio wide costs represent 11% of the portfolio total cost, however, over the five-year period they represent 15% of the portfolio's costs.

The following tables provide a portfolio-level look at costs by category in nominal and real 2015 dollars.

**Table 12. Projected Efficiency Portfolio Budgets by Category (Nominal)**

## 1.7 CHP Program Benefits and Costs

The following tables show the net primary energy savings installed annually for the CHP program.

**Table 14. Projected Net Primary Energy Savings from CHP (MMBtus)**

Savings	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY '17 - '21
First Year Savings	169,855	169,855	455,460	455,460	455,460	<b>1,706,090</b>
Lifetime Savings	2,547,828	2,547,828	6,831,898	6,831,898	6,831,898	<b>25,591,350</b>

The following table provides the net CO<sub>2</sub> emission reductions due to the CHP program.

**Table 15. Net CO<sub>2</sub> Emission Reductions due to CHP (Short Tons)**

Savings	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	FY '17 - '21
Incremental Annual	17,155	17,155	22,271	22,271	22,271	<b>101,124</b>
Cumulative	17,155	34,310	56,582	78,853	101,124	<b>101,124</b>

The following table provides the annual projected budget for the CHP program in nominal and real 2015 dollars.

**Table 16. Projected CHP Program Budgets**

<b>Spending</b>	<b>FY 2017</b>	<b>FY 2018</b>	<b>FY 2019</b>	<b>FY 2020</b>	<b>FY 2021</b>	<b>FY '17 - '21</b>
Nominal	\$418,500	\$435,650	\$852,825	\$922,412	\$997,821	<b>\$3,627,208</b>
2015\$	\$387,500	\$373,500	\$677,000	\$678,000	\$679,100	<b>\$2,795,100</b>

The following table provides the combined EE Program and CHP budgets in real 2015 dollars by category for FY 2017, which is used as the reference year in UGI Gas's Base Rate Case filing.

**Table 17. Reference Year (FY 2017) Budget by Category and Sector**

<u>Program Category</u>	<u>R/RT</u>	<u>Non-Residential</u>	<u>Total</u>
Customer Incentives	\$ 471,396	\$ 310,856	\$ 782,252
Administration	\$ 1,108,417	\$ 339,349	\$ 1,447,765
Marketing	\$ 172,955	\$ 209,851	\$ 382,806
Inspections	\$ 16,422	\$ 9,262	\$ 25,683
Evaluation	\$ -	\$ 20,000	\$ 20,000
<b>Total Expenses</b>	<b>\$ 1,769,189</b>	<b>\$ 889,317</b>	<b>\$ 2,658,506</b>

## 1.8 Cost-Effectiveness Analysis

This section provides cost-effectiveness projections for EE&C using the TRC test, which is the primary metric by which UGI Gas judges the portfolio.

**Table 18. Cost-effectiveness Summary of Energy Efficiency Programs for Five-Year Portfolio (2015\$)**

<b>Program</b>	<b>Total Resource PV Benefits</b>	<b>Total Resource PV Costs</b>	<b>Total Resource PV Net Benefits</b>	<b>Total Resource BCR</b>
<b>EE&amp;C Total</b>	<b>\$172,528,340</b>	<b>\$104,668,959</b>	<b>\$67,859,381</b>	<b>1.65</b>
Residential Prescriptive (RP)	\$31,130,604	\$14,907,355	\$16,223,249	2.09
Nonresidential Prescriptive (NP)	\$8,708,345	\$3,813,860	\$4,894,485	2.28
Residential Retrofit (RR)	\$4,816,226	\$3,509,802	\$1,306,423	1.37
Nonresidential Retrofit (NR)	\$3,347,061	\$1,739,899	\$1,607,162	1.92
New Construction (NC)	\$3,671,531	\$1,919,760	\$1,751,772	1.91
Behavior and Education (BE)	\$2,178,476	\$1,624,141	\$554,335	1.34
Portfolio-wide Costs	\$-	\$3,108,352	\$(3,108,352)	-
<b>EE Programs</b>	<b>\$53,852,243</b>	<b>\$30,623,169</b>	<b>\$23,229,074</b>	<b>1.76</b>
CHP Program	\$118,676,097	\$74,045,790	\$44,630,307	1.60

### 1.8.1 Cost-Effectiveness Analysis Methodology

The cost-effectiveness results reported in the Plan followed standard industry practices for utilizing the TRC test for cost-effectiveness. The TRC test methodology used is similar to the test utilized by the electric utilities under Act 129 of 2008, and presents results from the standpoint of the entire service territory. To calculate benefits, projected natural gas, electricity, and water savings are multiplied by avoided costs and this stream of future values is discounted to the present.<sup>11</sup> For measures that have an increase in resource usage, such as CHP projects, the increase in usage may offset some, or all, of the positive benefit derived from resource savings. The cost side of the test consists of the present value of all incremental costs incurred by participants, including net operation and maintenance costs, and the non-incentive costs incurred by the portfolio administrator. If the benefits outweigh the costs (the benefit-cost ratio is above one), then the total cost of energy services for an average customer within the territory will fall and the portfolio is considered cost-effective. Results for the Program Administrator Cost (PAC) test are also included. The PAC only includes the costs for program administration and incentives, not additional customer costs. Since UGI Gas is a natural gas utility, the benefits for the PAC test are the natural gas savings.

The analysis used a real discount rate (RDR) of 5.88%. The RDR was calculated using an assumption of a nominal discount rate (NDR) of 8.00%, based on UGI Gas's weighted average cost of capital (WACC), and an inflation rate of 2.0%. UGI Gas employed an Excel spreadsheet-based tool to calculate the cost-effectiveness of the EE&C Portfolio.

### 1.8.2 Avoided costs

UGI Gas developed avoided costs following the approach used by the Pennsylvania PUC in the Act 129 proceedings. Gas costs were based on the Henry Hub forwards for 2016–2020, followed by a mix of forwards and Annual

---

<sup>11</sup> Savings are not currently adjusted for free-ridership or spillover, meaning there is a net-to-gross assumption of 1.0, which is in line with current assumptions by PGW and Act 129 utilities.

Energy Outlook values through 2025, and the Annual Energy Outlook projections thereafter. The costs of baseload, winter storage and peaking capacity were added (paralleling the inclusion of generation capacity in the electric avoided costs), along with avoidable local distribution costs, using the same method employed by the Statewide Evaluator and adopted by the PUC in the Act 129 TRC proceeding.<sup>12</sup>

Evaluation of some gas-efficiency programs and CHP also requires estimates of avoided electric costs, which were taken directly from the analysis by the Statewide Evaluator for PPL Electric Utilities Corporation and Metropolitan Edison Company, the two major EDCs whose service territories overlap with UGI Gas's service territory, restated to constant 2015 dollars.<sup>13</sup> Both the electric and gas avoided costs reflect the benefits of reduced supply prices and emissions. A table showing the annual values for gas and electric avoided costs is included in Appendix 3.1.

UGI Gas plans to use these avoided costs for the full five-year plan. However, future market volatility or a change in the regulatory environment may require that UGI Gas update some or all of the avoided costs. If so, UGI will file an updated avoided cost document which includes details on the changes to avoided costs, establishes an effective date for the application of new avoided costs, and provides updated cost-effectiveness projections.

## **1.9 Implementation**

### **1.9.1 Program Staging**

The staging of the EE&C Portfolio is dependent on the approval of the plan, which is anticipated to occur in mid-2016. Each program will require a setup period during which services are contracted through a competitive bidding process, protocols are put in place, reporting systems are established, and

---

<sup>12</sup> See *2016 Total Resource Cost (TRC) Test*, Docket No. M-2015-2468992 (Final Order, entered June 22, 2015).

<sup>13</sup> *Act 129 SWE Distributed Generation Potential Study*, Docket No. M-2014-2424864 (February 13, 2015).

marketing initiatives are finalized before the program is officially launched and open for participation. Once launched, each program will ramp up for three or four years before reaching full participation levels. Figure 3 provides a high-level overview of the planning and launching of each program in the portfolio.

Figure 3. Overview of Program Staging

Once the Plan has been approved, the initial focus will be on rolling out the two prescriptive lost-opportunity energy efficiency programs, RP and NP, with anticipated launch dates in January of 2017. These programs are the cornerstone of the portfolio. The CHP program will also be launched at the same time in order to allow for the very long lead times required for CHP projects.

The NC, RR, and NR programs require a longer setup phase since the programs are more complex than the two prescriptive rebate programs. These three programs are anticipated to launch in January of 2018, and will benefit from the infrastructure developed from the launch of the first three programs.

Rounding out the portfolio is the BE program. It is anticipated to start in October of 2018, in coordination with planned upgrades to UGI Gas’s customer

information systems. After all programs are launched, they will continue to ramp up until the Plan reaches its maximum funding levels in FY 2021. Additional details on each program's staging can be found in the individual program description.

### **1.9.2 Marketing**

The EE&C Plan has a two-pronged marketing approach consisting of raising general customer awareness through a campaign around a cohesive portfolio brand, combined with targeted outreach and strategic partnerships with community based organizations and trade allies. Marketing efforts will be coordinated at the program level in order to leverage opportunities for multiple programs at the same time, and focus on opportunities tailored to the customer, regardless of which program incentives will ultimately be offered.

#### General Awareness and Branding

UGI Gas will develop an overall brand for the EE&C Plan that will be used as an umbrella for all program activity. This will create a cohesive picture of UGI Gas's efficiency and conservation efforts that should translate into higher engagement levels and more customer participation. The general awareness campaign will be the top of the sales funnel, driving customers to more targeted opportunities (providing the "push"). The central component of the campaign will be a branded micro-website for the portfolio. To do this, the campaign will utilize many approaches including, but not limited to, TV, print, radio, billboards, online ads, social media, bill inserts, sponsorships, grass-roots outreach, residential canvassing efforts, and event sponsorship. Once a customer reaches the website, he or she will be funneled towards appropriate programs and incentives through activities and targeted links. While the website will be the center of the portfolio brand, it will be supplemented with physical handouts and applications. These efforts are anticipated to be particularly important for driving residential sector participation.

#### Targeted Outreach and Partnerships

The second prong of the marketing campaign is to engage customers through outreach efforts and strategic partnerships (providing a “pull”). These efforts are likely to be the best way to drive nonresidential participation. Successful activities involve all sectors within the community and may include such activities as:

- Partnering with local businesses and trade organizations (builders, contractors, electricians, plumbers, HVAC service providers, equipment suppliers, etc.) to familiarize them with program opportunities, energy efficiency practices and implementation requirements and to utilize them, where appropriate, as one of the program’s service delivery channels.
- Targeting equipment manufacturers, distributors, installation contractors and retailers/vendors to make sure they offer high-efficiency equipment and can make customers aware of available incentives.
- Connecting with local business organizations to provide opportunities to address their specific needs and translate them to their tenants, management, and facility operations personnel.
- Assisting school systems in developing comprehensive, standards-based curricula, resources, materials and professional development for educators, school facility audits, and special events.
- Partnering with community-based organizations to develop outreach and program delivery strategies.
- Leveraging any available federal tax credits, if applicable, as well as supplemental consumer incentives (e.g., equipment manufacturers) as a means to increase consumer adoption of high efficiency heating equipment.
- Working with Act 129 electric administrators to combine marketing and delivery options and address all aspects of efficiency at the same time.

### **1.9.3 Administration**

UGI Gas will be the primary administrator of the Plan. UGI Gas will engage the services of various contractors to fulfill all the roles required to implement the Plan. Contractors will be selected through a competitive bidding

process, and UGI Gas will streamline operations across programs as much as possible by hiring a single rebate processor for multiple programs. The table below describes the main roles in the management of the EE&C Plan.

**Table 19. Overview of Administration Roles**

<b>Role</b>	<b>Description</b>
<b>Plan Administrator</b>	Primarily responsible for program and portfolio planning, management and reporting. Supervises and manages all other roles.
<b>Implementation and Design Consultants</b>	Provides assistance in the design and implementation of many different aspects of the portfolio, including, but not limited to, program design, reporting, marketing, and training. UGI Gas will leverage internal resources wherever possible to provide these services.
<b>Implementation Contractor</b>	Directly responsible for main aspects of program delivery, including but not limited to, customer engagement and retention, technical assistance, measure installation, rebate processing, program tracking, and reporting.
<b>Third-party Inspector</b>	Responsible for measure and project inspections separately from the implementation contractor.
<b>Evaluator</b>	Performs independent program and portfolio evaluations that are used to verify savings and guide future plans.

### 1.9.4 Reporting

UGI Gas will submit an annual report on the EE&C Plan each January following the close of the fiscal year, approximately three months after the end of the program year. This report will provide information on activity for the previous year and progress towards five-year goals, including, but not limited to:

- First year and lifetime savings;
- Participation;
- Spending;
- Cost-effectiveness;
- Highlights of portfolio and program activity; and

- Updates to program delivery and design.

In order to tie savings and costs together as effectively as possible, results will be reported based on commitments made. Any measures that have been verified as installed within a program year along with any costs committed to these measures, including administration costs, will be counted for that Plan year.

### **1.9.5 Program Flexibility**

In order to make sure that the EE&C Portfolio is able to address changing market conditions and improve service delivery as quickly as possible, UGI Gas requires flexibility in the allocation of budgets and implementation of program improvements. This plan document provides the principles and five-year goals that UGI Gas is seeking, but certain adjustments, such as providing incentives for new measures or moving budgets between years and programs, may be required in order to meet these goals. UGI will include any such adjustments in its annual report, but does not anticipate seeking initial approval for such updates. However, UGI Gas will file an updated EE&C Plan in anticipation of material changes that may have a serious effect on five-year goals, such as:

- The addition or removal of a program.
- A need for total funding levels above those approved for the five-year period.
- Significant changes to cost-effectiveness projections, such as an update to avoided costs or a large reduction in portfolio spending projections.

### **1.10 Evaluation, Measurement, and Verification**

UGI Gas will monitor the ongoing progress of the EE&C Plan in order to provide the highest possible service to customers, while maintaining rigorous processes and controls to ensure that savings and costs are being properly accounted for. UGI Gas will closely track program data, perform independent inspections of completed projects, and perform periodic evaluations for all the programs.

### **1.10.1 Technical Reference Manual**

As discussed above, in order to maintain consistency with existing gas efficiency programs in Pennsylvania, UGI Gas has developed a Technical Reference Manual (TRM) based on the one currently used by PGW's EnergySense portfolio. The UGI Gas TRM calibrates certain measure assumptions to UGI Gas's service territory (such as equivalent full load heating hours) and includes new entries for measures not covered in the PGW TRM. Any results from program evaluations that affect deemed savings calculations will also be added to the UGI Gas TRM.

### **1.10.2 Tracking System**

UGI Gas will require that implementation contractors collect all relevant customer, application, measure, and contractor information and that this data is provided to UGI Gas in a timely fashion. UGI Gas will in turn maintain a program and portfolio-level aggregation of this information to be used for program management and assessment, as well as for annual reporting.

### **1.10.3 Third-party inspections**

Each program will have a third-party inspector, separate from the contractor that performed the work, who will solicit customer feedback and will examine whether the work was done properly and whether the installed measures match the application data. Inspections for large, complex, and custom projects will be mandatory. Inspections rates for prescriptive programs will be designed to gather a statistically significant sample of program activity. See individual program plans for additional details.

### **1.10.4 Evaluations**

With the exception of the BE (Behavior and Education) program, UGI Gas will evaluate each of its programs once adequate participation levels have been reached and a full 12 months of post-participation billing data has been collected. The program will be evaluated again after another two years have passed. Due to the unique nature of the BE program, evaluation activities will begin as soon

as the program starts up and continue on an annual basis throughout the program's existence.

As part of the initial program development, UGI Gas will work with the selected evaluator to establish the methodology and goals of the process evaluation. Initial objectives include:

- Verifying energy savings and associated costs;
- Assessing market attitudes towards the program, including contractors, customers, and efficient equipment suppliers; and
- Measuring the effectiveness of current program design, marketing, and service delivery.

The evaluation section of the individual program plans includes additional details on evaluation schedules and goals unique to that program.

## 2 Program Plans

### 2.1 Residential Prescriptive

<b>Objective</b>	The Residential Prescriptive (RP) program is designed to overcome market barriers to energy efficient space and water heating equipment in the residential sector through rebates and customer awareness. The objective of the program is to avoid lost opportunities by encouraging consumers to install the most efficient gas heating technologies available when replacing older, less efficient equipment. The program also aims to strengthen UGI Gas’s relationship with HVAC contractors, suppliers, and other trade allies.							
<b>Eligible Rate Class</b>	R/RT

<b>Total</b>	<b>1,800</b>	<b>5,470</b>	<b>7,300</b>	<b>8,915</b>	<b>8,915</b>	<b>32,400</b>	
<b>Program Rollout</b>	<p><i>June 2016 – December 2017</i> Finalize program process and implementation details, select vendors, and develop initial marketing push.</p> <p><i>January 2017</i> Launch Program.</p> <p><i>FY 2018 - FY 2019</i> Continue engagement activities with customers and trade allies.</p> <p><i>FY 2020</i> Reach full participation levels.</p>						
<b>Program Design</b>	<p>The RP program offers mail-in rebates for qualifying residential-sized space and water heating equipment. Customers will be made aware of opportunities through traditional marketing efforts, such as bill inserts and media advertisements, as well as from installation contractors. For most measures, customers will have a contractor install the measure and receive a cash rebate to offset most of the incremental cost of the higher efficiency equipment. Smaller measures, such as Wi-Fi enabled thermostats, will only require a valid proof of purchase before a cash rebate is issued.</p> <p>UGI Gas will continue to examine other equipment for potential inclusion in the program, as well as</p>						

	<p>the relative market adoption of equipment already receiving incentives. Any new equipment added to the program will have a TRC BCR above 1.0.</p> <p>If program funds begin to run low in a given year, incentive levels may be lowered or equipment removed from the program if additional budget adjustments cannot be made. UGI Gas will aim to provide as little interruption to customers as possible due to such adjustments.</p>
<p><b>Target Market and End Uses</b></p>	<p>The RP targets residential consumers who use natural gas to heat their homes and/or generate hot water. In general, the program aims to incentivize only the highest levels of efficient equipment on the market.</p> <p>On the space heating side, the program provides incentives for Wi-Fi enabled thermostats, ENERGY STAR® labeled furnaces, high efficiency boilers, and combination boilers. Wi-Fi enabled thermostats offer the potential for deeper savings than traditional programmable thermostats due to the wide range of features and feedback they offer. ENERGY STAR® requirements for furnaces drive customers toward the highest efficiency tier of condensing units (95+ AFUE) and also require efficient fans that save electricity. The program would require boilers to also go towards the highest efficiency tier with an AFUE of at least 94. Finally, offering incentives for combination space and water heating boilers addresses two types of end-use with one piece of equipment. These “combi boilers” also address issues with orphaned water heaters having existing atmospheric venting systems that are no longer adequate, when switching to condensing heating equipment.</p> <p>The program addresses water heating by offering incentives for tankless water heaters at two</p>

	different efficiency levels due to the relatively low penetrations of this measure in UGI Gas’s territory.																					
<b>Financial Incentives</b>	<p>Incentives were designed to be in line with other offerings in the region and/or cover approximately two-thirds of the incremental cost of the measure. The table below lists the proposed incentive schedule.</p> <p><b><i>Proposed Residential Prescriptive Program Rebates (Nominal)</i></b></p> <table border="1"> <thead> <tr> <th><b>Equipment</b></th> <th><b>Minimum Efficiency</b></th> <th><b>Proposed Incentive</b></th> </tr> </thead> <tbody> <tr> <td>Wi-Fi Thermostat</td> <td>ENERGY STAR®</td> <td>\$100</td> </tr> <tr> <td>Furnace</td> <td>ENERGY STAR®</td> <td>\$500</td> </tr> <tr> <td>Boiler</td> <td>94+ AFUE</td> <td>\$1,500</td> </tr> <tr> <td>Combi Boiler</td> <td>94+ CAE</td> <td>\$1,800</td> </tr> <tr> <td>Tankless Water Heater</td> <td>82+ EF</td> <td>\$200</td> </tr> <tr> <td>Tankless Water Heater</td> <td>ENERGY STAR®</td> <td>\$400</td> </tr> </tbody> </table> <p>All equipment must be powered by natural gas.</p>	<b>Equipment</b>	<b>Minimum Efficiency</b>	<b>Proposed Incentive</b>	Wi-Fi Thermostat	ENERGY STAR®	\$100	Furnace	ENERGY STAR®	\$500	Boiler	94+ AFUE	\$1,500	Combi Boiler	94+ CAE	\$1,800	Tankless Water Heater	82+ EF	\$200	Tankless Water Heater	ENERGY STAR®	\$400

Tankless Water Heater	ENERGY STAR®	\$400																				
<b>Marketing Approach</b>	<p>The RP program will be a cornerstone of the two-pronged marketing approach for the portfolio. The program is expected to be a large portion of the general call-to-action on the residential side as well as a key part of trade ally outreach efforts. This will include placement on the UGI.com website as well as a general social media push. This program will also include more tailored messages for realtors, developers, owners, and managers of larger multi-family properties in order to make sure that high efficiency options are considered when bulk-purchasing decisions may be made.</p>																					

<p><b>Evaluation, Measurement, and Verification</b></p>	<p><u>Quality Assurance</u></p> <p>All applications will require proof of purchase and a valid UGI Gas account number. All equipment, except for Wi-Fi thermostats, will also require proof of installation, including information about the installing contractor. The rebate processor will verify that the equipment is eligible for the rebate based on the model number before issuing any rebate. The program’s rebate processor will maintain a real-time database of rebate activity, which will be periodically reviewed by UGI Gas and stored separately for long-term purposes.</p> <p>A third-party inspector will perform on-site inspections on five percent (5%) of non-thermostat equipment rebates and three percent (3%) of Wi-Fi thermostat rebates in order to get a statistically significant sample of activity. The inspection will consist of verifying that the rebated equipment is installed and operational and conclude with a short informational interview with the participant.</p> <p><u>Evaluations</u></p> <p>The program is expected to have enough activity to allow for an impact evaluation to start at the end of FY 2018 with a second evaluation scheduled for FY 2021. The initial evaluation will have a particular focus on Wi-Fi thermostats in order to determine the best way to utilize them as a measure.</p> <p>The RP evaluations will also include feedback from installation contractors and supply houses about current market conditions, such as availability and adoption of high efficiency technology, and awareness of the program.</p>
---	--

<p><b>Program Administration</b></p>	<p><u>Rebate Processing</u></p> <p>UGI Gas will engage a contractor to be the main rebate processor. This may include accepting customer applications, tracking and verifying application information, notifying the customer of any issues, maintaining a call center, and reporting results to UGI Gas. The rebate processor may also be responsible for other rebate programs in order to streamline portfolio management.</p> <p><u>Marketing and Outreach</u></p> <p>The main marketing and outreach contractor in combination with the UGI Gas internal marketing team will handle marketing and outreach for the RP program.</p> <p><u>Inspector</u></p> <p>A separate contractor will perform on-site inspections and collect customer feedback.</p> <p><u>Evaluator</u></p> <p>A third-party evaluator will be retained to perform regular evaluations.</p>
<p><b>Special Notes</b></p>	<p>The program is currently designed so that a cash rebate will be offered for Wi-Fi thermostats. If initial evaluation, and participant and trade ally feedback are positive, UGI Gas will move towards offering upstream incentives for this technology. This could result in much higher levels of participation, but would have a lower impact on budgets due to the size of the incentive offered.</p> <p>A key risk factor for the program is a changing baseline for furnaces in the Northern United States.</p>

	<p>There is a possibility that new federal standards and/or a general market shift towards condensing furnaces may necessitate a higher baseline for high efficiency furnaces. While the current efficient condition for natural gas furnaces would still exceed an anticipated baseline shift, savings and incentive levels would be adjusted downwards and savings and/or spending goals may need to be adjusted accordingly.</p>
--	---

## 2.2 Nonresidential Prescriptive

<b>Objective</b>	The Nonresidential Prescriptive (NP) Program is designed to overcome market barriers to energy efficient equipment in the small business and commercial sector through rebates and customer outreach. The objective of the program is to encourage business owners to install the most efficient gas heating and process technologies available to replace older, less efficient equipment. The program also aims to strengthen UGI Gas’s relationship with HVAC contractors, suppliers, and other trade allies.

<b>Program Rollout</b>	<p><i>June 2016 – December 2017</i> Finalize program process and implementations details, select vendors, and develop initial marketing push.</p> <p><i>January 2017</i> Launch Program.</p> <p><i>FY 2018 - FY 2019</i> Continue engagement activities with customers and trade allies.</p> <p><i>FY 2020</i> Reach full program participation.</p>
<b>Program Design</b>	<p>The NP program offers rebates for qualifying commercial-sized space heating, water heating, commercial kitchen, and custom applications. Customers will be made aware of opportunities through traditional marketing efforts, such as bill inserts and media advertisements, installation contractors, and supply houses. Customers will have a contractor install the measure and receive a cash rebate to offset most of the incremental cost of the higher efficiency equipment. Given the anticipated enrollment numbers, a comprehensive (multi-measure) prescriptive rebate form is a good choice for documenting and reporting measures to UGI Gas managers.</p> <p>UGI Gas will continue to examine other equipment for potential inclusion in the program, as well as the relative market adoption of equipment already receiving incentives. Any new equipment added to the program will have a TRC BCR above 1.0.</p> <p>If program funds begin to run low in a given year, incentive levels may be lowered or equipment removed from the program if additional budget adjustments cannot be made. UGI Gas will aim to provide as little interruption to customers as possible due to such adjustments.</p>
<b>Target Market and End Uses</b>	<p>The NP program will serve the small business and commercial market such as office buildings,</p>

	<p>restaurants, and agricultural facilities, and targets three main end-uses. The first and largest end-use targeted is space heating, through commercial boilers, unit heaters, and steam traps. The second target end-use is commercial water heaters. The last end-use is for addressing both cooking and hot water heating through gas fryers, steam cookers, and pre-rinse spray valves.</p> <p>The program also offers a custom application track for single-measure projects that are not already covered by prescriptive rebates. The custom track is expected to cover technology like heat-recovery systems, infrared heaters, controls, range-hood ventilation make-up air systems, and other more site-specific applications. The custom track will be a source for potential technologies to include as prescriptive rebates.</p>																					
<p><b>Financial Incentives</b></p>	<p>Incentives were designed to be in line with other offerings in the region and/or cover approximately two-thirds of the incremental cost of the measure. The table below lists the proposed incentive schedule.</p> <p><b><i>Proposed Nonresidential Prescriptive Program Rebates (Nominal)</i></b></p> <table border="1" data-bbox="504 998 1858 1351"> <thead> <tr> <th><b>Equipment</b></th> <th><b>Minimum Efficiency</b></th> <th><b>Proposed Incentive</b></th> </tr> </thead> <tbody> <tr> <td>Commercial Boiler (&gt;= 300MBh)</td> <td>85+ Et</td> <td>\$2 / MBh</td> </tr> <tr> <td>Commercial Boiler (&gt;= 300MBh)</td> <td>90+ Et</td> <td>\$2 / MBh + \$2,000</td> </tr> <tr> <td>Unit Heater (Warm Air)</td> <td>90+ Et/AFUE</td> <td>\$2 MBh</td> </tr> <tr> <td>Steam Trap</td> <td>&lt;15 PSIG</td> <td>\$50</td> </tr> <tr> <td>Steam Trap</td> <td>15&lt;= PSIG &lt;75</td> <td>\$150</td> </tr> <tr> <td>Steam Trap</td> <td>&gt;= 75 PSIG</td> <td>\$250</td> </tr> </tbody> </table>	<b>Equipment</b>	<b>Minimum Efficiency</b>	<b>Proposed Incentive</b>	Commercial Boiler (>= 300MBh)	85+ Et	\$2 / MBh	Commercial Boiler (>= 300MBh)	90+ Et	\$2 / MBh + \$2,000	Unit Heater (Warm Air)	90+ Et/AFUE	\$2 MBh	Steam Trap	<15 PSIG	\$50	Steam Trap	15<= PSIG <75	\$150	Steam Trap	>= 75 PSIG	\$250

Commercial Fryer (Large)	ENERGY STAR®	\$1,900														
Commercial Steam Cooker	ENERGY STAR®	\$600														
Pre-Rinse Spray Valve	WaterSense®	\$50														
<p data-bbox="191 899 342 971"><b>Marketing Approach</b></p>	<p data-bbox="506 899 1906 1317">The NP marketing approach focuses on targeted outreach to trade allies and supply houses. Outreach efforts will attempt to reach the decision maker at the time of, and in advance of, the need for equipment replacement. UGI Gas will provide regular outreach and training sessions on efficiency opportunities with HVAC contractors, heating suppliers, kitchen equipment suppliers, local business organizations, and other parties that deal with commercial equipment to provide education on opportunities for engagement with the program, hand out rebate applications, and encourage the stocking of high efficiency equipment. Good penetration rates will rely heavily on an educated contractor network to understand how to up-serve participants with more efficient</p>															

	<p>products when a service call is requested or new equipment is needed. Contractor training will be provided to those already part of the existing contractor network and qualified for commercial work.</p> <p>UGI Gas will also promote the program through its UGI.com website and other online outreach activities.</p>
<p><b>Evaluation, Measurement, and Verification</b></p>	<p><u>Quality Assurance</u></p> <p>All applications will require proof of purchase and a valid UGI Gas account number. All rebates will require proof of equipment installation, including information about the installing contractor. The rebate processor will verify that the equipment is eligible for the rebate based on the model number before issuing any rebate. The program’s rebate processor will maintain a real-time database of rebate activity, which will be periodically reviewed by UGI Gas and stored separately for long-term purposes.</p> <p>A third-party inspector will perform on-site inspections on all custom rebates and five percent (5%) of all prescriptive rebates in order to get a statistically significant sample of ongoing activity. The inspection will consist of verifying that the rebated equipment is installed and operational and conclude with a short informational interview with the participant.</p> <p><u>Evaluations</u></p> <p>The program is expected to have enough activity to allow for an impact evaluation to start at the end of FY 2018 with a second evaluation scheduled for FY 2021. The initial evaluation will have a particular focus on the accuracy of heating savings for varying customer types.</p>

	<p>The NP evaluations will also include feedback from installation contractors and supply houses about current market conditions, such as availability and adoption of high efficiency technology, and awareness of the program.</p>
<p><b>Program Administration</b></p>	<p><u>Rebate Processing</u></p> <p>UGI Gas will engage a contractor to be the main rebate processor. This may include accepting customer applications, tracking and verifying application information, notifying the customer of any issues, maintaining a call center, and reporting results to UGI Gas. The rebate processor may also be responsible for other rebate programs in order to streamline portfolio management.</p> <p><u>Marketing and Outreach</u></p> <p>The main marketing and outreach contractor in combination with the UGI Gas internal marketing team will handle marketing and outreach for the RP program.</p> <p><u>Inspector</u></p> <p>A separate contractor will perform on-site inspections and collect customer feedback.</p> <p><u>Evaluator</u></p> <p>A third-party evaluator will be retained to perform regular evaluations.</p>
<p><b>Special Notes</b></p>	<p>Due to the complex nature of the nonresidential equipment market, the exact mix of measures and adoption of different technologies is not easily predicted. While UGI Gas is confident that the</p>

	<p>projected budget levels are appropriate, the exact mix of measures may vary.</p> <p>In order to relieve busy business owners of the paperwork barrier and reduce pressure on the program's rebate processor, UGI Gas will explore batching rebates and paying them directly to contractors, with the rebate amount clearly indicated on the participant's invoice.</p>
--	---

### 2.3 New Construction

<b>Objective</b>	The New Construction (NC) Program is designed to overcome market barriers to energy efficient space and water heating equipment, as well as high efficiency thermal envelopes, in both the residential and nonresidential new construction sector through rebates offered to builders and developers, and general potential buyer awareness. The objective of the program is to avoid lost opportunities by encouraging builders and developers to install the most efficient gas heating technologies available instead of less efficient baseline equipment, as well as promote thermal envelope best practices. The program also aims to strengthen UGI Gas’s relationship with architects, builders, HVAC contractors, suppliers, and other trade allies.

<b>Program Rollout</b>	<i>January 2017 – January 2018</i>	Finalize program process and implementations details, select vendors, and develop initial marketing. Start initial engagement with builders and architects and solicit projects to begin technical assistance process.					
	<i>January 2018</i>	Launch program.					

	<p><i>FY 2018 - FY 2021</i> Continue engagement activities with customers reaching full program participation in FY 2021.</p>
<p><b>Program Design</b></p>	<p>Addressing efficiency when a building is first built is the cheapest and longest lasting way to change energy consumption patterns. The NC program offers incentives to builders and/or developers for going beyond building code to reduce natural gas consumption. The program targets both residential and nonresidential projects. UGI Gas will provide a technical assessment provider that will review customer applications, assess the project plans, verify that each project meets program eligibility requirements and help the customer to achieve the highest feasible and cost-effective savings.</p> <p><u>Residential Projects</u></p> <p>The program offers a streamlined prescriptive approach for residential new construction projects to go beyond the opportunities offered under the RP program. The NC residential track is designed to offer builders a higher incentive than they would otherwise receive from just combining RP measures. It encourages participants to go as deep as possible by addressing the space heating system, water heating system, and building envelope.</p> <p><u>Nonresidential Projects</u></p> <p>Each nonresidential project will require building simulation modeling showing the gas usage for a baseline building just meeting code and another model with the proposed modifications. UGI Gas will offer an incentive based on the percentage difference in gas usage between the baseline and</p>

	<p>proposed building. The technical assessment provider will provide guidance and propose revisions, which may last several iterations, in order to fully incorporate efficiency in to the design process.</p>
<p><b>Target Market and End Uses</b></p>	<p>The NC program targets all new construction projects (including “gut rehab”) contemplating use of natural gas to provide space and hot water heating. For the purposes of this program, gut rehabilitation is defined as a project where the interior space of the building exposes the studs or two or more of the mechanical systems are being replaced and are required to meet current energy code standards.</p> <p>In general, the program aims to incentivize only the highest levels of efficient equipment and construction practices on the market. The NC program takes a whole-building approach, acquiring savings from multiple measures compared to a baseline building just meeting code. For single family and small multi-family buildings, measures might include thermal envelope insulation, heating equipment, and water heating equipment and fixtures. Commercial or large apartment buildings might include HVAC equipment and controls, tighter and better-designed ducts, hot water heating equipment, and thermal envelope insulation.</p>
<p><b>Financial Incentives</b></p>	<p>Residential customers will receive a lump sum incentive for achieving 20% gas savings or greater, compared to a house only meeting code. The incentive amount will be designed to cover approximately 80% of the incremental cost.</p> <p>Nonresidential customers will receive an incentive calculated from a dollar per first-year MMBtu saved, depending on what percentage savings tier it falls in. The first tier will be greater than 15%</p>

	but less than 20% savings, the second tier will be greater than or equal to 20% but less than 30%, and the third tier will be greater than or equal to 30% savings.
<b>Marketing Approach</b>	The NC program will focus on tailored messages for realtors, developers, and builders (including ENERGY STAR® builders) in order to ensure that high efficiency options are considered when engaging in major rehab projects as well as in new construction. UGI Gas will also explore ways in which to highlight the efficiency of homes to potential buyers, including through social media.
<b>Evaluation, Measurement, and Verification</b>	<p><u>Quality Assurance</u></p> <p>All applications will require information confirming installation and proof of UGI Gas service for heating. Inspections will be performed on 25% of residential new construction projects and all nonresidential retrofit projects before a final rebate is issued. Inspections must verify that the measures proposed for the building were installed as planned and that savings targets have been met, and must conclude with a short informational interview with the owner and/or developer. The program’s rebate processor will maintain a real-time database of rebate activity, which will be periodically reviewed by UGI Gas and stored separately for long-term purposes.</p> <p><u>Evaluations</u></p> <p>The program is expected to have enough activity to allow for an impact evaluation to start at the end of FY 2019 with a second evaluation scheduled for FY 2021.</p> <p>The NC evaluations will also include feedback from installation contractors and supply houses about current market conditions, such as availability and adoption of high efficiency technology and</p>

	building practices, and awareness of the program and its efficiency tiers.
<b>Program Administration</b>	<p><u>Technical Assistance and Rebate Processing</u></p> <p>UGI Gas will engage a contractor to be the main program implementation contractor. The contractor will be responsible for technical review of projects as well as assisting potential customers with including efficiency in their project design. This role will also include accepting program applications, tracking and verifying application information, notifying the applicant of any issues, maintaining a call center, and reporting results to UGI Gas.</p> <p><u>Marketing and Outreach</u></p> <p>The main marketing and outreach contractor, in combination with the UGI Gas internal marketing team, will handle marketing and outreach for the NC program.</p> <p><u>Inspector</u></p> <p>A separate contractor will perform on-site inspections and collect customer feedback. The same firm responsible for providing technical assistance may perform this role.</p> <p><u>Evaluator</u></p> <p>A third-party evaluator will be retained to perform regular evaluations.</p>
<b>Special Notes</b>	The new construction market is highly cyclical and participation levels in the program will be highly influenced by broader economic trends beyond the control of UGI Gas.

## 2.4 Residential Retrofit

<b>Objective</b>	The Residential Retrofit (RR) Program is designed to overcome market barriers to energy efficiency in the existing residential sector through rebates offered either to customers undergoing a retrofit project or to their installation contractor(s). The program encourages improvements to the thermal envelope of the structure, particularly reductions in building air leakage and increases in insulation levels, as well as installation of the most efficient gas heating technologies. The program also aims to strengthen UGI Gas’s relationship with HVAC contractors, suppliers, and other trade allies.

<b>Program Rollout</b>	<i>January 2017 – January 2018</i>	Finalize program process and implementations details, select vendors, and develop initial marketing. Start initial engagement with contractors and provide initial training in protocols and program delivery.					
	<i>January 2018</i>	Launch program.					
	<i>FY 2018 - FY 2021</i>	Continue engagement activities with customers, reaching full participation in FY 2021.					
<b>Program Design</b>	The RR program offers incentives to customers retrofitting or weatherizing their homes by installing qualifying residential-sized space and water heating equipment, programmable thermostats						

	<p>(including Wi-Fi enabled), and making thermal envelope improvements through use of approved contractors who may also receive an incentive to encourage comprehensiveness.</p> <p>Customers must have an in-home audit performed that includes a blower-door test. After the audit, the customer receives a list of recommended efficiency measures. The customer has a contractor perform the recommended measures, after which he or she receives an incentive. Audits and thermal envelope improvements must be made by a contractor previously selected by the program as meeting program standards for high quality and technical performance.</p> <p>The rebate will be given to the customer upon submission of suitable documentation. Thermal envelope improvement rebates will require submittal of pre-post blower door measurements to document leakage rate reductions, and pre-post R-values, along with affected square footage, to document insulation improvements.</p> <p>Program participation levels will dictate allocation of funds from year to year, as well as the incentive levels offered. Initially, both participating customers and contractors each will be given an incentive based on first-year MMBtu projected savings. UGI Gas will aim to provide as little interruption as possible to the general community due to any program adjustments made to accommodate market conditions.</p>
<p><b>Target Market and End Uses</b></p>	<p>The RR program targets all residential homes that can benefit from improved space and water heating efficiency by encouraging a whole house approach to consider the full implications of specific measures to the overall performance of the house. The program aims to incentivize only</p>

	<p>the highest levels of efficient equipment on the market and the overall reduction in gas usage, including the interactive effects of equipment efficiency and thermal envelope improvements.</p> <p>On the space and water heating side, the program effectively ties in closely with the RP program measures to provide incentives for installing such equipment as Wi-Fi enabled thermostats, ENERGY STAR® labeled furnaces, high efficiency boilers, and combination boilers as part of the home retrofit package. To qualify for even the lowest incentive tier, customers are guided toward the highest efficiency units (95+ AFUE) as well as envelope improvements. The highest incentive tier requires both the customer and the contractor to aggressively embrace the whole-house approach.</p>
<p><b>Financial Incentives</b></p>	<p>Incentives are designed to be in line with other offerings in the region and/or other companion programs in the UGI Gas portfolio such as the RP program. UGI Gas anticipates an incentive of approximately \$60 per first year MMBtu savings for eligible projects. This incentive is designed to offset most of the incremental cost of the higher efficiency equipment and to provide a significant contribution to the cost of qualifying thermal envelope improvements.</p>
<p><b>Marketing Approach</b></p>	<p>Customers will be made aware of the RR program through the general media and bill inserts, as well as through equipment distributors, HVAC and plumbing contractors, and others in a position to affect equipment installation and thermal envelope improvement choices.</p> <p>The contractor network will play a large role in generating program leads. Approved program contractors will be encouraged to do their own marketing to enlist high quality leads to promote</p>

	<p>high lead conversion rates, and to up-serve comprehensive retrofit packages qualifying for the highest incentive tier(s). They will be supported in these efforts through training and the development of co-branding materials that the contractor can use to promote the program.</p> <p>UGI Gas also anticipates identifying qualified leads through an online audit tool. The tool will help homeowners identify opportunities for saving energy and put them in contact with a qualified contractor. Customers that have particularly large savings opportunities may be offered further rebates.</p>
<p><b>Evaluation, Measurement, and Verification</b></p>	<p><u>Quality Assurance</u></p> <p>A contractor previously approved by UGI Gas will supervise all audits and installation work. It is anticipated that an “approved contractor” will be required to possess Gold Star Contractor certification from the Building Performance Institute (BPI) to ensure quality business practices. Approved contractors must employ site technicians and site supervisors with BPI professional certifications appropriate to their duties. The approved contractor must also be trained in program protocols and the contractor’s first three projects will require confirmation of quality installation by an approved third party before moving from probationary status to becoming fully approved. Subsequent contractor work will be sampled up to 10% of projects submitted. Program infraction penalties can range from a return to probationary status to being removed from the program. In the event of a significant customer complaint, which has been verified, or failure of an inspection, contractors must provide satisfactory resolution within 15 business days or face termination from</p>

program participation or reversion to probationary status, depending on the severity of the infraction or the continuation of relatively minor infractions. An initially approved contractor may be barred from program participation upon documentation that the contractor has not met program requirements even when given the opportunity to correct failings consistent with the probationary process.

#### Rebate Processing

The rebate processor must verify that the contractor is eligible to participate in the program and that any issues brought to the program's attention either by a customer or by the third party inspector has been resolved. The program's rebate processor will maintain a real-time database of program activity, including such metrics as leads and lead source, which will be periodically reviewed by UGI Gas and stored separately for long-term purposes.

Inspections must verify that the project meets the requirements for incentive level offered by the contractor to the customer.

#### Evaluations

The program is expected to have enough activity to allow for an impact evaluation in FY 2020.

The RR program evaluations will also include feedback from installation contractors, participating customers and supply houses about current market conditions, such as availability and adoption of high efficiency technology, barriers to participation and awareness of the program.

<p><b>Program Administration</b></p>	<p><u>Contractor Network</u></p> <p>UGI Gas will put in place an approved contractor network that will perform energy audits, natural gas retrofit projects, and submit project and incentive application information to the program manager.</p> <p><u>Program Manager</u></p> <p>UGI Gas will engage a program manager to oversee the contractor network, accept program applications, track and verify application information, communicate with customers if necessary, and report results to UGI Gas.</p> <p><u>Marketing and Outreach</u></p> <p>The main marketing and outreach contractor, program administrator, and contractor network will be responsible for the marketing and outreach of the RR program.</p> <p><u>Inspector</u></p> <p>A separate contractor will perform on-site inspections and collect customer feedback. The inspector may also spend a portion of their time directed towards onsite mentoring for contractors. The program manager may perform the inspection role.</p> <p><u>Evaluator</u></p> <p>A third-party evaluator will be retained to perform regular evaluations.</p>
--------------------------------------	--

<b>Special Notes</b>	<p>UGI Gas will explore ways in which to encourage contractors to go after deeper savings. This may include setting aside a portion of incentives to go directly towards contractors in the form of a performance bonus.</p> <p>Through its parent company, UGI Gas has a network of over 400 contractors in Pennsylvania, many of which serve UGI Gas's territory. Contractors that express interest in participating, provide contact information, description of their business, and the territory that they serve. UGI Gas is able to provide leads to contractors regarding customers who have inquired about switching to natural gas. UGI Gas will examine ways to leverage this existing platform and contractor list to provide a launching off point for an enhanced contractor network able to deliver the services required under the RR program.</p>
----------------------	---

## 2.5 Nonresidential Retrofit

<b>Objective</b>	The Nonresidential Retrofit (NR) Program will provide incentives for overcoming market barriers for natural gas efficiency retrofits in existing commercial and multi-family buildings.

<b>Program Rollout</b>	<i>January 2017 – January 2018</i>	Finalize program process and implementations details, select vendors, and develop initial marketing. Start initial engagement with contractors and provide initial training in protocols and program delivery.					
	<i>January 2018</i>	Launch program.					
	<i>FY 2018 - FY 2021</i>	Continue engagement activities with customers, reaching full participation in FY 2021.					

<b>Program Design</b>	The NR program offers incentives to commercial buildings and multi-family projects that wish to upgrade some portion of the building’s performance. A technical assistance provider will evaluate projects for both savings opportunities and cost-effectiveness. A custom package of measures will be determined that is cost-effective and an incentive offer will be extended to the customer based on the project’s financial characteristics. The customer then has a set amount of time to perform the upgrades and receive a test-out audit after which the incentive will be paid.
<b>Target Market and End Uses</b>	The NR program primarily targets commercial buildings and multi-family housing projects, but is also open to agriculture and small industrial applications. Any measure that saves natural gas is eligible, with space heating, water heating, and process heating expected to be the largest opportunities.
<b>Financial Incentives</b>	Incentives for NR projects will all be based on the financial characteristics of the project. UGI Gas will negotiate with the customer to find an incentive that makes the project attractive enough for the customer to pursue without paying. The first approach for calculating an incentive will be to determine an acceptable internal rate of return (IRR) for the project that the customer will accept. A secondary approach will be to buy down the project’s simple payback to between 5 and 10 years. The incentive for a single project will be capped at the lessor of the project’s gas benefits, incremental cost, or \$100,000.
<b>Marketing Approach</b>	Customers will be made aware of the NR program through the general media and bill inserts, as well as through equipment distributors, HVAC and plumbing contractors, housing program

	<p>administrators, and others in a position to affect equipment installation and thermal envelope improvement choices.</p>
<p><b>Evaluation, Measurement, and Verification</b></p>	<p><u>Quality Assurance</u></p> <p>The technical assistance provider will monitor all projects from the outset. This includes monitoring the installation specifications and practices as well as the final project inspection to verify that all program requirements have been met for issuance of the requested incentive.</p> <p><u>Evaluations</u></p> <p>The program is expected to have enough activity to allow for an impact evaluation to start at the end of FY 2019 with a second evaluation scheduled for FY 2021.</p> <p>Since the number of projects anticipated to be completed under the program is so small, evaluations will be more focused on a “case study” approach that verifies performance once a project is complete and sufficient post data is collected.</p>
<p><b>Program Administration</b></p>	<p><u>Technical Assistance Provider</u></p> <p>The technical assistance provider will be responsible for the initial project analysis and design assistance, ongoing project monitoring, and the final inspection of all projects.</p> <p><u>Evaluator</u></p> <p>A third-party evaluator will be retained to perform regular evaluations.</p>

<b>Special Notes</b>	
----------------------	--

## 2.6 Behavior and Education

<b>Objective</b>	The objective of the BE program is to motivate a large group of residential customers to save energy by changing their behavior through education, outreach, and energy monitoring. The premise is that the delivery of timely, salient, and personalized information allows for informed decision-making. Small changes with noticeable results pave the way for wider program participation and increased future savings.

<b>Program Rollout</b>	<i>October 2017 – October 2018</i>	Finalize program process and implementations details, select vendors, and integrate energy reporting software with existing customer information system.					
	<i>October 2018</i>	Launch program.					
	<i>FY 2019</i>	Initial pilot year. <sup>14</sup>					

<sup>14</sup> A single year pilot program will be performed in order to gauge the potential success of the program before it is rolled out to a wider customer base.

	<i>FY 2020 – FY 2021</i> Run full program.
<b>Program Design</b>	<p>The program pairs behavioral science with data analytics to provide clearly defined and actionable information that motivates customers to lower their energy use. An external vendor will be enlisted to deliver the service. The vendor will collect (from various sources) and analyze customer data including gas use, weather data, demographic and parcel information, and service interactions such as web visits and use of UGI Gas’s call center data. Insights will be gathered and analyzed for each customer in order to develop personalized content and messaging to participants.</p> <p>The program will follow an “opt-out” model in which customers will be automatically enrolled to receive the service, but subsequently may choose to decline participation. Participants will receive an energy report detailing their gas usage and how their use compares with neighbors or others in a similar demographic. The report offers insights into how the household uses gas, provides tips on how to lower consumption, provides billing analysis, and promotes other UGI services. Customers are further engaged via access to a web portal that embeds the vendor’s analytics into UGI’s webpages, and stays connected with the service in real time by setting and tracking goals, receiving alerts indicating high use trends, weather or utility events, and receiving periodic home energy reports by email which may also contain UGI messaging.</p>
<b>Target Market and End Uses</b>	The program will target residential heating customers who are identified as high users based on usage per customer analytics.
<b>Financial Incentives</b>	The service will be delivered at no cost to customers and is anticipated to cost approximately \$9

	per customer per year.
<b>Marketing Approach</b>	UGI Gas will work with the selected vendor to produce a targeted rollout of the programs offerings. The program is expected to engage with a sub-section of UGI Gas’s highest usage heating customers.
<b>Evaluation, Measurement, and Verification</b>	<p>Since behavior programs are relatively new to the efficiency market, and particularly new to gas efficiency in Pennsylvania, extra care will be taken with verifying and measuring program savings. UGI Gas will retain an evaluator at the same time as a vendor is selected to be the service provider. All three parties will work closely to ensure that proper systems are set up so that data can be collected from the start to ensure that savings are being properly accounted for. Once the program launches, evaluation will be continuous. Some of the initial goals of the evaluation will be the following:</p> <ul style="list-style-type: none"> <li>• Selecting a proper control group;</li> <li>• Quantifying savings across different market segments;</li> <li>• Accounting for the effects of participation in other efficiency programs to measure the “channeling” effect of the BE program and avoid double counting savings; and</li> <li>• Examining the persistence of savings beyond a single year.</li> </ul>
<b>Program Administration</b>	<p><u>Service Provider</u></p> <p>UGI Gas will retain a service provider to provide the platform and analysis to deliver the energy</p>

	<p>reports and provide customer support.</p> <p><u>Evaluator</u></p> <p>A third-party evaluator will be retained to perform regular evaluations.</p>
<b>Special Notes</b>	<p>Evaluation results from similar programs have had a wide range of savings. The assumptions used for this program are conservative; however, market conditions in UGI Gas's territory may be very different from those experienced in other locations with successful programs.</p>

## 2.7 Combined Heat and Power

<b>Objective</b>	The Combined Heat and Power (CHP) Program seeks to promote the installation of cost-effective and net-primary-energy-saving CHP projects and provide meaningful CO <sub>2</sub> emission reductions that may be counted toward Pennsylvania’s Clean Power Plan goals. A CHP plant produces electricity at a commercial or industrial site while at the same time using the waste heat from the production of the electricity to serve a thermal load. Net efficiencies come from the recovered heat that is typically wasted in grid electricity production and avoided transmission and distribution losses from delivering the electricity from the generator to the customer site.

<b>Program Rollout</b>	<i>June 2016 – December 2017</i>	Finalize program process and implementations details, select vendors, and develop initial marketing.					
	<i>January 2017</i>	Launch Program.					
	<i>FY 2018 - FY 2021</i>	Continue engagement activities with customers.					
<b>Program Design</b>	Customers that are considering CHP need to submit the project details including CHP installation costs, annual electricity production, and gas usage before and after the CHP project is completed.						

	<p>Based on the particular CHP project details, verified by UGI Gas or its contractor, UGI Gas will determine whether it is cost-effective from the TRC perspective and reduces net primary energy usage. If both of these criteria are met, then the CHP project is eligible for an incentive from UGI Gas.</p> <p>Though the customer has primary responsibility for developing the CHP costs, savings, and technical details, UGI Gas may provide some technical assistance, as well as business development for new projects.</p>
<b>Target Market and End Uses</b>	<p>The CHP Program targets large commercial and industrial customers with high thermal and electric loads. This program is most likely applicable to customers with year-round thermal requirements and high hours of use. Customer types that are likely candidates include hospitals, campuses and multi-shift industrial.</p> <p>Based on current avoided electric and gas avoided costs, only larger CHP projects (over 1,000 MW) are typically cost-effective from the TRC perspective. If avoided costs change or the costs for micro turbines decline, then some smaller projects may become cost-effective. UGI Gas will continue to closely monitor the CHP market and identify opportunities for all ranges of CHP technology and sizes.</p>
<b>Financial Incentives</b>	<p>\$750/kW with a maximum of \$250,000 per CHP project and no more than 50% of the CHP project cost.</p>
<b>Marketing</b>	<p>UGI Gas will market its CHP program through a combination of the portfolio's mass-market</p>

<b>Approach</b>	awareness campaign and by contacting specific customers that are likely candidates for CHP. UGI Gas will work with its internal gas planning and marketing team to make sure that potential users are aware of possible technical support and incentives for pursuing CHP projects.
<b>Evaluation, Measurement, and Verification</b>	<p>Every CHP project will be inspected and its receipts reviewed to ensure that the expected technology is correctly installed and operational.</p> <p>A third party evaluator will be chosen to assess the actual versus projected electric and gas, generation and usage, respectively. Since the number of projects anticipated to be completed under the program is small, evaluations will be more focused on a “case study” approach that verifies performance once a project is complete and sufficient post data is collected.</p>
<b>Program Administration</b>	The CHP program may be implemented either solely by UGI Gas or with assistance from an independent contractor chosen through an RFP.
<b>Special Notes</b>	<p>The CHP Program’s costs and savings will be reported separately from the other efficiency programs, due to this program’s increase in gas usage, whereas the other efficiency programs decrease gas usage. This is similar to the separation made by PGW in its Phase II filing, as well as by other electric utilities that separate energy efficiency programs from load reduction programs.</p> <p>While UGI Gas is asking for general flexibility in annual program costs for the entire EE&amp;C Portfolio, this flexibility is particularly important for the CHP program. CHP projects are complex and require long-term planning. Moreover, incentives represent a large percentage of the program budget. Because of these factors, it is difficult to predict the outcome for a single year. UGI Gas will</p>

	limit its total spending to the five year projected total spending, and under-spending from one year may be carried over to the next year.
